The problem of preventing accidents at railroad crossings of the public highways is one of such vital importance that the roads are making an appeal to the people to lend its assistance by exercising every precaution for personal safety. While enormous sums of money have been and are being spent by the roads in track elevations, as well as by the employment of watchmen and the installation of signal systems, it is estimated that to complete the program of eliminating all such crossings in this country would involve an expense running into billions of dollars. The chief engineer of the Baltimore & Ohio Railroad fixes the cost of such improvements on his road at three hundred and fifty million dollars.

Supplemental to its plans of eliminating crossings, the Baltimore and Ohio recently revised its rules defining the duties of watchmen. The watchmen were given uniform caps identifying them before the public by means of a badge. This class of employes are drilled in the proper performance of duty and are required to undergo an examination as to their fitness to protect the public.

A Novel Employment for Old Car Trucks and Wheels.—During the recent heavy rain storms, the Los Angeles river in Southern California, became so swollen that it started to cut off the neck of the land on which was located extensive railroad yards of the Southern Pacific. As the danger became more threatening, the roadmaster ordered an enormous quantity of old car trucks and wheels to be thrown over the embankment. In this manner a solid retaining wall was formed which checked the disastrous efforts of the river and resulted in saving a vast amount of property. It is likely that never before has "cast off" material of this character been used for so novel a purpose.

Old Car Trucks and Wheels Which Were Successfully Employed to Save the Southern Pacific from the Devastating Effect of Flood Conditions.

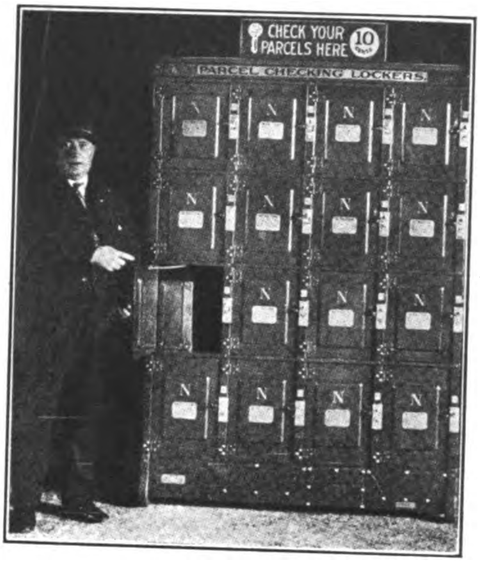
The Proposed Aeroplane Race Around the World.

RAPID progress is being made in the organization of the Panama-Pacific Aerial Race around the world, which will start in May, 1915, from the Panama-Pacific International Exposition. Present indications are that there will be about fifty entries, representing fifteen different nations. There will be two control points in the United States besides the start and finish on the exposition grounds. In all, there will be twenty-one control points, circling the globe at intervals of 1,000 miles.

Mechanical

An Automatic Coin Control Parcel Checking Locker.

THE accompanying photograph presents an excellent idea of an automatic coin control parcel checking locker, which has recently been installed by the Chicago and North Western Railway in the waiting rooms of a number of its important stations. These steel cabinets are of various sizes and the device is sanitary and convenient, enabling passengers to check their own baggage and take it out of the locker without a moment's delay. Preliminary tests of the use of the cabinets indicate that they are liberally patronized. The principal benefits offered by the new system are instantaneous service and absolute safety.



THE CHICAGO AND NORTH WESTERN'S NEW AUTOMATIC COIN CONTROL PARCEL CHECKING LOCKER.

Arc Welding.

THE subject of arc welding is receiving a great deal of consideration at the present time by railways and industrial concerns because of the many advantages it possesses for certain kinds of work.

Arc welding is particularly adapted to various uses in machine shops and foundries. Worn parts of machines can be built up prior to machining. Broken parts of steel castings can be welded together. Often defects develop in new castings, after considerable machining has been done. The machining and castings, in many cases, can be saved by repairing with the electric arc. Castings with blow-holes and sand holes can often be very quickly repaired. Risers and sinkheads can be cut off.

In steam locomotive shops metal pencil welding is used extensively in fire box and boiler repairs, flue welding, repairing steel locomotive frames, building up mud rings and general work of this character. A large amount of equipment that would have to be scrapped can thus be repaired with the electric arc, and a large saving in money, time and labor effected.

In electric railway shops arc welding can be used to special advantage in repairing broken armature shafts, axle brackets and motor frames. In track equipment, the repair of broken frogs, cross-overs and other work of this nature can be done with excellent results.

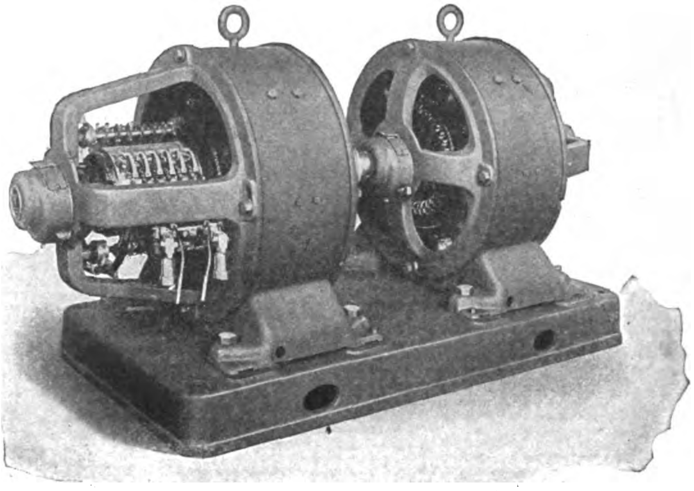
In steel mills, there are many places where the electric arc can be used to great advantage, often resulting in a considerable saving. The ends of wobblers and pinions, which have become badly worn, can be built up to their original size. Tap holes in blast furnaces can be burnt out in a very short time.

Realizing from past experience, the practical value of the electric arc for general welding purposes, the Westinghouse Electric & Manufacturing Company has developed a standard line of electric arc welding equipments.

The equipments comprise standard apparatus. They are simple in construction and easy to operate. Complicated relay schemes for automatically inserting resistances are eliminated. Ample protection is secured by circuit-breakers and special arrangement of the resistance.

The outfits are furnished complete in the four

VIEW OF OPERATOR MAKING A WELD ON A STEEL RING.



Motor Generator Set for Arc Welding.

following sizes: 200, 300, 500 and 800 amperes.

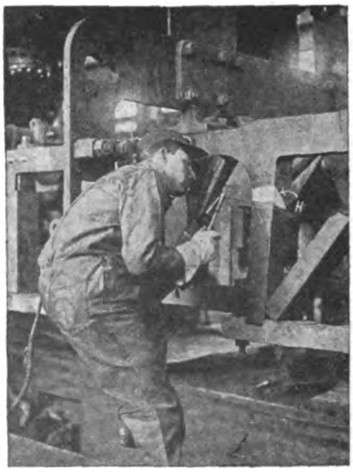
Each equipment includes a welding generator, or a welding motor-generator set, switchboard, control and all necessary accessories.

The welding generator consists of a special 75-volt, commutating-pole, direct-current machine either belt or motor-driven.

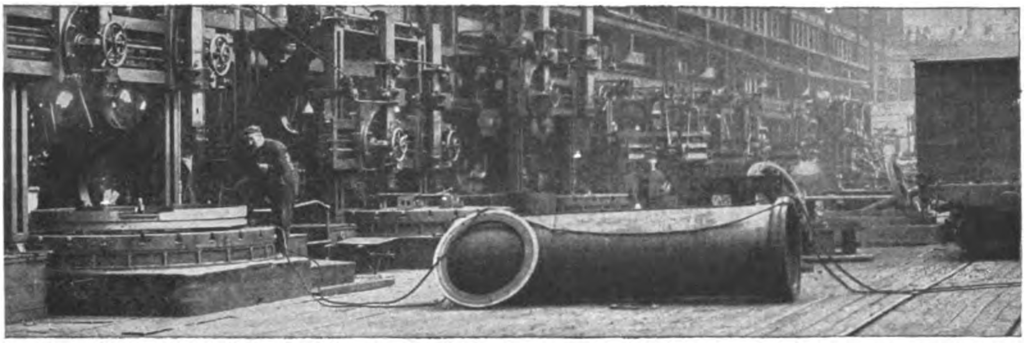
The instrument and control panels are composed of two sections. The upper section contains the indicating instruments, protective apparatus and switches arranged for regulating the welding current, and the lower section contains the starting and protective equipment for the motor-generator set. It is often desired to have several welding circuits connected to one generator. For this arrangement a control panel is provided for each circuit. Each panel can be located at the most desirable place. Metal or carbon pencil welding can be done from any of these panels, independent of all others, and one or more arcs can be operated simultaneously.

Arc Weld on Back Flue Sheet of Steam Locomotive.

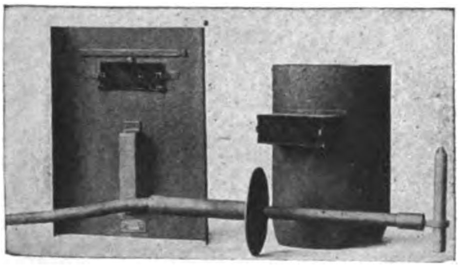
Surface Built up on Truck Spider.



Repairing Broken Locomotive Frame.



Repairing Work on a Machine Tube.



Shield, Hood and Carbon Holder.

The accessories furnished consist of a carbon holder and a hood for protecting the operator, together with a shield and a metal pencil holder for each welding circuit.

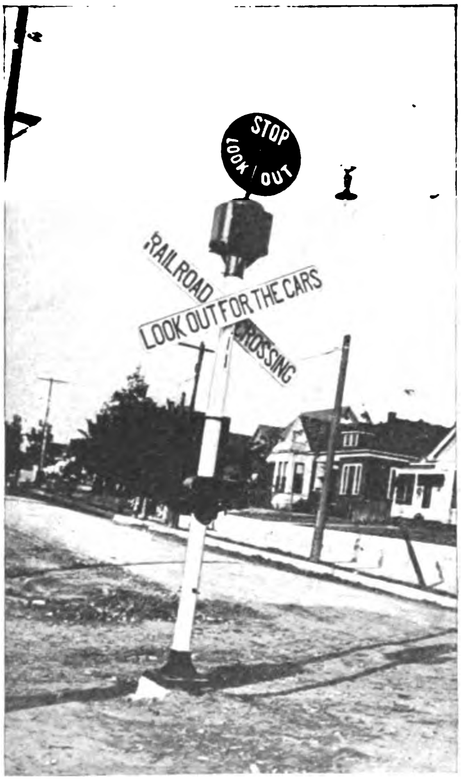
The equipment described above is the result of eight years' experience in its own shops by the Westinghouse Electric & Mfg. Company and has been employed on all classes of commercial work, thus ensuring a thoroughly practical shop outfit.

An Automatic Flagman.

ACCIDENTS to automobiles and other vehicles continue to be numerous and the conclusion has about been reached by many operating officials that the "Stop, Look and Listen" sign employed at grade crossings often fails to supply the necessary warning, particularly with regard to motorists who, swinging along at the rate of from forty to sixty miles an hour are likely to take a chance when there is no more indication of a possible approaching train, than the general warning presented on the sign.

In order to lessen the danger at these points there has been put in service on some roads what is termed an "automatic flagman," which is a device to protect railway grade crossings by giving effective warning of the approach of trains. There are several such devices on the market, but the one described herein, manufactured by the Automatic Flagman Company at Los Angeles, Cal., appears to have gone a step further than any of those previously employed which, as a rule, simply consist of a gong which automatically rings at the approach of a train. The Los Angeles device, however, not only rings a loud gong, but waves a bright red disc by day and a red lamp by night, so that such a warning can hardly escape notice.

As shown by the illustrations this device consists of a weather proof case containing the operating mechanism and the signal disc upon which are mounted standard ruby-red switch lenses with an incandescent lamp between. En-



A Device Known as an "Automatic Flagman" Which Is Being Successfully Employed in Developing Greater Safety at Railway Crossings.

ergy is supplied by a small Westinghouse Electric motor which operates the mechanism that rings the gong and waves the disk.

The motor receives its energy from storage batteries, lighting circuits, or trolley circuits, depending on the character of the installation. On steam roads, the track is insulated and bonded for the desired distance away from the signal and is charged with current from a small battery. The train on entering this block completes the circuit and operates a relay, which connects the motor with the power circuit. When the train leaves the block the circuit is opened and the motor disconnected.

On electric roads the motor is connected to the trolley circuit by a contactor which is mounted on the trolley wire or third rail and is operated by the car as it passes, a second contactor series disconnects the motor when the car passes the signal.

The illustrations show an installation of the Pacific Electric Railway Company, of Los Angeles, Cal., where the Beach Line crosses a road entering Rosedale Cemetery.

This machine, which is one of several hundred "Automatic Flagmen" on the lines of the Pacific Electric Company, operates about 300 times a day with an average duration of about one and one-half minutes each.

Lehigh Valley Develops Device for Employment of Red Lights at Grade Crossings.

A MERE piece of red glass has made it possible to use red lights on railroad crossing gates, and add greatly to the safety of motorists and other drivers at grade crossings. This has never been possible before for fear of confusing engineers on passing trains, but a simple device worked out in the signal department of the Lehigh Valley Railroad has made feasible the adopting of red lights at every grade crossing in the country. It has always been tried out at the busy Wyandotte Street crossing in Bethlehem and has proved a success.

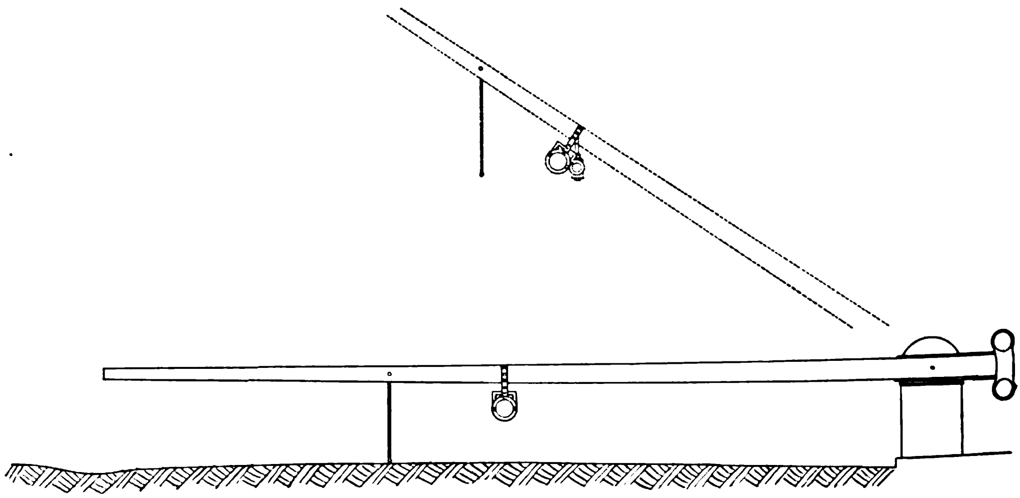
The ordinary crossing gate has a white light hung to the bar, which at night indicates by its position alone whether the track is clear. But by this device a piece of red glass set in a roundel, as in a frame, is fastened to the bar so that the white light swings behind it and shows red when the gate is down.

When the gate is up, as the roundel is stationary and the light swings, the light comes out from behind the red glass and shows white again. At no time is the red light visible from the track and traffic on the railroad is not interfered with, but the safety of motorists and the drivers of other vehicles is increased.

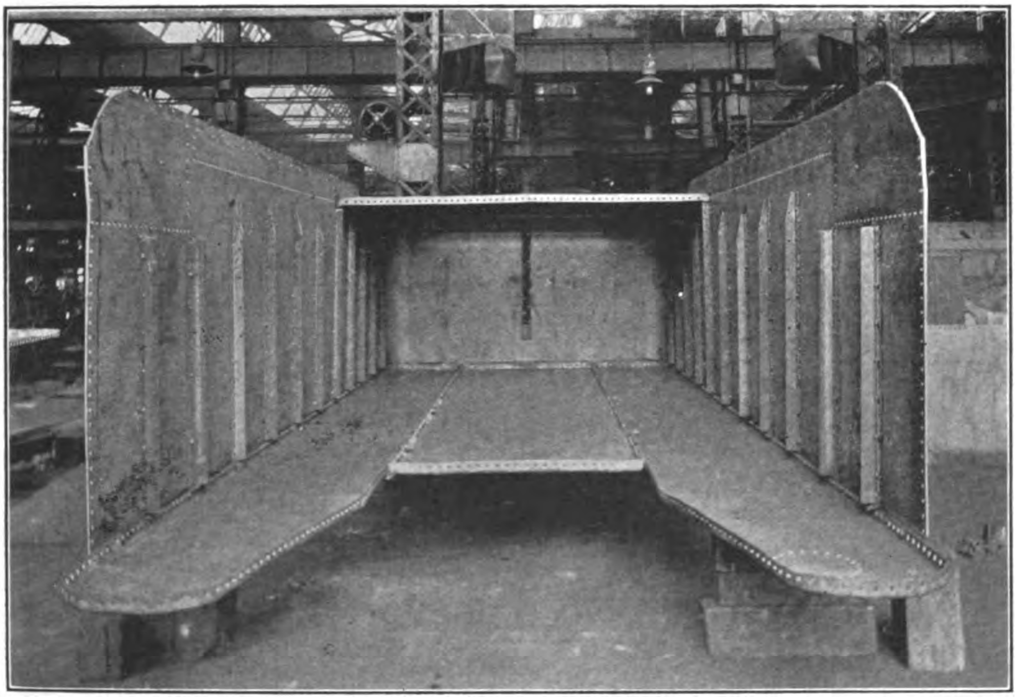
Improvement in Tender Tanks.

F. N. HIBBITS, superintendent of motive power of the Lehigh Valley Railroad, has by the simple expedient of bending a piece of steel, solved one of the most annoying of the smaller difficulties of railroading. In other words, he has invented a tender tank that does not leak. The old type of tank was always springing a leak in the bottom through a rivet hole or where an angle-iron at a corner became loosened, but in Mr. Hibbit's style of tank flanges are used, these have proved stronger and easier to repair and have now become standard on the Lehigh Valley. The accompanying illustration gives an excellent idea of the method by which this tank is constructed.

As indicated, the angle irons which join the side sheets with the top and bottom sheets, are eliminated. This is accomplished by flanging the top and bottom sheets, thus eliminating approximately 2,200 rivets and also eliminating all holes in the bottom of the tank. The top consists of one flanged pan and the bottom consists of three flanged pans, two side pans and one center pan. It is reported that the first cost of tanks of this construction, is less than for ordinary tanks, and that the cost of maintenance is also less, as all leaks can be repaired at any time without removing the tank from the tender frame.



METHOD SUCCESSFULLY ADOPTED BY THE LEHIGH VALLEY IN EMPLOYING RED LIGHTS AS DANGER SIGNALS AT GRADE CROSSINGS.



New Flange Type of Tender Construction Which Has Been Successfully Developed by the Lehigh Valley Railroad.

A Universal Blow Torch.

A NEW gasoline blow torch has recently been placed on the market by the Westinghouse Electric & Mfg. Company, East Pittsburgh, Pa., which embodies a number of novel features and improvements. These improvements, it is claimed, adapt the torch for all conditions of service and it is therefore called a Universal Blow Torch. An illustration of the torch and a cross sectional view of same are shown in the accompanying illustration.

The burner is made particularly heavy so that it will retain its heat and keep the torch burning in cold or windy weather. The drip cup is made especially deep so that it will start the torch under bad weather conditions. These features, however, do not detract from the use of the torch for indoor work.

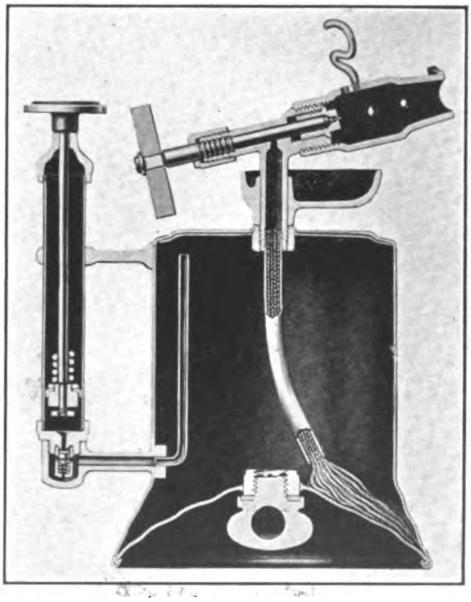
Another feature of the torch is the self-cleaning burner valve. The needle at the end of the valve stem cleans the hole automatically when the valve handle is turned. The valve seat need, therefore, never be injured by picking at the opening to clean it. The valve seat is a separate replaceable plug.

The handle of the valve is of fibre. This handle does not get hot nor does it need a long valve stem for cooling as does an iron handle. On the other hand it will not crack, loosen and come off as does a wooden handle. It does not char or burn.

The tank, it is claimed, is of the heaviest gauge brass ever used for torch tanks and is reinforced with an extra corrugated brass disc covering the entire inner surface of the tank pot. This insures the tank keeping its shape under very rough handling.

The pump valve works in a cylindrical guide which assures the perfect seating of the valve. It can be taken apart and any part replaced separately.

The illustrations show the quart size of torch. A pint size is also furnished which differs only in the shape and size of the tank.



A Blow Torch of Novel Construction Manufactured by the Westinghouse Electric and Manufacturing Company.

The Jones Automatic Water Tank Spout Lock.

R. H. JONES, of Peru, Ind., has recently applied for a patent on an automatic water tank spout lock, which contains meritorious features. The device as shown in the illustration, was first constructed at the local Chesapeake and Ohio Railroad shops and applied to their Marion, Indiana, water tank in the latter part of September, 1913. It is made of 3-16-inch strap iron, though No. 8 or even lighter iron may be used, thus reducing the cost as well as the weight. The method of application of this device can be changed or altered to meet the requirements of various types of water tanks, the operating principle, however, remaining the same. When the spout is returned to rest or upright position this device not only serves to eliminate the possibility of the spout working down and dangling over the track, but there is no wind that can dislodge the spout from upright position, nor will the spout be dislodged by one or both of the weight chains breaking. Another feature of importance which the testing of this device developed is that it minimizes the wear and tear on the spout—the denting and ultimate destruction of the spout by the tendency of an engineman to huri the spout back and upright against the tank is obviated by the device acting as a sort of brake and diminishes the shock of the spout which is thrown upwards with undue force. Since the device was installed in September, all kinds of weather conditions have been experienced and the device has negotiated this period successfully and without the necessity of any time or attention being given it; the simplicity of the mechanism, the small number of parts and the strength of the device has demonstrated wonderful wearing and lasting qualities.

Electrical

Electric Towing Locomotives for Panama Canal Locks.

THE first lot of electric towing locomotives for hauling vessels through the locks of the Panama Canal are now being received at the Isthmus. In all, forty of these "electric mules" are being built by the General Electric Company for this purpose. The machines weigh 82,500 lbs; measure 32 ft. 2½ in. long by 8 ft. wide by 9 ft. 3 in., the greatest height over the cabs; have an available tractive effort as high as 47,500 lbs. and a windlass rope pull of 25,000 lbs., and four of them, two on each side, will ordinarily propel steamships through the locks. Sometimes six engines will be needed to handle extra large vessels; in every case two astern, acting as a brake on the ship's movements, will give direction to her course. No vessel will be allowed to enter the locks and go through on her own power.

The locomotive is built up of cast steel side and end frames, cross ties and bedplates. It is mounted on two axles with wheels in accordance with MOB standards. The entire frame is supported from journal boxes of the regular railway type by means of coiled springs. The sides and top of the body are enclosed by sheet iron covers which fit in place and are very easily removable. At each end are enclosed cabs so that the locomotive may be operated from either end.

The locomotive is propelled by means of a rack rail while towing and while going up or down the steep grades from one level to another at a speed of two m.p.hr. While running idle or on return tracks, the speed is changed to five m.p.hr., and the machine is propelled by the regular traction method, the rack pinion being entirely released. This change is effected by manually-operated clutches located in the gear mechanism in connection with a lever in each cab similar to a steam locomotive.

The locomotive is driven by two 75 h.p. totally enclosed motors of the mill type, one being direct connected through reduction gearing to each axle. Three phase, 25 cycle, 220 volt current is used and is collected by contact plows. The motor and traction gearing is mounted on a common baseplate, which in turn is mounted on a driving axle and spring suspended to the locomotive frame the same as in regular railway practice.

In the center of the locomotive is located a vertical windlass with drum, the capacity of which is 800 ft. of one inch steel hawser cable. The windlass with its driving motors and gearing is mounted on a solid baseplate and is likewise independent of the movement of the locomotive frame. The cable drum extends above the locomotive cover and has a floating guard placed around it to retain the cable while coiling loose.

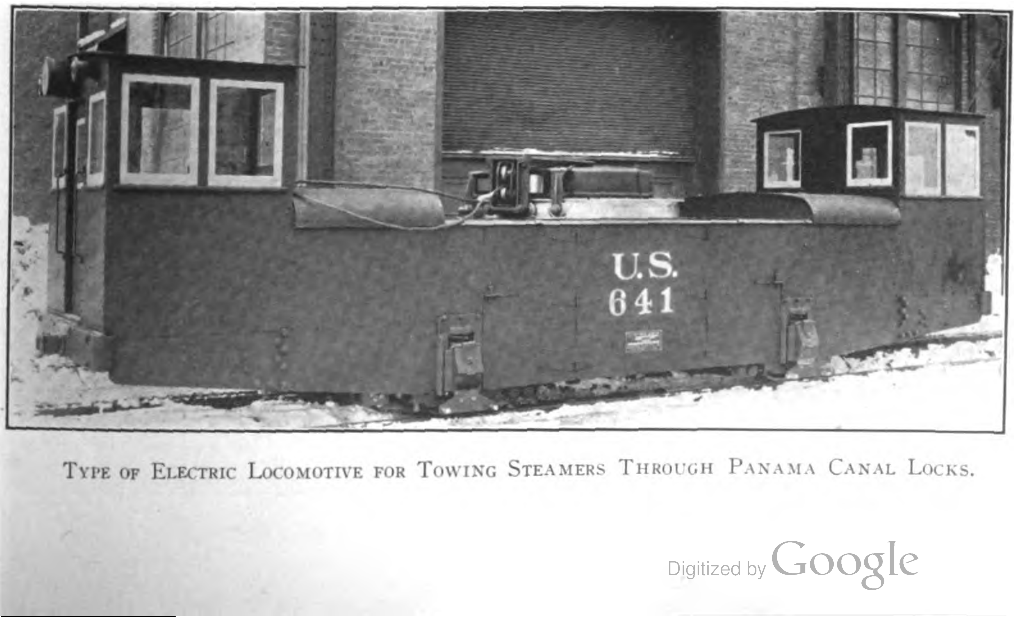
The windlass cable is handled by two 20 h. p. motors, also totally enclosed and of the mill type. One is geared for a rope speed of 12 ft. per minute at a pull up to 25,000 lbs. at two ft. radius, and its function is to adjust the position of the ship for anchor or while being towed through the locks. The other motor is geared for a rope speed of 200 feet per minute at two ft. radius and its duty is to take up slack or pay out cable or wind in any part of the entire length of cable as may be required. The cable drum is driven through a friction device which can be set at any desired value from zero up to the full capacity of the motor.

The traction motors as well as the windlass motors are controlled from either cab. In other words, the control equipment is duplicated. The two traction motors are operated by one master controller and contractors forward and reverse; while the windlass motors are operated by a reversible drum controller, and the clutch on the main vertical shaft by a solenoid. Later, we will be able to give a more detailed description of the mechanical and electrical construction and performance of those machines.

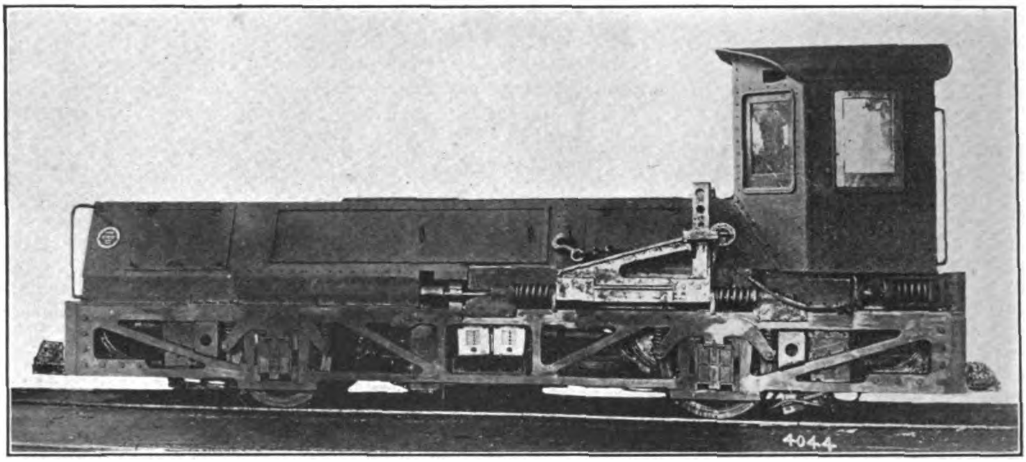
An Interesting Electric Locomotive.

FOR handling cars at their Cleveland ore docks, the Pennsylvania Lines West have recently had built three locomotives of unusual design.

The most novel feature in these locomotives is that they do not run on the same tracks as the cars they handle but on narrow gauge (42-



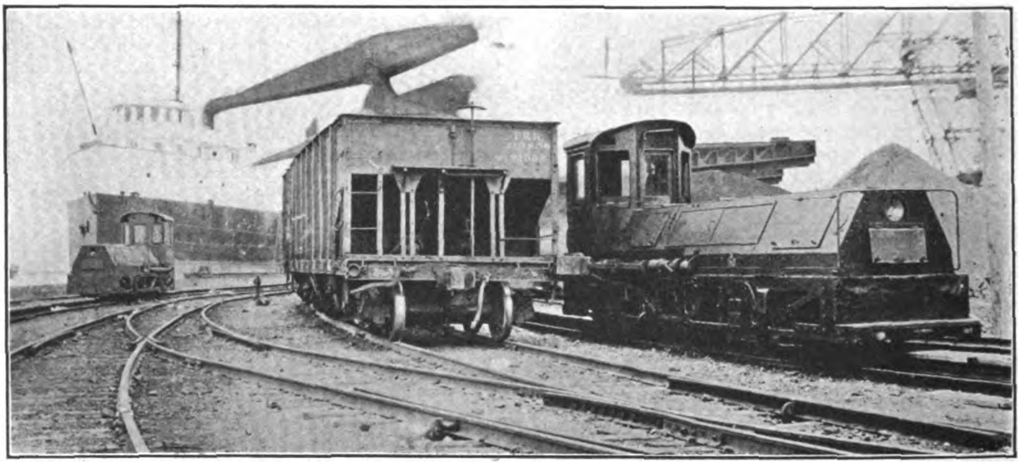
TYPE OF ELECTRIC LOCOMOTIVE FOR TOWING STEAMERS THROUGH PANAMA CANAL LOCKS.



Electric Locomotive Used on Pennsylvania Railroad's Ore Docks at Cleveland.

inch) parallel tracks. They are not attached to the cars by couplings but each locomotive is equipped with an arm on each side which can be lowered by means of compressed air controlled from the cab and acts as a pusher, as shown in the illustration. Single cars or trains can be easily handled and cars can be shifted and cut out from trains with the least time and trouble.

The locomotives are of Baldwin-Westinghouse make and are 25 tons in weight. They have bar steel frames, which give great strength but permit ready access to the interior. The motors are of the Westinghouse Electric commutating-pole type. Power is obtained from two rails lying inside the rails on which the locomotives operate; these rails are protected by a wood covering.



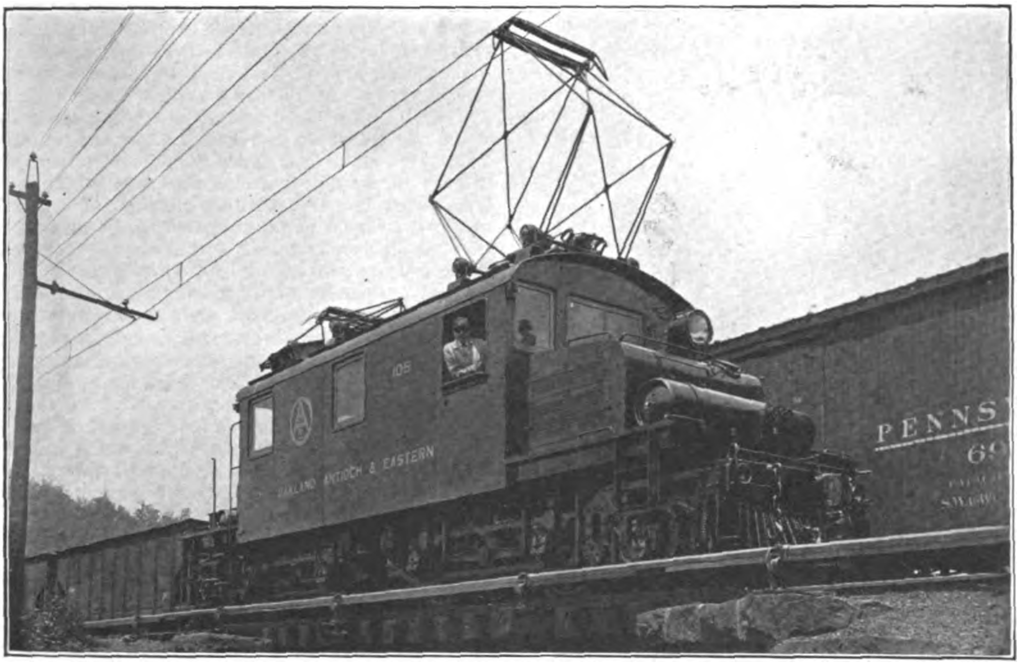
Showing Method of Coupling Electric Locomotive to Freight Car.

High Speed Electric Passenger Locomotive

BUSINESS has increased so rapidly since the opening of the Oakland, Antioch & Eastern Railway that in order to cope with the heavy through passenger traffic between San Francisco and Sacramento, it has been necessary to place in operation two 62-ton electric locomotives. The use of electric locomotives for hauling passenger trail cars instead of using multiple-unit cars is a new and noteworthy departure in the electric railway field. The phenomenal growth in traffic mentioned above is largely due to the opening up of new territory which has been heretofore practically inaccessible to the Bay Cities except by long round-about steam route.

The locomotives are of the 2-4-0 articulated truck type and each is equipped with four Westinghouse No. 308-D-7, 250 h. p. 600-1200-volt commutating pole motors and type HLF unit switch control.

Each locomotive when operating at a balancing speed of approximately 56 m.p.h. is capable of hauling a train of five steel passenger trail cars,



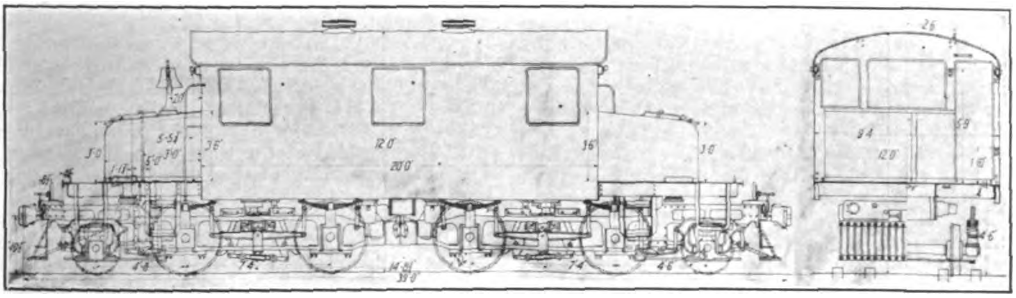
SIXTY-TWO-TON ELECTRIC LOCOMOTIVE OF THE OAKLAND, ANTIOCH AND EASTERN RAILWAY.

weighing 37.5 tons each, on a level tangent track with 1100 volts direct current on the trolley. With only three of these cars, one of these locomotives under the same track conditions is able to attain a balancing speed of about 60 m.p.h.

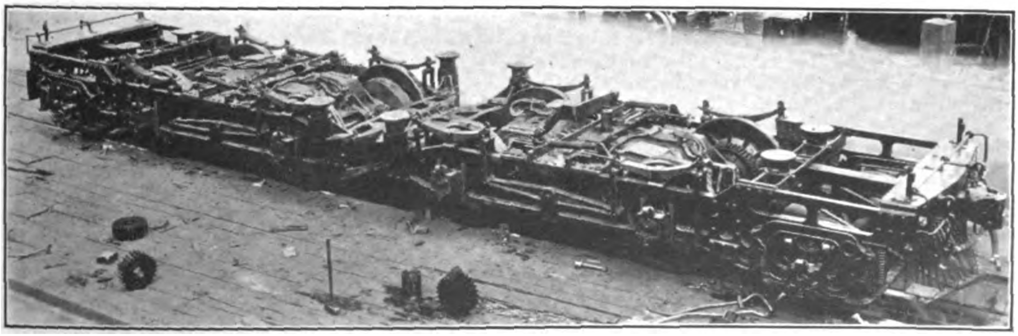
The mechanical parts were built by the Baldwin Locomotive Works, Philadelphia, Pa.

There are two articulated trucks each having six wheels, four of which are drivers, making a total of eight drivers per locomotive. Each group of wheels consisting of two pairs of driving wheels and one two-wheeled radial truck has an independent frame. These two truck frames are connected together with an articulation link. The cab is mounted on a separate frame which is supported on the truck frames by eight spring loaded friction plates, no draw bar pull being transmitted through the cab. The cab center pins carry no weight and are used simply to maintain the position of the cab with respect to the trucks.

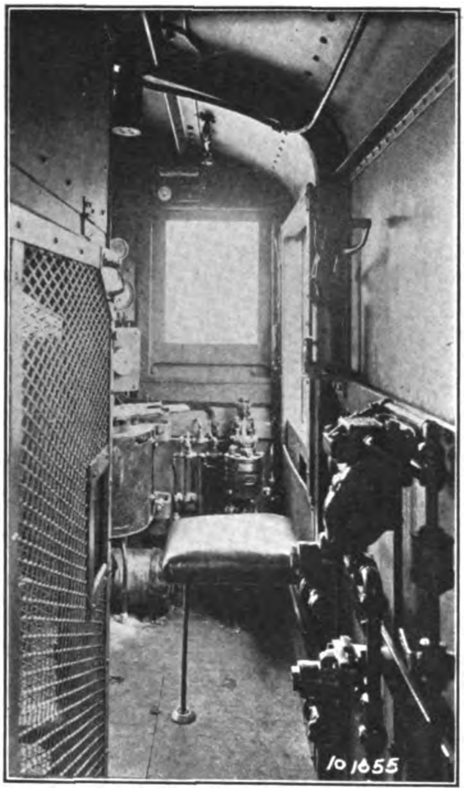
The truck side frames are steel castings of the



ELEVATION OUTLINE OF THE OAKLAND, ANTIOCH AND EASTERN RAILWAY ELECTRIC LOCOMOTIVE.



LOCOMOTIVE RUNNING GEAR SHOWING MOTORS MOUNTED.



Interior of Locomotive Showing Expanded Metal Cage Surrounding Control Apparatus, Also Operating Equipment.

steam locomotive type, 3½ inches wide, with their centers 76 inches apart transversely. These frames have renewable wearing gibs on the pedestals, and are designed in accordance with steam locomotive practice, except that in the present instance, it is unnecessary to use a tempered pedestal and wedge. The two-wheeled trucks under the ends of the locomotive are of the modified Rushton type with radius bars, and are equalized with the driven wheels. In each group of wheels, the equalization is continuous on both sides of the locomotive.

The truck frames are strongly braced transversely at each end, and also at two intermediate points. The crossties at the inner ends of the frames have radial faces which bear against each other. These crossties are provided with spring buffers placed 38 inches apart.

In negotiating curves, the inside buffers are compressed, thus tending to restore the alignment of the frames after the curve has been transversed. These buffers, being in contact at all times, also help to promote steady riding when passing over rough tracks.

The cab underframe is a built-up structure composed of channels, plates and angles. The longitudinal sills are four in number and they consist of eight-inch channels which have a length of 33 feet, 11¼ inches. The width over the outside channels is 8 feet, 10 inches. This structure is spring supported at eight points, four on each truck frame. The end supports are 37 inches apart transversely and the center supports are 90 inches apart. Longitudinally these center supports are placed close together as they are mounted near the ends of their respective truck frames. With this arrangement a minimum amount of shock is transmitted to the cab frame when the locomotive is running, and at the same time the trucks are maintained level under conditions of weight transfer due to the high tractive effort exerted by the motors. The center pins which hold the cab frame in alignment with the trucks are 14 feet 8½ inches apart. One of these pins is allowed a limited amount of longitudinal movement in the center plate on the cab-frame. This is in order to compensate for the varying distance between truck centers when the locomotive is traversing curves, and to relieve the cab frame from buffing shocks.

The cab is of steel plate with a hard wood floor. It is arranged for double end operation and is provided with a convenient arrangement of doors and windows. These are of such size that all the cab equipment can be removed through them. All walking platforms outside the cab are of rolled steel checker plate, and the arrangement of steps and handholds conforms to the requirements of the Interstate Commerce Commission.

These locomotives are equipped with head lights, pilots, and automatic couplers at each end. The couplers have radial draw-bars, which are provided with centering springs. This is an important feature, as in service these locomotives traverse curves of 100-feet radius.

The principal dimensions of these locomotives are as follows:

Gauge, 4 feet, 8½ inches.
Wheel base, rigid, 7 feet, 4 inches.
Wheel base, total, 31 feet.
Driving wheels, diam. outside, 42 inches.
Driving wheels, diam. center, 37 inches.
Driving journals, 5 inches x 9 inches.
Truck wheels, diameter, 30 inches.
Truck journals, 4½ inches x 8 inches.
Width overall, 10 feet.
Height on top of cab, 12 feet.
Length center to center of coupler knuckles, 39 feet.
Weight on driving wheels, 86,000 lbs.
Weight, total engine, 124,000 lbs.

The control for the traction motors is of the Westinghouse Unit Switch Field Type, similar to the Type HL except that the field control takes care of the extra field tap of the motors. With this type of control the time of acceleration during which running on resistance is necessary is considerably reduced.

The control equipment is mounted in a grounded expanded metal cage which protects the apparatus and yet allows it to be accessible for maintenance and inspection thus greatly assisting to insure reliable operation and continuity of service. These locomotives are designed for double-end operation.

Tenth Annual Electrical Night of the New York Railway Club.

THE meeting of the New York Railway Club on the evening of March 30th, constituted the Tenth Annual Electrical Night held by this organization. Addresses were made by eminent authorities in the electrical field, dealing largely with the progress being made in the electrification of steam roads.

Mr. William McClellan asserted that the past year has been a progressive one in electrification. He spoke of the plans of the Pennsylvania Railroad around Philadelphia, of those of the Norfolk and Western, of the Chicago, Milwaukee and St. Paul, and of the further extensions of the New York Central and the New Haven. From the standpoint of equipment, he considered the Norfolk and Western's electrification the most interesting, although the St. Paul marks the greatest advance on account of its length. He pointed to the fact that it is really the first long trunk electrification not demanded absolutely by grades, tunnels, terminals or some other special cause.

It was pointed out that the reason why there was no more to report, was not the fault of the electrical engineers, but of the uncertainty in the railway situation which has resulted in almost prohibitive figures being put upon the cost of new capital. Under such circumstances, railroads do not venture into new fields, unless driven by force. Electrified railroading usually means new capital and worse than all, new interest and amortization burdens. Inasmuch as there is ample proof that the most expensive thing in railroading to-day is capital, Mr. McClellan pointed out that the railroads must be content to use as little as possible until the world stops marking time.

Undoubtedly the most important address of the evening was that delivered by Mr. E. Huber-Stockar, of Zurich, Switzerland, consulting engineer of the Swiss Government, in direct charge of the electrification of the St. Gothard Tunnel, which is understood to be only the first step in the general electrification of all steam railroads in Switzerland. Mr. Huber was introduced by Mr. C. O. Mailloux, president of the American Institute of Electrical Engineers, who paid a glowing tribute to his ability and personality.

Mr. Huber, in addressing the members of the Club restricted himself to discussion of such railways on which steam locomotives have been used before or could be used. Under the conditions existing in Switzerland, such railways are generally standard gauge. He included, however, in the group, one narrow gauge line which he classed as main line, as per the accompanying table. To quote from his address:

"Of the total mileage of 319 km. of railroads electrically operated, around 210 km. are single phase and of these about 166 km. are operated with single phase alternating current of a low frequency for railway service, fifteen cycles per second.

"For some time the Government Committee has been at work in Switzerland investigation in the question of electrifying the railways of Switzerland generally and particularly certain main lines. This Committee was formed under the auspices of the Society of the Electricians of Switzerland; it was incorporated as a society called 'The Schweizerische Studiencommission fur electrischen Bahnbetrieb.' The Federal Government and the State railways were represented by membership on the committee; there were also representatives of the manufacturers and power companies. The committee was not a governmental one nor was it formed for the express purpose of reporting to the government. The committee have published reports from time to time giving the results of their investigations; at present they have in preparation a final comprehensive report upon the whole subject, which, it is hoped, will be published before long.

"In May, 1912, the committee reported, but not in a mandatory way, to the Board of General Managers to the Federal or State railways of Switzerland in regard to the practicability of electrifying the St. Gothard line, and recommended the adoption of the single phase system, more particularly single phase current of fifteen cycles directly generated by hydraulic power, with a voltage of 15,000 volts, possibly of 10,000 volts. The report showed a considerable saving to be realized by electrification assuming a tonnage which may certainly be expected at the time when the electrification is completed.

It seems that this report of the committee, by the way, no more recent at all, has been considered in this country as the report of a governmental committee to the Government of Switzerland. I would emphasize that this is not the case; though, the Federal Government and the State railways assisted it financially a great deal.

"The railroads in Switzerland are partly owned by private companies and partly by the State, more correctly by the Federation of Switzerland. There are approximately 3400 km. of normal gauge railways, of which about 2800 km. belongs to the Federation. There are about 1200 km. of narrow gauge railways, of which only about 60 km. are Federal. Besides these there are about 100 km. of track railways, about 450 km. of street railways and about 35 km. of rope railways.

"The Federal railways studied the problem of their electrification more or less independently of The Schweizerische Studiencommission fur electrischen Bahnbetrieb. They purchased water power rights and proceeded to prepare for the electrification of a section of the St. Gothard line. This line has long, heavy grades, an unusual percentage of tunnels, and a well established traffic, both passenger and freight, all of which tends to make electrification of that line a remunerative proposition. However, it must not be understood that the saving in operating expenses is the principal object of electrifying Swiss steam railways, at least not yet; because steam operation has not yet reached the limits of its capacity under present traffic conditions. Still, Switzerland is probably more nearly approaching a general electrification than most other countries, because the substitution of electricity for steam is a matter of general public interest in a country which has no fuel supply of its own, but an abundance of water power. Therefore, in the case of the St. Gothard line, where the capacity of the present steam operation is far from being exhausted, it unquestionably seemed preferable to begin electrification, rather than to spend money on extensive steam improvements, which are of vast importance, involving the reinforcement of almost all the bridges.

"The objects of the electrifications of the St. Gothard line in Switzerland are as follows: First, the speeds on the heavy grades can be increased so as to increase the traffic capacity to a much greater extent than would presumably be possible with steam. Second, the handling of trains by electric locomotives will simplify the handling of traffic causing a reduction in locomotive kilometers in relation to the number of ton kilometers. The assist engine on express and freight trains will be dispensed with. Third, the elimination of the smoke in the numerous long tunnels will improve the conditions under which train crews and trackmen work, and will doubtless reduce the cost of track maintenance in the tunnels.

"The following recommendations of the Board of General Managers of the Federal railways were adopted by the Board of Directors on November 30th, last year: First, the project of the electrification of the section Erstfeld Bellinzona, a portion of 110 km. double track line of the line between Luzerne and Chiasso (225 km.) is adopted and the sum of thirty-eight and a half million francs provided for the construction of power plants, electric track equipment, transmission lines, repair shops and their equipment. Second, the Board of General Managers are authorized to make such alterations on the project as may be necessary before or during the carrying out of the details of the work, provided that they do not thereby increase the expense appreciably."

Mr. George Gibbs followed Mr. Huber with an interesting and general account of the two important heavy traction installations under construction in this country, namely, those of the Pennsylvania Lines at Philadelphia and the heavy grade electrification of the Norfolk and Western at Bluefield, W. Va. Mr. Gibbs spoke in part as follows:

"I will take the case of the Norfolk and Western first. It is, perhaps, the heaviest electric traction scheme proposed anywhere in the world, as yet. The coal traffic of this railway is the important one, and originates in the Flat Top and Pocahontas fields, which lie on the west slope of the Allegheny mountains. There is a large coal movement to the west, but the most important coal traffic is easterly to tide-water; this has to be taken up the western slope of the Allegheny Mountains; it is this section of the road we are electrifying. That is the section between Bluefield on the east and Eckman on the west end, a distance of about thirty miles, or about ninety track miles. Within this distance and practically at the summit of the Alleghenies, is the Elkhorn tunnel, about 4,000 feet long; it is a single track tunnel, and constitutes "the neck of the bottle," limiting the capacity of the entire road. The alternatives for electrification to relieve congestion were either to double track the tunnel or to build a relief line, both of which would cost a great deal of money and require years of time.

"It is found that electrification of the existing tracks would not only give the desired increase in capacity of their line, but would give it promptly and would afford savings in operating costs which would carry the interest and depreciation charges on its cost and leave a handsome surplus besides. The maximum eastbound tonnage at present is about 65,000 tons per day up the grade, of which about 48,000 tons is revenue traffic—the tonnage, by the way, is exclusive of the ordinary tonnage of the road—it is simply coal tonnage that I am talking about. This tonnage is loaded in about twenty train units of 3,250 tons each, trailing load. This train is hauled up a two per cent grade over the mountain to Flat Top Yard by three mallet compound engines, thence to Bluefield, fifteen miles further over an undulating grade with 1¼ per cent maximum by two mallets. At this point trains are made up for the road run to tidewater. The entire thirty miles that we are electrifying is what we might call a 'gathering division,' the tonnage being filled out in the section from the various coal workings; it is, therefore, treated as a separate engine division, and this makes the substitution of electric for steam power unusually advantageous and economical. For these mallet engines we will substitute electric locomotives—a double electric unit at the head of the train and a similar one at the rear. The electric locomotives we have adopted are novel and will be described with some pictures, I believe, by Mr. Storer, of the Westinghouse Company. They weigh 130 tons, of which 110 tons are on the drivers and are exceptionally powerful and sturdy machines. As the road has a great amount of curvature, about forty per cent of the entire line being on curves up to twelve degrees, we feel that leading wheels would be an advantage in these locomotives and the design was adopted for this reason. The maximum drawbar pull of one of the single units, that is, one-half of the complete unit at the head of the train, is 48,000 pounds during acceleration, and about 42,000 pounds normally on the two per cent grade. We therefore, have at the head of the train about 100,000 drawbar pull during the acceleration period—about five times the amount Mr. Huber states is the limit of Swiss railways.

"The system of electric traction adopted is the single phase with an overhead trolley wire carrying 11,000 volts; on the locomotive the single phase current is converted to three phase by a 'phase-splitting' device, thus allowing three phase induction motors to be used, a type which has certain important advantages for this particular traffic. Transmission of current from the power house is 44,000 volts single phase, which is transformed in sub-stations along the line to the working pressure of 11,000 volts. The power house is a steam plant having a capacity of 27,000 kilowatts, and is located at Bluestone, about ten miles from the east end of the division. The foundations for the catenary line are in and we expect to begin the erection of steel in the next month or so, and expect to complete the whole installation by the early winter of 1914.

PENNSYLVANIA RAILROAD:

"The Pennsylvania Railroad has about reached the limit of its capacity in the Broad Street Station, Philadelphia, and the question of its enlargement has been under consideration for some time. It was found that by the electrification of the suburban service a large number of empty train and locomotive movements might be eliminated if the suburban service were electrified.

"The principal point of congestion at the terminal is at the junction of the six suburban routes in the yard outside of the headhouse. By suburban electrification it is figured that we can save from sixteen to twenty per cent of the total throat movements, and thus effect a corresponding relief during rush hours. The gain in station track capacity is not so important at the present time, as the main congestion point is in the yard, but the gain here will amount to an equivalent of about two station tracks and, of course, is not negligible. Initially we are electrifying the Broad Street—Paoli service only —twenty miles of four-track route; this will be followed, probably, by the conversion of the

Chestnut Hill line, as business conditions warrant. We do not expect to make money out of this electrification from the savings effected in operating expenses; if it carries its interest charges it is as much as we expect it to do. It is purely a case of emergency in effecting an equivalent of a considerable station enlargement.

"The electrification will be on the single phase alternating current system, with 11,000 volt trolley wires; trains will be of motor cars, each car having two 225 H. P. single phase motors on one truck. There is another interesting experiment which we are interested in carrying out. Some months ago we loaned to the Westinghouse Company a standard steel combination which they have equipped with four 225 H. P. direct current motors, a 'mercury rectifier' and alternating current control and transformer to poduce, in effect, a 1,000 H. P. A. C.—D. C. locomotive. Alternating current is taken from a 11,000 volt trolley line, passes through the transformer and control to the rectifier and appears as direct current for use in direct current motors. The car has been very thoroughly tested for some months in Pittsburgh, and has been lately sent to New York and is running, by courtesy of the New Haven Company, on their road in service tests. It is not yet open to public inspection, however. The experiment appears very promising and further widens the field of single phase traction for railroad service."

Mr. A. H. Armstrong, of the General Electric Company, spoke on the electrification of the Butte, Anaconda and Pacific, in part, as follows:

"In May, of last year, the Butte, Anaconda and Pacific began operating electrically in part, and in October practically the entire road of 114 miles of track was in operation with electric locomotives. The change from steam to electric motive power was made without mishap, and the same operating crews were retained and readily learned to handle the electric locomotives. The installation was successful from the start; in fact, so successful as to influence the management of the Chicago, Milwaukee and St. Paul Railway to adopt a similar system upon the 440 miles of projected electrification on that road.

"It is not my purpose to-night, to discuss the different systems of electrification other than to point out that the 2,400 volt direct current system now in successful operation upon the Butte, Anaconda and Pacific Railway offers a new method of electrical operation, and one possessing many qualifications for the heaviest type of main line service. The Butte, Anaconda & Pacific Railway comprises 114 miles of track and presents all the general characteristics of a main line road as regards profile and tonnage. Freight traffic consists of the movements of 5,000,000 tons of ore per year and this will be shortly increased to 7,500,000 tons besides mine supplies, miscellaneous freights, etc. Main line trains of 4,000 tons trailing load against a ruling grade of .3 per cent are hauled behind electric locomotives weighing 160 tons, all weight upon the drivers, and operating at a speed of approximately sixteen miles per hour on ruling grade. At Anaconda, trains of 1,600 tons are hauled against 1.1 per cent grade making the run up Smelter Hill in half the time previously required with steam engines. The entire road is fed from two sub-stations located at Butte and Anaconda respectively, 26 miles apart, power being furnished by the Great Falls Power Company. The entire installation is a successful example of the ease with which a road may be changed from steam to electric operation with a system well adapted to fit with coal requirements of operation as well as power supply. The fluctuating load of this road is fed from the general distribution system of the Great Falls Power Company without in any way interfering with its regular service, a considerable part of which consists of lighting load.

"Aside from the interest attaching to the success of this latest example of electrification, the equipment used is of special interest as demonstrating beyond question that high voltage direct current locomotives can successfully handle the heaviest traffic and receive power from existing distribution systems without in any way imposing on such systems any handicap of special apparatus or interference with regular service. This is all due to the great improvement made in the direct current motor with the introduction of the commutating pole which permitted the building of such motors for higher potential and made possible 2,400 volts on the trolley. After nearly one year of operation it seems fully demonstrated that the direct current motor at high voltage has lost none of the ruggedness and reliability in operation which has been its chief characteristics on our surface, elevated and subway lines."

Wheelless Electric Trains.

ENGLISH railroad experts have recently been astonished by demonstrations given in London of a new wheelless electric train invented by Emil Bachelet. With the employment of models, the inventor has demonstrated how he can send a car at a speed of 300 miles an hour through space. After twenty years' work Bachelet has perfected his invention, which is based on a new electrical principle. He discovered that the effect of a magnetic coil on aluminum and certain other metals is to repel instead of attract.

Bachelet's model car is cigar-shaped. When stationary it rests on a track below, which, at intervals of two feet, are electrical coils arranged to deliver magnetic lines of force against the resisting aluminum of the car. As soon as the electric influence is set in motion, the coils push the car away and the vehicle is raised clear of the track. The car is drawn along by pulling magnets, shaped like tunnels, at intervals of twenty-five feet. The car passes through the magnets, which are automatically energized in succession.

The models of this new train are housed in a secret room at the top of a building in London. In making a demonstration the inventor at the switchboard near a miniature track pulls a lever and the car springs forward with lightning speed. Bachelet says the operative cost of his railroad system would be infinitesimal compared with ordinary railway operation expense. His cars are without engines, wheels, bearings, armatures, commutators, and they require no oiling and little adjustment or repair. One railroad expert said the cars could be driven at a rate of 600 miles an hour, provided the power were strong enough.

Terminal Improvements

Vancouver Terminal Improvements.

THE Canadian Pacific Railway Company terminal improvements at Vancouver, B. C., are rapidly nearing completion and the subjoined plans and photographs may be of interest as giving an idea of what is intended to be done at that point and what is the present state of the work.

Front Elevation of the Canadian Pacific Railway's New Passenger Station at Vancouver, B. C.

It will be recalled that the general scheme embraces a passenger station and office building located on land immediately east of the present passenger station. Another dock 200 x 490 feet has been built. A particular point of interest in this work was the use of piles 135 feet long on the pier end. The main entrance to the station is located on Cordova Street with the main waiting room on the street level. Tracks are located about 25 feet below this level and there is provision for four passenger tracks separated by wide platforms. Stairways and lift connect the two levels of the station and a separate footbridge is carried over the passenger tracks and directly connected with the waiting room at one end and with the stairways leading to the track level thus giving access to the platforms without crossing the tracks at grade.

In order to avoid a grade crossing and the consequent delays to traffic between the city and the piers a steel viaduct is being built on the line of Granville and Burrard Streets passing over the tracks to the piers. An incline is also being built on the west side of the Granville Street viaduct to the wharf thus giving access to the lower deck of the pier and freight sheds and to the water front.

The passenger station is a combination stone and brick structure with a steel frame. The station is divided into two principal levels on the lower of which are the baggage, mail and express rooms while on the upper are ticket offices and waiting rooms. Above the public rooms in the station the space will be devoted to the general offices of the railroad company. The interior arrangement of the office space will be on the

CANADIAN PACIFIC RAILWAY'S NEW JETTY PIER "D," VANCOUVER, B. C.

unit system and each unit will have complete heating and lighting facilities with partitions that may be readily installed or removed as changes in the arrangement of office accommodation become necessary.

The principal problem was to provide easy and economic communication between the city, the railroad station and the piers, these last introducing an element which is unusual in most railroad terminals so far as passenger traffic is concerned.

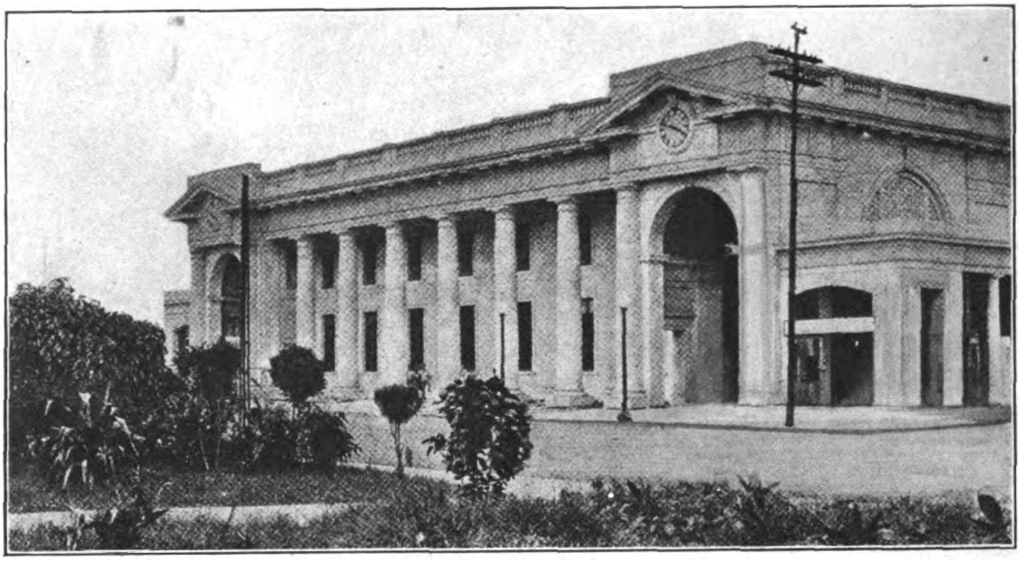
It is expected that the station will be ready for occupancy during the summer and that the steamship station facilities will be available somewhat earlier although due to the necessity of removing the old station before the viaduct can be built on the extension of Granville Street the use of the present grade crossing over the freight yard tracks will have to be maintained for a month or two longer.

Messrs. Barrott, Blackader and Webster, of Montreal, are the architects for this work. Westinghouse Church Kerr & Co., of Montreal, are the engineers for the complete design, construction and equipment of the terminal working in co-operation with the officials of the Canadian Pacific Railway.

New Station in Panama.

THE new station in Panama, which was first taken into active consideration by the Panama Railroad officials in 1912, has been completed and its general appearance is indicated by the accompanying photograph.

The station, whose main building is of two story construction, has a frontage of 167 feet with a three story wing in the rear extending back 100 feet to the alighting platform. The level of this platform and of the baggage room leading from it, is about seven feet lower than the street curb in front of the building, per-



THE PANAMA RAILROAD'S NEW PASSENGER STATION.

mitting the introduction of a messanine story in the rear wing. The ground floor of the main building is at the same level as the side walk and contains separate entrances, porte cocheres, vestibules and waiting rooms for each of the two classes of passengers. Stairs have been avoided wherever possible so that almost every portion of the building, to which the general public has access, can be reached by means of ramps having a seven per cent slope.

There is both a first and second class waiting room, the one for the first class passengers has a beamed ceiling executed in plaster and the walls decorated in plain panelling, while the second class waiting room has no relief decorations. Both the first and second classes are served by the same ticket seller and use the baggage room in common.

Climatic conditions have made it advisable to provide carriage accommodations, ample in extent and well protected from the weather. In accordance with the Panama Railroad's long established custom of providing quarters for employes, the entire second story was divided up into rooms for bachelors. Offices and a room for unclaimed baggage are placed in the mes-

sanine story, directly above the baggage room.

The location of the baggage room was determined by the make up of the Panama Railroad trains. Irrespective of the direction in which they are going, they always have the first class coaches on the southern end of the train and the second class coaches on the northern end, and the baggage car or cars in the middle. Hence, it follows that the most logical position for the baggage room is on the axises of the building adjoining the alighting platform and at the same level.

On the north side of the baggage room, a service court four feet below the level of the alighting platform is provided for the use of mail and baggage wagons. Service roads leading to and from this court pass under the passenger and carriage ramps connecting the main building with the alighting platform, an arrangement which makes the handling of baggage absolutely independent of the movement of passengers. Certain incoming trains, have, on the rear, either an observation car, or a hospital car bringing patients to Ancon Hospital. The patients are carried across the alighting platform to an ambulance, waiting in the turn-around. When an observation car takes the place of a hospital car, the ambulance is replaced by public carriages.

The carriage and service roads in the grounds form an integral part of the plans. They are laid out with the object of preventing congestion and confusion by keeping all vehicles and pedestrians on a given road or sidewalk moving in the same direction. The baggage wagons, for example, will enter the service road from the Twenty-third Street extension, whether empty or loaded, and leave by the service road at the north end of the grounds. The "coaches" or carriages, when bringing passengers to a departing train, will enter either the first class or second class driveway, and discharge their passengers at the waiting room or continue down the carriage ramp and draw up along the alighting platform. The roof of this platform projects thirteen feet over the road, so that passengers, even during a tropical downpour, will be protected from the wet. Coaches awaiting the incoming train will line up along the alighting platform.

The entire exterior and most of the interior first floor of the main building are finished in white cement stucco, tinted with mineral colors. This gives a more pleasing texture and color than the usual painted stucco and possesses the added advantage of lowering the cost of maintenance. Iron and steel corrode so rapidly in the hot, moist atmosphere of the Isthmus that they have been used sparingly, and, whenever practicable, bronze has been substituted. Welch floor tile is used practically throughout the building for floors. The principal exceptions are the concrete floor of the baggage room and the white tile floors of the toilet rooms. The public toilets on the first floor have a five-foot wainscot of sanitary glass. What little finishing lumber was used in the first class waiting room and its dependencies, is of mahogany, a wood which is not molested by ants. Cypress, used elsewhere in the building, possesses the same quality of repelling boring insects.

The principal items of equipment are the fitting of the news stand, with its glazed wall cases, counters, etc., and the bulletin boards, two in each vestibule and one in each waiting room. Four of the six are fitted with a train annunciator device in the upper portion. There are also in each vestibule gongs, controlled from the alighting platform, which announce the departure of trains. Ice water is piped throughout the building from a central cooler located in the baggage room. A main panel board in the closet of the main stairs controls all lighting and power circuits on the grounds and building.

Six different contractors submitted bids. Of these, the Central American Construction Company, Limited, of Colon, was the lowest bidder, and, on September 10, 1912, the contract was awarded to it. The formal contract was dated three days later. For the sum of $81,688, the aforesaid company agreed to furnish necessary labor and material for the erection of the superstructure complete and for the razing of the old station. A few items were not included in the contract, but were furnished by the Panama Railroad. Under this heading come the bronze lighting fixtures, electric clocks, ticket cases, seats upholstered in cane for the first class waiting room, and wooden slat seats for the second class waiting room. All of these were designed by the architect and bought, for the most part, through the office of the General Purchasing Agent. The mahogany seat ends in the first class waiting room are made at Cristobal in the Panama Railroad carpenter shop, just before it was discontinued.

The New Union Station at Wichita.

THE railways running into Wichita, Kansas, namely, the Santa Fe, Rock Island, Frisco and the Orient, have recently completed their new Union Station at that point, and, as the accompanying photograph indicates, it is a building of unusual artistic merit. The actual work of construction was performed under the direction of the Wichita Union Terminal Railway Company, which was organized by the four railroads involved. It includes, as well as a new Union Station, a system of track elevation. The total cost is estimated at approximately $2,000,000.

The main tracks of the Santa Fe, Rock Island and Frisco run through the town on parallel lines only a short distance apart, and in order to avoid a very hazardous grade crossing on the main business street, the tracks running to the new station have been elevated a distance of one and one-half miles.

The new station is 260 feet in length, by 100 feet in width. Additional buildings have also been provided for the accommodation of the various express companies and for the handling of mail.

Another photograph shows the main waiting room which is on the east side of the building, and need not be entered by passengers going to the trains unless they desire to sit down. The ticket office fronts on the concourse and grouped about the concourse, as a center, are the waiting room, dining room, news and parcel stand and the smoking room, while the telegraph office, telephone booths and baggage checking counter, are located in a passage way just south of the concourse.

The station and express buildings are of reinforced concrete and are fireproof throughout, while the Douglas Avenue facade is of a hand-

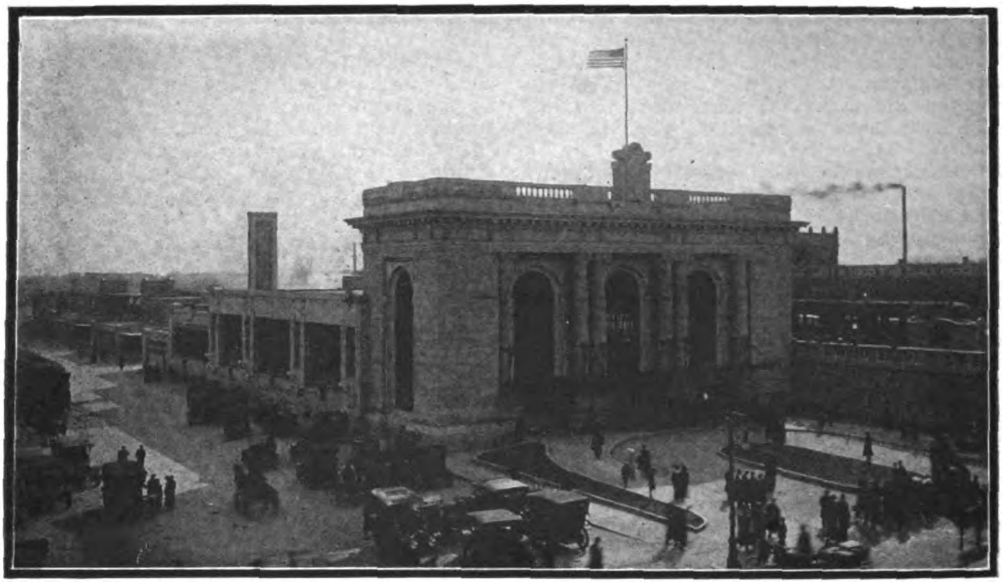
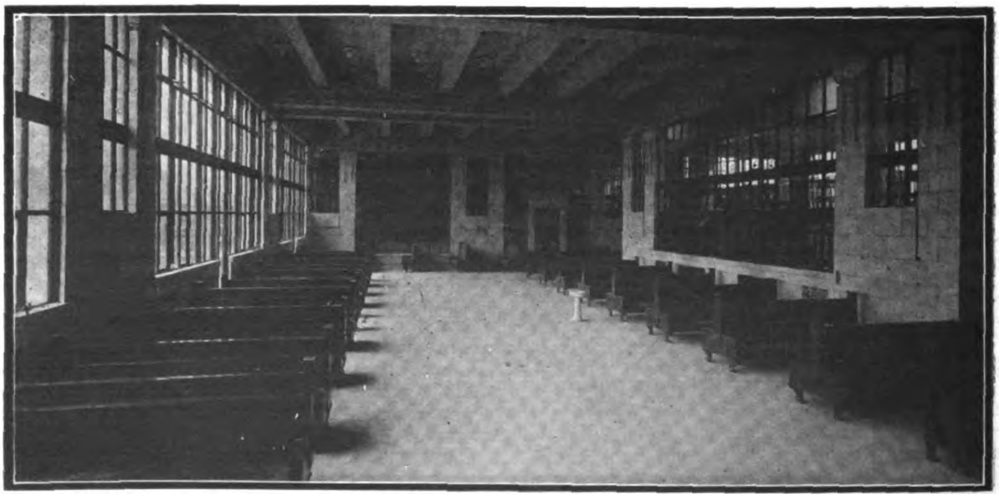
Track Plan and Profile of Wichita Track Elevation

some white stone. The east and west elevations of the station are of terra cotta, the interior being furnished with white terra cotta. The station has marble floors throughout.

The fact that the tracks are elevated, permits of the construction of spurs under them and inclines leading to each of the three platforms. This is an ideal arrangement for a through station as there is only a difference of level of ten feet between the waiting room floor and the track platform. There is a four track main line the entire length of the elevation which provides for a double freight and double passenger main. At the station, the passenger main lines spread out into five through tracks. There are also three passenger spurs, provided for branch line trains which use Wichita as a terminal. Just south of the depot there are ten tracks on the



View of the Beautiful New Union Station at Wichita.



Main Waiting Room of the Wichita Union Station.

elevation. This will take care of Wichita's business for a great many years to come.

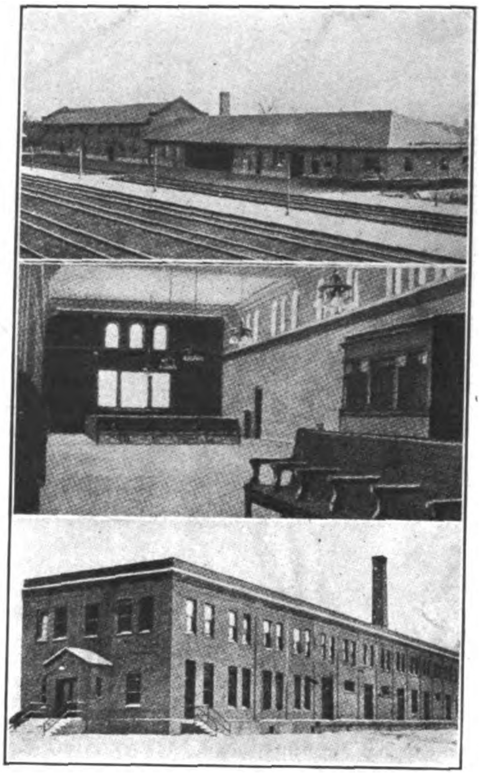
At the north end of the terminal tracks connections are made with the Santa Fe, Frisco and Rock Island, and these connections are so planned that at the point where the tracks diverge a four-track movement can be made. The same thing holds true at the connections at the south end. It will be seen by this plan that two Rock Island freight trains can meet each other at the Orient crossing at the same time that two Santa Fe passenger trains are meeting each other at the same place. Two complete electric interlocking plants are being constructed, one at each end of the elevation.

North Western's New Passenger and Freight Stations at Huron, S. D.

THE Chicago North Western has completed and opened for the use of the traveling and shipping public, large modern passenger and freight stations at Huron, S. D.

The passenger station is a most attractive structure 216 feet long by 45 feet deep. It is built of brick and has a concrete foundation and slate roof, insuring absolute protection against fire. It includes a large waiting room, dining room, lunch counter, ticket office, women's rest room, men's smoking room and the latest and most sanitary toilet conveniences. Just beyond the station building proper and connected by it with a canopy, is another fire-proof building 30 feet by 86 feet deep for the handling and storage of express and baggage. This building contains comfortable quarters for conductors and trainmen.

The new freight house is across the street from the passenger station and is also constructed of fireproof material throughout. It is a two story building with a length of 200 feet and a depth of 40 feet. The entire first floor is given over to a local freight office and general receiving and shipping room. On the second floor are light and roomy offices for the division forces, general superintendent and traveling agent. Extending from the building to the freight loading tracks is a covered transfer platform, affording a sheltered place for employes to work in, and protecting incoming and outgoing consignments from the inclemency of the weather.



New Passenger and Freight Stations of the Chicago North Western Railway at Huron, S. D.

Interstate Commerce Commission.

Railway Earnings for February.

THE Commission has made public figures compiled by it with regard to the revenues and expenditures of railways in the United States for the month of February. These figures constitute a powerful argument in favor of the application of the Eastern roads for a five per cent increase in freight rates. Some of the most striking features of the Commission's statement are as follows:

That for the month of February, 1914, the net revenue per mile on the Eastern railroads was $188 as against $413 a year ago. That the total operating revenues of the Eastern carriers was $71,943,390 in February as against $83,582,906, a decrease of more than $12,000,000.

That the total operating expenses in February of this year amounted to $63,311,927, as against $64,633,123 a year ago.

In net operating revenue there was an enormous decline, one that is said to be unprecedented. In February, 1914, the net operating revenue amounted to but $8,631,463, as against $18,949,783 in February, 1913.

The revenue per mile in February amounted to $1,565 as against $1,821 a year ago.

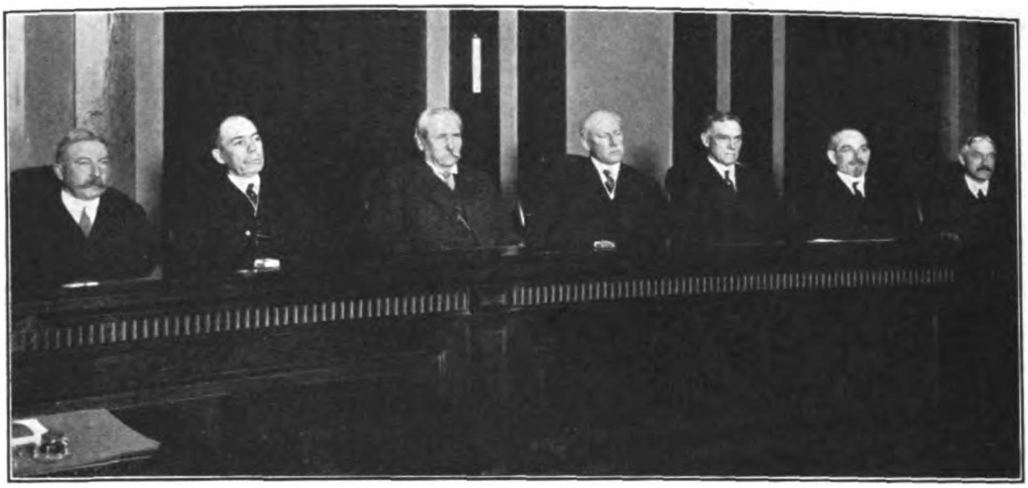
According to the statement, to meet these increased expenses and declines in revenue, the carriers in the Eastern district reduced expenses per mile to $1,377 in 1914, as compared with $1,408 per mile in 1913.

The statement shows the following for all railroads of the United States whose annual income is more than $1,000,000.

In February, 1914, the total operating revenue amounted to $182,739,376 as against $203,170,060 for the month of February, 1913, a loss of over $21,000,000.

Total operating expenses showed $146,941,132 as against $150,892,609. Net operating revenue for February, 1914, amounted to $35,798,244 as against $52,277,451 in February, 1913.

Revenue per mile $908 in February, 1914, as against $1,017 in February, 1913. Net revenue per mile decreased from $262 in February, 1913, to $178 in February, 1914.



THE INTERSTATE COMMERCE COMMISSION.

The Commission as Now Constituted.

THE accompanying illustration shows the Commission in session with a full bench for the first time in several months. As heretofore reported, President Wilson has recently made two appointments to this body, one occasioned by the death of Commissioner John A. Marble, and the other to fill the vacancy created by the resignation of Charles A. Prouty, who has taken charge of the physical valuation of railroads on behalf of the Commission.

The new members are Henry Clay Hall, of Colorado, and Professor Winthrop M. Daniels, of New Jersey. The confirmation of the appointment of Mr. Daniels, who was a New Jersey railroad commissioner, and, at one time, a member of the faculty of Princeton University, was the result of a three-day contest in executive sessions of the Senate and was finally granted by a very close vote. Mr. Daniels is a personal friend of President Wilson's.

Commission Defends Its Course in Rate Increase Case.

COMMISSIONER E. E. CLARK, in a recent letter to A. A. Housman and Company, of New York, warmly defends the attitude of the Interstate Commerce Commission with regard to the advance rate case and asserts that there has not been, nor will there be, any unnecessary delay in arriving at a decision, and that the policy of the Commission is that of absolute fairness towards all interests concerned. The letter is as follows:

"The Commission has no powers except those specifically delegated to it by law. It has no power to approve or disapprove of a rate except 'after full hearing.' It may be that it would have been a good thing for the railroads and certain other interests if the Commission had, without full investigation, immediately approved the proposed general increase in freight rates, but it seems to me that if that had been done in this instance it would be an invitation not only for the roads in other sections of the country to immediately follow with like requests, but for the roads in the territory immediately involved to present an additional request of the same nature if they thought that such action would be to their interests.

"Whatever the transportation charges are the consumers have to pay them, and we think that the consumers' interests are not to be entirely lost sight of.

"I have never felt and do not now feel that one or two black sheep in a flock make the entire flock black. I do not condemn all railroads' financing or all railroad managements because some of their financing and some of their management is both indefensible and inexcusable, any more than I condemn the Christian religion because occasionally a bad man is found in the clergymen's coat.

"I have not been able to quite understand why in this instance a propaganda of importunities, criticism and abuse has been launched against the Commission because it did not decide a question which had not yet been submitted to it. The tariffs proposing these increased rates were filed to become effective November 15, The duty rests upon the Commission to give full hearings and to properly investigate the reasonableness and necessity for the increases and the question of reasonableness is not at all a one-sided question. It means that the charges shall be reasonable for the carrier and for the shipper.

"We have been taking testimony in this situation almost continuously and there has been no policy of delay on the part of the Commission and no delay attributable to us which is fairly the subject of any criticism whatever. The railroads completed the submission of testimony in the proceedings within the last twenty-four hours. The protestants against the increases have not completed their testimony. The Commission has arranged to hear oral argument on the main question involved during the latter part of this month that being the earliest date within which the parties who desire to argue it could properly prepare for argument and prepare their briefs.

"The Commission is proceeding in an orderly way and in a judicial spirit. We do not understand that the law contemplates or that it would be in any sense proper for the Commission to determine questions of this importance upon the basis of which side could secure the largest number of petitioners which side could make the most noise, or which could indulge in the most abuse.

"We are glad to have the expression of views of those who are interested and we undertake to give due and proper consideration to every view thus properly expressed and we shall endeavor to do our duty on the premises realizing, of course, that we must assume and meet responsibilities for our action."

New Passenger Rates Further Reduce Carriers' Income.

THE new passenger rates which become operative on May 1st, and which were filed in conformity with the long and short haul provision of the law under orders of the Commission, show that a considerable percentage of fares on the direct routes will be reduced, but there will also be a number of increases on the indirect routes. The net result, however, will be a general reduction in the revenues that the railroads derive from this class of service.

The new tariffs are the result of the decision of the Supreme Court in upholding the State passenger fare laws, and the decree of the Interstate Commerce Commission compelling the roads to obey the intent of the long and short haul clause of the interstate commerce act. Due to the State two-cent rate laws, it often happens that a through rate is higher than the combination of the local rates. This situation the Commission ordered the roads to correct, making the through rates not higher than the combination of the locals.

The important phase of this question is its bearing upon the petition of the Eastern railroads for permission to make an increase of five per cent in freight rates. The roads claim they have suffered great losses in other directions and now they are compelled to suffer reductions in revenue due to the new passenger fares forced upon them by law.

"Spotting" Tariffs Suspended.

SEVERAL thousand tariffs recently filed by the railroads, canceling allowances heretofore made to twenty named industrial railways in various parts of the country, have been suspended by the Commission until July 30th, with the exception of those affecting the United States Steel Corporation. An inquiry now is in progress with a view to determining whether the allowances made by the trunk lines as divisions of their rates, do not constitute, in a legal sense, rebate on shipments handled by the industrial roads. The Commission found in its investigation of allowances made to the industrial railways controlled or owned by steel and iron companies, that the payments constituted a substantial rebate to the shippers and tariffs canceling those allowances have been permitted to stand.

Half Rates for Refugees.

RAILROAD companies with lines extending to the Mexican border have obtained permission from the Commission to give reduced rates to the State Department for the transportation of American refugees from Mexico.

A fund of $500,000 to bring refugees away was placed at President Wilson's disposal by Congress last week at the President's request.

The Southern Pacific Railroad has agreed, at the request of Secretary Bryan, to carry the refugees at half rates.

Water Line Decisions Indefinitely Postponed.

THE Commission has issued a ruling to the effect that the railroads may continue their interest in water lines after July 1st, provided they have applied for such continuance to the Commission, at least until such time as the Commission shall have passed upon the merits of the applications.

The Panama Canal act requires that the common carriers by rail which have direct or indirect interest in common carriers by water must divest themselves of that interest by July 1, if the two carriers may or do compete for traffic. The act confers upon the Commission discretionary authority to determine whether the rail carrier shall divest itself of its water lines.

It has been evident to the Commission for weeks that it would be physically unable to pass upon all the applications by July 1. It probably will take several months to hear and determine the many proceedings which have been instituted. Meantime, no change in the general situation will take place.

Private Car Inquiry.

RAILROADS and shippers have been notified by the Commission that it is desired that they should discuss certain stipulated questions in the briefs they intend to file in the private car case. In this proceeding the Commission will not file a brief, inasmuch as it will be expected of the respondents to discuss stipulated propositions upon which the Commission especially desires light. The Commission also announced that the discussion on the private car case will not be limited to the subject matter of the questions propounded, but any other matters embraced in the testimony already offered in the investigation which may be deemed pertinent to the problem may be included.

Following is the list of questions the Commission is desirous of having the respondents discuss in their briefs:

"1. If equipment of a special character is owned or supplied by carriers, should a service charge in addition to the freight rate be assessed?

"2. Where the carrier has no available equipment of the kind required by the shipper, should it procure same for the shipper from a car owner, or should the shipper be permitted to make his own arrangements with car owner and supply equipment for his own use? This question to be considered as to, first, ordinary equipment; second, special equipment (the terms 'ordinary' and 'special' in this connection to be defined).

"3. If concerns owning private cars are to be permitted to continue to furnish them to shippers and to make a charge direct to the shipper for the use thereof, should not tariff naming such charges be filed with the Interstate Commerce Commission?

"4. If the railroads are to continue using cars of private ownership, should such car owners be subjected to regulation by this Commission?

"5. What compensation should be paid by the railroads to the car owner or lessee for the use of his equipment, both ordinary and special? Should this compensation be on a mileage or per diem basis, or both? Should compensation be different? (a) Where carriers individually or jointly agree to supply equipment, but shipper elects to supply his own cars? (b) Where carriers fail or refuse to supply suitable equipment and shipper is practically compelled to supply his own cars?

"6. What relation should the investment in the private car, its cost of operation, maintenance and depreciation, and the loaded and empty per car mile freight earnings bear to the rental or allowance to be paid by the carrier for the use of such car?"

"7. Should charges for refrigeration be a stated sum for the entire service, or should they be based on the weight of ice and salt furnished?

"8. (a) Should the railroads be required to perform the initial icing? (b) Should they be required to perform all re-icing? (c) Should they be required to own all of the icing stations and facilities on their respective lines? (d) Should they be permitted to contract with a shipper or shippers of perishable freight for re-icing en route?

"9. Do not the present rules carried in the exceptions to freight classification unduly discriminate in favor of shipments made by the packers in that lower minimum weights and more liberal mixing and other privileges are accorded shipments made by these interests than are accorded other shippers of some of the same commodities, and do not the rules relating to mixing, minimum weight and charge, part lot shipments, return of empty containers, etc., encourage the light loading of cars, the loading of non-perishable freight in refrigerator cars, and result in a greater number of car miles than are reasonably necessary to transport the tonnage?

"On what grounds are empty containers used in shipping meats and packing house products considered a part of the car any more than empty beer packages?

"10. Should present demurrage rules applicable to privately owned cars be allowed to stand, or should they be changed? If changed in what respect?

"11. Should the M. C. B. rules be filed with the Interstate Commerce Commission?"

Rock Island and Pere Marquette Inquiries.

THE Commission has instituted two proceedings of inquiry and investigation relating to Pere Marquette Railroad Company and to the Chicago, Rock Island and Pacific Railway Company. Representative Cramton, of Michigan, introduced a resolution providing for an investigation such as has been ordered by the Commission into the affairs of the Pere Marquette Railroad Company, and Representative Green, of Iowa, introduced a similar resolution providing for an investigation of the affairs of the Chicago, Rock Island and Pacific Railway Company and affiliated companies.

These resolutions were referred to the Commission by the House Committee with a view to determining whether the Commission could conduct these investigations through its division of physical valuation, thereby saving a duplication of labor. As a result of the conferences had with the Commission, the House Committee, instead of recommending the passage of said resolutions by the House of Representatives, requested the Commission to proceed with them as a part of the work of physical valuation and the investigations above mentioned were accordingly instituted by the Commission. Both of the roads mentioned have been the subject of some public criticism, and it is understood that the resolutions and the proposed investigations thereunder are deemed to be matters of considerable public importance by the House Committee.

The Commission proposes to make a thorough investigation in each instance, will take up the work at an early date and will prosecute it to completion as rapidly as may be possible in connection with other important matters now pending before the Commission.

Commission Approves New York Central Plans.

ENDORSEMENT has been given by the Commission to the proposal of the New York Central and Hudson River Company to issue $167,102,400 of 4 per cent mortgage bonds to take up outstanding bonds, incident to the consolidation of the New York Central and Lake Shore roads.

Facts in relation to the proposed bond issue and the Commission's opinion concerning it were transmitted to the Senate in a report prepared by Commissioner Judson C. Clements in response to a resolution directing the Commission to investigate the transaction and report all facts and circumstances relating to it. The Commission reports "that it seems probable that, by the consolidation, a substantial saving can be effected; that from the standpoint of economy in operation and facility in the future financing of the two companies, the consolidation is warranted," and that "neither the consolidation itself nor the exchange of bonds on the basis of increased interest rates indicated, incident thereto, would, so far as we are advised, offend any federal statute."

ORGANIZATION NOTES.

Candidates Selected for Pittsburgh Traffic Club.—The nominating committee of the Traffic Club of Pittsburgh has completed a most excellent ticket for the forthcoming annual election of officers for that Club. All the candidates selected are hard, earnest workers for the Club, and while the electioneering has been spirited, perfect harmony prevails. The selections as made by the nominating committee are as follows:

President—George G. Herring, General Agent, Southern Pacific Co.; Edward F. Lalk, General Agent, Santa Fe System; Robert Main, D. F. A., Can. Pac. Ry., Soo Line and D. S. S. & A. Ry.

First Vice-President—Albert C. Graham, T. M., Youngstown Sheet & Tube Co.; William H. Higgins, T. M., Wheeling Steel & Iron Co.; David M. Wier, T. M., Phillips Sheet & Tin Plate Co.

Second Vice-President—Edwin F. Austin, D. F. A., P. C. C. & St. L. Ry.; Milton H. Jacobs, A. G. F. A., Western Maryland Railroad; Samuel P. Woodside, G. F. A., Wabash-Pittsburgh Terminal Railway.

Secretary—David L. Wells, General Agent, Erie Railroad.

Treasurer—James T. Neison, Commercial Agent, Missouri-Pacific Ry.

Board of Governors. Transportation. Three to elect.—John E. Corfield, General Agent, Union Pacific Railroad; John A. Fitzpatrick, General Agent, T. St. L. & W. Railroad; Will G. Howard, General Agent, Frt. Dept., C. & A. Railroad; Frank D. Hurst, General Agent, L. S. & M. S. Ry.; George H. Kerr, General Agent, Southern Railway; Ralph B. Merrick, General Agent, Frisco Lines; Almer H. Orr, Agent, Atlantic Coast Despatch; Charles R. Phoenix, Commercial Agent, Illinois Central R. R.; George N. Thomas, General Agent, Wabash Railroad.

Board of Governors. Industrial. Two to elect. —Glen A. Aiken, Traffic Manager, Spang, Chalfant & Co., Inc.; Harry F. Denig, Traffic Manager, Chamber of Commerce; Floyd A. Higerd, Traffic Manager, H. J. Heinz Co.; Edwin C. Jepson, Traffic Manager, Wheeling Corrugating Co.; Thomas L. Kane, Traffic Manager, Brier Hill Steel Co.; Alfred R. Kennedy, Traffic Manager, Pittsburgh Steel Co.

Educational Safety Work.—At a meeting of the Philadelphia Safety Council held at Franklin Institute on the evening of April 28th, Mr. J. C. Johnson, superintendent of telegraph, of the Pennsylvania Railroad, delivered an interesting address on the above named subject. He showed how thoroughly the Pennsylvania Railroad conducted its work of this character and how the efforts permeated practically every department of the service. Speaking of the recommendations of the various committees, he said:

"It has been the policy of the management to comply with all such recommendations wherever practicable, and it is significant to note that of 20,213 recommendations made by these committees since the inauguration of this plan, 15,970 or over 75 per cent of them have been complied with at a cost of $489,000."

Mr. Johnson also spoke of the particular necessity of educating the foreign element employed by the railways, as a considerate proportion of the accidents occurred to trainmen, many of whom are unfamiliar with the English language. It has been the policy of the Pennsylvania Railroad for some time to conduct a correspondence course of English for Italian employes, supplemented by lectures delivered in their native tongue at various points on the system by the instructor of the course, in order to furnish them with a knowledge of the name, purpose and proper use of various kinds of tools and appliances used in track work as well as an intelligent conception of any rules, regulations or orders, both written or verbal, that may be given them. In addition to this a pamphlet for guidance and instruction of new employes and other men working on or about tracks, has been printed in several different languages and distributed among employes interested.

Second Annual Outing of Traffic Club of Baltimore.—The Traffic Club of Baltimore, at present is busily engaged in making arrangements for their second annual outing, to be held on Saturday, June 13th, at Miller's Park, Dundalk, Md., on the shores of the beautiful Chesapeake Bay.

The Traffic Club of Pittsburgh have accepted a challenge to play a game of baseball and a large number of their members will be on hand to root. It is also expected that a large number of members from the New York, Philadelphia, Chicago, Detroit and Boston Traffic Clubs, will attend the outing.

The dinner will be an old-fashioned Maryland one, consisting principally of soft-shelled crabs, Maryland fried chicken, Smithfield ham, and other sea foods, for which Maryland is famous. Crab soup and hard crabs will be served ad libitum.

There will also be trap-shooting by professionals, bowling contests, and other sports. The Fourth Regiment Band and field music will be on hand to receive the visitors and will also be at the park to furnish music. This is to be an all-day affair, and arrangements have been made for special train service to the park, and our out-of-town guests will be well taken care of.

Nineteenth Annual Convention of the National Association of Manufacturers.—An innovation in the treatment of unemployment, namely, a discussion of the subject by leaders of industry representing establishments furnishing occupation for forces of workmen numbered by thousands, by hundreds and also in smaller groups, is promised as one of the special features of the nineteenth annual Convention of the National Association of Manufacturers, to be held at the Waldorf-Astoria, New York City, May 19th and 20th. Unusual interest attaches itself to the unemployment conference for the reason that the Convention, which will bring together many hundreds of manufacturers from all parts of the country, will afford the spectacle of a gathering seeking an intelligent solution of a nation-wide problem, the essential facts of which they themselves best understand. Business conditions of the country, the deterring influences now operating with respect to trade activities, and also the prospects in all the main lines of industry, will be treated in detail.

In the address of the president, Col. George Pope, and in a session devoted to the betterment of industry will be presented an elaboration of the Association's dogma that in co-operation between employers and employes lies the hope of labor, as shown by the failure of labor parties in government and by the futility of the class struggle.

To the reports of the Committees for Accident Prevention and Workmen's Compensation, Fire Prevention, and Industrial Education, will be added practical talks by C. W. Price, of the Wisconsin Industrial Commission; Professor Breckenbridge, of Yale University; Edwin G. Cooley, the well-known educator; J. Schereschewsky, of the Public Health Department, Washington, D. C.; Robert Adamson, Fire Commissioner of New York City, and many others, authorities in their various lines.

Legislative issues affecting industry will be discussed at length by James A. Emery, and reports will be made by Committees on Immigration, Uniform State Laws and Patents, etc. In the time devoted to export trade, opportunities in Russia, South American affairs, and West Africa developments will be featured in addresses by Hon. C. J. Medzikhovsky, commercial attache to the Imperial Russian Embassy, Washington; Manuel Gonzales Z., consul general for Costa Rica in New York, and others.

Annual Convention of International Railway Fuel Association.—The sixth annual convention of the International Railway Fuel Association, was held at the Hotel La Salle, Chicago, May 18th to 21st. The following papers were presented for discussion:

Honey-Combing and Clinker Formation, by S. W. Parr, Professor of Applied Chemistry, University of Illinois; Relation of Front End Design and Air Openings of Grates and Ash Pans to Fuel Consumption and Sparks, by M. C. M. Hatch, Superintendent of Fuel Service, Delaware, Lackawanna & Western R. R.; Storage of Coal—Its Feasibility and Advantages to Producer, Carrier and Consumer, by C. G. Hall, Fuel Agent, Chicago & Eastern Illinois Railroad; Sizing of Coal for Locomotive Use, by Alonzo G. Kinyon, Locomotive Fuel Engineer, Clinchfield Fuel Company; A Uniform Method of Computing Locomotive Fuel Consumption for Office Statistics and Trip Performances, by C. F. Ludington, Chief Fuel Supervisor, Atchison, Topeka & Santa Fe Ry.; "Fuel Stations." Report of Standing Committee, Chairman, H. J. Slifer, Consulting Civil Engineer; Coal Space and Adjuncts of Locomotive Tenders, by L. R. Pyle, Traveling Fireman, Soo Line; "Firing Practice." Report of Standing Committee, Chairman, D. C. Buell, Director, The Railway Educational Bureau, Harriman Lines; Pre-Heating of Feed Water for Locomotive Boilers, by Monro B. Lanier, Sales Manager, Monro-Warrior Coal and Coke Co.; Economies in Round House and Terminal Fuel Consumption, by F. W. Folz, Fuel Supervisor, Missouri Pacific Railroad.

National Convention to Promote Foreign Commerce.—After some preliminary consultation between the heads of several of the leading manufacturing concerns in the country and officers of a number of industrial and commercial organizations interested in the promotion of foreign trade, the following call has been issued for a National Foreign Trade Convention to be held at the Hotel Raleigh, Washington, D. C., on Wednesday and Thursday, May 27th and 28th.

The National Foreign Trade Convention will be held under the auspices of the American Manufacturers' Export Association, American Asiatic Association and the Pan-American Society of the United States and other leading commercial organizations throughout the country interested in the promotion and development of foreign trade.

The purpose of the convention is to give expression to the views of men representing the productive activities of the country in regard to the more effective promotion of American commerce in the markets of the world.

The success of this convention must largely depend upon the presence of representative manufacturers, merchants and others from every section of the country, comprising all branches of industry.

The papers to be presented before the convention will be prepared by men identified with the conduct of practical affairs, and will be issued in advance, so as to be in the hands of delegates before the sessions at which they will be discussed. In this way a full and free expression of sentiment from the collective membership of the convention will be made possible, and such an interchange of views as may tend to greater unity of effort will be facilitated.

General Committee: Lloyd C. Griscom, chairman; James A. Farrell, Charles E. Jennings, Charles A. Schieren, Jr., Willard Straight, Eugene P. Thomas, Ellison A. Smyth, Alba B. Johnson, Henry White, Charles M. Muchnic, Frederic Brown, Edward V. Douglass, John Foord.

E. V. DOUGLASS, Secretary,
66 Broadway, New York.

April Meeting of Canadian Railway Club.—J. E. Duval, general superintendent of Car Service of Grand Trunk System, addressed the Canadian Railway Club on April 14th, on the subject of "car service," dealing particularly with conditions in Canada, he said in part:

"In Canada the regulations governing the free time allowance to shippers and consignees are contained in an order of the Board of Railway Commissioners. A penalty of $1.00 per day is assessed against the shipper or consignee for delay to the car after the expiration of the regulation free time.

"The free time is considered liberal; in fact, it is considered by some shippers to be excessive; for instance, it is rather cold comfort to a shipper, possibly a farmer, to be told that you are unable to provide the necessary means of transporting his goods to market in order that he may realize on the result of his labor, on account of a consignee holding a car that may be put in service if released. The regulations in Canada provide an allowance of twenty-four hours free time on an inward shipment after notice of arrival for paying freight charges and ordering the car for special placement, and if the freight is in bond an additional twenty-four hours is allowed for passing the entry. If the destination is not a port of entry another twenty-four hours is added, and then, after the car is placed, forty-eight hours or seventy-two hours free time according to the commodity is allowed for unloading. Additional allowance is made for inclement weather and for holidays.

"For example, a car of coal arrives from the United States in bond. If the destination is not a port of entry, six days may be used before the penalty of $1.00 per day can be applied, and if there happens to be a holiday or two, or inclement weather, both of which are not an unusual thing in the Providence of Quebec, additional allowance is made so that it is not an uncommon thing for cars containing coal to suffer a delay of from six to eight days waiting to be released and the penalty applied only if delayed beyond that number of days, and during all this time, including the days the car is in transit from the connecting road until returned to the road from which it was received, the per diem charge of forty-five cents per day is being assessed against the railway company. Large numbers of cars containing coal coming into Canada during the severe weather more particularly, the per diem paid the owner of the car equals the amount of freight charges, and the railroad has the pleasure of handling the car for nothing.

"The railroads in Canada report all cars subject to car service regulations to the Canadian Car Service Bureau, and all claims for over charges or failure to carry out the regulations, such as charges of discrimination, etc., are investigated and adjusted by the Manager of the Bureau. A quarterly statement is issued by the Bureau showing the total number of cars reported, the percentage released within the free time, the average railroads, consignees and total delays, and the amount assessed and collected. The statement issued by the Bureau in Montreal, which receives reports from all stations east of Port Arthur, covering the quarter ending December, 1913, shows a total of 427,768 cars; about seven per cent were detained beyond the free time, an average of about 4.68 days, a total of about 129,793 days. This 129,793 days represents that many car days during the three months or a working day average of 1,664 cars each day; that is, if all of the cars had been released within the liberal free time allowed under the regulations, it would have given the transportation companies in Canada east of Port Arthur, 1,664 more cars each day to distribute among the shippers and relieve the terminals of that number of cars each day.

"Car service is a chain of three links, the weakness or strength of the chain is gauged by its weakest link; the first link is the placement and loading; the second, the movement from loading point to destination and the third and last, the placement and unloading. Failure on the part of either weakens the whole chain. Transportation companies have their faults and their short-comings, but I cannot in candor, censure a railroad company for failure to provide empty cars for loading when the cars are being held by some consignee for his own convenience, neither can I consistently hold the carrier responsible for terminal congestion and delays in placing cars, when consignees hold cars for storage purposes. I am told and I believe with more or less accuracy, that large industries throughout this country have during the past decade, in some instances, increased their business by from one to two hundred per cent and have not increased their storage capacity by one-quarter that amount, depending in a great many cases upon the railways companies to furnish storage in their cars.

"It is my opinion that most of the railroads have a sufficient number of cars to meet the needs if they could keep them distributed and prevent their misuse by selfish railroads and selfish consignees. The public have a larger say in this matter than many individual shippers seem to recognize. Transportation will provide more economical results if just the right number of cars employed can be made serve the demand. Railroads, if forced by public neglect to promptly release cars on the one hand and by public demand for building more cars on the other hand, can, of course, build enough cars to afford a surplus when cars are in the greatest demand, but the public will have to pay for this extravagance. Freight rates must provide for capital invested in idle cars as well as capital invested in active cars. The railroads and the public are alike interested in a proper car supply, its distribution and its use, and enough cars should be built to meet every reasonable demand, and then everyone should be required to make the best possible use of them.

"The $1.00 per day penalty after the liberal free time allowed is not an incentive to promptly release cars, in fact, it is in some cases considered rather cheap storage. The carriers, of course, stand to lose for the reason that the earning capacity of a car is very much in excess of $1.00 per day, and, as already stated, it is rather cold comfort to a man who is waiting for a car to market his produce to be told that some other person is being assessed $1.00 per day for a car that could be supplied were it released. Numerous instances can be cited where great hardship to the public and carriers could have been avoided had the free time limit been less excessive and consignees release the cars more promptly. My experience is that the slow movement in terminals is the result of delay in releasing cars which have already been placed. Let me give you an illustration: Here is a team track which, for argument's sake, will say hold 25 cars. It is filled with loaded cars say at 7.00 A. M., and is switched again the following night in order that the cars may be available for the following 7.00 A. M. We find that out of the original 25 cars which were placed, only ten have been unloaded, possibly not two of them together; the second, fourth, fifth, seventh, tenth, twelfth, fourteenth, sixteenth and twenty-fifth car, and in order to get the twenty-fifth car it is necessary to pull the whole twenty-five cars and switch out the cars which have been unloaded and put the others back and fill up the available space with other loaded cars which are awaiting placement. The following day a similar condition exists and the cars not unloaded are again returned. Sometimes days, even weeks, some of the original twenty-five cars are pulled out every night and replaced again for the following morning, and, as I have already stated, statistics furnished by the Canadian Car Service Bureau shows that during the last quarter, that 1,664 cars were held in Canada east of Port Arthur each working in excess of the free time allowed by the present car service rules.

"Evidence given before the Dominion Board of Railway Commissioners by a prominent railroad official at a recent hearing held in Ottawa, was to the effect that from an actual check made the previous day of a team track in the city of Montreal, there were 110 cars placed, 73 or over 66 per cent of which had been detained beyond the free time. This will indicate to you the extent to which cars are held for storage purposes and to what extent terminals are congested. The same official stated that there were at that time a large number of cars held awaiting room for placement on this particular team track, and gave as his opinion, that if all of the cars were released promptly after being placed, that the congestion referring to the cars waiting placement, would be relieved within ten days.

"At the same hearing an official of another railroad stated that there was at that particular time a shortage of cars on his road to the extent of about 1,000 cars and that if the cars held under demurrage were released, it would relieve that shortage at once.

"In conclusion, after giving this question careful thought, in my mind congestion in terminals will continue and delays in switching cars unnecessarily follow and there will be more or less delay in supplying cars so long as the free time in releasing cars is excessive or beyond the actual time necessary and cars are held beyond that free time for storage purposes, and I am strongly of the opinion that it is as much in the interests of the shipping public as it is in the interests of the carriers, and that joint action is necessary in order to bring about a remedy for the prevailing evil.

"There is no doubt in my mind, at least, that the carriers alone cannot overcome the difficulty, and by the enforcement of a penalty against railroads for delay in placing a car after its arrival at its destination will not remove the trouble. The remedy, to my mind is, as already stated, joint action that the free time be reduced and a stop put to delays beyond the free time in releasing the cars."

Exposition Officers Tender Banquet to Transcontinental Traffic Association.

THE President and directors of the Panama Pacific International Exposition, gave a banquet at San Francisco on March 26th to the members of the Transcontinental Traffic Association.

This function was the termination of a week's work by this organization in which railway rates from Eastern points to San Francisco, during the exposition, were fixed, resulting in a one way first-class fare for the round trip from Missouri River points, Chicago and other base points of Eastern departure. Tickets are to be good to San Francisco, Los Angeles or San Diego, and the return limit is to be fixed at ninety days. It is also understood that the tickets will carry generous stop-over and exchange privileges and that passengers desiring to return over a different route than that by which they went out, will be compelled to pay only the usual rate between the two points of Western departure.

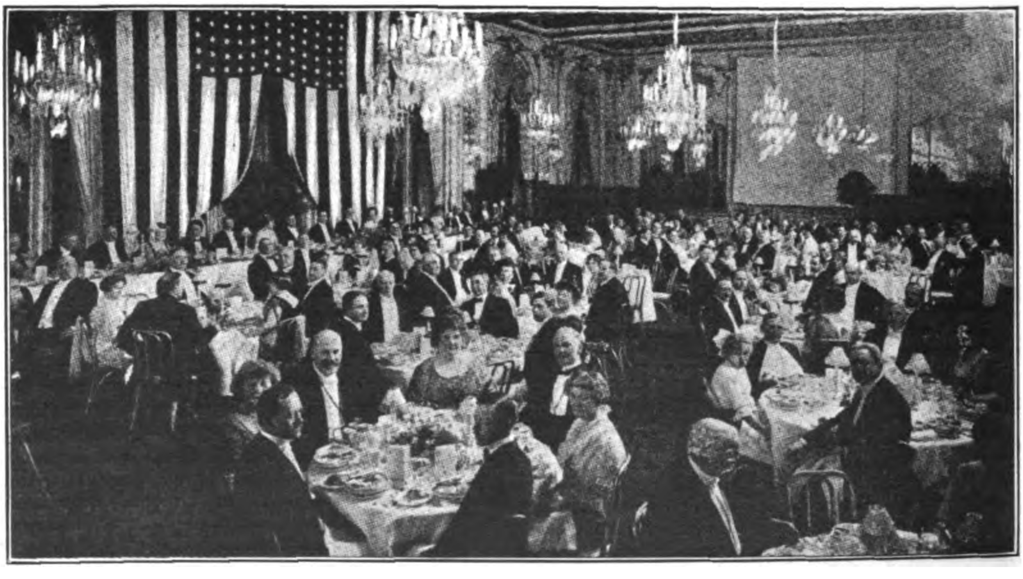
The banquet was attended by 200 officials representing sixty American railways and all the speakers took occasion to speak in congratulatory terms regarding the rapid progress which is being made towards the completion of this marvelous exposition.

The speakers also outlined the publicity plans of the California railways whereby, among the millions who will visit the Exposition, they hope to bring to California, one million people who will remain in the State to make it their permanent home or who will return to California for that purpose.

Students of the University of Illinois Inspect North Western's Chicago Terminal.—A party of students from the Railway Department of the University of Illinois, numbering about fifteen and accompanied by Professor E. R. Dewsnup, were recently personally escorted through the new passenger terminal of the Chicago and North Western Railway and inspected the interlocking towers, power plant, mailing department, express and baggage department and the many other complete features of the terminal, after which they were taken to the Fortieth Avenue shops and escorted though the plant, all the points of interest being explained to them. Addresses were made by Professor Dewsnup and various officials of the Chicago and North Western Railway.

Conventions Booked for Panama Exposition.—Two hundred and nineteen congresses and conventions now have been booked to meet in San Francisco in 1915 during the Panama-Pacific International Exposition. The last organization to notify the Bureau of Conventions and Societies of the Exposition that it will meet in San Francisco during the 1915 universal celebration is the Congress on Religious Education to be held in connection with the Religious Education Association.

Monthly Meeting of the Traffic Club of Newark.—The relative importance of good lighting



BANQUET TENDERED BY THE PRESIDENT AND DIRECTORS OF THE PANAMA PACIFIC EXPOSITION TO THE TRANSCONTINENTAL TRAFFIC ASSOCIATION AT SAN FRANCISCO ON MARCH 26TH.

in the "Safety First" movement occupied the attention of the Traffic Club of Newark at its monthly meeting held at the Washington, April 6th, after the regular business had been transacted.

A. L. Powell, illuminating engineer of the General Electric Company pointed out the part lighting plays in the movement in an illustrated lecture. He dwelt on local general lighting as the necessary factor in illuminating establishments.

The views thrown on the screen showed methods of lighting factories, stores, factory yards, streets, trolley cars, trains, ferryboats and motor vehicles.

The indirect and semi-indirect systems were advanced by Mr. Powell as valuable, as well as strong lamps when placed close to high ceilings in the factories. By using these methods, he said, great quantities of light may be obtained locally, as well as generally in the rooms in which they are in operation.

The factory pictures showed long rows of complicated machinery by the bright lights, the various parts of which could easily be discerned, a point considered by the speaker as essential in avoiding accidents to the men at work. The car lighting systems now employed by many railroad and trolley companies, he said, are of greatly increased benefit to the passengers as compared with former lighting methods.

Frank E. Stone, president of the lumber firm of Stone Hershey and Gibson and chairman of the Membership Committee, announced last night that the club membership had reached its highest point since organization in 1909. There are now 210 names on the roster and every one has imbibed sufficient enthusiasm to bring a total of three hundred by the end of the current year.

Annual Meeting of International Fuel Association.—The Secretary of the International Fuel Association has given notice that the Sixth Annual meeting of this organization, will be held at the Hotel La Salle, Chicago, May 18th to 21st, 1914.

The Executive Committee have selected a list of subjects upon which papers are being prepared, that should be of mutual interest to representatives of Coal Companies and Railroad Companies. The subjects are as follows:

No. 1—Storage of Coal—Its Feasibility and Advantages to Producer, Carrier and Consumer.
No. 2—Sizing of Coal for Locomotive Use.
No. 3—A Uniform Method of Computing Locomotive Fuel Consumption for Office Statistics and Trip Performance.
No. 4—Honey-combing and Clinker Formation.
No. 5—Coal Space and Adjuncts of Locomotive Tenders.
No. 6—Relation of Front End Design and Air Openings of Grates and Ash Pans to Fuel Consumption and Sparks.
No. 7—Economics in Roundhouse and Terminal Fuel Consumption.
No. 8—Pre-heating of Feed Water for Locomotive Boilers.

May Meeting of Central Railway Club.—The May meeting of the Central Railway Club was held at the Hotel Statler, Buffalo, N. Y., on Friday evening, May 8th. Mr. G. W. Howard, assistant superintendent of State Foresters gave an illustrated lecture on forestry and forest fire fighting in New York State. This lecture followed an extremely interesting paper by Mr. W. F. Goltra, president of the W. F. Goltra Tie Company, on "Treating Railroad Ties and Timbers as Practiced in North America." An abstract of this address will be found in another section of this issue.

Spring Meeting of American Railway Association.—The spring session of the American Railway Association will be held in New York City, on May 20, 1914, at eleven A. M.. Reports will be presented by the following Committees: The Executive Committee; the Committee on Transportation; the Committee on Maintenance; the Joint Committee on Automatic Train Stops; the Committee on Relations between Railroads; the Committee on the Safe Transportation of Explosives and Other Dangerous Articles; the Committee on Electrical Working, and the Committee on Nominations.

The election of a president and a first vice-president will take place at this meeting. Two members of the Executive Committee, three members of the Committee on Transportation, three members of the Committee on Maintenance, three members of the Committee on Relations between Railroads and three members of the Committee on Nominations are to be elected.

International Engineering Congress; 1915.—The following list of topics to be treated in this section on Mechanical Engineering at the International Engineering Congress which is to be held in San Francisco in 1915, gives a good idea of the character of the publications which it is intended to issue and the remarkable scope of the topics which will be presented and discussed at the meeting. Many of these topics appeal strongly to the railway engineer.

(1) Recent progress and present status of foundry practice, and casting metals.
(2) Recent progress and present status of the art of forging.
(3) Equipment processes, and the methods for the boiler-shop.
(4) Machine shop equipment, methods, and processes.
(5) Automatics.
(6) Special processes for shaping and forming metals.
(7) High temperature flames in metal-working.
(8) Industrial management.
(9) Safety engineering.
(10) Industrial Museums as an educational factor.
(11) The steam-engine of the year 1915.
(12) The steam-turbine of the year 1915.
(13) The internal-combustion engine of the year 1915.
(14) Motors of the Diesel type.
(15) The Humphreys gas pump.
(16) The steam boiler of the year 1915.
(17) Refrigeration.
(18) Pneumatics
(19) Lubrication and lubricants.
(20) Water wheels of pressure type.
(21) Water wheels of impulse type.
(22) Hydraulic power developments and use.
(23) Power plant design.
(24) Motor vehicles, passenger type.
(25) Motor vehicles, utility type.
(26) Motor tractors.

Many of these topics will be treated as symposiums with contributions representing the practice in more than one country.

The various sections outlined for the work of the Congress and the volumes to be issued are as follows:

Vol. I.—The Panama Canal.
Vol. II.—Waterways and Irrigation.
Vol. III.—Municipal Engineering.
Vol. IV.—Railways and Railway Engineering.
Vol. V.—Materials of Engineering Construction.
Vol. VI.—Mechanical Engineering.
Vol. VII.—Electrical and Mechanical Engineering.
Vol. VIII.—Mining, Engineering and Metallurgy.
Vol. IX.—Naval Architecture and Marine Engineering.
Vol. X.—Military Engineering and Miscellaneous.

W. A. Garrett Addresses Lansing Chamber of Commerce.—On April 9th, the new chief executive officer of the Pere Marquette Railroad, Mr. W. A. Garrett, addressed a meeting of the Chamber of Commerce at Lansing, Mich., in an effort to point out how the people of the State and the Road could get together to produce results of a mutually beneficial character. Mr. Garrett stated that the average rate for the transportation of freight over the Pere Marquette is but six mills per ton per mile, with which not even the bare necessities can be provided.

Mr. Garrett pointed out that criticism should be constructive, not destructive, and that while it is easy to fall into the way of speaking words of condemnation, it took courage to boost where others knocked and that one courageous word might turn the tide of adverse criticism, when given at the right time. Quoting from an editorial appearing in the Tuscola County "Pioneer Times" of April 3rd, he said:

"It seems to us that a little gratitude and a little friendly spirit should be manifest, instead of poking around trying to find something about which to knock. We presume that this grows out of the fact that most any one can knock, and the emptier the receptacle the greater the noise; while but comparatively few can construct and do things." In closing he said:

"The Pere Marquette needs a helping hand. We want your good will; we want your slap on our back and your words of encouragement. We want you to look forward to us and help us in the onward movement we are making. Help us acquire new confidence, or better, help us to regain the old confidence and for your business and confidence, we will give you in reward, high efficiency and safety in service."

LEGISLATION.

Panama Canal Developments.—Recent developments in the United States Senate with reference to the Panama Canal tolls repeal measure, has greatly strengthened the position taken by President Wilson. Perhaps the most severe criticism to which the President has been subject, relates to his apparent disregard to that plank of the Democratic platform, on which he was elected, and which favors the exemption of American shipping. Senator Gore, of Oklahoma, however, has made a canvass of the delegates to the Democratic Convention which nominated Mr. Wilson in 1912, and finds that more than half of these men endorse the Panama tolls repeal bill advocated by the President. This greatly strengthens Mr. Wilson's position before the country and in further view of the fact that many experts and prominent men, including Colonel Goethals, are upholding him, it appears more than likely that the Senate will take favorable action.

Locomotive Headlights.— In connection with the proposed National Legislation, looking to the general adoption of locomotive headlights of a greater candle power than that ordinarily employed, the Special Committee on Relations of Railway Operation to Legislation has recently conducted an investigation to determine just what character of locomotive headlights were employed at the present time by the steam railways of the United States. The results of this investigation are briefly summarized in the following table:

	Locomotives Operated.			
Headlight.	Passenger.	Freight.	Switch.	Total.
Electric—Arc	8,923	13,076	121	22,120
Electric—Incandescent	176	142	314	632
Acetylene	908	1,585	411	2,904
Character of Oil	7,206	24,471	10,536	42,213
Total	17,213	39,274	11,382	67,869

The railroads object to this new legislation principally on the grounds that they are at the present time, using such headlights as, according to their practical experience, serve best to operate trains with the greatest degree of safety.

It is asserted that the powerful headlights advocated in the bills now before Congress would defeat their purpose inasmuch as the concentration of such powerful rays often has the effect of confusing the engineer or causing him to misinterpret signals rather than to prove of real assistance to him. To quote from the statement of Mr. D. F. Crawford, general superintendent of motive power of the Pennsylvania Lines West of Pittsburgh, before the sub-committee of Committee on Interstate and Foreign Commerce of the House of Representatives at Washington, D. C., on January 16th:

"A headlight of high candlepower on a locomotive does to the engineman running toward it exactly what a strong light on an automobile does to all of us when we endeavor to cross the street in front of it. It contracts the iris of the eye and reduces the eye range, and nobody can help it. A strong light, thrown toward a person contracts the iris and reduces the ability of that person to see objects. Sometimes, if the light is very intense, it takes several seconds for the eye to recover from the effect of the light, and for the iris to open sufficiently to permit the appreciation of a dim light. A strong light, thrown toward a signal, can and does reflect back its own color instead of the color of the signal.

"I have seen absolutely a green light sent back from a red roundel with the signal at 'danger,' and on one railroad, on a surprise test, the engineman ran past a signal set at red and claimed he read a green from the signal. The officers of that railroad made a test and found that he did get a green reading. The engineman got a reflection from his own headlight which gave him a signal under which he had the right to proceed, although the signal actually indicated a dangerous condition. It is true there are some electric headlights running—strong lights—quite a number. Fortunately for the traveling public most of them are on roads that have thin traffic and few signals. Every strong light on a locomotive has the potential for an accident. Accidents do not occur every time the potential exists. In the reports of the Interstate Commerce Commission there are several accidents reported in which the strong light was involved. When an engineman is running toward a strong headlight, and the flagman, with a red lantern, swings the lantern across the track, it is frequently missed by the engineman, who ought to regard it. In these tests, which we made here, we endeavored to imitate the road conditions as far as possible, and I will say, gentlemen, with one type of headlight facing toward the observers on 38 per cent of the opportunities they missed the red flagging signal. These observers were locomotive enginemen, road foremen of engines, assistant train masters, and the members of the committee, all of whom have had many years' experience in railroad operation. The fact that the United States Government will take away the license of a master of a ship who turns his searchlight on the pilot house of another vessel is a pretty good indication of what would occur if a locomotive headlight is turned to the cab of another locomotive. The fact that practically every city in this country has passed or is considering ordinances forbidding the use of high-powered lights on automobiles and vehicles in the streets shows that there is a reason for avoiding lights of high power.

"There is but one railroad in the United States that has had any considerable number of electric headlights on it and has a considerable traffic, and that is the Chicago & North Western. Recently, to meet the requirements of the various State laws through which they operate, they have applied in the neighborhood of 1,100 electric headlights. I asked Mr. Bentley about how long those headlights had been in service—what was their average life—and he said about three months; and in about three months' use of electric headlights on a road with a fairly dense traffic they have had pages and pages of complaints from their own men. Some of them are included in this book; in fact the majority of them are. Mr. Bentley actually found that the engineman on one engine went out in front and tilted the headlight so as to point the light down on the track at as short a distance as possible in front of the engine. When they were asked why they did so, they said they could not read the signals when it was set the usual way. If these lights of high intensity are placed on railroads that have heavy traffic the trouble will begin. We have divisions where an electric headlight might have run for the past 10 years, and I do not believe there would be any possibility of an accident, because we have few trains at the present time, and I do not believe it likely we could get into very much trouble; but on the four-track, and in places a five-track road, with a signal bridge about every 4,000 feet, there would be trouble. I was here yesterday and heard the discussion in regard to a law asking us to put signals at frequent intervals over the entire railway. Here is another bill that asks us to wipe the signals out, to put a device on our locomotives which minimizes or reduces the effectiveness of every one of the signals.

"I have ridden behind an electric arc light and had it arranged so we could turn it out—turn it off and on—and a red roundel—that is, the red signal lamp, or the red glass in front of the signal lamp—with no headlight would appear to be at, say, 2,000 feet away from it—1,500 to 2,000 feet away from it—would appear to be about six inches in diameter, but the instant we turned that electric headlight on it—remember, I was looking through the rays of the electric headlight—that red spot would seem to shrink to two inches in diameter. It simply reduces the comparative illumination that reaches the eye, and you wipe out or reduce the efficiency of every signal that is put up."

LEGAL.

To Test Power of Missouri Commission.—In order to determine whether the Missouri Public Service Commission has power to permit a railroad to charge more than the maximum fixed by statute for freight and passengers, a mandamus test suit to compel the Commission to authorize the company to charge more than two cents for passengers and more than the maximum for carload commodities, has been filed against the commission by the Missouri Southern Railway Co., in the Supreme Court. The company, which operates fifty-four miles of road between Leeper, in Waynes County and Bunker, in Reynolds County, applied several months ago for authority to increase its rates. The Commission formally denied its application Wednesday upon the ground that it was without authority to permit more to be charged than the maximum for freight and passengers fixed by statutes.

The Southern Pacific's Answer in Unmerger Suit.—The Southern Pacific Company on April 30th, filed at Salt Lake City in the District Court of the United States for the District of Utah, its answer in the government suit to divorce the Central Pacific from the Southern Pacific. The answer, after specifically denying all allegations that the Sherman Anti-Trust law has been violated, points out not only that the two lines were originally built, operated and developed as one road, but that, as far back as 1898, the United States Government, itself, practically recognized the combination as wholesome.

It shows, furthermore, that in the joint operation of these lines, through trains have been run by the most direct or convenient route without reference to their ownership, and that any separation of the Central Pacific lines from those of the Southern Pacific cannot now be had without detriment to both properties, and without impairing and inconveniencing the public service and the communities through which the lines pass.

In a brief historical resume, the following facts are brought out:

First, That the lines of the Southern Pacific Railroad Company were built as extensions and connections of the lines of the Central Pacific Railroad Company, and by the same stockholders.

Second, That as the lines of the Southern Pacific Railroad Company were completed, they were directly leased to the Central Pacific to be operated as a unit with its lines.

Third, That on April 1, 1885, the Southern Pacific Company, to simplify the organization, took over under lease for 99 years, all the lines of both Central Pacific and Southern Pacific; and has since managed and developed them as one property, considering only efficiency of service to the public, without regard to corporate properties, such as terminals and branches.

Fourth, That relying on the terms under which the Central Pacific's debt to the Government of $58,000,000 was settled in 1898, the Southern Pacific Company undertook heavy financial obligations, not only guaranteeing the payment of this debt, but also guaranteeing the $100,000,000 four per cent mortgage bond issue of the Central Pacific. In this connection, it is contended that the Government could not consistently and with justice have accepted this settlement of which it did have full knowledge as party thereto, if the arrangement involved a relation between the roads contrary to public policy.

Fifth, That even as late as 1912, in the recent so-called Harriman unmerger suit, when the United States Supreme Court ordered the dissolution of the Union Pacific and the Southern Pacific, the Court, the highest in the land, found no reason to disturb the relations between the Central Pacific and the Southern Pacific. The Supreme Court ordered the dissolution of the Union from the Southern Pacific, but as to the Central-Southern Pacific relations, said: "We find no reason to disturb the action of the court below." The court below had declined to disturb the Central-Southern Pacific relations, although the facts concerning it were at the time brought out.

Commenting on the fact that the lines were in one ownership and management and developed as one property, the early part of the answer points out that, because of this fact, little heed was given as to which corporation should hold the title to terminal properties and branch lines. Accordingly branch lines from points on the Central Pacific were built and owned by the Southern Pacific Railroad Company, these branches having no connection with the main line of the Southern Pacific Railroad Company except through Central Pacific lines. At important points the entire title to valuable terminal properties was taken and held in the name of the Central Pacific Railroad Company. At other points the title to terminal properties was held by the Southern Pacific Railroad Company.

Any separation of the Central Pacific lines from the Southern Pacific lines cannot now be had except with great detriment and injury to each of these companies, and in order that these lines should now be operated as separate properties, there must be expended very large sums of money to secure separate terminals to complete these properties for operation on a basis independent of each other. Besides, such separation would necessarily impair the public service, as through direct routes could not be used as efficiently or economically for operation of trains by one company as under present conditions.

The answer further sets forth the granting by the Government of a subsidy to the Central Pacific Railroad Company, by which that company became indebted to the Government in a sum exceeding $58,000,000.

On July 7, 1898, Congress passed an act providing that the Secretaries of the Treasury and the Interior and the Attorney General constitute a commission with full power to settle this indebtedness by agreement between them and the railroads involved and with the written approval of the President of the United States.

The answer alleges:

"It was well understood by the Congress at the time of the passage of this law that the said indebtedness of the Central Pacific Railroad Company to the United States Government amounted to at least $58,000,000 and according, therefore, to the terms of said law, the Central Pacific Railroad Company was required to pay during each of the ten years allowed for the payment of said debt the sum of $5,800,000 per annum.

"This sum exceeded many times over any possible net earnings of the Central Pacific Railroad Company that could be applied to the payment of this debt, and it cannot be questioned that the Congress intended and understood that this debt could only be paid by the employment of the credit and resources of the Southern Pacific Company, and that compliance with the prescribed terms of the settlement necessarily involved participitation therein by the Southern Pacific Company, and the only motive or consideration which could induce the said Southern Pacific Company to participitate in the payment of the Central Pacific Railroad Company's debt to the Government was the existence of the aforesaid relations between it and that company and its desire to continue such relations and to make permanent its control of that part of its system.

"The defendants, therefore, allege that the Congress at the time it enacted the said law of July 7, 1898, contemplated and expected such participation by the Southern Pacific Company in the settlement provided for and had full power to arrange for such security for the payment of said indebtedness as to said commission might seem expedient."

The commission created by Congress under the authority of this act made an agreement with the Central Pacific Company for the payment of this debt in twenty semi-annual installments.

Copies of the agreement and memoranda were given the widest publicity, so that not only the private parties interested, but the President of the United States and all Government officials, including members of Congress, knew that by the terms of the re-adjustment, the Southern Pacific Company was to acquire the ownership of the entire capital stock of the Central Pacific Railway Company, and knew also of the lease and operation of the Central Pacific lines as a part of the Southern Pacific system, the things now complained of as being in violation of the Sherman Anti-Trust law.

It is recited that they knew also at the time that the Central Pacific could not, without the aid of the Southern Pacific, comply with the terms of the agreement, and they based on the participation of the latter their assurance that the agreement would be carried out financially.

In consequence, it is recited, the Southern Pacific Company incurring the obligation of guaranteeing the $100,000,000 of the first refunding four per cent mortgage bonds of the Central Pacific Railway Company, which are now outstanding, and of acquiring the $12,000,000 preferred stock and the $67,275,500 common stock of the Central Pacific Railway Company. For this stock, the Southern Pacific Company gave neither cash or its equivalent in its own capital stock. Furthermore, the United States Government received $58,812,715.48 in payment of the Central Pacific debt, which it would not otherwise have been paid.

In like manner, relying on the expectation and belief created and induced by the Government as above, the Southern Pacific Company has since incurred heavy financial obligations, details of this being given in the answer.

It is shown, for instance, that on March 1, 1911, it unconditionally guaranteed an issue of bonds of the Central Pacific Railway Company, known as that company's four per cent 35 year European loan of 1911, aggregating 250,000,000 francs, a loan made for the benefit of the Central Pacific Railway Company, and it furnished out of its own treasury the collateral of stocks and bonds by which said loan is secured, and among other onerous conditions, it agreed that the loan should mature and become exigible if it disposed of the stock of the Central Pacific Railway or if its lease thereof terminated.

It is then set forth that by reason of the transaction with the Government and its duly authorized agents, the Southern Pacific Company had the right to believe and rely on the fact that its relations with the Central Pacific Railroad Company, its lease of the lines and property of said company, and its acquisition of the stock of said company were not, nor were any of them, in violation of the laws of public policy of the United States Government.

For these reasons, it is averred, any objections which could ever have been made by the Government to either the lease or the stock ownership mentioned have been waived and that the Government has fully assented thereto and fully acquiesced therein.

The answer further relies upon the decree of the United State Supreme Court in the suit which resulted in the separation of the Union Pacific Railroad Company from the Southern Pacific Company as a bar to the present suit. The answer sets forth that it appeared from the petition of the Government in the former suit that the Southern Pacific Company was the owner of the capital stock of the Central Pacific Railroad Company and absolutely controlled the operation and business of said Central Pacific Railroad Company; that the principal relief sought by the Government was to free the Central Pacific-Union Pacific transcontinental line from all restraint of trade and commerce, which, it was alleged, had been created by the said defendants or any of them; that the fact that the Southern Pacific Company exercised complete domination and control over the Central Pacific Railway Company was alleged in the petition and the necessary parties against whom an effective decree could have been entered terminating such control, were before the court, and if the ownership of the Central Pacific Railroad Company by the Southern Pacific Company constituted any violation of the laws of the United States, it was the duty of the Government to submit its case as to such violation and take a decree terminating the same, if found to exist, but after joinder of issue and the full taking of testimony as to all these matters, the trial court entered its decree dismissing the petition and denying the Government any relief whatever.

The Supreme Court of the United States, on appeal, reversed said decree only upon the point that the control of the Southern Pacific Company by the Union Pacific Railroad Company was illegal and in violation of the act of July 2, 1890, but as to all other matters the Supreme Court of the United States said:

"We find no reason to disturb the action of the court below," and as to such matters the final decree was against the Government in favor of the defendants.

The answer was filed by all the defendants other than the Union Trust Company, of New York, through Wm. F. Herrin, solicitor for the defendant, and J. P. Blair, P. F. Dunne and Garrett W. McEnerney, of counsel.

TRAFFIC.

Official Classification Committee to Meet Quarterly in the Future.—The chairman of the Official Classification Committee has instructed sent out a general notice that hereafter meetings will be held quarterly instead of semi-annually and that subjects listed for consideration prior to the first day of February, May, August and November, will be included in the documents for meetings to be held early in the months of March, June, September and December.

The shipping public will be greatly benefitted by this change, inasmuch as the arrangement will enable them to secure more prompt action to their request for classification changes as heretofore the Classification Committee has had only two general meetings each year.

Process in the Liquidation of the United States Express Company.—The United States Express Company on March 31st, the majority of its shareholders having voted affirmatively on the question of liquidation, sent notice of abrogation of contract to all railroads over whose lines United States Express service is being operated. The stipulated dates of abrogation are variously, April 30th, May 31st, and June 30th, according to the contracts. If all abrogations are finally accepted by the railroad companies on the dates specified, United States Express will cease operations as a transportation agency on June 30th, next.

Such replies as have been received from railroad companies in acknowledgment of notice of abrogation express regret that conditions have become such in the express transportation field as to necessitate the United States Express Co.'s retirement from business. These replies do not treat of the matter of contracts specifically, but their general tenor indicates a willingness to accept notice of abrogation as stipulated.

The general belief among transportation people who have followed developments closely is that a majority of railroads will accept these notices of abrogation, and proceed to reassign the expiring contracts or make new contracts with some other express carrier. It is admitted, however, that a possibility exists that in some cases the legality of the action of United States Express Company will be tested in court.

Directors of the United States Express Co., who, under the power given them by the company's articles of association will liquidate the effects of the company, are not likely to take any further steps toward final liquidation until the transportation agreements with the railroads are disposed of. No further action on the part of the directors, as the liquidating body, is looked for, therefore, until after the close of the current fiscal year, or later, as it may be necessary to alter some of the dates specified in the notices of abrogation, which dates are in effect only tentative.

Hamburg-American Line to Carry Exposition Goods Free of Charge.—The Hamburg-American and Kosmos Steamship Lines have agreed to transport German Exhibition goods for the Panama-Pacific International Exposition from Hamburg to San Francisco and return free of charge.

In their communication to A. M. Mortensen, traffic manager of the exposition, the directors of the Hamburg-American Company say that they have been moved to make their offer by a desire to assist in making the 1915 celebration a success and to encourage the exhibition of German wares at the exposition.

They offer to carry bona fide German exhibition goods to and from San Francisco free of charge for freight, subject to several conditions. All goods enjoying such privileges must be strictly of German origin. The shipper at Hamburg must pay the freight charges to San Francisco. At the close of the exposition the goods are to be shipped back to Hamburg where the freight charges for transportation both ways will be refunded. Should the exhibitor sell his exhibition goods, he must forfeit the freight charges from Hamburg as these will not be refunded.

The Union Steamship Company of New Zealand, through its local agents, Hind, Rolph and Co., has announced its intention of carrying exhibits of New Zealand resources and produce to San Francisco from New Zealand and return free of charge.

Southern Roads Preparing for Enlarged Trade with South America.—In anticipation of a stimulation in South American trade through the influence of the opening of the Panama Canal, the Southern Railway Company, the Cincinnati, New Orleans and Texas Pacific, the Alabama Great Southern and the Mobile and Ohio, have appointed Mr. Charles L. Chandler, South American Agent, with headquarters at Chattanooga, Tenn. Mr. Chandler will not only work on the lines of these companies, but will also co-operate with manufacturers and merchants in other parts of the United States, who are so situated that they can advantageously ship to South American markets through South Atlantic and Gulf ports. It is expected that the completion of the Panama Canal and the consequent stimulation of interest in trade with all South America will result in the development of a large volume of traffic from points in the Mississippi Valley and the Middle West.

Mr. Chandler, who was South American commercial expert in the Consular Bureau of the State Department, previous to his present appointment, has had years of experience in Latin-American countries and is thoroughly acquainted with their markets and the needs of their people. He will advise those who desire to develop a South American trade where their wares can be sold, will aid them in the preparation of letters and circulars and will instruct them as to the methods of packing required for different markets. He will also keep in touch with commercial bodies in Central and South American countries and their diplomatic representatives at Washington, and will be able to give business men the earliest possible information with regard to Government and other large contracts to be let. He will also begin a campaign in Latin-American markets for the purpose of stimulating the demand for American goods.

Striking Features of the Import and Export Trade of the United States.—In its monograph "Annual Review of the Foreign Commerce of the United States," just issued, the Bureau of Foreign and Domestic Commerce, Department of Commerce, states that the striking characteristics of the import trade of the United States in the fiscal year 1913, when compared with the import trade of earlier years, are: (1) An increased percentage entering free of duty, and (2) An increased percentage imported for use in manufacturing. The percentage of the imports which entered free of duty in 1913 was 54.47, being larger than in any earlier year except 1892 (55.35 per cent) and 1894 (57.98 per cent), the opening and closing years of the brief period in which sugar was admitted free of duty under the act of 1890. The total value of merchandise imported free of duty in the fiscal year 1913, was 987.5 million dollars, against 367.2 million in 1900; and of dutiable, 825.5 million dollars, against 482.7 million in 1900, merchandise entering free of duty in 1913 having formed 54.47 per cent of the total imports, against 43.21 per cent in 1900.

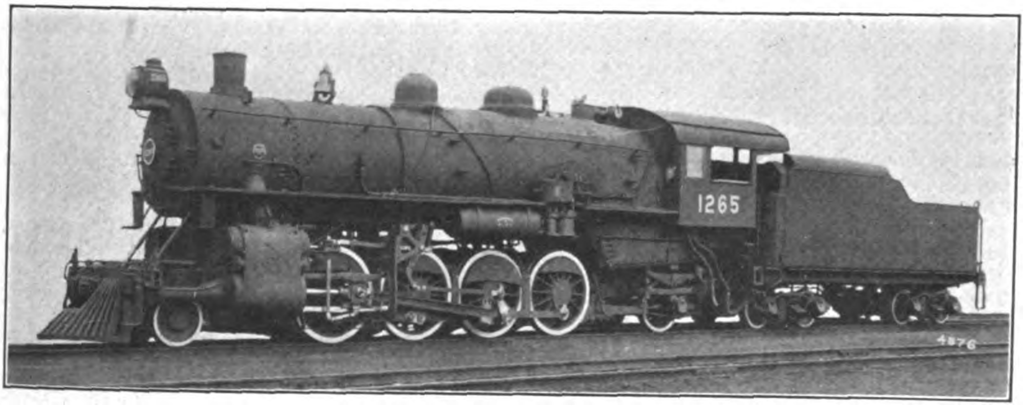
Another monograph issued by the same department illustrates sharply the changing character of our commerce and of the occupations of our people. Agricultural products, which formed, in 1880, 84.3 per cent of the total domestic exports, were in 1913, 46.1 per cent of the total. Manufactures, exclusive of foodstuffs, which were, in 1880, 14.78 per cent of the exports, were in 1913, 48.8 per cent. The actual figures are: Exports of agricultural products in 1880, 694.3 million dollars and in 1913, 1,121.3 million; exports of manufactures in 1880, 121.8 million dollars and in 1913, 1,185.1 million; the increase in agricultural products being 427 million dollars, and that in exports of manufactures considerably more than one billion dollars. This transition of the United States from an exporter of natural products to an exporter of manufactures has been a steady movement during the last third of a century.

Latest Population Figures for the United States.—According to figures just published by the United States Census office, the United States is now a country of 109,000,000 people. According to the same authority, the population of the United States in 1910, was in round numbers 101,500,000 people, so that the latest figures show an estimated gain of over 7,000,000 people in a little more than four years.

EQUIPMENT.

New Locomotives for the Missouri Pacific.

THE Missouri Pacific-Iron Mountain System has received the last of the twenty-five locomotives recently purchased from the Baldwin Locomotive Works. These engines are of the Mikado type and are among the largest and most powerful of that class in service on any railroad in the country. Each weighs 400,000 pounds when equipped for service, and measures 78 feet 4½ inches in length and 15 feet 5½ inches in height. The cylinders measure 27 x 30 inches, and the boilers have a steam pressure capacity of 170 pounds to the square inch. The weight on the main driving wheels is 209,000 pounds and the engines have a tractive force of 50,160 pounds. They are equipped with electric headlights, electric cab lights and Schmidt superheaters. Eight of the engines have been assigned to service on the Joplin Division, three to the Eastern Division, eight to the Omaha Division and six to the Southern Kansas Division.



Mikado Type of Locomotive Recently Completed by the Baldwin Locomotive Works for the Missouri Pacific-Iron Mountain System.

Heavy Equipment Orders Placed by Southern Railway.—Following his statement of February 20th, in regard to Southern Railway financing, President Fairfax Harrison announces that with the proceeds of five million dollars of equipment trust notes, Southern Railway has just contracted for 75 locomotives, 54 all steel passenger train cars, and 4,075 freight train cars, largely of steel construction.

Of the locomotives, 45 will be of the heavy Mikado freight type, 15 of the Pacific passenger type, 13 six-wheel switchers, and two eight-wheel switchers. They will be built in accordance with the latest and most improved designs and will be similar to motive power of the same types now in service on the lines of the Southern Railway where traffic is heaviest.

The all steel passenger equipment includes 35 coaches of the largest and latest type, electrically lighted, four dining cars, five combination passenger and baggage cars, five mail and baggage cars, and five baggage and express cars.

The 4,075 freight train cars will include 3,250 thirty-ton steel underframe ventilator box cars, 500 fifty-ton all steel flat cars, 200 cabooses, 100 steel underframe stock cars, and 25 steel underframe poultry cars.

This large equipment order shows the belief of Southern Railway Company in the continued prosperity and growth of the territory it serves and its purpose to enlarge its facilities to keep pace with that growth. As soon as it can be delivered by the builders, this equipment will be placed in service and at the disposal of the business interests of the Southeastern territory.

The Delaware and Hudson Purchases Engines.—With a view towards meeting the increase in traffic which is hoped for in the future, the Delaware & Hudson Company has placed this large order for twenty-five engines with the American Locomotive Company, at Schenectady.

It is well known that the company's business has been slack for months as has been the case with most of the Eastern railroads, and that these engines are not needed for its present business. So large a purchase will give the company a surplus of motive power to meet busier times, which are confidently expected. It is a move made in the interest of the men at the locomotive works at Schenectady, who will be the first to profit, and who can thus be kept employed. It will mean a decided increase of activities at that point.

LABOR.

Efforts to Organize Brotherhood of Federated Railroad Employes on the Pennsylvania.—S. C. Long, general manager of the Pennsylvania Railroad, has authorized the following statement with regard to recent difficulties which have occurred with certain employes on account of a movement looking to the establishment of a "Brotherhood of Federated Railroad Employes."

"Efforts to organize a so-called 'Brotherhood of Federated Railroad Employes' among the Pennsylvania Railroad employes at the expense of the efficiency of the service, have resulted in those belonging to this organization circulating false reports of strikes at different points on this railroad.

"The facts are these:

"One hundred and forty-eight men on the Williamsport Division, comprising shop men, truckers in freight houses, and trackmen, failed to report for work yesterday. They were immediately notified that they were discharged from the service and to call for the pay due them. Under no circumstances will they be taken back into the service of the company. Their places will be filled from the ranks of employes who have been on furlough.

"From what can be learned, the men who refused to work did so because the company, in reducing forces recently, followed the rule of discharging first the least efficient men rather than in some cases retaining some of the inefficient employes because they had been longer in the service than others. In all demotions as well as promotions, fitness and ability take precedence over all other qualifications for employment.

"It is not true, as reported, that there has been any strike, because officers of the company had refused to hear grievances of employes.

"The officers of the Pennsylvania Railroad are always ready to meet employes who have grievances to present, and no change has been made in this policy."

STATE COMMISSIONS.

New York.—Governor Glynn has signed the bill which this Association endorsed giving the State Public Service Commissions the same power that the Interstate Commerce Commission has for suspending rate increases until the inquiries have demonstrated the necessity for them. In future, the Commissions will be able also to suspend any increase in rates, and compel the public service corporations making them to demonstrate their justice.

Pennsylvania.—The Public Service Commission has issued an administrative ruling to the effect, that after careful consideration, it has come to the conclusion that the according to ministers of religion of free intrastate transportation or such transportation at reduced rates, is discriminatory and illegal under sections 8 and 9 of Article 3 of the Public Service Law, and that the Commission is without warrant to otherwise record it under the present public policy of the State, as fixed by law. It is further stated, however, that should application be made to the Legislature at the next or some subsequent session, means may be found by that body to afford the relief desired by the applicants.

LAND AND INDUSTRIAL.

Southern Railway Wins First Prize at Texas Corn Show.—The Southern Railway's exhibit at the Sixth Annual Corn Exposition held in Dallas, Texas, during February, was awarded first premium as the best and most beautiful exhibit at the Exposition. One of the main features was a very large exhibit of fine corn gathered by the Department of Farm Improvement Work. There were ten ears each from one hundred and seven different fields, all of which were cultivated under the department's field agents. There was also a large display of Virginia apples, as well as a collection of grains, grasses and foreign crops in sheafs, baled hay, together with half a dozen varieties of sweet potatoes, bananas from Alabama, peanuts, pecans, fruits, truck crops and other vegetables from all parts of the southwest, along the lines of the Southern Railway's system. The accompanying illustration gives some idea of the attractiveness of the booth.

North Western's Potato Growing Campaign in Wisconsin.—The accompanying illustration shows the interior of a potato exhibit car recently run over the Chicago and North Western Railway in Wisconsin. This car is accompanied by a demonstrator or lecturer who gives instructions as to how to procure the best results in potato growing. It is the effort of the North Western Road to create an intelligent enthusiasm for

potato growing in that State, as the climate and soil are well adapted for its cultivation. It is pointed out that the Wisconsin potato must be given individually, must be promoted and packed for market in a manner attractive to both the consumer and trade. This, it is realized, is a grower's not a dealer's proposition, and for this reason the Road is giving the farmers the necessary information, in order that the desired results may be accomplished.

Commissioner of Agriculture for the Denver and Rio Grande.—In a circular issued by Mr. E. L. Brown, vice-president of the Denver & Rio Grande Railroad, announcement is made of the appointment, effective April 1st, of Prof. W. H. Olin, as Commissioner of Agriculture for the Denver & Rio Grande.

This is an entirely new departure for the Rio Grande and marks the beginning of a new era of agricultural development in the territory served by that line.

Professor Olin will devote his entire time to the work, the major portion being employed in visiting the agricultural districts, holding meetings with farmers, giving advice and suggestions as to seed selections, production and markets, and at all times co-operating with persons engaged in agriculture.

Professor Olin is a practical man as well as a scientific farmer and it is confidently believed that the results of his work will be mutually beneficial to the farming communities and the railroad.

ELECTIONS AND APPOINTMENTS.

Executive.

W. J. Besler, president and general manager, Central Railroad of New Jersey.

Murray Carleton, director, St. Louis and San Francisco Railroad.

H. W. Davies, assistant to the president and general manager, Pacific & Idaho Northern Railway. Headquarters, New Meadows, Idaho.

Edward Dickinson, president, Kansas City, Mexico and Orient Railroad.

H. O. Dunkle, assistant to president, the Erie Railroad.

George A. Gaston, president, Northwestern Pennsylvania Railway.

A. S. Greig, director, St. Louis and San Francisco Railroad.

Charles Hansel, chairman, valuation committee, Philadelphia and Reading Railway, and the Central Railroad of New Jersey.

Guy Hopkins, vice-president, Louisiana Western Railroad and Morgan's Louisiana and Texas Railroad & Steamship Company. Headquarters, New Orleans, La.

J. H. P. Hughart, president, Grand Rapids and Indiana Railway. Headquarters, Grand Rapids, Ind.

Felix Jackson, vice-president, Houston and Brazos Valley Railroad.

R. E. Kimball, assistant to president, St. Louis Southwestern Ry.

R. S. Lovett, director, New York Central and Hudson River Railroad.

Charles H. Markham, chairman of the Board, Central of Georgia Railroad. Headquarters, Chicago, Ill.

Santiago Mendez, executive vice-president, National Railways of Mexico. Headquarters, Mexico City, Mex.

Ogden Mills, director, New York Central Railroad.

C. A. Morse, chairman of the Valuation Committee, Chicago, Rock Island and Pacific. Headquarters, Chicago, Ill.

C. W. Nelson, vice-president, St. Louis Southwestern. Headquarters, St. Louis, Mo.

C. E. Schaff, president, Houston and Brazos Valley Railroad.

W. L. Seddon, first assistant to president, Seaboard Air Line. Headquarters, Norfolk, Va.

E. T. Stotesbury, president, Reading Company.

George W. Simmons, director, St. Louis and San Francisco Railroad.

H. W. Stanley, second assistant to the president, Seaboard Air Line. Headquarters, Norfolk, Va.

E. P. Swenson, vice-president, Houston and Brazos Valley Railroad.

J. M. Tomlinson, vice-president, New York, New Haven and Hartford. Headquarters, New Haven, Conn.

Harold S. Vanderbilt, director, New York Central Railroad.

Theodore Voorhees, president, Philadelphia & Reading Railway. Headquarters, Philadelphia, Pa.

William A. Winburn, president, Central of Georgia Railway. Headquarters, Savannah, Ga.

Legal.

Sidney F. Andrews, general counsel, Manufacturers' Railway Company of St. Louis and the St. Louis and O'Fallon Railway. Headquarters, St. Louis, Mo.

Joseph M. Bryson, general counsel, Houston & Brazos Valley Railroad.

Eppa Hunton, Jr., general counsel, Richmond, Fredericksburg & Potomac and the Washington Southern. Headquarters, Richmond, Va.

George Thompson, general attorney, Texas & Pacific Railway. Headquarters, Dallas, Texas.

S. H. West, general solicitor, St. Louis Southwestern Railway. Headquarters, St. Louis, Mo.

Financial.

M. L. Bell, general solicitor, Rock Island Lines. Headquarters, Chicago, Ill.

J. I. Ferguson, assistant paymaster, Indianapolis Union Railway. Headquarters, Indianapolis, Ind.

Thomas C. McCampbell, secretary and assistant treasurer, Tennessee, Kentucky and Northern Railroad. Headquarters, Nashville, Tenn.

George C. Morris, secretary and treasurer, Houston and Brazos Valley Railroad.

Accounting.

C. F. Cater, auditor, South Georgia Railway. Headquarters, Quitman, Ga.

R. J. Dillon, auditor, Houston and Brazos Valley Railroad.

A. R. Down, auditor of freight receipts, New York, New Haven and Hartford Railroad. Headquarters, New Haven, Conn.

A. E. Lock, car accountant, Toronto, Hamilton & Buffalo Railway. Headquarters, Hamilton, Ont.

Alfred Mackrille, assistant general auditor, New York, New Haven and Hartford. Headquarters, New Haven, Conn.

T. M. Prentice, assistant auditor, New York, New Haven & Hartford Railroad. Headquarters, New Haven, Conn.

A. S. Steirer, auditor, Union Terminal Company. Headquarters, Dallas, Texas.

Walter V. Wilson, assistant general auditor, Chicago, Milwaukee & St. Paul. Headquarters, Chicago, Ill.

L. R. Wood, assistant auditor, Oregon Short Line. Headquarters, Salt Lake City, Utah.

Engineering and Mechanical.

Wilbur D. Arter, supervisor of apprentices, New York Central and Hudson River Railroad.

Mark Baer, master mechanic, Colorado, Kansas & Oklahoma. Headquarters, Scott City, Kansas.

F. H. Bagley, signal supervisor, Louisville & Nashville Railroad. Headquarters, Louisville, Ky.

Charles F. Barnhill, division master mechanic, Gulf, Colorado & Santa Fe. Headquarters, Silsbee, Texas.

C. N. Beckner, assistant signal engineer, Louisville and Nashville Railroad. Headquarters, Louisville, Ky.

August F. Blaess, engineer maintenance of way, Illinois Central Railroad. Headquarters, Chicago, Ill.

Daniel J. Brumley, valuation engineer, Illinois Central Railroad. Headquarters, Chicago, Ill.

Louis Chevalier, bridge engineer, Seaboard Air Line. Headquarters, Norfolk, Va.

W. L. Darden, engineer of buildings, Seaboard Air Line. Headquarters, Norfolk, Va.

F. H. Dowler, general agent and superintendent of terminals, Nashville, Chattanooga and St. Louis. Headquarters, Chattanooga, Tenn.

Ellis A. Frink, principal assistant engineer, Seaboard Air Line. Headquarters, Norfolk, Va.

Felder Furlow, in charge of construction department, Southern Railway. Headquarters, Birmingham, Ala.

Henry Gardner, assistant shop superintendent, Mt. Clare shops, Baltimore and Ohio Railroad. Headquarters, Baltimore, Md.

C. A. Gill, assistant district superintendent of motive power, Baltimore and Ohio Railroad. Headquarters, Baltimore, Md.

H. L. Gordon, assistant division engineer, Pittsburgh Division, Baltimore and Ohio Railroad. Headquarters, Foxburg, Penna.

Hugh E. Hale, engineer, President's Committee on Valuation, Eastern Group. Headquarters, New York.

C. Harsch, superintendent of terminals, Pere Marquette Railroad. Headquarters, Chicago, Ill.

P. W. Helwig, master car builder, Chicago & Alton Railroad. Headquarters, Bloomington, Ill.

A. C. Hinckley, superintendent of motive power and machinery, Oregon Short Line Railroad. Headquarters, Salt Lake City, Utah.

W. T. R. Hoddinott, acting trainmaster, Baltimore and Ohio Railroad. Headquarters, Philadelphia, Pa.

J. R. Holman, chief engineer, Oregon-Washington Railroad and Navigation Company. Headquarters, Portland, Oregon.

F. G. Hoskins, division engineer, Baltimore and Ohio. Headquarters, Connellsville.

W. F. Hudson, signal inspector, Louisville & Nashville Railroad. Headquarters, Louisville, Ky.

S. A. Jordan, division superintendent, Baltimore and Ohio. Headquarters, Winchester, Va.

C. S. Kirkpatrick, division engineer, St. Louis, Brownsville and Mexico Railroad. Headquarters, Kingsville, Texas.

Patrick Laden, district engineer, Illinois Central Railroad. Headquarters, Chicago, Ill.

E. G. Lane, district engineer, maintenance of way, Baltimore and Ohio Southwestern. Headquarters, Cincinnati, Ohio.

C. P. Lloyd, superintendent of water service, St. Louis and San Francisco Railroad. Headquarters, Springfield, Mo.

A. E. Lock, car accountant, Toronto, Hamilton & Buffalo. Headquarters, Hamilton, Ont.

H. C. Lothholz, engineer of design, Chicago, Milwaukee and St. Paul Railroad. Headquarters, Chicago, Ill.

H. K. Lowry, signal engineer, Chicago, Rock Island and Pacific Railroad. Headquarters, Chicago, Ill.

W. J. P. McGregor, division freight agent, Grand Trunk Pacific. Headquarters, Edmonton, Alta.

W. H. Malone, assistant superintendent locomotive performance, St. Louis and San Francisco Railroad. Headquarters, Springfield, Mo.

E. K. Mentzer, supervisor of bridges and buildings, Boston and Albany Railroad. Headquarters, Worcester, Mass.

M. S. Montgomery, road foreman of engines, Northern Pacific Ry. Headquarters, Duluth, Minn.

C. E. Moyer, general yardmaster, Lehigh Valley Railroad. Headquarters, Manchester, New York.

D. J. Mullen, superintendent of motive power, Cleveland, Cincinnati, Chicago & St. Louis Railway. Headquarters, Indianapolis, Ind.

F. K. Murphy, assistant to the superintendent of motive power, Cleveland, Cincinnati, Chicago & St. Louis Railway. Headquarters, Indianapolis, Ind.

J. B. Myers, district engineer maintenance of way, Baltimore and Ohio Railroad. Headquarters, Baltimore, Md.

L. C. Ord, assistant master car builder, Canadian Pacific Railway. Headquarters, Montreal, Que.

J. J. Patton, superintendent of terminals, Southern Railway. Headquarters, Knoxville, Tenn.

Philip Petri, division engineer maintenance of way, Baltimore and Ohio Railroad. Headquarters, Cumberland, Md.

R. Preston, assistant superintendent of motive power, Canadian Pacific Railway. Headquarters, Winnipeg, Man.

T. M. Ramsdell, master car builder, Oregon-Washington Railroad & Navigation Company. Headquarters, Portland, Oregon.

W. E. Ricketson, mechanical engineer, Cleveland, Cincinnati, Chicago & St. Louis. Headquarters, Beech Grove, Ind.

C. W. Robertson, general foreman, locomotive repairs, Chicago, Burlington and Quincy. Headquarters, Aurora, Ill.

J. A. Rutledge, roadmaster, Detroit, Toledo & Ironton. Headquarters, Napoleon, Ohio.

J. B. Sheafe, master mechanic, Staten Island lines of the Baltimore and Ohio Railroad. Headquarters, St. George, Staten Island, N. Y.

Charles Silliman, engineer, Southern group, presidents' conference committee federal valuation.

M. K. Tate, master mechanic, Cleveland, Cincinnati, Chicago & St. Louis Railway. Headquarters, Bellefontaine, Ohio.

F. L. Thompson, assistant chief engineer, Illinois Central Railroad. Headquarters, Chicago, Ill.

A. M. Traugott, division engineer of Third and Deepwater Divisions, Virginian Railway. Headquarters, Princeton, W. Va.

F. Von Sprecken, assistant engineer, Atlantic Coast Line. Headquarters, Savannah, Ga.

I. F. White, engineer, maintenance of way, Chicago Great Western Railroad. Headquarters, Chicago, Ill.

R. C. White, engineer maintenance of way, Missouri Pacific Iron Mountain System. Headquarters, Little Rock, Ark.

R. W. Williams, assistant engineer, Alabama Great Southern Railroad. Headquarters, Birmingham, Ala.

P. O. Wood, superintendent, locomotive performance, St. Louis and San Francisco Railroad. Headquarters, Springfield, Mo.

Operation.

P. C. Allen, superintendent, Philadelphia Division, Baltimore and Ohio Railroad. Headquarters, Philadelphia, Pa.

C. A. Anderson, trainmaster, Iowa and Dakota Division, Chicago, Milwaukee and St. Paul Railway. Headquarters, Mason City, Iowa.

W. E. Berner, superintendent, Dakota Division, Northern Pacific Company. Headquarters, Jamestown, N. D.

R. S. Black, assistant superintendent, Canadian Lines, Pere Marquette Railroad. Headquarters, St. Thomas, Ont.

L. W. Bowen, assistant general superintendent, Eastern District, Great Northern Railway. Headquarters, St. Paul, Minn.

G. D. Brooke, superintendent, Ohio Division, Baltimore and Ohio Southwestern Railroad. Headquarters, Chillicothe, Ohio.

A. V. Brown, general superintendent, Central District, Northern Pacific Company. Headquarters, Livingston, Mont.

E. N. Brown, assistant superintendent, Ohio Division, Baltimore and Ohio Southwestern Railroad. Headquarters, Chillicothe, Ohio.

G. Cameron, assistant superintendent, Cincinnati Terminal Division, Baltimore and Ohio Southwestern Railroad. Headquarters, Seymour, Ind.

R. F. Carr, superintendent, Southeastern Division, St. Louis and San Francisco Railroad. Headquarters, Birmingham, Ala.

D. B. Carson, acting general manager, Nashville, Chattanooga and St. Louis Railway. Headquarters, Nashville, Tenn.

William Carswell, superintendent, Great Northern. Headquarters, Marcus, Wash.

F. S. Collins, superintendent, Mobile Division, Southern Railway. Headquarters, Selma, Ala.

Herbert E. Correll, superintendent, St. Louis

Division, Chicago, Rock Island and Pacific Railroad. Headquarters, Eldon, Mo.

W. M. Cowhig, superintendent of freight transportation, Southern Railway. Headquarters, Washington, D. C.

A. J. Currie, superintendent, Quebec, Montreal and Southern Railway. Headquarters, Sorel, Que.

W. H. Davidson, assistant trainmaster, Saratoga Division, Delaware and Hudson Company. Headquarters, Albany, New York.

J. M. Doyle, division superintendent, Great Northern Railway. Headquarters, Havre, Mont.

Stanton Ennes, general superintendent, Western Maryland Railway. Headquarters, Baltimore, Md.

H. Fairmon, trainmaster, Oklahoma Division, Chicago, Rock Island and Gulf Railway. Headquarters, El Reno, Okla.

Henry Gardner, assistant superintendent of shops, Baltimore and Ohio Railroad. Headquarters, Mount Clare, Baltimore.

J. A. Gordon, general manager, Chicago Great Western Railroad. Headquarters, Chicago, Ill.

E. W. Grice, assistant general manager, Chesapeake and Ohio Railroad and the Hocking Valley Railway. Headquarters, Richmond, Va.

H. O. Halsted, assistant to general manager, Pere Marquette. Headquarters, Detroit, Mich.

C. L. Hamilton, trainmaster, Western Division. Pennsylvania Lines West of Pittsburgh, Northwest System. Headquarters, Ft. Wayne, Ind.

T. W. Hansell, assistant district superintendent, Atlantic Coast Line. Headquarters, Sanford, Fla.

C. Harsch, general agent and superintendent, Pere Marquette Railroad. Headquarters, Chicago, Ill.

J. L. Hayes, superintendent, Grand Rapids-Port Huron District, Pere Marquette Railroad. Headquarters, Saginaw, Mich.

J. N. Hicken, trainmaster, Great Northern Ry. Headquarters, Havre, Mont

G. D. Hicks, assistant superintendent, Nashville Division, Nashville, Chattanooga and St. Louis Railway. Headquarters, Nashville, Tenn.

J. A. Hyde, superintendent, Northern Texas Oklahoma Division of the Wells, Fargo & Company Express. Headquarters, Dallas, Texas.

Henry E. Hutchens, superintendent of passenger transportation, Southern Railway. Headquarters, Washington, D. C

Kepler Johnson, trainmaster, Southern Division, Chicago, Rock Island and Gulf Railway. Headquarters, Fort Worth, Texas.

S. A. Jordan, superintendent, Baltimore and Ohio Southwestern Railway. Headquarters, Winchester.

O. B. Keister, superintendent, Knoxville Division, Southern Railway. Headquarters, Knoxville, Tenn.

F. J. Kron, superintendent, Eastern Division, Northwest System, Pennsylvania Lines West of Pittsburgh. Headquarters, Allegheny, Pa.

C. S. Lake, general superintendent, Seaboard Air Line Railway. Headquarters, Portsmouth, Va.

M. F. Leamy, trainmaster, Saratoga Division, Delaware & Hudson Company. Headquarters, Albany, New York.

Elisha Lee, general superintendent, Philadelphia, Baltimore & Washington Railroad. Headquarters, Wilmington, Del.

C. E. Leverich, assistant general superintendent, Great Northern Railway. Headquarters, Spokane, Wash.

B. F. Lilly, general foreman, car department, St. Louis, Brownsville & Mexico Railway. Headquarters, Kingsville, Texas.

C. L. MacManus, supervisor of demurrage for Texas, American Railway Association. Headquarters, Austin, Texas.

H. T. Malcolmson, superintendent, Toronto, Hamilton & Buffalo Railway. Headquarters, Hamilton, Ont.

C. S. Millard, superintendent, Peoria and Eastern Division, Cleveland, Cincinnati, Chicago & St. Louis Railway.

J. W. Mulhern, superintendent, Petoskey Division, Pere Marquette Railroad.

J. H. O'Neill, general superintendent, Western District, Great Northern Railway. Headquarters, Seattle, Wash.

J. L. Otis, trainmaster, International and Great Northern Railway. Headquarters, San Antonio, Texas.

J. F. Patterson, superintendent, Peoria Division, Vandalia Railroad. Headquarters, Decatur, Ill.

Thomas R. Patterson, chief dispatcher, Great Northern Railway. Headquarters, Superior, Wis.

A. C. Peterson, trainmaster, Kansas City Division, Chicago, Milwaukee and St. Paul Railway. Headquarters, Ottumwa Junction, Iowa.

L. H. Phetteplace, general manager, Carolina, Clinchfield and Ohio Railway.

Thomas H. Pindell, superintendent, Alton and Southern Railroad. Headquarters, East St. Louis, Ill.

J. M. Rapelje, assistant general manager, Northern Pacific Company. Headquarters, St. Paul, Minn.

E. M. Reese, assistant trainmaster, Western Division, Pennsylvania Lines West, of Pittsburgh, Northwest System. Headquarters, Ft. Wayne, Ind.

J. E. Roberts, general superintendent and general passenger agent, Greenwich and Johnsonville Railway. Headquarters, Greenwich, N. Y.

C. W. Robertson, general foreman, locomotive repairs, Chicago, Burlington and Quincy Railroad. Headquarters, Aurora, Ill.

R. K. Rochester, division superintendent, Pittsburgh, Cincinnati, Chicago and St. Louis Railway. Headquarters, Logansport, Ind.

F. A. Rutherford, trainmaster, District 26, Grand Trunk. Headquarters, Battle Creek, Mich.

H. H. Shepard, superintendent, Buffalo Division, Delaware, Lackawanna and Western Railroad. Headquarters, Buffalo, New York.

R. E. Simpson, general superintendent, Northern District, Southern Railway. Headquarters, Greensboro, N. C.

Theodore Spieden, assistant superintendent, Chattanooga Division, Nashville, Chattanooga and St. Louis Railway. Headquarters, Chattanooga, Tenn

R. Stephens, superintendent, Wichita Union Terminal Railway Company. Headquarters, Wichita, Kansas.

G. S. Stewart, division superintendent, Great Northern Railway. Headquarters, Spokane, Wash.

Samuel C. Stickney, assistant general manager, the Erie Railroad. Headquarters, New York.

A. K. Stone, trainmaster, Dakota Division, Great Northern Railroad. Headquarters, Grand Forks, N. D.

W. H. Strachan, superintendent, Lake Superior Division, Northern Pacific Company. Headquarters, Duluth, Minn.

W. K. Tasker, superintendent of telegraph lines, Pere Marquette Railroad.

W. G. Templeton, acting superintendent, Huntsville Division, Nashville, Chattanooga and St. Louis Railway. Headquarters, Tullahoma, Tenn.

J. E. Withrow, trainmaster, Toledo Terminal Railroad. Headquarters, Toledo, Ohio.

W. B. Wood, general manager, Grand Rapids and Indiana Railway. Headquarters, Grand Rapids, Ind.

E. M. Wrenne, assistant superintendent of transportation, Nashville, Chattanooga and St. Louis Railway. Headquarters, Nashville, Tenn.

Traffic.

F. G. Adams, commercial agent, Grand Trunk. Headquarters, Winnipeg, Man.

E. N. Altmeyer, assistant dairy agent, Chicago, Burlington & Quincy Railroad. Headquarters, St. Paul, Minn.

W. H. Askew, district freight and passenger agent, New Orleans, Mobile and Chicago Railroad. Headquarte s, Memphis, Tenn.

N. H. Atwood, commercial agent, Missouri Pacific-Iron Mountain Railway. Headquarters, Milwaukee, Wis.

W. N. Bass, traveling freight agent, Carolina, Clinchfield & Ohio Railway. Headquarters, Spartanburg, S. C.

J. Beels, dairy agent, Chicago, Burlington & Quincy. Headquarters, St. Paul, Minn.

H. G. Benedict, general eastern agent, Atlanta, Birmingham and Atlantic Railroad. Headquarters, Kansas City, Mo.

H. R. Bingham, general agent, passenger department, Denver and Rio Grande, Western Pacific, Missouri Pacific and St. Louis, Iron Mountain and Southern. Headquarters, Los Angeles, Cal.

Elbert Blair, commercial agent, Missouri, Kansas & Texas Railway. . Headquarters, Dallas, Texas.

N. H. Brand, commercial agent, Atlantic Coast Line. Headquarters, Ocala, Fla.

W. H. Bremer, traveling freight agent, Central of Georgia Railroad. Headquarters, Cincinnati, Ohio.

Frank M. Byrd, general baggage agent, Indianapolis Union. Headquarters, Indianapolis, Ind.

Edward T. Campbell, general traffic manager, Erie Railroad. Headquarters, Chicago, Ill.

John D. Carter, commercial agent, Atchison, Topeka and Santa Fe Railroad. Headquarters, Detroit, Mich.

Charles L. Chandler, South American agent, Southern Railway, Cincinnati, New Orleans and Texas Pacific Railway, Alabama Great Southern Railroad and the Mobile and Ohio Railroad. Headquarters, Chattanooga, Tenn.

M. J. Clark, agent and general foreman of transfer, Lehigh Valley Railroad. Headquarters, Manchester, N. Y.

E. B. Coolidge, general western agent, Wheeling and Lake Erie Railroad. Headquarters, Chicago, Ill.

B. H. Dally, division freight agent, Vandalia Railroad. Headquarters, St. Louis, Mo.

Randolph Daniels, assistant general passenger agent, Missouri, Kansas & Texas of Texas. Headquarters, Dallas, Texas.

S. M. Dickey, commercial agent, St. Louis Southwestern Railroad. Headquarters, Pine Bluff, Ark.

J. H. Doughty, general agent, St. Louis and San Francisco Railroad. Headquarters, Birmingham, Ala.

F. H. Dowler, general agent and superintendent of terminals, Nashville, Chattanooga & St. Louis Railway. Headquarters, Chattanooga, Tenn.

J. K. Dyer, commercial agent, Lehigh Valley Railroad. Headquarters, Boston, Mass.

C. V. Finkle, agent, Lehigh Valley Railroad. Headquarters, Aldene, New Jersey.

F. G. Fitz-Patrick, passenger agent, Chicago & North Western Railway. Headquarters, Pittsburgh, Penna.

J. E. Fitzwilson, general agent, Southern Railway. Headquarters, New York City.

Lloyd D. Franklin, agent, Lehigh Valley Railroad. Headquarters, Flemingville, N. Y.

Gordon E. Gaines, contracting freight agent, Delaware, Lackawanna and Western Railroad. Headquarters, New York.

J. F. Garvin, general freight agent, Missouri, Kansas & Texas of Texas. Headquarters, Dallas, Texas.

E. Gegenbach, general agent, freight and passenger department, St. Louis and San Francisco. Headquarters, St. Louis, Mo.

H. C. Gettier, commercial agent, Atlantic Coast Line Railroad. Headquarters, Albany, Ga.

John O. Gill, traveling freight and passenger agent, New Orleans, Mobile and Chicago Railroad. Headquarters, Memphis, Tenn.

F. E. Godfrey, assistant general freight agent, Tennessee Central Railroad. Headquarters, Nashville, Tenn.

D. L. Gray, assistant general traffic manager, the Erie Railroad. Headquarters, New York.

Mortimer M. Graham, agent, Lehigh Valley Railroad. Headquarters, Cayuga, New York.

John 'A. Groves, commercial agent, Atlanta, Birmingham & Atlantic Railroad. Headquarters, Kansas City, Mo.

S. J. Henry, assistant general western freight agent, Northern Pacific Railroad. Headquarters, Tacoma, Wash.

George A. Hill, agent, Union Line—Pan Handle Route. Headquarters, Chicago, Ill.

L. C. Hosley, agent, Lehigh Valley Railroad. Headquarters, Gorham, New York.

Samuel M. Howard, freight soliciting agent, Southern Railway. Headquarters, Greenville, S. C.

J. Carroll Hughes, soliciting freight agent, Georgia Southern & Florida. Headquarters, Macon, Ga.

Oliver F. Johnson, division freight agent, Lehigh Valley Railroad. Headquarters, Ithaca, New York.

F. W. Kirkland, freight traffic manager, Florida East Coast Railway. Headquarters, St. Augustine, Fla.

L. D. Knowles, general agent, Missouri Pacific-Iron Mountain, Denver & Rio Grande and Western Pacific Railways. Headquarters, Kansas City, Mo.

W. M. Lampton, general freight agent, Denver and Rio Grande Railroad. Headquarters, Denver, Colo.

M. R. Leahy, assistant general passenger agent, Chicago & North Western. Headquarters, Chicago, Ill.

William M. Long, contracting freight agent, Illinois Central Railroad. Headquarters, Peoria, Ill.

R. R. Losee, agent, Lehigh Valley Railroad. Headquarters, Manchester, New York.

W. M. Lowrie, passenger traffic manager, steamship and railway service, United Fruit Company. Headquarters, New York City.

B. F. McCamey, traveling freight agent, Illinois Central Railroad. Headquarters, Memphis, Tenn.

J. S. McCrea, city freight agent, Lehigh Valley. Headquarters, New York.

W. J. P. McGregor, division freight agent, Grand Trunk Pacific. Headquarters, Edmonton, Alta.

J. A. McTague, contracting freight agent, Delaware, Lackawanna and Western. Headquarters, Minneapolis, Minn.

J. H. Martin, traveling freight agent, Central of Georgia. Headquarters, Macon, Ga.

N. R. Martin, general agent, Lake Tahoe Railway & Transportation Company. Headquarters, Los Angeles, Cal.

G. J. Mitchell, commercial agent, Carolina, Clinchfield & Ohio Railway. Headquarters, Columbia, S. C.

F. S. Montgomery, division freight agent, Vandalia Railroad. Headquarters, South Bend, Ind.

W. B. Morgan, commercial agent, Central of Georgia Railway. Headquarters, Macon, Ga.

L. C. Morris, city passenger and ticket agent, Lehigh Valley Railroad. Headquarters, Rochester, New York.

J. C. Murray, general freight agent, Missouri & North Arkansas Railroad. Headquarters, Eureka Springs, Ark.

R. K. Neilson, freight solicitor, Pennsylvania Railroad. Headquarters, Uniontown, Penna.

Edward F. Neogle, traveling freight agent, Lehigh Valley Railroad. Headquarters, New York.

James T. Nicol, general agent, Waterloo, Cedar Falls & Northern. Headquarters, Cedar Rapids, Iowa.

M. J. Ormond, commercial agent, Lehigh Valley Railroad. Headquarters, New Haven, Conn.

H. G. E. Pansius, contracting freight agent, Delaware, Lackawanna and Western. Headquarters, New York.

H. W. Pinnick, district passenger agent, St. Louis and San Francisco. Headquarters, Houston, Texas.

W. M. Porteous, district freight agent, Canadian Pacific Railroad. Headquarters, St. Louis, Mo.

A. H. Proudfoot, assistant general freight and passenger agent, Liberty-White Railroad. Headquarters, McComb, Miss.

W. C. Ragin, division freight agent, Atlantic Coast Line Railroad. Headquarters, Montgomery, Ala.

M. L. Schultz, commercial agent, Louisiana & Arkansas Railway. Headquarters, Chicago, Ill.

J. E. Scott, traveling freight agent, Carolina, Clinchfield & Ohio Railroad. Headquarters, Columbia, S. C.

L. A. Seubert, agent, Lehigh Valley Railroad. Headquarters, Groton, New York.

Vivian G. Snall, commercial agent, Grand Trunk Railway. Headquarters, Moncton, N. B.

S. T. Stackpole, Canadian freight agent, Pennsylvania Railroad. Headquarters, Toronto, Ont.

J. A. Streyer, general agent, freight and passenger departments, Macon, Dublin and Savannah Railroad. Headquarters, Macon, Ga.

C. B. Sudorough, assistant general freight agent, Vandalia Railroad. Headquarters, St. Louis, Mo.

A. W. Symes, traveling freight agent, Canadian Northern Railway. Headquarters, Toronto, Ont.

Robert Thompson, assistant general passenger agent, Chicago and North Western Railway. Headquarters, Chicago, Ill.

Alexander Tinling, assistant general freight and passenger agent, Northern Pacific Railway. Headquarters, Seattle, Wash.

C. A. Turnell, soliciting freight agent, Nashville, Chattanooga and St. Louis Ry. Headquarters, Chicago, Ill.

L. Van Orden, general agent, Lake Tahoe Railway and Transportation Company. Headquarters, San Francisco, Cal.

H. G. Van Winkle, terminal passenger and ticket agent, Chicago and North Western Railway. Headquarters, Chicago, Ill.

Morris Vinson, traveling passenger agent, Erie Railroad. Headquarters, San Francisco, Cal.

J. D. Watson, assistant freight traffic manager, St. Louis Southwestern Railway. Headquarters, St. Louis, Mo.

G. A. Weller, assistant general freight agent, Ann Arbor Railroad. Headquarters, Toledo, Ohio.

J. A. Werne, New England agent, Southern Railway. Headquarters, Boston, Mass.

J. L. West, freight traffic manager, Missouri, Kansas and Texas of Texas. Headquarters, Dallas, Texas.

Fred Wild, Jr., freight traffic manager, Denver and Rio Grande Railroad. Headquarters, Denver, Colo.

J. A. Williams, chief clerk in general passenger department, Chicago and North Western Railway. Headquarters, Chicago, Ill.

Claude P. Wilson, commercial agent, Missouri, Oklahoma and Gulf Railway. Headquarters, Houston, Texas.

H. W. Winter, agent, Lehigh Valley Railroad. Headquarters, Somerville, N. J.

F. L. Word, live stock agent, Georgia Southern & Florida, the Macon & Birmingham and the Hawkinsville & Florida Southern. Headquarters, Atlanta, Ga.

W. S. Yeatts, special agent, general freight agent's office, Pennsylvania Railroad. Headquarters, Philadelphia.

Railway World

VOL. LVIII. JUNE, 1914 No. 6

Important Developments in the Transportation Field

PRESIDENT WILSON ON THE OUTLOOK

President Wilson is of the opinion that the business depression which has affected many interests and thrown thousands of men out of work throughout the country is largely psychological. The accuracy of this statement rests largely upon the method of its interpretation. If the President means that the uneasiness which is so manifest in the minds of business is due to the development of unfavorable business conditions we agree most heartily with him. If, however, he means that unfavorable business conditions are due to an unfounded mental anxiety, then he surely has missed the mark, by a very wide margin.

Take the railway situation, for example. Heavier expenses and decreasing revenues have placed the carriers in such a situation as to imperil the solvency of some of them. They have been forced, not through any mental anxiety as to the future, but on account of present necessities, to either discharge or lay off thousands of men and to reduce the salaries of many thousands of others. Nothing psychological about this, except its effect upon the minds of other business men who see in it an inability or unwillingness on the part of the Government to permit the railroads to conduct their plants in an efficient and progressive manner. Then, again the railroads have ceased buying, except under the most urgent necessity. This has had its effect upon practically every other industry, as the railways are among the heaviest purchasers in the country. Nothing psychological about this either, except the creation of a general feeling of uneasiness as to what the future may bring forth.

Now, the psychological aspect of the case, and we admit this exists to a very grave extent, does not rest upon any intangible basis, but upon the development of certain tendencies, largely political, which have had and are having, a very detrimental effect upon business. Unfavorable railway regulative developments, the tariff and the proposed trust legislation, have all wielded a certain amount of influence to bring about present conditions, and the President would indeed be wise, if instead of insisting upon additional trust legislation during the present session of Congress, he would urge that much over-worked body to adjourn, mingle with their constituents for the next few months, and really learn what the people at large need and desire.

Many of our larger and better managed railroads now insist that their officials spend a large part of their time out of their office on the line, so that they may get in touch with actual conditions and, in that way, be able to more intelligently comprehend the conditions which confront them. If this is true with reference to railroad officials, it is certainly more true with reference to Congressmen, who have now been held so long at Washington by an obdurate chief executive, that many of them are rapidly losing their sense of proportion with reference to legislative requirements of business.

In addition to the proposed trust legisla-

tion, the railway rate situation looms large in the public mind and until some decision has been arrived at by the Interstate Commerce Commission no great amount of confidence in more favorable business conditions may be expected. If favorable, it is generally believed it will prove a mighty factor in restoring public confidence and bringing about more prosperous conditions. There has been such an interminable delay, however, in rendering the decision, that any immediate help from that quarter is almost dispaired of. Not only is it recognized at home but abroad that American railways are not being fairly treated. Many eminent European banking authorities have recently condemned in no uncertain terms the attitude of our Government toward the railroads and a recent statement by Arthur von Gwinner, managing director of the Deutschebank at Berlin, and one of the leading banking authorities in Europe, sums up the situation very clearly. In an address before the American Luncheon Club in that city Herr von Gwinner, who is the Fatherland's leading expert on American railway conditions, made a remarkable plea in favor of increased American freight rates, whch he declared European bankers considered of primary importance for the continuance of American industrial prosperity.

In the course of his address Herr von Gwinner produced some amazing figures illustrating the difference between the rates of the leading systems of Europe. While the Pennsylvania, Baltimore and Ohio and the Chesapeake and Ohio in America charge per ton mile, respectively, .65 cent, .63 cent, and .46 cent, the Northeastern of England charges 2.45 cents, the Prussian State railways 1.33 cents, and the Chemin de Fer Du Nord, France, 1.13 cents. These figures, Herr von Gwinner pointed out were all the more remarkable because American railways were compelled to pay wages twice, sometimes thrice, as large as European systems.

"Such a state of affairs," continued Herr von Gwinner, "is utterly anomalous. It is more than that—it is a deliberate menace to the prosperity of the republic, and because the prosperity of the rest of the world is closely bound up with that of America it is a danger to all of us. Unless ways and means are found to remedy it you are headed straight for an economic calamity."

There have, of course, been various rumors as to what the decision will be. For example, the Chicago *Herald* of June 15th, asserts it is to be in a position to announce the salient points of the decision which it states as follows:

1. The Commission will deny the application for a flat increase of five per cent.
2. However, it will grant increases ranging from one to five per cent and perhaps higher on commodities now transported below cost.
3. It will decline to make advances on certain other commodities.
4. The public will be emphatically warned that the increases ordered do not justify any advance in the prices of food or other necessities.
5. The railroads will be denounced for engaging in a gigantic conspiracy to create

—From the New York Journal.

a public sentiment in favor of the five per cent increase and against the Commission.

Whether the Chicago *Herald* has procured this information from a source more or less reliable or whether it is simply making a clever guess, is an open question, but in view of the fact of the long delay in rendering the decision, it would at least appear probable that the Commission is undertaking an extensive and laborious readjustment of certain freight rates. However, to show how widely divergent the newspaper stories are in forecasting the main features of the decision, the following from the New York *American* of June 18th, which purports to present the main points in the coming decision, is of interest:

(1) Advances will be sanctioned on class rates in Central Freight Association territory, which is between Pittsburg and Buffalo and the Mississippi River.

(2) No advance will be sanctioned on commodity rates in Central Freight Association territory.

(3) No advances in rates will be sanctioned in Trunk Line territory, which is east of Buffalo and Pittsburg.

(4) The Commission will point out to the carriers in Trunk Line territory how they may conserve their revenues by discontinuing certain practices which now prevail.

(5) Pending the outcome of efforts by the carriers in Trunk Line territory to increase their revenues the Commission will hold open the question of an advance in rates for final disposition.

(6) No advance in lake and rail rates will be sanctioned.

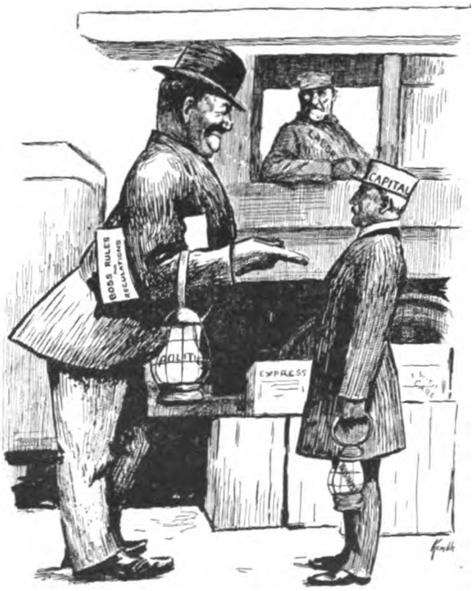
It is stated that the additional revenues which the carriers will receive will be far below the amount they hoped for.

RESTRICTIVE INFLUENCES

No one denies the necessity for Governmental regulation along certain well defined lines both with regard to big business and the railroads. The danger lies in an extension of paternalism to such an extent as to strangle the individual initiative of private enterprise. The country is suffering at the present time from the dread of the possible development of such paternalism. The Democratic party, in spite of the bitter criticism it has subjected itself to, continues its effort to interfere with business to an extent never before attempted, and business is responding by retiring into its shell, where it evidently proposes to remain until the outlook is brighter. To blame the Mexican situation for poor business is to beg the issue, for the uncertainty which has been injected into business through legislative developments under the present Administration, and through the deplorable delay in settling the rate case, are influences which far outstrip the effect of Mexican developments.

Railroads in particular have suffered from this feeling of uncertainty and the talk of eventual Government ownership has not helped to relieve the situation. Notwithstanding the experiences of many countries in which Government-owned railroads have failed to give satisfactory service to the public and in fact has placed a burden on their shoulders which is fast becoming unbearable, political leaders are still trying to make capital out of what they consider the sentiment of the people in favor of Government ownership.

Railroad officials not only believe but know that this would be one of the worst calamities which could befall the country. To offset this tendency they must be both alert and aggressive and should be willing to make every legitimate effort to keep the public informed regarding the true state of affairs. Publicity must be the future key-



How Long?

THE DEMAGOGUE: "Say! You're not running this railroad business to suit me, so you get out and I'll run it to suit myself, see?"

Drawn for Leslie's by E. W. Kemble

note of railway progress and the successful railway executive of the future will be the one who is as willing and able to enter the public arena in defense of the entire industry, as to direct his own company's operating activities.

The latest evidence of the failure of Government-owned railroads comes from no less an authority than Theodore Roosevelt. In an article published in the *Outlook* of May 23d he refers to the Government-owned railroads of Chili in the following manner:

> "When the time came for us to leave Chili, we went southward on the railway to Puerto Veras. Incidentally I may remark that the railways in Chili are owned by the State, and that the men I met who are the best informed and most trustworthy express great regret that they had not been kept in private hands.
>
> "These men stated that there was always a deficit in the management of the railways and that they were a burden on the Government and unprofitable to the citizens generally."

In Europe, as heretofore noted in these columns, Government ownership in the great majority of instances, has proved anything but satisfactory, and, as a panacea for private ownership, has developed into a lamentable failure. An editorial appearing in the London *Economist* of February 14th, is very illuminating as to Government ownership in its application to the Belgium State Railways.

To quote from the editorial:

> "Passengers have been delayed for hours: goods have been detained in transit for three or four days, or even a week, and the steps taken to meet the difficulties have in some respects made them worse. Thus, all consignments from certain selected stations have been held back for twenty-four hours to let other traffic pass, and a number of trains on certain lines have been temporarily—and suddenly—taken off, even on important trunk routes.
>
> "The railway authorities find their excuse in the sharp frost, which has caused the canal traffic to be diverted to the railways, and set up a shortage of trucks, besides blocking the lines with traffic. But **their failure to cope effectively with their difficulties has revived the outcry against State management and the demand for a change.**
>
> * * *
>
> "The railway accounts, it is alleged, are not published in an intelligible form; items belonging to them have to be collected from different estimates; the administration is over-centralized, the staff is too large, and the heads of the various departments have not sufficient responsibility or power of initiative.
>
> "There is too much red tape; promotion depends on political consideration as well as on efficient service; and it may be remembered that during the general election of 1911 the Government was charged with making special concessions at the last moment to the railway men in regard to pay and other advantages in order to secure their votes.
>
> "It is stated, too, that there is not enough rolling stock, and that the fares and rates, which are extraordinarily low (and probably are directly unremunerative) for tourist traffic and for some classes of through freight, are a good deal less liberal for local traffic."

Switzerland also appears to be having its troubles. Harold Cox, one of the leading public men of England, writing in the London *Daily Graphic* of January 20th, thus describes, in part, the railway situation in Switzerland:

> "If State purchase of railways could be a success anywhere it would be in Switzerland, for the Swiss Government possesses advantages which are denied to larger countries. It is not cursed by the party spirit which prevails in England, nor by the Ministerial instability which is so injurious to France. The Swiss Government, like the Swiss people, is both prudent and patriotic.
>
> "Yet, when the results of railway nationalization in Switzerland are compared with the promises made in advance it is impossible to avoid the conclusion that **the experiment has been a failure."**

Mr. Cox goes on to say that instead of the personnel being reduced as promised it grew rapidly from the time the railroads were taken over in 1898 to 1909, developments in this particular became so serious that the Swiss Parliament appointed a Committee of Inquiry. This committee reported "that one of the main causes in the deficit of the railway situation was the plethora of the personnel." As the result of this report, drastic steps were taken to reduce the number of employes, but notwithstanding these efforts, the personnel still remains far in excess of the standard found necessary by the companies.

As regards the rates and fares charged to the public, the experience of the Swiss railways has been equally unfortunate, and while rates were reduced in 1901, it was found necessary in 1909, to again raise many of them. Again, at the beginning of Government ownership, new trains were added with a lavish hand, but by 1908, the unsoundness of this proceeding was admitted and in 1909, the head of the railway administration denounced "the insatiable appetite of the public" for additional trains and declared that the administration had not been able to resist pressing demands from which it was constantly assailed from local and federal authorities.

As regards the payment of employes the story appears to be the same. The administration began by making large readjustments of wages in order to carry out promises made, but very soon the demands put forward by the staff were found to be intolerable and further concessions were refused. The employes at once complained that they had been deceived, and that they were worse off than they had been under the companies and this complaint is still constantly repeated and it is further alleged that promotion depends on political favoritism.

In France, conditions under Government ownership could hardly be more deplorable. Since the State purchased the Western Railway in 1905, the advances to capital account for that system and for the old State Railways have reached the enormous total of 718,500,000 francs. This, it should be understood, however, is only a part of the drain which the Government has made upon the French treasury, for these advances were entirely outside the deficits due to the operation of these railways.

These treasury advances will have to be funded ultimately and that is one of the troublesome problems of French finance. The railways have been required to pay only 2½ per cent for this accommodation, while the obligations placed with the public call for 4.75 per cent interest, or nearly double the charge by the treasury.

It is further to be noted that no interest at all was paid upon treasury advances from January 1, 1909, to December 31, 1911, so that the sum which should have been paid must be added to the deficit to ascertain the exact amount of the losses due to State operation.

It is thus plain that not military expenditure alone, but reckless and improvident railroading, is responsible for French financial embarrassments.

In addition to these deplorable financial results, the operation of the French-owned railroads, presents an example of incompetency which it would be hard to equal in any civilized nation on earth. Intolerable service delays are the rule rather than the exception, and one need only to examine the files of the leading French newspapers of the past two or three years to appreciate how woefully lacking Government ownership of railways in France, has been, and how welcome would be the return to private ownership.

EFFECT OF RATE INCREASE ON EARNINGS

An interesting leaflet has been published by Messrs. L. F. Rothschild and Company, members of the New York Stock Exchange, entitled "Statistical Analysis of the Effect of Freight Rate Advances on Earnings of Twelve Railroads in Eastern Classification Territory."

The purpose of the compilation is to segregate the revenue to which the advance is applicable from the total operating revenues, and to then apply the proposed advance of five per cent to the revenue which would be affected, indicating the amount of the advance and the percentage of same of the total common stock of each road; also indicating the percentage of total operating revenue which would be effected by the advance.

The results are brought together in condensed tabulated form below, which is of interest as showing the effect of the proposed advance upon the twelve roads which have been selected.

Railroad.	Revenue to which advance is applicable.	Amount of revenue to be derived from 5% increase.
B. & O.	$79,087,845	$3,954,392
Erie	32,377,628	1,618,881
N. Y. C. & H. R.	64,495,126	3,224,756
Pennsylvania	127,664,818	6,383,240

RAILWAY MAIL PAY DEVELOPMENTS

The railway mail pay situation has become intolerable. Not only has the Post Office Department and Congress failed to provide relief for the grave injustice under which the railroads have been laboring for many months on account of the increased burden imposed upon them by the parcel post but the "Moon Bill" now before Congress would if passed, actually reduce the pay of the railroads for carrying the mails by about $10,000,000. It is little to be wondered at that a growing number of newspaper editors are accusing the Government of not only dishonorable but dishonest practices where the railways are concerned. At the present time, through an entirely unnecessary delay and a neglect of a direct and plain duty, the Government is as clearly robbing the tills of the railways, as if they had engaged professional thieves to perform the job. In the meantime, certain Government officials are boasting of the increased net earnings and the splendid showing made by the Post Office Department. Truly this is a shameful spectacle.

Ralph Peters, chairman of the Committee on Railway Mail Pay, has issued the following statement regarding the proposed new railway mail pay legislation as incorporated in the Moon bill:

"The Rules Committee of the House of Representatives has, I am informed, adopted a recommendation that the so-called 'Moon Bill' follow the Sundry Civil Appropriation Bill now being considered by the House. The underlying principle of the Moon bill is to reduce the pay of the railroads for carrying the mails by about $10,000,000.

"Congress some time ago appointed a Joint Committee of which former Senator Jonathan Bourne, Jr., of Oregon, is the chairman, to investigate the whole subject of railway mail pay and recommend to Congress the proper method which should be adopted. That Commission has conducted a most exhaustive investigation but has not yet reported although it intends shortly to do so.

"The railroads have, I believe, proved conclusively to the committee that they were certainly not overpaid for carrying the mails, but were, as we see it, underpaid by at least $15,000,000 annually. In making his closing argument on the Five Per Cent Advance Rate Case, Mr. Brandeis, as its special counsel, advised the Interstate Commerce Commission that to him it seemed clear that the railway mail service was unremunerative to the railways.

"At the instigation of the Post Office Department which has, we feel, been grossly unfair in all questions relating to compensating the railroads for carrying the increased burden of the parcel post, and before the Joint Congressional Committee has rendered its report, Congressman Moon has introduced the bill which revises the methods of paying the railroads in such a manner as to reduce by about 20 per cent the compensation now paid to the railroads.

"This proceeding not only seems highly inappropriate in advance of the recommendation of the Congressional committee, but in itself proposes an imposition upon the

railroads which is without warrant and is in the highest degree unjust. It cannot be that such a plan will have the support of the American people when the people realize what the plan actually means."

BRITISH RAILWAYS MAY DEMAND FURTHER RATE INCREASES

According to a statement received from the Bureau of Railway News and Statistics at Chicago, English railways may be forced into applying for further advances in their rates in addition to the four per cent increases granted last year. Advices received by the Bureau of Railway News and Statistics state that so far have the increases already awarded fallen short of compensating the companies for higher working expenses due to rising wages and costs of materials, that the carriers are confronted by the alternatives of cutting off the less remunerative facilities now furnished the public or following the example set by Eastern railroads of the United States in applying for permission to raise their rates beyond the present maxima.

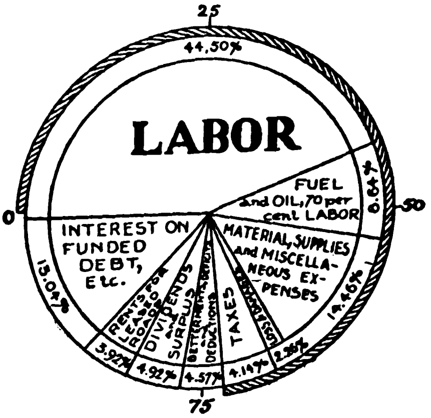
Relief afforded to the companies by last year's four per cent increase, it has been found, is only partial. Advances were applied only to such rates as could be raised within the Parliamentary maxima, many being already up to the maximum. Many of those below the maxima, moreover, could not be raised for one reason or another. Hence the London and North Western estimates that the benefit it has obtained equals not more than one half its increased expenses; the Midland and the Great Central declare the increases do "not nearly compensate" for the concessions made and the Lancashire and Yorkshire states that increased labor costs which it must meet are "considerably more than double" any advantage it has gained. Other companies make similar statements.

English railways have shown a uniform reflection of American experience in that although gross revenues were greatly enhanced in 1913 an excessive rise in expenses wiped out the advantages which should have resulted. Wages account for most of this. The London and Northwestern labor bill in 1913 showed an advance of about $2,500,000 of which $1,500,000 was the direct cost of extra wages paid. The Great Western estimates the concessions it has made to its staff since 1911 at $1,250,000 per annum. The North Eastern estimates the cost of its wage concessions in the next two years will be $1,500,000 a year, equal to a dividend of one per cent on its consols. On the Midland the increase in wages and salaries in separate departments include: Enginemen, $290,000; maintenance of way, $95,000; maintenance of equipment, $115,000, and traffic $375,000. The Lancashire and Yorkshire wages bill has been increased $650,000 per annum; that of the Great Central, $1,135,000; of the London, Brighton and South Coast, $250,000; of the London and South Western, $250,000; of the Caledonian, $650,000, and of the Glasgow and Southwestern, $165,000.

The increase in cost of coal to various companies in 1913 was: London and North Western, $1,100,000; North Eastern, $850,000 (of which $600,000 was due to higher price, and $250,000 to increased consumption); Great Western, $625,000; Midland, $700,000; Great Central, $610,000; Lancashire and Yorkshire, $460,000, and Great Northern, $425,000. Prices of all materials required by the Lancashire and Yorkshire in 1913 had increased by about ten per cent. For oil used in manufacture of oil gas alone the Great Western had to pay $60,000 more in 1913 owing to advance in price.

The total of taxes paid by British railways in 1912 was $25,645,000, an increase of $250,000 over 1911 and $3,180,000 over 1903. This item is steadily increasing and is considered the more hopeless for the railways because the advance is in the rate per pound income over which the companies

The Railway Dollar



—and what became of it in the fiscal year ended June 30, 1913, as computed by Slason Thompson.

have no control and not in increased assessments. The London, Brighton and South Coast paid in taxes, government duty and national insurance more than one third of its yearly profits.

On top of this abnormal advance in expenses increased difficulties have been met in the form of declining traffic, similar to that which has occurred in the United States. Traffic returns of nine of the principal companies for the first 19 weeks of the current year show a decline in receipts from freight traffic of nearly $2,500,000.

THE INCREASED COST OF FREIGHT MOVEMENT

The Lehigh Valley Railroad has recently compiled some interesting figures tending to show that the cost of hauling freight has doubled in the past fifteen years and that this increase has been met, so far as possible, by employing larger cars, longer trains and careful railroading methods. In spite of all the carriers could do, however, the cost has mounted so rapidly as to far outstrip the results which have been obtained through greater economy; so that the only solution to the present difficulty appears to be an increase in freight rates. To quote from the statement prepared by the Lehigh Valley:

> "A fair example of increased cost is the price of freight cars. Fifteen years ago a freight car, on an average, cost $419.66. Now it costs $979.49, considerably more than twice as much. The yearly cost of repairs and renewals fifteen years ago was $31.69. Now it is $70.06, again more than double. To ure railroad phraseology and get at the unit comparison, hauling freight per 'car mile' cost $.0046 fifteen years ago, and now its costs $.0088.
>
> "Freight locomotives cost $25,000 to-day. Fifteen years ago they cost $15,000. And the cost of repairs and renewals has increased from four to ten cents per mile. Over the same period wages have increased 25 per cent.
>
> "All there is to offset this great increase, is careful management. The new freight cars hold one-fourth to one-third more than the old ones and the average tractive power of freight engines has increased one-third. Careful routing and a close check on all train movements has been necessary. There is no system of business management that can offset an increase of over 50 per cent in costs, but the railroads are asking the Interstate Commerce Commission for an increase of only five per cent in freight rates."

INCREASING THE TRAINLOAD

Some interesting figures were given by Louis D. Brandeis as special counsel for the Interstate Commerce Commission in the closing brief which he filed in the Eastern Advance Rate Case. While Mr. Brandeis infers that there is still room for further economies in various ways, he at least clearly recognizes that the carriers have accomplished great results in the direction of overcoming the increased cost of labor by increasing the carload and trainload.

The brief cites that through the introduction of powerful locomotives and cars, and by eliminating heavy grades and curves, the average load per loaded car was increased from 19 tons in 1903 to 22.08 tons in 1912, or 19 per cent. The average freight trainload was increased from 312 tons in 1903 to 501.8 tons in 1912.

On the Pennsylvania Lines East the loaded freight car was increased 15 per cent between 1903 and 1912, and during the same period the average trainload was increased from 491.4 tons to 613.5 tons, or 24 per cent.

The Baltimore and Ohio Railroad increased its average load per loaded car from 21.4 tons in 1903 to 26.7 tons in 1913, or 25 per cent, and its average trainload was increased from 418 tons to 650.81 tons, or 55 per cent during the same period. Referring to the Baltimore and Ohio, Mr. Brandeis notes in his brief that from 1910 to 1913 the ton miles increased 18.6 per cent while freight train mileage decreased 15 per cent. It is likewise cited that the average capacity and the average load of freight cars had each been increased about 10.8 per cent on the Baltimore and Ohio and that the consumption of coal per 100 ton-miles decreased 9 per cent, so that while the price of coal was higher in 1913 than in 1910, the coal cost per ton mile in freight service was overcome.

The New York Central increased its carload 17 per cent between 1903 and 1912 and its average trainload was advanced 18 per cent. The Norfolk and Western at the same time increased its carload 29 per cent and the trainload 42 per cent.

RAILWAY CAPITALIZATION AT HOME AND ABROAD

It is, of course, well known among railway men and to a certain extent by the general public, that capitalization per mile of line in the United States is smaller than in any other country. This fact, however, has been brought out in an unusually striking manner in a recent bulletin published by the Bureau of Railway News and Statistics which shows that while the United States railways of 1912 comprised more than one third of the total mileage of the earth, their capital represented but little more than one fourth of the entire investment in the world's railways. In other words, the average capital per mile of United States railways was only slightly over three quarters the average per mile of the entire world.

According to the Interstate Commerce Commission's figures, the total capitalization of the United States railways is $15,000,000,000, or $63,944 per mile. As the following compilation shows, this places the United States eighteenth in the list of countries in order of capital per mile though by a margin of more than 200,000 miles first in point of mileage.

1.	England	$269,496
2.	Belgium	189,023
3.	France	143,435
4.	Brazil	142,080
5.	Italy	124,116
6.	Austria	120,311
7.	Switzerland	117,953
8.	Germany	116,661
9.	Roumania	88,937
10.	Spain	88,368
11.	Japan	84,301
12.	Russia	83,496
13.	Holland	82,796
14.	Servia	73,373
15.	Hungary	69,084
16.	New So. Wales	65,989
17.	Algiers	64,019
18.	United States	63,944

CAPE COD CANAL CUT THROUGH

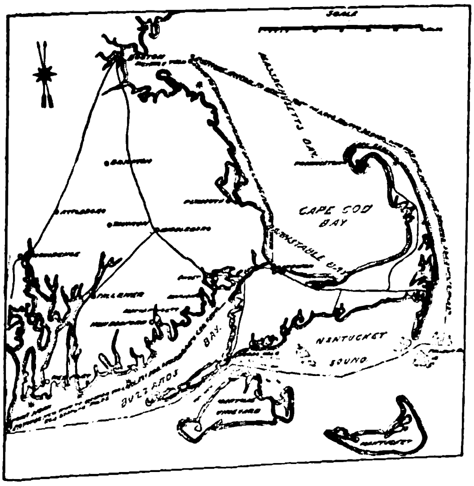
On April 21, Cape Cod, Massachusetts, became, in fact, an island. The waters of Massachusetts and Buzzard's bays met for the first time on that date, when the last dike in the Cape Cod Canal was removed. By July of this year the canal will be navigable for vessels drawing not over 12 feet. The officials announce that they expect to have 15 feet through the canal long before August 24. The canal has no locks. The length from the shore of Massachusetts Bay to the shore of Buzzard's Bay is eight miles; the length from a thirty foot line in either bay is thirteen miles; the minimum width of the bottom will be one hundred feet except at passing places where it will be two hundred feet.

This cut of eight miles will reduce the length of the water journey from New York to Boston from 326 miles via Pollock Rip to 260 miles via the canal through Long Island Sound. The distance from New York to Bostan via Nantucket Light is 402 miles. It will thus be seen that the economy in distance is very marked. Not only will the canal affect a large proportion of all Atlantic Coast shipping but it will also affect shipping from New York to Boston.

The factor of safety in addition to shortened passage must also be taken into consideration. It is estimated that 25000 craft round Cape Cod every year, exposed to the risks of the outside passage. The canal is to have continuous illumination on the street lighting plan.

The economies of the canal are expected to be very marked. The average delay each round trip for barges and schooners taking the outside route is nearly four days. This means a loss in money of 10 cents per ton on the seven million tons of coal and lumber carried by tows and sailing craft. The total amount of coal and lumber carried by steamers is 4,500,000 tons on which nearly the same amount per ton would be saved.

The canal from both ends can be approached without any influence of current



Location of Cape Cod Canal.

and will enable barges and tows to more nearly approximate schedule time than has ever been possible hitherto.

The Cape Cod Canal is a private enterprise, executed by the Cape Cod Construction Company of which August Belmont is president, and William Barclay Parsons the chief engineer. About $12,000,000 has been expended on this enterprise.

THE GROWTH OF THE INTERSTATE COMMERCE COMMISSION

Perhaps nothing so strikingly indicates the tremendous growth in the activities of the Interstate Commerce Commission as a comparison between the early requirements of that body both as to working force and appropriation and similar requirements at the present time.

In the second annual report of the Commission for the year ending June 30, 1888, the appropriation by Congress for salaries and expenses of the Commission was $125,000, and of this amount $113,007.59 was expended. At that time the Commission consisted of:

Commissioners	5
Secretary	1
Auditor	1
Stenographers	2
Clerks	26
Messengers	3
Total	38

The appropriation for the year ending June 30, 1893, was $225,000, and the amount expended $217,792.33. At that time the Commission consisted of:

Commissioners	5
Secretary	1
Auditor	1
Asst. Auditor	1
Statistician	1
Asst. Statistician	1
Docket Clerk	1
Law Clerks	4
Clerks	91
Stenographers	11
Special Employes	2
Typewriters	7
Messengers	8
Total	134

The report for the year ending June 30, 1913, shows the total appropriation to be $1,853,629.03, which is divided as follows:

For salaries of Commissioners and Secretary	$ 75,000.00
For general expenses in the execution of the laws to regulate commerce	1,000,000.00
To enforce compliance with Sec. 20 of the act to regulate commerce as amended by the act approved June 29, 1906, including the employment of necessary special agents or examiners	300,000.00
For the payment of all authorized expenditures "to promote the safety of employes and travelers upon railroads by compelling common carriers engaged in interstate commerce to equip their locomotives with safe and suitable boilers and appurtenances thereto"	225,000.00
To enable the Interstate Commerce Commission to keep informed regarding compliance with acts to promote the safety of employes and travelers upon railroads, including the employment of inspectors	150,000.00
To enable the Interstate Commerce Commission to investigate in regard to the use and necessity for block-signal systems	3,629.03
Deficiency appropriation to provide for the valuation of property of the carriers	100,000.00

Of the total of $1,853,629.03 appropriated for the fiscal year ending June 30, 1913, there was expended $1,560,404.21.

According to the annual report of the Commission published for the year ending June 30, 1913, the total number of the staff of the Commission which were in its employ during all or a part of that year was 859, and consisted of the following:

Commissioners	7
Secretary	1
Statistician	1
Associate Statisticians	3
Disbursing Clerk	1
Cashier	1
Chiefs of Divisions	10
Asst. Chiefs of Divisions	6
Solicitor	1
Asst. Solicitor	1
Attorneys	32
Examiners	75
Law Clerks	3
Special Agents	11
Clerks	501
Inspectors (Loco. Boilers)	53
Other Inspectors	37
Miscellaneous Employes	50
Messengers	60
Engineers (Valuation)	5
Total	859

Contemporary Opinion

A "Call to the Colors" for the Railroad Army.

(From the May issue of the "Railway Employes' Journal," Official Organ of the Brotherhood of all Railway Employes.)

THIS is a "call to the colors" for all of you railroad workers of the United States—a call to arms for your defense against your worst peril, against evils as bad as any war upon your country could bring you.

Two millions of you, brother railroad workers, live solely on the railroad pay car and pay envelope. All you get and all your families get is what you earn by your toil for railroads.

You prosper when the railroads prosper; you suffer when the railroads suffer. Good times for the railroads are good times for you; hard times for the railroads are hard times for you.

Take notice, too, that you prosper first and suffer first. The first glint of railroad good times brightens your condition; the first pinch of railroad hard times grips you. The axe of economy strikes first, hardest and most frequently at the pay roll, and that is where and how you live.

Yours is the greatest business in the nation bar only agriculture. The farmer raises and sells hundreds of things; you make and sell one thing—transportation.

Two millions of you in one calling, with one interest, one aim, one resource—there is no army of industry anywhere that is anything like yours in numbers, in singleness of interest, in potential power.

You need to do something now. Your common and single interest is in distress. Hard times are upon it and upon you—and they will be worse unless something is done now, and only you can do it. Everybody else has tried everything else. What needs to be done you must do with all your gigantic united strength.

Your enemy is the self-seeking politician, the demagogue, the fanciful theorist. They have put your tremendous industry on the rocks and you with it. Some want—or say they want—"regulation," and after that more "regulation." Some want government ownership—and that and bankruptcy are the only alternatives if they keep on with their wrecking. Bankruptcy for the roads means ruin for you. Government ownership means $388 a year for you, as in Germany, or $260, as in France, or $196, as in Russia—and the privilege of touching your cap when the gentle-folk go by!

Your industry is the backbone, the heart and the lifeblood of America's progress and commercial greatness. It has pioneered the wilderness and peopled the waste places; it has long since moved the frontier of commerce from the Missouri River westward to the Pacific Ocean; it, and it alone, has made American opportunity equal to American genius and enterprise.

And for twenty years your great industry has been the target, the victim, the prey of unconscionable scoundrelism, masking now as "reform," now as "regulation," now as "progress."

For twenty years the politician, the demagogue, the theorist have been clutching the throat and tearing at the vitals of your industry. In that time the price of everything men make and sell has gone steadily up—everything but the one thing you make and sell—transportation.

In twenty years the rate-reducers have remitted, by one process and another, four billion dollars in freight charges, and none of that—not a penny—has gone to the dear consumer. In that same time the makers and sellers of all other commodities have boosted their prices on the average 33 1-3 per cent. Up with every other industry; down with your industry!

In twenty-five years your industry's taxes have climbed from twenty-seven millions to one hundred and twenty-nine millions, or 367 per cent; the rate per mile has grown from $197 to $532, or 197 per cent.

For a quarter of a century the wreckers, at Washington and at every state capital, have been cinching, hammering, hampering your industry, lowering its rates, raising its expenses, loading it with costly restrictions.

They have got it down so that your industry, giving the best service in the world, gets the poorest returns. And they are still cinching your industry, hammering it, hampering it.

And now what had to happen some time has happened. The inevitable consequences have arrived. You can see them and feel them all over your industry. Hundreds of thousands of you are out of work. Other hundreds of thousands are on reduced time.

Unless you protect yourselves by protecting your industry there will soon be many more of you who can put idle hands into empty pockets and try to forget about your own empty bellies while you think about the full bellies and full pockets of your enemies, the politician, the demagogue and the theorist.

Two millions of you, and each one has, or can have, a vote—enough of you to turn anybody into or out of any office in the land. Individually you are, unless you choose to be otherwise, pretty important and influential citizens; collectively you are invincible in the nation and in almost every one of its towns, cities, counties and states. Pulling together, you can make any legislature, even Congress itself, take strangling hands off your industry and give it the same fair chance and square deal every other industry gets..

There are enough of you in Iowa, North and South Dakota, Missouri, Nebraska, Kansas, Oklahoma and Arkansas to make the administrations of those eight states send Mr. Clifford Thorne back home to attend to whatever occupation he has besides that of harassing your industry.

In Wisconsin there are enough of you to make Senator La Follette understand that your industry is not bad merely because it is big; that he will not get any more or higher honors by seeking to deny to your industry the justice accorded to all others.

In Iowa, again, you can convince Senators Kenyon and Cummins that the price of baiting your industry will be your votes and their jobs.

In his Illinois district you can show Congressman Fitz Henry that there is no more political profit to be had in jamming your industry—that the end of twenty years of demagogism is at hand and with it the end of careers of statesmen who have no other platform.

You have the right to know what every office-holder and every office-seeker intends to do by your industry. Exercise it. Ask them. Demand to know. If they do not answer right, serve notice on them that war is declared. Tell them they have no chance for election or re-election unless they give your industry and you a chance to live.

As individuals and collectively, alone and in all your organizations, come to the colors for the salvation of your industry, whereby you and your wives and children live. When the men of other industries see what you are doing they will stand with you—and, if they only knew it, it is the long strangling and starving of your industry that is rapidly making all their industries lean and hungry.

Don't humbly request. Don't petition. Make demands and enforce them. This is a fight, so hit, and hit hard. Take up the strong arms of your votes and your citizenship for your right and your chance to live. Begin with your supervisor or alderman, tackle your legislator, and make war all the way up to Congress and Washington.

All you want is as fair a deal for your industry as other American industries enjoy. You must have that to live, to be sure of full work at full pay. You are entitled to it. Get it.

A Time to Fight.

(From "Leslie's Weekly.")

THE world loves a fighter. It has little respect for the man who, when smitten on one cheek, turns the other to the smiter also. One who does not resent a wrong is looked upon either as weak or cowardly. Even a bad cause wins a following if it has a fighter at its head.

The railroads of this country have had every man's hand against them. The Interstate Commerce Commission has slapped them in the face, the Post Office Department has robbed them by adding to the weight and costs of mail transportation without extra pay, State Legislatures have passed full crew bills imposing unnecessary burdens on the railways without right or reason, and the attorney general's department at Washington has sought to dismember systems whose strength lay in their unity and whose dismemberment meant their ruin.

Meanwhile what have the railroads done? They have yielded meekly to abuse, to robbery and oppression. They have been so cowed by the terrific onslaught of the muckrakers and persistent hammering of the demagogue that no spirit of resistance has remained. The worm will turn. The most wholesome sign of the times is found in the militant attitude of the Pennsylvania Railroad, voiced by President Rea, at the recent annual meeting of its stockholders, when he said that hereafter the management of that company was determined to allow no statement reflecting on it or on the integrity of its officers to go unchallenged. Good!

All over this country the people are rising in resentment against the unfair treatment the railroads are receiving. The people of Connecticut, and in fact throughout New England, are determined to give the new management of the New Haven Railroad fair play. "The stockholders have suffered enough," says ex-Lieutenant-Governor Blakeslee of New Haven. They propose to fight the government's efforts to compel the New Haven to give up the Boston & Maine and other holdings. On the Pacific coast every chamber of commerce is entering a united protest against the absurd demand of the department of justice that the Southern Pacific shall give up control of the Central Pacific.

Bills for the repeal of the "full crew" laws are now being urged upon the legislatures of New York, New Jersey and other States, though these laws were passed only a year ago. Behind this demand stand the security holders of the railroads. Organized, they can accomplish all that they seek, for at heart the people are fair-minded. It is only necessary to expose the injustice of a situation to secure relief.

The working masses are having the real truth driven home to them by the wholesale discharge of railway employes going on throughout the country under the compulsion placed on the railroads to cut their expenses "to the bone." President Willard of the Baltimore & Ohio Railroad sorrowfully states that six thousand of the employes of that railroad have been laid off during the past year. It is estimated that 25 per cent of the workmen in the railroad shops in the East and from ten to fifteen per cent in other sections are idle. Who will care for these employes? Will the Interstate Commerce Commission? Will the department of justice? Will all the politicians catering to class voters in our legislatures and at the national capital?

The people are thinking of these things. They are discovering the impressive fact that a demagogue never filled a pay envelope and never will!

Every proposed freight increase by the railroads has been uniformly and promptly suspended by the Interstate Commerce Commission without regard to its merits. Meanwhile every demand for an increase in wages has had to be satisfied. How long can this condition last? Does it mean anything that the railroad equipment manufacturing concerns, the steel rail mills and the other factories depending largely on the railroads for their orders are running on part time and discharging workmen? Let workmen think of this and let demagogues at Washington ponder over it! There will be another election for congressmen next fall.

It is amazing how the public misconcieves the railroad situation. The New York "Herald," always alert to the public welfare, justly characterizes it as "momentous." The railroads are not owned by a few men of wealth. Their prosperity doesn't concern a hundred or a few hundred individuals. They are owned by hundreds of thousands of shareholders and bondholders. Every depositor in a savings bank and every holder of a life or fire insurance policy is interested in the prosperity of our railways. In six of our states the savings banks have over five million depositors and their savings are largely invested in railroad bonds. If the railroads are bankrupt, what will happen to the savings bank depositor? Already the loss to the savings banks of New York State alone, with three million depositors, because of the decline in the market value of securities, has reached over $70,000,000.

The insurance companies invest their funds largely in railway securities—and heretofore these investments have been regarded as the safest. What will happen if the pressure upon the railroads for increased wages, increased cost of material and heavier taxes continues and if they are not permitted to slightly increase their rates? It is said that some merchants oppose the increase, but leading commercial bodies are heartily in favor of the advance. What will the merchants do in the face of receding prosperity?

Extravagant statements are made in regard to the amount of the increase the railroads would have if the application of the eastern roads for an advance of five per cent in their freight schedules were granted by the Interstate Commerce Commission, but the testimony shows that this would amount to about $40,000,000. Large as this appears it would be offset by recent increases in wages and the rise in the cost of material.

Every observant citizen fears that the country is drifting away from prosperity. This retrograde movement would be checked at once if the railroads, which constitute the second great factor in our industrial progress, were permitted to advance their rates. A good Democrat, Congressman Levy, has introduced a bill to expedite the decisions of the Interstate Commerce Commission. We hope the measure will pass. But it should be unnecessary. The exigency itself should compel immediate and favorable action.

President Wilson, in his recent message to Congress, speaking of the needs of the railroads, said: "We cannot postpone action in this matter without leaving the railroads exposed to many serious handicaps and hazards." This should be a warning to the members of the Interstate Commerce Commission. If they do not act promptly they should retire and be replaced by those who realize the need of the hour and who have the ability and the disposition to meet it.

Regulation Versus Strangulation.

(From the New York "Evening Mail.")

EVER since June, 1908, the necessity for an advance in railroad freight rates has been before the country. Ever since June 18, 1910, when Congress gave the Interstate Commerce Commission power to suspend new schedules of rates, the issue raised by the fifty-two eastern railroads has been officially before that body. Yet this proposition, of paramount importance to the industrial and commercial life of the nation, has remained undecided for three years and nine months.

It is only technically true that the case now pending before the Commission originated last May. It began with the filing of higher tariffs by the railroads while the amendment of the Interstate Commerce Act was before Congress in May and June, 1910, and it was not ended by the decision which the Commission filed on February 23, 1911. That action technically was a denial of the application of the railroads, but it was in fact an adjournment or suspension of the proceedings. The decision explicitly provided for "further consideration" of the rate question "if actual results should demonstrate our forecast of the future is wrong."

This "forecast" of the Commission was that increases in gross earnings would come to the railroads and that, with economy, the net earnings of the future would be found adequate.

The eastern railroads waited and economized —with the prices of supplies advancing, wages increasing, taxes growing heavier, new burdens imposed by legislation, by Commission orders and by the removal of grade crossings.

The Commission's forecast was not borne out. The gross earnings of the eastern railroads in the year ended on June 30, 1913, were $186,775,000 higher than in 1910, but expenses and taxes showed an increase of $203,087,000, so the companies were $16,312,000 poorer. "Actual results" worked out directly the other way.

The situation had become acute when, in April, 1913, the fifty-two eastern railroads renewed their application for a five-per cent increase in freight rates.

Formally presented to the Interstate Commerce Commission on May 13th, that body refused to give assurance that it would consider the case "before the summer recess."

In fact more than six months elapsed before the preliminary hearing was held on November 24, 1913.

That was nearly four months ago. The case has dragged along. The record has been piled high with evidence.

Surely the Commission ought to decide this case without further delay. Five of the eight men who considered this application in 1910 are still on the Commission, and they have had forty-five months in which to reach a conclusion.

Does the business of the country have to halt while these men dilly-dally over a problem that has been insistently before them during a period almost equal to the whole term of a national administration?

Does the proposed regulation and control of enterprise resolve itself into this, that business has to be hamstrung while officials ponder ponderously and go about the country making speeches or giving out interviews attacking railroad management?

In a case of life or death the jury of twelve men usually make up their minds within twenty-four hours.

Why, in this case, in which the business life of a nation is at stake, should forty-five months of consideration be required—with a decision still two or three months off?

What sense is there in holding up the railroads, in making extensions impossible, in preventing increased efficiency, in checking betterments by keeping the freight rate issue unsettled?

Government regulation never was meant to be government strangulation. The power to fix freight rates never was intended to be the power to delay forty-five months before giving a decision.

One of the great evils of this country to-day is the killing effect of prolonged litigation in the courts. This is an abuse from which all business interests suffer. It never was designed, when the Interstate Commerce Commission was established, or when its powers were enlarged in 1910, to intensify that evil by creating another body that could hold up for an endless period questions that ought to be decided with reasonable promptness.

Forty-five months' consideration of one question is not reasonable promptness. It is simply a process of stifling railroad prosperity and preventing development and extensions.

The people are determined to have government regulation. They are equally determined not to have government strangulation. They want the railroads and every business enterprise to thrive and prosper. They are not in favor of having them Brandeised into profitless stagnated enterprises.

Hostility to Legitimate Business Condemned by the National Association of Manufacturers.

THE following resolutions which virtually condemn the hostility of the present administration to legitimate business were adopted at the 19th annual convention of the National Association of Manufacturers, which was held in New York on May 19th and 20th.

Hostility to business must stop: With feelings of profound anxiety we observe prevailing industrial and commercial depression wholly at variance with those healthy and prosperous conditions to which our country is entitled. On all sides productive industry and operative manufacture is shrinking in volume and output to a degree that forbodes years of slow recovery before prosperity can be restored. We observe policies fraught with experimental novelty with respect to the tested principles of the Sherman Anti-Trust Act. We witness, with amazement, hostility toward established and legitimate business from many sources—journalistic, legislative and even administrative; but we fail to detect any concerted and affirmative efforts to resuscitate business vitality or augment those great industrial forces that should express the sovereignty of our trade and commerce. The number of unemployed American working men, now hundreds of thousands, is increasing. Countless plants and factories operate listlessly on greatly reduced schedules. A hesitancy, born of relentless political onslaught and ruthless legislative assault, explains, in large part, our business inertia.

Therefore Be It Resolved: That the National Association of Manufacturers, a non-political, non-partisan organization, representing all crafts and groups of industry, do hereby solemnly protest against continuous assault on our established industries. That we affirm our conviction that unless there is a cessation of hostility to legitimate business the vitality of our commerce and trade will be critically impaired.

And We Therefore Finally Resolve: That we unqualifiedly oppose the passage of The Clayton Bill (H. R. Bill 15657), now pending before Congress.

Resolved: That it is the patriotic duty of the individual members of this Association in their respective communities to encourage and endorse the honest efforts of those who are faithfully endeavoring to foster constructive thought and measures in State and National Legislation and to earnestly appeal to American citizenship to condemn and displace those self-appointed or politically promoted demagogues who seek to perpetuate themselves in the administration of public affairs by any means or measure, no matter what the economic effect so long as such seem to promise temporary popular votes.

Resolved Further: That the members of this Association be asked to distribute this resolution widely in their respective communities.

The Parcel Post and the Railroads.

(From the Toledo, Ohio, "Times.") ..

A GREAT many people will believe that Congress has committed an unpardonable oversight by enacting the bill providing for the expenditures of the Post Office Department for the next fiscal year without including in it a provision to compensate the railroads for carrying the parcel post.

The bill is based upon estimates of the Department that next year the parcel post will handle 600,000,000 packages, from which it will derive a revenue of $60,000,000. In his annual report the Postmaster General suggested that the railroads would be entitled to additional compensation on this account, and the Department is said to be now gathering information relating to the correct basis for future fair compensation to the railroads on account of the new departure in our mail service. But Congress, either through neglect or because of the cowardly reluctance of modern statesmen to do anything to protect corporations from injustice, neglected to make any provision for the service of the roads in assuming their new burdens.

In Great Britain the railways receive 55 per cent of the revenues from the parcel post. Before the establishment of the system in this country the railroads received for transporting mails at least one-fifth of the postoffice revenue. Assuming that their service is no greater in handling the parcel post than with other mail, this increased revenue of $60,000,000 to the Postoffice Department should in all fairness mean increased payments to the railroads of at least $12,000,000.

The parcel post ruined or crippled the express companies without any compensation to them. It is now proving itself a heavy burden to the railroads, also without compensation, at a time when they are under the strictest government surveillance and undergoing a critical period in the history of their development. If this is justice, there can be no such word as hardship in the English language. The time has come for the American people to call upon their representatives to cease an attitude toward corporations indicating that they are to be harassed simply because they are corporations. It it time to cease wringing unnecessary taxation from them and treating them as necessary evils, if not public enemies.

The parcel post should be developed to the utmost, but it should be done with justice to all.

Mail Transportation Injustice.

(From the "Bache Review," New York.)

IT must be remembered that the Government's contract with railways is made on the basis of the weight carried at a fixed time, when all the mails are weighed, the Government thereafter paying a lump sum for four years following the weighing period, no matter whether the amount carried increases or not. The mails were weighed by the Government for this purpose before the Parcel Post was inaugurated, so that the railroads now are carrying all the additional parcel post without cost to the Government, and with a distinct loss to themselves. The utter injustice of this arrangement is demonstrated by a number of incidents which have come out lately. The "Eagle Enterprise" of Colorado, has the following jubilant and congratulatory note:

"Sherman Brothers, of Eagle, broke the record for parcel post shipments last week when they sent eighty fifty-pound sacks of oats by mail to J. C. Temple, at Hayden. By sending the oats by parcel post the cost of the shipment was over fifty dollars less than it would have been by freight. Sherman Brothers are among the progressive ranchers of this country, and the oats were shipped to Hayden to be used for seed."

In other words, the Government has taken the Sherman Brothers 80 sacks of oats and transported them at a price which enables these gentlemen to profit $50 over what they would have had to pay if they had been sent by freight. But think of the railroads! The Government pays them nothing at all for carrying the oats and they lose the whole bill, although they furnish the entire transportation.

Other shippers are taking advantage of this situation. For instance, on another of the Colorado roads a ton of ore was shipped recently in small 50-pound sacks by parcel post and these little bags traveled speedily on the passenger trains, but here again the roads get absolutely no pay for doing the business.

Six large mail order houses are shipping every day on an average 100,000 packages by parcel post, for the transportation of which the railroads do not get a cent.

We understand that the Post Office Department declines to pay any attention to the petitions of the railroads for justice. And the Interstate Commerce Commission, which is so ready to suggest that the railroads are neglecting opportunities to make business pay on the present scale of rates, turns a deaf ear to the subject.

If this kind of an operation were practiced by an individual or by big business, it would be considered sharp practice and dishonest and worthy of severe punishment.

Meanwhile, the railroads are having difficulty in earning their fixed charges and dividends, are making no purchases that are not absolutely necessary, and the business of the country is growing more and more stagnant because of this.

Annual Convention of International Railway Fuel Association.—The International Railway Fuel Association held its sixth annual convention in Chicago, on May 16th to 21st. President Collett's opening address was devoted largely to the conservation of the coal supply. He spoke in part as follows:

"The proper use of fuel on railroads depends also on other factors: Fuels should be properly prepared for delivery to the engine tender, and a uniform grade of fuel should be supplied where possible. It is fair to assume, where coal mines exist on railroads, that such coal will be used on its locomotives; first, because of lower cost and a constant supply, and second, to stimulate the industry. Efforts should be made to learn to use such coals, rather than criticize the quality, as the source cannot be altered. Every semblance of waste should be avoided from the time the coal leaves the mine until it reaches the locomotive tender, otherwise there is not the incentive for the engineer and fireman to exert their best efforts. If railway managers are shown, concretely, what it costs to operate locomotives not in good condition, the locomotive will not be permitted to long remain in this condition. The proper distribution of engines to divisions to secure the best results, the correct loading of cars and trains, and train movement, should be carefully studied from the standpoint of fuel cost, quite as much as from any other angle. The make-up and schedule of trains is important; it is all along the line of cooperation, and needs emphasis."

It was decided to hold the seventh annual convention of the International Fuel Association at Chicago, Ill., May 17th to 20th, inclusive, 1915.

The Swiss National Exhibition.—The Swiss National Exhibition which is held in Berne, the country's beautiful capital, up to October 15th next, had a brilliant opening on May 15th. A very comprehensive exhibition covering railway rolling stock with the Swiss Federal Government as the largest exhibitors is creating considerable interest among railway men. Among other exhibits is the first Swiss locomotive (now about seventy years old), ever used in Switzerland, side by side with the newest and most modern locomotive employed for express trains on the St. Gothard line.

The new Lotschberg Railway shows 2,500 H. P. electric engines which being the most powerful locomotives of the kind in the world, will prove of interest to those interested in electric railway developments. The exhibits include also special invalid railway carriages, rotary snow plows, mail and luggage vans and also refrigerator vans.

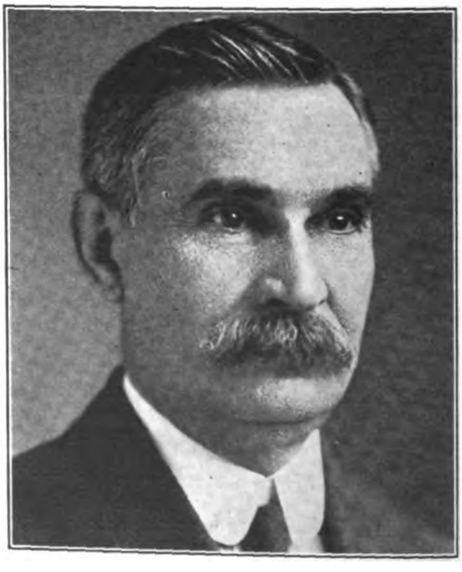
Personal

Joseph H. Young.

JOSEPH H. YOUNG, who for some time was president of the Spokane, Portland and Seattle and the Oregon Trunk Railway, has been elected president of the Norfolk Southern with headquarters at Norfolk, Va. He succeeds Charles H. Hix, resigned. Mr. Young was born on January 17, 1864, at Salt Lake City, Utah, and was educated at the University of Utah. He began railway work in 1882 with the Utah Central as office boy and warehouseman, and was later agent and operator at various stations, and then bill clerk on the same road. He was with the Union Pacific as ticket clerk and train agent at Ogden, Utah, from 1883 to 1886, and was superintendent of the Utah Division of the same road, now the O. S. L., from 1891 to 1902. From 1886 to 1889 he was traveling passenger agent of the Chicago & North Western, and then to 1891 was general agent of the Salt Lake & Eastern, and general superintendent of the Utah Central. Mr. Young was general superintendent of the Rio Grande Western, now part of the Denver & Rio Grande, at Salt Lake City, for two years from 1902 and then became general superintendent and later general manager of the Colorado & Southern at Denver. For a short time during 1907 he was general superintendent of the St. Louis & San Francisco. He was general superintendent of the Southern Pacific at San Francisco from 1907 to 1910, and in the latter year was elected president of the Alaska Steamship Company, the Northwestern Steamship Company, Ltd., the Northwestern Commercial Company, the Northwestern Fisheries Company, and the North Coast Lighterage Company, and vice-president of the Copper River & Northwestern. From May, 1912, to January, 1914, he was president of the Spokane, Portland & Seattle, the Oregon Trunk Railway, the Oregon Electric Railway, the United Railways, the Spokane & Inland Empire, the Pacific & Eastern, and the Dalles, Portland & Astoria Navigation Company, with office at Portland, Oregon.

John F. Auch.

JOHN F. AUCH, who has recently been appointed vice-president and traffic manager of the Philadelphia & Reading Railway, entered the service of the Philadelphia & Reading Railroad Company in October, 1875, as night operator at West Spring Mill, and remained in that department, alternating between night and day service, at various points along the line, until the fall of 1879, when he was appointed station agent at Chalfont, Pa. While in this branch of the service he was transferred two or three times until in the summer of 1885 he was made chief clerk to the division freight agent of the Philadelphia & Atlantic City Railroad Company at Philadelphia. In the fall of 1886 he became the division freight agent of the same Company, which position he held until that office was abolished in 1888, when he was appointed traveling freight agent, covering the territory of the Atlantic City Railroad and the New York Division of the Philadelphia & Reading Railway. In 1889 he relinquished the title and duties of traveling freight agent to accept the position of chief clerk to the general freight agent. That position he filled until April, 1891, on which date he was appointed division freight agent with headquarters at Harrisburg. In this position he remained until April, 1894, at which time he was advanced to the position of assistant general freight agent at Philadelphia, and remained in that position until May 1, 1908, when he was appointed general freight agent, which office he held until appointed assistant freight traffic manager December 1, 1909. This office he held for just one month, or until January 1, 1910, when he was appointed to the position of freight traffic manager. He fulfilled the duties of this position until January 1, 1913, when he



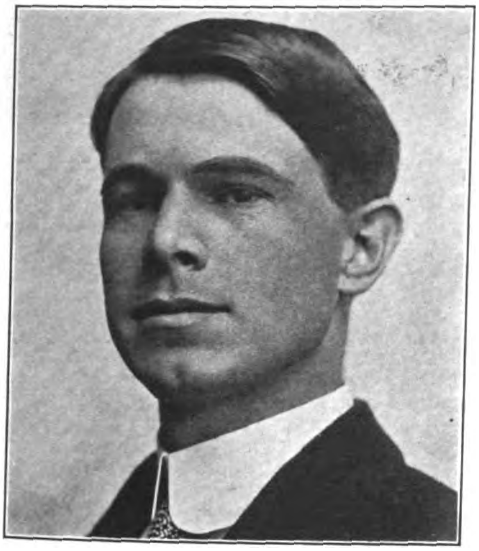
JOHN F. AUCH.

was appointed vice-president and freight traffic manager. Following the death of Mr. George F. Baer, president of "The Reading," the Passenger Department of the Company was placed in his charge, and on May 20, 1914, by action of the Board of Directors, he was appointed vice-president and traffic manager.

Mr. Auch is now the executive head of the Traffic Department of the Reading Railway System.

E. C. Bagwell.

E. C. BAGWELL, whose appointment as President's Assistant of the Seaboard Air Line Railway, with headquarters at Norfolk, Va., has recently been announced, is a graduate in civil engineering of the A. & M. College of North Carolina. He began railroad work with the Louisville & Nashville Railroad in 1903, when he was employed as rodman. In 1904 he entered the service of the Seaboard Air Line as inspecting engineer and, except for eighteen months (March, 1908, to September, 1909) when he was superintendent of the Charlotte Harbor & Northern Railroad, he has been continuously in the service of the Seaboard Engineering Department. For the past four years he has been principal assistant engineer and was appointed president's assistant on April 1st, 1914.



E. C. Bagwell.

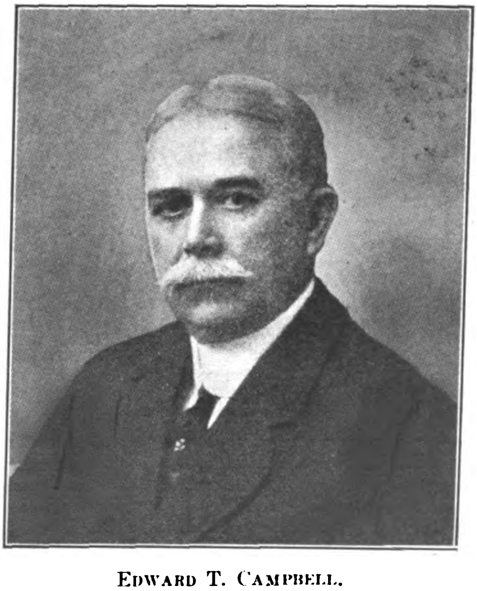
R. E. Kimbell.

R. E. KIMBELL has been promoted from the position of assistant general auditor of the St. Louis Southwestern to that of assistant to the president with headquarters at St. Louis, Mo. Mr. Kimbell was born January 19, 1867, at Little Rock, Ark., and was educated in the public schools. He began railway work in 1886 as junior clerk in the auditor's office of the St. Louis, Arkansas & Texas, now the St. Louis Southwestern. He filled various clerkships, was traveling auditor and chief clerk in the accounting department, until December, 1902, when he was made assistant general auditor of that road.

R. E. Kimbell.

Edward T. Campbell.

EDWARD T. CAMPBELL has been appointed general traffic manager of the Erie Railroad with headquarters at Chicago. Mr. Campbell began railway work in 1891, as contracting freight agent for the Queen & Crescent Route. From February to June, 1893, he was with the Chesapeake, Ohio & Southwestern as chief clerk, and the following two years he was secretary of the I. W. freight bureau. He was then, in June, 1895, made chairman of the Southwestern freight bureau, which position he held until 1899. In August, 1900, he was appointed purchasing agent of the Minneapolis & St. Louis, resigning in May, 1902, to become purchasing



Edward T. Campbell.

agent of the Erie, with headquarters at New York. Seven years later Mr. Campbell was made traffic manager of the latter road, with office at Chicago, which position he held at the time of his recent promotion.

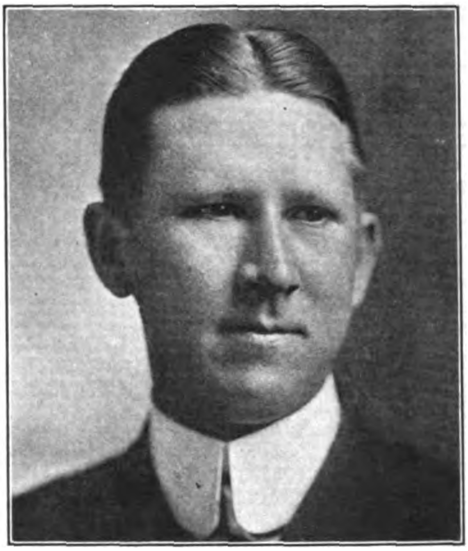
Fred Zimmerman.

FRED ZIMMERMAN, who has been appointed general freight agent of the Lake Shore and Michigan Southern and the Dunkirk, Allegheny Valley and Pittsburgh Railroads, with office at Cleveland, Ohio, was born July 26, 1866, at Portland, Me. He entered railway service in 1882, since which he has been consecutively to October, 1833, office boy and clerk with the Green, Kankakee, Chicago & Louisville Southern and Southern Despatch Fast Freight Lines; October, 1883, to April, 1887, clerk, Chicago & Ohio River Road; April, 1887, to February, 1890, rate and tariff clerk, general freight department, Louisville, New Albany & Chicago Ry. at Chicago, Ill.; February, 1890, to April, 1897, tariff and percentage clerk, general freight department, Michigan Central R. R. at Chicago, Ill., and Detroit, Mich.; April, 1897, to October 1, 1899, chief clerk, same department at Detroit; October 1, 1899, to July 1, 1900, assistant general freight agent at Buffalo, N. Y.; July 1, 1900, to November 1, 1909, assistant general freight agent, same road at Chicago; November 1, 1909, to January 1, 1911, general freight agent, Indiana Harbor Belt Railroad; January 1, 1911, to March 1, 1914, general freight agent, Chicago, Indiana & Southern and Indiana Harbor Belt Railroads.

FRED ZIMMERMAN.

John A. Streyer.

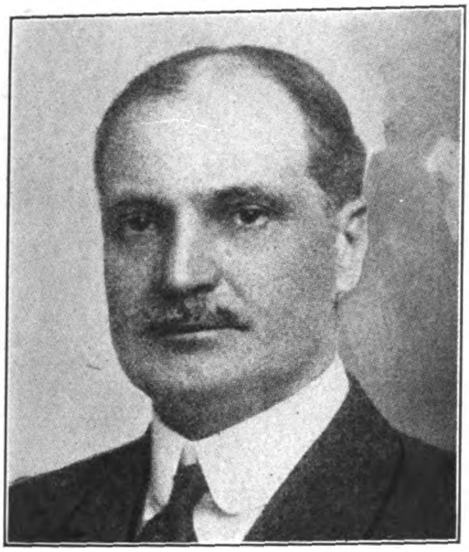
JOHN A. STREYER, who has recently been appointed traffic manager of the Macon, Dublin and Savannah Railroad, was born in Macon, Ga., on October 27, 1874. He entered railway service in 1889 as messenger in the traffic department of the Georgia, Southern and Florida and the Macon and Birmingham Railways. He filled various positions in the general freight agent's office of this road until January 1, 1894, when he became general clerk in the claim department. In May, 1894, he left the railway service to become engaged in mercantile business at Macon, but re-entered it again in 1898 as traveling freight and passenger agent of the Macon and Birmingham Railway and on February 1, 1900, was appointed traveling freight agent of the Atlanta and West Point Railway and the Western Railway of Alabama with headquarters at St. Louis, Mo., opening the first office located by this line in Western territory. He returned to the Macon and Birmingham Railway, February 1, 1901, as commercial agent and in the latter part of the same year was made general agent of the freight and passenger departments at Macon, Ga. In 1902, he was promoted to the position of general freight and passenger agent of the same road and in February, 1904, became general agent of the Macon, Dublin and Savannah Railroad. This position he held until April 1, 1904, when he was again promoted to the position of general freight and passenger agent with headquarters at Macon, which position he held until April 1, 1914, when he was appointed traffic manager as above noted.



JOHN A STREYER.

Samuel G. Strickland.

SAMUEL G. STRICKLAND, who has been appointed general manager of the lines east of the Missouri River of the Chicago and North Western Railway, was born August 15, 1859. He entered railway service in 1877 as a telegraph operator on the Canadian Pacific Railway. From 1878 to 1880, he was operator and clerk with the St. Paul, Minneapolis and Manitoba Railway, and from 1880 to 1892, he served successively as telegrapher, clerk, agent and general agent of the Chicago, St. Paul, Minneapolis and Omaha Railway. The following two years he was agent and superintendent of terminals for the same road and was then appointed chief clerk to the general superintendent. In 1898 to 1900, he was trainmaster and



Samuel G. Strickland.

assistant superintendent. From 1900 to 1905, superintendent at Omaha, Neb., and from 1905 to 1908, general superintendent at St. Paul. In the latter year he was appointed assistant general superintendent of the Chicago North Western at Chicago and in November, 1910, became general superintendent. Since April 1, 1912, and until his recent appointment he has been assistant general manager.

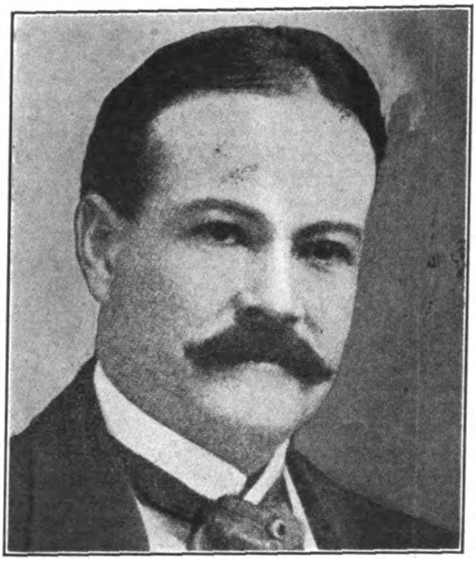
Marcus L. Bell.

MARCUS L. BELL, who has been appointed general solicitor of the Rock Island Lines, was born January 11, 1880, at Pine Bluff, Ark. He graduated from the University of Arkansas in 1898, and attended the law school of the University of Chicago in 1903. He entered railway service in June, 1904, as private secretary to the chairman of the Executive Committee of the Chicago, Rock Island & Pacific at New York, and on January 1, 1905, was made assistant attorney at Chicago. In November of the following year he was appointed local attorney at Chicago, and on August 1, 1909, he became assistant general attorney, being promoted to general attorney in April, 1910. He now becomes general solicitor, with headquarters at Chicago.

Marcus L. Bell.

W. D. Cantillion.

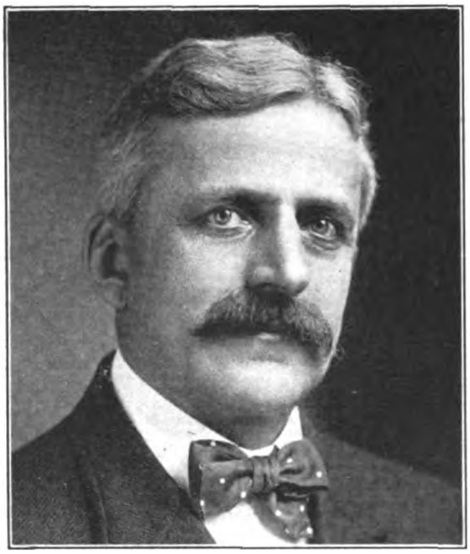
W. D. CANTILLION, who has resigned as general manager of the Chicago and North Western Railway, was born at Janesville, Wis., August 5, 1861. He received a common school education and in 1875 entered the service of the Chicago & North Western as a freight brakeman. He served in that capacity and as conductor until 1891 when he was made trainmaster at Milwaukee, Wis. From 1893 to 1897 he was assistant superintendent at Milwaukee. Mr. Cantillion was appointed superintendent at Winona in 1897 and four years later became assistant general superintendent. He was made general superintendent July 1, 1902, on January 24, 1906, was promoted to assistant general manager and since November 1, 1910, has been general manager of lines east of the Missouri River.



W. D. Cantillion.

A. K. Shurtleff.

A. K. SHURTLEFF, who has been appointed office engineer of the Presidents' Conference Committee of the Western Group of Railways, was from 1885 to 1894, engaged in railway construction work on various Western lines among which were the Chicago North Western, the Minnesota and North Western (now the Chicago and Great Western), Illinois Central, Pacific Short Line (now a portion of the Burlington System), the Great Northern and the Brainerd and Northern Minnesota (now the Minnesota and International Railway). From 1894 to 1898, he was division engineer of the Black Hills Division of the Freemont. Elkhorn



A. K. SHURTLEFF.

and Missouri Valley Railway (now a portion of the Chicago North Western Railway). From 1898 to 1900, division engineer of the Kansas Division of the Union Pacific Railroad and from 1900 to 1906, assistant engineer on the chief engineer's office of the Union Pacific Railroad. In 1906, he joined the forces of the Rock Island Lines as office engineer, which position he held at the time of his recent appointment.

M. C. Cleveland.

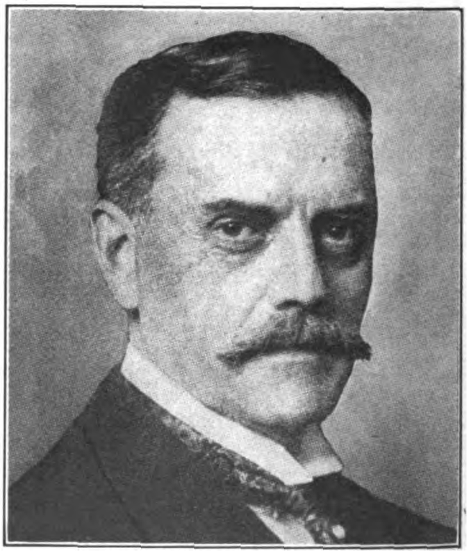
M. C. CLEVELAND, who has recently been appointed valuation engineer for the Lehigh Valley Railroad Company, began his railway service in 1902, as instrument man on construction for the Baltimore and Ohio. In May, 1903, he became assistant engineer of the Toledo, St. Louis and Western Railway, and from this position in April, 1904, accepted a similar one with the "Big Four." In September, 1905, he was promoted to the position of engineer of maintenance of way for the P. & E. Division of the same road, and in June, 1907, became division engineer for the Michigan Central Railway. In October, 1910, he was appointed special engineer for the vice-president of the New York Central Lines West of Buffalo, and in August, 1911, accepted the position of engineer of maintenance of way for the Chicago, Indiana and Southern Railway, which position he held at the time of his recent appointment.

F. L. Thompson.

F. L. THOMPSON, who has recently been appointed assistant chief engineer of the Illinois Central Railroad is a graduate of the Civil Engineering class of 1896, of the University of Illinois. He entered the service of the Illinois Central as chainman on June 18, 1896, and was later made rodman and inspector on the concrete work. In February, 1898, he became assistant engineer on surveys and on grade reduction work, and on January, 1900, assistant engineer in charge of grade reduction and double track work. In February, 1902, he was transferred to the chief engineer's office at Chicago, as assistant engineer and in February, 1903, became acting roadmaster of the Chicago Division. In October, 1903, he was transferred to the Louisville Division in a similar capacity, and in January, 1907, was appointed chief engineer of bridges and constructon. On July 1, 1910, he became engineer of bridges and buildings and on April 1, 1913, engineer of construction, which position he held at the time of his recent promotion.

E. C. Carter.

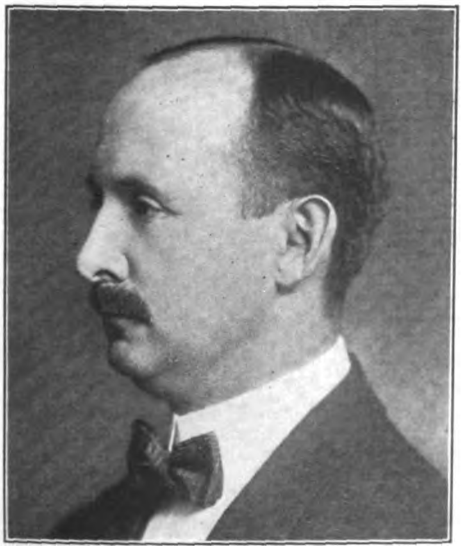
E. C. CARTER, who has resigned as chief engineer of the Chicago and North Western Railway, was born January 11, 1854, at Waverly, Ill. He was graduated from Rensselaer Polytechnic Institute, Troy, N. Y., and entered railway service in 1870, as a rodman with the Jacksonville & Southeastern Ry. He was with the Cairo & St. Louis Ry. and then from 1876 to 1877 was draftsman and mechanical engineer for the Springfield Iron & Steel Co. He returned to railroad work in 1877 as assistant engineer of the Chicago & Alton R. R. on its Kansas City extension. He was with the United States Government on Mississippi River observation in 1878 and then from 1879 to 1880 was assistant engineer of construction, Indianapolis, Decatur & Springfield Ry. Mr. Carter was resident engineer of the Wabash, St. Louis & Pacific Ry. from 1880 to 1884; from 1884 to 1885, assistant to chief engineer of that road, and from 1885 to 1887, assistant and contracting engineer of the Detroit Bridge & Iron Works. He went with the Chicago & North Western Ry. in 1887 as principal assistant engineer. He has been chief engineer of that road since December, 1899.



E. C. CARTER.

R. G. Fitzpatrick.

R. G. FITZPATRICK, who on June 1st, became superintendent of the Fort Worth and Denver City, began his railway career as operator for the Chicago, Burlington and Quincy Railroad at Chillicothe, Mo. Later he became train dispatcher for the Missouri Pacific at Sedalia and from there joined the forces of the Missouri, Kansas and Texas as chief dispatcher with headquarters at Dennison, Texas. His next position was that of trainmaster with the Fort Worth and Denver City, from which he resigned three years ago to become superintendent of the Wichita Valley Railroad. He was holding this position at the time of his recent appointment to the superintendency of the Fort Worth and Denver City as above noted.



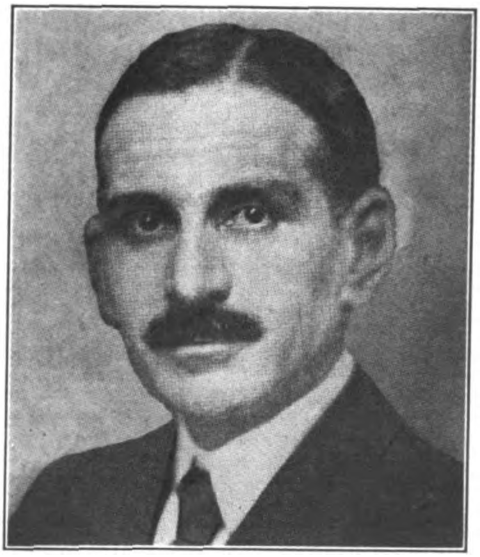
Fred T. Dickerson.

Fred T. Dickerson.

FRED T. DICKERSON, until recently assistant secretary of the Central Railroad of New Jersey, has been appointed assistant to the president of the same road with headquarters at New York. He was born on January 28, 1867, at Ramapo, N. Y., and was educated in the public schools. He also took a course in a New Jersey business college. In 1883 he studied telegraphy while serving as a telegraph messenger for the Delaware, Lackawanna & Western at Roseville Avenue, Newark, N. J., and in April, 1884, entered the service of the Central of New Jersey as operator and assistant agent at Lake Hopatcong. Subsequently he was appointed agent and operator at that station, and later had charge of other and larger stations. He served also for two years in the trainmaster's office. He was transferred in 1891 to the general offices of the same company at New York as clerk. Five years later he was appointed chief clerk to the controller, and later was advanced to chief clerk to the vice-president and general manager. In 1907 he was elected assistant secretary, continuing also to perform the duties of chief clerk. Mr. Dickerson's entire service of thirty years has been with the Central of New Jersey.

C. D. Honodle.

C. D. HONODLE, ticket agent at Akron for the Erie Railroad and the Cleveland, Akron and Columbus Railway, has been elected president of the International Association of Ticket Agents. Mr. Honodle was born in Akron, Ohio, on August 28, 1866. He commenced railroading in June, 1882, as an operator for the B. & O. at East Akron. In July, 1883, he became assistant ticket agent at the B. & O. station in Akron, going to the union station in the same capacity in July, 1887. Since June, 1891, Mr. Honodle has been ticket agent at the union station in Akron.



C. D. Honodle.

Shall the Government Own the Railroads?

President Low Discusses New and Critical Phases of the Railroad Problem, at Annual Meeting of the National Civic Federation.

HONORABLE SETH LOW.

IN his opening address at the Fourteenth Annual Meeting of The National Civic Federation, President Low devoted his attention chiefly to recent developments in the railroad situation, in their bearing upon national policies and the menace of government ownership.

Referring briefly to the efficient and useful work of the several departments of the Federation, Mr. Low described the preparation and passage of the Newlands Arbitration Law as perhaps the most significant work which has been carried to completion during the past year. The history of the Federation's part in this achievement was given in some detail in the last number of the "Review," and with it an account of the first arbitration held under the new law, that between the eastern trunk line roads and the conductors and trainmen. By request of both the railroads and brotherhoods, Mr. Low acted as chairman of this arbitration, which brought under review practically the whole field of operating costs, revenues and conditions of service.

In addition to this adjustment, Mr. Low enumerated twelve other controversies which have been settled or put in the way of settlement, through the United States Board of Mediation and Conciliation during the four months of the new law.

Arbitration is not necessarily a compromise, Mr. Low pointed out, but the fact remains that in the three principal arbitrations in the eastern territory the operating expenses of the roads have been heavily increased, and it is, of course, obvious "that a railroad cannot have its fixed charges indefinitely increased against its will unless it can at some time or another increase the rates which it will charge for service." Mr. Low then entered upon a discussion of these larger aspects of the problem as follows:

"The actual situation of the railroads, at the moment, seems to me so serious that, if this application for an increase of freight rates is declined, I fear the demand for the public ownership and operation of the steam railroads of the country will be inevitably strengthened. In a spirit of despair, men who know better will be apt to say, 'That is the only way'; and out of despair, I need not remind you, wise counsels seldom come. I make no apology, therefore, for pointing out briefly, on this occasion, some of the difficulties attaching to government ownership and operation of railroads in a country like ours, with a Federal Government evolved as ours has been, covering half a continent. Such information as I can command leads me to believe that in Germany, France, Australia, Italy and Austria, the earnings of the state-owned railroads in each country barely equal, if they do equal, the sums paid in taxation by the railroads of the United States. The freight rates prevailing in those countries are uniformly higher, I believe, than the freight rates prevailing in the United States. In some cases they are more than double, but it is noticeable that the average passenger rate, disregarding the division by classes obtaining there, is lower in some, and, I think, in all, of those countries than here. This is largely due, no doubt, to the fact that the multitudes there travel third class, and are given accommodations that would not be acceptable here.

"It is needless for my purpose to pursue this comparison into detail. What I wish to point out is, that in our country, by reason of its vast extent and by reason of its Federal government, and its historic evolution, the problem of public ownership, and, not less, the problem of public operation, are surcharged with difficulties that do not exist under different conditions. Leaving out of account altogether the difficulty of securing wise and economic management under the democratic conditions prevailing in the United States, the first point to emphasize is the difficulty of acquiring effective control of the railroads even if desired. Most of the railroads, if not all of them, are incorporated by the different States. This means that every railroad is given the authority by each State to operate within its own borders, and that every such railroad is equipped with the right of eminent domain to condemn land for railroad purposes within such State. What authority is to compel the States, or rather, what appeal is to induce the people of the various States to permit the railroads to surrender State charters in favor of national ownership; and in addition to grant to the national government authority to equip railroads so chartered with the power of eminent domain in every State of the Union? Without such power of eminent domain it would be impracticable for railroads to be enlarged or for new roads to be constructed. If, on the other hand, each State were to absorb its own railroads, we should have a condition in this country out of which it would be impossible to bring effective unity of action and a railroad service operated for the general good. Imagine, for example, the New York Central Line from New York to Buffalo, owned and operated by the

State of New York and the Lake Shore & Michigan Southern owned and operated in fragments by the States of Pennsylvania, Ohio, Indiana and Illinois. Who can think for a single moment that the result in public service would be either adequate, economical or satisfactory? Moreover, if the national government, despite every difficulty, were to succeed in absorbing the railroads of the entire Union, every State would lose the control of its intrastate traffic that it now enjoys; and every State would lose all the income which it now collects from the railroads by taxation, because United States property is not subject to taxation in any State. Every State, therefore, in such a case, would be confronted with both an economic and a social problem, born of our Federal system, and the scale upon which these effects would be felt would greatly magnify the embarrassments.

"But, assuming for a moment that this great economic and social change had been sanctioned and actually put into force, try to imagine, if you can, how the conflicting interests of different parts of the United States could be harmonized when the same government is responsible for railroad operation everywhere. The annual bill for the construction of public buildings for the Federal government has acquired the popular name of 'pork-barrel' because it is so universally recognized that appropriations for this purpose are made to gratify local sentiment and to promote the interests of individual congressmen more than upon the merits of the matter, as determined by careful inquiry. What possibility is there that the administration of a system of national railroads would be, or could be, carried on under our democratic government in any other spirit? And in what possible way could the general interest of the people of the United States, in the matter of transportation, be less well served? Furthermore, the political consequences of centering such power in Washington are beyond calculation . . . .

"Our privately-owned railroads are themselves largely responsible for the strength of the popular feeling in the United States (in favor of government ownership) . . . No doubt, the rebate system, so long practiced, accounts for most of this feeling. Happily, by virtue of the Interstate Commerce Law and the creation of the Interstate Commerce Commission, that which was a nation-wide abuse has become a rare exception, and it will become more and more rare. In other words, without public ownership, but through public regulation, we have substantially secured equality of treatment at the hands of the railroads for every shipper, large or small, in whatever State he may be . . .

"It is hard to speak with moderation of the financial abuses connected with railroad management which have done so much to create and to strengthen the demand for the public ownership and operation of railroads. The public has seen railroads loaded with charges for the profit of individuals responsible for the conduct of the roads, charges which add permanently to the cost of transportation. Increases of value, largely created by the public, have been absorbed entirely for private benefit; and all of this has gone on upon so great a scale and for so long a time as to have cost railroad management, to a great extent, but often unjustly, both the respect and the confidence of the people. It is a case where the innocent suffer with and for the guilty. If government regulation can successfully put an end to these evils no doubt private ownership and operation of railroads may long continue in the United States; but, if government regulation falls short of being as effective in these directions as it has fortunately been in the ending of rebates, the tendency toward government operation, despite all its difficulties and dangers, is not unlikely to grow, unchecked. If the railroads wish to escape public ownership they must consent to the public regulation, for the future, of the issue of stocks and bonds; and it is greatly to be hoped that instead of placing every imaginable difficulty in the way of such legislation, they will cordially co-operate to see that effective and fair legislation to prevent the repetition of the abuses of the past is quickly made a part of the law of the land.

One further observation is legitimate in this connection. If not completely, still very largely, the actual management of railroads in this country has passed, and is constantly passing, out of the hands of financiers and into the hands of practical railroad men who are less and less affiliated with the stock market. It is reasonable, therefore, to hope that we are passing out of the old era into a better order of things. The practical question also arises whether it is not better now to "let the dead past bury its dead" and to turn with united and courageous front towards the better future. An attempt to uncover all of the past, and to try to do ideal justice now for wrongs that were committed long ago, is certain to be very costly to the country as a whole, as well as to the unhappy stockholders, who, without personal fault, find themselves involved in such a predicament. Mr. Evarts used to say that "there are vested wrongs as well as vested rights," which was a wise man's way of saying that some wrongs are so costly to undo that it is better to leave things as they are and turn over a new leaf. . . .

"There is one aspect of public ownership and operation which it seems to me legitimate to point out to the railroad employes who are so largely represented in our membership, and this is its probable effect upon wages. Railroads that are publicly owned have available for wages only such sums as are appropriated by law. In a country of the vast extent of the United States that this difference is substantially certain in wages, as established by law, when they have once been fixed. Working conditions will also then be much more difficult to change than when the railroads are under private management. The cost of living is so different in different parts of the United States that this difference is substantially certain to be reflected in an average wage below that which the railroads can pay under private management. The agricultural interests of the country are enormous, and one of their greatest difficulties comes from the fact that agriculture cannot afford to pay as large wages as transportation and many other occupations may now. This is, in fact, one great reason for the high cost of food products, that agriculture cannot command the labor that it needs in order to cultivate as it should, and to produce and to harvest larger crops. As long as railroads are privately owned, agriculture must take its chances: but, in this country, if railroads were publicly owned, the granges and other combinations of farmers would certainly be on the job to keep railroad wages as low as possible. They would have to be or they could not work their farms at all. There is a rigidity about law that makes it difficult to change conditions once established; and it is equally hard, under the provisions of law, to take into consideration local qualifying conditions. Such considerations as these satisfy me that railroad employes are not only better off now, under the private administration of railroads than they would be likely to be under public administration, but also that under existing conditions they can hope for a betterment in pay and rules of service which it would be vastly harder to realize from a Federal government constituted like ours."

How a Great Railroad Helps the Farmers

By H. M. Cottrell.
Agricultural Commissioner, Rock Island Lines.

THE fourteen States served by the Rock Island Lines cover one-third of the tillable area of the United States. The territory includes a large part of the spring wheat, winter wheat, corn, alfalfa, cotton, rice and Kafir growing districts of the country. It covers a large part of five States where dry farming methods are necessary and districts in five States where drainage is the first requisite.

The Agricultural Department of our road makes a careful study of the agricultural needs and opportunities of each farming section of this large area, doing whatever it can to supply immediate needs and stimulating work that will lead to future large developments.

Constant watch is kept of the condition of the seed for both spring and fall planting. At any time, should the seed in a locality or a district show weak germination, warning is sent immediately to all newspapers, banks and business organizations in the affected territory advising of the defect in the seed and urging that all seed be tested.

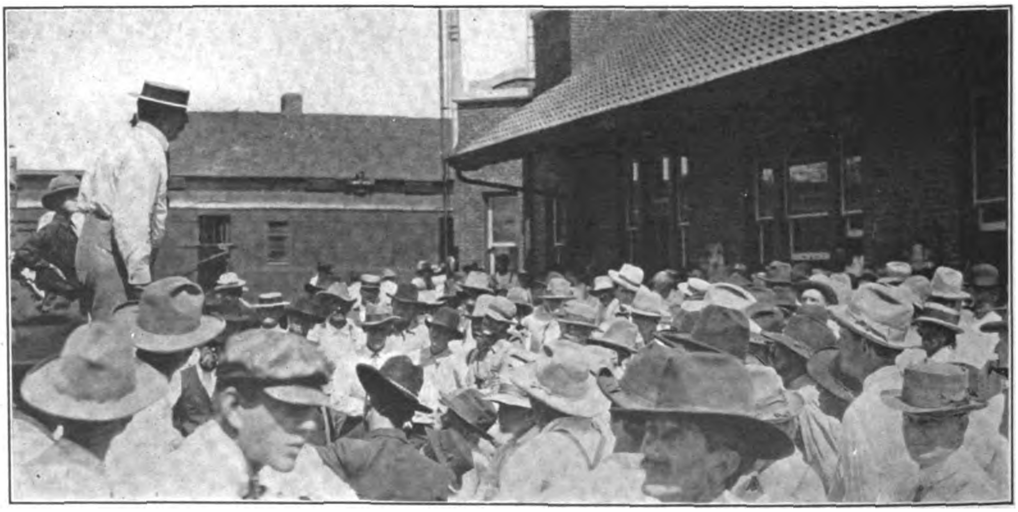
At the same time an effort is made to find seed of good quality that is adapted to the affected locality. Seed corn, seed wheat, alfalfa seed, Kafir seed, seed potatoes and forage seed campaigns have been conducted over districts from Minnesota to Louisiana, and from Chicago, St. Louis and Memphis to the Rocky Mountains.

Wherever the United States Department of Agriculture, or a State agricultural college or a farmer finds a new strain of some old crop, or a new crop that promises to be profitable, our agricultural department gives the matter the fullest publicity through its own publications, the general newspaper press and to banks, commercial clubs and farm owners.

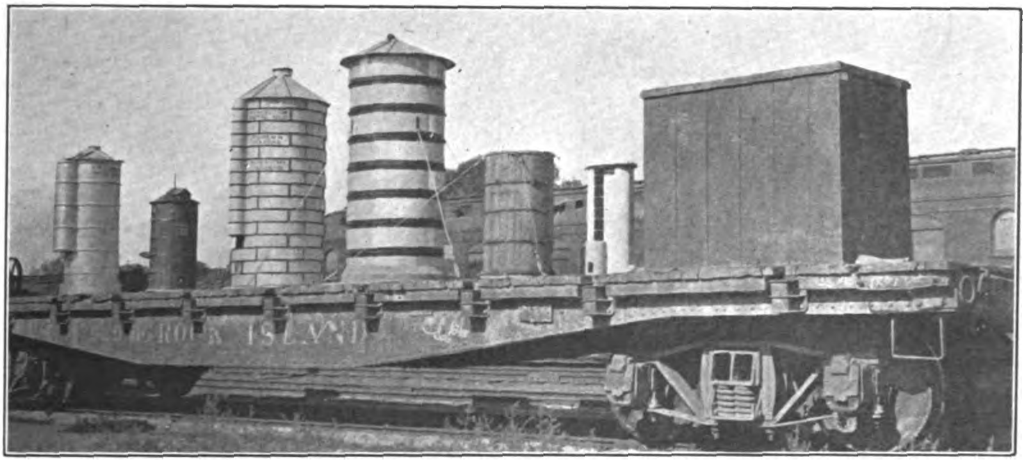
Among the larger campaigns that have been conducted are those for encouraging dry land farming, dairying, hob raising, corn growing, wheat growing, melon culture, irrigation and silos and silage.

The Agricultural Department issues a monthly agricultural paper, "The Southwest Trail," for free distribution. The issues vary from 30,000 to 120,000 copies each month, depending upon the extent of the territory needing the information covered by any particular number. Issues of 1913 are respectively on Spanish Peanuts as a new feed crop, Potatoes, Kafir, Raising Hogs, Alfalfa in Iowa, Raising Hard Wheat, Silage, Apple Growing, Irrigation by Pumping, Corn Growing in Arkansas and Louisiana, Dry Farming in Colorado and Farming on Cut-Over Lands in the South. Each number of the "Southwest Trail" takes up exhaustively but concisely one particular branch of farming.

A series of agricultural booklets are published treating special lines of farming at greater length than can be done in the "Southwest Trail." These pamphlets are sent free to patrons of the road, to banks, commercial clubs



H. M. COTTRELL, AGRICULTURAL COMMISSIONER, ROCK ISLAND LINES, TALKING TO KANSAS FARMERS ON THE NEED FOR SILOS.



Silage Special. One of the Five Flat Cars Carrying Models of Silos on Rock Island's Demonstration Train on the Southwest.

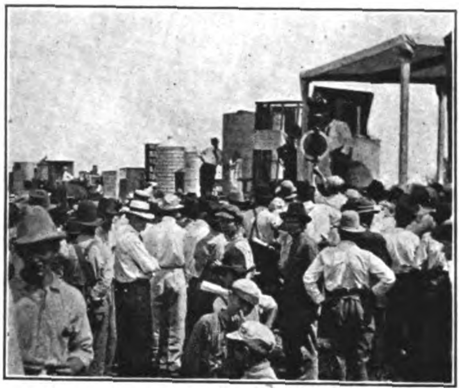
and newspapers. Several hundred schools use them as supplementary texts in classes in agriculture. The titles of these pamphlets are: How to Double the Yield of Corn; How to Double the Yield of Potatoes; How to Make Poultry Pay; Making Money in Dairying and Kafir and Milo.

Short, seasonable articles giving specific information on some one problem in farming are sent to the local newspapers. These articles treat of handling the soil, seed selection, tillage, harvesting and marketing of crops and selection, breeding, raising and feeding of farm animals. The plan is to give information in each of these articles that the farmer can put into practice the week or month of issue. Frequent requests are received from various city and country publications for special articles on specified agricultural subjects, and these are furnished promptly.

There is one marked difference between the agricultural work of the Rock Island Lines and that of other railroads. We have found that our best results in securing seed testing, deeper plowing, better cultivation, the growing of crops adapted to the varying climatic conditions and improvements in raising and feeding live stock are secured through work with the business men rather than direct with the farmers. It takes less time to convince the average banker that each ear of corn used for seed in his territory should be tested for vitality, than it does to convince the average farmer. When the banker becomes satisfied that such testing is necessary and is shown an easy method, he takes up the matter with each of the farmer patrons of his bank and keeps after them until they have followed his advice. Frequently one banker will induce 200 farmers to adopt a better plan. Hardware men and lumbermen are often as efficient as bankers in securing from the farmers actual results.

No matter what line of agricultural work we are doing, we always take it up through the schools of the territory in which we are working Many farmers can be reached only through their children. Pupils of the schools, both in city and country are eager to test the germinating qualities of seed. A farmer decides that his seed corn is good enough and that it is "book farming" to test it. A boy or girl from the school gets permission to test twenty ears of this seed and finds that they show only ten per cent vitality. He reports to the farmer and the pupil talks about it to all his associates and the news spreads over the neighborhood that the farmer's seed is not fit to plant. We have known many instances where such a test induced the farmer to secure strong seed.

Our investigation of alfalfa in Iowa shows the methods of the Rock Island Lines in determining the adaptation of special crops or methods to particular districts. Alfalfa when it does well in Iowa gives at least twice the net returns of any other field crop. Some farmers have succeeded in making a regular profitable crop, others have entirely failed with it and more have had a partial success, but not sufficient to determine whether to drop the crop or increase the acreage. No one seemed to know what caused success or what made failure. We studied the growing of this crop for three years in various parts of the State, noting carefully the conditions surrounding the failures and those where the farmers found the crop profitable. Early in 1913, we made a survey of alfalfa growing in all parts of the State, investigating the behaviour of the crop on several hundred fields. During this survey the surface rock and soil formations as outlined by the State Geological Survey were considered in connection with the growth of every alfalfa field. We found that lime, inoculation and drainage were the three controlling factors in the growth of alfalfa. In certain areas the soil has been formed in recent geological ages and is filled with lime. In these there is no difficulty in raising large crops of alfalfa when good seed and thorough preparation of the soil is given. In areas of older formation there is some lime, but not a sufficient quantity and the application of fine crushed limestone just before seeding is necessary. In still older geological formations the deficiency in lime is serious and heavy applications of fine crushed limestone are necessary, and it is also necessary to inoculate the soil with the germs that produce nodules on the alfalfa roots. Thorough drainage is essential in all parts of the State. We were able to make a map of the State, showing definitely the different areas and the treatment that land in each must receive to make



Oklahoma Farmers Inspecting Models of Silos on Rock Island Educational Train.

alfalfa a paying crop. Late summer seeding of alfalfa is advisable in Iowa. Last summer was too dry and we did not push increased seeding. If the season of 1914 is favorable, we will start a vigorous campaign for the seeding of one million acres to alfalfa in Iowa. We have made investigations in similar lines in several other States with satisfactory results.

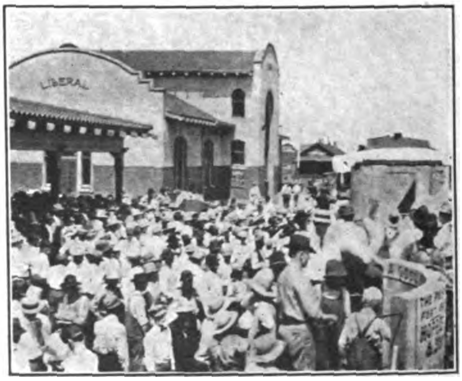
The Special Agricultural train has been one of our most popular lines of agricultural work, and is the quickest way to influence a large number of farmers. Last year the Rock Island Lines operated twelve Agricultural Specials. They were operated in seven States, covered runs of over 9,000 miles and were attended by 147,000 people.

In operating these trains we differ from most of the railroads in allowing only one particular line of farming to be considered on the train. If it is a "Wheat Special," the exhibits, lectures and demonstrations are confined to wheat only. If it is a "Silo Special," silos and silage alone are discussed. We aim to concentrate the attention of the entire district covered to improvement in one line, and believe in so doing we secure vastly greater results than is done when many similar subjects are considered. We put as much effort in the advance work of securing a large attendance at our Agricultural Specials as we do in the work on the train. We get bankers and merchants in each town where the Special stops to send personal invitations to every customer to come with his family to the train. We send invitations to every teacher in both country and city schools to come with her pupils. We ask that all business houses and schools in a town close twenty minutes before the arrival of the train. Our object is to get every man, woman, boy and girl in both country and city to come to the train. We provide special cars and lectures for the men, for the women and for the boys and girls. Our aim is to get our lectures and exhibits discussed that night, following the stop of our train in a town, at the supper table by every member of the family in every home in the country and town. This makes the special line of farming we are pushing a community thought. The farmer is urged by every member of his family to adopt the method we recommend. All his neighbors talk to him about it. When he comes to town his merchant, banker and blacksmith urge on him the improved method. His children talk about it at school with their teachers and other pupils. Even the girl in the millinery store talks about the train work with the farmer's wife when she goes in to buy a hat. The train is thoroughly advertised in local papers and by posters and concise practical articles on the subject handled by the Agricultural Special are furnished the local papers for several weeks after the train has been operated. This creating a community interest influences a much larger number of farmers than when an appeal is made to them only.

Each of our Agricultural Specials is operated somewhat differently from the others. The record of three of the specials will show our general plan.

WHEAT SPECIAL: In 1910, Oklahoma had the largest wheat crop in her history. The wheat was plump and unusually heavy. On account of frost in the northwest in the previous year, there was a shortage of wheat in large milling districts such as Minneapolis, Chicago, and Buffalo. The Oklahoma wheat was ready to ship in June, and a large movement to northern milling centers was expected. Hardly a car went north of Kansas City. Representatives of the northern mills, even as far east as Boston, came to Oklahoma, got samples of this fine wheat, went home and no orders followed. We knew that something must be the matter. We went to Minneapolis to find from the large mills what it was. One of the large mills had just finished a baking test of the flour from this Oklahoma wheat and found that it would make 260 one-pound loaves per barrel. The northern mills guarantee 320 one-pound loaves from each barrel of flour. They said that if they should send out flour from the Oklahoma wheat that this loss of 60 loaves per barrel of flour would destroy the markets that they had spent years of work and millions of dollars to build up. In Kansas City we found that during a time that 1800 cars of this wheat was received, only one car furnished the required loaves. Experts at the large mills explained that this defect in Oklahoma wheat came from the careless mixing of seed that often repeated and resulted in a mongrel strain that in all countries produced a flour that was weak in rising qualities. These experts also said that pure seed and good preparation of the soil would secure wheat in Oklahoma from which flour of the highest baking quality could be made.

The Rock Island Lines started a campaign



Farmers at Liberal, Kansas, Inspecting Models of Silos.

through the newspapers and with the banks, grain dealers, millers and commercial clubs to get the Oklahoma farmers to sow pure wheat. We operated a wheat special, making stops in 92 towns. On this train lectures were given showing how they had lost three million dollars that season from sowing mongrel seed. Samples of good and poor seed were shown and many farmers brought samples of their own wheat to learn the quality. In cars for the women, the same story was told, wheat samples were shown and loaves of bread showing the large loaf from flour from pure wheat and from that made from the usual mongrel wheat. The women were shown how much bread they lost from each sack of flour, because pure seed was not used and were urged individually and through their clubs to get pure wheat sown on every farm in their communities. The children brought samples of wheat from their fathers' farms or from the grain elevators and were taught how to select pure wheat and how to tell when fine appearing wheat was of mixed origin. They were shown the losses and what these meant to the State and to their own community, and even to their individual homes. The State Millers' and State Grain Dealers' Associations agreed to furnish pure seed at actual cost as long as they could find it. These Associations received orders before our train stopped running for sufficient pure seed to sow 200,000 acres. We have continued the agitation for pure seed every year since the running of the first Wheat Special.

CORN SPECIAL: In January, 1912, we found that the corn saved for seed in the northern corn belt was the poorest ever known. Particularly in Iowa not over half of it would germinate at all, much of it would show only ten per cent germination, and on many farms fine appearing ears would not have a single kernel that would grow. The attention of farmers and business men was called to this condition, but they would not believe it and in most communities declared that they did not intend to test their seed before planting. This was a serious matter to the Rock Island Lines as there are five million acres of corn grown along our lines in Iowa alone and the planting of such poor seed would result in a heavy loss of freight the following winter.

Germination tests were secured from so many parts of the State that we were sure of our position. The matter was presented to the Greater Des Moines Club, and they immediately voted an appropriation and decided to join the Rock Island in a State wide campaign for the testing of every ear of corn used for seed. Telegrams were sent to every bank and newspaper in the State describing conditions and urging a concerted effort to have the seed corn tested on every farm. Sixteen hundred banks and trust companies were induced to join the movement and many banks purchased seed testers and tested corn free for their farmer patrons. Two thousand manufacturers took up the matter with their customers. Jobbers sending two thousand travelers agreed to have their men urge the testing of seed corn before they showed their goods. Three hundred commercial clubs were induced to use their efforts. The County Superintendent of schools in every county in the State was asked to get his teachers to have each pupil test the seed corn of some farmer. At our request the Bell Telephone Company called up every farmer in the State who had one of the Company's 'phones and asked him what his seed corn tested. Usually the farmer answered that he had not examined it. He was courteously urged to test his seed immediately and report the result to the telephone central. As fast as these reports came in they were tabulated, and as soon as a dozen or more were received from one locality, the average was figured and the banks and commercial club in that town notified and shown what the loss would be in their county if such poor seed was planted.

The Rock Island Lines sent out five seed corn special trains, four in one day. These covered over 2,000 miles of Rock Island track in Iowa. At the suggestion of the agriculturalist of the Rock Island Lines, the Greater Des Moines Committee asked all the other railroads in the State to operate Seed Corn Specials. Some of the lines did, and all of the lines carried on some kind of a seed corn propaganda. The result was, that with the poorest seed corn found in the State in forty years and a general insistence of the farmers that there was no need to make a test, the seed corn was generally tested and an unusually good stand of corn secured. For months through the winter, the Rock Island Lines had difficulty in moving the enormous amount of corn that was shipped over its rails.

SILAGE SPECIAL: The severe drought of the summer of 1913 dried up the corn and forage crops in several of the Western States to such an extent that it was considered that there would have to be a general shipping out of stock. The burnt up forage would not keep the stock. The same material preserved in silos would. The Rock Island Lines started a Silage Special train in Colorado Springs, operated it through Eastern Colorado, Western and Central Kansas, the Panhandle, Eastern New Mexico, Oklahoma and Northern Texas, closing a five weeks' continuous run at Fort Worth. Stops were made in from seven to ten towns daily, 116 stops being made in Oklahoma alone. Flat cars on the train held twenty silos of different types and machinery for cutting the forage and filling the silo. At each stop a man who had put up and fed thousands of tons of silage explained the principles of making silage, showed how to handle the crops in the locality where he was speaking so as to get the greatest value out of the feed through the silo, and showed how to feed the silage with the straw or other available forage. Then the people got on the flat cars and examined the exhibits. An expert was stationed on each car to answer questions. No agricultural train ever operated by the Rock Island Lines has secured such immediate results. In the dry farming sections of El Paso County, Colorado, 53 silos were constructed and filled immediately after the operation of the train. Until this season there has not been a single silo in Thomas County, Kansas; fifty were built this summer in time to be filled. At Almena, Kansas, forty farmers as they left the train said they would start the construction of silos that week. Forty-eight farmers around Norton, Kansas, bought the material to construct home made silos. Seventy-three farmers around Liberal, Kansas, built silos. Like results followed all along the route of the Silage Special. A thousand or more home made silos were constructed. From two to four cars of silo material were shipped out of Kansas City alone daily on the Rock Island Lines for several weeks to points along the route of the Special.

After the tour a canvass was made showing that in one Colorado County, fifty silos were built almost immediately. In another county in Kansas, a newspaper published the names of seventy-eight farmers who had decided to follow the advice of railroad experts and save their fodder by means of silos. An estimate made by Kansas Agricultural College experts, who were with the Rock Island train, was to the effect that more than 1,000 silos would be built along the line of the Rock Island in that State alone, as a direct result of the campaign. A total of 3,000 silos of all kinds is a conservative estimate of the results over the lines covered. And the effect will be cumulative, for every silo built will serve as a reminder to the stock or dairy farmer who has none, that his system lacks an essential element of economy.

Another strong campaign was conducted by the same company during the early spring of this year in Kansas and Oklahoma, where seed corn was of poor germination, because of last season's dry weather. Bankers, business organizations and schools were enlisted in a seed testing movement that covered both States from end to end and resulted in the careful selection and proving of nearly every kernel of corn planted along the Rock Island Lines this year. Without the testing campaign corn would not be showing half a stand. The planting of only the seed from ears that had been subjected to the germination test and proven prolific, has resulted in a corn prospect that is fully fifty per cent better than could have been expected from the showing early in the year.

Grain and fodder for livestock are vital factors in the prosperity of the granger roads, hence the extraordinary efforts on the part of experts in railroad employ to keep production at the maximum point.

The Hill Invasion of the Pacific Northwest

DURING the last six years, more than 700 miles of new railway line have been opened to traffic in the Pacific Northwestern States of Oregon and Washington by the Hill System. The affiliated properties, the Spokane, Portland & Seattle Railway—"The North Bank Road"; the Oregon Trunk Railway, into Central Oregon; the Oregon Electric Railway, the first long-distance interurban line in Oregon and the United Railways, a line which was projected from Portland to Tillamook Bay, on the Oregon Coast and twenty-seven miles of which were constructed, and is in operation, are owned equally by the Great Northern Railway Company and the Northern Pacific Railway Company. Striking changes have taken place in the Pacific Northwest consequent upon the era of extensive railroad construction popularly referred to as the "Hill Invasion."

metropolis of Eastern Washington, and Portland, pierces the great Cascade Mountain Range on strictly a water-level grade along the Snake and Columbia Rivers, through one of the choicest scenic sections in America. West of Portland the line follows the Columbia to the Pacific Ocean through the historic city of Astoria, and beyond to oceanside beach resorts. On Young's Bay, practically a part of the Astoria Harbor, work will be instituted at once on construction of a system of docks. Between this point and San Francisco a line of the fleetest steamers will be established early in 1915, connecting with limited train service to Portland and the East.

Development in Western Oregon, and especially the Willamette Valley, a district 150 miles in length and averaging fifty miles in width, lying between the Cascade Range and the Coast Range, has been rapid since the electric lines penetrated the region. They brought to life new communities and gave the older ones a fresh start. The Oregon Electric parallels portions of the Southern Pacific in the Willamette Valley. The electric lines interchange traffic with steam lines in the Portland terminals. The Oregon Electric operates 189 miles of trackage and 139 passenger and freight trains daily. The main line between Portland and Eugene is 122 miles in length. The local and limited trains run on fast schedules, the night trains carrying standard sleeping cars and the limited trains observation parlor cars serving buffet meals.

The Oregon Electric has just completed a year's job of reconstructing and double-tracking the entrance into Portland at an outlay of about $800,000. The line is double-tracked eight miles outside of the city and runs through the center of the shopping and theater district of Portland to the North Bank Station.

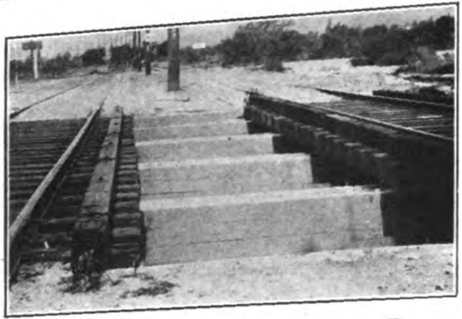
A Modern Railway Storm Water Drain

By Albert Marple.

ANYONE who knows anything about Southern California is aware that at certain times of the year that section is visited by heavy rainstorms. This is probably true even more in other sections than in the southern portion of the Golden State, but these storms are more remarkable in that section than in others on account of the fact that all other seasons of the year are fair and pleasant. These storms come so suddenly and so very often, that the people are unprepared for them, and they cause great damage. The rains of last winter in California did thousands of dollars damage to the railroad lines. For a day or so transcontinental lines were out of commission, and local lines, were at several points blocked for a week or more. Bridges were washed out, trestles were carried away, tracks for long stretches were undermined and wrecked, and, as a whole, the railroads of California, along with those of the States immediately adjoining on the east, were temporarily crippled.

Method of Placing the Concrete Piers for Railroad Bridge.

There were several points, however, along all of the lines that were protected against these waters in a proper manner, one of these being a wash district on the Pacific Electric line just



Concrete Piers in Railway Water Drain as They Appear from Above.

A Long View of Drain with Good Roads Bridge in Distance.

a short distance from Azusa. This system seems of such an efficient character that we feel that it is deserving of description. It is located about a mile distant from the mouth of San Gabriel canyon. The stream running down this canyon, is at every rain, so swelled that it comes racing cut of the canyon and upon the level lands just below at a frightful rate, having, by the aid of the streams from the many side canyons, been converted into quite a river. The level land, on account of the several days of continuous rain, becomes so water soaked that it will absorb no more and consequently the water must run off, headed for the lower points.

After leaving the mouth of the canyon the stream widens out to possibly half a mile, but as it nears the point where the concrete work is located, on account of the grade of the land it narrows again, so that it is possible to confine it within this storm water ditch, after passing from which it again widens out and spreads out over the farm land and ranches in that vicinity.

The waters of this stream had done so much damage that finally the railroad company and the county of Los Angeles joined hands and constructed this modern storm water drain, for, in addition to taking care of the property of the company, it also serves to protect the section of the foothill boulevard, one of the county good roads, that is immediately in the path of the water.

The concrete-lined ditch is about 500 feet in length and 24 feet in width, the walls on either side having a height of four and a half feet. These walls are six inches in thickness at the top and twelve inches at the bottom. The bottom of the walls rests on foundations, which are six inches in thickness and two feet wide. In addition to the four and a half feet above the ground the walls are buried three feet within the sand and gravel.

The bridge on which the double-track railway line runs is located at the intake of this storm ditch. It is thirty feet wide and as long as the ditch is wide. On account of the heavy cars that pass over these rails three supports have been placed beneath the bridge, these being six feet apart, measurements being taken from the center of the piers. The piers are five feet in height, eighteen inches thick at the top and two and a half feet at the bottom. These, also, are buried three feet in the sand and gravel, being located upon a foundation eight inches thick and five feet wide. The piers are pointed at the ends so as to cut the water as it comes in contact with them. At the upper edge of the piers four indentations were left during the course of construction, these being to accommodate four large beams, reaching across the entire width of the ditch and supporting the ties for the tracks.

The bridge over which the good road runs, and which is at the exit of the drainage system, is fifty feet in width and six and a half feet high. The facing across the side is two feet in width and the single support, which runs the entire width of the structure, is ten inches in thickness at the bottom, tapering gradually toward the top, at a point six inches from which it is eight inches in thickness. From this point the support flares outward and at the point where it connects with the under side of the bridge it is eighteen inches thick. This, also, has a wide concrete base.

All of the concrete work is re-inforced by steel rods. In the construction of this waterway the bed of the ditch was lowered so that it might be on a natural slope with the bed of the wash on either side. The bed of the ditch lies about four feet below the land located on either side.

Agricultural Department Experiments with Poultry Cars

To test the efficiency of refrigerator cars in the shipment of dressed poultry, and to determine the changes that take place in this poultry in transit at different temperatures, the Bureau of Chemistry, United States Department of Agriculture, has made complete examinations and records of 120 carload shipments of dressed poultry which traveled an aggregate of 140,000 miles. The hauls averaged between 1,000 and 1,500 miles, and terminated generally in New York City. No car was used twice, and many different types of ordinary refrigerator cars were employed. The shipments were made in winter and summer, so that the effect of outside temperatures could be determined. Many of the cars were equipped with accurate recording devices which showed the temperature near the ice bunker and in various parts of the car, and also outside temperatures. As a result of this experiment the specialists have found that the builders of refrigerator cars have not kept pace with the refrigerating industry in general, and have also determined the temperatures which best keep poultry fresh in long trips from Iowa or Tennessee to the Atlantic Coast markets. These results are reported in Bulletin No. 17, "The Refrigeration of Dressed Poultry in Transit," which contains a large number of tables and illustrations in its 35 pages.

The poultry shipped in these cars was carefully prepared and chilled for 24 hours to 32 degrees F., packed in one dozen to the box, and the boxes placed in refrigerator cars which had been iced 24 hours before loading. Accurate chemical analyses of the conditions of the poultry were made prior to the shipment, special attention being given to the percentage of amoniacal nitrogen in the muscle tissue, which is a naccurate index of the degree of deterioration in the flesh of dressed poultry. The fresh chicken shows .0110 per cent such nitrogen. It was found that poultry kept at a temperature of 18 degrees to 26 degrees F. showed only .0120, while a temperature of above 31 degrees F. gave nitrogen per cent of .0131, and 35 degrees F. or above, a nitrogen per cent of .0141.

The poultry after arrival in the car was then kept under exaimnation while in the wholesale commission houses, and at the retailers. The commission houses kept the low-temperature shipments at 29.8 degrees F., whereas the average for the high-temperature shipments was 32.2 degrees F. The retail stores kept their poultry at from 35 degrees F. to 39.3 degrees F. It was found that the high-temperature shipmenas after a transit period of five days showed an increase in nitrogen to .0143 per cent. The high-temperature shipments at a retailer's after seven days showed a nitrogen percentage of .0188. The changes during the commission period were, therefore, very slight; but after four days at a retailer's ,or nine days after the railroad haul the low-temperature shipments increased to .0144 per cent, which is nearly the same as the high-temperature shipments at the end of transit period. This indicates that if the car temperature is above 35 degrees F. the poultry when it reaches the market has the disadvantage of a deterioration equivalent to five or more days in the market, and must be consumed five days earlier than that arriving at car temperatures below 24 degrees F.

The experiments indicated that less than 31 degrees F. is the most satisfactory temperature of dressed poultry for long hauls. The ten-degree rise in the temperature of the car during the haul makes a difference in keeping time on the New York market, even when the market conditions are favorable. Even poultry excellently handled, as was the case in these experimental shipments, if exposed to unfavorable temperatures during transportation, receives an impetus towards decay that cannot be overcome by subsequent careful treatment on the market. It is a comparatively simple matter to prevent decay, but it seems to be impossible to stop decay by the use of low temperatures once the decay has gained a foothold. Imperfect work by the carrier nullifies to a certain extent the work of the packer, and the wholesaler or retailer handling the goods on the market. The temperatures indicated by this investigation to be most desirable for the transportation of dressed poultry are considerably lower than those generally accepted as satisfactory.

The information furnished by these 120 carshipments of dressed poultry indicate that most of the refrigerated carriers of the United States are not built to maintain optimum condition during warm weather for the transportation of a highly perishable commodity, such as dressed poultry. Certain refrigerator cars are much more efficient than others, and their increased efficiency apparently results from their construction.

The insulation of the car in relation to temperature is its most vulnerable part, with the character of the ice bunker next in importance. In the past the insulation has not been sufficiently heavy to maintain the low temperatures produced by the refrigerant, and the bunker has not been so built as to distribute its refrigerating effect evenly throughout the car. This last was fully established by the use of thermographs and the electric recording thermometers in various parts of the car. The use of a dead air space in cars is not found to be successful. Cork, the best known insulator, which is almost impervious to water and contains practically no nitrogenous material which might produce decay, has not been used to any great extent in car construction. Wool and hair felt are good insulators, but their high percentage of nitrogenous material makes them good bacterial media when moist. These materials when once moist seldom dry out, and the result is putrefaction, giving rise to offensive odors, which contaminate goods. Some of the vegetable or cellulose fiber insulators are perhaps slightly more resistant to moisture and bacterial action, but in time they also become moist, and the alkalies present in such material hasten their chemical decomposition. It is for this reason that car builders are exerting every effort to prevent moisture from reaching the insulation. Mineral wool is least subject to decay, but on the other hands, its nonadhesive qualities hinder the manufacture of strong material.

The insulation in the side walls and floors of the cars used by six different lines shows no radical difference in quality or quantity, though methods of construction in certain cases are preferable. The roof of the car theoretically is most severely taxed to prevent transmission of heat. The most efficient cars studied were those with the best insulated and best built roofs. More attention should be paid to roof and floor insulation, and the floor should be built with its insulation more effectively protected against moisture.

The wire-basket principle of ice bunker is sound because abundant air access to ice and salt results in increased efficiency. A serious shortcoming of the present types of cars is the impossibility of equalizing the temperature at the center and at the bunker so that all parts of the car are sufficiently cold. Good bunkers and any additional insulation, together with the stowing of the load so as to provide passages for cold air between packages, should materially help to improve results. The well-cooled package does not show changes in temperature corresponding to those in the air of the car, but a long continued increase of temperature or direct contact between the package and the wall of the car, and therefore, the source of heat, affects the goods in the course of time. The daily rise and nightly fall of temperature in the car sometimes result in slight changes in the packages, but it is the constant or maintained rise in the average temperature of the car that is responsible for objectionable results noted at the expiration of long hauls.

The Traffic Aspect of the Panama-Pacific International Exposition

By A. M. Mortensen, Traffic Manager, Panama-Pacific International Exposition.

A. M. Mortensen.

NEVER in the history of American railroads has there been an exposition of any kind, or a celebration held, of such great importance to transportation interests as will be the Panama-Pacific International Exposition to be held in San Francisco from February 20th to December 4th, 1915.

Located as the Exposition City is, on the western edge of the United States, we must reach back great distances to the centers of population to secure our attendance.

Many thousand tons of exhibits to come from the producing centers of the United States and the world must be transported great distances to be displayed in the Exposition palaces. All of this long distance travel and movement of freight very materially affects the transportation interests of the Nation.

Previous universal expositions held in the United States have been located in cities close to the center of population. While they have been attended by very large numbers of people, the great volume of traffic originated in a territory within five hundred miles of the Exposition city. Thus the amount of money paid by visitors to the Exposition for transportation was insignificant when compared with the amount that will be spent by the people of the United States and the world in traveling to the Panama-Pacific International Exposition.

Likewise, the exhibit tonnage for previous expositions originated close to the cities in which these expositions have been held, whereas, in the case of this Exposition this exhibit tonnage will have to be transported a great distance.

We estimate that there will be paid to the transportation lines of the United States for the movement of exhibits and construction material in connection with exhibits, the sum of $5,000,000. This exhibit movement wll all take place during the last three months of 1914 and the first two months of 1913, with perhaps 75 per cent of the total during the first two months of 1915.

The amount of money, however, that is to be spent for the transportation of exhibits is small when placed alongside the estimate of money that will be spent in the movement of passengers to and from the Exposition, and the great advance movement of exhibitors, commissioners and other travel in the interests of the Exposition during the pre-Exposition period.

During the past year and a half hundreds of thousands of dollars have been paid out for passenger travel due entirely to the fact that preparations for the Exposition were going forward. Commissioners have been sent to nearly all the countries of the world and to all the States in the Union. Nearly all of these States and countries have, in turn, sent or will send during the pre-Exposition period, large commissions to San Francisco to select and dedicate sites and to make other necessary arrangements for their participation in the Exposition.

To date thirty-five foreign governments have

accepted the invitation of the United States Government to participate and forty States of the Union have likewise arranged to officially participate. Before the opening day we believe that every State in the Union, and practically every country in the world will be ready to welcome to their respective pavillions exposition visitors.

Careful estimates have been made not only by the Exposition management, but by travel experts throughout the world of the number of people who will visit San Francisco in 1915. The traffic department has carefully checked and compared these estimates, and we submit below what seems to us to be a conservative estimate of the number of people to come from various parts of the world. These figures have been arrived at after taking into consideration the many suggestions received from railroad and transportation men.

From United States points east of Rocky Mountains	1,000,000
From United States points west of Rocky Mountains	250,000
From California outside San Francisco and Bay cities	750,000
From Canada, British Columbia, etc.	15,000
From Europe and Africa	50,000
From Alaska	5,000
From Hawaiian Islands	2,500
From Orient, Australia, New Zealand and Straits Settlements	10,000
From Mexico, Central and South America	50,000
Total	2,132,500

Never before has an exposition been held in a city or State that presented so many attractions to the visitor aside from the Exposition itself as does San Francisco and California. This fact will largely offset our disadvantage in being located so far from the centers of population.

California and the routes to California have been for many years extensively advertised and people from everywhere have a longfelt desire to visit the Golden Gate and se the many attractions in the way of natural scenery that lie between the East and the West.

The matter of passenger rates from the centers of population to San Francisco was of course a very important one in forming an opinion of the number of people to make the trip.

During the latter part of March the Transcontinental Passenger Association held a meeting in San Francisco at which rates of, approximately, one fare for the round trip were adopted from the territory covered by the member lines of this Association. Routing privileges were adopted by which the traveler may come west via one route and return via another, thus giving to the visitor an opportunity of visiting the many points of interest on the routes to California as well as points of interest in practically the entire State of California. Very liberal stop-over privileges were also granted.

To handle this heavy traffic the railroads, particularly those leading into California, have been compelled to spend large sums of money for additional motive power and equipment. Preparations for this unusual traffic have been going on for a year or more and when the Exposition opens the railroads will be well prepared for it.

To care for the large number of visitors after their arrival in San Francisco and to provide transportation facilities for them between the downtown districts and the Exposition grounds was another important problem that had to be solved. The site is so located that it is only served by two street car lines, both being of very limited capacity on account of excessive grades. The maximum capacity of these lines was 5,000 passengers per hour, while to properly care for Exposition travel a capacity of 50,000 passengers per hour was needed. To provide this the city of San Francisco voted a bond issue of three and a half million dollars and is now engaged in building municipal lines from the downtown district to the site. These lines will be over routes of easy grade and cars of large capacity will be operated.

The site is located on the Bay of San Francisco just inside the Golden Gate. Docks and slips have been built on our Exposition waterfront so that ferries and other boats from Oakland and the cities around the Bay may land passengers direct on the grounds. The site is very close to the business center of the city, being only two and a half miles from the principal hotel section. Forty per cent of the population of the city lives within two miles of the grounds. It is believed that these factors will provide, on account of the easy accessibility, a greater average attendance from our out-of-town visitors as well as the people living in our metropolitan area.

Extending the Express Companies' Field of Usefulness

By D. G. Mellor, Manager, Wells Fargo Food Product Department.

Editor's Note.—The Wells Fargo Express Company has set an inspiring example in its refusal to accept defeat at the hands of the Post Office Department in its unscrupulous efforts to drive this branch of the transportation service out of existence. Finding its activities greatly curtailed on account of the parcel post competition, the Wells Fargo Company has been regaining lost business, and in a measure, helping to solve the high cost of living, by the promotion of producer-to-consumer transactions. Railway traffic officials will read with interest Mr. Mellor's statement regarding the methods by which this experiment is being carried on.

ABOUT a year ago it became clear to the management of Wells, Fargo & Company, that some new traffic in considerable volume was necessary to make up the heavy loss in parcel business due to the parcel post, which began immediately after it came into existence January 1, 1913. Failure to develop something along that line promised to make it very difficult for the companies to continue business.

Wells, Fargo & Company, having always been very largely interested in the movement of food products, decided to extend its operations in that direction because it seemed to be the most promising field for new business and also presented an opportunity to go direct to the people with our large organization particularly adapted to be of real assistance in the nation wide effort to simplify distribution by more direct marketing in which everyone is interested.

The high cost of living is not really so much a question of the cost of living as of "living as we prefer to live," or, as we live, to "keep up with Lizzie." The argument has generally turned on what can be done to make the other fellow reduce our cost of living.

Legislation, the popular cure-all, has not been left out of the discussion. Every means has been suggested except the only one that can help much, i. e., to do something yourself. Really the question is intensely personal. For example, as long as men are satisfied to pay the Italian on the corner for polishing shoes instead of buying a box of blacking and doing the work themselves, there is little good reason for participation in the debate.

Most of us live more than our fathers lived and have more income to do it with or we couldn't do it long. If we were satisfied to live as people generally lived a few years ago, the additional income would considerably more than cover the increased cost of living. If it were not considered such terribly bad form to practice little economies, it would be quite possible generally to live well to-day on to-day's income and save something for old age and rainy days.

Why not apply economy and efficiency to the living problem? Men of prominence in the business world prophesy a period of prosperity during 1914. In times of peace prepare for war—adversity. Plan to live as well for less money and put the savings in the bank. How can this be done?

One way it is being done very successfully is through buying clubs in offices, shops, banks and many other places where several men are employed. One such club in the accounting department of Wells, Fargo & Company, in Chicago, has shown the way and is to-day ordering several thousand dollars' worth of butter, eggs, bacon, ham, poultry, etc., each month and saving the members a considerable amount. Smaller clubs in the service in other cities and in business houses all over the company's lines are taking advantage of the idea and facilities brought into existence by the Wells, Fargo order commission and food products department organized in August last.

Seven months' experience in the study of the food products problem—including growth, production, standardization and distribution—confirms the opinion held before work on the idea began. Few farmers are abl eto furnish a regular and continuous supply of produce, graded to satisfy the necessities or demands of markets and consumers. Improvement in this direction is most important. Organization among farmers offers the greatest chance for success.

The direct from farm to table idea is a popular one and possible of realization to a certain extent because some producers are able and willing to co-operate and because at times and under certain conditions produce can be economically moved by express directly from a producer to consumer.

Experience and a close analysis of the situation reveals obstacles which must be overcome before it will be possible to bring about a general movement of food products directly from producer to consumer. I do not mean by this that occasional progressive individuals and groups may not forge ahead of the rank and file and make it profitable to themselves. This is now being done in many cases. But in order to achieve success the drawbacks must be understood and allowances made.

The lack of any general standardization of farm produce is perhaps the thing above all others which deters the individual from dealing directly with the farmer. The individual wants to know what he is going to get before he places an order. The absence of common standards to which farmers conform makes it impossible for the customer to know with any certainty what kind of eggs, butter, poultry or fruit he will receive when he orders from the country.

Then again the farmer must have a steady supply; must never run out of produce, but must always supply it promptly on demand. How can he expect to compete with the city retail store which indirectly draws its supply from all sections of the country, from all lands of the earth?

Nor is the farmer a trained merchant or salesman. His energies are consumed by producing. He is not as a rule able to give that time to the retailing of produce which such a business demands. In the first place, in order to retail goods a market must be found. This always requires time and very considerable energy. In the second place, the routine of receiving orders and filling them, with the correspondence and bookkeeping which this involves, is frequently more than the farmer can attend to. Lastly, the complaints and adjustments which inevitably arise in regard to the quality and delivery of goods, would soon lead most farmers to decide that doing a retail business was not in their line.

The fact that many foods are of a perishable nature makes dealing at long distance difficult. Some food necessarily deteriorates in transit, and is eliminated by the retailer before he offers his wares to the buyer. In direct dealing the consumer would receive all such food. This also would be a source of dissatisfaction to most people. For these reasons it is difficult for the individual to market his produce by a direct method.

One way in which we are trying to be useful is in bringing together those who wish to sell and those who wish to buy. This the company has always done for those who sought its services. We are also endeavoring to bring about standardization of farm produce and experimenting with different forms of carriers.

Understand, what we are after is merely to create an amount of business for our transportation equipment—not to get up competition for the regularly organized food trades. We do not undertake to be merchants—to do any of the things the grocer does—but only to act as a sort of go-between, taking our profit out of the charges of transportation. The producer acts as his own jobber and the consumer acts as his own retailer, taking the goods in the large-size practical shipment unit and doing his own subdividing. We have no credit and we deliver an order to one consumer only. The consumer pays in advance and carries his own subdivision of the original package home.

In practice our establishment makes use of its 8,000 agencies and depends largely on its 25,000 employes and their friends and allies for the extension of the business. Through our industrial agents we stir up both producers and consumers to adopt our channel of distribution, and in some cases our facilities and the growth of the business have led to the formation of regular collectors at both ends of the line. But as a rule the unit of our trade is the shop-club or the neighborhood combination.

Every Monday our several main branches receive quotations from producers, naming prices for the coming week. We immediately put these into form lists (like that appended for last week) and mail them to all our consumer subscribers, who receive them surely by Tuesday. They make up their orders, hand them in at the nearest office of our company, and we do the rest. The date of the order carries with it the assurance of goods at the current week quoted price and quality, though, of course, the distance from production point to the consumer determines the delay in receipt of goods. We are very careful, however, to give the orders the utmost expedition. I have no idea of the aggregate of business developed, but it is surprisingly large. I know one station in Indiana which has built up shipments of eighteen tons in a single month.

To illustrate the economies, let me cite an experience in apples. A certain woman complained that she paid fifteen cents for a quart of apples in the city, which figures $4.80 a bushel. I knew a farmer who was proposing to sell his windfall apples for 75 cents a barrel, or 25 cents a bushel, and glad to get it. I persuaded him to pick them up, wipe them off and ship them to town in fibre boxes, which cost him eight cents each. He did it and realized $1 a bushel cash, or $3 a barrel. And the consumer got first-class apples for $1.35 a bushel, express prepaid, instead of at the rate of four times that. All we did was to bring the people together, and we got paid for the express business.

Many families in cities, however, are not able to order food products in the quantities mentioned because of the fact that in the modern apartment there are no satisfactory storage facilities for commodities of this kind. Consequently, we are suggesting buying clubs which order in quantity and divide the produce received among their members. Many such clubs are being formed among men in offices, stores, factories, etc., and are ordering large quantities of produce wherever satisfactory prices and supply can be found. A majority of the orders received through this department have been from buying clubs.

Experience forces one to the conclusion that a great educational movement is necessary before any considerable change in marketing methods can be brought about. All who have gone deeply into present conditions realize that the machinery now busy with distribution is doing a great work, that much of it is good and necessary, at least until something better is put in its place.

There is a constantly increasing quantity of food products for express movement to take the place of the business lost to the parcel post. The great volume, however, is grown in various widely separated sections of the country under changing climatic conditions, and must necessarily continue to move in large lots by either the cheapest or quickest medium to wholesale dealers, and from them to local markets and the corner store. It is not economically possible to furnish small lots to the millions of people direct from the field by express.

In the meantime the express will continue its effort to be useful to people interested in the carload and less carload movement that has always received serious consideration and careful attention. We must also try to satisfy the popular demand for data regarding produce obtainable in the country and furnish it to those who wish to try a service which the express only is in a position to offer. Orders and cash to cover country cost will be accepted by any agent who will issue a money order and send it with the order to the point where the produce can be had. The only charge made by the company is the regular express rate on the weight carried.

This system of marketing is satisfying a popular demand all over the country and while it is not claimed that the idea offers a solution of the cost of living problem, it does afford an opportunity for those who want really better produce at reduced prices to get it.

The Installation of a Profit-Sharing Plan and What It Accomplished

Note.—No excuse is offered by the editors for publishing an article which apparently has no direct bearing upon railway developments. The inspiration to be derived therefrom, rests upon a broader foundation, than that associated with any one industry. It is the practical application of the golden rule to business activities, and shows, in a remarkable manner, the highly beneficial effect to all concerned. It may not be possible, in the railway business, to use a plan of a similar character, but its application, in a broader sense, is possible everywhere, and the results obtained have invariably made the effort well worth while. Railroad officials, in the development of their pension plans, in their greater safety efforts and in an increasing desire to care for the moral as well as the material and physical welfare of their employes, are all giving evidence of their belief in the fundamental soundness of such a policy, and such officials will read with interest, the remarkable results obtained by the Clipper Belt Lacer Company, as set forth in the following paragraphs:

ON the eve of Christmas, 1912, Mr. Charles P. Foote, president of the Clipper Belt Lacer Company, of Grand Rapids, Mich., announced a profit sharing plan to cover the year 1913 and thereafter.

All through its early struggle the Company had looked forward to a time when its dreams in this direction might be realized, and a year previous the plan had been tried out in one department only—the hook carding department. The girls at that time were assured that all increased earnings would be theirs and that the piece rate would not be lowered no matter how much they made. The result of the experiment was that the girls from earning their former wage of $7.50 a week increased their earnings to a point where the more skilled operatives were making $12.00 to $15.00 a week and the less skilled averaged a little over $10.00.

The output per operative was increased nearly 50 per cent thus reducing the overhead cost to the management in spite of the great increase in wages paid.

Encouraged by this experiment the Company announced an enlargement of the plan, details of which were worked out by Mr. F. A. Stone, the secretary-treasurer of the Company, in the following Christmas letter:

Fellow-worker:

We have assembled here on the eve of another day that commemorates the birth of the Christ child, an event of great importance to us all, and which has much to do with that for which we are gathered here at this time.

Events have come along rapidly this year for us all, a great change having been made not only in our working place, but in the amount we have accomplished, and no small credit is due you for your part in it. The officers of the company wish at this time to thank you most sincerely for the interest you have shown, and ask that you accept with their best wishes for a Happy Christmastide, the enclosed little remembrance, which in a slight way expresses their appreciation of your loyal service, and their desire for its continuance during the year to come. For this, plans have been laid that should be of special interest.

When we started to card hooks, the young women were paid but $7.50 a week. We believed them capable of earning more, and wished them to do so, consequently established a piece basis for their work, agreeing never to lower the basis, regardless of the amount earned. The results are well known. We are given to understand that they are now the best paid for similar work of any in the city.

We desire the same to be true of our other departments, and therefore have determined that we will, beginning January 1st next, put all departments (where practicable) on a piece basis, making it possible for all employees to use their heads as well as hands, to further their interests, increase their wages, and incidentally, our business. We here wish to assure them also that we will not lower the established piece price, regardless of the amount earned.

Ever since the manufacture of the "Clipper" was started, an accurate cost of every operation has been kept, and the price established for piece work will be based entirely on this cost, therefore making it not only possible for you to make exactly the wages you have been receiving, but to largely increase them with a little added effort.

We have no doubt that the balance of our employees will do exactly as did the young women, rise to the occasion and make it possible for us to pay them much more in the year to come.

But this is not all. A nine hour working day will be established with Saturday half holiday during the entire year, without a reduction in pay. Also the management has felt for some time that employees so loyal and faithful, who had so large a part in making the business what it is, should share in its profits, and as a consequence has decided that beginning January 1st next, they should, and on the following basis:

All who at the end of 1913 have been with the company one year or less, will receive 5% (in cash) of the amount they have been paid during the year. All who have been two years in our employ, 6%, three years, 7%, and so on, 1% added each year until the amount has reached 10%, where it will remain indefinitely, provided the profits for each year warrant it.

This you will notice makes you profit sharers in the business, and vitally interested in its outcome. You have we believe, in the past year or more of service with us, done all you could to further our interests, but we trust in the year to come, this added profit will be an incentive for greater care and effort on your part.

Wishing you a Merry Christmas, and a bright and prosperous New Year.

Respectfully yours,
CLIPPER BELT LACER COMPANY.

HOW IT WORKED OUT.

On closing the books for 1913, it was discovered that over $3,000 were available for distribution under the plan outlined, one stenographer and one drayman earning the maximum ten per cent dividend.

The dividends were placed in the pay envelopes Christmas Eve of 1913, with a little note expressing the gratification of the Company that the amount was as large as it proved to be and expressing the hope of still better things in the year to come.

The good will that this distribution engendered was an inspiration to the management and many incidents came to their notice where this Christmas present helped an employe over serious trouble. Early in January the cottage occupied by one of the girls in the hook department, was totally destroyed by fire, not even the furniture or household effects being saved. The next day the girl and her mother called on the president and told him but for that Christmas check they would be paupers, as every cent they had in the world was in that little home. They had never felt they could afford to carry insurance as they were making payments on the home, but when the Christmas check came both mother and daughter decided that insurance on both the home and contents would be the very best use they could put it to. The fact that they were insured was therefore wholly due to this timely sharing of the year's profits.

DIRECT BENEFIT TO THE COMPANY.

Outside the indirect benefit of a closer bond of fellowship with their employes, the direct results of the profit sharing plan were as follows:

The yearly output was nearly doubled with only a slight increase in force.

Cost of the Clipper Belt Lacer reduced nine per cent in spite of the fact that the men making it increased their earnings twenty per cent.

Output of one important piece for which twenty cents is being paid on piece work, was so greatly increased, that figured on the former daily wage basis, it would have cost only eleven cents labor per piece.

Figuring all departments, the average gain to operatives was nineteen per cent and the average direct gain to the Company nearly nine per cent.

The indirect gain to the Company because of more hearty co-operation of operatives with each other and with the management cannot be expressed in figures.

There will be no "labor troubles" in the Clipper Belt Lacer plant as long as the Company continues to pursue the policy of giving their employes the large share of the increased earning. A case in point was cited: One very capable workman was so embittered by real or fancied wrongs in the old country and in earlier experiences in America that he was continually preaching anarchy and endeavoring to stir up trouble. He had consistently scoffed at the sincerity of the management of the Company in their profit sharing plan and had lost no occasion of warning his fellow workmen that this was only a trick to put a yoke around their necks. Fortunately he had few followers, as he was a comparative newcomer and the older employes trusted the management.

When he found over $70 extra in his Christmas envelope, he went straight to the president's office and with tears coursing down his cheeks asked to be pardoned for all the harsh things he had said against the Company. He is now one of the most efficient and loyal men of the whole force.

The plan will be continued in force indefinitely, and will, of course, become more expensive in proportion to the added years of service of employes who stay.

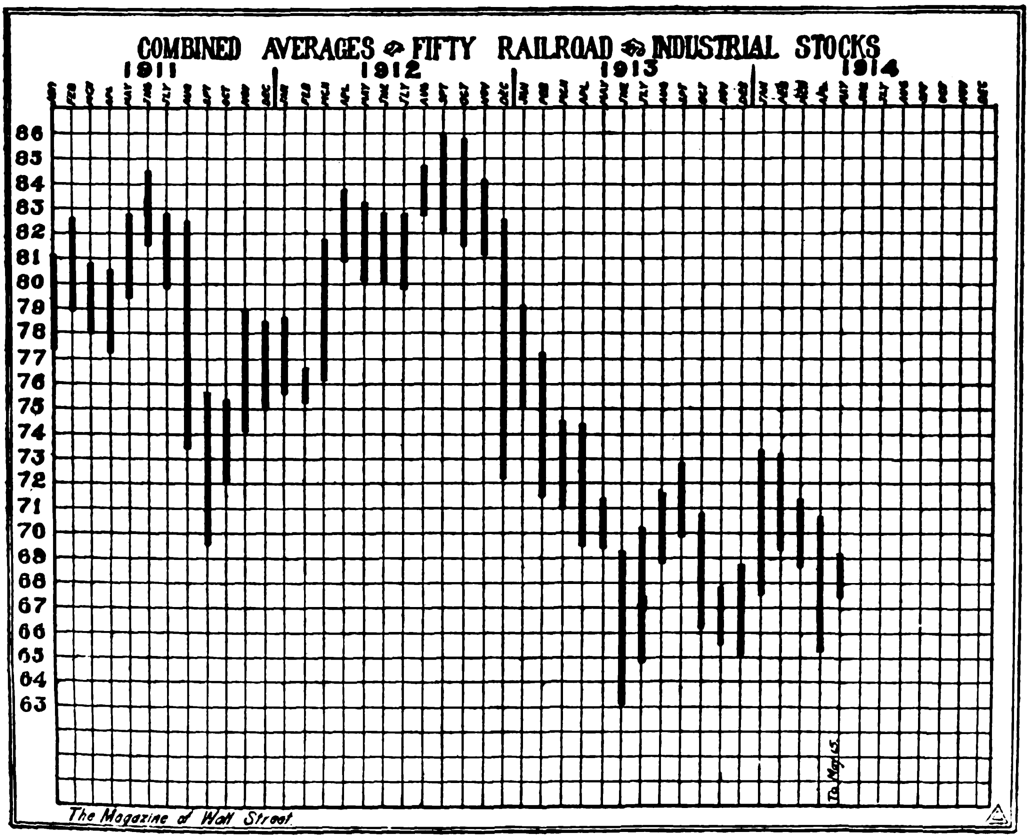
Financial

The Outlook.

WHILE the outlook appears to be little, if any more favorable than it was a month ago, undoubtedly a more cheerful feeling prevails in some quarters. This may be due to the fact of a growing conviction that Mexican affairs will be settled without the necessity of a long and costly war, and to the prevailing belief that the Interstate Commerce Commission will soon render a decision permitting the Eastern carriers to advance their freight rates. One thing is certain, there is no single event awaited with more anxiety by the business interests than this decision of the Commission's in the rate case, and on it hinges to a greater or less extent, the immediate future prosperity of the country. As Spencer Trask and Company in its monthly letter puts it: "Once this rate question has been settled in a spirit of broad fairness, we believe that a sigh of relief will go up from one end of the country to the other, and while it is quite conceivable that the relief may not translate itself into an instant blowing in of furnaces now cold, we do believe that one of the most perplexing and dangerous factors will be removed and the road to prosperity made that much easier."

In making this statement Spencer Trask and Company but echoes the opinion of financial authorities both at home and abroad. There has been several important orders placed recently for railway equipment which have somewhat brightened the steel outlook and is an evidence of what may be expected if the rate case is decided favorably to the carriers.

The attitude of the present administration towards business, however, is still a source of unrest and anxiety. Some of the bills which Congress has under consideration are drastic in the extreme and the feeling of unrest which is engendered by the evident purpose of Congress to continue to interfere with business to an extent never before attempted, cannot be ex-



pected to show much improvement until the administration's policy has become more clearly defined. How these Congressional activities are viewed by business men is well expressed in a statement recently published by the New York Chamber of Commerce, as follows:

"A survey of the history of the remarkable industrial and business development of this country indicates that its achievements have been, in the main, due to the initiative, energy, enterprise and bold courage of an immense number of individuals breathing and operating in the free air of untrammeled opportunity, in which alone true genius can work and survive. To shackle the genius of this country, to limit individual freedom and initiative within the confines of parental government direction other than the well defined limits now understood and recognized as inconsistent with moral law, modern ethics, and the public welfare, would be to set brakes upon the splendid spirit of our people by which all our achievements have been inspired, if not indeed to break down the march of progress, and to force us to the rear in that international contest for the world's business by which alone this country can continue to grow and reach the fruition of which there has heretofore been such ample promise."

To sum up the situation, a favorable solution of the Mexican problem would undoubtedly prove helpful and good crops, which now seem assured, will put heart into those communities whose purchasing power largely depends upon satisfactory harvests. On the whole, however, it is our opinion that there can be no decided or sustained improvement unless the rate decision is such as to permit the carriers to finance their properties along progressive lines.

Railway Financing.

IT is reported that the proceeds of the $8,000,000 general mortgage four per cent bonds purchased recently by Kuhn, Loeb and Company from the Chicago and North Western, are to be used for improvements and betterments. These bonds are part of an authorized issue of $165,000,000 of which $53,327,000 has been sold. They are selling on a basis to yield four and one-half per cent. Foreign agents of the Lake Shore and Michigan Southern have been able to sell in London and Paris, about $20,000,000 of the one year notes dated May 15th. This capital is to be employed to meet the $10,000,000 or thereabouts of Sterling notes due in London on the date mentioned and to reimburse the treasury for cash used in meeting earlier maturities of the year and any various outlays for improvements. The notes were sold on a basis of about four and one-half per cent but do not carry interest.

The directors of the Northern Pacific have under consideration a new financial plan for providing for the Company's needs for a number of years to come. The current year's requirements are about at $25,000,000 of which $10,000,000 consists of notes maturing July 9th. The directors have in mind the creation of a new blanket mortgage amounting to $300,000,000. It is believed that no increase in the capital stock is contemplated.

E. W. McKenna, the railroad expert engaged by the Wallace Committee of holders of Rock Island four per cent collateral bonds, as to the financial needs of the Chicago, Rock Island & Pacific Railway, estimates that $65,000,000 could be spent profitably in the next five years to produce substantial operating economies. In the supplementary report he reduces this estimate by figuring on the needs for three years, instead of five. He finds that 20,000 freight cars are in bad condition, and would scrap 16,000 of them. The remainder he thinks could be repaired to furnish a few years' more service. Mr. McKenna says in part: "If the sum of approximately $65,000,000 is applied as suggested, certain economies will be produced, and an improvement in the present property will be secured, which will put a stop to the deterioration, and place the property in such physical condition as to secure a great proportion of the traffic of the country it serves. There are about 20,000 cars which should be retired; possibly 4,000 of these cars will be found to be in such condition that their life can be extended for from two to five years. This would mean a retirement of 16,000 cars. The present cost per car for repairs averages about $79 per car per year. An investment of $15,000,000 in 15,000 new cars would produce an efficiency of equipment at least 50 per cent greater than the cars retired, and the maintenance cost of these new cars for the first five years should not exceed $25 per car per year. It will be observed that in the tabulation of prospective capital requirements, which contemplates about $41,000,000, there is an estimated saving in operation of $4,400,000 per annum.

"It is assumed further that the improved conditions of the railway and its equipment would produce an increase of revenue over existing conditions of at least $5,000,000 per annum, of which 30 per cent would be net earnings. The investment of this money would also enable the railway company to carry on its maintenance program from January to July, which would yield a saving of at least $500,000 per annum."

In a supplementary report made as a result of conferences with President Mudge, Chairman of the Board Schumacher, and members of the Stockholders' Protective Committee, Mr. McKenna suggests that capital requirements be reduced from a five to a three year basis.

The Atlanta & Charlotte Air Line Railway Company, represented by the committee appointed under an agreement dated May 1, 1906, and the Southern Railway Company have tentatively entered into an arrangement which calls for an issue of first mortgage bonds of the Air Line Company to the amount of $20,000,000, to bear interest at not to exceed five per cent, per annum. Of this amount $5,500,000 will be issued immediately and sold, and the proceeds used for the purchase and cancellation of an equal amount of bonds now held in the treasury of the Southern Railway Company. The balance will be sold from time to time as it may be deemed desirable by the Directors of the Southern Railway Company and the proceeds turned over to that company for the sole purpose of double-tracking and improving the Air Line Railway's property and terminal. The arrangement provides for an agreement modifying the agreement previously made, so that the dividend may be increased on the stock of the Air Line Railway Company to an unqualified distribution of nine per cent per annum without regard to earnings, in lieu of the existing provision for a maximum seven per cent dividend conditioned upon the amount of annual gross earnings. In consideration of the above, the stockholders of the Air Line are to agree to an option to be given to the Southern Railway Company to purchase their holdings upon due notice or any dividend date at $250 per share in cash. The Air Line stockholders are being urged by the committee to deposit their shares as promptly as possible in order to make the agreement effective.

Gross and Net Earnings for March.

RAILWAY earnings for March, 1914, show up rather better than they did for the corresponding month of 1913. This does not, however, indicate any real improvement in view of the fact that abnormal conditions greatly affected railway earnings during the latter period. It will be remembered that it was in March, 1913, that the devastating floods visited the middle and middle western sections of the country and played havoc with railway operations and earnings besides adding enormously to expense accounts. Besides this, there is a favoring influence in the present year's results, in view of the fact that in many bituminous coal mining districts, there was an abnormal activity during March owing to the fear that mining operations would be suspended on April 1st, on account of the expiration of the old wage scale. These factors in themselves would appear enough to create the difference which exists between the results of the two months, without the consideration of any other factors.

The "Commercial and Financial Chronicle" reports the gross earnings for 848 roads for March, 1914, to be $250,174,257, as against $249,514,091 in March, 1913. Operating expenses in the former month totaled $182,180,306, while in 1913 they amounted to $184,524,668. Net earnings for March totaled $67,993,951, compared with $64,998,423, a gain of over $3,000,000 in favor of this year's results. It is evident from these figures, however, as above stated, that the better showing in net is not due to any real improvement but rather to the abnormally poor showing made in 1913, owing to the extraordinary conditions with which the carriers had to contend. The following table shows the principal changes in net earnings in March as compared with a year ago for some of the more prominent roads of the country.

Principal Changes in Net Earnings in March.

	Increases.
Baltimore & Ohio	$851,636
Chicago Burl & Quincy	808,464
Pennsylvania	a789,029
Chic Milw & St Paul	663,825
Chicago & North Western	557,903

Representing 18 roads in our compilation	$3,396,780

---

a This is the result for the Pennsylvania RR., together with the Pennsylvania Company and the Pittsburgh Cincinnati Chicago & St Louis, the Pennsylvania RR. reporting $28,169 increase, the Pennsylvania Company $368,342 gain and the P. C. C. & St. L. $392,518 gain. Including all lines owned and controlled which make monthly returns to the Interstate Commerce Commission, the result is a gain of $708,631 in net with a loss of $29,994 in the gross.

b These figures merely cover the operations of the New York Central itself. Including the various auxiliary and controlled roads, like the Michigan Central, the Lake Shore, the "Big Four," the "Nickel Plate," etc., the whole going to form the New York Central System, the result is a loss of $212,486.

The "Commercial and Financial Chronicle" has also issued its preliminary statement covering railway gross earnings for April, which shows in brief, that there is a loss for the month of $4,466,008 or 6.28 per cent as compared with the results for April, 1913. When it is considered that flood conditions were still affecting earnings in the latter period, it must be concluded that the showing for April of the present year, is far from satisfactory. Furthermore, losses in the case of individual roads are not only large but are general, coming from all parts of the country and from all classes of roads, unmistakably indicating a general and significant decrease in commercial activities. The following table, also prepared by the "Chronicle," shows the principal changes in gross earnings in April, as compared with a year ago.

Principal Changes in Gross Earnings in April.

	Increases.
Chesapeake & Ohio	$675,740
Mobile & Ohio	197,344

Representing 20 roads in our compilation	$5,811,739

Operation

Handicaps to Increased Train Movement.

ANSWERING the criticism that the railroads could increase their revenue by "speeding up" the movement of freight and increasing the average distance of twenty-two miles a day when calculating both fast and slow service, George H. Campbell, assistant to the president of the Baltimore and Ohio has made a study of this phase of the American transportation question which is illuminating to shippers and the public.

"There are several things entering into the transportation of freight with which the public may not be familiar," said Mr. Campbell, in connection with his investigation. "The bald statement that cars are moved 22 miles a day is misleading and the impression naturally would be that something is wrong. In the first place, a railroad cannot always store its idle cars near to the place where they will be needed next. The freight cars are collated in order that they may be kept under supervision. Then when cars are ordered it is necessary to move them to the industry, which takes time but is calculated against the average movement.

"Other delays are encountered over which the railroads have no control. Shippers are allowed 48 hours in which to load cars—two whole days that likewise enter into the calculation. The two days do not include Sundays nor holidays; and in the case of many articles of commerce it does not include rainy days. After cars have started in transit the consignees have 48 hours additional in which to unload shipments, and this, taken in connection with the time taken to move over the road is balanced against the distance the shipments are transported. That explains very largely why the average day's run of freight cars is small. Even though a carload of goods were shipped only five miles, there would be four days' time allowed for loading and unloading.

"While the average capacity of freight cars to-day is more than double what it used to be, the penalty for delays beyond the time limit prescribed by the car service rules remains the same. The shipper still pays $1.00 a day when using the car for storage purposes.

"Further than this, from five to seven per cent of a railroad's freight car equipment is undergoing repairs; so that a road that has 100,000 cars often has between 5,000 and 7,000 cars in the shops and out of service. This is a further factor which lessens the average movement of shipments as set forth by statistics.

"Taken separately, however, fast freight service is entirely different and makes a far better showing than the average. Fast freight trains on the Baltimore and Ohio, for instance will cover 350 miles a day. The next fastest service is moved at the rate of 190 miles a day. The speed average of coke cars is high, as is that of cattle, which usually are loaded in a few hours. Refrigerator cars, which also are quickly loaded, are put through to their destination without delay.

"Viewing the transportation question from this phase, it will be seen that the railroads are not altogether to blame for the slow average movement of freight. The railroads are trying to obviate the delays at shipping points, but that is another big problem, the solution of which lies largely in the size of terminals."

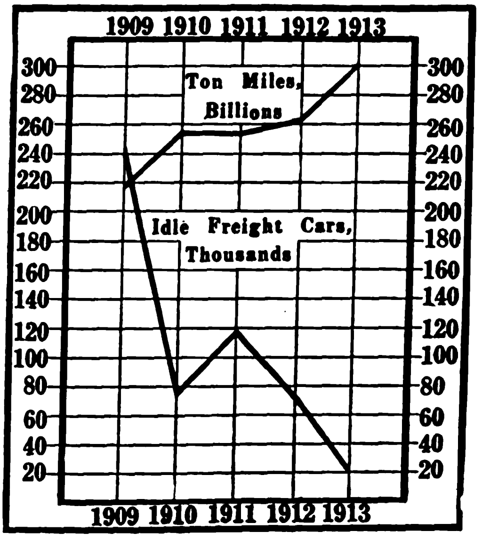
A Railroad Barometer.

THE accompanying chart which was prepared by the New York "Annalist" shows the average number of idle freight cars in contrast with the number of tons of freight hauled one mile by the railroads of the United States during the last five fiscal years, which end June 30th.

As might be supposed, the former line exercises a strong influence on the latter, and a decline in the number of idle cars is invariably followed by an increase in ton mileage—which, of course, means also an increase in gross earnings; while an increase in idle equipment is always coincident with a decrease in ton mileage and gross earnings.

As the average number of idle cars so far during the current fiscal year has been much larger than it was in the twelve months ended June 30th last, a decline in gross was inevitable, and this condition is shown by the monthly statements of important roads.

A Railroad Barometer



The Car Situation.

THE latest report of the American Railway Association shows that on June 1, 1914, there was a total of 242,572 idle cars as compared with 60,291 on May 31, 1913. There was practically no shortage in any section of the country. These figures strikingly illustrate the tremendous let up in commercial activities within the past year and not since 1909, has there been such a large number of idle cars on any given date. The following chart presents a record of car surpluses and shortages in the United States for the past seven and one-half years.

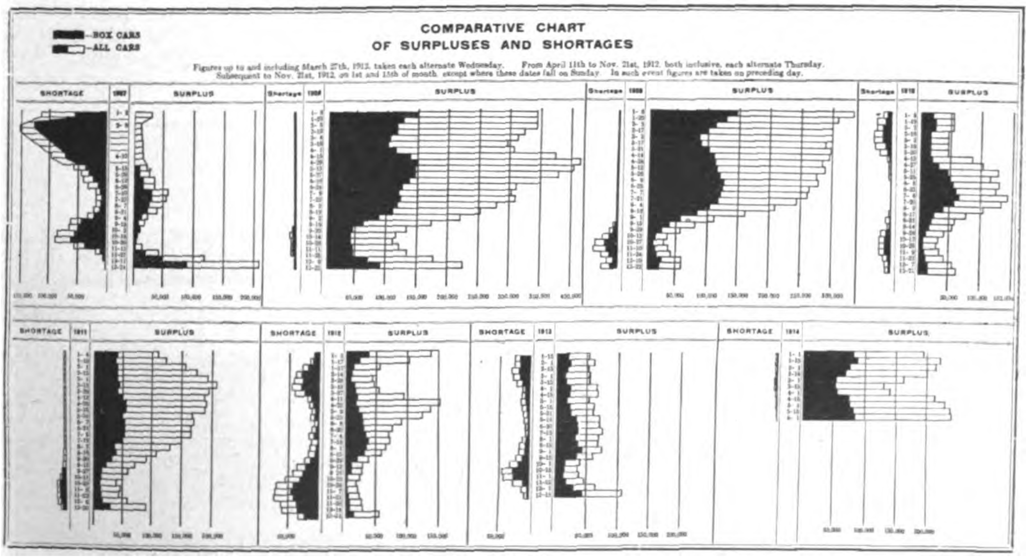
Contributory Negligence in Railway Accidents.

IN order to ascertain to what extent contributory negligence is responsible for accidents at railroad crossings of the public highways, a series of observations was conducted recently by the Baltimore and Ohio System which showed a reckless disregard on part of the public for personal safety and practically complete failure to heed the warning of watchmen, signals or crossing regulations.

A record was kept at several of the busiest crossings on the Baltimore and Ohio Southwestern and the Cincinnati, Hamilton and Dayton Lines, and out of a total of 32,079 instances of the railroad tracks being crossed by motor vehicles, teams and pedestrians, only 298 were recorded where the rule of stopping, looking and listening, or stopping to receive a signal from the watchman before proceeding were observed, which shows less than one per cent efficiency by the public. Of the inefficient, 18,335 persons failed to get signals and kept moving over the crossing without looking in either direction; while 8,776 persons, failing to stop, looked in but one direction and 4,680 other persons failed to stop and depended only upon sight to insure their safety.

The observations were made at three street crossings in Cincinnati, also at North Vernon, Seymour, Vincennes and Rushville, Ind., East St. Louis, Springfield and Tuscola, Ill., and at Hamilton, Dayton and Celina, Ohio. At most of these crossings there are two or more tracks and in the larger cities an average of from ten to thirty-five trains move over the crossings each hour of the day.

In Cincinnati 184 motor vehicles crossed the railroad tracks without one strict observance of the rules. There were but 60 observancs by teamsters of a total of 1,743 vehicles that crossed the tracks and of the 7,010 pedestrians only 376 took the proper precaution against accident. About the same ratio of efficiency was displayed by people who used the crossings in the other cities and towns, although in Vincennes, 115 motor vehicles complied strictly with traffic regulations, out of a total of 135 that crossed the tracks. On the other hand, at Springfield not one observance of the crossing regulations was noted out of 245 motor vehicles that passed over the railroad tracks. The best record of pedes-



trians was made by the citizens of North Vernon, 3,176 of whom crossed the tracks with 806 instances of full observance of the rules.

Safety Movement on the Chicago and Great Western.

G. O. PERKINS, acting chairman of the executive safety committee of the Chicago and Great Western Railroad, has supplied the following interesting account regarding the development of the safety movement on his Company's lines:

The Great Western began the organization of its Safety Bureau in 1912, and nearly a year was required to put the organization in first class working order, and to arouse the general interest in the movement.

The organization has worked on the theory that it was necessary for the Company to establish safe conditions in order to induce the men to adopt safe practices. So far, the Company has spent over $10,000 in establishing safe conditions on the recommendation of the Safety Bureau. The most notable monument of the safety movement is the bridge across the tracks at Oelwein, Iowa, for the use of shop employes, which is shown in the attached illustration. Safety appliances have been placed on machines in shops, warning signals installed at dangerous crossings, railings built at dangerous places in yards and around stations, and changes made where liability to accident could be reduced by so doing.

Our figures for 1912 show a reduction of nineteen per cent in the number of personal injury cases as compared with the previous year and the figures for the first four months of 1914 show that a still greater improvement over 1913 is being effected.

The organization consists of an Executive Safety Committee, with full jurisdiction over the operation of the Bureau, a Division Safety Committee and the following sub-committees on each division:

Transportation,
Mechanical,
Maintenance of Way,
Local.

The main shop at Oelwein, Iowa, is treated as a division and has sub-committees for each department.

The Division Committees are composed of the Chairman of the Transportation, Mechanical and Maintenance of Way Committees, to which are added the Claim Agent and the Chief Dispatcher.

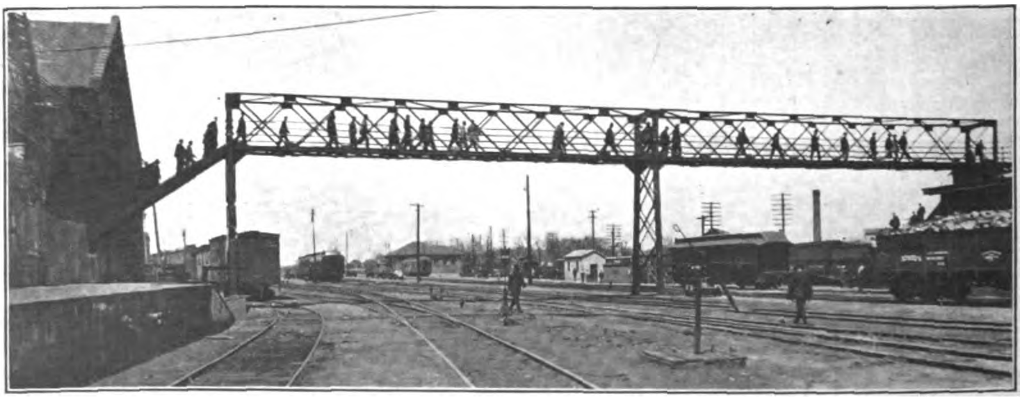
The Executive Committee is composed of the Chairmen of the Division Committees, to which have been added the Chief Engineer, Superintendent of Motive Power, Superintendent of Telegraph, Chief Surgeon, the Instructor and Examiner on Train Rules, and the Air Brake Instructor.

Each local and sub-committee holds meetings once a month, and makes report to its Division Committee. The Division Committee meets monthly and makes reports to the Executive Committee, which holds its meeting on the last Friday of each month. At these meetings accidents and personal injury cases are analyzed and discussed and efforts made to find, if possible, improved methods to reduce their number. Recommendations for promoting safe practices are discussed and if considered practicable are recommended for adoption. In influencing the rank and file, we depend largely on personal contact of the Committeemen with the men. All employes are encouraged to make suggestions for the benefit of the movement.

In shops weekly inspections are made by the committees to see that safe conditions and practices are being maintained.

Division safety rallies are held from time to time at which papers are read by the men and stereopticon and moving picture displays, which have an educational bearing on safe practices, are given. One large Safety Rally for the system was held, which brought together over 2,500 employes. Addresses were given by officers and subordinate employes. There was good music, moving pictures, a ball game and a dinner to all employes and their families. The effect of this meeting was highly beneficial and the increased interest of the men in the movement was very noticeable.

We try to keep the subject of Safety before the men at all times. Safety signs are placed in cabooses, around yards, and in shops. Safety bulletins are frequently issued. The subject is dealt with in our employes' magazine, and in each issue of the magazine is published an "Honor Roll" of the men who, by their vigilance, have detected unsafe conditions and thereby probably averted an accident.



THE GREAT WESTERN'S SAFETY BRIDGE AT OELWEIN, IA.

Safety Developments on the North Western.

THE Chicago and North Western Railway under the able leadership of Ralph C. Richards, chairman of its Central Safety Committee, has made a record for greater safety which is well worth being proud of. This movement was originated on the North Western's lines in 1910, and during the forty-six months that the organization has been in existence, up to April 30, 1914, there are shown 134 fewer employes killed, a decrease of 32 per cent, 8,720 fewer employes injured, a decrease of 26.2 per cent, 857 fewer passengers injured, a decrease of 23.7 per cent, 172 fewer outsiders killed, a decrease of 19 per cent and 173 fewer outsiders injured, a decrease of 7.5 per cent.

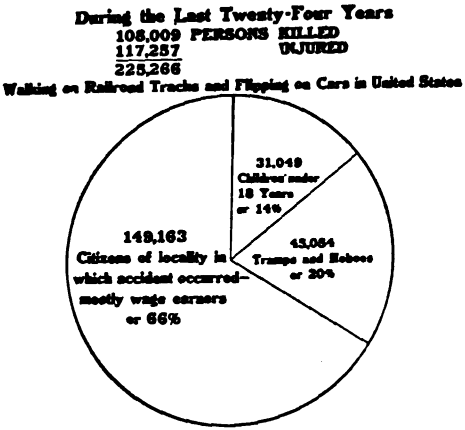
During this period the mileage of the North Western Lines has increased between four and five hundred miles, the number of men employed has largely increased, as has the number of trains run.

So splendid have been the results obtained by the North Western, that Mr. Richards is now unanimously hailed as the "father of the railroad safety-first movement." The fame of his organization has reached the Government railways of Japan, whose vice-president has adopted the safety organization after hearing of the marvelous results which have been obtained. It also has received gratifying recognition in Europe, and has been awarded a commemorative medal by the International Exposition of Hygiene.

Up to the present time, nearly 200,000 miles of railroads including nearly all of the more prominent systems, have adopted organizations identical, or very similar to that which has proved so effective on the North Western. Activities of a similar character have spread to industrial organizations and at no time in the history of the world has a greater or more united effort been made towards the conservation of human life, particularly in so-called hazardous occupations. In fact, the movement has spread to such an extent that in a number of the larger cities, safety organizations have been formed whose general purpose is to study the general safety movement not only in its effect upon certain industries but upon all hazardous occupations. These united efforts are proving highly beneficial to those engaged in the scientific development of this work and are already having a marked effect upon the number of accidents reported from a vast variety of occupations. The work is such as to produce unbounded enthusiasm in its development and means unlimited benefits for future generations.

The Results of Trespassing.

THE Central Safety Committee of the Chicago North Western Railroad Company, has been distributing the following figures and diagram showing the results of trespassing on the railroads of the United States. A further argument is hardly necessary to indicate the desirability of adopting every possible method to abolish this disastrous practice.



Why not make and enforce Laws to prevent this Slaughter?

Effort to Suppress Trespassing on Baltimore and Ohio.

PURSUING the campaign which the railroads of the country are waging against trespassers and others who use the property unlawfully, the Baltimore and Ohio Railroad has adopted a plan of impressing upon town and country authorities the toll of human lives secrificed needlessly because people remain impervious to danger.

Agents of the Baltimore and Ohio are asked to discuss with Justices of the Peace and other town and county authorities, to acquaint those entrusted with the enforcement of the law with the facts pertaining to the loss of life due to trespassing. The authorities are being asked to co-operate with the railroad in the campaign it is conducting, to the extent that when tramps, unlawful train riders and others are apprehended they be taken in charge by the agents of the law. Suggestions are being requested from the authorities consulted and their recommendations will be forwarded to the railroad officials for due consideration.

Soliciting Public Aid in Safety-First Movement.

IN an effort to minimize accidents and deaths to trespassers and others on railroad property, and as another step in its "Safety First" campaign, the Southern Pacific Company is posting in conspicuous places on its properties everywhere along the Pacific System large placards appealing for the assistance of the public. The cards read as follows:

"We solicit your co-operation in preventing death and injury to yourself, our patrons and the community at large. Stop to look and listen before passing over railway grade crossings. Refrain from and discourage trespassing upon railroad property. Be careful when waiting for trains or using the company's facilities.

"It is not safe to start over a railway crossing without first stopping to look and listen, to get on or off trains while in motion, to stand near edge of platform when trains are passing, to cross over ahead of an approaching train, or pass closely behind a train standing, to stand or walk upon tracks around stations and elsewhere, to allow children to play around the station, tracks and cars.

"Trespassers: In the United States, nearly

54 per cent of all persons losing their lives on railway premises are trespassers. If record of recent years maintains, fourteen people were so killed yesterday, fourteen will be killed to-day and fourteen to-morrow. Think of that—nor are they all tramps.

"Automobiles, Pedestrians: More than 69 per cent of drivers of motor vehicles pay no attention to a railroad crossing. Likewise, 34 per cent of drivers of horse drawn conveyances and 37 per cent of pedestrians take no precaution to guard against accidents. Help us to reduce these percentages.

"Grade Crossings: Grade crossings are unavoidable. Without them, few railroads could have been built in this country. They are one of the inconveniences of progress, to be eliminated just as rapidly as practicable. The railroads are doing their best, but it takes time and a great deal of trouble. Meanwhile the public demands that trains be run on time. To do so, involves speed over crossings. We appeal to the driver of every vehicle and every pedestrian before crossing a railroad track to stop, look and listen."

Electrically Illuminated Sign Under Which All Employes of the Sayre Shops of the Lehigh Valley Railroad Pass.

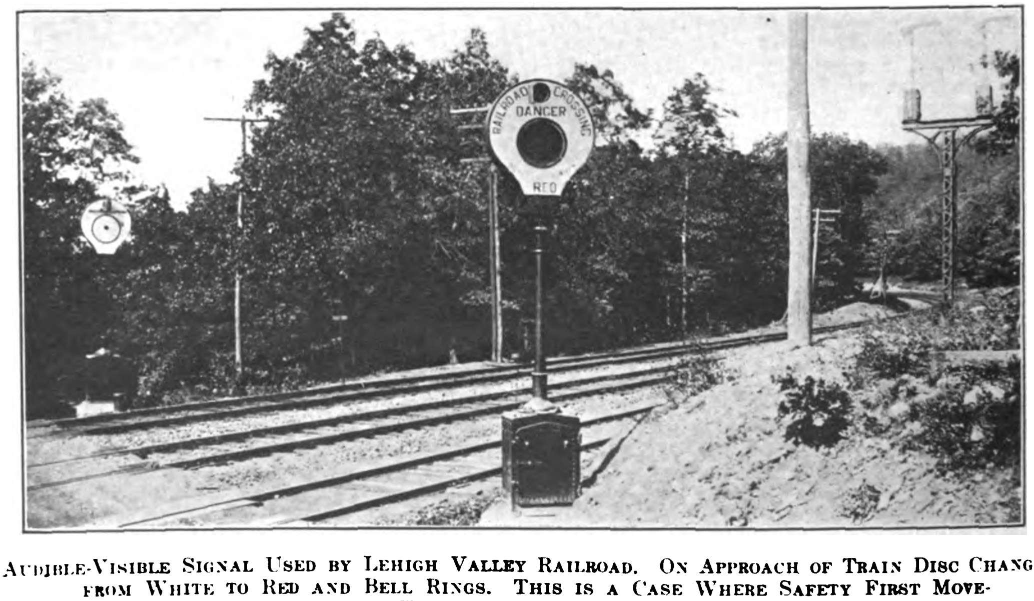
The Progress of the Safety-First Movement on the Lehigh Valley.

THE safety-first movement on the Lehigh Valley Railroad has resulted in a pronounced saving of life. It has been in operation now nearly two years and during the first year there was a falling off in deaths and injuries which showed from the start the value of this movement. The decrease of deaths among trainmen, enginemen, conductors and firemen was sixteen per cent and the decrease in injuries was eighteen per cent. Among switch-tenders there was a decrease in deaths of 100 per cent and in injuries 25 per cent. The number of trackmen and bridgemen killed was lessened by 31 per cent and those injured by 56 per cent.

When the second year's report is completed it is anticipated that the showing will be much greater as the safety-first movement has taken a firm hold in the minds of the railroad's employes. The work is also much better organized now.

The advantage of this work is that it is cumulative. Men get the habit of taking precaution, they become more cautious as time goes on and just as carelessness breeds carelessness, the idea of safety breeds greater caution.

The work has been carried on among employes of the Lehigh Valley Railroad with the assistance of safety committees on each division. There is a division safety committee which reports to the general safety committee. All the important operating officials connected with each division are members of the division safety committee and the general safety committee includes in its membership the general manager of the railroad, his assistant, the superintendent of transportation and superintendent of motive power.



Audible-Visible Signal Used by Lehigh Valley Railroad. On Approach of Train Disc Changes from White to Red and Bell Rings. This is a Case Where Safety First Movement Touches the General Public.

To stimulate interest it was announced when the campaign was started that awards would be given to men who made the best safety suggestions during the year. For this purpose the railroad was divided into seven divisions, six operating divisions and one in the shops. Suggestions were made by any employe to the division committees which reported to the general safety committee. Many of these suggestions were of purely local significance but were of immediate advantage in enabling division superintendents to correct unsafe conditions at once. A large number of general suggestions, however, were presented during the year and the general safety committee finally met and made the awards. This consisted of a month's vacation with pay.

As not unnatural in a movement of this kind, its significance did not reach, at first, to all the employes of the road, and many employes were under the misapprehension that suggestions were to come only from members of division safety committees, but the fact that the awards were made in all cases to men who were not members of any safety committee has eradicated that false impression. Now the safety suggestions are much greater in number and the safety movement as a whole is much more active. At a recent monthly meeting of the safety committee of the Mahanoy & Hazleton Division of the Lehigh Valley, eighteen separate safety suggestions were considered and all were of practical importance. Sixteen were acted upon favorably, one was referred to another department for action and a remedy for the eighteenth already proved to be in practice.

From a practical operative point of view, the greatest result of the movement has been the discovery and reporting of broken wheels and rails. Our men on trains and on track work are always on the lookout for defective equipment. Their eyes have been trained to watch for defects and in effect every man connected with the operative department of the railroad has become an inspector.

The personal injury side of the situation hardly needs a comment. The number of arms, legs, and lives saved is in itself worth many times the cost and the effort involved. As a matter of fact the cost of this movement has been hardly more than nominal and the results have been incalculable. In pursuing the work in the future, the plan of the Lehigh Valley Railroad, as now outlined, is largely educational. In fact, the whole safety first campaign is an educational movement. It can be stimulated by the offer of reward, but what counts is the decrease in deaths and injuries.

The Northern Pacific's Efficiency Bureau.

On January 1, 1913, the Northern Pacific Railway established what was designated as a Bureau of Efficiency, one of the functions of which was to provide ways and means to prevent accidents to persons. At the close of 1913, statistics were compiled contrasting the first six months of the year with the last six months. These figures showed a decrease of fifty-eight per cent in the number of persons killed, and an increase of less than one per cent in the number of persons injured, although in this connection, it should be taken into consideration that there was an increase in the average number of men employed in the latter period of eight per cent, so that the net results were a decided decrease.

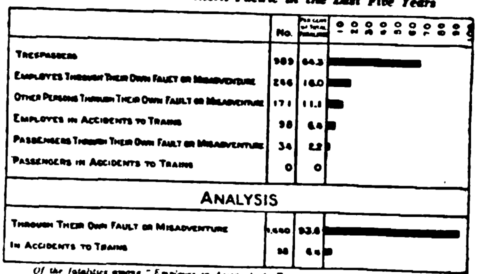
In contrasting serious injuries with minor injuries it was found that during the year there was a considerable decrease. For example, during the month of January, 1913, seventy-two per cent of the employes injured were off duty more than three days on account of their injuries, while in the month of December only 38 per cent of the employes injured were off duty more than three days. For the first four months of 1914 as compared with the corresponding period of 1913, there has been a decrease in the number of employes killed of 70 per cent and in the number injured of 18 per cent. It might be interesting to state that approximately one-third of the employes killed, and one-fourth of those injured, are foreign track laborers, men whose mentality is only that of a normal educated child of fourteen or fifteen years of age, who have been taught certain things in connection with the work they perform, but who have not been taught how to avoid the dangers which are incidental to their surroundings, and whose order of mentality appears inadequate to protect them against dangers in which they have not been specifically instructed. It is obvious therefore, that work along this educational line is necessary in order to reduce the fatalities and injuries which confront this class of labor.

Remarkable Success of Safety First on Southern Pacific.

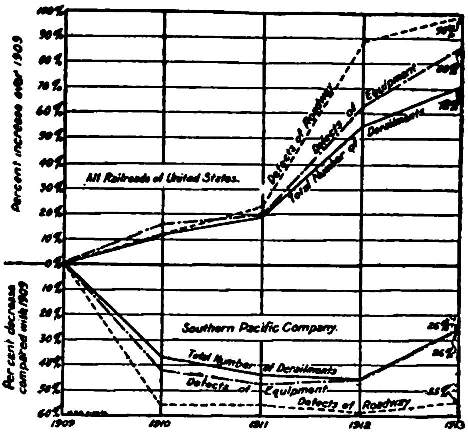
The following interesting diagrams appeared in an article published in the New York "Annalist," of May 11th, which is based on an interview with Julius Kruttschnitt, the chairman of the Executive Committee of the Southern Pacific. Mr. Kruttschnitt believes that the Southern Pacific is the only railroad in the United States that measures its accident rate by an accurate scale. Industrially, the standard of risk is per thousand days' work, and in transportation it is per million locomotive miles run. Mr. Kruttschnitt pointed out that the train miles standard, employed by many railroads, is not so accurate a gauge because, for one thing, there are more locomotives than trains and therefore, more opportunities for accidents.

Switch locomotives, for example, in yards add greatly to the aggregate mileage and cause a great many accidents. These would be ruled out altogether on a train mile basis. The following statement shows the number of train accidents and fatalities to passengers and employes resulting therefrom, on the Southern Pacific per million locomotive miles for a series of years.

Fatalities on the Southern Pacific in the Last Five Years



Of the fatalities among "Employes in Accidents to Trains" a large proportion were due to the negligence or carelessness of the victims.



A Comparison of Derailments and Their Causes

	Number.	Passengers. Killed.	Employes. Killed
1907	28.1	0.872	0.663
1908	24.4	0.037	0.370
1909	17.9	0.144	0.246
1910	8.4	0	0.347
1911	7.6	0	0.256
1912	8.1	0	0.745
1913	8.2	0	0.151
Nine months ending March, 1914	7.1	0	0.178

Mr. Kruttschnitt holds that the only way to prevent accidents and to locate the weak spots in the vast human machinery of a great railroad before they become dangerous, is through an incessant practice of watching and checking the service. Unless discipline is absolutely enforced, men grow careless and rules are not absolutely observed. While the Southern Pacific does not necessarily discharge a man who trips up, he nevertheless knows that his failure is noticed by someone and that his attention will be called to it. Officers are held to the strict performance of their duties, and they in turn, must do the same with the men under them. Superintendents both general and division, must be at least fifteen days of each month out of their offices going over their part of the road personally, and seeing that it is being run properly. Surprise tests are constantly being employed to know how accurately the men are observing the operating rules. The Southern Pacific for the last quarter, on its entire system, averaged ninety-nine and one-half per cent efficient in actual tests of the observances of signals.

Widening the Doors of Mail Cars.

THE growth of the parcel post service is compelling the railroads to assume an additional expense to the extent of widening the side doors of cars in which such shipments are handled. The widening of the doors of mail cars has become necessary in order to avoid delays to trains in loading large packages. Until the extension of the parcel post system the railroads loaded the mail matter through small doors, which provided ample space for the mail clerks to assort letters. The railroads contend that the expense incident to this change in the design of equipment will total a large sum, for the expenditure of which they will receive no additional revenue.

Patriotic Action Taken by Pennsylvania Railroad.

THE Board of Directors of the Pennsylvania Railroad Company has taken formal action providing for the retention in the service of any employe of the Company for such time as he may be engaged in State or National military or naval service in response to a call to arms in the event of war or other emergency. This applies whether such employe is a member of the National Guard or not.

The rule of the Company has been that a furlough from active service could not be granted for a period longer than nine months. At the time of the Spanish-American War, employes who left the service of the Company to engage in military or naval service sacrificed their positions, although following the war every effort was made to find places for the men who had left on that account.

Under the plan now adopted, employes shall be granted a furlough during the time they may be engaged in such military or naval service. Credit for the time absent will be given in computing pension allowances of employes so furloughed.

The Advisory Committee of the Voluntary Relief Department also took action so that a member may continue his membership in the Relief Fund. If he keeps up his contributions he will be entitled to the benefits of the Fund provided for any member who is on furlough.

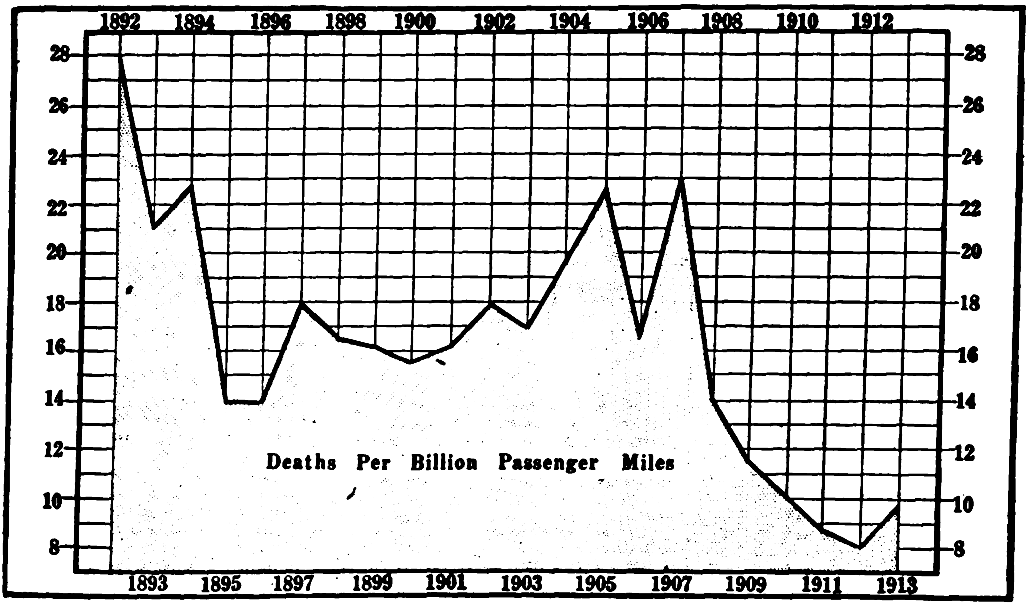
The action taken by the Board of Directors of the Pennsylvania Railroad Company applies not only to the contingency of war with Mexico, but is a general provision to preserve the interests of employes at any time, according to the language of the Board Resolution, that "they might engage in State or National Military or Naval service in response to a call to arms in the event of war or other emergency."

The Mortality of Railway Travel.

THE New York "Annalist" in its issue of May 18th, published the following interesting chart showing the deaths per billion passenger miles from 1892 until 1913 inclusive. This chart is prepared from figures published by the Bureau of Railway News and Statistics and attention is called to the fact that one of the interesting points developed is that four roads with a combined mileage of 1411 miles, have been operated for ten consecutive years without a single fatality to a passenger in a train accident, while 299 railways in the United States operating 120,901 miles of line, equal to the combined mileage of the railways of the United Kingdom, Germany, France, Austria and Italy, went through the fiscal year ended June 30, 1913, without a single fatality to a passenger in a train accident.

During the year the railways thus reporting complete immunity carried a total of 409,808,488 passengers an aggregate distance of 14,400,992,000 miles, and 968,764,956 tons of freight, a total of 141,790,227,000 ton miles. Almost one-

An Upturn in the Mortality of Railway Travel



half the entire railway traffic of the United States for the year thus was carried without one passenger being killed in an accident to a train.

This immunity record for the past fiscal year is the highest since the banner year 1909, and comes close to it, although traffic density, one of the largest factors affecting the probabilities of accidents was more than 11 per cent greater in the passenger business, and more than 30 per cent greater in the freight business of the railways.

Fluctuation in the number of passenger miles —which last year was the greatest on record— the number of passengers killed in railway accidents and the deaths per billion passenger miles are shown in the table below:

Year.	Passenger Miles.	Passengers Killed.	Per Billion Pas. Miles.
1892	13,362,898,299	376	28.00
1893	14,229,101,084	299	21.05
1894	14,289,445,893	324	22.66
1895	12,188,446,271	170	13.93
1896	13,049,007,233	181	13.92
1897	12,256,939,647	222	18.05
1898	13,379,930,004	221	16.50
1899	14,591,327,613	239	16.37
1900	16,038,076,200	249	15.50
1901	17,353,588,444	282	16.21
1902	19,689,937,620	345	18.02
1903	20,915,763,881	355	17.00
1904	21,923,213,536	441	20.13
1905	23,800,149,436	537	22.56
1906	25,167,240,831	418	16.65
1907	27,718,554,030	647	23.35
1908	29,082,836,944	406	13.95
1909	29,452,000,000	335	11.35
1910	32,338,496,329	324	10.03
1911	33,201,695,699	281	8.46
1912	33,510,673,000	270	8.06
1913	34,447,197,000	336	9.76

According to figures compiled by the same Bureau, there was also a marked increase in fatalities in Europe in the last year for which figures are available, as will be seen from the accompanying table:

Passengers Killed in European Railway Accidents.

1912	669	1907	586
1911	554	1906	560
1910	692	1905	503
1909	671	1904	412
1908	630		

The record of passenger mileage in Europe is not available, so that an exact yearly comparison with the figures shown in the accompanying chart cannot be made, but in 1910 those killed per billion passenger miles were 7.53, which compares with 8.06 in the United States in 1912. Obviously, there is no great disparity between the records of passenger fatalities in Europe and the United States.

Hersey B. Goodwin, who was a railroad commissioner for Massachusetts from 1896 to 1901, and first president of the Boston Chamber of Commerce, died on May 6th, in Cambridge, Mass., at the age of 78.

Abraham Vedder Hartwell, president of the F. G. Hartwell Coal Company, and formerly purchasing agent of the Chicago & Alton, died in Chicago on May 5th. He was born at Denmark, N. Y., and entered railway service in 1863 as fuel agent of the Chicago & Alton. During the following two years he was engaged in the construction of that road, and from 1865 to January 1, 1900, was purchasing agent of the same road, and then resigned to engage in the coal business.

Mechanical

New Locomotives for the Pennsylvania.

DURING the last few years the Pennsylvania Railroad Company has felt the need of a larger freight locomotive for use on the Main Line between Altoona and Pittsburgh, in order to reduce double-heading to a minimum and to avoid breaking up trains arriving at Altoona and Pittsburgh before sending them forward over the Pittsburgh Division. It was also thought desirable to experiment with a very heavy Pacific type locomotive for passenger service on this same division. With this object in view a Mikado locomotive, which will bear Pennsylvania Railroad classification "L-1-s," and a Pacific type locomotive, which will bear Pennsylvania Railroad classification "K-4-s," have been developed. The first "L-1-s" locomotive will be placed in service about the first of May of this year, while the first "K-4-s" locomotive will be placed in service about June 10th of this year.

Inasmuch as the road clearance is somewhat limited, also the weight per pair of driving wheels is limited to 65,000 pounds with a five per cent margin for scale variations and the dynamic augment of the unbalanced reciprocating parts at 70 M. P. H. is limited to thirty per cent of the weight of the drivers, it was necessary to keep the locomotive within restricted limits and make the revolving and reciprocating parts as light as possible and at the same time maintain the necessary strength. Further, it was found desirable to maintain as many parts as possible interchangeable in these two types of locomotives and to use as many parts as possible which are embodied in the design of the E-6-s locomotives.

The following are interesting features in the designs:

The design of boiler is particularly interesting in the type of flanging used. It will be noted that the throat sheet is flanged integral with the lower half of the rear barrel sheet. The advantages of this scheme are that it was possible to lower the locomotive about 1⅞ inches and at the same time give sufficient clearance for the rear driving wheels, the clearance being close at this point, particularly with the Pacific type locomotive. The practice of flanging the neck sheet and the barrel sheet in one piece has been followed on quite a number of our modern locomotives, also that of flanging the dome in one piece has been used to quite an extent. The boilers of the "L-1-s" and the "K-4-s" locomotives are interchangeable.

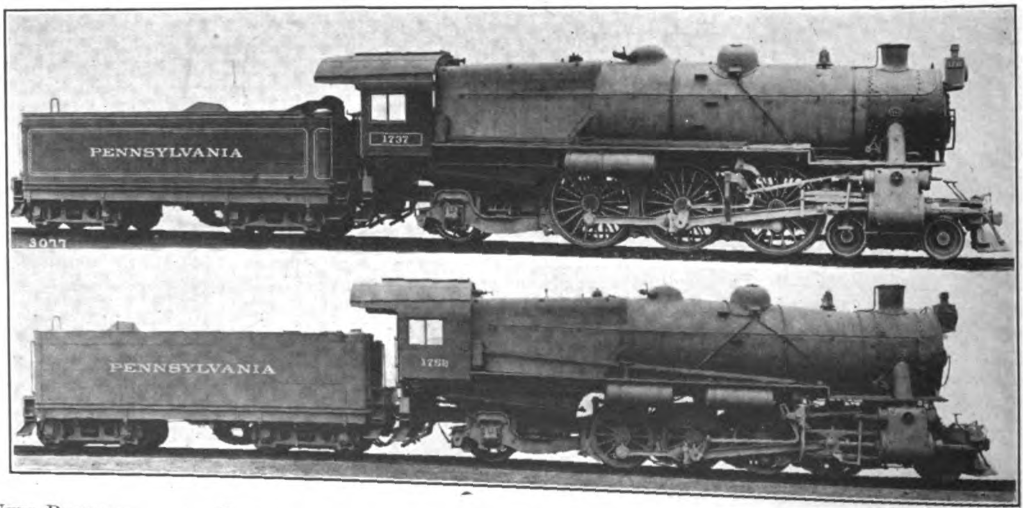
The locomotives are equipped with all-steel cabs, which are considerably smaller than the standard type of cab used on the Pennsylvania Railroad. On account of the fact that the locomotives are equipped with screw reverse gear a cab of great length is not necessary and it is believed that the shorter cab will give the engine crews better opportunity to observe signals.

The running gear has been lightened as much as possible by the use of heat-treated material for driving axles, crank pins, piston rods and side and main rods. The axles, crank pins, wrist pins and piston rods are provided with holes through them with a view of reducing the weight and at the same time providing a better chance for the heat-treatment to take effect.

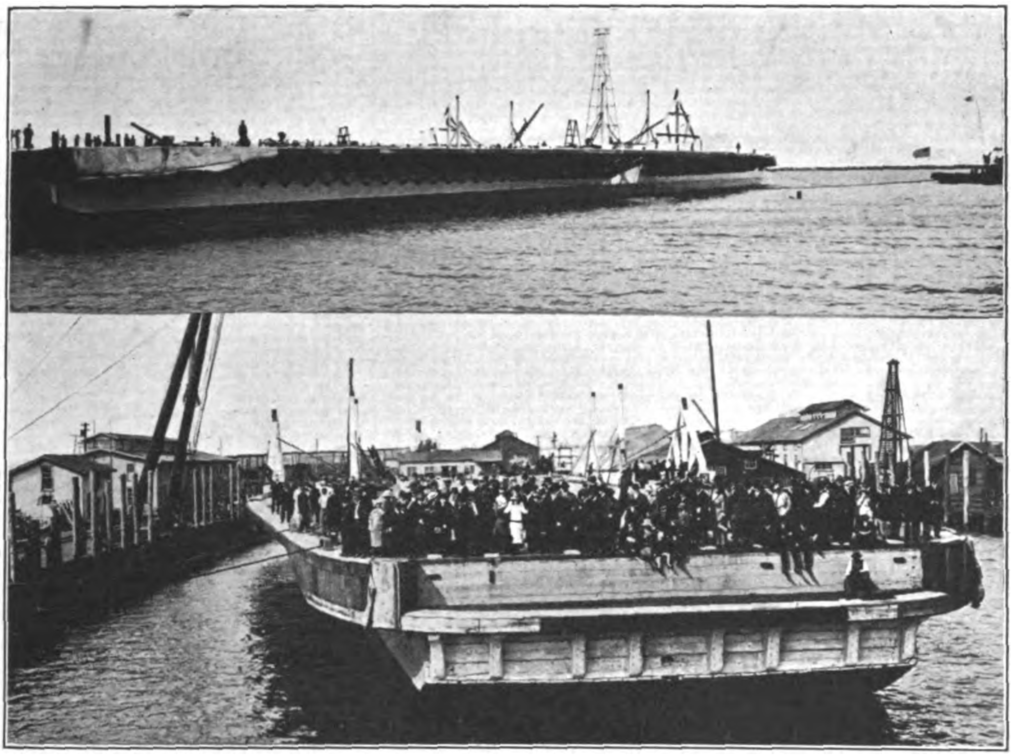
The trailer truck is what is known as the K-W truck, this truck being interchangeable on the E-6-s, L-1-s and K-4-s locomotives.

The driver brake arrangement is particularly interesting on account of the arrangement of cylinders, the arrangement being necessary to provide sufficient space for two 16-inch cylinders which are necessary for proper control.

The locomotives are equipped with Schmidt Smoke Tube superheaters and Security fire brick arch.



NEW PASSENGER AND FREIGHT LOCOMOTIVES FOR PENNSYLVANIA RAILROAD. THE UPPER PHOTOGRAPH REPRESENTS CLASS "K-4-S" PASSENGER LOCOMOTIVE, AND THE LOWER CLASS "L-1-S" FREIGHT LOCOMOTIVE.



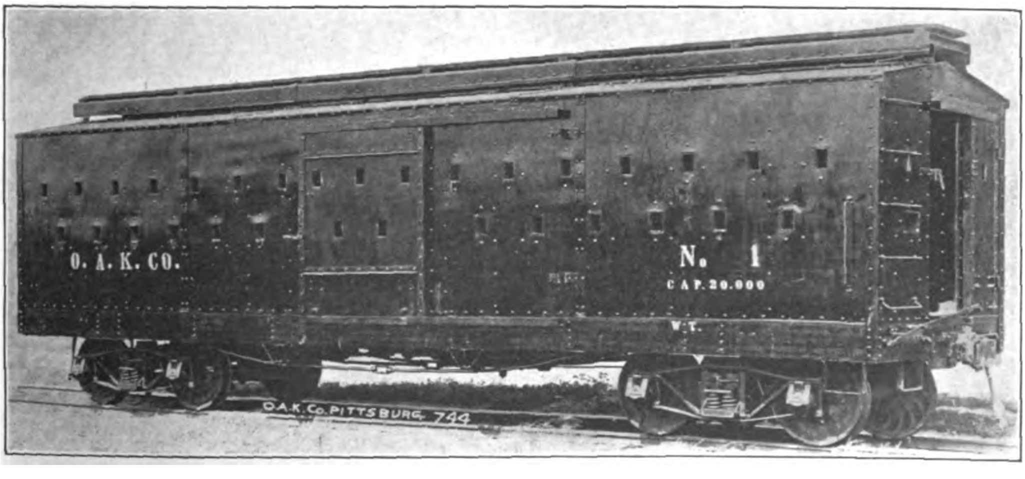
Two Views of the World's Largest Ferry Boat Recently Launched by the Southern Pacific Company at Oakland, Cal.

The World's Largest Ferry Boat.

THE Contra Costa, the largest ferry boat in the world, has been launched by the Southern Pacific Company at its ship yard in West Oakland, Cal. This vessel will ply between Port Costa and Benecia, to supplement the service now given by the Steamer Solano. The new boat is 433 feet long and will carry four tracks with a capacity of 36 freight cars and two engines, or 24 passenger cars and two engines. For safety, there are 14 bulkheads, any one of which might be punctured without sinking the vessel. The engines are located below the level of the main deck, thus giving ample track room above. Two sets of engines energize a paddle wheel on each side, so that if necessary the boat can be swing around in its own length by reversing one while the other is turning forward. Oil is used for fuel and electricity for lighting purposes.

Armored Cars for Mexican Federals.

THE following interesting photograph shows an armored car, being one of a number constructed for the Mexican Government

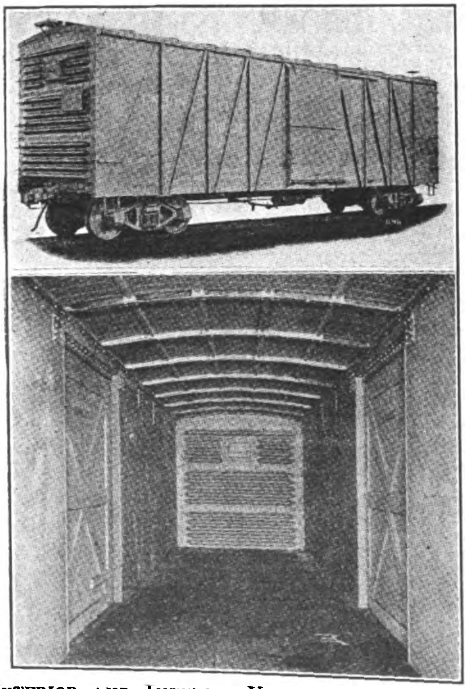


One of a Number of Armored Cars Built in the United States for the Mexican Government.

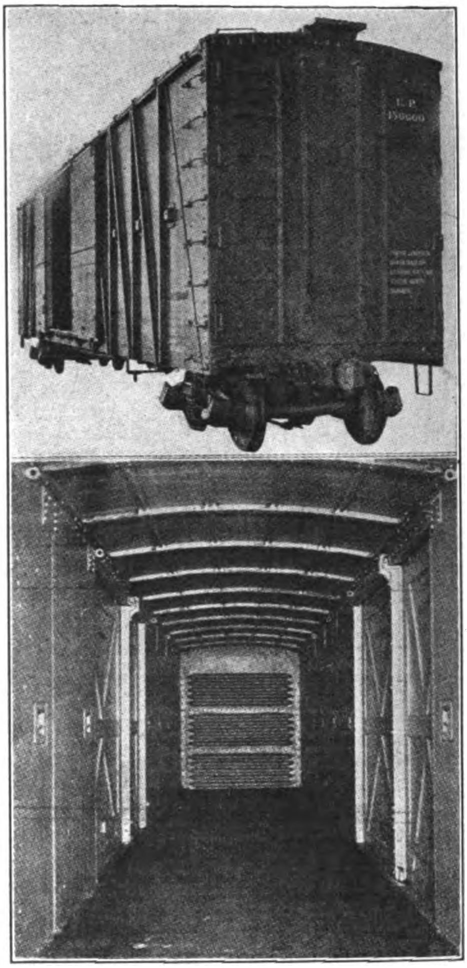
by the Orenstein-Arthur Koppel Company of Koppel, Penna. This car which is 35 feet long, nine feet wide and twelve feet five inches high, affords accommodations for a large number of men and is supposed to be bullet proof. The walls and roofs are made of two thicknesses of heavy steel plate with a four-inch space between filled with sand and concrete. As the picture indicates, there are numerous port holes, provided at the ends and sides, each flared at the outside so that the firing can be done in any direction. The floors are steel plates covered with wood and the underframes and trucks were constructed especially heavy. Accommodations for traveling are provided in the way of bunks, shelves, drinking water appliances, etc., making the car a moveable fort which can only be destroyed by artillery or heavy charges of dynamite. The doors of the car are comparatively small and supported on exceptional heavy rollers. When locked from the inside it is extremely difficult to force them open and a further means of exit and entrance has been provided by a ladder inside of the car which is suspended from the roof by pulleys and ropes. A large number of these cars have been built for the Mexican army, many of them having been captured or destroyed in recent encounters with the Constitutionalists.

Steel Box and Automobile Cars.

THE accompanying illustrations give an idea of the exterior and interior of steel box and automobile cars recently built by the Bettendorf Company for the Union Pacific Railroad. These cars are all steel with the exception of the floors, the longitudinal floor stringers, the side doors and the running boards. The advantages claimed for this type of construction are maximum strength and minimum weight, smoothness of interior, proof against grain leakage and general neatness of appearance. In their planning, side construction was utilized for the purpose of carrying load, thus permitting the use of lighter underframe construction than would otherwise have been necessary. In applying side sheathing no lap joints have been incorporated and no rivet heads are in evidence below the road line other than those by means of which the sheets are secured to the diagonal side frame members. This has been accomplished by flanging the side sheets and riveting them through these outward extending flanges to the webs of the Z-bar side posts. This method of attachment is also a permanent factor in making the cars proof against grain and weather leakage.



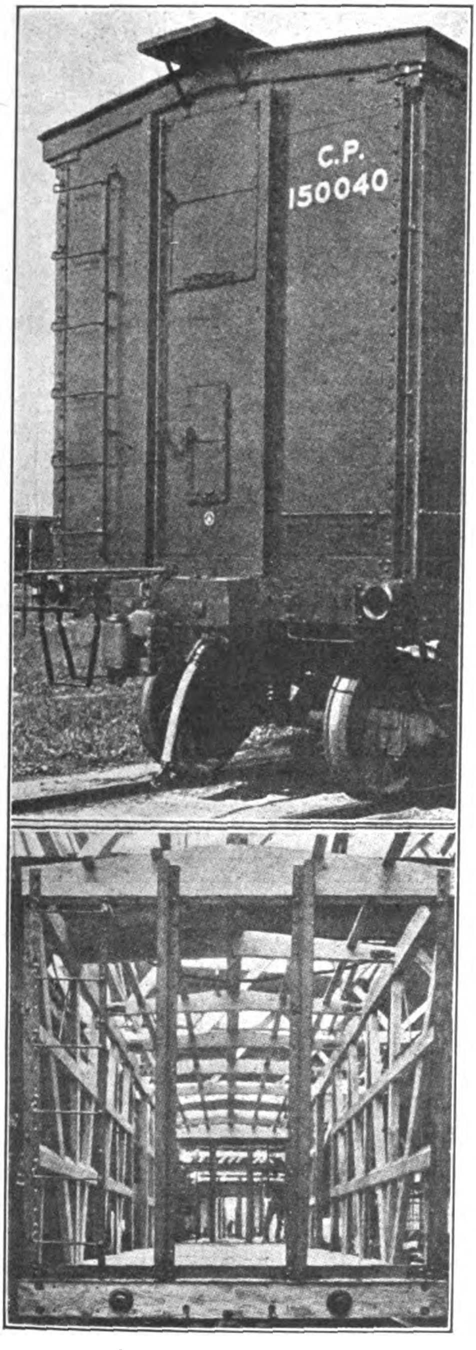
Exterior and Interior Views of Union Pacific's Steel Box Car.



Exterior and Interior Views of Union Pacific's Steel Automobile Car.

Reinforced Ends for Wooden Box Cars.

THE "Canadian Railway and Marine World" presents in its June issue the following illustrations of the wooden car end construction recently evolved on the Canadian Pa-

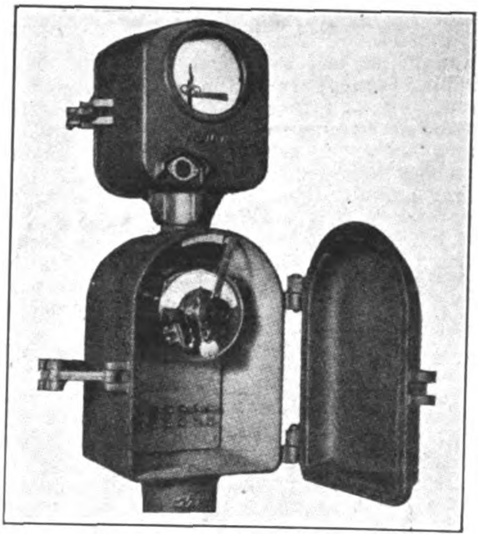


Reinforced End Wooden Box Car, Canadian Pacific Railway, Showing Details of End Framing.

cific Railroad. The corner posts consist of Z-bars with two intermediate Z-bars for end posts, these four being tied together with a Z-bar on the top and an angle on the bottom. The bottom angle is bolted to the end sill and riveted to the steel center sills. The top Z-bar is securely attached to the end plate. The end sheathing is horizontal and consists of 1¾-inch tongued and grooved lumber. This is secured to the verticle end Z-bars by bolts. It is stated that this makes a very solid end arrangement and one that is not easily damaged in the event of the lading and shifting in transit.

New Switch Indicator with Novel Features.

An improved switch indicator which, it is stated, will save power and can be used for outlying side tracks without circuit preliminaries, has been designed by the Union Switch and Signal Company. The accompanying illustration gives a general idea of its appearance. The saving of power is secured by the use of a push button which, when depressed, contacts close the circuit for the indicator provided the external circuit is complete. The indicator will not clear by the depression of the button unless energized by the external circuit. The indicator is provided with a time-release arrangement which is employed where it is undesirable to control the switch indicator by track circuit preliminaries.

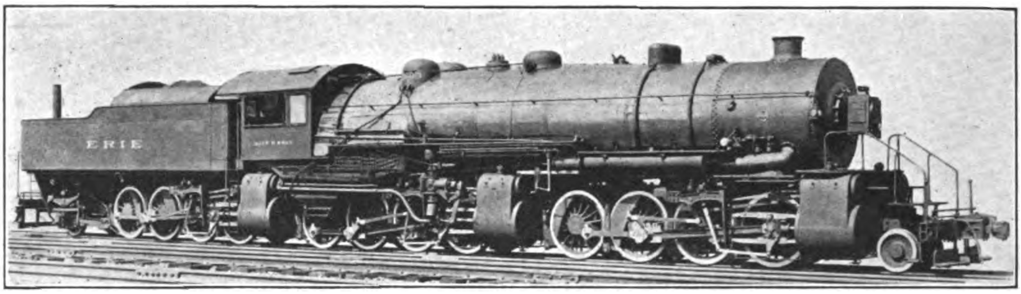


Switch Indicator with Time Release.

Articulated Compound Locomotive for the Erie Railroad.

The Baldwin Locomotive Works has recently completed, for the Erie Railroad, a locomotive for pusher service, which develops a tractive force of 160,000 pounds, and is by far the most powerful unit yet built. This capacity is secured, not by using excessive wheel-loads or a rigid wheel-base of unusual length, but by placing driving-wheels under the tender and thus making the weight of the latter available for adhesion. In heavy grade work especially, the weight of the tender detracts materially from the net hauling capacity of a locomotive of the usual type; while in this case, the tender is used as a means for increasing the hauling capacity.

This locomotive is built in accordance with patents granted to George R. Henderson, Consulting Engineer of the Baldwin Locomotive Works. The wheel arrangement is 2-8-8-8-2, the third group of driving wheels and the rear truck being placed under the tender section. The cylinder exhausts into the two front cylinders, as high pressure and four as low pressure. The



Erie Railroad's New Articulated Compound Locomotive with an Additional Set of Drivers Under Tender.

two high pressure cylinders drive the middle group of wheels. The right-hand high-pressure cylinde exhausts into the two front cylinders, and the left-hand high pressure cylinder exhausts into the two rear cylinders. This arrangement is therefore equivalent to a compound engine having a ratio of cylinder volumes of one to two.

The boiler has a conical connection in the middle of the barrel, and is fitted with the Gaines type of furnace. The firebox has a total length of 13 feet 6 inches, and of this the grates occupy 10 feet. A combustion chamber 54 inches long extends forward into the boiler barrel, and the tubes have a length of 24 feet. The brick arch is supported on six 3½-in. tubes and heated air is delivered under the arch by seven 3-in. pipes which are placed vertically in the bridge wall. There are two fire-doors, placed 32½ inches between centers and a Street mechanical stoker is applied.

The barrel of this boiler measures 94 inches in diameter at the front end and 102⅛ inches at the dome ring. The center line is placed 10 feet 7 inches above the rail. The circumferential seams are triple riveted, while the longitudinal seams have sextuple riveted butt joints, which are welded at the ends, and have an efficiency equal to ninety per cent of the solid plate. The dome is of pressed steel, 33 inches in diameter and 13 inches high. It contains a Chambers throttle, which is connected with the superheater header, in the usual manner, by an internal dry pipe. The superheater is composed of 53 elements, and is the largest ever applied to a locomotive; the superheating surface being 1584 square feet. The header is divided, separate castings being used for the saturated and superheated steam sections. The front end contains a single exhaust nozzle, with ring blower. The size of the nozzle can be varied by a simple adjusting device placed outside the smoke-box. The stack is 22 inches in diameter, and it has an internal section which extends down to the center line of the boiler.

The superheated steam is conveyed to the high-pressure cylinders through outside pipes, and the high pressure distribution is controlled by 16-inch piston valves, arranged for inside admission. Similar valves are applied to the low-pressure cylinders. These valves are all driven by Baker gear, and the three sets of motions are controlled simultaneously by the Ragonnet power reverse mechanism. All six cylinders are cast from the same pattern, and the valve motion and driving-gear details used with the three groups of wheels are as far as possible interchangeable. A large number of these details also interchange with those of the heavy Mikado type locomotives in service on this road.

Among the details of the driving-gear may be mentioned the pistons, all six of which are alike. The piston heads are steel forgings, of dished shape; and each is surrounded by a cast iron bull ring. The bull ring carries three packing rings, and is secured to the piston head by a retaining ring which is electrically welded into place. The cylinders and steam chests are bushed, and these bushings, as well as the piston and valve packing rings, are of Hunt-Spiller metal.

The pipes connecting the high and low pressure cylinders, are constructed like the flexible pipes in a Mallet locomotive. The high pressure cylinder saddle has cored in it two passages, one of which conveys the exhaust from the right-hand cylinder to the front receiver pipe, while the other conveys the exhaust from the left-hand cylinder to the back receiver pipe. The front cylinders exhaust up the stack in the usual manner, while the exhaust from the rear cylinders is discharged up a pipe placed at the back end of the tank. Between the rear cylinders and the exhaust pipe is placed a feed-water

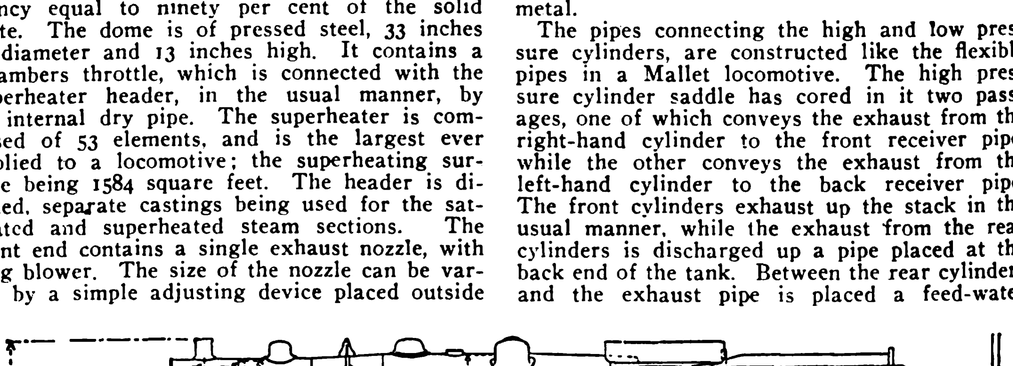


Diagram Illustrating Wheel Base and Weight Distribution.

heater, through which the exhaust steam passes. The heater consists of a large drum, traversed by small tubes. The drum has connection with the tank through a suitable valve, and the exhaust steam passes through the tubes. The hot feed from the drum is forced into the boiler by two pumps, which are driven from the crossheads of the high-pressure engine. Two injectors are also used, and they draw cold feedwater from the front end of the tank. The pump and injector checks are placed on the top center line of the boiler, near the front end.

The tender section, as far as frames, wheels, equalization and driving-gear are concerned, is arranged like a steam locomotive. The tank is supported on the frames by six bearers, which serve as transverse frame braces also. Three of these bearers are placed between adjacent pairs of driving-wheels; one is placed just back of the rear driving-wheels, one above the rear truck, and one under the back end of the tank. The width of the tank is 10 feet 8 inches; and it is placed sufficiently high to clear the valve motion.

The articulated connection between the middle and rear frames is placed under the cab, and between the rear cylinders. The radius bar on the middle frames makes a ball-jointed connectin with the hinge-pin. A similar connection is provided between the middle and front frames, and in this case the radius bar is pinned to the front frames in such a way as to allow vertical flexibility.

The frames are vanadium steel castings, 6 inches in width. Each is made in one piece with a single front section to which the cylinders and saddle are keyed and bolted. The front group of wheels is arranged with a continuous equalization system, the leading truck being center bearing and equalized with the driving-wheels as in a Consolidation engine. The second group of wheels has a continuous equalization system on each side of the locomotive. In the rear group, the equalization is broken between the second and third pairs of driving-wheels. The rear truck, which is of the side-bearing type with outside journals, is equalized with the two rear pairs of driving-wheels.

The arrangement of starting valve usually applied by the builders to Mallet locomotives, is used on this engine; except that in the present case, live steam is admitted to four low pressure cylinders instead of two. The admission of steam is controlled by a manually operated valve in the cab.

This locomotive marks an interesting step in the development of heavy power for freight service. The efficiency of a locomotive for slow, heavy work, is measured largely by the proportion of the total weight that is available for adhesion; and in this respect the present locomotive excels, as about ninety per cent of the total weight is carried on the driving-wheels, as against approximately 65 per cent in a Mallet locomotive of the 2-8-8-2 type, including, in the latter case, the weight of the separate tender.

As indicating the enormous tractive power of this locomotive, it is of interest to note that in a trial trip over the Baltimore and Ohio Railroad from Baltimore to Philadelphia, it drew a train of fifty-five coal cars containing 4,012 tons. This monster engine left Baltimore at 6.10 A. M. and arrived at Philadelphia at 4.30 in the afternoon, making the ninety-mile trip in ten hours and twenty minutes with what is believed to be the heaviest train ever hauled this distance by any one locomotive.

A Device for Bending Rails.

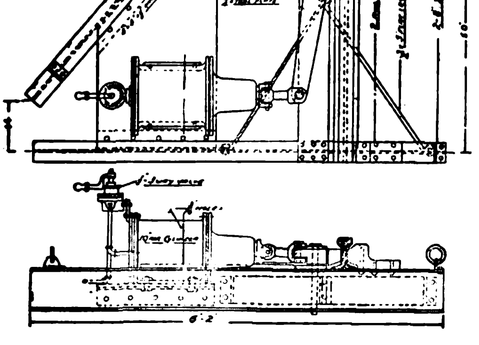
THE engineering department of the Panama Canal Commission, has developed a device for the quick and economical bending or breaking of old railway rails to be used at the Balboa Terminal for reinforcement in the concrete construction of the proposed dry dock No. 1.

The plan and end elevation of the apparatus are shown in the accompanying sketches. It consists of a base or table of trapezoidal shape, with a depth of five feet and with its greatest base six feet four inches long, on which is mounted the mechanism for bending or breaking the rail. The base is of ¾-inch steel plate, set on 8-inch I-beams and braced beneath by plates of steel, ¾-inch thick by five inches wide. Heavy studs, or rail stops, are set at each end of the base to hold the rail in place, while the pressure is applied.

The pressure is supplied by a 10-inch air cylinder, with a 10-inch stroke, mounted in one corner of the table. The piston of the cylinder is jointed to a heavy iron bar, two feet four inches long, the other end of which is set in a stationary pivot alongside the rail. Near this fulcrum is attached to the bar a wedge-shaped block of steel which fits between flanges of the rail. The forward stroke of the cylinder thrusts the wedge-shaped block against the web of the rail, midway between the rail stops on the sides of the table. It thus attains the maximum leverage for bending.

The strain thus set up is sufficient to bend the rail to a considerable curvature. In addition, when the rail is under the strain of pressure, it may be broken by a sharp blow from a sledge-hammer applied opposite the point of the wedge-shaped block.

The cylinder is supplied with compressed air, at the regular working pressure. Its operations are controlled by a ½-inch 3-way valve. In



Plan and Elevation of Rail Bending Device.

order to afford relief of pressure and avoid blowing the cylinder head off if the operator should neglect the proper manipulation of the controlling valve, a row of 3-16-inch holes has been drilled in the cylinder at a point about two-thirds of the distance of the forward stroke.

The outfit weighs about 650 pounds, and is portable. It may be used in railroad construction, for the bending of rails, by connecting the cylinder to the air brake system of a locomotive or train. The cut made when a rail is broken, however, is not clean enough to allow pieces to be joined up properly, in laying track, without finishing them off with a cold chisel.

The system has been very satisfactory in operation at Balboa. A gang using it can bend rails much faster than by any other simple field process, and can break rails a great deal more rapidly than by using the familiar "cold cut" method, of striking repeated sledge-hammer blows on a chisel or pointed hammer held against the side of the rail.

A substitute for the forge and anvil for the bending of steel rods to be used as reinforcement for concrete, also has been placed in use at Balboa, in connection with the construction of the quay wall and pier of the permanent terminals.

It is similar in principle and general form to the apparatus for bending rails. The rods are bent by the thrust of the piston rod of an engine cylinder, while they are held in place on a table in front of the cylinder. The table is a steel plate, bored with a number of holes in which movable steel pegs, or studs, are set according to the point and degree of bending desired.

Two such equipments are in use. One uses a single cylinder, 10 inches in diameter, which was recovered from an old French locomotive. This outfit places a single crimp in the ¾-inch rods, which are used in the length-wise beams of the construction, and the cylinder has sufficient power to bend three or four of the rods at the same time. The second equipment employs two 14-inch cylinders, taken from the dumping mechanism of a 1-cubic yard concrete mixer, which are mounted on opposite sides of the table. These make, at one placing on the table, opposite bends in the larger rods which are used in the main girder. They bend, without difficulty, rods as large as 1¼ inches in diameter. All the cylinders are operated by compressed air, under pressure of about eighty pounds to the square inch.

By the use of these equipments, five men are able to bend in an hour as many rods as they could bend in an 8-hour day by the former process of heating them in forges and bending over anvils. As the quay wall and pier require a total of approximately 4,000,000 pounds of bent rods in their reinforcement, the saving of time and money by the use of these equipments is considerable. The cold-bending process, instead of lessening the strength of the steel, is believed to conserve it.

Motor Cars for the Pacific Great Eastern.

THE Hall-Scott Motor Car Company, of San Francisco, has recently completed for the Pacific Great Eastern Railway, two 65-foot gas engine propelled motor cars. The power plant of each car is rated at 150 H. P. and the same Company is now engaged in building a third car for this road to be fitted with a 250 H. P. engine which will permit it to haul three 65-foot trailers, and yet maintain a reasonable schedule for local passenger service. The power is derived from a water cooled gas engine which is generally similar to that employed in an automobile. By means of a clutch, three

section longitudinal driving shafts provided with flexible couplings and a selective gear set, mounted in a case on the forward axle of the rear truck, any one of four speeds either forward or reverse, may be obtained. The general appearance of the car and the arrangement of its power plant transmission, are indicated in the accompanying illustrations.

Electrical

Electrification of Steam Railroads.

THE members of the Richmond Railroad Club listened to an interesting address at its March meeting by Mr. H. Root Palmer, on "Electric Light and Power: Past, Present and Future." The part of Mr. Palmer's address which will appeal particularly to railway men, is that which he devoted to a discussion of the electrification of steam railroads. He said in part:

"There is no question that electrical apparatus has demonstrated its ability to handle large quantities of power reliably and economically, to meet successfully the increased traffic demand where steam locomotives fail in spite of their recent development, its superiority in handling double the trains in terminals with the same trackage as required for steam operations, no turning or shifting or necessity for frequent trips to round house for inspection and hostlering, ready to go without advance preparations and for tunnel work has no competitors. There is no doubt that in this day of railroad regulations and difficult railway finance, no argument will appeal to a railway manager that does not show beyond doubt, a saving in dollars and no small amount either.

"Central Station companies can be of material assistance by giving some attention to this phase of the situation and by co-operating with the railroads that reasonable regulation be effected, permitting the charging of rates adequate for the quality of service which must be rendered.

"The adoption of electrification by steam railroads would naturally follow as rapidly as manufacturers of heavy traction apparatus could take care of the business, and the railroads would come to the Central Station to purchase power just as they now go to the coal company to purchase coal, thereby opening wider the largest and most desirable field to the Central Station.

"Let us assume the role of a Prophet and dare to cast a horoscope of the future. Much is being said and done with regard to conservation of our forests and fuel supply with the view of postponing an impending crisis in industrialism. Scientists have told us much about the enormous quantity of energy stored up in radium. Suppose that the energy in one ton could be utilized in thirty years instead of being evolved at its variable slow rate of 1760 years for half disintegration. It would propel a ship of 15,000 horse power at the rate of fifteen knots per hour for thirty years, practically the life of the ship. To do this actually requires 1,500,000 tons of coal.

There is being woven a network of transmission lines which when completed will extend beyond the Pennsylvania Coal Fields toward the north and beyond the Alabama Coal Fields toward the south and to the westward beyond the West Virginia, Illinois and Kentucky Coal Fields to which will be connected the various hydro-electric developments. Large steam stations will be constructed at the mines in the various coal fields. This large and comprehensive system would probably receive consideration as an independent ownership, for wholesale purposes only, with broad powers having right of eminent domain and authority to condemn right-of-way in their capacity of public service companies. Electrification of steam railroads would follow, they buying their power, coal mining operators would buy their power, some railroads and mines having now found it to their advantage to do so. There would be no occasion for isolated plants, in fact there is none now from a standpoint of economics. Even when steam heating is required, the steam requirement for heating and steam required for power balance each other for only very short periods if at all. If high efficiency steam apparatus for power is installed, the exhaust is insufficient and live steam is used much of the time; if low efficiency steam apparatus for power is installed, the exhaust steam is in excess of the heating requirement and in both cases, considerable waste occurs. In this connection, however, it remains for some to convince the others to be convinced.

"There will be available from this transmission system for use on the farms, electric light and power, materially aiding the many movements both by private interests and the government in solving the civic problems which are now occupying their attention toward relieving the congested living conditions in the cities.

"These additional conveniences making country life more attractive and instead of the term "Electric City" we will be known as the "Electric Country."

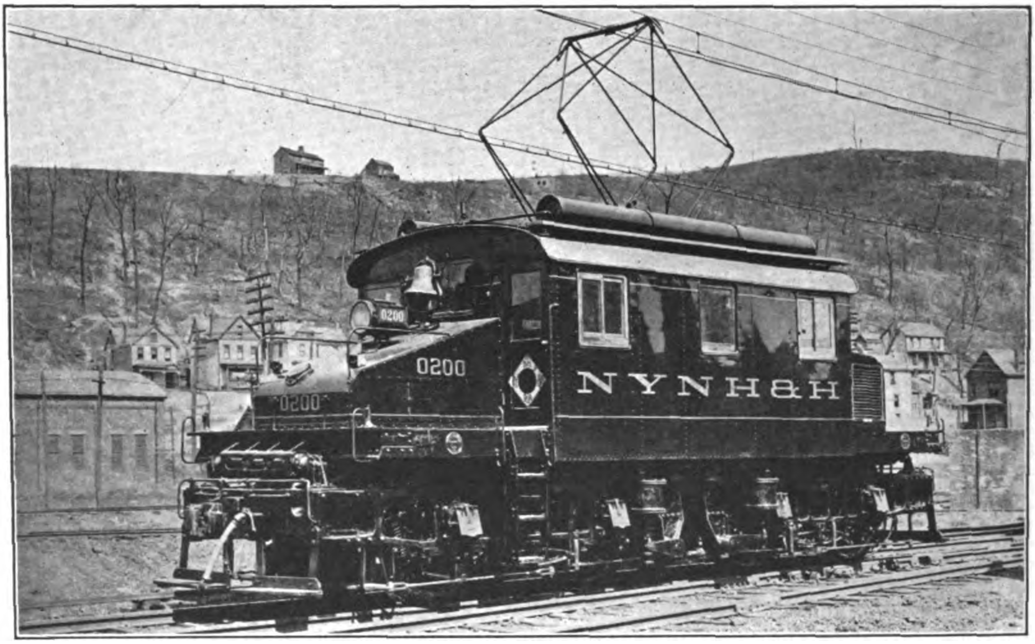
The Adaptability of the Electric Locomotive to Railroad Switching Service.

APPROXIMATELY eight million people are served by the New York, New Haven & Hartford Railroad in rendering service to the New England States. Of all freight hauled in and out of New England by rail, this road handles 75 per cent of it. The majority of this freight is carried via the Harlem River Division and the Harlem River and West Chester freight and transfer yards.

Although the complete electrification of the New Haven road between New York and New Haven has not yet been placed in electrical operation, the switching of all freight cars between Stamford and Harlem River has been done successfully by electricity for approximately eighteen months. The economics obtained by the use of the electric switcher locomotives have exceeded all the expectations of those who are responsible for their application to this field.

The reliability of this switcher locomotive equipment has proven to be far superior to the steam locomotive in switching service. The operation of these electric switcher locomotives is a source of satisfaction to the operating department and trainmen who have this work in charge.

SERVICE.—The three main switching yards on the New Haven System are:



0200
0200
NYNH&H

Harlem River Yard, Length—23.3 miles.
Oak Point Yard, Length—37.16 miles.
Westchester Yard, Length—22.29 miles.

Also the Van Nest Yards which are used for storage only.

In March, 1911, the first switching engine was placed in operation at Stamford, Conn. In August, 1912, the first switcher started to work in the Westchester Yards; in September, 1912, the first in the Oak Point Yards in float service and in August, 1913, the first began its operation in the Harlem River Yards proper.

The service performed by these locomotives in the Oak Point Yard is of special interest. This yard is the terminal where all the cars on flats destined to the New England States are unloaded. Each float is properly docked and secured. There are two large controlling bridges at this terminal, one having accommodations for five floats, and the other for three. These bridges contain all of the counter weights used to compensate for the weight of the individual gang or approach bridges, besides all control apparatus necessary for the proper operation of these float docks.

The entire gang bridge to each float is hinged on to the main land. The bridge consists of two parts connected by a hinged joint. Each of these two parts of the approach bridge leading to a float, is raised and lowered electrically as the case may be by means of two controllers. In addition to these controllers, there are two controllers which manipulate two motors connected to a friction drum which by means of a rope holds the floats in their slips securely to the gang or approach bridge. Three large steel bars are used to keep the tracks on the float properly aligned with tracks on the approaches while cars are being loaded or unloaded.

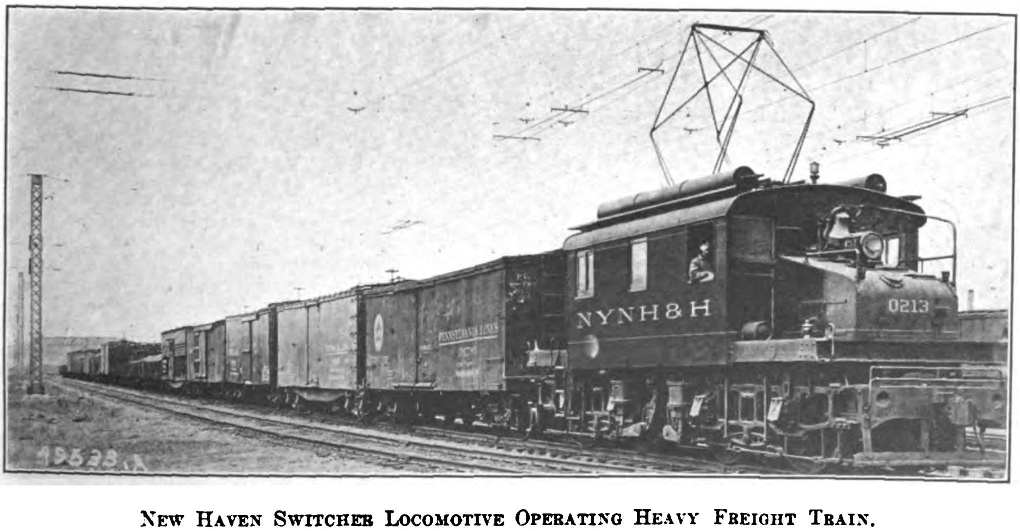
SHOWING CONNECTION BETWEEN TRUCKS OF THE NEW HAVEN SWITCHER LOCOMOTIVE.

tracks on each float. It requires six movements to unload a float and dispatch a train to the yard; also six movements are necessary to load a float. When either loading or unloading floats, there are always two flat cars coupled between the electric switched locomotive and the cars being hauled on or off the float. In this way the locomotive always remains on land and is never supported by the approach and the two flat cars act as an arm for reaching the train.

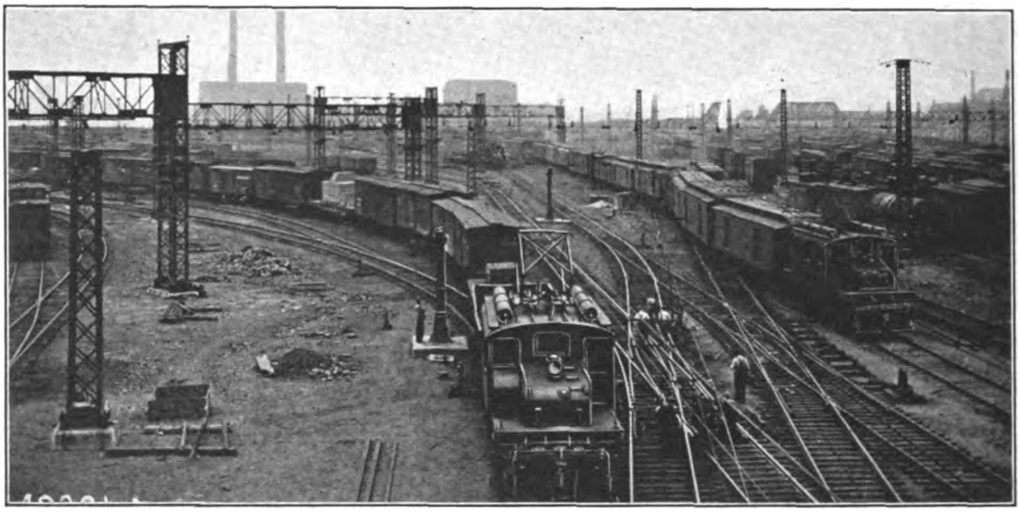
Each float has three tracks, two with a capacity for eight cars and a center one for six cars. In this float service it is important to load and unload cars so that the floats do not capsize. This is prevented as follows: Referring to the accompanying illustration, the eight cars on track No. 1, are hauled off until two cars remain, enough to have about 100 tons on this track, and this train left standing until later. Then all the eight cars on track No. 3 are hauled off. Next the six cars on track No. 3 and then off. Finally the eight-car train which was partially removed, is hauled off. The minimum time required to load and unload a float (12 movements) is thirty-five minutes.

To date not a single feature has developed in which the electric locomotive is not superior to steam locomotive in switching service. The ease with which electric locomotives are controlled, the elimination of stand-by losses and those that are necessary where coal and water are used, elimination of liability for freezing up in cold weather, are all features which are to be credited to the electric locomotive.

Six single-phase electric locomotives do the work of approximately twice the number of steam locomotives formerly used. A total of eight of these electric locomotives are sufficient for practically all of the switching work between Stamford and Harlem River stations. These are kept in service 24 hours a day, each making on the average of approximately 140 miles in 24



NEW HAVEN SWITCHER LOCOMOTIVE OPERATING HEAVY FREIGHT TRAIN.



OAK POINT YARD, NEW HAVEN SYSTEM, SHOWING ELECTRIC SWITCHER LOCOMOTIVES IN OPERATION.

hours with three eight-hour crew shifts. The electric locomotives handling the work between Westchester Yard and Harlem River for a given month made 38,000 locomotive miles and consumed approximately 896,000 kilowatt-hours of electrical energy at the locomotive.

During this same period, the six locomotives handled approximately 65,000 cars which had a total weight of approximately one million tons. Practically all of these cars were transferred from floats and since the control of the electric locomotive is more sensitive than the control of the steam locomotive, this is a feature that appeals strongly to the operators.

All of the heavy freight tonnage mentioned above is handled within the corporate limits of New York City, and the elimination of smoke by the use of the electric locomotive is another advantage which has appealed to all parties.

There are sixteen switching locomotives included in this installation. Each locomotive is equipped with four Westinghouse No. 410. 125 h. p. 25-cycle, single-phase motors and Unit Switch Control. These locomotives each weigh 80 tons and are able to exert a maximum tractive effort of 40,000 lbs. with a clean, dry rail. Several items given below such as hauling capacity, weights and mechanical data may be of interest.

*Rated Hauling Capacity.

Track Profile	Number of Cars Each Weighing 45 Tons With Load.	Max. Speed M. P. H.
Straight Level Track	67	8.5
½ Per Cent Grade	28	8.1
1 Per Cent Grade	17	8.1
2 Per Cent Grade	9	8.1

---

*On the average road, the load that can be handled is determined by the maximum grade.

The figures given for "Straight Level Track" show the load which may be handled in infrequent switching service.

The switching locomotives are guaranteed to exert a maximum tractive effort of 36,000 lbs. for about three minutes at speeds up to 6 m.p.h. and a continuous tractive effort of 14,800 lbs. at a speed of 11½ m.p.h. In practice it has been found that an electric switching locomotive can do the work of two steam locomotives because it can be operated both day and night. In fact, the first switching locomotive furnished has been in use for about twenty hours a day in the yards at Stamford. It is not expected that the maximum voltage on the motors will be reached in ordinary switching service, but it is available when climbing grades or on longer runs in the yard. The average operating potential is estimated to be 190 volts. The hour rating corresponding to this voltage and current of 900 amps., is approximately 125 h. p. per motor.

Arrangements have been made for a large bridge, known as the interconnecting railroad bridge, between Harlem River and Long Island City, which will physically connect the Pennsylvania and New Haven Systems. Electricity as a motive power will be used entirely for handling all traffic over this bridge.

A detail description of these switcher locomotives follows:

Mechanical Features of Electric Switching Locomotives.

The sixteen switching locomotives are of the eight-wheeled 0-4-4-0 articulated truck type with central cab and sloping ends. The pulling and buffing strains are taken by the truck frames, which are joined at the center of the locomotive by a draw bar. The frames are placed outside the wheels, and are steel castings of the usual bar type, having straight pedestal and removable gibs. The semi-elliptic springs are placed directly over the journal boxes, and the springs of each truck are connected by equalizing beams. There is no cross equalization with this arrangement; that is, the equalizer system of one side of the locomotive is not connected with that of the other side.

The end bumpers are of cast steel, arranged for Westinghouse friction draft gear. At their inner ends, the frames are braced transversely by steel castings and these are provided with pockets which carry the intermediate drawbar. These castings also serve to transmit buffing shocks when the locomotive is coupling or pushing.

Each end of the armature shaft is equipped with a pinion which meshes with a steel tired gear. These gears are mounted rigidly in a quill which surrounds the axle with a clearance sufficient to allow vertical wheel play. The quill is carried in journals formed in the motor frame. The motor tractive effort is transmitted from the gears to the wheels through helical springs, rigidly attached at their ends to the wheel center and gear center respectively. With this arrangement, the motors are spring supported, and the center of gravity of the locomotive is at a suitable height above the rail.

As these locomotives operate on the New Haven tracks only, no provision has been made for collecting current from a third rail. The locomotives have been designed to traverse 20 degree curves.

The frame which carries the superstructure of the locomotive is built up of rolled shapes and plates with the exception of the cab bolsters which are cast steel. It is supported on each truck frame by spring-loaded friction plates at four points; two of these points are located at the inner end of the frame; one on either side, as far from the longitudinal centerline as possible. The two remaining points are located at the outer end of the frame, and placed close together on either side of the longitudial centerline. The trucks have center pins also, but these carry no weight and are simply to keep the superstructure frame in proper alignment with the trucks. One of the center pins is given sufficient longitudinal play to compensate for the backlash existing between pulling and buffing positions. The main driving wheels are 63 inches in diameter and have 56-inch cast steel spoke center. The tires are held with a shrink fit and shoulder.

The cab, which is of the steeple type, is built of steel plates with the main portion 17 feet 8 inches long. An operating equipment is placed at each end. Part of the apparatus is hung from the roof. Access can easily be had to transformer, compressor, and other control apparatus. The end motors, which are located under the sloping hoods, can be handled by a crane after removing the hoods. All the motors can be dropped into an overhauling pit.

This locomotive is fitted with Westinghouse EL double-end brake equipment with train connections; a hand brake on one track, sand boxes at each end with air sanders, and air operated bell and whistle. Steps are secured to each number. The cab can also be entered by means of a ladder on each side.

MOTORS AND BLOWERS.—The No. 410 railway motor is of the series type with short-circuited compensating winding and preventative resistance leads to the armature circuit. The motor is designed with eight poles. The main field winding consists of concentrated field coils, each of which has a few turns of heavy copper strap, and is in its general construction very similar to the field coils used in large D. C. railway motors. The auxiliary of compensating winding is distributed in the slots provided in the pole pieces. It consists of heavy copper bars, one in each slot, and straps interconnecting these bars at the ends.

The armature winding consists of heavy copper strap, and the resistance leads in the armature are made of strap of high resistance materials. It will be noted that windings are made of bars or straps and are, therefore, of a very strong and reliable structure, a feature which is exceedingly desirable for railway work. This is combined with the fact that the compensating winding are practically eliminated, and the fact that the voltage of the motor is very low, far below the customary voltages on D. C. railway motors, makes this motor as reliable a structure as can be imagined at the present state of art.

CONTROL.—The motors are connected in two pairs, so arranged that the two motors of each pair are permanently in series, while the two pairs are permanently in parallel. The speed regulation is obtained by connecting the motors to different taps on the secondary winding of the transformer in the same way as is done on all the previous New Haven locomotives.

The control is exceedingly simple because the switching locomotives are not required to operate on direct current. In addition to the a. c. circuit breaker for shutting off the high tension power from the transformer, the main circuit control apparatus consists merely of a single switch group having twelve unit switches together with three preventive coils and two reversers. As in all of the previous locomotives, the switches are of the Westinghouse standard pneumatically operated type, using the compressed air of the braking system as an operating force, and a small 20-volt storage battery for actuating the magnet valves. The battery is charged by means of a small motor-generator set which consists of a single-phase motor and d. c. generator. As a rule, this set furnishes all of the energy required for operating the controller circuits; the battery being merely allowed to float on the line ready for use in case of accident or other emergency.

These locomotives are controlled by means of a master controller located in each side of the cab. A sixteenth locomotive has been built in which a single controller in the center of the cab is provided for operation in either direction.

An ammeter is provided near each master controller to enable the engineer to know just what load each pair of motors is taking at any time, so that he can handle the locomotive to the best advantage. In the case of a switching locomotive it is especially desirable to know when it is capable of hauling extra heavy loads; in other words, to know the temperature condition of the motors. For this reason, there has been installed a temperature indicator which is built on the principle of the wheatstone bridge. The connection of this instrument is made through a coil in the motor fields. Its indications are obtained only when the motorman presses a button which is in the circuit of the control battery. This indicator has been in satisfactory operation since May, 1911.

A novel feature in the main circuit connections is that the motors are operated from a two coil transformer instead of an auto-transformer; thereby reducing the insulation strain on the windings to a minimum.

A number of interesting features regarding these locomotives are given below:

Electrical Progress in Japan.

According to a British Consular report, eight years have seen a very great development in the Japanese electrical industry. During that period the capital invested in supply undertakings and electric railways increased from $14,290,000 to $229,683,810. In the same period the length of transmission lines increased from 5,981 to 35,584 miles, and the length of electric railways from 93 to 704 miles. As copper is produced in Japan, the manufacture of electric wire has made good progress, and imports of this material are practically confined to a certain quantity of submarine and other cables. Only two or three years ago insulators and other porcelain ware required in connection with electrical work were imported from Germany, but the Japanese article is now said to be in no way inferior to the imported.

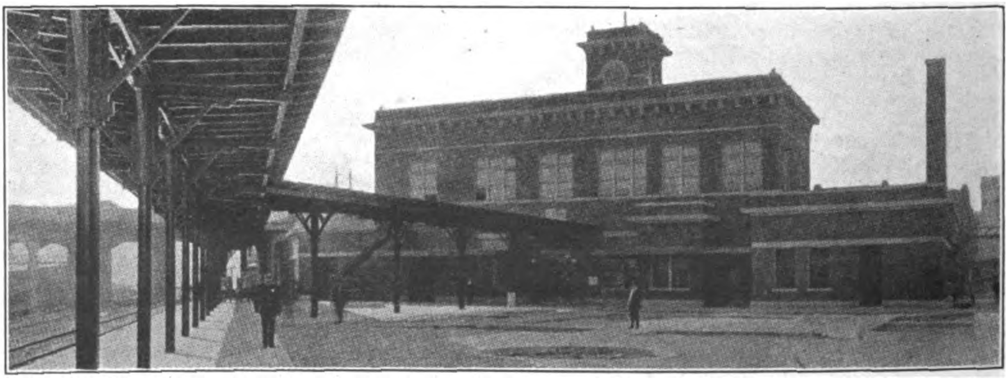
Terminal Improvements

New Passenger Station for the Missouri, Kansas and Texas, at Houston, Texas.

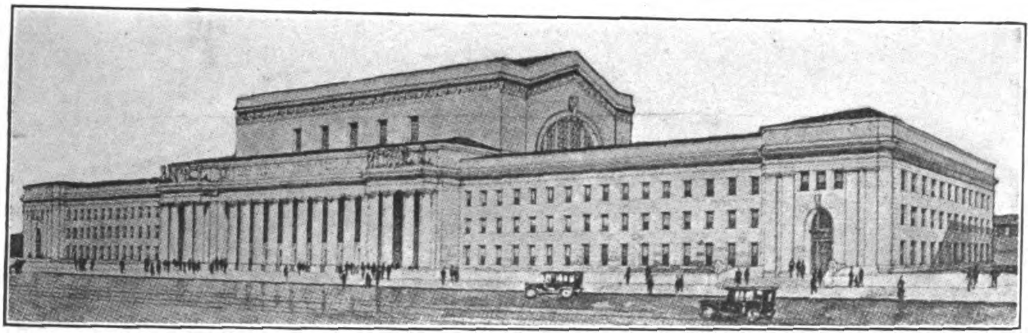
The new passenger station of the Missouri, Kansas and Texas Railway, which has recently been completed at Houston, Texas, presents a handsome and substantial appearance, as the accompanying illustration shows. The building, which is fireproof, is 186 feet long, divided into a central portion measuring 100x40 feet, a left wing 60x33 feet and an express room 53x40 feet. The exterior walls are of a reddish brown brick, while the interior partitions are of fireproof tile blocks. Reinforced concrete, supported by steel girders, was used in floor construction. There is a waiting room 75 feet long by 40 feet wide on the second floor, and a wide flight of stairs leading from this waiting room to the white waiting room below. In the extreme west end of the main building, below the ladies' rest room on the second floor, is a negro waiting room. Between the latter and the white waiting room are the ticket offices making them easily accessible from both sides. The station contains a news stand, checking counter, white and negro lunch rooms, kitchen, store rooms and refrigerator rooms, as well as baggage and express rooms.

Toronto's New Union Station.

The following illustrations are from the plans recently completed of the new Toronto Union Station on which work will shortly begin. The building is to be of the Roman type of architecture built of a light colored stone, and the floor plan of the station will be in the form of an inverted "T" the leg projecting under the tracks. The ticket lobby will be 250x84 feet, the Information Bureau being situated in the center thereof, equally convenient to all entrances. Twenty ticket booths will be located along the north wall of the ticket lobby and along the opposite wall will be the baggage room and the parcel room. Mid-way between these will be a forty foot passageway to the trains. The east end of the ticket lobby will connect with the lunch room and restaurant occupying a combined space of 152x76 feet. The opposite end of the ticket lobby will contain



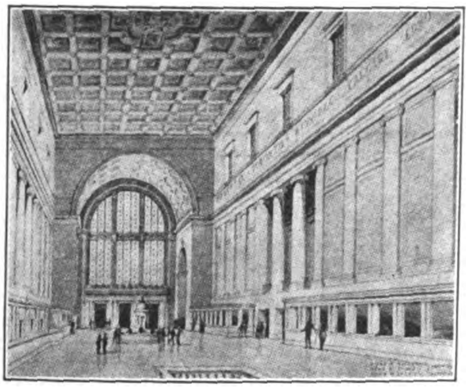
The Missouri, Kansas and Texas New Passenger Station at Houston.



THE NEW STATION TO BE ERECTED AT TORONTO, CANADA.

the main waiting room 88x64 feet and the women's rest room and toilet facilities occupying a total space of 68x34 feet.

The forty-foot passage way for trains will lead down a five and one-half per cent ramp to the train waiting room, the difference in elevation between the tracks and the train waiting room being 13.9 feet. The train waiting room, while not of great height will have an area of 100x230 feet in length from north to south, at right angles to the tracks. The baggage room will occupy the whole of the west end of the lower level extending out under the track area as well. Most of the opposite end will be for post office accommodations. Special accommodation has been provided in the design for the accommodation of immigrants. In the upper level plan, in each exit passage, there is to be a descending stairway leading to a cross passage in the lower level. This passage will connect with a series of rooms to the immediate east of the exit concourse, these rooms consisting of immigrants' waiting rooms, lavatories, lunch and kitchen service rooms, provincial and dominion agents, and laundry, this section of the station being entirely segregated from the balance of the station. There will be ten through tracks in the station in pairs, with a combination platform between each pair.



ARCHITECT'S DRAWING OF TICKET LOBBY, TORONTO, UNION STATION.

The new Union Station is to be built by the Toronto Terminal Railway Company, an organization of the Grand Trunk and Canadian Pacific interests formed to handle the project.

We are indebted to the "Canadian Railway and Marine World" for the information and illustrations presented herewith.

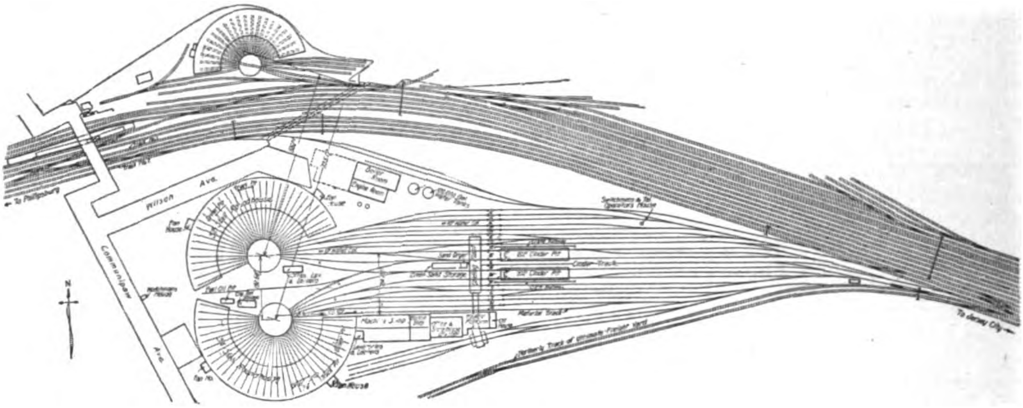
MAIN FLOOR PLAN, TORONTO UNION STATION.



General Layout of Communipaw Locomotive Terminal, Central Station of New Jersey.

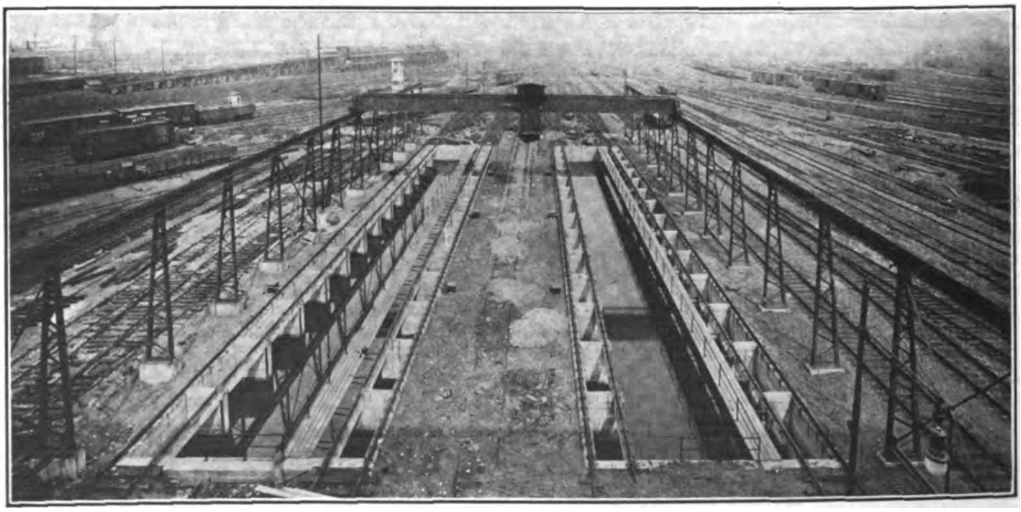
Jersey has had constructed for them at Communipaw, N. J., a modern locomotive terminal which for its size, convenience and up-to-date construction is not excelled by any other plant in the country. The work was designed and executed by Westinghouse Church Kerr & Company, engineers and constructors, New York City, in co-operation with and under the direction of Mr. Joseph O. Osgood, Chief Engineer, and Mr. A. E. Owen, Prin. Asst. Engineer, of the Central Railroad Co., of New Jersey.

The new plant is located on the south side of the main line tracks about one mile west of the passenger terminal and is in close proximity to the freight yards, which are located on the opposite side. Located with the freight yard on the one side and the passenger yard on the other, the terminal facilities are arbitrarily divided so that the freight and passenger engines are handled separately.

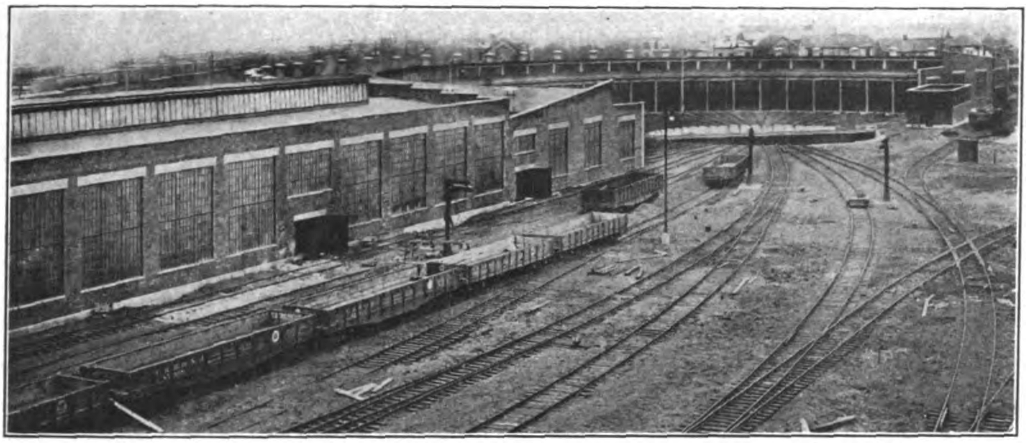
The sufficient track arrangement provides the necessary flexibility to permit of the free use of either of the houses for passenger or freight as may be found necessary or desirable. It has been possible to provide a layout of tracks, leading up and into the terminal, especially designed for the quick handling of passenger power, formerly cared for in the two old engine houses at Fiddlers and Communipaw, located on the north side of the main tracks, and through which were handled 30,823 locomotives during the first four months of the present year, or an average of 255 locomotives per day. During the summer months the number of engines handled per day is about 300 which includes all the usual performances of cleaning fires, dumping ashes, coaling, supplying sand and water, washing boilers, and inspecting, together with any light running repairs that may be necessary.

These completed improvements consist of a power house to serve not only the engine terminal but also to take care of all electrical requirements of the railroad from the Jersey City water front to Newark Bay. Two roundhouses, one 34-stall, 100 ft., and one 32-stall, 90 ft., two 100-ft. turn tables, machine shop, blacksmith shop, storehouses and office, material platform, oil house, cinder pits, coaling station, sand storage, roundhouse office and toilet building, engineers' locker building and telephone tower with all equipment and service inside of building and in yard.

The ground is principally cinder fill, varying in depth from two to ten feet, on an underlying



Cinder Pits, Looking East.



Machine Shops and Round House for Freight Engines.

strata of blue clay, sand, and bog, except where the old shore line runs across the west end of the property. In consequence all the buildings rest on piles with the exception of the west half of the round houses where the ground conditions are favorable for footings. The foundations of the buildings consist of concrete pile caps and piers where the concentrated loads are imposed, with reinforced concrete wall girders supporting the building walls. The power house, however, rests on a concrete slab four feet thick, extending under the entire building. This slab is supported on piles spaced equally under the entire mattress. All the buildings are constructed of reinforced concrete, steel, and brick with steel sash, wooden doors and concrete floor. The roofs of all buildings except the coaling station are covered with three-ply felt roofing.

Power House.

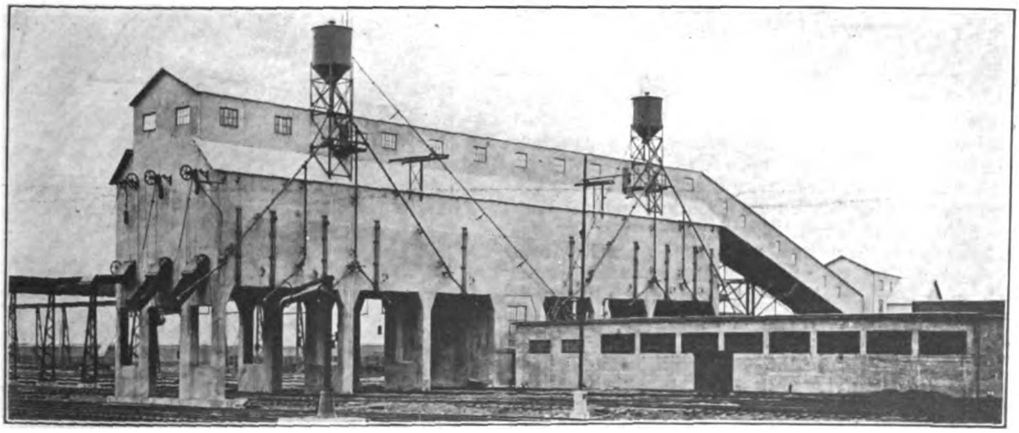
The power house is 135 feet long and 92 feet wide with concrete boiler and machine foundations. The building proper is of brick with a structural steel frame for supporting boilers, stack and coal bunkers; steel sash and doors.

Six 250 h. p. B. & W. water tube boilers arranged in three batteries of two each are installed and space is provided for an additional battery. Boilers are fed by two reciprocating, duplex, outside end packed, plunger type pumps, either of which is capable of furnishing the maximum amount of water needed for the boiler plant. Stokers are installed. A lined steel stack 10 ft. 6 in. in diameter and 75 ft. in height above the roof furnishes natural draft aided by automatically controlled turbine type blowers. Feed water and steam piping are of the loop type. A Cochrane feed water heater provides feed water at a temperature of about 200 degrees.

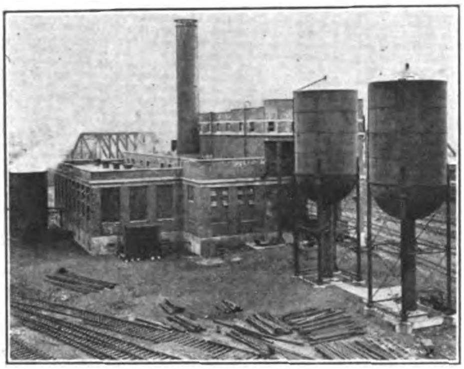
Hopper bottom cars deliver coal into a track hopper. The coal is then elevated by bucket elevator, discharging into a flight conveyor which distributes the coal into the bunkers, located over the boiler room. The coal is fed by gravity to the stokers through chutes with grates operated from the boiler room floor.

Ashes are dumped from the stoker into a hopper directly underneath. The hopper terminates in a gate. A bucket on a car traveling on an industrial track is manually pushed underneath the hopper, loaded by gravity with ashes and then manually shoved to a point below an electrically driven hoist which elevates the bucket and automatically dumps it into a hopper above the railroad siding. Ash and coal handling arrangement is such that the railroad car is used to bring in coal and load with ashes without changing its position.

Three 600 kw. 2200 volt a. c. General Electric



Coaling Station Looking from the West.



POWER HOUSE.

turbo generators are installed with space provided for a fourth unit. One steam driven exciter and one motor driven exciter are installed. Two 2500 cu. ft. compound steam two stage air compressors furnish air for the engine terminal, also for operation of switches and signals in terminal yard between Communipaw and Jersey City and to Elizabethport and Newark on the main line and on Newark branch.

The plant operates normally condensing. In cold weather the exhaust steam is used for heating the several buildings in the terminal. A mixing condenser is located in the engine room basement. As the water used for condensing purposes is taken from the Jersey City mains and metered, condensing water is used over again and cooled in a cooling tower. An automatically controlled motor driven centrifugal pump located in the basement of the plant is used for raising water into elevated tanks when necessary. There is also a 1500 gallon underwriter's pump connected onto high pessure fire lines in yard and buildings. Jacket circulating water is returned to the water system through a duplex steam pump.

The main switchboard is located on the engine room floor with high tension switches in the basement where the transformers are located. Current is generated at 2250 volts and stepped down to 550, 220 and 110 volts for use at the terminal proper.

A ten-ton Maris hand power crane spans the engine room floor.

ROUNDHOUSES.

The roundhouses are constructed of reinforced concrete columns, piers and roof girders with hollow tile and concrete roofs. The rear wall consists of concrete piers approximately five feet wide with steel sash between, with an 8-in. brick wall below these windows. This arrangement permits a maximum window space both for lighting and ventilation. The roof line is broken at the first row of columns at the front of the building so as to give a row of hinged sash over each stall. Additional ventilation is provided for by means of three-chamber four-inch hollow tile set in the rear wall above the windows and in the locomotive door lintels. There are also ventilating openings above the sash in the roundhouse monitors. This arrangement follows the C. R. R. of N. J. standard practice and provides an outlet for any gases that may collect under the ceiling which is a flat arch giving an unobstructed path for gases to pass out through the ventilator openings. Both houses are heated by indirect system. The fans and heaters are located in the fan houses of which there are two in each house. The hot air is delivered through underground ducts and is discharged through outlets located in the pits and around the rear walls. The floor wearing surfaces are concrete throughout and are reinforced along the sides of the pits to provide bearing for jacking. Each house is provided with steam, air and water service on columns.

In addition a boiler washing plant has been installed in connection with the 90-ft. house which serves 32 stalls. The piping is of such size as to permit of the system being extended to the 100-ft. house should it be desired at a later date.

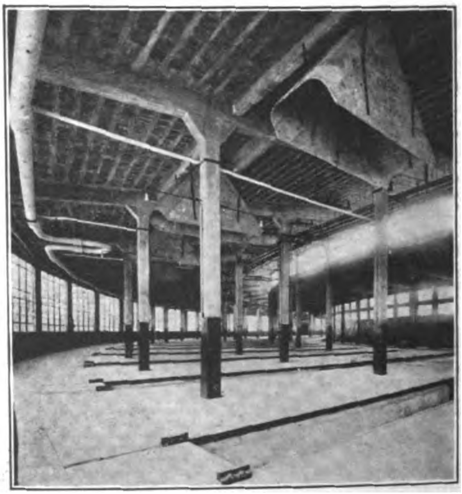
Asbestos smoke jacks are at present installed but the roofs of the houses are so designed and constructed that they could sustain the weight of cast iron jacks should it be found desirable to install them in place of the asbestos jacks.

Both houses are lighted by Tungsten lamps, wires carried in conduits under floors and in columns. There is installed in the 90-ft. round house one driver and truck drop pit and in the 100-ft. house two driver and one truck drip pit, each extending over three stalls which have pneumatic jacks for wheels and half-ton crane for handling driver boxes, etc.

The entrance doors to the stalls are hinged to pintle posts which are entirely separate from the building construction proper and so fastened to the building columns that the accidental wrecking of a door will not damage the building structure.

TURNTABLES.

Each roundhouse is served with 100-ft. deck turntable of heavy construction operated by electric tractors. Owing to the extreme depth of these turntable pits and the shallow grade of the sewer in the vicinity it was found necessary to provide against the contents of the sewer backing up into these pits. This was accomplished by constructing a deep sump into which



INTERIOR PASSENGER ENGINE ROUND HOUSE.

both pits are drained. Automatic ejectors discharge this drainage into the nearest sewer at a higher level.

Machine Shop and Blacksmith Shop.

Adjoining and directly connected to the 100-ft. roundhouse is a machine and blacksmith shop building. The total length is 200 feet and the total width 80 feet and the height is 28 feet over all.

A monitor 13 feet wide extends over the entire length of the building and is provided with continuous top hung steel sash operated from the machine shop floor. Toilet and locker room facilities are provided in a small extension located between the main building and the 100-ft. roundhouse. Access to this toilet room and locker room may be gained either from the machine shop or the roundhouse.

The machine shop space is 140 feet long by 80 feet wide and has a concrete floor throughout. The equipment consists of small lathes, crank planers, and other similar machines as may be required for light running repairs. Two motor driven line shafts near the north wall furnish power for the small machines. A motor driven wheel lathe for driving and truck wheel work is located near the center of the building and is served by 4-ton over head trolley. One of the roundhouse tracks is extended through the machine shop into the blacksmith shop. In the south east corner of the machine shop space is provided for pipe. Besides two pipe forges this space contains an 8 in. pipe machine, pipe racks, benches, etc.

The blacksmith and boiler shop is located at the east end of the building and is separated from the main or machine shop by a fireproof wall. This space is 40 feet wide and 80 feet long and the south half is occupied by the blacksmith shop which is equipped with five down draft forges, each served by a half-ton gib crane. A 2000-lb. steam hammer served by a 3-ton gib crane is located in the center of the blacksmith shop space. The equipment of the boiler shop consists of motor driven punch and shears, hand bending rolls, flange fire and screw flanger. Heating of the building is by direct radiation and lighting by Tungsten lamps varying from 25 to 500 watts. A concrete ramp is located at the northeast corner of the building. This leads to the material platform by means of which material may be brought directly to the machine and blacksmith shops from the storehouse.

Storehouse and Material Platform.

The storehouse is 100 feet long and 60 feet wide and directly adjoins the blacksmith shop building. Its construction is fireproof throughout. Steel bins and counters are used for storing material, so that except for any combustible contents the fire hazard is reduced to a minimum. The building is at present one story in height but the foundation walls and columns are designed heavy enough for a second story should it be found necessary to construct this addition at a later date. The easterly end of the building is divided by fireproof partitions into offices for the general foreman and the storekeeper and the toilet and wash room. The material platform is 48 feet wide and 80 feet long and extends 12 feet in width along the north side of the storehouse. This structure is built of reinforced concrete and hollow tile with concrete wearing surface.

Oil House.

For the storage of various kinds of oil used at the engine terminal, an oil house is located at the extreme east end of the material platform. This building is 20 feet wide and 48 feet long and one story in height and is provided with a basement 10 feet high in which the various oil storage tanks are located.

The measuring pumps and boxes for filling the storage tanks are located on the main floor where space is also allowed for storage of waste and grease cakes. The building is lighted by Tungsten lamps and heated by direct radiation at a high temperature to render the oil fluid in cold weather.

Coaling Station.

The most interesting structure of the group on account of its size and construction is the coaling station. The main building spans eight tracks and serves an additional track at each end. The structure is 168 feet long, 34 feet wide and 55 feet high and is of reinforced concrete throughout. The bunkers rest on special steel I-beams, girders encased in concrete and the hopper bottoms are built of reinforced concrete with hollow tile. The sides of the bunkers are heavily reinforced to withstand the side pressure of the coal when the bunkers are filled. A monitor extending the full length of the structure is of steel trusses with 2-in. plastered concrete sides and is provided with an asbestos roof. The coal is received from the cars by two receiving hoppers from which it is discharged by means of reciprocating feeders into bucket conveying elevators. These conveying elevators carry the coal to the top of the hopper house where it is discharged on two 30-inch belt conveyors running up the convey bridge over the top of the bunkers. Traveling trippers running on rails above the bunkers discharge the coal into various compartments.

There are three longitudinal bunkers having a capacity respectively of 430 tons of bituminous, 813 tons of broken and 430 tons of buckwheat coal. These bunkers are each divided into four compartments by transverse concrete partitions. Each track is served by three coal chutes so that an engine on any one of the ten tracks may be coaled with either bituminous, broken or buckwheat coal. The conveying machinery is divided into two separate and distinct units from the track hopper to the tripper over the bunker. Each unit having a conveying capacity of 100 tons per hour. Provisions are made, however, whereby either track hopper, elevator or conveyor of one unit may discharge its contents onto the elevator or conveyor of the other unit and in addition the trippers are so arranged as to discharge into either one of the three bunkers. This flexibility reduces the possibility of shutting down the entire plant due to a break down or other emergency to a minimum. The entire machinery is electrically driven.

Suitable stairways, platforms, and walkways are provided from which an inspection of the apparatus may be safely made while the machinery is in operation. Guards are placed over all exposed gears as a protection to the attendants and in addition there are eleven emergency stations from which the entire machinery may be shut down by pressing a button.

West of the coaling station and south of the machine shop and storehouse are the coal storage tracks having a capacity of 40 cars. Provisions are made for thawing out frozen coal in the cars on these tracks by means of live steam.

Under the center bay of the coaling station at the ground level there is a toilet and locker room for use of hostlers, cinder pit and coaling station employes.

SAND HOUSE.

Provisions for the storing and drying of sand are made in a building west of the coaling plant. This building is of reinforced concrete throughout and is 103 feet long, 16 feet wide and 14 feet high. The green sand is dried by means of two coal stoves of standard Central R. R. Co. of N. J. design located in a separate room in the east end of the building. The dried sand is then screened and elevated by means of compressed air to two storage tanks of 15 cu. yds. capacity each located on top of the coaling station. From these tanks the sand is delivered to the locomotive through cast-iron delivery pipes and wrought iron telescoping spouts serving each of the ten tracks.

CINDER PITS.

The cinder pits are located about 60 feet east of the coaling plant and are of the submerged type. They are each 200 feet long, 30 feet wide and 12 feet deep and are heavy reinforced concrete throughout. Each pit serves two tracks which are 26 feet center to center, the pits are parallel and are about 58 feet center to center, with a track for cinder cars between. The cinders are cleaned out of the pits by four-ton electric traveling crane operating a one and five-eighths yards clam shell bucket. This crane is located on a steel runway 240 feet long, 99 feet 6 inches span and 26 feet above the rail. Aside from the economy and speed in handling engines over the pit this arrangement permits of the coaling of engines from cars by means of the clam shell bucket should occasion arise.

Baltimore & Ohio's New Terminal at New York.

THE Baltimore and Ohio Railroad has recently placed in operation at New York, one of the most modern freight terminals of the present time. Occupying the block bounded by Twenty-fifth and Twenty-sixth Streets and by Eleventh and Thirteenth Avenues, the terminal building is 353 feet long and 68 feet wide and has eight stories for business purposes, with a mezzanine floor for offices, while there is an additional floor below the grade of the street. Included in the terminal are team tracks and paved drive-ways to facilitate the handling of business through the terminal, while within the building is provided with every modern device for moving shipments.

The structure is of the latest design in fireproof construction, there being no wood in the structure. Goods stored in the building are also completely protected by a sprinkler system.

Two tracks, having a capacity of eighteen cars, enter the building. The tracks are so constructed that the floors of the cars are approximately level with the first floor of the building—this floor being the unloading and trucking platform.

On the unloading floor are located automatic weighing scales, which are set to allow for the weight of the truck, and when a load is placed on the scale platform the hand on the dial indicates the weight. The hand remains fixed until the load is removed.

Six electric elevators, each with a capacity of 10,000 pounds, traveling 100 feet per minute, serve each floor, including the basement. These elevators are located on the street side, so that merchandise stored in the warehouse can be taken out without disturbing the freight handling on the first floor.

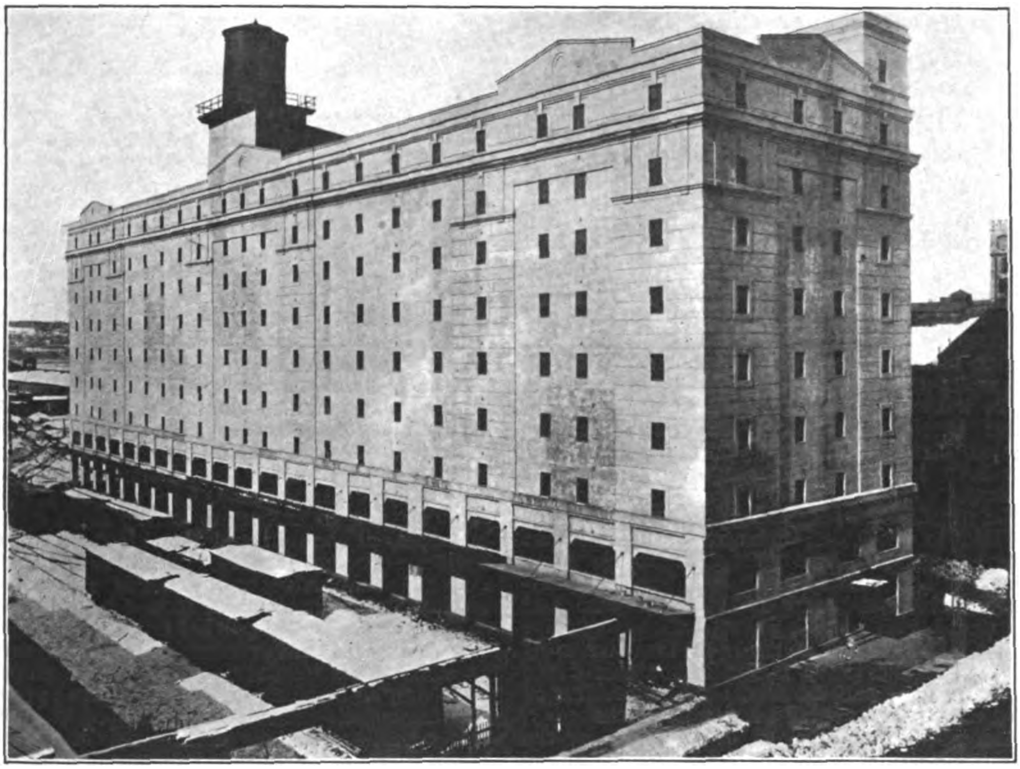
Large packages, especially automobiles, are handled in cars having end doors. To permit of such cars being unloaded directly into the warehouse, another track has been provided with its terminus just outside the end wall, where there is a door as large as the end of a car. Adjacent to this door is a large elevator, 12 feet wide by 17 feet long, to handle large packages or automobiles.

As the material stored varies considerably in weight, the floors were designed accordingly, the safe load varying from 500 pounds per square foot on the first floor to 150 pounds per square foot on the top floor. Above the first floor the building is divided into three sections by fire walls, making three separate compartments each served by two elevators and an enclosed stairway which will also serve as a fire escape.

The structural features are especially interesting—the building being of the "flat slab" type. It is the first building of this type approved by the building department of Manhattan. In this type the reinforcing rods radiate in all directions from the columns into the floor slabs, the loads being transmitted from the floor direct to the columns. Floor beams cut down the head-room, obstruct light and interfere with the sprinkler system; therefore, by eliminating there was a saving in the height of the building, better light was provided and the cost of installing sprinklers was lessened.

The curtain walls were carried up monolithic with the floors and the columns instead of being filled in after the column and floor skeleton was in place. This is somewhat unusual in concrete general practice. The building laws of Manhattan make it necessary to provide double reinforcing for the curtain walls. This is expensive and unnecessary as the curtain walls do not carry any of the floor loads.

In the construction of the building 15,000 cubic yards of concrete and 675 tons of reinforcing steel were used. At present it covers only one sixth of the lot but is so arranged and constructed that additions can be made as the business warrants. The company anticipates covering the entire lot in the course of a few years. The greatest amount of trucking will be done on the first floor and this is finished with a rock mastic wearing surface. The offices on the mezzanine floor have wood wearing surface, while all storage floors have a granolithic finish. The house is equipped with electric lights and telephone service. All conduits for both sys-



New Eight Story Concrete Terminal Warehouse of Baltimore and Ohio Railroad in New York.

tems are concealed, having been placed in the floor slabs and columns during construction.

That part of the lot not used for the building is occupied by team tracks and driveways. The yard has a capacity of 75 cars. Every car can be reached by teams, each team driveway is paved with granite blocks. Spanning one driveway and a track is a traveling gantry crane, of twenty tons capacity, for loading or unloading heavy freight. A wagon scale of six tons capacity is convenient for teams. On the Twenty-fifth Street side is a platform used exclusively for unloading of poultry.

Side Elevation of Warehouse.

The building of the warehouse necessitated changing the entire track layout, as it was formerly switched from the east end and now it is switched from the west end. This is an exceptionally busy yard, which made it necessary to make most of the track changes at night always providing sufficient track to replace the done by the company's forces.

The new terminal and warehouse was designed old taken up. The track work was, of course, by M. A. Long, assistant to chief engineer under the direction of Francis Lee Stuart, chief engineer of the Baltimore and Ohio System. W. B. Redgrave engineer maintenance of way and M. P. Northam, assistant division engineer, had charge of the field work.

Southern Railway Improvements at Memphis.—Southern Railway Company has begun the construction of a modern classification yard and engine terminal on property located at Buntyn, six miles east of Memphis. The terminal is to be known as Forrest Yard in honor of the great Confederate cavalry chieftain, General Nathan Bedford Forrest. Contract for grading has been let to C. V. Lane and Company of Atlanta.

Fourteen and seven-tenths miles of track will be laid in the yard which will comprise two separate groups, each group consisting of a receiving and distribution yard. The group including the east-bound classification yard and the west-bound receiving yard will have twelve tracks, each with a capacity of from 60 to 65 cars, while the group including the east-bound receiving yard and the west-bound classification yard will have an equal number of tracks.

Among the facilities to be provided at the Forrest Yard will be an eighteen stall round house with a ninety-foot power turntable of latest type and heaviest capacity, strong enough to accommodate the heaviest class of power now in use, and a modern plant for furnishing coal, water and sand to locomotives.

A coal handling plant of reinforced concrete and of most modern type with machinery for mechanically and automatically weighing the coal issued to locomotives will be constructed. It will be electrically operated, and coal dumped from hopper-bottom cars will be conveyed to an overhead storage bin of 1,000 tons capacity from which it will be dropped to weighing pockets and issued direct to locomotives, the capacity given to each locomotive being weighed by subracting-beam type-registering scales. In connection with the coal handling plant there will be complete machinery for drying, handling, and issuing sand to locomotives. A water supply system to serve locomotives and the entire terminal will also be provided and it will be so arranged that it will be possible for a locomotive at one point to receive supplies of fuel, water, and sand simultaneously.

A machine shop and boiler room for running repairs to locomotives will also be constructed and a shed for the repair of freight cars will be built. A battery of air compressors will be provided which will afford pneumatic service throughout the terminal for testing brakes and the operation of air tools used in repair work. In connection with the round house, a wash room with lockers for employes will be provided and there will also be a fireproof oil storage house and a storehouse for the issue of supplies.

A commodious two-story building with tile roof will be erected as a yard office for the use of the yardmaster and his force of billing clerks, and the yard will also be provided with modern automatic track scales of the heaviest capacity.

The entire layout of buildings will have complete fire protection by an adequate system of mains and hydrants and the whole terminal with its buildings will be thoroughly lighted by electricity. Signaling and interlocking facilities for the protection of main line train movements as well as the handling of trains into and out of the yard will be installed at each end.

ORGANIZATION NOTES.

May Meeting of New York Railroad Club.—The members of the New York Railroad Club on May 15th, listened to an interesting address by William F. Zimmerman, vice-president of the Pittsburgh Testing Laboratory on "Bureau Inspection by Railroads." Mr. Zimmerman pointed out that for any one road to furnish a sufficient number of inspectors of the right calibre to inspect at the mill and shop all material and equipment being furnished them, would prove extremely expensive and that for this reason an insufficient number of men are often sent to do this work. He pointed out that to inspect any fair sized order, often requires as many as eight or ten men at one time. If, on account of having an insufficient number of men to properly inspect the material, it is shipped in imperfect condition and the defects only discovered when it reaches the shop, all work is delayed until the material is replaced and the inspector has to return to the mill to reinspect a small quantity of material. In the inspection of freight cars, Mr. Zimmerman claims that it takes from four to five men well acquainted with their business to be present at all times during the construction of such cars. The same is true with the construction of locomotives.

Mr. Zimmerman believes that the only practical way in which to meet this problem is for a number of railroads to combine their inspection departments either directly by forming a Bureau of Inspection in some central district with branches in all the large manufacturing districts, so that their orders can go direct to the district and someone in that district be held responsible, or else, do the same thing through some responsible organization at present qualified to do this work. To quote from his article:

"Instead, we will say, fifteen or twenty different railroads each having one inspector at a mill or shop, each man looking after his particular order and not being able to cover the ground properly, would it not be far better to have say six to eight inspectors properly distributed through the shop and have such inspections cover the entire work of all the railroads. With a proper foreman of the men at any railroad shop the inspection would be more thoroughly done, as each operation could be inspected, and for any given output would be more cheaply done. The reports of progress of each order could be promptly transmitted to the proper railroad and the foreman could post each engineer of tests of the various railroads weekly on the condition of their orders in the shop. This is the system on which the present commercial bureaus operate. It would be impossible for any outside organization to compete with individual inspection if it were not for the fact that such outside organizations are doing work for a large number of clients, and therefore can keep at all the principal mills and shops a sufficient force of men to properly and carefully inspect the commissions placed with them. It is a very difficult and a very expensive matter for any engineer of tests of any railroad not located near the manufacturer, to organize and send from his road a sufficient number of men thoroughly competent and versed in the art of inspection to inspect any good sized order, whether for material for permanent way, or for rolling stock equipment, and it would take such men some little time to get into the run of the mill or shop to properly inspect the work assigned to them. If, therefore, a number of railroads could combine to maintain what might be termed a railroad bureau of inspection where the engineer of tests of such road has a say as to the direction or management of such bureau, could not the work be more thoroughly done, more cheaply done and would not this be a solution of what now seems to the writer a very difficult problem? The writer believes that with such an organization, just as it is with the commercial bureaus doing this class of work to-day, the railroads would profit and a great load be taken off the mind of the engineer of tests."

The American Association of Railroad Superintendents.—The executive committee and advisory committee of the American Association of Railroad Superintendents, met in St. Louis on May 20th, with the following in attendance: Mr. D. S. Farley, superintendent, A. T. & S. F. Ry., Kansas City, Mo.; Mr. E. H. Shaughnessy, trainmaster, C. & N. W. Ry., Chicago, Ill.; Mr. W. L. Booth, superintendent, C. & O. Ry., of Indiana, Peru, Ind.; Mr. A. G. Smart, superintendent, C. B. & Q. R. R., Aurora, Ill.; Mr. W. S. Williams, superintendent, I. C. R. R., Carbondale, Ill.; Mr. A. E. Bougher, superintendent, M. K. & T. Ry., Sedalia, Mo.; Mr. S. E. Flanagan, superintendent, N. O. & N. E. R. R., New Orleans, La.; Mr. M. Marea, general superintendent, St. L. T. & E. R. R., St. Louis, Mo.; Mr. Chas. Burlingame, superintendent, The Wiggins Ferry Co., St. Louis, Mo.

Several important matters were discussed and handled. It was decided to hold the 1914 annual meeting in New York City, August 20th and 21st, and to hold the 1915 annual meeting at San Francisco, California, May 20th and 21st.

The membership of this Association has increased very rapidly during the past fifteen months and comprise membership of General Superintendents, Assistant General Superintendents, Superintendents, Assistant Superintendents, Trainmasters and Assistant Trainmasters throughout various parts of the United States, Mexico and Canada. There are a number of subjects to be brought before the meeting in New York next August, the details of which will be furnished later.

Forthcoming Annual Convention of the Traveling Engineers' Association.—The twenty-second annual convention of the Traveling Engineers' Association will be held in Chicago from September 15th to 18th, inclusive. The subjects to be discussed are as follows:

"Difficulties accompanying prevention of dense black smoke and its relation to cost of fuel and locomotive repairs," Martin Whalen, Chairman.

"Operation of all locomotives with a view of obtaining maximum efficiency at lowest cost;" J. R. Scott, Chairman.

"Advantage to be derived from the use of mechanical stokers, considering (first) increased efficiency of the locomotive; (second) to increase the possibility of securing a higher type of candidates for the position of firemen; (third) the utilization of cheaper grades of fuel;" J. H. DeSalis, Chairman.

"The care of locomotive brake equipment on line of road and at terminals; also, method of locating and reporting defects;" George H. Wood, Chairman.

"Advantage derived from the use of speed recorders and the influence of same on operating expense;" Fred Kerby, Chairman.

"Practical chemistry of combustion;" A. G. Kinyon.

"Scientific train loading; Tonnage rating. The best method to obtain maximum tonnage haul for the engine over the entire division, taking into consideration the grades at different points on the Division;" O. S. Beyer, Jr.

Annual Elections of the Traffic Club of Pittsburgh.—The Traffic Club of Pittsburgh, at their annual election, Monday, June 8th, held at the Hotel Schenley, elected the following: President, Edward F. Lalk, General Agent, Santa Fe System; First Vice-President, Wm. H. Higgins, Traffic Manager, Wheeling Steel & Iron Co.; Second Vice-President, Milton H. Jacobs, A. G. F. A., Western Maryland Railroad. Board of Governors: Transportation—George H. Kerr, General Agent, Southern Railway; John E. Corfield, General Agent, Union Pacific System and Ralph B. Merrick, General Agent, Frisco System. Industrial—Glen A. Aiken, Traffic Manager, Spang, Chalfant & Co., Inc.; Alfred R. Kennedy, Traffic Manager, Pittsburgh Steel Co. The secretarial and treasury offices were chosen without opposition: D. L. Wells, General Agent, Erie Railroad and James T. Neison, Commercial Agent, Missouri Pacific Railway, were reelected Secretary and Treasurer respectively. Frank D. Hurst, General Agent, L. S. & M. S. Railway, tied with Mr. Merrick for the third Transportation Governor. Mr. Merrick won by lot.

A most pleasing incident was the presentation of a costly watch to the retiring president, E. C. Sattley, by Chairman John M. Gross of the Board of Governors. Acting for the entire membership, in a few well chosen words, Mr. Gross expressed the great appreciation of the earnest efforts of President Sattley, whose administration has been one of the most successful of the Club's career. Mr. Sattley expressed his thanks both for the token and for the hearty co-operation of the various committees during the past year. The new Board of Governors will organize shortly and the newly elected officers will be inducted into office at the August meeting which will take the form of an outing.

The Portland Transportation Club.— The Transportation Club of Portland, though of comparatively recent origin, has already taken its place in the front ranks of similar organizations in that enterprising Pacific Coast city. It is non-sectarian and non-political and its object, in a broad sense, is to promote social and business interests and the good fellowship and culture of its members. The present officers are: W. A. Robbins, president; W. O. Roberts, secretary; W. Merriman, vice-president and E. W. Mosher, treasurer.

The spacious quarters of the Transportation Club are located on the mezzanine floor of the Multnomah Hotel, the largest hotel on the Pacific Coast. The rooms comprise the main parlors, billiard and pool rooms, card and domino rooms and secretary's office. The huge ball room of the hotel is also connected with the Club rooms when needed for dances or smokers. Bi-weekly meetings are held at which addresses are delivered by prominent officials and others, the average attendance being from 200 to 300 men. The club also publishes a monthly paper entitled "The Headlight," which is edited by C. D. Freeman, publicity agent of the North Bank Road. The paper is breezy and contains, in addition to the regular Club announcements, personals, railroad notes of interest, etc.

The Club points with no small pride and satisfaction to the extraordinary circumstance that its comfortably equipped and attractive club rooms do not include a bar or grill, and that members may enjoy their inviting privileges without spending one cent. Billiard, pool and card tables, and all other accessories, are absolutely free to members.

May Meeting of Central Railway Club.—The members of the Central Railway Club listened to an interesting address on May 8th, by W. F. Goltra, president of the W. F. Goltra Tie Company, of Cleveland, on: "Treating Ties and Timbers as Practiced in America." Mr. Goltra briefly reviewed the growth of the timber treating industry in the United States, which he stated had its inception in 1856, when the Vermont Central Railroad erected a plant to treat ties with chloride of zinc. Prior to 1885, the development was a slow one, as up to that year there were only three pressure plants in existence. In 1890, there were eight plants, in 1895, twelve plants, in 1900, fifteen plants, in 1905, thirty-five plants, in 1910, seventy-four plants and at the close of the year 1913, ninety-two plants with two under construction. These ninety-four plants have an aggregate capacity of 109,441,000 ties per annum. The actual number of ties treated in 1913, was 36,250,000 or about 25 per cent of the entire number purchased by the steam and electric railways. Sixty-four of the plants are owned and operated by independent companies, while thirty are owned and operated by railway companies, who employ the plants exclusively for their own requirements.

Mr. Goltra points out that there are two general methods of impregnating woods with antiseptics, namely: Impregnation by immersion in open tanks or boilers without pressure, also impregnation by pneumatic pressure by means of force pumps and air-tight cylinders. He then reviews at some length the various processes employed under the pressure system. Almost every class of forest timber growing in practically every section of the United States is employed and the various classes of material treated include railroad ties, piling, telegraph poles, dimension timbers, switch ties, cross arms, mine props, fence posts, paving blocks, wooden pipe crossing, plank signal poles and tie plugs.

Speaking of the kinds of preservatives used, Mr. Goltra had the following to say:

"Creosote oil and chloride of zinc, or combinations of these antiseptics are the principal preservatives used. Crude oil, corrosive sublimate, aluminum sulphate and carbolineum are other preservatives which have been used in smaller quantities. During the year 1913, 100,000,000 gallons of creosote oil and 25,000,000 pounds of zinc chloride salts were used in treatment of wood by the treating plants in the United States. Foreign creosote is imported, chiefly from England and Germany, and constitutes about 70 per cent of the consumption of this commodity in the United States. The bulk of the zinc chloride is produced by large manufacturers of this chemical in the United States and very little is imported.

"Many problems in the art of treating wood with antiseptics have yet to be solved, and there is undoubtedly much room for improvement. Many years of experience, exhaustive study and close observation of the methods employed in timber treating, both in this and foreign countries, persuades the speaker to say that the greatest improvements in the present methods employed lies in the direction of a speedier and more efficient method of seasoning ties and timbers, a more thorough preparation of the same for receiving the injection of the antiseptic and a greater economy in the handling of the material in process of treatment, by means of modern equipment and appliances.

"A majority of the timber treating plants in this country are treating ties and timbers by the same method and in the same manner as was practiced nearly half a century ago. This consists of simply placing the timber to be treated in air tight cylinders, frequently in unfit condition for treatment, and submerging the wood in a preservative fluid and then forcing more liquid into the wood by means of force pumps. Some modifications of this primitive method have been tried and recommended and some improvement has been accomplished, but it has been slow, because in a majority of cases the experimenters and practitioners confined themselves closely to the methods invented by Sir William Burnett and Mr. John Bethell, of England, in 1838, and any departure from these two established methods is made with diffidence.

"The industry of wood preserving is certain to expand as soon as the more or less experimental period is passed. In using the word "experimental" it is not meant that there is any doubt as to financial results, but there is doubt as to what woods ought to be treated; as to what preservative treatment should be given; the effect of climatic and other conditions; cost of different preservatives delivered at the plant; manner of seasoning and preparing for treatment; supply and price of timber; amount and weight of traffic over a given line; the use or non-use of tie-plates; weight of rail; etc. They are all very important factors in determining the advisability of a preservative treatment.

"Your speaker therefore earnestly recommends to the members of this Club the study and practice of timber preservation, both as an economic proposition and as a check on the rapid depletion of our forests."

Spring Session of American Railway Association.—The American Railway Association held its spring session in New York City on May 20th. One hundred and seventy delegates were present and the executive committee reported that the membership now comprises four hundred and three members representing 272,949 miles of road. The election of officers resulted as follows: H. U. Mudge (C. R. I. & P.), president for two years; R. H. Aishton (C. & N. W.) first vice-president and H. E. Byram (C. B. & Q.) and George L. Peck (Pennsylvania Lines) members of the executive committee. It was decided to hold the next regular session in Chicago, November 18, 1914. The following resolutions regarding the dimension of box cars was ordered to a vote by letter ballot of the Association.

Resolved, That the present standard inside dimensions of box cars as adopted by the Association on October 23, 1901, viz., 36 ft. in length, 8 ft. 6 in. in width and 8 ft. in height, should be adhered to, except in the construction of special equipment such as automobile cars.

Resolved, That special equipment should not exceed the inside dimensions of 40 ft. 6 in. in length, 8 ft. 6 in. in width and 9 ft. in height, with maximum outside dimensions of 9 ft. 2 in. in width at 13 ft. above the top of the rail.

Resolved, That the Master Car Builders' Association be requested at the earliest practicable moment to design and adopt a standard frame for closed cars in accordance with the present standard inside dimensions of box cars.

On the recommendation of the Committee on Weighing, a note was added to car service rule 11, providing that the market weight shall be the multiple of 100 pounds nearest the scale weight, except that when the scale weight indicates an even 50 pounds the lower multiple shall be used. The Committee also called attention to the fact that general supervision over packing and marking of freight was now being exercised by all of the five weighing and inspection bureaus. Two plans of stowing eggs in cars were approved by the Association as were certain regulations relative to the preservation of wrecked freight and the committee reported that the names of the two sub-committees have been changed to "Committee on Weighing" and "Committee on Packing, Marking and Handling of Freight." The membership of the latter Committee is to be increased to sixteen, the Freight Claim Association nominating five members each and the five weighing and inspection bureaus nominating one member and the American Railway Perishable Freight Association nominating one member, the other five members will remain as at present.

The Executive Committee reported the appointment of a special committee of presidents on standard freight cars. This action was taken on a petition from ten western railway companies, which said:

"With a view to greater economy in maintenance of equipment we have felt for some time past that the adoption of standard freight car equipment was most desirable. . . . We fully realize the difficulties in the way of such a movement, but we believe that by bringing the matter to the attention of the presidents of the roads that its importance will so appeal to them as to give instructions to their subordinate officers that will overcome the obstacles that have heretofore been in the way." . . .

The Executive Committee, deeming this recommendation of great importance and warranting hearty co-operation, decided to appoint a special committee; it will also instruct the Committee on Maintenance to assist that committee. The special committee consists of:

E. P. Ripley, President, Atchison, Topeka & Santa Fe; Fairfax Harrison, President, Southern; Samuel Rea, President, Pennsylvania; A. H. Smith, President, New York Central; J. Kruttschnitt, Chairman of the Executive Committee, Southern Pacific; Darius Miller, President, Chicago, Burlington & Quincy; Howard Elliott, Chairman of the Board, New York, New Haven & Hartford.

Attention was called to an effort being made in Ohio to have the railways of that State change their standard to Eastern time both for their timetables and for their offices, shops and freight houses, the idea being evidently to secure the adoption of Eastern time for the entire State of Ohio. The Association believes that great confusion in time keeping within the State would result should these efforts attain success and on recommendation of the Executive Committee the president appointed a committee on this subject to report at the November meeting of the Association. In the meantime, all members of the Association whose lines are located in the section assigned in 1883 to Central time are "earnestly requested to abstain from the use of Eastern time until the report of this committee shall have been presented and finally acted upon."

The committee is as follows:

E. B. Thomas, President, Lehigh Valley; B. McKeen, General Manager, Pennsylvania Lines West; C. W. Galloway, General Manager, Baltimore & Ohio; H. A. Worcester, General Manager, Cleveland, Cincinnati, Chicago & St. Louis; D. C. Moon, General Manager, Lake Shore & Michigan Southern; A. W. Johnston, General Manager, New York, Chicago & St. Louis; A. J. Stone, General Manager, Erie; M. S. Connors, General Manager, Hocking Valley; H. W. McMaster, General Manager, Wheeling & Lake Erie.

Proceedings of Twenty-third Annual Session of the Freight Claim Association, Held at the Hotel Galvez, Galveston, Texas, May 13, 14 and 15, 1914.—The Twenty-third Annual Session of the Freight Claim Association was called to order in the Hotel Galvez, Galveston, Texas, at ten o'clock A. M., Wednesday, May 13th, 1914, by President G. W. Perry, Freight Claim Agent, Great Northern Railway.

Hon. Lewis Fisher, Mayor-President of the City of Galveston, extended a welcome to the delegates and their families present, which was responded to by President Perry.

The President's annual address follows:

PRESIDENT PERRY: As this occasion marks the passing of another milestone in the history of our Association, it is customary at this time to briefly review the events of the past year.

The Secretary's report shows that we have had a very successful year, our net membership having been increased by twenty-seven, and, as the majority of our new members represent lines having a short mileage, it is evident the small lines find it to their benefit to join our ranks.

Your Conference Committee has been very active in your behalf since our meeting at Bluff Point.

The Standard Forms of the Presentation of Freight Claims have received the endorsement of the Interstate Commerce Commission, National Industrial Traffic League and the National Association of Railway Commissioners. These forms, outlining, as they do, the information required to substantiate claims, I suggest that, as an Association, as well as individually, we urge the use of these blanks by shippers.

Your Conference Committee, by the request of the Interstate Commerce Commission, assisted in preparing a form of statistics to be required of the carriers, which is embodied in Special Circular, Series No. 17, effective January 1st, 1914.

While these statistics are expensive to compile, as they are largely in addition to other statistics kept by each carrier to conform to their own particular requirements, the foundation has been laid for a uniform and scientific analysis of causes for delayed settlements, as well as by causes and commodities, entering into the great waste of money caused by loss and damage claims.

It remains for the Commission to decide whether the figures so obtained will be used to improve the claim situation.

A glance through an ordinary claim will reveal that at least one-half of the papers contribute nothing to the subject matter, but rather tend to general confusion, the salient features being often overlooked by investigators.

This condition, in my opinion, is largely caused from the use of printed investigation forms. We are trying to obtain information by machinery rather than by the human element and the use of such forms not only tends to discourage initiative, but they do not command the respect and attention of the addressee as a written letter would.

I do not believe results are obtained more promptly by using these printed question forms. If they are, why not have a printed form of answers, which could be arranged with the same ease as the questions asked?

A conservative estimate of the number of interline loss and damage claims during the past year is one million. Of that vast number, only 658 have been placed in arbitration, and only 156 have reached our Appeal Committee. While this is an increase over the previous year, it is not out of proportion to the increase in claims. These figures, however, suggest the question of the advisibility of another arbitration committee.

That our Constitution, Rules and Rulings have enabled us to adjust all but a fraction of these claims without friction and that such a small number contained elements on which the carriers are unable to agree, speaks well for our legislation.

In the case of all litigation there must be a prevailing and a losing side.

Ex-President Taft, speaking recently on the recall of judicial decisions, used these words:

"Now, it is impossible for a constitution to cover in its letter every phase of its application. It must be construed by someone, and its meaning, in special cases, must be declared by some authority and there are no men better fitted for this task than independent judges who are schooled in the construction of legal language and who exercise their judgment in accordance with their best lights of experience."

This question, it appears to me, is particularly appropriate in its application to our Arbitration and Appeal Committees.

We have several cases in which members have refused to abide by the decision of the Arbitration and Appeal Committees and which you may be called upon to consider, but I trust these differences will be amicably adjusted so that it will not be necessary to bring them before this session.

We have been successful as an association only because our Constitution, Rules and Rulings are mandatory. Without this mandatory provision, the situation to-day as respects freight claims would be chaotic.

In a paper read with approval before the General Superintendents' Association of Chicago on November 26th, 1913, appears the following:

"Without fear of successful contradiction, I venture the assertion that the Freight Claim Association is the strongest of all railroad organizations in the interest of railroads in America, and that it has done more in the unification of individual effort, and accomplished more than any other railroad organization along the lines of their endeavors, its purpose being the formulating of rules mandatory in their application by which the railroads can equitably adjust claim settlements as between themselves, and the need of this Association, the maintenance of which costs the railroads thousands of dollars annually, is questioned by none. Its creation, it might be said, was more of an evolution than anything else, the outgrowth of loss and damage to freight in transit, forcing as it did upon the railroads the need of a court of justice and such a tribunal they have in the Freight Claim Association, its last recodification of rules being as fair as any law of the land.

"I preface my general remarks with this statement of facts merely to impress upon you the strength of an organization founded upon loss and damage, but sad to relate, an organization founded not to prevent loss and damage, but to mitigate, to make less severe, the penalty we must pay for negligence and misguided effort.

"Suppose the strength of the Freight Claim Association, so broad in its scope, so fair in its judgment, should swerve about, face loss and damage from another point of view and attack it with its full strength of force, made doubly strong because of its impartiality, its slogan being 'Prevent loss and damage,' instead of 'Adjust loss and damage,' what would be the results?

"I may answer that query, and fairly and squarely, when I say 'Complete victory'—but the railroads have need of the Freight Claim Association. It has a definite purpose. The strength of its fortification must not, through diversion, be weakened, but there is no reason in the world why the operating departments of the railroads of this country cannot organize themselves into a bulwark of strength equally as strong and equally as efficient as the Freight

Claim Association, but having for its purpose the prevention of loss and damage, instead of the adjustment of loss and damage, and not until we do will we be able to relieve our operating accounts of the heavy burden they now bear, reaching on some railroads to more than three per cent of their gross operating revenue."

The above is only an extract from the paper read.

The Loss and Damage Committee of the General Managers' Association of the Southeast, in File 243, Docket 729, of March 25, 1914, is of the opinion that instead of creating any new association, the logical thing to do is for the managerial officials of railroads in America to express to their freight claim departments a desire for the Freight Claim Association to amend its Constitution and turn its attention actively to the prevention of claims, and resolved:

"That the Freight Claim Association be requested to enlarge its scope of activity to include the study of claim causes, the development of suggestions for standard practices for the proper handling of interline freight, and to consider the application of remedies to prevent losses, damages, delays, et cetera; that to such end, they be further requested to organize a committee or committees for the special purpose of studying the prevention of claims and to suggest standard practices for the receiving, packing, marking, loading, billing, transferring and delivery of interline freight."

The adoption of this resolution is now before the General Managers' Association of Chicago.

We need nothing more to show the high regard in which this Association is held. We must justify this confidence. We cannot stand still; we must go forward or backward.

You will consider at this session legislation to enlarge the scope of this Association to include causes and remedies. Now is our opportunity to meet fairly and squarely these new conditions, and prove that this Association is as efficient in the field of prevention and remedies as we have been successful in handling claim settlements.

We have behind us the power of the Government in prosecuting those guilty of presenting fraudulent claims, as is evidenced by convictions during the past year and cases now pending.

In conclusion, I wish to gratefully acknowledge the assistance rendered by our Secretary. We are indeed fortunate in having the position filled by a man of so much tact and good judgment, in addition to his other lovable qualities.

The roll call showed that there were present or represented by proxy 157 members. There were also present a number of visitors, including Mr. Fred W. Sweney, Chief Examiner of Accounts, Interstate Commerce Commission, and Mr. Robt. E. Quirk, Examiner, Interstate Commerce Commission.

On motion, duly seconded, Messrs Sweney and Quirk were extended the privileges of the floor.

The Secretary and Treasurer reported that the roll on the first day of May, 1914, numbered 426, representing over 261,000 miles of road (in addition to the mileage of the steamship lines) in the United States, Canada and Mexico, 45 new members having been admitted during the preceding eleven months. The finances of the Association were reported in excellent condition, all bills due having been paid and, of the items due the Association, all except a very small percentage having been collected, leaving a gratifying balance in bank to the credit of the Association.

There were considered in the order named, the reports of the following committees:

Committee on Constitution and By-Laws.
Conference Committee.
Committee on Methods and Topics.
Committee on Loss and Damage Rules.
Joint Report of Committees on Loss and Damage and Overcharge Rules.
Committee on Overcharge Rules.
Committee on Accounts.

New Work to be Taken up by Association—Causes and Prevention of Freight Claims.

The Committee on Constitution and By-Laws, in its report, recommended that the scope of the work of the Association be enlarged so as to include the study of causes and prevention of freight claims. That recommendation was adopted and the work will be undertaken by a new standing committee to be known as the "Committee on Cause and Prevention."

This new work on the part of the Association when proposed received the earnest endorsement of the General Managers' Association of the Southeast, General Managers' Association of Chicago, General Superintendents' Association of Chicago, and General Managers' Association of Texas. The Association was assured of the most hearty co-operation of the operating departments of the carriers in its activities along the lines indicated, the opinion being expressed that, inasmuch as the Freight Claim Association occupies such a position of prominence and strength and in view of the close contact into which its members are brought with the individual cases of loss and damage to freight sustained by the carriers and with the apparent reasons for such losses and damages, the Freight Claim Association is the most logical and proper organization to take up the work of prevention, in connection with other interested railroad associations.

The Association feels that it should welcome this opportunity for service and the President will promptly appoint the committee which is to undertake the task. It is predicted that, with the complete co-operation of the others interested, an inestimable amount of good will be accomplished in the obviation of causes and the consequent substantial reduction in the claim accounts of the carriers.

Publication of Appeal Decisions.

There was adopted, also, the recommendation of the Committee on Constitution and By-Laws that that portion of the Constitution providing for the publication of the decisions of the Appeal Committee be so amended as to require the publication by the Secretary only of such cases as may be designated by the Chairman of the Appeal Committee. This will avoid the expense and labor incident to the publishing of cases which are analogous and which cover points which have already been decided and published a number of times and will make the work more effective.

It was also provided that the decisions of the Appeal Committee shall be binding upon the members of the Association, as well as upon the Arbitration Committee.

WORK OF THE CONFERENCE COMMITTEE.

The report of the Conference Committee was presented by Chairman Stanley and duly accepted. It showed that since the 1913 annual session a number of important matters under consideration with the representatives of the Interstate Commerce Commission had been brought to a conclusion.

The restatement of Conference Ruling No. 15 is considered of particular importance, the new Ruling reading as follows:

CARRIER MUST INVESTIGATE BEFORE PAYING CLAIMS.

"A carrier cannot shield itself from responsibility in paying a claim by accepting authority of a connecting line to pay it, but must ascertain the lawfulness of the claim and allow it or not upon the basis of its own investigation. This is not to be understood, however, as requiring each carrier interested in the claim to make an independent investigation. The principle of direct investigation embodied in the rules of the Freight Claim Association, whereby the carrier against which a claim is presented undertakes to make the investigation for itself and for the other carriers concerned in the joint movement out of which the claim arises, is approved by the Commission as a means of expediting the adjustment of claims. In all cases, however, the investigation so made must be thorough and must disclose a lawful basis for the payment before the ? ? ?

This endorsement of the rules of the Freight Claim Association is very gratifying and it is felt that it will have a tendency to add to the strength of the Association and enable it to accomplish more good in the claim world.

Also, the Standard Forms of Presentation of Claims, prepared during the previous year in connection with the representatives of the Interstate Commerce Commission, National Industrial Traffic League and kindred organizations, were reported as having been very generally adopted throughout the country by carriers and claimants alike, and much good is anticipated from their use.

The Special Report on Freight Claims called for by the Interstate Commerce Commission on the form prepared last year by its representatives in connection with the Conference Committee and committees from the Association of American Railway Accounting Officers and American Railway Association, became effective January 1, 1914, but it is not yet, of course, known what results will be shown.

There are several other matters, including "Interest on Claims," "Prorating Deficits," and "Concealed Loss and Damage," which will be further considered at a later time by the representatives of the Interstate Commerce Commission, the Conference Committee and such other organizations as may be interested.

METHODS AND TOPICS MATTERS.

The various suggestions and recommendations carried in the very able report of the Committee on Methods and Topics were considered, some being referred to the new Committee on Cause and Prevention and others being referred to the appropriate incoming committees or received as information. The subjects dealt with were as follows:

Stamping Less Carload Package Freight.
Cancellation of Internal Revenue Tax.
Forms Used in Handling Overcharge Claims.
Overcharge Distribution Statement—Form Proposed by Western Lines.
Marking Freight with Shippers' Names and Addresses.
Method of Requesting Disposition of Freight.
Showing Weight on Shipping Orders.
Concealed Loss and Damage.
Section 3, Uniform Bill of Lading.
Showing Causes and Commodities on Loss and Damage Distribution Statements.
Securing Information from Other than Freight Claim Officials.
End Doors.
Use of Stamp for Showing Transfer Exceptions.
Uniform Practice to be Observed for Returning Claim Papers to Official of Paying Carrier.
Prevention of Loss and Damage Claims.
Receiving, Billing, Loading, Handling and Delivering Freight.
Astray Freight.
Defective Equipment.
Disposition of Refused and Unclaimed Freight.
Locating Individual Responsibility.
Standard Over, Short, Damage and O. K. Forms.
Study of Claim Conditions.

ELECTION OF OFFICERS, SELECTION OF PLACE FOR NEXT SESSION, ETC.

The following officers and members of Arbitration and Appeal Committees were elected for the ensuing year, viz.: President, J. W. Newell, Aud. Frt. Accts., Chicago, Burlington & Quincy R. R. First Vice-President, E. Arnold, Freight Claim Agent, Grand Trunk Ry. Second Vice-President, W. O. Bunger, Freight Claim Agent, C. R. I. & P. Railway. Secretary and Treasurer, Warren P. Taylor, Traffic Manager, R. F. & P. R. R. and Wash. Sou. Ry.

Arbitration Committee "A"—G. C. Arnold, Chairman, F. C. A., Lehigh Valley R. R.; H. R. Grochau, F. C. A., C. St. P. M. & O. Ry.; T. S. Walton, F..C. A., Missouri Pacific Ry.

Arbitration Committee "B"—R. Kemp Slaughter, Chairman, Auditor, Atlanta, Birmingham & Atlantic R. R.; D. B. Daley, F. C. A., Kansas City Southern Ry.; H. F. Bidwell, F. C. A., Boston & Maine R. R.

Arbitration Committee "C"—J. M. Eadson, Chairman, F. C. A., Michigan Central R. R.; H. M. Noors, F. C. A., M. L. & T. R. R. & S. S. Co.; E. A. Jack, F. C. A., Terminal R. R. of St. Louis.

Appeal Committee—J. J. Hooper, Chairman, F. C. A., Southern Railway; A. B. Thompson, F. C. A., D. L. & W. R. R.; F. E. Shallenberger, Auditor, Union Line; J. F. Horrigan, F. C. A., Northern Pacific Ry.; J. M. Brewer, F. C. A., Southern Pacific Co.—Pacific System.

The Conference Committee was continued, with the same powers as heretofore.

Chicago, Ill., and the third Wednesday in June, 1915 (16th), were selected as the place and date for the next, or Twenty-fourth Annual Session.

Adjournment was taken at 11.45 A. M., Friday, May 15th.

LEGISLATION.

Proposed Legislation Covering Passenger Train Equipment.—The Special Committee on Relations of Railway Operation to Legislation has issued a bulletin with reference to the proposed legislation covering steel and steel underframe passenger train equipment and the estimated cost to the carriers in making the change demanded in the various bills now before Congress. The bulletin follows:

"Seven bills are pending in Congress requiring the replacement of wooden passenger train equipment in steel. The periods suggested during which this is to be done vary from January 1, 1915, to ten years from enactment of the law; in some cases with extensions of time in the discretion of the Interstate Commerce Commission.

"Three bills are pending which, among other things, leave to the discretion of the Interstate Commerce Commission the operating conditions under which wooden cars must be replaced with steel equipment, and the time for such replacement.

"To ascertain the progress of the building of steel and steel underframe passenger equipment, and to develop the cost of reconstruction in steel of the present wooden passenger equipment in the country, Circular No. 53 was issued by the railways on January 2, 1914.

"Replies to that Circular have been received from 227 companies, operating 236,720 miles in the United States, and 58,660 passenger equipment vehicles, with 3,144 under construction on January 1, 1914.

"Replies have also been received from eleven companies, operating 27,030 miles in Canada, and 5,118 passenger equipment vehicles, with 240 under construction on the same date.

"The estimates and percentages given hereafter apply only to the equipment operated by roads in the United States.

"It will be noted that there were but fifteen wooden passenger train cars under construction January 1st, only two of which were intended for the use of passengers

"The charge to operating expenses under the classification of accounts of the Interstate Commerce Commission, assuming a value of $4,000 per vehicle replaced, will be $178,240,000."

Cost of Complying with Full Crew Laws.—The Special Committee on Relations of Railway Operation to Legislation on March 10, 1914, issued a bulletin showing the results of its investigation regarding the total cost to the carriers of complying with the full crew laws passed by the various States. In this bulletin, the cost of ninety-eight roads was reported as $6,800,729 per annum. A latter investigation, however, indicates that the figures given for the State of Texas were in error. The Committee has therefore, issued another statement in which it places the total cost per annum for all roads reporting as $5,769,174.

Six Months' Report of the Special Committee on Relations of Railway Operation to Legislation.—The Special Committee on Relations of Railway Operation to Legislation, has issued a general report covering its activities during the six months from November 1, 1913 to May 4, 1914, inclusive. The Committee's activities are reviewed in the following manner:

"In its last report your Committee forecast the proposal to increase largely the discretionary power of the Interstate Commerce Commission over railway construction, maintenance and operation. Bills having this in view have been introduced into Congress and are now pending.

"It is evident that there is a well defined movement to substitute legislation of this character for that prescribing in specific terms the things that shall be done. So far as the general principle is concerned, your Committee feels that if legislation on any operating matter be enacted it should permit the exercise of a proper discretion on the part of such body as can wisely use it, rather than make an inflexible requirement which in many circumstances ought not to or could not be enforced. The precise form which such legislation should take, however, is a matter of such vital concern and involves so many considerations that your Committee has preferred to wait until the varying propositions were more clearly defined before seeking the counsel and advice of the roads as a whole.

"If circumstances so shape themselves that general legislation of this character is probable at this session of Congress, the Railways will be given notice thereof, and such suggestions as your Committee has matured will be placed before you for discussion. Your Committee in this, as well as in other matters, is keeping in close touch with the Railway Executives' Advisory Committee on Federal Relations, and with the Law Committee associated with it.

Laws Enacted.

"Since the last report was made no legislation affecting railway operation has been passed by either House of Congress.

Operating Bills Pending.

"Exhibit No. 3 shows the bills relating to operation pending in the present Congress, subdivided as between those on which there have been hearings before committees and those on which hearings have not been called.

"Your Committee has presented witnesses to deal with the provisions of these bills as indicated in the Exhibit and will present testimony on these and others when opportunity offers. There have been no hearings before any Committees of the Senate.

Boiler Inspection.

"The Chief Inspector of Locomotive Boilers having asked for a conference with the railways in regard to the factor of safety for locomotives in service or under construction prior to January 1, 1912, this conference was held on April 28, 1914, the railways being represented by the Mechanical Sub-Committee.

"As a change in rules is involved, it will be necessary for the Interstate Commerce Commission to deal with the subject after notice and hearing. Full information will be given as these negotiations proceed. (See Circulars 57 and 58, issued April 15 and 17, 1914, respectively.)

Steel Passenger Equipment.

"To bring the information as to the progress and construction of steel and steel underframe passenger equipment cars up to date, your Committee issued Circular No. 53 asking for the necessary information. A bulletin will be issued in the near future.

Specifications for Steel Postal Cars.

"Tests of insulating methods and materials which have been under way for the past eight months have now been completed and the Mechanical Sub-Committee having this matter in charge will be shortly in a position to discuss the matter with the representatives of the Post Office Department, and to make a definite recommendation on this subject.

"The completion of the paragraph regarding insulation will be the final step in the complete specification for steel and steel underframe postal car construction.

Locomotive Headlights.

"Three bills are pending in Congress with respect to uniform headlights.

"In view of the numerous state laws existing on this subject (see Bulletin No. 52, July 16, 1913), it is thought that federal legislation along proper lines is desirable.

"At a hearing before a Sub-Committee of the House Committee on Interstate and Foreign Commerce, the argument for the railroads, based upon an investigation made by the American Railway Master Mechanics' Association, was presented so fully and completely that your Committee has published it for the general information of the railways. (See Bulletin No. 58, April 23, 1914.)

"Your Committee has also ascertained, in response to Circular No. 54, the number and character of headlights in use on upwards of 67,000 locomotives in the country, and this information has been made a part of the bulletin referred to above.

FEDERAL INSPECTION OF GRAIN.

"Two bills are pending in Congress covering this subject; one, Senate 120, placing the inspection of grain going into interstate commerce in the hands of the federal government; and the other H. R. 14493, giving the federal government supervision over the existing methods and creating uniform standards.

"Your Committee has obtained a large amount of information as to the manner in which the first named bill would affect railway interests, chiefly in the detention to which it will subject cars under the proposed plan. (See Circular No. 55, February 14, 1914.)

"This information has been made use of and substantial amendments have been made in this bill on the floor of the Senate.

"Up to the present time no opportunity has been afforded for presenting witnesses on this subject, and it is hoped that the legislation may take such a form to obviate all objections thereto.

PRIVATE CAR INVESTIGATION.

"At the request of a number of roads, your Committee canvassed the railways of the country generally to ascertain if it was desired that it undertake the presentation of the railway's case before the Interstate Commerce Commission. (See Circular No. 52, December 10, 1913.)

In response to this circular 132 roads, operating 199,468 miles, authorized your committee to so represent them and to pay the necessary expense out of its general funds, such expenses to be ultimately assessed upon the roads joining in the movement on a mileage basis.

"Your Committee thereupon designated the Chairman of the Committee on Relations between Railroads of the American Railway Association, and the Chairmen of the four General Managers' Associations to act as a Committee on Private Cars to conduct the railways' case. (See Bulletin No. 56, January 28, 1914.)

"Hearings before the Commission have been finished and the work of the Committee on Private Cars so far as this particular authority is concerned will be concluded within the near future by the preparation of the necessary brief and argument.

"The expense of this proceeding up to May 1, 1914, is shown in the financial statement under the heading of 'Advances for Account of Private Car Investigation.'

MINIMUM (FULL) CREWS.

To complete the data on this subject, your Committee has published as Bulletin No. 57, March 10, 1914, a tabulation of the replies received from roads operating 202,000 miles, giving an estimate of the number of trains affected and the amount of money involved in the application of the State Full Crew Laws.

"The laws themselves, with an analysis, thereof, will be found in Bulletin No. 55, October 17, 1913.

"The total estimated annual additional cost of these state laws is $6,800,000.

STATE LEGISLATION.

"Your Committee has continued its arrangement of keeping itself informed of all bills affecting railway operation introduced and passed in all states and has notified its supporters accordingly.

"Most of the State Legislatures which were in session in 1914 have adjourned. Some are, however, still in session and upon their adjournment the usual bulletin will be issued showing the number of laws introduced and passed affecting railway operation.

STATE COMMITTEES.

"Your Committee has urged that the State Committees, which were formed to handle matters before the Legislatures which met in 1913, continue their organization in order that the necessary work preliminary to the meetings of these same legislatures in 1915 may be undertaken without loss of time.

"This course is being very generally pursued."

New York Central Inquiry Shelved.— By a vote of 33 to 20, the Senate has sent to the Committee on Interstate Commerce the Norris resolution providing for an investigation of the New York Central Railroad System by the attorney general. This action is significant in that a majority of the members of the committee are believed to be unfriendly to the investigation on the ground that the railroads need rest and that no public purpose would be served by prodding the Department of Justice to a task which is clearly within its province without the necessity of any spur from Congress.

Panama Toll Repeal Bill Signed by the President.—On June 15th, President Woodrow Wilson placed his signature upon the Panama Canal tolls repeal bill. The bill as finally passed by the House of Representatives on June 12th, contained the Senate amendment which declares that the United States does not relinquish any right it may have to exempt its vessels from tolls. The vote in the House was 216 to 71, while the vote in the Senate was 50 to 35.

Government of Alaska By Development Board.—Secretary Lane of the Interior Department has sent a report to Congress in which he urges the creation of a development board to be in complete control of the natural resources of Alaska. The plan urged by the Secretary provides for a board of three members to be appointed by the Commission and confirmed by the Senate which is to have headquarters in Alaska. This Board will take over such authority now exercised by various departments and bureaus as would be necessary to give it supervision over practically the entire public domain. According to Commissioner Lane this should include the control of water powers, building and maintenance of roads and trails and operation and rates of the railroads and telegraph lines. It should include protection and control of game, fur-bearing animals, public lands, mineral deposits, coal, oil, gas, hot-springs, timber lands and timber.

Railroads Opposed to Rayburn Anti-Trust Bill.—Judge Robert S. Lovett, chairman of the Union Pacific Board, appeared before the Senate Interstate Committee on June 3rd, in opposition to the proposed Rayburn Bill to regulate the issuance of railroad securities which he believes to be a menace to the prosperity and development of the carriers of the country. Judge Lovett contended it would disrupt many of the great railroad systems; that under it the Union Pacific would be separated from the Oregon Short Line; that it would impair the value of railroad securities and that some systems would be forced into the hands of receivers because they would not be able under it to finance their necessities.

A. H. Harris, general counsel for the New York Central, and Edward P. Ripley, president of the Atchison, Topeka and Santa Fe Railroad, took substantially the same view.

Judge Lovett objected to the section which prohibits a person serving on more than one railroad board, whether there is any competition or not, without the consent of the Interstate Commerce Commission.

Judge Lovett also particularly objected to that clause of the bill which prevents the issuance of new securities except where they are, in the language of the bill, necessary in the public interest to the proper performance of its service for the public. He pointed out that this provision would prevent the railroads from making improvements from cash on hand and later recouping the treasury so as to restore the amount of cash on hand for the purpose for which it was being saved by the sale of bonds. He also called attention to the fact that the proposed law would usurp many state functions and deny the railroads the right of exercising privileges given them by the States, while at the same time it did not take away the state supervision by providing federal incorporation. George F. Brownell, vice-president and general counsel of the Erie Railroad, also spoke vigorously in opposition to the bill and declared that under its supervision the members of the Interstate Commerce Commission would become a system of interlocking directorates of vaster powers than anything which is dreamed of by Congress in proposing legislation against interlocking directorates.

Bill to Regulate Water Carriers.—A bill to regulate water carriers engaged in foreign and domestic commerce of the United States, has been introduced in the National House of Representatives by Representative Alexander. The legislation is aimed at the so-called steamship pool and represents the result of an inquiry into the activities of the so-called shipping trust. It is the first attempt which has been made in the halls of Congress to bring the vast water transportation interests under a comprehensive system of Government supervision. The bill declares that deferred rebate arrangements, whether in export, import or domestic trade, to be illegal.

Copies of all arguments and conference arrangement between steamship lines must be filed for approval with the Interstate Commerce Commission. Such arguments as are approved by the Commission shall be excepted from prosecution under the anti-trust law. Those that are disapproved must be withdrawn or take the risk of prosecution.

Discriminatory practices of all kinds giving unfair preferences, or advantages or persons and localities, false bills, false classification and false weighing are made unlawful under the bill. Both foreign and domestic carriers are prohibited from carrying in retaliatory measures against shippers by refusing or threatening to refuse space when such are available. Rate cutting or injuring a competitor is prohibited. The commission is authorized to reduce rates when they are found to be unreasonably high or excessive.

Water carriers are required to observe the same rules in the filing of rates enforced against railroads. The commission is empowered to investigate all complaints filed by shippers in matter of cargo, space accommodations or unfair or discriminating contracts with shippers or other unfair treatment, and to order the discontinuance of all practices found to be in conflict with the law.

Three or four series of the bill have an important bearing on the relation of water transportation. It is made unlawful for any railroad to discriminate between a rail and water route. Railroads are prohibited from acquiring any interest directly or indirectly in any canal in the United States or in any common carrier or forwarding company on such canal unless such acquisition is approved by the Interstate Commerce Commission. Railroads can also be required by the commission to account separately for the income, expenses and other financial and property characteristics of water carrier in which it may be interested.

The penalties provided by the bill are severe. Any water carrier that fails to file any agreement with any other water carrier when called on to do so by the commission is made liable to a fine of $1,000 for each day during which such offense continues.

The bill contains a prohibition against the issuance of free tickets or free passage or transportation to passengers. Violation of this provision is made a misdemeanor punishable by a fine of not less than $100 or more than $2,000.

Other prohibitions by the bill are made misdemeanors punishable by a fine not to exceed $5,000 for each offense. If the offense constitutes an unlawful discrimination in rates, fares or charges, the person found guilty is liable to imprisonment for a term not exceeding two years, as well as a fine of $5,000 or both such fine and imprisonment in the discretion of the court.

LEGAL.

Spur Track Charge Illegal.—In a decision on June 8th, the Supreme Court of the United States upheld the Interstate Commerce Commission's order forbidding the Santa Fe and Southern Pacific Railroads to charge for shunting freight cars on and off industrial spur tracks. This ends a case which has been disputed since 1908. In that year the Associated Jobbers of Los Angeles filed a complaint before the Interstate Commerce Commission. It was set forth that the spur track charge illegally cost shippers of this city alone more than $300,000 a year. In rendering a decision declaring the charge illegal Franklin K. Lane, then an Interstate Commerce commissioner, estimated that if the railroad exacted similar charges in every large city of the country, it would cost shippers between $250,000,000 and $300,000,000 a year. The decision of the Supreme Court probably means that the railroads will have to refund the shippers and consignees of Los Angeles between $1,000,000 and $2,000,000, already collected illegally as switching charges.

Supreme Court Rules in Favor of Florida East Coast Railway.— The Supreme Court handed down another decision on June 8th, which will prove of interest to railway officials and will enable the Florida East Coast Railway to charge higher freight rates on citrus fruits and vegetables. The Interstate Commerce Commission had issued an order lowering the rates on the commodities shipped over the Florida Road. The Chief Justice, who rendered the opinion in this case, laid down the principle that while the Interstate Commerce Commission was charged with the sole authority to ascertain facts in any given case and enter an order in accordance therewith, the court was not precluded from looking into the record to ascertain whether the facts disclosed sufficient warrants for large rates. In this case the court was of the opinion, the Chief Justice said, that there was nothing in the facts disclosed by the record to sustain the order made by the Commission lowering the rates and the order would operate as a confiscation of the carrier's property and was therefore void.

Supreme Court Rules Against States in Shreveport Decision.—An epoch making railway rate decision was handed down by the Supreme Court of the United States on June 8th, in what was known as the Shreveport case. Under the decision the authority of the Federal Government to regulate interstate commerce through the Interstate Commerce Commission is made practically supreme. State laws and orders of state commission conflicting with the federal laws must give way and vexatious orders or regulations promulgated by the state authorities as burdens on interstate commerce can be set aside by orders of the Interstate Commerce Commission. The decision, which was handed down by Justice Hughes, holds in effect, that rates fixed by a state even for traffic, wholly within that state, must give way to orders of the Interstate Commerce Commission when it finds that the local regulations effect a real discrimination in interstate commerce. The decision is undoubtedly a blow to the state rights doctrine and will curtail the activities of many state commissions. The decision rests upon an order of the Interstate Commerce Commission declaring that discrimination arose from the observance of State rule even for intrastate rates. That order is sustained.

The decision was announced by Mr. Justice Hughes. The case arose out of complaint by Shreveport (La.) merchants that the Texas Railroad Commission had shut them out of all Texas business by compelling the railroads to reduce Texas State rates far below what the Interstate Commission allowed the railroads running from Shreveport to Texas cities to charge.

The court first decided that Congress had power to control intrastate charges of an interstate carrier to the extent necessary to prevent injurious discrimination against interstate traffic and then held that Congress had conferred this power upon the Interstate Commerce Commission.

"It is the essence of the power to regulate interstate commerce that where it exists, it dominates," said Justice Hughes. "The fact that carriers are instruments of intrastate commerce as well as of interstate commerce, does not derogate from the complete and paramount authority of Congress over the latter or preclude the Federal power from being exerted to prevent the intrastate operations of such carriers from being made a means of injury to that which has been confided to Federal care.

"Wherever the interstate and intrastate transactions of carriers are so related that the government of the one involves the control of the other it is Congress and not the State that is entitled to prescribe the final and dominant rule, for otherwise Congress would be denied the exercise of its constitutional authority and the State and not the nation, would be supreme within the national field."

In removing discriminations against interstate commerce the Court held Congress was not bound to reduce the interstate rate below what it may deem to be a proper standard to the carrier and the public.

"Otherwise," said the opinion, "it could prevent the injury to interstate commerce only by the sacrifice of its judgment as to interstate rates."

Justice Hughes, who wrote the court's decision in the state rate cases of a year ago, pointed out that the present case did not conflict with those cases. He said that undoubtedly in the absence of a finding by the commission of unjust discrimination, intrastate rates were left to be fixed by the carrier and subject to the authority of the States.

"We are not unmindful of the gravity of the question that is presented when State and Federal views conflict," the opinion concluded. "But it was recognized at the beginning, the nation could not prosper if interstate and foreign trade were governed by many masters, and, where the interests of the freedom of interstate commerce are involved, the judgment of Congress and of the agencies it lawfully establishes must control."

STATE COMMISSIONS.

Michigan.—Chairman Lawton T. Hemans, of the Michigan Railroad Commission, in a recent discussion of the American transportation question with a representative of the "Saturday Night," a Detroit publication, indicated that the movement of the nation's commerce is dependent alike upon the railroads and the waterways and that the development of these highways of trade should be carried on uniformly and with full measure of public support.

"Can you tell me," asked Commissioner Hemans, "why we get so excited when we hear that the government is going to do something for American ships, and why on the other hand we seem to care so little about doing anything for American railroads? Some of us are deeply perturbed because American ships may have to pay tolls for carrying freight through the Panama Canal; but none of us is clamoring for the purpose of a free right of way, for instance, for any American Railroad that carries freight. We cheerfully spend millions of dollars on the Lime Kiln crossing and the Livingstone Channel to promote shipping on the great lakes, and many more millions for locks at Sault Ste. Marie. And we take pictures of these waterways improvements and put them on postcards which we proudly send to our friends. But I wonder what would happen to the statesman who would suggest that we appropriate funds from the public treasury to break down heavy grades on some of our railroads so that they could haul freight at less expense. As far as public aid is concerned, I can see no difference between the man who invests in ships and the man who invests in railroads."

LABOR.

Service Annuity System Established on El Paso and Southwestern.—The El Paso and Southwestern Railway established on June 1st, a service annuity system applicable to all employes who have been continuously in the service of the Company during fifteen years or more preceding the date of their retirement and who at that date, shall have reached the age of sixty-five years.

The Board of Service Annuities, which has been organized under this system, also has the power at its discretion, to retire a man who has become so incapacitated for the performance of the service for which he was engaged that he cannot be transferred to other work provided, he shall have been continuously in the service of the company during the fifteen years or more next preceding the date of his retirement.

In computing the annuity, an allowance for each year of service is made of one and one-half per cent of the average regular monthly pay for the ten years next preceding retirement. Thus, if an employe has been in the service for forty years, and his average salary or wages for the last ten years was seventy-five dollars per month, his annuity allowance would be sixty per cent of seventy-five dollars or forty-five dollars per month. It is further provided however, that in no case shall the allowance be less than twenty dollars per month or more than one hundred and fifty dollars. These allowances shall be paid monthly during the life of the beneficiary.

Organized Labor in the Railway Field.—The New York "Annalist" points to the fact that there are ten principal divisions of the army of organized labor that forms the human part of the vast and intricate machinery of transportation. They are like ten States bound together by no other tie than a community of interest—a loosely knit republic of labor. Their growth has more than kept pace with that of the powers they serve. Each order, brotherhood, or union began in a very small way—with a mere handful of unsatisfied men. Each has suffered many vicissitudes, and each has risen to its present power by relatively similar methods. A favorite one has been the employment of paid organizers.

About half of all the employes of the railroads belong to one or another of these associations connected with the service. When action seems to them to be necessary, all the members of one or more orders, or brotherhoods, or unions, combine as a unit to enforce their demands. It is this which has made them a force to be reckoned with, even to the passing of special laws by the Congress of the United States.

The membership of these ten great railroad powers fluctuates. Of late years, it has been increasing steadily. Stated in round numbers, it aggregates about 700,000, made up as follows:

Brotherhood of Locomotive Engineers .	75,000
Brotherhood of Railroad Trainmen	130,000
Order of Railway Conductors	55,000
Brotherhood of Locomotive Firemen and Enginemen	75,000
Brotherhood of Railway Clerks	55,000
Brotherhood of Maintenance of Way Employes	50,000
International Association of Machinists	80,000
Order of Railway Telegraphers	45,000
Switchmen's Union	90,000
Brotherhood of Railway Carmen	45,000
Total	700,000

There are about 1,900,000 railroad employes in the United States. Among them are some 300,000 common laborers, and nearly an equal number of men who are divided among a score or so of relatively small organizations, or who belong to none at all.

All but four of the great railway organizations are affiliated with the American Federation of Labor. These four are the Brotherhoods of Locomotive Engineers, Locomotive Firemen and Enginemen, and Railroad Trainmen, and the Order of Railway Conductors, aggregating 335,000. These bodies are made up of highly skilled men. None of these has regularly employed organizers to increase its membership. In fact they remind one somewhat of the ancient guilds of craftsmen in the qualifications they exact on the part of those who would join them. By some they are called the aristocrats of the railroad labor world. Their leaders are men of unusual force and executive ability.

Labor Troubles in Pittsburgh.—A number of the employes of the Westinghouse Electric & Manufacturing Company, and the Westinghouse Machine Company went on a strike recently, because the management refused to recognize the demands made by the newly formed labor union, the Allegheny Congenial Industrial Union, and as a result the works of these companies at East Pittsburgh are partly shut down. The management of the companies does not believe that the trouble will be of long duration.

EQUIPMENT.

Locomotive and Car Purchase by Mobile and Ohio.—The Mobile and Ohio Railroad Company announces the purchase of seven consolidation type freight locomotives, 1,000 all steel ventilated box cars, 8 all steel passenger coaches, 4 all steel mail and baggage cars, and 4 all steel baggage and express cars at a cost of over a million dollars. This equipment will all be of the most modern design as well as of most substantial construction.

Dining Car Equipment of the Southern Pacific.—The Southern Pacific has recently purchased six new dining cars which now gives that Company one hundred and five diners, the largest number owned by any one railroad either at home or abroad. In addition to these 105 diners, the company now possesses forty-two observation cars, in general use on its lines; one lunch car, which, when experimented with, proved a marked success, and two cafe cars. It also operates five restaurants and sixteen boats, on which dining accommodations are to be found, all under the supervision of Allan Pollok, superintendent of dining cars, hotels and restaurants. The Company is rigorous in its demand for the most sanitary conditions and cleanliness on its diner system.

TRAFFIC.

Pennsylvania Railroad Issues New Order with Reference to Mileage Books.—The Pennsylvania Railroad Company has instructed all conductors of passenger trains in detaching mileage from mileage books to notify each passenger the number of miles covered by his journey.

This was done in order to enable the passenger to check up the amount of mileage detached and also to insure accuracy on the part of conductors in detaching the correct amount.

These are the instructions issued to conductors:

"When a mileage ticket is presented for passage, conductor must in every instance (except in sleeping cars on night trains) inquire of passenger his destination and must tell him the place to which lift is made and number of miles required for trip thereto; for instance, to a passenger offering mileage fo a trip from Philadelphia to Williamsport, Philadelphia Division conductor should say to passenger 'Harrisburg, 104 miles.'

"When a mileage ticket is presented, conductor must in every instance (except in sleeping cars on night trains) inquire of holder how many passengers and destination of each; and must repeat such information to passenger, stating the number of miles detached; for instance, if mileage should be offered for two passengers Philadelphia to Williamsport, the Philadelphia Division conductor should say: 'Two to Harrisburg, 208 miles.' In the case of one passenger using a mileage ticket the announcement would be 'One to Harrisburg. 104 miles.'"

In addition to the foregoing instructions, the Company is now commencing a plan whereby passengers in sleeping cars will be notified as to the mileage lifted by means of a slip inserted in the mileage book.

San Francisco Hotel Rates for the Panama Pacific International Exposition.—An announcement of interest to passenger traffic officials, is to the effect that hotel keepers at San Francisco have not only entered into an agreement among themselves, but with the Exposition officers as well, that there will be no increase whatever in the prices which they have submitted to prevail throughout the Exposition year. These rates range from $1.00 to $3.00 per day, European plan, and the agreement extends to the dining rooms and restaurants, so that the visitors may be assured of reasonable prices for the necessities. Many objectionable features will be dispensed with, such as solicitors on trains, steamers and at depots. Buss lines will run from the ferry and depot to all hotels, the fare being twenty-five cents per passenger.

Food Stuffs an Increasing Factor in Import and a Decreasing Factor in Export Trade.—Home consumption of domestic foodstuffs has so nearly overtaken home production that the United States is not only reducing its sales of foodstuffs abroad but drawing more largely upon foreign countries for certain of its food requirements. An analysis of the foreign trade during the first six months under the new tariff has been made by the Bureau of Foreign and Domestic Commerce, Department of Commerce. From this it is shown that imports of foodstuffs in their natural condition, including food animals, increased from $117,194,237 in the half year ended with March, 1913, to $143,421,536 in a like period ended with March, 1914; and that imports of foodstuffs partly or wholly prepared for use in the same period advanced from $95,744,241 to $100,967,378. Thus the increase in importations of all food products in the period named amounted to over $30,000,000 or an average of $5,000,000 per month.

On the export side the figures are even more striking. Of crude foodstuffs the sales to foreign countries fell off more than 50 per cent, while prepared foodstuffs also declined, though in smaller proportion. Exports of the first-named group fell from $115,850,453 in the six months period of last year to $55,483, 787 in the half year which ended with March of the current year, and manufactured food products from $180,007,422 to $162,022,620.

ELECTIONS AND APPOINTMENTS.

Executive.

R. H. Ashton, vice-president, American Railway Association.

John F. Auch, vice-president and traffic manager, Philadelphia & Reading Railway. Headquarters, Philadelphia.

E. C. Bagwell, president's assistant, Seaboard Air Line Ry. Headquarters, Norfolk, Va.

Fred T. Dickerson, assistant to the president, Central of New Jersey. Headquarters, New York.

M. L. Grossman, assistant to president and secretary, Georgia and Florida Railroad. Headquarters, Baltimore, Md.

Samuel L. Kamps, assistant to chief executive officer, Pere Marquette Railroad. Headquarters, Detroit, Mich.

Paul H. King, receiver, Pere Marquette Railroad. Headquarters, Grand Rapids, Mich.

R. J. Lockwood, vice-president, New Iberia & Northern. Headquarters, New Iberia, La.

L. B. Maytag, vice-president, South Dakota Central. Headquarters, Sioux Falls, S. D.

H. U. Mudge, president, American Railway Association.

A. M. Nanton, director, Canadian Pacific Railway Co.

Joseph H. Young, president, Norfolk Southern Railway. Headquarters, Norfolk, Va.

T. U. Young, assistant to the vice-president and general manager, Jonesboro, Lake City & Eastern Railroad. Headquarters, Jonesboro, Ark.

Legal.

C. B. Heiserman, general counsel, Pennsylvania Lines West of Pittsburgh. Headquarters, Pittsburgh, Pa.

E. H. Seneff, general solicitor, Pennsylvania Lines West of Pittsburgh. Headquarters, Chicago, Ill.

Financial.

K. Bowerfind, general paymaster, Missouri, Kansas and Texas Railway. Headquarters, Dallas, Texas.

Albert T. Clifton, secretary and treasurer, Texas Central Railroad. Headquarters, Waco, Texas.

T. Garland Tinsley, treasurer, Georgia & Florida Railroad. Headquarters, Baltimore, Md.

Accounting.

F. W. Charske, auditor, freight accounts, Union Pacific. Headquarters, Omaha, Neb.

S. W. Greaves, accountant of freight and passenger charges, St. Louis Southwestern Railway. Headquarters, St. Louis, Mo.

Thomas C. McCampbell, general auditor and claim agent, Tennessee, Kentucky & Northern. Headquarters, Nashville, Tenn.

Charlton Messick, assistant general auditor, St. Louis Southwestern Railway. Headquarters, St. Louis, Mo.

Engineering and Mechanical.

H. E. Astley, division engineer, Central New England Division, New York, New Haven & Hartford Railroad. Headquarters, Hartford, Conn.

O. S. Bowen, assistant chief engineer, Great Northern Ry. Headquarters, Spokane, Wash.

I. C. Bower, assistant engineer, Chicago, St. Paul, Minneapolis and Omaha Railroad. Headquarters, St. Paul, Minn.

J. S. Browne, assistant engineer of maintenance of way, New York, New Haven and Hartford Railroad. Headquarters, New Haven, Conn.

J. J. Carey, master mechanic, Texas and Pacific Railway. Headquarters, Marshall, Texas.

M. C. Cleveland, valuation engineer, Lehigh Valley Railroad. Headquarters, New York.

P. J. Colligan, master mechanic, Illinois and Chicago Terminal divisions, Rock Island Lines. Headquarters, Chicago, Ill.

E. L. Cruger, assistant engineer, Illinois Central Railroad. Headquarters, Chicago, Ill.

W. H. Davis, master mechanic, Marshall and East Texas Railroad. Headquarters, Marshall, Texas.

C. O. Destiche, superintendent of motive power, South Dakota Central. Headquarters, Sioux Falls, S. D.

John Dickson, general master mechanic, Spokane & Inland Empire Railroad. Headquarters, Portland, Ore.

R. J. Greiner, general foreman, Missouri, Kansas & Texas Lines. Headquarters, Smithville, Texas.

Otto Gumpper, assistant engineer, Southern Railway. Headquarters, Birmingham, Ala.

A. H. Hogeland, chief engineer, Great Northern. Headquarters, St. Paul, Minn.

J. W. Hungate, electrical superintendent, Spokane and Inland Empire. Headquarters, Spokane, Wash.

Ernest Kuehn, inspector of motor cars, St. Louis Southwestern System. Headquarters, Texarkana, Ark.

W. T. Kuhn, superintendent of motive power, Toronto, Hamilton and Buffalo. Headquarters, Hamilton, Ont.

W. T. Lovell, master mechanic, Oregon-Washington Railroad and Navigation Company. Headquarters, Portland, Oregon.

J. T. Luscombe, master mechanic, Ohio River Division, Baltimore and Ohio Railroad. Headquarters, Parkersburg, W. Va.

D. H. Maples, superintendent of building construction, Canadian Pacific Railway. Headquarters, Montreal, Que.

L. A. Richardson, mechanical superintendent, First District, Rock Island Lines. Headquarters, Des Moines, Iowa.

R. E. Rowe, master mechanic, St. Louis, Brownsville and Mexico Railroad. Headquarters, Klingsville, Texas.

Harvey Shoemaker, mechanical superintendent, Bangor and Aroostook Railroad. Headquarters, Derby, Maine.

O. E. Slater, superintendent of terminals, Fort Dodge, Des Moines and Southern Railroad. Headquarters, Fort Dodge, Iowa.

W. T. Spencer, division engineer maintenance of way, Providence Division, New York, New Haven and Hartford Railroad. Headquarters, Providence, R. I.

Paul Sterling, division engineer, Western Division, New York, New Haven and Hartford Railroad. Headquarters, Waterbury, Conn.

R. L. Stewart, mechanical superintendent, Third District, Chicago, Rock Island and Pacific Railroad. Headquarters, El Reno, Okla.

E. Von Sprecken, assistant engineer, Atlantic Coast Line Railroad. Headquarters, Savannah, Ga.

Walter Walker, foreman, bridge and building department, South Dakota Central. Headquarters, Sioux Falls, S. D.

W. D. Warren, division engineer, Midland Division, New York, New Haven and Hartford Railroad. Headquarters, Hartford, Conn.

H. E. Waters, supervisor of division No. 6, Pennsylvania Railroad. Headquarters, Mifflin, Pa.

W. B. Wilson, master mechanic, Chicago, Rock Island and Pacific Railroad. Headquarters, Dalhart, Texas.

Operation.

H. H. Broughton, assistant superintendent, Cleveland Division, Baltimore and Ohio. Headquarters, Canal Dover, Ohio.

A. V. Brown, general superintendent, Central District, Northern Pacific Railroad. Headquarters, Livingston, Mont.

C. E. Burchfield, trainmaster, east end, Knoxville Division, Southern Railway.

A. E. Campbell, superintendent, Columbia Division, Chicago, Milwaukee and St. Paul Railroad. Headquarters, Malden, Wash.

C. B. Carpenter, assistant superintendent, Fourth Division, Denver and Rio Grande Railroad. Headquarters, Alamosa, Colo.

E. W. Deuel, superintendent, Third Division, Denver and Rio Grande Railroad. Headquarters, Gunnison, Colo.

R. D. Fitzmaurice, superintendent, Providence Division, New York, New Haven & Hartford Railroad. Headquarters, Providence, R. I.

E. D. Flad, assistant supervisor of Division No. 32, Pennsylvania Railroad. Headquarters, Earnest, Pa.

W. H. Foster, superintendent, New York Division, New York, New Haven & Hartford Railroad. Headquarters, Harlem River, N. Y.

E. W. Fowler, inspector of transportation, Chicago Great Western Railroad. Headquarters, Chicago, Ill.

George H. Frazine, master carpenter, Cleveland carpenter department. Lake Shore and Michigan Southern Railway and Dunkirk, Allegheny Valley and Pittsburgh R. R. Headquarters, Cleveland, Ohio.

J. D. Gallary, superintendent, Shore Line Division, New York, New Haven & Hartford Railroad. Headquarters, New Haven, Conn.

R. A. Grammes, terminal trainmaster, Baltimore and Ohio Railroad. Headquarters, Philadelphia, Pa.

R. J. Greiner, general foreman, Missouri, Kansas & Texas. Headquarters, Smithville, Texas.

S. P. Henderson, superintendent, Southern Division, Chicago and Alton Railroad. Headquarters, Bloomington, Ill.

Paul Hevener, superintendent, Insurance Department, Rock Island Lines.

W. C. Hudson, superintendent, Washington Division, Southern Railway. Headquarters, Alexandria, Va.

J. H. Jackson, superintendent, Newark Division, Baltimore and Ohio Railroad. Headquarters, Newark, Ohio.

C. G. Johnson, supervisor of efficiency, Minneapolis, St. Paul and Sault Ste. Marie Railroad. Headquarters, Minneapolis, Minn.

A. B. Kearsey, general manager, Pascagoula Moss Point Northern R. R. Headquarters, Moss Point, Miss.

D. F. Kirkland, general manager, Georgia and Florida.

E. E. Lillie, superintendent, Traction Division, Spokane and Inland Empire Railroad. Headquarters, Spokane, Wash.

J. T. Loree, superintendent, Susquehanna Division, Delaware and Hudson Railroad. Headquarters, Oneonta, N. Y.

M. D. Miller, superintendent, Western Division, New York, New Haven & Hartford Railroad. Headquarters, Waterbury, Conn.

Harry D. Mudgett, trainmaster, Northern Pacific. Headquarters, Livingston, Mont.

J. H. Nelson, terminal trainmaster, Pere Marquette R. R. Headquarters, Detroit, Mich.

J. C. Nolan, superintendent, St. Louis, Brownsville & Mexico Railroad. Headquarters, Kingsville, Texas.

Ralph Peebles, general manager, Tavares & Gulf Railroad. Headquarters, Tavares, Fla.

G. V. Peyton, superintendent, Columbia Division, Southern Railway. Headquarters, Columbia, S. C.

A. B. Ramsdell, superintendent, Illinois Division, Chicago, Rock Island and Pacific. Headquarters, Rock Island, Ill.

J. W. Root, assistant superintendent, Wheeling Division, Baltimore and Ohio Railroad. Headquarters, Benwood, W. Va.

G. W. Rourke, assistant general manager, Second District, Chicago, Rock Island and Pacific. Headquarters, Topeka, Kansas.

Mott Sawyer, superintendent, Idaho Division, Chicago, Milwaukee and St. Paul Railroad. Headquarters, Spokane, Wash.

S. G. Strickland, general manager, Chicago & North Western Railway. Headquarters, Chicago, Ill.

R. C. Ten Eyck, superintendent, Grand River Division, Denver and Rio Grande Railroad. Headquarters, Helper, Utah.

W. J. Towne, assistant general manager, Chicago & North Western Ry. Headquarters, Chicago, Ill.

G. B. Vilas, general superintendent, Chicago & North Western Ry. Headquarters, Chicago, Ill.

P. G. Walton, superintendent, North Carolina Division, Seaboard Air Line Railway. Headquarters, Hamlet, N. C.

J. B. White, assistant trainmaster, Baltimore and Ohio. Headquarters, Brunswick, Md.

F. F. Whittlesey, acting general manager, Tennessee Railway. Headquarters, Oneida, Tenn.

L. B. Wickersham, assistant general manager, Oregon Electric Ry., Spokane and Inland Empire Railroad and the United Railways Co. Headquarters, Portland, Oregon.

Traffic.

G. E. Allen, division passenger agent, Mobile and Ohio Railroad. Headquarters, Jackson, Tenn.

H. S. Bradley, traffic manager, freight and passenger traffic, Ann Arbor Railroad. Headquarters, Toledo, Ohio.

Charles A. Brister, traffic manager, Cleveland, Cincinnati, Chicago and St. Louis Ry. Headquarters, Cincinnati, Ohio.

A. J. Brouthers, traveling passenger agent, Chicago, Milwaukee and St. Paul Railway. Headquarters, New York City.

F. W. Buddard, agent, Baltimore and Ohio Railroad. Headquarters, Bridgeport, W. Va.

H. C. Bush, member, Committee on Uniform Classification. Headquarters, Chicago, Ill.

C. J. Buster, general traffic manager, Big Four Railroad.

Willis Callaway, Florida agent, Atlanta, Birmingham and Atlantic. Headquarters, Jacksonville, Fla.

C. A. Carpenter, assistant general freight agent, Seaboard Air Line Railway. Headquarters, Jacksonville, Fla.

J. C. Carpenter, agent, Baltimore and Ohio Railroad. Headquarters, Jane Lew, W. Va.

A. S. Collins, general dairy agent, Rock Island Lines. Headquarters, Cedar Rapids, Iowa.

C. T. Cope, assistant commercial agent, Southern Railway. Headquarters, Rome, Ga.

Xerxes H. Cornell, master of transportation, Chicago and Alton Railroad. Headquarters, Bloomington, Ill.

F. K. Crosby, chief of tariff bureau, Chicago, Rock Island and Pacific. Headquarters, Chicago, Ill.

W. B. Harris, general agent, Western Express Company. Headquarters, Chicago, Ill.

M. Hartmann, general Western agent, United Fruit Company. Headquarters, Chicago, Ill.

C. E. Holland, agent, Baltimore and Ohio Railroad. Headquarters, Huron, Ind.

W. N. Kee, ticket agent, Chicago, Milwaukee and St. Paul Ry. Headquarters, New York.

J. C. LaCoste, assistant general freight agent, Chicago, Rock Island and Pacific Railroad. Headquarters, Kansas City, Mo.

C. B. Lindsay, commercial freight agent, Denver and Rio Grande and Western Pacific Railroads. Headquarters, Pine Bluff, Ark.

John McAuliffe, Jr., foreign freight agent, New York Central and Hudson River Railroad. Headquarters, New York.

P. H. McCue, agent, Baltimore and Ohio Railroad. Headquarters, Cranberry, W. Va.

E. F. McDaneld, general agent, freight department, Chicago and Alton Railroad. Headquarters, Salt Lake City, Utah.

J. J. McManus, assistant freight claim agent, Northern Pacific Railway. Headquarters, Tacoma, Wash.

B. S. Merritt, general agent, Great Northern Railroad. Headquarters, Great Falls, Mont.

H. R. Mitchell, commercial agent, Great Northern Railroad. Headquarters, Kansas City, Mo.

R. C. Moore, agent, Baltimore and Ohio Railroad. Headquarters, Georgia, Ind.

H. A. Platt, traveling freight agent, Southern Railway. Headquarters, Rome, Ga.

E. S. Reader, general agent, Western Pacific Railway, Denver and Rio Grande Railroad and Missouri Pacific-Iron Mountain System. Headquarters, Reno, Nev.

H. F. Sanborn, general agent, freight department, Great Northern Railway. Headquarters, St. Paul, Minn.

W. A. Shropshire, general agent, Western Maryland Ry. Headquarters, Baltimore, Md.

T. P. Smith, Jr., agent, Baltimore and Ohio Railroad. Headquarters, Joppa, Md.

Bryan Snyder, traffic manager, New Iberia & Northern Railroad. Headquarters, New Iberia, La.

R. E. Tipton, general freight and passenger agent, Galveston, Houston and Texas. Headquarters, Smithville, Texas.

F. E. Water, traveling freight agent, Atlanta, Birmingham & Atlantic Railroad. Headquarters, Atlanta, Ga.

Herman Weigh, general tourist agent, White Pass & Yukon Railroad. Headquarters, Chicago, Ill.

W. S. Wilson, agent, Baltimore and Ohio Railroad. Headquarters, Farmingdale, Ill.

Purchasing.

W. R. Dawson, storekeeper, Cincinnati, Hamilton and Dayton Railway. Headquarters, Dayton, Ohio.

Miscellaneous.

William C. Edes, chairman, Alaska Railroad Commission.

Dr. J. J. McGarrell, medical examiner, Baltimore and Ohio Railroad. Headquarters, Lorain, Ohio.

Frederick Mears, member, Alaska Railroad Commission.

Thomas Riggs, Jr., member, Alaska Railroad Commission.

Robert C. Wood, member, New York State Public Service Commission, First District. Headquarters, New York.

RESIGNATIONS.

Executive.

Benjamin Campbell, vice-president, Boston & Maine Railroad.

S. M. Felton, receiver, Pere Marquette Railroad.

Charles H. Hix, president and general manager, Norfolk Southern Railroad.

Legal.

William S. Kies, general counsel, Chicago & Western Indiana Railroad.

Accounting.

W. H. Anderson, auditor, freight accounts, Union Pacific Railroad.

Engineering and Mechanical.

Max Chase, general foreman, Missouri, Kansas & Texas Lines.

Edward C. Carter, chief engineer, Chicago & North Western Railroad.

J. F. Dunn, superintendent of motive power and machinery, Oregon Short Line.

James Healy, master mechanic, Oregon-Washington Railroad and Navigation Company.

G. H. Langton, master mechanic, Texas and Pacific Railroad.

H. J. Osborne, superintendent of motive power, South Dakota Central Railroad.

R. O. Prendergrast, mechanical superintendent, Bangor and Aroostook Railroad.

A. K. Shurtleff, office engineer, Chicago, Rock Island and Pacific Railroad.

H. C. Van Buskirk, mechanical superintendent, First District, Rock Island Lines.

Operation.

W. D. Cantillon, general manager, Chicago & North Western Ry.

C. A. Carpenter, general manager, Tavares & Gulf Railroad.

Xerxes H. Cornell, superintendent of transportation, Pere Marquette Railroad.

F. C. Farr, superintendent, Traction Division, Spokane and Inland Empire Railroad.

W. A. Gore, superintendent, North Carolina Division, Seaboard Air Line Railroad.

C. W. Miller, superintendent, Southern division, Chicago and Alton Railroad.

C. H. Motsett, superintendent, New York Division, New York, New Haven and Hartford Railroad.

J. H. Nelson, superintendent of transportation, Florida East Coast Railroad.

J. H. Rosenstock, superintendent, Susquehanna Division, Delaware and Hudson Railroad.

Stewart Starr, general manager, Moss Point Northern Railroad.

N. A. Williams, superintendent, Grand River Division, Denver and Rio Grande Railroad.

Traffic.

Joseph H. Banks, traveling freight agent, Atlanta, Birmingham and Atlantic Railroad.

S. S. Butler, traffic manager, New Iberia and Northern Railroad.

John J. Kirby, general passenger agent, Ann Arbor Railroad.

W. F. McClure, general freight and passenger agent, Galveston, Houston and Henderson Railroad.

H. E. Partridge, Jr., Florida agent, Atlanta, Birmingham and Atlantic Railroad.

H. W. Prickett, general agent of the freight department, Chicago and Alton Railroad.

Fred Smith, assistant general freight agent, Chicago, Rock Island and Pacific Railroad.

R. M. Smith, general agent, freight department, Great Northern Railroad.

J. C. Toynbee, commercial agent, St. Louis Southwestern Railway.

H. E. Williams, general agent, Western Maryland Railroad.

Miscellaneous.

D. R. McLennan, supervisor of insurance fund, Rock Island Lines.

OBITUARY.

Frank Lynn Borton, western superintendent of the Star Union Line at Chicago, died at his home in Evanston, Ill., on June 2nd. Mr. Borton was born on February 23, 1863, near Philadelphia, Pa., and was educated at Westown Boarding School. He began railway work in February, 1881, as a clerk in the motive power department of the Columbus, Chicago & Indiana Central at Columbus, Ohio. He was then to April, 1888, stenographer to the western manager of the Star Union Line. From 1888, to July, 1896, he was chief clerk to the western superintendent at Chicago, then chief clerk to the manager and the western superintendent, and since January 1, 1907, had been western superintendent of the same line, with headquarters at Chicago.

Jacob O. Brinkerhoff, superintendent of the Kansas Division of the Union Pacific at Kansas City, died in that city on May 22nd. He was born on March 3, 1839, in Tioga County, N. Y., and began railway work in May, 1865, as a brakeman on the Union Pacific Railway. He was then consecutively baggageman, freight and passenger conductor and local despatcher at Kansas City, Mo., until July, 1877, when he was appointed superintendent of the Smoky Hill Division. The following year he was appointed superintendent of the Kaw Valley Division, remaining in that position until November, 1884, when he was appointed superintendent of the Kansas Division. From January 1, 1891, to November, 1898, he was general superintendent, and since that time was superintendent of the same division. Mr. Brinkerhoff's entire service was with the Union Pacific Railway and its successor, the Union Pacific Railroad.

W. H. Brimson, formerly from February, 1904, to September, 1910, general superintendent of the Baltimore & Ohio Southwestern, died recently at his home in Washington, D. C., aged 65 years. Mr. Brimson began railway work in 1862 as messenger boy for the Cleveland and Toledo. Later he was consecutively secretary to superintendent, train despatcher, trainmaster and superintendent telegraph and superintendent of the Cincinnati, Sandusky & Cleveland, and subsequently was superintendent of the Duluth & Iron Range, assistant superintendent of the Northern Pacific, and from 1892 to August, 1895, superintendent of the Rocky Mountain Division of the latter road at Missoula, Mont. From November, 1895, to June, 1896, Mr. Brimson was superintendent of the Brainerd & Northern Minnesota, and in May, 1897, he went to the Baltimore & Ohio Southwestern as division superintendent at Chillicothe, Ohio, which position he held until he was promoted to general superintendent in February, 1904.

D. C. Cheney, fuel inspector of the Chicago, Milwaukee & St. Paul, died at his home in Chicago, on May 29th, aged 60 years. He had been connected with the St. Paul since 1873, beginning as a telegraph operator and filling successively the positions of assistant train despatcher, chief despatcher, trainmaster, division superintendent, general superintendent of the Middle District until 1910, when he was appointed fuel inspector.

Pennel Cherrington, general attorney of the San Pedro, Los Angeles & Salt Lake R. R., died at the Good Samaritan Hospital, Los Angeles, Cal., May 22nd. Mr. Cherrington was getting a glass of water for his little son the previous Monday morning, fell and sustained fatal injuries.

Former **Judge John Forrest Dillon,** consulting counsel of the Western Union Telegraph Company, and formerly general counsel of the Missouri Pacific, died at his home in New York City on May 5th. He was born on December 25, 1831, in Montgomery County, N. Y., and was appointed general counsel of the Union Pacific in 1879, which position he held for many years. He also became general counsel for the Missouri Pacific and the Texas & Pacific and consulting counsel for the Manhattan Elevated Railway Company of New York City. Previous to taking up railway work he served for many years on the bench and was the author of numerous legal works.

J. Roy Dillon, president of the Texas City Terminal Company, with headquarters at Texas City, Tex., died at Mineral Wells, Tex., on May 18th.

Walter J. Eddington, general foreman of the Atchison, Topeka & Santa Fe Ry., at Corwith, Ill., died at his home in Chicago, May 29th, aged 65 years.

Martin Luther Gardner, assistant to the principal assistant engineer of the New Jersey Division of the Pennsylvania Railroad, with headquarters at New York, died on May 14th at his home in Newark, N. J., at the age of 51.

Henry W. Gays, general manager of the Ottawa & New York Railway, died at Ottawa, Ont., May 31st. He was born at Brant, N. Y., March 21, 1849. Previous to his connection with the Ottawa & New York Railway, Mr. Gays was general manager of the St. Louis, Chicago & St. Paul Railway, and the Chicago, Peoria & St. Louis Railway.

Thomas R. Limer, superintendent of transportation of the Hocking Valley, with headquarters at Columbus, Ohio, died on May 19th, aged 50 years. Mr. Limer had been in railway service since December, 1886, and had been connected with the Columbus, Hocking Valley & Toledo and its successor, the Hocking Valley, since March, 1890. He was consecutively chief clerk in charge of the car record office, car service agent, superintendent of car service and superintendent of transportation, having held the latter position four years.

A. A. Sinclair, superintendent of bridges and buildings of the Duluth, Missabe & Northern Railway, was run down by an engine in the proctor yards near Duluth, Minn., May 14th. He was taken to a Duluth hospital, but died within a short time.

J. B. Smalley, assistant general manager of the Second District of the Chicago, Rock Island & Pacific, with headquarters at Topeka, Kan., died in the latter city on May 8th. His death was due to a stroke of paralysis, brought on, it is said by strain caused by hours of work without sleep in the flood district of the Cimarron Valley, in Western Kansas. He suffered the attack on May 6th while superintending the reconstruction of washed out bridges. Mr. Smalley has been in railway service about 40 years.

Sir William Whyte, a director and formerly vice-president of the Canadian Pacific Railway, died at Coronado Beach, Cal., April 14th. Sir William Whyte was born in Fifeshire, Scotland, on September 15, 1843. He was educated in Scotland, and in May, 1862, commenced railway work as a station agent on the West of Fife Railway. He came to Canada in June, 1863, and secured a position on the Grand Trunk Railway, for which company he worked for twenty years. He was freight agent at Toronto for a time and was for over one year division superintendent. From 1883 to 1884 he was general superintendent of the Credit Valley Railway, and also served in that position with the Ontario & Quebec Railway, which also included the Credit Valley and Toronto, Grey & Bruce Railways. In 1884-1885 he became general superintendent of the Ontario Division of the Canadian Pacific Railway, which embraced all the lines in Ontario west of Smith Falls Junction. The following years he was general superintendent of the Eastern Division as well as the Ontario Division, and from 1886 to 1897 he served as general superintendent of the Western Division. It was in 1897 that he was appointed manager of the Western Lines, including all lines west of Lake Superior, and occupied this position until 1901, when he became assistant to the president. This position he filled for three years, and on January 1, 1904, was elected second vice-president, with headquarters at Winnipeg, which position he filled up to a little over two years ago, when he retired from active service, although continuing as a director of the company.

William Wainwright.

WILLIAM WAINWRIGHT, vice-president of the Grand Trunk and Grand Trunk Pacific, died on May 14th, at Atlantic City, New Jersey, at the age of seventy-four.

He was born at Manchester, England, April 30, 1840, and entered railway service there in 1858, with the Manchester, Sheffield and Lincolnshire Railway, beginning as junior clerk and passing through various positions until he became general manager. He became associated with the Grand Trunk Railway in 1862 as senior clerk in the chief accountant's office and from 1863 to 1867, was secretary to the managing director and until 1872, senior clerk to the managing director in charge of car mileage department. He became general passenger agent in 1872 and in 1881, was appointed to the position of assistant manager. In 1890, he was appointed assistant general manager and in 1896 became general manager. From 1900 to 1907, he was comptroller and in July of the latter year, was elected fourth vice-president. In 1890, he became second vice-president of the Grand Trunk Railway and the Grand Trunk Pacific Railway and later when the numerical designations of the vice-presidents were abolished, he was appointed vice-president with seniority over other vice-presidents. Shortly after the death of President C. M. Hays, who it will be remembered lost his life in the Titanic disaster, Mr. Wainwright was placed in charge of all the company's affairs pending the appointment of a president to which position he was the logical successor had it not been for his advanced years. His railroad record extended over a period of fifty-six years.

DIVIDEND NOTICES.

Office of The United Gas Improvement Co.

N. W. corner Broad and Arch Streets.

Philadelphia, June 10, 1914.

The Directors have this day declared a quarterly dividend of two per cent ($1.00 per share), payable July 15, 1914, to stockholders of record at the close of business June 30, 1914. Checks will be mailed.

LEWIS LILLIE, Treasurer.

THE NORTHERN CENTRAL RY. CO.

Baltimore, June 9, 1914.

The Board of Directors has this day declared a semi-annual dividend of four per cent ($2 per share) upon the Capital Stock, payable on and after July 15, 1914, to stockholders as registered June 30, 1914. Checks will be mailed to stockholders who have filed permanent dividend orders.

JAMES F. FAHNESTOCK, Treasurer.

Railway World

VOL. LVIII. JULY, 1914 No. 7

Important Developments in the Transportation Field

RAILWAY MAIL PAY DEVELOPMENTS

The callousness of the Post Office Department and Congress toward the rights of the carriers in connection with proper compensation for carrying the mails continues to astonish the country. Attention was called in last month's issue to the statement of Mr. Ralph Peters, chairman of the Committee on Railway Mail Pay with regard to the Moon bill which, if passed, would not only fail to provide for the enormous additional burden placed upon the railways by the parcel post, but would actually reduce the inadequate payments now being made, by about $10,000,000 annually.

In reply to Mr. Peters' statement, Congressman Moon, who, by the way, is chairman of the Post Office Committee of the House of Representatives, attempts to defend his bill by stating that he does not believe it will produce a loss to the railroads of $10,000,000 a year in addition to the loss they have already suffered. He also asserts that the introduction of his bill was delayed as long as possible and that a policy of delay has been practiced by the railroads for sixteen years. Both these assertions, the carriers flatly deny. In the first place, the determination of what the railways would lose under the Moon bill is, as Mr. Peters points out, a question of fact, impossible of determination except by technical experts, and no body can better judge of that fact than the Joint Congressional Committee which will soon submit its report for the consideration of Congress. As to the policy of delay to which Congressman Moon refers, the fact is that the railroads have been seeking by every proper means, during the past twenty-five years to obtain from Congress fair treatment on this subject. To quote from a second statement published by Mr. Peters on June 25th:

"The railway companies have for the last eighteen months been urging the Postmaster-General to no longer delay giving attention to adequately compensating them for carrying the increased burden of the parcel post. They have, indeed, brought to public attention every reason that they could suggest why Congress should indefinitely delay any action to give them less than their services are worth.

"Congressman Moon further asserts that 'the only material difference between the Joint Congressional Committee and the Committee of Congressman Moon is that the Commission proposes a higher rate than the Committee.' The fact is that the Commission has not yet reported its recommendations, and that the rates of pay proposed by Congressman Moon's bill are absolutely confiscatory.

"We are in full accord with the conclusions of Chairman Moon that the old method of weighing the mails **once in four years** is altogether unfair, unscientific and unbusinesslike. We have urged for many years that the mails should be weighed every year for the whole country and the pay adjusted accordingly. The claim is also unfounded that the railroads divert the mails so as to pad them when the regular weighing is in progress. The railroads have no control over the movement of the mails; the routing is all done by the officers of the Post Office Department. The Department officers will readily verify this statement.

"The railroads are prepared to abide by the conclusions of the Joint Congressional Committee upon the fact as to whether or not they are now overpaid. They are also eager to co-operate with the government in arriving at a policy to govern future methods of payment which shall protect the government, and at the same time secure to the railroads that pay to which they are justly entitled."

How this attitude of Congressman Moon and the Post Office Departemnt is viewed by ex-Senator Jonathan Bourne, Jr., chairman of the Joint Congressional Committee on Railway Mail Pay, is shown in the following statement which he made public on July 9th:

"In its persistent efforts to secure dictatorial power the Post Office Department has broken all records. The Department Bill, H. R. 17042, provides that 'not exceeding' certain rates shall be paid to steam railroads for transportation of the mail. The same bill also contains a clause compelling the railroads to carry mail.

"It is claimed that 'not exceeding' is but a continuance of existing law, but heretofore the railroads have not been compelled by law to carry mail. They are supposed to have accepted the rates as a voluntary act which in itself was assumed to be sufficient guarantee that rates will not be too low and it was only necessary for Congress to fix maximum rates. But this assumption was not sound as a railroad would hardly dare to refuse to carry mail because of irritation resultant from such action in the community in which the road operates.

"The Interstate Commerce Commission is now authorized to fix maximum freight rates, it being left to the railroads to fix the minimum. It would be considered preposterous that the Commission should fix the maximum rates at which railroads must carry freight and leave the shippers to fix the minimum. Yet this is the very thing that the Post Office Department proposes for mail pay in the Departmental Bill. Congress is to fix the maximum rates and the shipper—the Post Office Department—is to fix the minimum rates, and the railroads are to be compelled to carry the mail. This is a proposition without parallel in the history of rate regulation. It is Bureaucracy run mad."

Such a statement by Senator Bourne constitutes a most impressive warning against the tendency displayed by the present Administration to unfairly interfere with railway activities and in fact, to openly rob the carriers simply because, at the present time, they apparently have the power to do so. Undoubtedly Senator Bourne would have hesitated to censure the Post Office Department so severely unless he felt that the railways were being subjected to treatment of an unusually unfair character, and it can be confidently stated that no man in public life knows more, at the present time, what the requirements of the mail service really are and what the measure of compensation should be for transporting the mails. Senator Bourne and his committee, will find the country solidly behind them in their desire to give the carriers a square deal. The efforts of the Post Office Department and Congressman Moon to offset the constructive results of an investigation of this character, is little short of contemptible, and is doomed to defeat. In another statement issued on June 27th, Senator Bourne refers, in more detail, to the Moon bill and to the various investigations by the Post Office Department in connection with railway mail pay, as follows:

"In its insistent efforts to reduce railway mail pay, the Post Office Department has attempted to dictate to Congress rates which, if adopted, would be confiscatory.

"House Bill, 17042, introduced by Mr. Moon, Chairman of the House Committee on Post Office and Post Roads, was, I am informed, prepared by officials of the Post Office Department and introduced by Mr. Moon at the request of the Postmaster General. Under that bill, the average revenue to the railroads would be less than 21.8 cents for hauling a 60-foot mail car one mile. I assert that this rate is confiscatory. I realize the responsibility of making such an assertion, but its justification lies in the Post Office Department's own figures.

"The Department spent several years in an attempted elaborate investigation of railroad expenses and car space. It propounded over 140 interrogatories to the 796 railroads carrying mail. The railroads spent over $250,000 in securing the information asked for, and it cost the Government $19,500 to compile, tabulate and present such information in what is known as House Document No. 105, 62d Congress, 1st Session. According to Table 7 of that Document the operating expenses and taxes alone amounted to 3.08 mills per mail car foot mile, or 18.48 cents for hauling a 60-foot mail car one mile. This excludes the advertising and other traffic expenses with which the Department claimed the mail should not be burdened. The margin between this 18.48 cents and the less than 21.8 cents allowed in the Departmental Bill, is so small that if similarly unprofitable rates were made on all railroad traffic, the roads must necessarily go into bankruptcy, because there must be a sufficient allowance for capital charges. According to the Statistics of Railways in the United States for 1911 published by the Interstate Commerce Commission, operating expenses and taxes were 72.53 per cent of the operating revenues. At the same ratio, 7 cents instead of the 3.32 cents allowed under the Department rates, would have to be added to the 18.48 cents to allow for capital charges, as the 18.48 cents covers only operating expenses and taxes. In other words, 25.48 cents would have to be paid the railroads for hauling a 60-foot car one mile to yield the railroads from the mail business the average rate of profit now realized on all railroad traffic, both freight and passenger taken together.

"This incident shows the danger of accepting and acting upon the recommendations of the Departments. It also illustrates the necessity for checking the present trend toward the initiation and control of legislation by officers of the administrative branch of government."

Newspaper editors throughout the country are attacking, in an unusually vigorous manner, the glaringly unfair attitude of the Post Office Department. So far as we can learn, the country, as represented by its newspapers, is practically a unit in its opposition to the present attitude of the Post Office Department.

The Providence, R. I., *Journal* of June 19th, for example, remarks that "No schedule that has in it the element of confiscation should be approved by Congress," and significantly adds that, 'The probability is that the Post Office, when all charges are made, is not self-sustained. But there should be no attempt to conceal the exact condition of the Department. If there is a deficit the people should know all about it. It is improper to make a better showing than the facts warrant by compelling the railroads to handle the mail at a heavy loss; in fact, such a procedure is palpably dishonest."

The Wilmington, N. C., *Star* in an editorial of June 19th affirms that "This Government of ours is too great and too powerful to saddle the expense of an extra public service on the carriers without expecting to pay its way," and the Atlanta, Ga., *Constitution* of June 20th, following the same line of reasoning affirms that, "The Government cannot afford to take service for nothing even from a railroad. That savors too much of confiscation. Even the railroads are entitled to a square deal."

The Chicago *Tribune* of June 18th affirms that the railroads should be paid not only for the cost of the service they give, but should be allowed a fair profit, and adds that the American people want a square deal for all. In the eyes of the Savannah, Ga., *News* of June 22d, "It looks a little as if the Post Office Department was bent on making it appear that the Department is self-sustaining, even if, in order to do so, it has to be unjust to the railroads."

The Fall River, Mass., *Herald* declares that the railroads are making out a strong case which is getting the general endorsement of the press, and the Jackson, Mich., *Patriot* affirms that the Government should set the example of being honest and fair with all its people and that it is not, is evidence of the low tone of morals prevailing among the politicians who run the Government."

Quotations along similar lines could be quoted almost indefinitely as newspaper editors generally have taken up the cause of the railways in this particular. The following editorial, however, from the New York *Sun* of June 23d, sums up the situation so well that it has been found desirable to quote it in full:

"That the railroads of this country are underpaid by from $10,000,000 to $15,000,000 a year for transporting the mails is the conclusion reached, after careful study, by men of such opposed interests as Ralph Peters, President of the Long Island Railroad, and Robert A. Turner, Secretary of the Joint Congressional Committee on Second Class Mail Matter and Compensation for Transportation of Mails. M. O. Lorenz, Associate Statistician of the Interstate Commerce Commission, 'thinks the evidence indicates an underpayment of at least ten per cent,' and recommends a further test of the figures.

"Louis D. Brandeis, who to put it mildly, is not overgenerous to the carrier corporations, finds that **'it seems clear that the railway mail service is at present unremunerative to them.'**

"This condition of underpayment was recognized before the parcel post came into being. Imposing that burden on the railroads without payment for it made the situation more unfair. The railroads complained and Congress, acknowledging the justice of their demand for readjustment, appointed, more than a year ago, the joint committee mentioned above, of which Senator Bourne was made chairman, with Senators Bankhead and Weeks and Representatives Lloyd, Richardson and Tuttle as his associates. This Committee undertook an exhaustive study of the subject, planning to devise a scheme of payment fair to the carriers and the Government and elastic enough to accommodate any changes in the service occasioned by future growth and development.

"Since then Senator Bourne and Representative Richardson have been retired from the Congress, but because of the importance of the matter intrusted to them they have served without pay on the committee. Its researches have been careful and the expectation of Congress and the railroads was that its report and recommendations would furnish a sound basis for intelligent legislation on an intricate and highly technical subject.

"But while this reasonable and proper method of correcting the inequalities which mark one detail of the Government's dealing with the railroads was engrossing the attention of those interested in the subject the Post Office Department has had another idea, which came to general knowledge, when, at midnight on the evening of the day preceding that on which the joint committee's bill was to have been introduced, Chairman Bourne was informed over the telephone that Postmaster General Burleson 'insisted' that Chairman Moon, of the House Committee on Post Offices and Post Roads, should introduce a bill of his own and that this should be 'recognized as the Administration bill.'

"By this proceeding, wholly unexpected by the joint committee, the labors of that body and the special knowledge obtained by it were ignored; **its recommendations were discarded, and the time and effort it had expended were lost. Why were these sacrifices made?** An examination of the committee's bill and of the Moon measure throws light on what might otherwise be a mystery.

"The joint committee's bill is confined to railway mail pay, and provides for line rates one cent a mile higher than the Moon bill. The Moon bill also makes the terminal allowances about 25 per cent lower than the committee bill. Here comparisons must stop, because the committee bill deals with nothing else; here the popular appeal of the Moon bill lies, in the opinion of its authors, because it 'hits the roads again,' and here is the colored gentleman in the woodpile:

"The Moon bill requires that all assistant postmasters, including those now in the classified service, shall take a civil service examination within ninety days. These assistants are mostly officers who have held their jobs because they were competent; those jobs are wanted by hungry Democrats; under the false claim of extending the civil service the Administration will be able to oust some of them and put Democrats in their places.

"In this lies the appeal to the Democrats in Congress; add to it that the Moon bill caters to the anti-railroad prejudice of the country, and a strong combination results. The joint committee offers a fair and reasonable adjustment of rates to be paid for service actually performed by the railroads; the Moon bill joins politics to office grabbing, and the Wilson Administration supports the latter.

"As for the details of the Moon bill so far as they affect the underpayment of the railroads, which offers the excuse for its introduction, **they**

reveal an utter disregard for the rights of the carriers.

"These unfortunates must, under its provisions, provide terminal post offices for handling and distributing the mails, as directed by the Postmaster General.

"They must furnish free transportation to the officers of the Post Office Department and the Postal Service traveling on official business, without regard to whether it concerns the railway mail service; the bill puts the railroads at the mercy of the Postmaster General as to the conveyance of the mails in every detail.

"It provides that 'clerical and other assistance' and office rent for it shall be paid out of the appropriation 'for inland transportation by railway routes.'

"It gives to the Postmaster General power to fix in his discretion payment for carrying all mail matter other than first class, including, of course, the parcel post business.

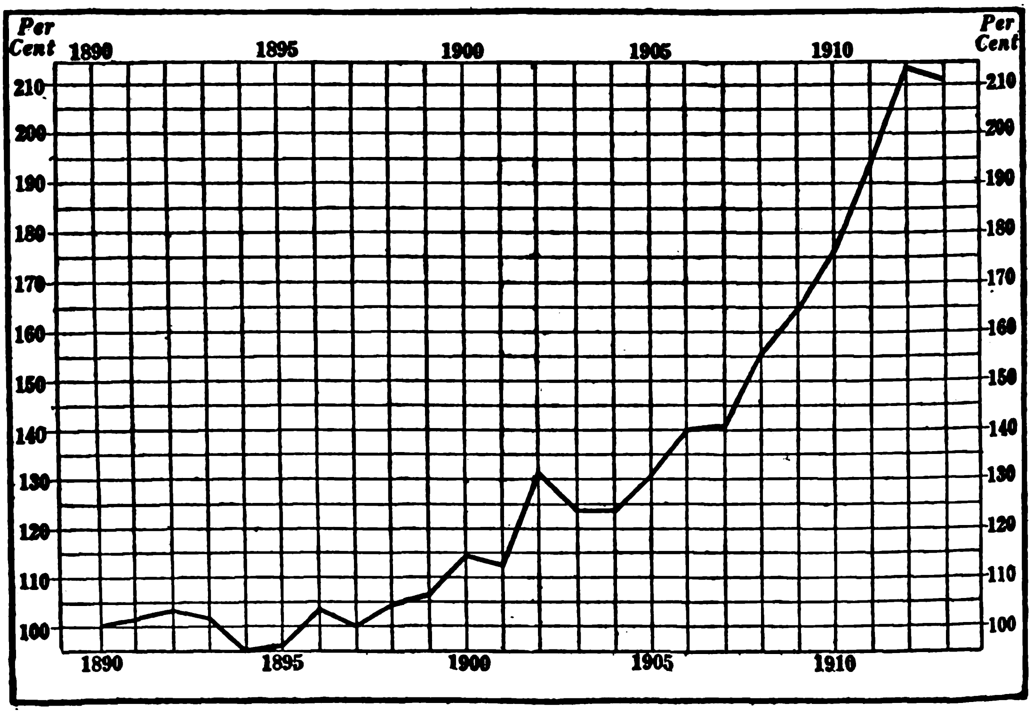
"It betrays in every section whose applicacation makes possible the revelation of such a purpose **a design not to treat the carriers fairly, not to pay just rates for services rendered,** but still further to milk the roads, to force them to do part of the work for nothing, and generally to starve them in their relations with the Government."

"This amazing product of politics and hunger is to be discussed at a hearing tomorrow. It will not be defended as scientific or suitable; its strength will be in partisan playing for jobs and the supposed hatred of a substantial fraction of the public for railroads. The railroads will be represented, to plead for a consideration of the merits of the case, for a study of the joint committee's report, and to test the boasted love of the American people for fair play for all.

"Are the railroads to get that fair play from any department of the Federal Government?"

The New York *Annalist* adds a most excellent exhibit to the controversy by preparing and publishing the accompanying chart which is plotted on a percentage basis and shows the number of pieces of mail transported by the railroads in the United States per dollar paid them by the Government for that service. As the *Annalist* points out, commencing in 1902, an astonishing growth set in and in the last fiscal year, the railroads were giving more than twice as much service per dollar of cost as in 1890. It would be hard to find better proof, if it were needed that the railroads' claim for more pay is based on substantial grounds. The chart is prepared from official figures.

A Dollar's Worth of Mail Transportation



This chart shows that the railways during the last fiscal year gave twice as much service per dollar of cost in transporting the mails as they gave in 1890.

A CONFLICT OF SIGNALS

Would it not be better to prevent this collision than to investigate it after it has happened?
—McCay in the New York *American*.

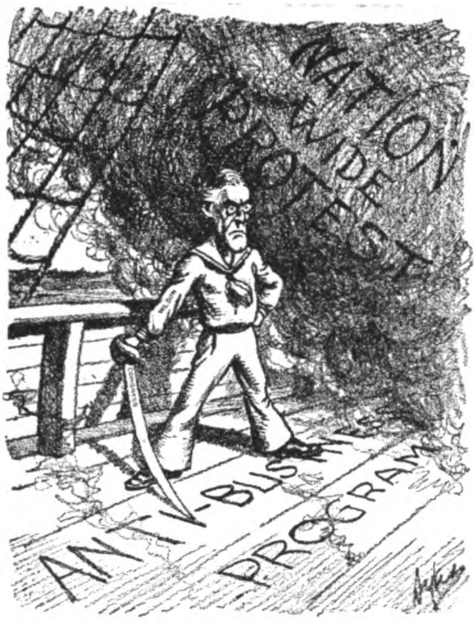
THE FINANCIAL ASPECT OF THE SAFETY MOVEMENT

Safety first stands for the conservation of human life and for that reason alone, it cannot be made too prominent a factor in railway operations. There is another side to the question, however, which gives it a very practical application so far as financial results are concerned. In the first place, hundreds of thousands of dollars worth of equipment has been annually destroyed and enormous quantities of freight ruined by careless methods and habits, the correction of which comes largely under the influence of the greater safety movement now in active operation on practically all important railroads of the country. Second, such methods and habits have not only cost the loss of the services of many valuable men, but have also been the occasion of heavy damage suits which have resulted in the payment by the railroads of hundreds of thousands of dollars to the relatives of the men who have lost their lives and to the men themselves for serious injuries sustained. While it is generally understood that these damages represent no inconsiderable outlay of money, the extent of the loss would be a matter of surprise to those who have not investigated it.

The great majority of these cases for damages are either settled by compromise or through a decision of the lower courts. It is only when the damage claimed, is, in the opinion of railway legal authorities, extremely excessive, that the cases have been carried to the higher courts. It is of interest to note therefore, what action has been taken by these courts in meeting the claims of the injured. Just an even fifty big verdicts have been tested in the highest courts of the various States and the courts have allowed verdicts to stand for $35,000 in four cases, $30,000 in one case, $25,000 in three cases and $20,000 in four cases. These decisions apply to damages allowed railroad men themselves for injuries. Of course, it is different in cases of death. Some of the States allow only $5,000 to the family in case of the death, while others leave the amount to a jury.

But for injuries, railroad companies have paid out $628,883 to employes under the judgments of the highest courts of the land for injuries in fifty cases. These fifty cases are taken from decisions of the various States in which appeals were taken by the railroad companies to the supreme courts on the ground that the verdicts were excessive. Of this sum $325,000 was paid in twelve of the cases. The remaining $303,883 was divided up between thirty-eight other injured railroad men in sums ranging between $1,500 and $17,000.

As a peculiar co-incident nearly all of these holdings were made in the courts of the South and Southwest. Whether or not the courts of that region are more liberal than other courts, or accidents are more



—WHENCE ALL BUT HIM HAD FLED

prevalent in those States is a mere matter of speculation. Texas courts are the crippled railroad man's friend according to the decisions. These courts started off with a judgment for $35,000 for the loss of two legs below the knee by a brakeman, followed this up with $30,000 for another brakeman made a helpless cripple, and followed this up with $20,000 each for three brakemen and one switchman. She gave another switchman $20,000, but the court cut this one down to $15,000. Texas railroads have paid out in these big cases alone $145,000—to six persons.

The other three $35,000 verdicts were paid under judgments affirmed in the supreme courts of Arkansas, Missouri and Idaho. Webster, a brakeman in Arkansas whose injuries consisted of curvature of the spine was paid $35,000. Gordon, a switchman in Missouri received $35,000 for five broken ribs, injured back, pelvis and hip. The Idaho courts compelled the payment of $35,000 to Neil, a freight conductor who was struck by a switch engine.

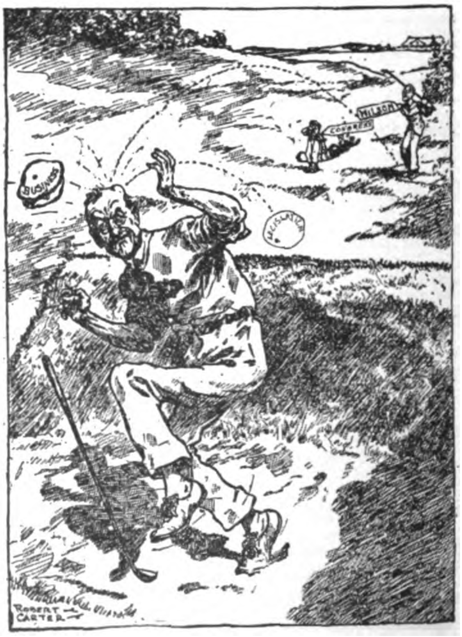
The three $25,000 verdicts were affirmed by the Arkansas and Iowa courts. Arkansas gave Rogers a brakeman $25,000 for loss of both legs and also gave Brown, a brakeman $25,000 for the fracture of his spine. The jury gave Brown $50,000, but he died while the case was pending in the supreme court and the court reduced it to $25,000 for his estate. The courts of Iowa gave Canfield, a section hand, who was generally smashed up in a wreck, $25,000. A jury had allowed $49,000, but the courts thought it was too much.

Two verdicts for $17,000 for injuries have been sustained. These were given in Illinois and Texas. The Illinois courts allowed Eidem, a freight handler, $17,000, by cutting down a verdict for $23,000 to that amount. Brice, a locomotive engineer, was allowed $17,000 in Texas for his leg, which had to be cut off six inches above the ankle. The jury had given him $22,000.

Two verdicts for $15,000 have been allowed railroad men for injuries. The Missouri courts allowed Lessenden, a switchyard employe, $15,000, which was originally for $25,000. Texas allowed Forester, an engineer, $15,000, whose accident caused total deafness.

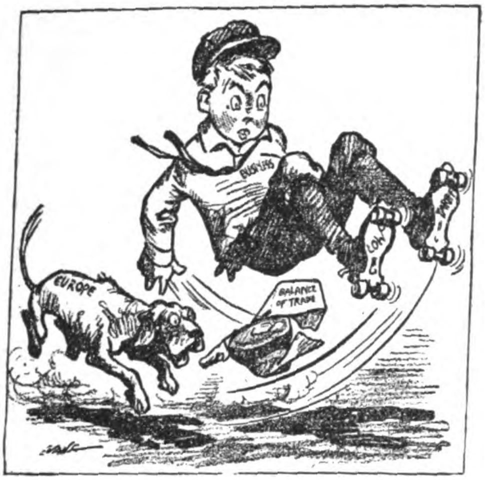
Two verdicts for injuries have been sustained for $14,000, three for $12,000, one for $12,500, two for $11,000 and one for $10,000. Fourteen verdicts have been sustained in amounts ranging from $6,000 to $8,750. The remaining verdicts of the fifty mentioned range from $1,500 to $4,000.

The highest verdict ever rendered for damages for personal injuries according to the decisions was rendered in California. A man by the name of Zibbell secured the judgment against the Southern Pacific Railroad Company. He lost both arms and a leg in an accident. He was twenty-seven years old at the time and was earning $2,500 a year. The jury gave him $100,000. The



"FORE" (PSYCHOLOGICALLY SPEAKING)
—From the New York Sun

A SLIP-UP



supreme court reduced the amount to $70,000. But Zibbell was not a railroad man. He was a horse trainer.

THE ENORMOUS DUTIES ENTAILED IN GOVERNMENT REGULATION OF RAILWAYS

In the June issue of the Railway World attention was called to the growth of the Interstate Commerce Commission as indicative of the larger activities of that body under the present requirements of the interstate commerce law. In brief, this statement showed that the working force of the Commission had grown from a total of 38 in 1888, to a total of 859, in 1913, while the total appropriation in the former year was $125,000 as compared with $1,853,629 in the latter.

The Peoples National Bank of Pittsburgh believing that if the facts of the enormous work and responsibility connected with railway regulation were better known, there would be less public clamor for even greater government control of business has obtained the following statement on the subject from an acknowledged expert. It is believed that no similar investigation has ever been attempted and in compiling the data the aid and suggestion of some of the foremost traffic authorities of the country were drawn upon. The facts and figures are amazing even to those familiar with the subject and have been compiled with painstaking care. They are submitted as an interesting study of a subject with regard to which even many railway officials are not intimately familiar:

ANTI-TRUST BILLS
You simply must hear one more. This is a sweet thing!
CURRENCY BILL

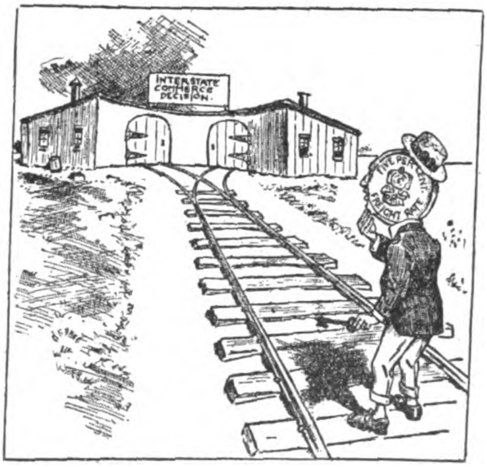
That Trying Moment—When Your Host Insists.—Chicago Daily News.

"The total number of stations outside of the State of Pennsylvania, in the United States, Canada, and Mexico, to which railroads in the State of Pennsylvania can sell tickets is approximately 77,744, multiplied by the number of stations on 51 roads in Pennsylvania selling interstate tickets, 2,531, multiplied by 2 (both directions), equals 393,540,128, the total number of passenger rates from all points in Pennsylvania to all destinations outside of Pennsylvania, in both directions, for which tariffs are filed with the Interstate Commerce Commission.

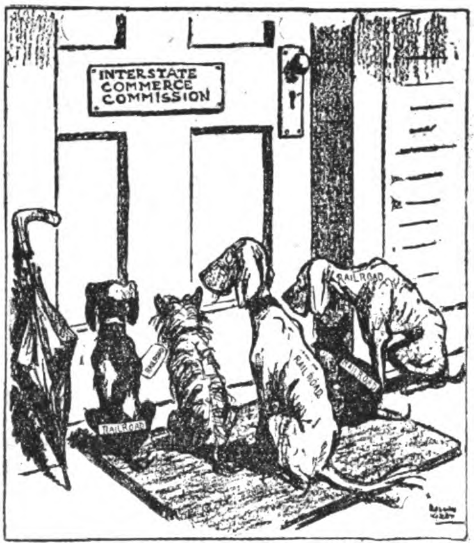
"The following is a condensed statement of all classified freight ratings that can be secured from published tariffs filed with the Interstate Commerce Commission, covering the various classes of articles that can be shipped by freight:

Classes of Freight	Number of articles of freight on which ratings apply. Less than Car load.	Car load.	Total Ratings.
1	1,575	31	1,606
2	953	238	1,191
3	1,273	400	1,673
4	668	857	1,525
5	73	2,190	2,263
6	....	415	415
Multiple ratings	1,312	104	1,416
Total	5,854	4,235	10,089

"The total number of railway freight stations in the United States, Canada and Mexico, to which freight shipments can be billed from Pittsburgh, Pa., is approximately 89,425, multiplied by 10,089



THE LADY OR THE TIGER, UP TO DATE
—From the Philadelphia Record.



WHERES THAT BONE?
—From the New York World.

(number of various ratable articles that can be handled by freight), equals 902,208,825, the total number of ratings covering all classes of freight articles for which tariffs are filed by the carriers with the Interstate Commerce Commission.

"There are approximately 4,346 freight stations on 89 railroads in the State of Pennsylvania from which freight rates are published, and filed with the Commission, to all the other 85,079 freight stations in the United States, outside of Pennsylvania, Canada, and Mexico; therefore, 85,079 multiplied by 4,346, multiplied by 10,089 (freight ratings), multiplied by 2 (both directions), equals 7,460,882,773,452, the total number of freight ratings from all stations in Pennsylvania to all other destinations outside of Pennsylvania, in both directions, for which there are tariffs filed by the carriers with the Interstate Commerce Commission, and from which tariffs any one of these total ratings can be ascertained.

"These figures represent only a small proportion of all freight ratings and passenger fares, for the reason that all rates to and from other points outside of Pittsburgh, as well as outside of Pennsylvania, are, vice versa, applicable to all shipping destinations in the United States, Canada, and Mexico. (Canada has 8,645 stations, and Mexico 4,940, which are included in the above calculations.)

"One railroad operating out of Pittsburgh advises that during a recent year its tariff and traffic departments prepared detailed figures covering all freight ratings for all stations on its line, which comprised a supply of 5,448,110 leaflets, pamphlets, and booklets (originals and duplicates, containing 57,323,706 pages of rates), for distribution to all agents, shippers, consignees, etc., and for filing with the Interstate Commerce Commission. The total weight of this output of tariffs for that year amounted to 333,859 pounds, equal to 167 tons. This is only one railroad.

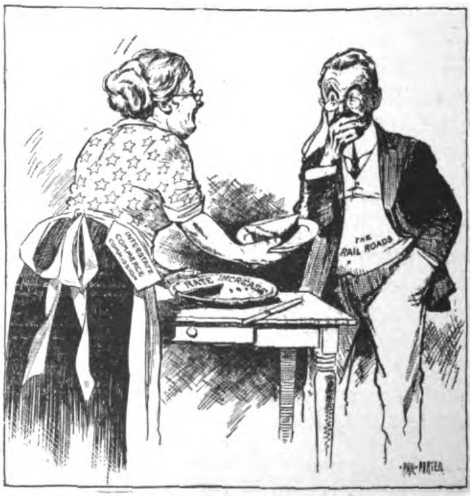
"These figures, so far as Pittsburgh and the State of Pennsylvania are concerned, readily show the stupendous undertaking imposed on all carriers in each State of the Union in the preparation and filing of detailed tariffs showing every passenger and freight rate, and multiples and combinations thereof.

"During 1912—the last year for which we have the Commission's annual report at hand—there were 6,550 complaints received and docketed by the Commission, during which period 3,090 rulings were issued. The Commission also conducted 1,154 hearings throughout the country, in the course of which approximately 125,000 pages of testimony were taken, relating to car service charges, absorption of switching, privileges or facilities affecting the value of service wherever in operation, demurrage charges, terminal allowances, carload weighing, bills of lading, individual freight cars, hours of service, examination of accounts, safety appliances, investigation of accidents, inspection of locomotive boilers, ash-pans, etc. In 1911 there were 2,179 steam railroads reporting to the Commission, whose jurisdiction also extends over interstate water carriers, electric railways, express companies, pipe lines, sleeping-car companies, telephone, telegraph, and cable companies—all of which carriers filed, in that year, an aggregate of 108,766 single copies of separate, original tariff publications of from 1 to more than 1,000 pages each.

"The duties of the Commission in the realm of accounting devolve upon the Division of Carriers' Accounts, a force of examiners being constantly engaged in examining the books and accounts of the carriers to determine whether or not they are being kept in the manner prescribed by the Commission. The reports of these examiners are very voluminous and are supposed to be passed upon by the Commission. The accounting rules have recently been revised, and on July 1, 1914, these new classifications will take effect, the changes necessitating close scrutiny of the accounts of carriers for some time, and numerous questions will be asked for rulings which will require careful consideration and a great deal of the Commission's time.

"The monthly and annual report filed by the carriers require a vast amount of labor in the verification and compilation of the data, and the results published in the annual reports of the Commission to Congress. Numerous special reports on a variety of matters are required in spec-

"YOU CAN'T HAVE ALL OF THE PIE"



ial investigations, and the results must be likewise passed upon by the Commission.

"The magnitude of the task of carrying out the provisions of the Federal Valuation Law is sufficient to keep the Commission engaged for a period of five to seven years. While the preliminary work of preparing forms and establishing methods for the prosecution of the work has been delegated to Hon. Charles A. Prouty, a former Commissioner, all matters pertaining to this subject must be passed upon by the Commission and rulings issued under its order.

"In order to comply with the comprehensive terms of the Interstate Commerce Act and amendments, it is imperatively necessary that the Commission have complete knowledge of all the conditions and requirements of shippers and carriers to enable that body to decide what may be adopted as useful and practicable regulations and policies, in accordance with the established authority vested in the Commission. Compliance on the part of all carriers has entailed upon them unprecedented labor and expense; and when it is realized that the Commission is required to give attention to all passenger and freight tariffs, and promulgate rulings applicable to all these and numerous other matters coming within its jurisdiction, it will indicate the magnitude of the immense burden imposed upon the Interstate Commerce Commission in undertaking the task of regulating transportation service throughout the United States."

COURTESY PAYS

The modern railway official is becoming more and more impressed with the fact that courtesy to the traveling public pays not only in its general effect upon the public mind, but because it becomes a real asset to any road who constantly insists upon its application, and should be enforced in all cases where employes come in contact with those who travel or employ the company's lines for shipping purposes. Courtesy belongs to the new methods of competition and, owing to the general equality in rates which now exists, railroads are coming to depend more and more upon the quality of the service which they render, and of which courtesy constitutes no unimportant part. Through its employment, thousands of dollars are annually turned into the coffers of railroads, and its influence often overcomes other handicaps and develops an atmosphere of friendliness to which patrons respond in the most gratifying manner.

A recent example of this effort on the part of important roads to impress upon every employe the importance of politeness and courtesy in dealing with the public, is illustrated by the following circular letter which has been sent by President Fairfax Harrison, of the Southern Railway, to every officer and employe of the system:

Washington, D. C., June 23, 1914.

To all Officers and Employes of Southern Railway Company:

A railroad is first of all a public servant. It follows that the success of a railroad as a business enterprise depends, in very large measure, not only upon the efficiency of the transportation it affords, but upon the personal treatment which those doing business with the railroad receive at the hands of its officers and employes. Therefore, in addition to doing everything in his power to promote the physical efficiency of our service, each officer and employe, whatever may be his rank or duty, must at all times consider the moral efficiency, and this means first of all that he should treat all patrons of the company and others with whom he may come into contact with politeness and courtesy. This is a primary rule of management of Southern Railway Company, but it is no more than each officer or employe himself expects of every one from whom he buys. This rule should be observed regardless of the amount of business that the individual may give to the company, not only because that is the part of a gentleman, but from self interest, for the occasional traveler or the small shipper of to-day may be the constant traveler or the large shipper of to-morrow. A nursed grudge growing out of a surly answer has been responsible for many of the troubles of the railroads. Let us then all try to please the public.

The station agent should remember that at his station he is the Southern Railway Company and that public opinion regarding the company in his community is very largely his responsibility. In addition to maintaining the highest efficiency at his station, he should see to it that he and his subordinates maintain pleasant and agreeable manners in meeting the public and that all questions, even unreasonable questions, are answered with politeness and courtesy.

It is equally important that trainmen should observe the rule of courtesy and politeness, giving full, responsive and intelligent information to those passengers who solicit it about anything that may happen on the road. The operation of a railroad is interesting to every intelligent man, and the more information such a man has about actual conditions the more he will understand the difficulties encountered in operation and so contribute to sound public opinion.

I am proud to believe that the general average of courtesy and politeness in the Southern Railway organization will compare most favorably with that of any railroad in the United States. Good manners are traditional in the South and our men are Southern men. This is attested by many letters which are received by the management commending individual employes for conspicuous acts of courtesy and painstaking efforts to serve our patrons.

Occasionally, however, letters are received complaining of instances of discourtesy. These may be entirely eliminated if each officer and employe will adopt as his rule of conduct the declaration by the late President Finley that "He serves the railroad best who serves the public best."

FAIRFAX HARRISON, *President.*

In line with the above, it is interesting to note a recent article written by C. R. Berry, assistant to the vice-president of the Chicago, Great Western Railroad on "The Relation of the Commercial Traveler to the Railroads." Mr. Berry, who writes in the official magazine of his company for the benefit of the road's employes, calls attention to the fact that the attitude of many railway employes towards commercial travelers is far from satisfactory and further emphasizes his point by showing how the traveling man is really a potent factor in producing or reducing traffic. A very significant feature of this influence is pointed out when he states that "the greater percentage of commercial travelers, representing big business interests insert routing instruction on orders taken by them, as most houses provide a space on their order blanks for this purpose." These men as a rule, have no preference in the matter of routing and are inclined to favor lines to whom they feel indebted because of friendship or courtesy which has been extended to them.

To quote from the article:

> "It is not uncommon to hear a traveling salesman, in the presence of many other knights of the grip congregated in a hotel lobby, "knocking" some railroad because he was furnished with incorrect information resulting in his missing a connection and a few hundred dollars worth of business in consequence, or because a certain station employe drove a hard bargain in the matter of rating excess baggage, or because of a hundred and one seemingly inconsequential things resulting from carelessness on the part of station employes in manner in which they meet the public.
>
> "Just remember that the traveling man is more than ordinarily appreciative of small courtesies and is just as ready to laud your road as he is to condemn it.
>
> "Traveling traffic representatives realize that it is no waste of time to cultivate the acquaintance of the commercial travelers with whom they come in contact and they can be materially aided in this by the employes of the operating department and train service.
>
> "Common courtesy costs us nothing and represents an investment paying substantial dividends.
>
> "Let's get right with the traveling man."

PRESIDENT RIPLEY ON GOVERNMENT OWNERSHIP

President Ripley has been widely quoted in the public press as stating as his opinion, that government ownership of railways was inevitable. It should not be understood, however, that Mr. Ripley has in any way changed his mind regarding the folly of such a development or of the dismal consequences that would follow, as he sees nothing in the Government conduct of affairs to justify a belief that it could operate the railroads with efficiency. He does believe, however, that as matters appear to be drifting now, there will, in a short time, be no other alternative. As he puts it in a recent newspaper interview, "Either conditions must be made easier for the railroads or the Government will have to buy them."

In brief, Mr. Ripley feels that the only changes that could be made which would remove the alternative of Government ownership, would be to give back to railroad executives, a large part of that control which has within the past few years been taken away from them by legislation and regulation. This would permit them enough freedom to utilize their expert knowledge, and thus permit them to continue to conduct a successful and progressive transportation plant. Mr. Ripley believes that the Government should treat the railroads as citizens and not so much as malefactors, and that, within recent years at least, it has been an unnecessarily harsh guardian and ought to now allow the carriers liberty to develop along legitimate lines.

Apparently the only difference of opinion which exists between Mr. Ripley and other prominent railway executives, rests upon the more optimistic viewpoint of the latter regarding the future. There is not a railway executive in the country who does not believe that, if present tendencies continued indefinitely, that Government ownership would eventually result. These same officials believe, however, that the present tendencies must, and will be checked, that the people will awake before too late and more fully appreciate the dangers which would result from such a development. In this viewpoint, we would agree, rather than with that of Mr. Ripley. During the last year or so, the railways of this country have done a tremendous amount of effective educational work which is unquestionably having its effect upon public sentiment. The carriers have established the habit of appealing more directly to the people, and the people, to a large extent at least, have responded in a most encouraging manner.

Mr. Ripley should not overlook the fact that of the millions of railway employes and of those dependent upon the railway industry, there are scarcely a handful who believe that any possible good could result from Government ownership. In fact the great majority of them are solidly opposed to any such trend and can be counted on to throw all the influence they possess against the development of a sentiment of this character. For the sake of progressive transportation, this feeling should be encouraged to its utmost limits.

Government ownership in other countries has, with rare exceptions, proved so disastrous or deplorable, that it does not seem possible that a public so alert as ours, would permit this country to make a similar mistake. If it is to be avoided, however, railway officials must continue to take the public into their full confidence and to keep them fully informed as to their requirements and the results of public ownership in other countries. In other words, the campaign of publicity which has recently become a prominent feature of railway work, must be continued unabated and it can be confidently expected that the American public will respond in a satisfactory manner provided, of course, that the deplorable incidents, which have been far too many during the past two or three years, will be largely eliminated from future operations.

Private ownership, severe as it has been handicapped recently, has by no means lost its grip, or the confidence of the people. In fact, in spite of occasional set backs, it has made more real progress recently in coming to a better understanding with the public than it has for several years. It rests largely with those in charge of railway affairs to see that the public in the future is kept generally informed and to permit no libel or mis-statement to be circulated, uncontradicted. The success of private ownership in the future, as never before, will depend upon the frankest relations between the carriers and the public.

AN EVEN DISTRIBUTION OF PASSENGERS

The Pennsylvania Railroad has recently issued instructions which might well be employed by other railways both to the advantage of themselves and their patrons. Many times, when passenger cars appear overcrowded, it is often the result of travelers congregating in certain cars and failing to walk through the entire train to see whether seats were really available. This is particularly true with regard to suburban travel, where, in innumerable instances, trains have performed part of their journey with passengers standing, while. as a matter of fact, empty seats of sufficient number to accommodate more than those standing, were available.

The Pennsylvania Railroad, recognizing the existence of this avoidable condition, has issued an order to the effect that trainmen in the future must see that no passenger is compelled to stand, if there are any seats left in any part of the train. The policy of the management is to provide sufficient cars to seat all the people normally using any train, and by the proper attention of trainmen it is believed that this can be generally accomplished, and a large amount of unnecessary criticism avoided. The following is a copy of the order which has recently been issued:

> "Investigation of complaints in regard to passengers being compelled to stand in overcrowded coaches has at times disclosed the fact that seats were available in other coaches on the same train. When it is found that a coach is overcrowded, a member of the crew must announce in the crowded coach the number of seats available in the other coaches. It is desirable that the number of seats be specified, in order to avoid disappointment in case of excess number of passengers. This matter should be especially watched at our large terminals in loading trains."

FAILURE OF GOVERNMENT OWNERSHIP IN BELGIUM

Examples continue to multiply of the failure of government owned railways in various parts of the world. One of the most recent striking evidences of extravagance of public ownership, as compared with private management, is furnished by the 1912 report of the railroads of Belgium, which has just been received by the Bureau of Railway News and Statistics at Chicago.

According to the statistics found in this volume, had Belgium's state railways been operated with the same economy as were the private companies, approximately $18,000,000 spent in operating the system, would have been saved. Instead, however, according to the same showing, the public railways of that country are practically bankrupt.

The Bureau of Railway News and Statistics, in its analysis of these figures, points out that although Belgium is a country primarily of government ownership, there are still five small companies operating railways. Operation of the Belgium railways reflected in 1912 the rising tendency of costs which has been experienced over the entire world and whereas in 1911 the state lines out of every $100 in gross receipts paid $66.89 to operate, they paid in 1912 the sum of $69.33.

Against this figure the private companies in 1912 paid out of every $100 of gross receipts respectively only $38.52, $56.11, $59.22, $62.26 and $67.19, the largest of the five companies making the best showing. In no case did a private company reach the $69.33 spent by the government management, and the average spent by all five companies to operate was only $41.42 out of every $100. The showing is the more striking in that it compares railways operating in the same country and therefore more probably subject to similar conditions than were they in different countries.

Returns for the government railways for 1911 and 1912 compare as follows with the private lines in 1912:

	State. 1911.	State. 1912.	Private. 1912.
Operated mileage	2,684	2,696	217
Receipts (000)	$60,610	$63,949	$6,797
Expenses (000)	40.545	44,327	2,815
Net (000)	20,065	19,622	3,982
Ratio exp. to receipts.	66.89%	69.33%	41.42%

Although subject to the same conditions as the government operated lines, the private railways, with only one exception, succeeded in holding down expenses hard enough to withstand rising costs, and four of the companies operated with a lower ratio between expenses and receipts than in the year before.

Operation of the government lines, on the other hand, has left the public railways bankrupt. Against their net after paying operating expenses which amount, as shown above, to $19,622,000 must be set the charges made on the railway budget for interest and sinking fund on the railway debt and for the rental of the small mileage lying in foreign territory. The charges amounted in 1912 to approximately $20,384,081, so that there was an actual deficit of over $762,000 on the operation of only 2,696 miles for the year.

The Interest of Railway Employes in Railway Prosperity.

(From the Southern News Bulletin.)

THE declining tendency of the net revenues of American railways during recent months and especially the much greater percentage of decline in net revenue than in either gross revenues or expenses, as shown by figures compiled by the Bureau of Railway Economics from the monthly reports of the railways to the Interstate Commerce Commission, should bring home to all railway employes with striking force the fact of their vital interest in the prosperity of the companies by which they are employed.

In any just analysis of the present situation, no intelligent observer can fail to take account of the many forces which are at work either for the purpose of depressing the gross revenues of railways or of increasing their expenses, either of which of necessity must result in a decrease in their net revenues.

Of all the movements for the purpose of decreasing the gross revenues of railways not one has held out any hope of advantage to the railway employe. Under existing conditions the railway employe gets forty cents of every dollar collected by the company, but where freight rates have been reduced it has not been to his advantage, for he has not been able to purchase a single commodity cheaper than before. The only result of such movements, so far as the railway employe is concerned, has been the reduction of the fund out of which his wages must be paid and the consequent impairment not only of his opportunity to get increased wages in the future, but even of the certainty of maintaining his present standard, for certainly the railways cannot pay out money if they do not receive it. It does not require an expert mathematician to see this, or the equally obvious fact that, when the margin of gross revenues left over after paying expenses approaches the point of danger, as it has on some railroad systems, retrenchment is necessary, and this means reduction of forces.

With such a possibility facing them, it is nothing less than amazing that railway employes as a whole have failed to take any active stand against movements for the reduction of the gross revenues of railways and against those movements which mean increased expenses for the railways without any increase in wages, as is the effect of many of the legislative and regulatory requirements which force upon the railways practices that are unnecessary in the opinion of the most experienced and the most progressive of railway managers.

There is hardly a community in the United States where the railway employes do not constitute a highly influential class. They are men of character and intelligence, or they could not hold their positions, and they are everywhere the best paid branch of labor. The trade of their families is sought by local merchants and professional men. They could exert a wonderful influence on public opinion, which is, after all, the high court of appeal on all matters in this country.

Why does not the railway employe raise his voice in protest against movements which can only result in decreased revenues for the railways without the least opportunity for benefit to himself?

Railway employes can make themselves felt in every community against the anti-railway agitators. How long is it going to be before they recognize that their own interest demands that they do so?

Contemporary Opinion

Government as a Railroad Wrecker.

(From the Philadelphia Public Ledger.)

IF the governments in Washington and Boston have their way it will soon be as difficult to sell railroad securities in New England as ice in Labrador, for the State and the Nation are doing their utmost to force the New Haven into the hands of receivers. The Federal suit to bring about the separation of the New Haven and the Boston and Maine was held up several months ago on the promise of the New Haven managers that they would sell their Boston and Maine holdings. Permission for the sale must be obtained from the Massachusetts Legislature. That body granted permission on condition that the purchaser of each share of stock shall agree to sell it to the State whenever the State chooses to buy. The New Haven managers refuse to sell their holdings under such conditions. No investor would buy shares which the State could demand at a time when the market was most depressed, hence as there can be no sale until the Legislature modifies its regulations next year, the Federal Government is preparing to file suit for forcible dissolution of the merger.

The attempt of the present managers to protect the shareholders from further loss has apparently failed through the persistent determination of meddling government to lay down impossible conditions. The managers maintain that they have not violated the anti-trust laws, and that they can establish the legality of the purchase of the Boston and Maine, but preferred to compromise with the Attorney General last year and yield several points rather than prolong the damaging uncertainty. It now looks as though all that will be left of the propetry when the lawyers in Washington and politicians in New England get through it will be a stupendous, devastating ruin.

Under Your Flag, Brothers.

(From the Railway Employes Journal, the official organ of the Brotherhood of all Railway Employes.)

YOUR flag it is, brother railroad men, that floats in to-day's sunlight over all the world's mightiest empire, an invitation to the oppressed, a challenge to despotism, a guaranty of justice and liberty.

Your flag it is by every right, so come you up and range yourselves about and under it—come with reverent boldness. Standing so, in the name of the flag demand for yourselves all that it means for you. Do not beg: demand.

Demand justice. Demand that the pledge and promise of the flag be kept to you and your industry as it is kept to all the other freemen that owe and pay it allegiance, and to every other industry but yours alone.

Demand liberty. Demand that the nation which so jealously guards the freedom of all its other citizens give you back your freedom. Demand that your industry's right to live be restored so that you may have again your right to live.

Demand relief from the intolerable oppression which, bowing down the wide, patient shoulders of your industry, thereby also makes your backs to bend and thereby grinds the face of every one of you in the dirt.

Come up and stand up reverently but boldly under your flag to make your demand in tones two million voices loud.

Your flag it is, indeed. Forebears and kinsmen of you railroad men bloodily earned you your share in that flag's blessings at Lexington, at Yorktown, at Bunker Hill. They earned it for you again when liberty's "lean, locked ranks went roaring down to die" under an alien sky across the Rio Grande.

Railroad forebears and kinsmen of you railroad men—aye, and some of you very men still bearing the arms of peace in the loyal legions of transportation—paid once more and paid in full for your share of that flag's glories and guaranties—paid at Antietam, and at Vicksburg, at Shiloh, at Lookout Mountain and at Gettysburg.

Lift up your eyes in reverent boldness to your flag and say to it and to your countrymen: "Those newer stars we railroad men set upon that azure field, for ours it was to drive and ours it is to keep our industry's highways out over the desert, across the rivers and under the mountains to the sea—the highways that make and hold this nation one. Those are our stars. Without us you would not have them."

Be reverent to your flag and be bold to your countrymen when you say under it to them: "How have you kept our flag's holy pledge to us—to us two millions that serve you endlessly by day and night; to us that bear you your food and your fuel so that you may live; to us that haul the goods of your mills, the crops of your gelds, the work of your hands so that you may prosper; to us without whose industry your industries could not exist?"

In the name of your flag ask your countrymen —ask them boldly—why two hundred thousand of your brothers-in-toil, their brothers-in-faith, go hungry in a land and a time of plenty. Ask them why nearly a half million strong, trained, competent railroad hands have not work to do nor wage to draw; why a million railroad men, women and children—little, helpless children, taught trustfully to worship that flag—grow hungrier, gaunter and shabbier every day.

By the right of your flag call on your countrymen and bid them look what has been done under that flag to your industry and to you. Bid them see how it has been starved until now you, too begin to starve. Bid them mark how hands that eagerly smooth the way for all other industries eagerly strangle your industry and dig it a grave.

In the name of your flag and standing in its shadow, ask your fellow countrymen to witness how every other industry fixes its own rates of compensation, and fixes them higher and higher—and how government, state and national, fixes your industry's rates and fixes them lower and lower.

Ask your countrymen boldly and sternly: "Is that justice, the justice of the flag?"

Ask them why and how in a singe year they let your industry's net income be cut one hundred million dollars while every other industry's income grew: why in one year they let your industry's tax bill, already the largest in the land, be swollen eight million dollars?

Ask your countrymen loud and clear: "Is that freedom, the equal freedom of the flag?"

Under the guaranty of the flag summon your countrymen to judge between you and the professional politician who denies you and your industry the right of petition and the right of free speech—the vote-begging, canting politician-in-office who prints at public expense for private advantage a million-word speech denouncing those who dare respectfully and humbly to ask only fair play for your industry.

Ask your countrymen in righteous wrath: "Is that liberty, the sacred liberty of the flag?"

Standing up under the flag two millions strong, demand of your countrymen that they deal with the flag-haters and self-seekers who, traducing your industry and you seek to make uniforms of service liveries of servitude, who would complete government destruction of your industry with government ownership.

Tell your countrymen you know what government ownership means. Tell them it means the same kind of treatment the postman gets and the railway mail clerk—a good deal less than a fair day's wage for a good deal more than a fair day's work; that it means making European flunkeys out of American freemen; that it means going from a self-respecting service of honest industry to a boot-licking slavery of dishonest politics; that the demagogues who are running your industry into bankruptcy now want to run you into the bread line.

Call upon your countrymen for the honor of the flag to shut the vile mouths of such as declare, out of vile hearts, that your industry is a thief and a murderer, "whenever and wherever" it "can steal and kill at a profit"—a lying stigma stamped by hands that never built anything upon two millions of you that have built a nation's commercial greatness.

You, crying out to and under our flag, shall be heard. Demand the justice of the flag and justice shall be done your industry and you. Demagogism has barred all the other doors and paths to relief. But demagogism lives only by the ballot and by the ballot it shall be slain—by your ballots and the ballots of your countrymen.

Under freedom's flag make every ballot a bullet shot straight into the body of your foe, your industry's foe, your country's deadliest foe—the foe that wants through the government to own you and through you to own the government.

Standing yet free under freedom's loveliest emblem, demand that your flag be made to mean for you all that it means for the men of every other American industry.

Demand that the red and the blue of it be made free of stain and tarnish for you. Demand that its stars shall shine clear and steady again for you. Demand that its white be made clean again by promise kept and faith fulfilled to you.

Only you can save your industry and yourselves, your heritage and your birthright—you, under the flag, reverent but bold, two millions strong. The million hungry railroad men, women and children, early victims of demagogism, cry out to you. They cry for help and they cry a warning. Save them. Save your industry. Save yourselves.

Criminal Delay.

(From the "Bache Review.")

THE delay in the rate decision, while one railroad after another of the weaker class approaches receivership, can only be adjudged as obstinate disregard of the country's crying needs.

It is reasonable to conclude that had rates been raised ten per cent in 1910, all the receiverships which have occurred since would have been avoided. There might have been necessary some physical readjustments of financial machinery, as in the case of St. Louis & San Francisco, which, under restrictions of its charter was prevented from financing through stock issues and was compelled to dangerously pyramid its bond issues. But sufficient earnings would have averted probably in every instance the disastrous resort to receivership.

This, then, is what regulation of railroads carried to the extreme and unbusinesslike extent of allowing a political commission to arbitrarily control rates, brings the country up against. If the decision is finally to be favorable, it is reasonable to compute the loss, by delay in announcing the decision, to the hundreds of business concerns in the United States, at a million dollars or more a day in overhead expenses, which are necessarily continued but are not paying a profit.

Mr. Edward C. Simmons, who is president of the Simmons Hardware Company, and who declined the Presidential nomination for the Reserve Board, is quoted as saying in part:

"The greatest danger now confronting the country is the dishonest and shameful treatment given the railroads. Public opinion, unfairly made, has caused the robbery of the railroads for eight years.

"If I were President of the United States with power over Congress—and there have been such Presidents—I would legislate the present Interstate Commerce Commission out of existence and two weeks afterward I would enact another law creating a new Commission, and I would see that fair men, unafraid of muckrakers, demagogues and Socialists, thereafter regulated the freight rates of our railroads. I say this, although I am a shipper and pay out large sums to our transportation companies.

"I believe in the strict regulation of our railroad corporations, but I am opposed to a policy which stops enterprise, keeps capital locked up in bank vaults, deprives thousands of men of gainful employment and lets wild grass grow where there should be wheat, corn, cotton and hay."

If President Wilson had appreciated, as was constantly asserted in these columns and in a few other publications, that the failure to raise railroad rates last January would precipitate the country into a severe recession of business, he would immediately after the passage of the Currency Bill have turned his whole energy and influence into forcing a favorable decision. He was then in the full flush of a great victory and his wish would have been, even if reluctantly, converted into law by so obdurate a board as the Commerce Commission. They could not have stood against it because the whole country was then enthusiastically behind the President on account of his really great achievements.

The other troubles which have gathered since are negligible compared with the shameful condition into which the railroads have been bullied, and this last is the real overwhelming cause of the business depression. This depression has prevailed in nearly all lines.

The trouble which is holding back prosperity is not shortage of capital, but lack of confidence on the part of capital.

For ten years a war has been waged in this country against capital. Capital has been beaten and is withdrawing.

Is it any wonder that business, which depends upon capital even more than upon labor, feels the effect and shivers and shrinks?

Capital is the backbone of railroad enterprise and upkeep. Capital invested in railroads has been scrimped and starved. Is it any wonder that it refuses to go further, and that the railroads are in trouble all along the line?

President Wilson's official statement to the Virginia editors will have some good effect in reassuring the country, but there are two or three things that, if done at once, would go much further than verbal assurances to lift the country out of its real depression.

First of all, railroad rates should be raised at least five per cent. This is not enough, but anything less will be eventually ineffectual. If the President has the power to bring this about, he should use it. The condition of the railroads is one of the greatest causes of the slump in business. And upon the restoration of railroad credit by granting the carriers sufficient net-earning power, depends their future and the well-being of the whole country. This restoration of credit hinges upon the Government's action.

The Interstate Commerce Commission is said to be rewriting its decision on rates, because the decisions of the Supreme Court have made this necessary. "Apparently," says Mr. Willard, of the Baltimore & Ohio, "while the members of the Commission have been writing their decision, the United States Supreme Court has been shaking the table." In one of the cases the Court decided that the Commission had power to dispose of a whole group of rates by establishing a percentage. This being so, the Commission can now easily write in the words "five per cent" and let the thing go at that. If there are any mistakes they can be corrected afterwards.

The signal for such a gigantic boom as President Wilson predicts would be a brief official announcement by the Interstate Commerce Commission, somewhat as follows:

"The petition of the Eastern Railroads for an advance in freight rates to the extent requested, is hereby allowed and approved."

The Supreme Court's Decision in the Inter-Mountain Case.

(From the *Commercial and Financial Chronicle.*)

IT is scarcely possible to over-estimate the significance and importance or to exaggertee the far-reaching consequences of this week's decision of the United States Supreme Court upholding the action of the Interstate Commerce Commission in the famous intermountain cases. No order ever issued by the Interstate Commerce Commission embodied such a sweeping exercise of its powers and none such an arbitrary use of those powers. In this order the Commission went further than it had ever attempted to go before; in effect, it interpreted the enlarged authority granted it under the amendatory law of 1910 as giving it the right to do anything and everything it might choose to do in the way of fixing and regulating rates—to make traffic centres, to unmake them, to decree whether (through the prescribing of rates) natural advantages should be overcome, to decide what jobbing districts and what manufacturing sections should be allowed to cater to the needs of the remoter parts of the country, and, generally, to decree life or death to important interests of long-established standing—always through the instrumentality of the rates fixed, the Commission being the sole arbiter in all instances, with no right of appeal to any other authority.

We say the Commission construed its new powers in this broad way. In thus construing them, the Commerce Court, since abolished, held that the Commission had gone too far. The Supreme Court, however, now reverses the Commerce Court and says the Commission really possesses all the powers assumed by it. That ends the matter, and leaves the Commission in supreme control, with full liberty to devise schemes of rate-making in accord with its own dictates. It is not an inviting prospect for the railroads; neither is it an inviting prospect for the country at large.

Nominally, the point at issue in the cases which have now been definitely settled by the highest judicial tribunal was the interpretation and application of the long-and-short-haul clause as amended by the Act of 1910. Actually, however, much larger considerations were involved, as already indicated, and as will appear from a recital of the facts of the case. The immediate question was whether the carriers should be allowed to charge more for the shorter haul to intermountain territory in the States of Washington, Nevada and Arizona than for the long haul to the Pacific Coast, and, if so, how much more. The custom has been to charge intermountain points the rate to the Pacific Coast (which, being fixed by water competition, is a very low rate) plus the local charge for hauling the freight back to the intermountain point, though this rule has been deviated from in certain cases. The Interstate Commerce Commission had the cases under consideration a long while and issued several orders concerning the same. It shifted its position several times because of new objections raised, and was made to recognize that in the last analysis the controversy was one of competition of different markets. It was not merely the lines reaching the Pacific Coast that were involved but practically all the roads throughout the whole country, excepting only those in the South, for merchants on the Pacific Coast are anxious to serve intermountain territory, so are those at Chicago, likewise those at Buffalo and Pittsburgh, and not less so those on the Atlantic Coast.

The problem was and is admittedly a difficult one, and the wisest course for the Commission would have been to have allowed the existing conditions to continune unchanged, since they were the outgrowth of natural circumstances. But the Commission was determined upon a readjustment and proceeded to bring about the adjustment through wholly arbitrary methods, with the result that the whole country was quickly up in arms against it. We imagine the Interstate Commerce Commission experienced a distinct feeling of relief when the Commerce Court stepped in and granted the injunction restraining the orders from going into effect, for, after having modified its orders many times during the previous fifteen months, it seemed certain that further modifications would be made before the new scheme would be allowed to go into effect.

Notice what the Commission proposed to do by its order. It proposed that from St. Paul and the Missouri River no higher charge should prevail to any intermediate place than to a more distant place on the Pacific Coast. In other words, Spokane and other points in intermountain territory were given precisely the same rates as points on the Pacific Coast from destinations no further east than the Missouri River. For freight originating in Chicago territory, the Interstate Commerce Commission decreed that rates to intermediate points might be 7 per cent higher than the rates to Pacific Coast terminals. For freight originating in the Buffalo-Pittsburgh zone, the Commission allowed a charge of 15 per cent higher to intermountain territory than to the Pacific Coast, and for freight originating on the Atlantic Seaboard a 25 per cent increase over the long-haul rates was permitted.

It will be observed that the proposed rates and percentages were wholly arbitrary. Justice White, who wrote the opinion of the Court, in combating the attacks made by the carriers upon the zone system of rate making proposed by the Commission, pointed out that the railroads themselves have always followed a similar practice and divided the country into districts, and he averred that "though somewhat modified, the zones as thus selected by the Commission were in substance the same as those previously fixed by the carriers." But these modifications and the changes in rates coincidentally inaugurated by the Commission in the rates themselves make all the difference in the world. It stands to reason that if the Commission had done nothing more than to sanction what had previously existed, the carriers would not have attacked the Commission's order. As a matter of fact all the carriers asked in the first instance, in petitioning the Commission, was that they be permitted to continue the rate previously in force both to Pacific Coast points and to intermountain points, the latter being on a higher basis than the former.

This petition the Commission denied, and proposed, instead, something novel, embodying striking conceptions of its own, altogether out of accord with previous practices. In proposing, moreover, a new system of rate schedules, it undertook to pass upon the merits of rival jobbing districts and markets. Observe in the first place that in placing intermountain points upon a basis of equality with Pacific Coast points, it put the jobbers in intermountain territory in position to cater to certain communities which heretofore have been served by the jobbers on the Coast. The advantage which the Pacific Coast centres now have is a natural one. The advantage which the Commission seeks to confer upon intermountain points is a wholly artificial one. Observe, furthermore, that the Commission in the distribution of its favors does not proceed with entire impartiality—in fact far from it. Intermountain points are to stand on a basis of equality with the Coast centres only in the case of destinations no further east than the Missouri River. On freight originating in Chicago territory, as already stated, the Interstate Commerce Commission holds that rates to intermediate points may be 7 per cent higher than the rates from the same place of origin to Pacific Coast terminals. It is a little perplexing to understand why it should be a heinous offense, involving preference and discrimination, to charge more to intermountain points than to Coast terminals where the shipment comes from destinations no further east than the Missouri River, while a higher rate to intermountain points than to the Coast should be innocuous and free of offense and of preference and discrimination when the shipments originate in the Chicago district.

But if the reason for such a distinction is difficult to discern, the effect is perfectly obvious. It is a discrimination against jobbers in the Chicago district. The Commission in effect decides that business with intermountain territory shall be limited to Missouri River districts. And the discrimination becomes more marked the further east we go. While in the view of the Commission it is wrong to charge more to intermountain points than to the Coast when the freight originates in Missouri River territory, the rate may be 15 per cent higher to intermountain territory than to the Pacific Coast when the shipments originate in the Buffalo-Pittsburgh zone, and when it originates on the Atlantic Seaboard it is right and proper and justifiable to add an increase of even 25 per cent over the long-haul rates. These Eastern zones are in any event handicapped because the rates to the Coast are higher by reason of the longer distances, and the Commission in its wisdom proposes an additional handicap of 15 or 25 per cent. What is this but an attempt to say what markets shall participate in the business?

It was for this reason that the Commerce Court held that the Commission had exceeded its authority. Judge Mack said with reference to the order of the Commission that it "goes beyond any authority that has been vested in it, for it is not in the power of the Commission to say that 107 per cent or any given percentage of an unknown less than reasonable rate to the Coast is necessarily a maximum reasonable and non-discriminatory rate from the same point of origin to an interior point." He also said the practical effect of the Commission's order was either to compel a blanket rate from the entire East to the entire West, or to prevent the carriers from getting all the business which they now secure without loss by making rates which enable merchants to meet market competition. Judge Archbald (since removed), in a separate but concurring opinion, said that by no device could the whole United States be made a "special case." He also asserted that such wholesale rate making entirely disregarded the right of the carriers to have considered what in each instance is a reasonable rate between points involved.

The United States Supreme Court sweeps all these contentions aside. Justice White's opinion deals largely with the legal technicalities of the case and does not readily adapt itself to quotation. He considers the matter entirely from the standpoint of the change made in the long-and-short-haul clause by the Act of 1910. Previous to the amendment of 1910, the long-and-short-haul clause, or Section 4, of the Commerce Act read as follows: "That it shall be unlawful for any common carrier subject to the provisions of this Act to charge or receive any greater compensation in the aggregate for the transportation of passengers, or if like kind of property, *under substantially similar circumstances and conditions* for a shorter than for a longer distance over the same line in the same direction, the shorter being included within the longer distance," &c., &c. Under the 1910 amendment the words we have placed in italics, namely, "under substantially similar circumstances and conditions," were eliminated and some other changes made in the section. With the omitted words in the section, the carriers could not be called to account if they charged more to near points than to far points, provided the circumstances and conditions were substantially dissimilar, even though they had not applied to the Commission and obtained its consent. With the quoted words omitted, however, a higher charge can in no instance be imposed without the sanction of the Commission.

Justice White says that the effect of the amended fourth section was not to create new powers theretofore non-existing, but simply to re-distribute the powers already existing. "In substance," he says, "the amendment intrinsically states no new rule or principle, but simply shifts the powers conferred by the section as it originally stood; that is, it takes from the carriers the deposit of public power previously lodged in them and vests it in the Commission as a primary instead of a reviewing function."

It had been insisted that there was no power, after recognizing the existence of competition and the right to charge a lesser rate to the competitive point than to intermediate points, to do more than fix a reasonable rate to the intermediate points; that is to say, that under the power transferred to it by the section as amended the Commission was limited to ascertaining the existence of competition and to authorizing the carrier to meet it without any authority to do more than exercise its general powers concerning the reasonableness of rates at all points. But Justice White says this is directly in conflict with the statute as construed by the Court and with the plain purpose and intent manifested by its enactment. "To uphold the proposition, it would be necessary to say that the powers which were essential to the vivification and beneficial realization of the authority transferred had evaporated in the process of transfer and hence that the power perished as a result of the act by which it was conferred." He continues:

"As the prime object of the transfer was to vest the Commission within the scope of the discretion imposed and subject in the nature of things to the limitations arising from the character of the duty enacted and flowing from the other provisions of the Act with authority to consider competitive conditions and their relation to persons and places, necessarily there went with the power the right to do that by which alone it could be exerted, and therefore a consideration of the one and the other, and the establishment of the basis by percentages was within the power granted. * * *

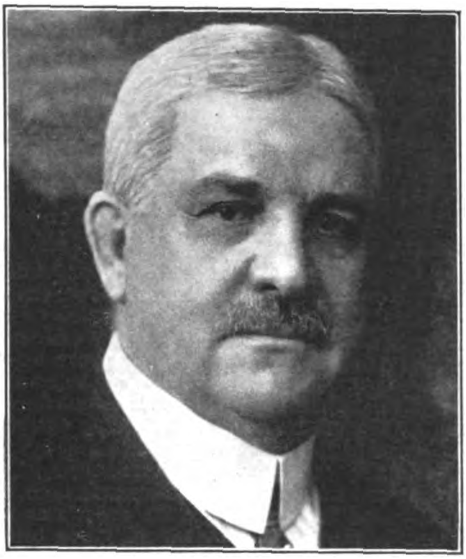
"Except as to questions of power, there is no contention in the argument as to the inequality of the zones or percentages or as to any undue preference or discrimination resulting from the action taken. But be this as it may, in view of the findings of the Commission as to their system of rates pravailing in the tariffs which were before it, of the inequalities and burdens engendered by such system, of the possible aggrandizement, unnaturally, beyond the limits produced by competition in favor of the competitive points, and against other points by the tariff in question, facts which we accept and which indeed are unchallenged, we see no ground for saying that the order was not sustained by the facts upon which it was based, or that it exceeded the powers which the statute conferred or transcended the limits of sound legal discretion which it lodged in the Commission when acting upon the subject before it."

The only point in the decision from which any comfort can be derived is that the Court reiterates the rule laid down by it in a previous decision, that, while findings of fact made by the Commission within the scope of its administrative duties must be accepted in case of judicial review, such doctrine does not relieve the courts in a proper sense from determining whether the Constitution has been violated or whether statutory powers conferred have been transcended or have been exercised in such an arbitrary way as to amount to the exertion of authority not given—"doctrines which but express the elementary principle that an investiture of a public body with discretion does not imply the right to abuse, but on the contrary carries with it as a necessary incident the command that the limits of a sound discretion be not transcended, which by necessary implication carries with it the existence of judicial power to correct wrongs done by such excess."

Personal

Edward Dickinson.

EDWARD DICKINSON, who on July 6th, became president of the Kansas City, Mexico and Orient Railroad, was born October 8, 1850, at Cumberland, Md. Educated in the common schools. Entered railway service October, 1861, as messenger, Cleveland & Toledo Road in freight office at Cleveland, Ohio, since which he has been consecutively 1862 to 1864, messenger, same road; 1865 to 1868, telegraph operator, Atlantic & Great Western Railway; 1868 to 1869, assistant train dispatcher, same road; for a short time in 1869, was clerk and operator, Union Pacific Railway at Omaha, Nebraska; 1870 to 1872, train baggageman and United States Express messenger, Atlantic & Great Western Railway; 1872 to 1875, train dispatcher, Nebraska Division, Union Pacific Railway; 1875 to 1878, chief dispatcher, Laramie Division and 1878 to 1883, superintendent, same division; 1883 to 1885, general superintendent, Wyoming Division, same road; 1885 to 1887, assistant general superintendent, Union Pacific System; 1887 to 1889, general superintendent, and 1889 to July, 1890, general manager, Missouri River Division, same system; July, 1890, to May, 1891, general superintendent, Trans-Ohio Division, Baltimore & Ohio Road, at Chicago; May, 1891, to April, 1893, assistant general manager, Union Pacific System; April, 1893, to November, 1902, general manager, same system; November, 1902, to March 7, 1912, vice-president and general manager, Kansas City, Mexico & Orient Railway, at Kansas City; March 7, 1912, to July 6, 1914, receiver, same



EDWARD DICKINSON.

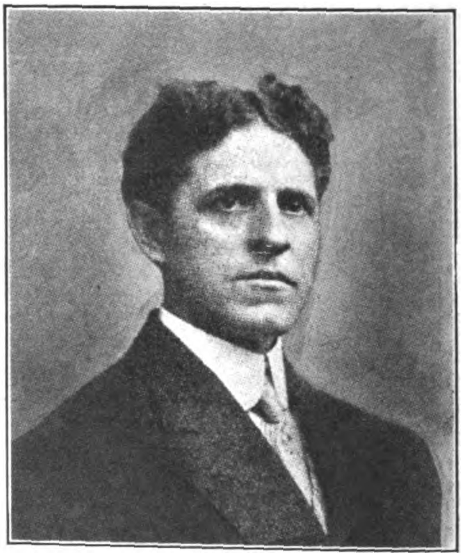
road; July 6, 1914, president, Kansas City, Mexico & Orient Railroad.

George C. Taylor.

AFTER serving for thirty-three years as president of the American Express Company, James C. Fargo has retired from that position to obtain relief from business cares and the directors of the company have elected George C. Taylor, first vice-president and general manager of the company in Chicago, to succeed Mr. Fargo.

Mr. Taylor entered the service of the American Express Company in Wisconsin in 1885, being employed in the wagon service. He successfully filled practically every position in the office service, such as transfer clerk, trace clerk, money clerk, cashier and agent during the next few years throughout various western states. From that line of work Mr. Taylor was transferred to superintendent's chief clerk and then as route agent on the Great Northern lines and also throughout the southern states at the time when service was inaugurated on the M. K. & T., Illinois Central and Yazoo & Mississippi Valley lines in the years 1892 and 1893. Mr. Taylor was later made assistant superintendent of the Southern Division with headquarters at St. Louis, then transferred to Chicago as general agent, when he was promoted to assistant general manager of the Central Division at Cleveland, from which position he was transferred two months later to the new Pacific Division with headquarters at Salt Lake City with the title of manager. On the first of July, 1911, he was transferred to Chicago as general manager of the Western Department, embracing all of the company's lines west of Buffalo, N. Y. In February, 1912, Mr. Taylor was further honored by being elected to a vice presidency in the company, and has since served as vice-president and general manager in charge of the company's interest in the West.

GEORGE C. TAYLOR.

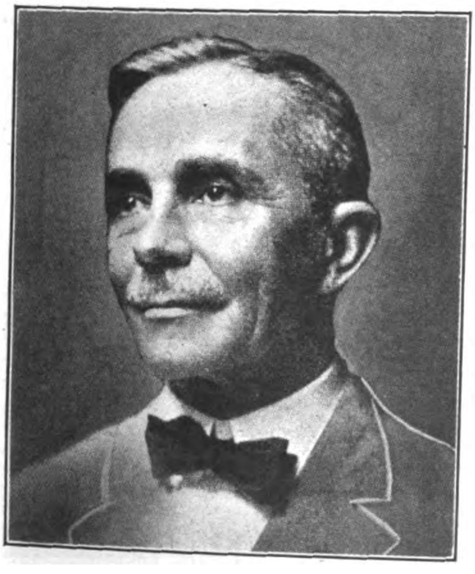


Frank H. Alfred.

FRANK H. ALFRED, general manager of the Pere Marquette, has been appointed chief executive officer for the receivers, with headquarters at Detroit, Mich., succeeding W. A. Garrett, resigned. Mr. Alfred was born at Logan, Ohio, December 24, 1866, and was educated at the University of Michigan and the Ohio State University. He began railway work in 1887 as rodman on construction of the Columbus, Lima & Milwaukee, and later was made resident engineer. From March, 1889, to 1894, he was assistant engineer of the Norfolk & Western in charge of field work on construction of the terminal at Columbus, Ohio, and from the latter date until April, 1896, was assistant to the chief engineer of the Hocking Valley. He was then successively engineer maintenance of way of the Cleveland, Akron & Columbus and the Wheeling & Lake Erie, and in 1900 became assistant engineer on the Pere Marquette. He was made chief engineer in October, 1902, and resigned October 1. 1905, to become manager of the Canadian White Company, Limited, of Montreal, Que. Mr. Alfred returned to railway service in 1908 as assistant to the president of the Cincinnati, Hamilton & Dayton, and from August, 1910, to April, 1912, was general superintendent of that road at Cincinnati, Ohio. He then returned to the Pere Marquette as assistant general manager, being made general manager in December of that year.

J. W. Everman.

J. W. EVERMAN has been appointed vice-president and general manager of the St. Louis Southwestern Railway. Mr. Everman was born February 1, 1861, graduated from the public schools of Philadelphia in 1876. During 1877 and 1878 he was engaged in the mining industry in Venezuela, South America. He returned to the United States and began his railroad career—a mere boy, acting as clerk in the ticket department of the Pennsylvania Railroad. Early in 1881 he resigned his Philadelphia position and went to Texas, going to work for the Texas & Pacific Ry., at Marshall. Mr. Everman went from one clerkship to another, all the time attending to his duties with a sacredness that has marked his career in later years. Not long afterward he was made chief clerk; then a private secretary to a superintendent, with the Texas & Pacific. The two years that followed May 10, 1892, he was assistant general superintendent, and two years after that became assistant general manager of the same road. Mr. Everman has a record for making and holding friends. He regards friendship as one of the dearest things in a man's life. The church and the Y. M. C. A. as well as other moral and uplifting organizations, have always claimed supporting attention from him. In railroad circles he has the reputation of being fair and impartial. With training as to detail and capacity for work, Mr. Everman is master of his business.



JOHN W. EVERMAN.

C. L. Macmanus.

C. L. MACMANUS, who has been appointed demurrage supervisor for Texas, was born at Brownsville, Texas, January 8, 1869. Began railway work as clerk in auditor's office of the Mexican National R. R. in City of Mexico, 1889; was next in service of that line as cashier at Nuevo Laredo, Mexico, and continued in that position until June 30, 1890, when he was transferred to Alice, Texas, as cashier for the San Antonio & Aransas Pass, and Texas Mexican Rys., (latter leased line of the Mexican National. Continued in those two positions until December 7, 1890. On December 8, 1890, transferred to Monterey, Mex., as cashier of the Mexican National. Continued in that position until June 28, 1891, when resigned to enter service of the Monterey & Mexican Gulf R. R. Co., as chief clerk at Tampico, Mex., July 1, 1891, and continued in that position until September 18, 1892. On September 19, 1892, appointed agent at Tampico, Mex., with same company, and continued in that position until February 2, 1893, when transferred to Trevino, Mex., as agent of the same line; continued in that position until June 9, 1893. On June 11, 1893, entered service of the Mexican International R. R., at Jaral, Mex., remaining there until January 26, 1894, when resigned to enter service of Monterey & Mexican Gulf a second time at Tampico, Mex., and resigned that position in 1894 to engage in railroad service in the United States. Entered service of the Gulf, Colorado & Santa Fe, as cashier, at Cameron, Tex., July 24, 1894, and continued in service of that line until June 30, 1910, being successively promoted first as agent at Cameron, Tex., in 1896; then to agency at Temple, Tex., in 1899; then to agency at Dallas, Tex., in 1902. From December 5, 1903, date of entrance of Rock Island Line into Dallas, was also the agent of that line up to June 30, 1910. On July 1, 1910, entered service of Frisco Lines at Brownsville, Tex., in capacity of general agent for St. Louis, Brownsville & Mexico Ry. Co.; was later appointed general agent for the Brownsville & Matamoros Bridge Co., and for the Rio Grande Railway Co., (in June, 1912, was made vice-president and general manager of the Rio Grande Ry. Co.), and continued with those properties until he resigned to accept present service.

H. O. Hukill.

H. O. HUKILL, purchasing agent of the Pennsylvania Company was retired on June 1st, under the rules of the pension department.

Mr. Hukill was born at Steubenville, Ohio, May 25, 1844. After attending public school at that place until sixteen years of age, he entered the service of the Steubenville and Indiana Railroad Company, March 19, 1860, as Messenger in the Superintendent's office. He learned telegraphy, and in 1863 became an assistant operator; and on April 12, 1864, he entered the service of the Pittsburgh, Fort Wayne and Chicago Railway Company and the Cleveland and Pittsburgh Railroad Company as telegrapher and clerk in the office of the purchasing agent at Pittsburgh. He was advanced to the position of chief clerk to the purchasing agent January 1, 1877, continuing in that capacity until June 1, 1887, when he was made assistant to purchasing agent, holding that position until January 1, 1894, when he was appointed purchasing agent of the Pennsylvania Lines, and continued at the head of that department until his retirement, June 1, 1914, under the regulations of the pension department—an unbroken record of more than 54 years.

Rufus M. Pile.

ON July 1st, Rufus M. Pile, assistant general passenger agent of the Pennsylvania Railroad, was retired under the pension rules of the Company, having reached the age of seventy years. He has served the Pennsylvania Railroad system more than forty-four years.

Mr. Pile was born in Jeffersonville, Indiana, on June 25, 1844. He was educated at Jeffersonville High School. He entered the service of the railroad as a clerk in the general ticket office of the Jeffersonville, Madison and Indianapolis Railway, now known as the Louisville Division of the Pan Handle System, May 19, 1865. On June 1, 1873, he was appointed rate and division clerk in the passenger department of the Pennsylvania Railroad at Philadelphia. In September, 1883, he was promoted to chief clerk to the assistant general passenger agent, and on November 6, 1888, he was made chief clerk to the general passenger agent.

On June 1, 1903, when Mr. J. R. Wood was made passenger traffic manager, and Mr. George W. Boyd promoted to the position of general passenger agent, Mr. Pile was promoted to succeed Mr. Boyd as assistant general passenger agent.

Mr. Pile is a member of the Union League of Philadelphia, the Historical Society, Genealogical Society, New England Society of Pennsylvania, the Pennsylvania Society, Sons of the Revolution, and the Masonic Fraternity.

R. M. PILE.

W. H. Finley.

W. H. FINLEY, who has been appointed chief engineer of the Chicago and North Western Railway, was born in Newcastle, Del., and educated in the public schools. His engineering training was acquired by private instruction. In 1881 he entered the service of the Edgemoor Iron Co., remaining with that company until 1887 when he entered the service of the Chicago, Milwaukee & St. Paul Ry. in the bridge and building department. He remained with that company until 1892 when he entered the service of the Chicago & North Western Ry. as engineer of bridges. He has filled successively the positions of engineer of bridges, principal assistant engineer, assistant chief engineer and now chief engineer. Mr.

W. H. Finley.

Finley is a member of the American Society of Civil Engineers, past president of the Western Society of Civil Engineers and past president of the Chicago Engineers' Club.

O. S. Bowen.

O. S. BOWEN, who has been appointed principal assistant engineer of the Great Northern Railway Company, entered railway service in 1888, in the engineering department of the Coeur d'Alene Railway and Navigation Company in Idaho. He has also held various positions in the engineering department of the Washington and Idaho Railway, the Seattle, Lake Shore and Eastern Railway, the Spokane Falls and Northern Railway, the Nelson and Fort Sheppard Railway and the Great Northern Railway, until 1903, when he was made resident engineer of the Great Northern Railway at Spokane, Wash. In 1913, he was transferred to a similar position at Seattle, Wash., which he held until his recent appointment. All Mr. Bowen's engineering experience has been in the states of Idaho, Montana, Washington and British Columbia.

D. F. Kirkland.

D. F. KIRKLAND, who has recently been appointed general manager of the Georgia and Florida Railway, was born in 1866 in Lownds County, Ga. He entered railway service in 1883 as bridge laborer on the South Florida Railway and since then he has been consecutively—1884, work train conductor; 1885, locomotive fireman; latter part of 1885 to 1887, telegraph operator at various points, Savannah, Florida & Western Ry.; 1887 to Jan. 1, 1888, copying operator in dispatcher's office at Savannah, Ga.; Jan. 1, 1888, to Sept. 1, 1889, dispatcher, same road; Sept. 1, 1889, to April 1, 1891, dispatcher, Georgia, Southern & Florida Ry., at Macon, Ga.; April 1, 1891 to July, 1898, dispatcher, Plant System; July, 1898, to Sept., 1900, trainmaster, same system; Sept., 1900, to Dec., 1905, division superintendent, same system, now operated by the Atlantic Coast Line, at Waycross, Ga.; July to Dec., 1906, superintendent transportation, Georgia, Florida & Alabama Ry.; May, 1907, to April, 1911, chief clerk to superintendent transportation, Central of Georgia Ry.; April to October, 1911, acting superintendent at Savannah, Ga.; Oct., 1911, to Jan. 7, 1912, trainmaster, same road at Cedartown, Ga.; Jan. 8, 1912, to April 15, 1913, superintendent, Georgia & Florida Ry., Douglas, Ga.; April 15, 1913, to June 1, 1914, superintendent, Atlanta, Birmingham and Atlantic Ry., Manchester, Ga.

M. D. Miller.

M. D. MILLER, who has recently been appointed superintendent of the New York, New Haven and Hartford Railroad Company, was born in Easton, Penna., and received his education in public schools. His first work was performed in the coal mines of the old Lehigh Coal and Navigation Company who later employed him for several years as telegraph operator and agent. In 1889, he went to the New York, and New England Railroad as telegraph operator at East Hartford, Conn., and served in that capacity at various points for about two years and as train dispatcher for about a year. He was then employed as train dispatcher for about a year on what is known as the Central New England Railroad, and in 1893, went to the New Haven Road to fill a similar position on the Stonington Division. In 1899, he was appointed chief despatcher on the same division and in 1901, when a re-arrangement of the division lines was made, he was transferred to New London as chief train dispatcher of the Shore Line Division. In 1908, there was another re-arrangement of the division lines and Mr. Miller was transferred to Providence as chief train dispatcher of the present Providence Division. In December, 1912, he was appointed assistant trainmaster and shortly after became trainmaster from which position he was appointed superintendent on May 25, 1914.

J. R. Kearney.

J. R. KEARNEY has been appointed superintendent of transportation of the Baltimore and Ohio System with headquarters at Baltimore. Mr. Kearney is promoted from the position of superintendent of transportation succeeding the late C. C. Riley, whose death occurred last winter. He was born March 29, 1859, and after attending the public schools at Altoona, Pa., entered railway service in 1876 as a clerk in the car record office of the Pennsylvania Railroad, at Altoona. From March 1, 1880, to May 1, 1881, he was employed in the car record office of the Illinois Central Railroad, and from May to November, 1881, was car accountant of the Illinois Midland Railroad. Returning to the car record office of the Illinois Central, he remained until May 10, 1882, and from that date until May 1, 1889, he was successively clerk and chief clerk of the car record office of the St. Paul, Minneapolis and Manitoba and the Great Northern Railways, at St. Paul. Mr. Kearney resigned from the western road to enter Baltimore and Ohio service as superintendent of car service, which position he filled until he was advanced to superintendent of transportation.

JAS. R. KEARNEY.

Obituary

Alexander Stewart.

ALEXANDER STEWART, general superintendent, motive power and equipment of the Southern Railway, with offices in Washington, D. C., died suddenly at the Hotel Continental in Paris, France, Sunday morning, June 28th, according to a cablegram received in Washington by a local official of the Southern Railway during the afternoon of the above mentioned date, though only bare announcement of the death had been received in Washington up to that night.

ALEXANDER STEWART.

Mr. Stewart had been in bad health for several months and, upon advice of his physicians, on June 16th, accompanied by his wife and only daughter, Miss Eleanor, sailed on the Mauretania for Bad Nauheim, Germany, where it was hoped he would fully regain his health and the cablegram, coming as it did, was a great shock to his many friends and associates.

Mr. Stewart was 46 years old and widely known in the railroad world as one of the most capable and experienced men of his profession.

He was born in Fort Wayne, Ind., and began at an early age to prepare for the railroad business. He was master mechanic of the Union Pacific Railroad, with headquarters at Cheyenne, Wyo., for a number of years, when he accepted a similar position with the Southern Railway with headquarters at Knoxville, Tenn. He was then promoted to general superintendent motive power and equipment with headquarters at Washington and also chairman of the Committee on Mechanical Standards of the Southern Railway and the following affiliated lines: Alabama Great Southern, Cincinnati, New Orleans & Texas Pacific, Mobile & Ohio and Georgia Southern & Florida Railroads, which positions he held for the past ten years and occupied at the time of his death.

In 1910 he was sent as a delegate to the International Railway Congress, which was held at Berne, Switzerland and in 1911 he was elected president of the Master Car Builders' Association, he was also a member of the Master Mechanics' Association. There was no man who was held in higher esteem than Mr. Stewart by his associates as well as those who served under him.

He was widely known in fraternal and club circles. He was a Knight Templar, a 32 degree Mason, a member of the Mystic Shrine, a life member of the Elks and a member of the Commercial Club, the Columbia Country Club and the Anglers' Club of Washington, D. C.

James Campbell, former vice-president of the St. Louis & San Francisco R. R., died at Greenwich, Conn., June 12th, in his sixty-eighth year. At the time of his death he was chairman of the Board of Directors of the St. Louis & San Francisco Company.

Marvin S. Chase, formerly from 1885 to May, 1901, assistant general freight agent of the Lake Shore & Michigan Southern, died at his home in Chicago on June 27th, aged 70 years.

Edward C. Coffey, assistant general freight agent of the Chicago & Alton R. R., at Peoria, Ill., died in that city June 26th.

D. K. Colburn, assistant general manager of the Sunset Central Lines, Houston, Texas, died at Woodhull, Ill., June 3rd at the age of 68. Mr. Colburn had gone to Woodhull, his former home, about a month ago, on account of continued ill health. He had been connected with the Sunset Central Lines since 1889, having been employed first in the bridge department. Before entering the railroad service he had been engaged in bridge building. On the day of his death President W. B. Scott issued an announcement to the officers and employes of the road eulogizing Mr. Colburn's high character.

Frederick Cromwell, formerly a member of the Board of Managers of the Delaware & Hudson Company, and a director of the Atlanta & Charlotte Air Line, the Morris & Essex, the Sixth Avenue Elevated Railroad, the Worcester, Nashua & Rochester and the New York Dock Company, died on June 22nd, at his summer home at Mendham, N. J., at the age of 71.

Walter J. Eddington, general foreman of the Atchison, Topeka & Santa Fe at Corwith, Ill., died at his home in Chicago on May 29th, aged 65 years.

T. H. Goodman, for almost forty years general passenger agent of the Southern Pacific Co., died in San Francisco, June 11th, in the Southern Pacific general hospital. He was one of the pioneers in California railway developments, having entered Southern Pacific service as general passenger agent in 1868, one year before the last spike was driven at Promontory. Mr. Goodman was born at Mount Morris, N. Y., July 12, 1830. In 1850, he started his railroad career as telegraph operator for the Vermont and Massachusetts railroad, advancing to higher positions with various eastern lines, until 1868, when he came to the Southern Pacific. Here he held the position of general passenger agent until his retirement on a pension in 1903.

William Harder, for twenty years general agent of the freight department of the Great Northern at Portland, Ore., died suddenly at his home in the latter city on June 18th, aged 70 years. He had been associated with the Hill lines continuously for 23 years, previous to which time he was assistant traffic manager of the Canadian Pacific at Winnipeg.

Franklin Harvey Head, formerly a director of the Toledo, Peoria & Western, died recently at Maplewood, N. H., at the age of 79.

M. C. Kimball, district freight agent of the Minneapolis, St. Paul & Sault Ste. Marie Ry., at Grand Rapids, Mich., died in that city June 12th, aged 50 years.

Russell Pardee Orcutt, from 1909 to 1911, division engineer of the Rochester Division of the Erie, and a son of George N. Orcutt, assistant to president of that road, died on June 28th, at Hot Springs, Ark., at the age of 29.

Edwin T. Plowman, of Kansas City, Mo., for twenty years superintendent of the dining car and eating-house system of the Atchison, Topeka & Santa Fe Ry., died at Deming, N. M., June ninth.

Martin Montgomery Reynolds, vice-president of the Grand Trunk Ry. system, died at Old Point Comfort, Va., June 17th, aged 52 years. Early in life Mr. Reynolds, who was an American born, was connected with the Mexican National railways, remaining with the same for eleven years. In 1892 he became general auditor for the Central Vermont Ry.; from March, 1896, to April, 1899, he acted as auditor for the receiver of the road and from May, 1899, to September, 1902, he was auditor of the Central Vermont. He returned to the Mexican Railways of Mexico in October, 1902. From April, 1904, to April, 1908, he was comptroller of the Mexican International and the Interoceanic Ry. of Mexico. In 1908 he joined the Grand Trunk Ry. as vice-president, and was later appointed vice-president of the Grand Trunk Pacific and Central Vermont railways.

M. M. Reynolds.

A. C. Sheldon, general agent of the Chicago, Burlington & Quincy R. R., at Portland, Ore., died in that city June 11th, aged 68 years.

Peter Stafford, roadmaster of the Chicago & North Western Ry. at Norfolk, Neb., died June 25th.

The Three R's of the Railroad Business

IN an article which appeared in the Chicago *Herald* of June 22d, Howard Elliott, chairman of the New York, New Haven and Hartford, discusses the financial situation which confronts the railroads and points to the urgency of augmenting their net revenues to meet the great increases in operating expenses which continually confront them. Mr. Elliott remarks that there have been three Rs in the railroad business in the last twenty years, namely, raising wages, raising taxes and reducing rates, and he believes that the point has been reached where, if the Nation wants continued expansion and development of its transportation system, those three Rs cannot go on because there will not be enough money to foot the bills. He considers it full time for the Nation to stop and consider whether it is not putting a greater burden on its railroads than they can bear. The following paragraphs are from his article:

"If there is any one feature offering encouragement in the existing railroad situation I think it lies in the increasing recognition of the important relation the prosperity of the railroads bears to the welfare of the country as a whole, and of the very grave danger there is in the failure of the Governmental agencies to help out. The narrowing of the margin between railroad income and outgo, reflected in the many published statements of earnings, and the effect this has had of stopping railroad improvements, upon which the country's growth depends, has been very generally observed.

"That something must be done to increase the net revenues of the railroads has lately been conceded even by Mr. Brandeis. In his brief presented to the Interstate Commerce Commission at the close of the recent rate hearings he said: 'On the whole, the net income, and net operating revenue of the railroads in Official Classification territory are smaller than is consistent with their assured prosperity and the welfare of the community, and this is notably true of the General Freights Association and other Eastern lines. In view of this fact it is desirable that steps should be taken as promptly as reasonably may be to increase that net revenue.'

"It may be of interest to refer to a very recent utterance of Arthur von Gwinner, managing director of the Deutsche Bank. Herr von Gwinner says: 'American railway rates should not be 3, 4 or 5 per cent higher. They ought to be 25, 35 or 50 per cent higher. Such a state of affairs as exists in American railroads is a deliberate menace to the prosperity of the republic, and because the prosperity of the rest of the world is bound up with that of America, it is a danger to all of us.'

"The duties of American railroads to-day, except paying the bills, are practically directed by Governmental authority. The railroad owners and railroad managers have, to a very large extent, lost control of some of the very important elements of their business. The railroads cannot fix the selling price of their goods, their rates are all fixed for them by State or Federal laws or by municipal organizations, they cannot control their taxes any more, they have little control over rates of pay, and they cannot any more get capital for improvements at 4 per cent, as they used to do.

"The transportation business in the United States is a very big one. It is, second to agriculture, the biggest of all. The last Census showed that there were something over $41,000,000,000 in agriculture, about $19,000,000,000 in manufactures and somewhere between $18,000,000,000 and $20,000,000 in transportation. These three great interests are interwoven together. They must go up or down together. The transportation business must grow and must develop and must be reasonably protected and regulated or it will not be in a position to serve the country and the millions whose daily livelihood depends upon this great business.

"The railroad is never finished, and it cannot stand still; it must go forward or backward, and to go forward means a constant investment every day in the year. In round figures, for every dollar increase of gross earnings for the railroads of the United States as a whole, at least $6 of new capital is required. In New England, where there is a dense population, for every dollar increase in gross earnings the new capital investment must be more than $6.

"For the last four or five years the railroads have been struggling with the higher cost of living, as have individuals. For the year ending June 30, 1914, the New Haven will pay $2,500,000 more than for the year ending June 30, 1910, for the same amount of labor. This is 5 per cent on $50,000,000. That could be used to pay the return on bonds or other forms of indebtedness or for improvements, but it can't be used for both. If the New Haven could have paid the same rates in 1913 as it did in 1903, its payroll would have been $7,200,000 less.

"Coincident with these increasing expenses there has been a fall in freight rates. For example, if the New Haven had received the same average freight rates in 1913 as it received in 1903, it would have had for the same service $1,800,000 more. Here in these two items the increase in the unit price for wages and the decrease in the average unit price of freight, there is a difference of $9,000,000. In other words, the average physical energy expended by the railroad to-day is paid for at a less price than ten years ago, while it costs very much more. In twenty years railroad taxes have increased 225 per cent, or from $34,000,000 to nearly $125,000,000, with no increase in freight rates.

"Then, too, in addition, there are demands from Governmental bodies, involving expenses on the part of the railroad and at the same time taking a great deal of time and physical and mental energy of the officials which is thus diverted from constructive and operative work. The conflict of laws in the States has naturally been an embarrassment to the great public service corporations.

"The railroads have gone pretty nearly to the limit in their efforts to increase their efficiency, although there is always a chance to improve; they are getting heavier engines, engines capable of drawing heavier trains, and heavier rails; managers are trying each year to make a dollar go further than the preceding year, but there is something of a limit to what they can do, and in my own judgment that limit is very nearly reached.

"The cost of producing new railroads connecting important communities is so great that none is likely to be built, and the country must depend upon those now in existence and permit them to expand to meet the increase in business.

"The railroads of the United States have done a wonderful piece of work since the Civil War in practically rebuilding the transportation machine of this country, so that to-day it is the wonder of foreign nations. They have so done it that the capital invested represents but $60,000 per mile, while in England it represents $275,000 per mile and in Germany $114,000 per mile. The average pay of the employes of the railroads is $733 per year, compared with $270 per year in England and $388 per year in Germany. The average charge against the people of the United States for hauling 2,000 pounds one mile is only ¾ of a cent. It is 2 1-3 cents in England and 1½ cents in Germany.

"In other words, the railroads have succeeded here in producing a piece of machinery at a capitalization of $60,000 per mile upon which labor is employed at the rate of $733 per year, and the freight rate is from 1 1-3 to 1½ cents per mile cheaper than in foreign countries. Not only that, but the best appliances, the latest inventions for the safety and comfort of employes, are found on the railroads of this country. Our people demand and our railroads supply better facilities for safe and luxurious travel than in any other country.

"There have been three Rs in the railroad business in the last twenty years—raising wages, raising taxes and reducing rates. It looks now as if we had reached very nearly the parting of the ways and that if the nation wants continued expansion and a development of its railroads those three Rs cannot go on, because there will not be money enough to foot the bills.

"We put up at a railroad crossing a sign and we letter it 'Stop, Look and Listen.' Has not the time come when the nation should stop and see whether it is not putting a greater burden on its transportation agencies than they can bear, and look ahead and see what is needed in order to let the business of this country go on and grow?"

President Delano on the Railway Situation

THE Chicago *Tribune* on June 5 published the following letter from F. A. Delano, president of the Chicago, Indianapolis and Louisville, discussing an editorial which appeared in the *Tribune* on May 31 on the reasons for the present critical condition of the railways.

"If the admirably expressed and tersely put editorial from the Chicago *Tribune* correctly states the facts, and I believe it does, it is time for men who love their country—patriotic, forward-looking men—to do something about it.

"Criticism from all sides has laid bare the facts enumerated, but we need something besides criticism. We are drifting towards government ownership, because those having the greatest share in the present form of ownership are becoming disgusted.

"Under the policy which has existed in this country almost to the present time, railway building was encouraged without regard to needs, intelligent location or earning capacity. Capital was encouraged to build railroads, although in many cases they were so built that they could never be made to pay; and yet even to this day, although we have for 26 years had a commission with large administrative powers, we depend chiefly on competition to determine rates, facilities, time schedules, etc. In mercantile experience or in manufacturing, the unwisely projected or the badly located venture goes to the wall and no longer continues as a menace to other enterprises; but not so a railroad. In only two States of the Union has there been a check placed on useless railroad building, wildcat projects, blackmailing schemes; and yet, the worst practices to-day, practices which the Interstate Commerce Commission could without doubt stop at once by executive or administrative orders, are practices which have crept in and become custom in the battle for existence between these parallel and competing lines.

"As a nation we have attempted to cling to a dual system of regulation on the one hand and unlimited competition on the other; and when railroad men have tried to get together to abolish evil practices—trying to bring about a better enforcement of the law and the spirit of the law— they were none the less enjoined as conspirators.

"But this is neither the time nor the place for criminations and recriminations. The *Tribune* has correctly diagnosed the situation. It is time to arouse ourselves. The Interstate Commerce Commission finds itself overworked and unable to cope with the situation, and it appears to the writer that the time has come for railroad men themselves to take hold. We must do as the bankres have found it necessary to do; they do not depend upon the comptroller of the currency and his examiners to find irregularities—that method was fully tried and found sadly wanting—but they have added, in Chicago and in some other large cities, their own corps of examiners to report to the clearing house.

"Railway officials object to being told that it was their business to cry a halt in the New Haven situation before things had gone too far, and yet all of them will admit that great and incalculable harm has been done to all by the methods of Mr. Mellen. Shall we allow this sort of thing to go on; shall we permit one man, be he insane or unscrupulous, to besmirch the reputations of the remainder? The old employers' guilds of the middle ages were wiser than that. Surely if we have a reputation to sustain we cannot afford to have it ruined. Certain standards of professional ethics must be established and enforced by a committee of such character and authority that its recommendations will carry.

"Such a committee would soon have the confidence of the Interstate Commerce Commission and State authorities, and in time be helpful in curing practices which the Commission probably thinks should be cured, but does not know how to approach. Mr. Brandeis has pointed out serious causes of loss, leaks which should be stopped, rates so low that they amount to special privileges. These are not new discoveries; the serious fact is that they have long been recognized, but under the present method of management there has been no cure for them. What shall we do about it? Shall we try to cure the trouble or shall we allow things to drift, the slow but inevitable drift to government ownership, even though we may foresee in that drift the wreck of our republic?"

FREDERIC A. DELANO.

The Prejudice Against the Railways*

By Fairfax Harrison, President, Southern Railway.

TIME was when it was generally believed that the railroads were making vast profits because they handled millions of revenues. Many there were who purported to disbelieve the statements of the published accounts: comparatively few there were who ever read them. It was enough to know that the figures dealt in millions to believe they were unholy. Then came the regulation of the system of railroad accounts, and with it an appreciation by most intelligent men that accounts kept under the supervision of a government commission were probably reasonably correct, and if they showed, as they did show, that the profits were not large when reduced to the unit of investment represented, or of service performed, then resort must be had elsewhere to find the "Nigger in the woodpile."

The American people are not yet entirely convinced that a railroad is a precarious industry subject to general economic laws, though they are rapidly coming to that appreciation. Because it has been demonstrated that there are thieves and buccaneers in the railway industry, as well as in most other forms of human activity, the popular search has always been to find whither have gone the vast "profits" which are believed by many to be a necessary incident of control of a system of railways. It now seems likely that publicity will demonstrate that this suspicion of all railroad bankers, like the suspicion of unlawful profits of the railroads themselves, is a delusion. The recent publication, by a great banking house in New York, of the details of its accounts with the New Haven Railroad revealed to an astonished world that over many years of the largest financial transactions the bankers' profits averaged seventeen trousand dollars per annum. This may well give us all pause in our preconceived opinions, and, in further aid of clear thinking as to your and my relations to the bankers, I venture to say in conclusion a word as to what these bankers do for you and for me.

Every one of you has a large personal interest in the perfection of the Southern Railway as an instrument of commerce. I myself have a personal ambition and a steady determination to accomplish every year a step towards the realization of your interest in this respect. To do that will require bringing into the South many millions of new money. We cannot hope to earn from our service to the Southern people all that we need to spend on these railroads as fast as we must spend it. Even if we devoted all of our income to that end, and for many years we have so devoted most of it, the agricultural and industrial South is growing so fast that we could not keep up with it, much less keep ahead of it and so help it to grow. Neither is the South itself yet ready to provide the capital by buying our securities. Under the operation of the new income tax law we have had an opportunity, never before possible, to ascertain where and by whom many of our railway securities are held. In this way we have identified a certain representative block of one hundred and ten million dollars of Southern Railway bonds and find that they are held not only in New York but in most of the States of the United States and in many foreign countries and by nearly eleven thousand individuals. Of this total, less than three and a half million dollars is held by seven hundred individuals resident in the States the Southern Railway serves, and sixty per cent of these holdings in the South are in the two cities of Richmond and Louisville. This demonstrates that the money we have secured for the improvement of the Southern Railway in the past has been drawn not from a few rich men, but from an army of investors having at stake an average of not much more than $10,000 apiece, and that the South itself, which has had the benefit of the expenditure of the money in the promotion of an unexampled growth of prosperity, has as yet contributed only three per cent of the capital.

Until the South is prepared to support our capital requirements on a larger scale, we must then look to those who have established channels for the facile distribution of large blocks of securities among a multitude of investors all over the world, and this necessity brings us inevitably to the banking community, to the hated Wall Street, for access to the money we need to spend in the South.

I am glad to be assured that these bankers have realized that the South is the coming part of the United States, and so are confident that they can safely venture their reputation in distributing the securities of Southern Railway Company under present day conditions. I am glad, too, to believe that I have their personal confidence and that they will listen to my recommendations. They have already supplied fifteen million dollars of absolutely new money on such recommendation since the first of January last, and they are ready to supply more for further nmprovement of the Southern Railway plant. All of this is to be spent for the South, most of it in the South, in such ways that eventually it will seep into the accounts of many Southern merchants, just as the proceeds of a large crop eventually reach the merchants. Every one whom I now address has an interest in the disbursement of this money and in what will result in the way of personal convenience and facility for doing business from its expenditure. It is as if a new crop worth fifteen million dollars had been produced in the South this winter. Think what the rejoicing would have been if it had been a crop!

It is, then, of great importance to you and to me and to all the people of the South to have and to hold the confidence of these bankers. The way to accomplish that is simple. I do not propose an investigation of the bankers' business. I do not even propose a new statute to compel them to supply us with money; that might be the simplest way, but it appears that no investigation nor any statute has yet been devised to make a banker invest where he does not want to invest: such a miracle is apparently one of the few things which neither an investigation nor a statute can be made to perform. The bankers do not ask any gratitude, any lip service, for they expect to get their reward in the form of a commission: that is their business. They do not expect to control the railways as the popular imagination pictures them as doing: to make rates and initiate policies affecting the welfare of thousands of people. Never in my personal experience with them, and it has been an intense experience over many years, have I heard a suggestion of that kind of interference, nor have I experienced an attempt to exercise such power through the control of the sources of money.

---

*Extracts from an address delivered before the Chamber of Commerce, Lynchburg, Va., April 30, 1914.

In a prosperous community there is only one condition of the bankers' co-operation, but it is an essential one—that the public shall be as fair in the treatment of invested capital as it has demanded that those who control invested capital shall be fair to the public.

Personally, I have no doubt that we in the South shall meet the condition and get all the money we need.

Close Relation of the Railroads to Human Nature

(EXTRACTS FROM A RECENT ADDRESS DELIVERED BY IVY L. LEE, EXECUTIVE ASSISTANT, PENNSYLVANIA RAILROAD, AT A DINNER OF THE AMERICAN RAILWAY GUILD.)

THE railroads are in the midst of a swirling flood of legislation and regulation—most of it punitive and restrictive, little of it constructive and statesmanlike. Last year in forty-two State Legislatures 1,495 bills regulating railroads were introduced, and 230 became law.

Why?

Because the American people have become imbued with certain ideas concerning our railroads, ideas which have a deeply sinister meaning, ideas which have supplied fuel for a flame these courtiers of His Majesty the Crowd have delighted to keep burning.

One of the main reasons we are in the midst of this vortex is that we have failed to take account as railroad men of certain fundamental currents of human nature, which from time immemorial have been made the most of by men who have influenced the action of crowds. Railroad men have been standing aside content to be judged by the machines they were running, not attempting to have themselves regarded as human beings, not making it known that railroads were but composites of human nature. Machines haven't the necessary red blood to arouse multitudes.

The railroad business is very much like, and has always been very much like, every other kind of business. Railroad morality has responded to the general morality of the public, and railroad men have been neither worse nor better than the average run of people at any time.

But somehow or other the public has come to have the idea that three essential evils are imbedded in the railroad business:

1. The first is that there is a vast amount of watered stock on which dividends are being paid. Now there is no essential immorality in the existence of watered stock. It is, after all, a mere business question. It is purely a question of policy as to whether dividends should be permitted to be earned on watered stock. The difference in the effect of watered stock on different publics may be seen in the resulting attitude toward watered stock in this country and in England. In England the Board of Trade reports that the capital obligations of all British railroads are about $6,675,000,000 and the official returns expressly state that nearly $1,000,000,000, or about fifteen per cent is "nominal" capital or "water," and yet in none of the published discussions regarding the railroad problem in England do you observe sinister reference to the "watered" stock.

There is no doubt that the present Federal valuation scheme in this country, which is to be so very expensive, would never have been undertaken if it had not been for the very firm belief on the part of the public that dividends were being paid on watered stock.

2. In the second place, there is a wide-spread feeling that the railroads are ruled from Wall Street, that a small coterie of bankers in alliance with the so-called "money trust" are absorbing huge profits from the people. I do not think you would ever have had two-cent fare laws if it had not been for this wide-spread sentiment. The people in the States felt that by such laws they could retain for the public in their own districts, a portion of the profits which were being absorbed by the absentee owners.

I have an idea the public is to-day persuaded that the railroads are underpaid for carrying the mail, yet acquiescence deliberately in a continuance of a recognized injustice in itself because the people believe, and a large number of Congressmen believe, that by restricting the payment for mail they may save to the people some of the undue profits they feel are earned through other railroad operations by these absentee owners.

3. There is a third idea abroad—that the railroads through their combinations of capital and management exercise undue power over the welfare of the people. A most astounding document was presented to Congress on May 15th by the chairman of the House Committee on Interstate Commerce. Must we not take serious notice when the chairman of one of the most important committees, representing the dominant party in Congress, pronounces a doctrine so amazingly unsound as this:

> "The most vicious thing about all combinations in transportation and all other kinds of business is that while it multiplies the benefits of the few men retained, it dispenses with the services of so many both competent to fill the positions and entitled to the fair emoluments thereof."

On March 29th, Clifford Thorne, chairman of the Iowa Railroad Commission, who, no matter what we may think of his views, undeniably represents a large body of public sentiment, made this statement with reference to newspaper reports of railroad economics:

> "The discharge of 40,000 men simply proves the colossal power of a few men that can throw 40,000 poor families out of the means of daily sustenance."

I believe you will agree with me that these thoughts are in the minds of a large percentage of our population. That such notions are full of error is no matter; they are there, and it is because of their existence that the very foundations of railroad prosperity in this country are being undermined.

That there has been some reason for some of these popular ideas, no one can deny. But that the railroad business as a whole or in the main has been conducted upon unsound lines, that its managers have not been honest, that its results have not contributed mightily to the wonderful progress of this land can be emphatically denied. The extraordinary achievements of our railroads, the wonder, as they are, of the industrial world, constitute a fact of overwhelming significance, a fact embodying the effort, the fidelity, the enterprise, the patriotism of ninety-nine out of every hundred men who have given their service to the public through the railroad since the railroad started to run in this country.

Why is it then that the good in the railroads has been hidden and the bad magnified and distorted out of all proportion? It is because railroad men have neglected the human nature of the situation; it is because loud-tongued politicians have dilated upon the evils while railroad men sat still, attended to their job and said nothing of the good; it is because railroad men have not insisted in and out of season and produced the facts to prove it, that no matter what fly-specks might be pointed out on the wall, the structure itself was safe and solid and something to be proud of.

From the beginning of history popular leaders have taken account of the fact that the people in the mass act upon impulses. Such leaders have not been disposed to exaggerate the intellectuality of mankind at large. If railroad men then are to assume the place to which they are entitled as leaders of the public they must consider these same elements in the psychology of the multitude.

These elements may be briefly described as follows:

1. In the first place crowds do not reason. It is impossible to induce a crowd to proceed toward any proposition on a logical basis. John C. Calhoun proved beyond dispute, as a matter of pure reasoning, that the Southern States had a right to secede, but Wendell Phillips came along and preached the doctrine that the slaves should be freed and that the Union must be preserved. It would have been a logical thing to pay the Southern people for their slaves, but we all know it was not possible to deal with that in that way. You were dealing with crowds.

2. Again crowds are led by symbols and phrases. Joseph Chamberlain, when he was advocating the Boer War, achieved his purpose when he dubbed those opposed to him as "Little Englanders." We know that Bryan, through the creation of that extraordinary phrase "You shall not crucify mankind on a cross of gold," did more to advance the free silver cause than all of the subtle and logical efforts that were ever made to advocate that idea.

3. Success in dealing with crowds, that success we have got to attain if we are to solve the railroad question, rests upon the art of getting believed in. We know that Henry VIII, by his obsequious deference to the forms of law was able to get the English people to believe in him so completely that he was able to do almost anything with them. At the present time the German Empire has, as I see it, the most despotic Government and yet the most progressive and the most contented people in Europe, for the reason that the Emperor of Germany is absolutely believed in by his people. So he may do anything he desires, and the people are glad to have him do it. Does anyone question that Mr. Roosevelt's supreme influence while he was President was due to the fact that the American people absolutely believed in him, believed in the purity of his motives and the elevation of his patriotism? Believing in him as they did, they paid no attention to his blunders or to criticisms of him, however valid.

4. The problem of influencing the people en masse is that of providing leaders who can fertilize the imagination and organize the will of crowds. Moses painted a picture of the promised land, and he induced the Israelites to spend forty years of extraordinary hardship under his leadership. Caesar drew a picture of the conquest of Gaul, and so infused the imagination of the Roman populace that they thrice offered him a crown. Napoleon's uncanny power in France was due to his resourcefulness in the appeal to these same elementary crowd-impulses.

These are some of the elementary main-springs of crowd stimulation. They are factors which statesmen, preachers and soldiers have from time immemorial recognized when they sought to lead peoples. My point is that in working out the railroad problem we must take account of these same principles of crowd psychology.

We must, for example, replace with sound phrases and symbols those symbolic words, symbolic terms and phrases that have gotten into the public mind and created a false impression. We have heard a great deal about "full crew" laws. The labor people were very happy in their selection of that term "full crew." Now, if we had referred to that from the beginning as the "extra crew," it seems to me we would have made considerably more headway than we did.

The phrase, "What the traffic will bear," has done as much to hurt the railroads as any expression ever used. It is scientifically correct, no doubt, but it conveys a most unfortunate suggestion to the popular mind; the thought that the rate is "all the traffic will bear" is a suggestion absolutely contrary to the fact.

We can never be too careful in the terms we use. Some time ago, a certain public service corporation was in great financial difficulties; it could not pay its bond interest. Its skillful president induced its bondholders to agree to a reduction of the rate of interest on the bonds. Their president then announced to the public that there was to be "a readjustment" of the finances of the company. Now "readjustment of finances" is so much better than saying "Your company is bankrupt," and no one ever suggested that his company was bankrupt. It was a matter of terms, and we must be careful of the terms we allow to be lodged in the public mind. There is often talk of "educating the public." Now railroad officers themselves are getting a good deal of very helpful "education." It is not a question of "educating the public"; it is a very real question of understanding the public and having the public understand the railroad man.

What we say to the public, it seems to me, must be with reference to its effect, and not especially with reference to its logical sequence. You cannot argue with the public. To illustrate, Mr. Roosevelt in his speeches gives us holes through which one can drive a coach and four. Mr. Bryan doesn't reason, but he moves multitudes powerfully. Such men and quite legitimately, say what they have to say with a view to its effect, the emotional effect upon the imagination of the people they are seeking to reach.

Major Charles DeLano Hine, Railroad Efficiency Expert

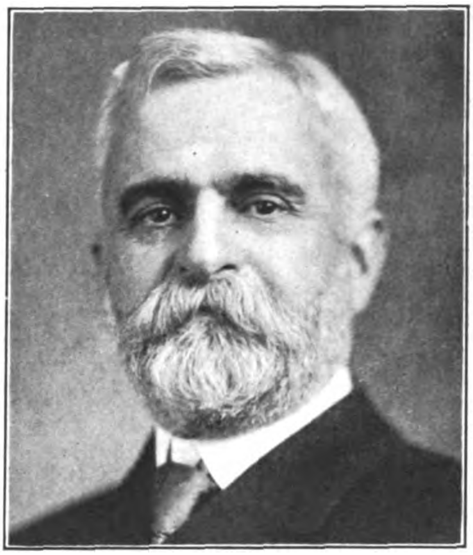
By S. Hunter Walker.

ON my return from Europe the other day, I ran into a solid, smiling, middle-aged young man carefully leading a distinguished-looking woman through the big swinging doorways of the beautiful Washington terminal. The man was Major Charles DeLano Hine, of railway note, and the lady was his mother. They were on their way to a private car which was to convey them to Buffalo, near which city Major Hine is making his headquarters while doing special work for the Erie Railroad. It was characteristic of the Major that he should be smiling, and it was also characteristic of him that while he was living the life of a luxurious bachelor in a private car for the few hours out of the twenty-four which he allows himself for rest, he should wish to share this luxury with his mother.

Major Hine is one of the most interesting men the United States has lately produced. A railroad man he is who, by dint of grit and application and by his own desire to study his chosen profession from the bottom, engineered his way from brakeman on a freight train to senior vice-president and general manager of one of the biggest lines of the Harriman system. Until late last year Major Hine held this position with the Southern Pacific Railway of Mexico and Arizona Eastern Railway. He had taken the post two and a half years before and was, when appointed, the youngest railroad vice-president in this country, if not in the world. During those years he did heroic work upon the seventeen hundred miles he practically controlled. Last year, however, railroad conditions in Mexico became too deplorable for even his irresistible force and sanguine nature and he resigned his southern post. It is the tremendously hard work he did in Mexico and the border lines during this difficult period which has made the Major's hair whiter than is usual in a man yet in his early forties.

Here is a pen picture made by a man who saw Hine in his office in Tucson, Arizona, and on the road shortly before conditions made proper railroading in Mexico impossible:

"Just a door to pass into the office of Vice-President Hine—really the working head of the system. I have seen Major Hine writing a thousand word telegram to a diplomat in Washington; seen him take charge of a muddle of trains and bring them out on good schedule; seen him in the yards giving signals and causing a great equipment movement in ten hours that would ordinarily take five days; seen him hastening over the line in a motor car and stopping at a peon's ranch to really enjoy a meal of menudo, tortillas and thick, black coffee; seen him in charge of a special train carrying munitions of war to a point of need—and he is always all there. His office, though, might seem to one who does not know a place where a social official played at business—no stenographer, no table littered with reports, papers, telegrams, paraphernalia; for Major Hine is the embodiment of system, and he is a past master in its actual exposition."



MAJOR CHARLES D. HINE.

It was a great climatic change from Mexico and Arizona to Canada, and winter an unpleasant time to make it. But Major Hine did not mind that, and when he was asked to take a three months' term of work as Consulting Engineer and Efficiency Expert for the Canadian Northern Railway during the survey of its new road, he immediately accepted it. His sister, in Vienna, Virginia, permits me to quote from a letter he wrote to his family there while he was roughing it in the Northwest last winter:

"I left Winnipeg on sleeper Thursday night, 6th, reached Edmonton Saturday morning and went off on a construction train with General Superintendent W. A. Brown, to go over the new line west. We reached the end of steel, 241 miles, Sunday night, only eleven miles from the Yellowhead Pass, the summit of the Rocky Mountains. Monday morning we took a train on the Grand Trunk Pacific, which parallels the Canadian Northern for many miles. We came through the Yellowhead Pass and crossed the Continental Divide on an easy grade at an elevation of only 3,700 feet. Forty-nine miles west of the Pass, where the two lines diverge, we got off at a C. N. R. grading camp. Here I found it possible to follow the grading west all the way through. A horse was available. My bag was back on Mr. Brown's car. At the contractor's store I got a sweater, a rubber coat and a pair of arctics. After dinner, to the amazement of Mr. Brown, I set off on horseback accompanied by two grading walking bosses. After nearly twenty miles' riding, I slept in a tent in an engineers' camp. Tuesday brought over twenty-five miles of hard riding over icy and snowy roads with dinner in a grading camp.

"Wednesday, Division Engineer Millidge and I followed the Thompson River five miles on horseback, and then below the rapids I took his supply canoe, manned by two good boatmen, one an Indian half-breed. The canoe carried coal oil, canned goods and corn flakes for the down river engineers, all of whom have good log houses. We made only seven miles to the camp of Engineer Stirrett so as to make an early start Thursday, when we paddled thirty-five miles through icy water, stopping for dinner at the camp of Engineer Morrison, only three miles above where the canoes stop on account of rapids below.

"Friday morning, I walked alone thirteen miles, three of which were over a miserable trail. After dinner at a grading camp I left on the camp doctor's old horse and rode twenty-seven miles, the last ten over a rough frozen road. I reached camp at mile 343 from Puget Sound at 8.40 P. M., with a record broken for one day's travel along the ever-present Thompson. The enthusiastic youngsters got me a hot supper and prepared a good bed. Saturday morning, I was as good as new and in the afternoon drove fourteen miles in a spring wagon to engineers' camp at mile 329, where I spent the night and left this morning before breakfast on the twice a week supply construction train and arrived at Kamloops, 86 miles, at 4 P. M. I leave over the C. P. R. to-night and unless delayed by a landslide reported west should be in Vancouver at 8.30 A. M.

"This trip was harder than last year's crossing the Continental Divide between Guadalajara and Tepic on muleback. I believe on the whole, I prefer to follow the rails than precede them."

Major Hine is the creator of the Unit System for railroads, which was introduced into nearly all of the Harriman lines at a saving of hundreds of thousands of dollars annually to that system. The Unit System has been used in whole or in part on many of the railways throughout this country, as well as in Canada and on some of the railways in South Africa.

This system, Major Hine succinctly describes as "a simplification of ways and means." It is largely a process of elimination. It does away with archaic methods, annihilates worthless red tape and roundabout ways, unnecessary correspondence and records. It condenses work and workers and cuts out "dry rot" generally with the ruthless hand of an iconoclast of business traditions.

The Major is a graduate of the United States Military Academy, although his title was gained as a volunteer officer of the Cuban Army. He is a lawyer besides and also the author of several works. His two latest books are: "Modern Organization" and "Letters from an Old Railway Official." As a writer and as a public speaker—for he is often called upon to express his views on organization in general and railroad organization in particular—he is lucid in diction and strikingly epigrammatic in style. Here are a few dicta from his late spoken and written words:

Organization is a necessity and not an accident.

True inspection is as open as the day, as welcome as the evening.

Specialization is the lazy man's excuse for passing the work up to the other man.

A railroad track's second winter is often like a baby's second summer, a period of relative distress.

The corollary of specialization is centralization. The corollary of over-specialization is over-centralization.

Perhaps the best natural check against corporation over-specialization is rotation of function.

Efficiency too often is measured by book balances and statistical reports rather than by expert inspection of actual conditions and performances.

The great problem in organization is to develop, under modern conditions, the old-time feeling of individual responsibility. Specialization running rampant is often responsible for the creation of unnecessary departments.

Since history repeats itself in organization as elsewhere, the gradual evolution in industry will be, as shown by the experience of the ages in armies and navies, to insist upon periodical rotation between the staff duties of inspection and the line duties of performance.

Training Office Railroad Workers

By J. S. Donaldson,

Assistant Comptroller, Penna. R. R. Co.

THE creation of an organization to conduct a work of such vast importance as Railroad Accounting is fundamentally and necessarily based upon lines of desire to obtain accuracy in execution, and therefore the foundation must be built in accordance with correct principles.

To be an efficient clerk requires that a person should be a fair penman, able to write with reasonable rapidity, able to operate the various accounting mechanical devices and have a knowledge of stenography; he should be able to add, subtract, multiply and divide accurately; he should have the temperament which will enable him to apply himself continually for many hours upon details; he should have a certain acuteness that will enable him to judge quickly where errors exist in accounts; and should also be interested in methods to improve the systems or methods of record keeping.

An accountant does not require the same skill of hand and readiness of performance as a clerk, but must be able to supervise and direct the work of the clerk; he should have a sufficient knowledge of the principles of accountancy, business methods, and general practices to qualify him to apply them to any line of business; and he should be competent to devise such a system of reports and record keeping as will enable him to place before the management the results obtained from the business. Many expert accountants are, or have been, bookkeepers, although, through lack of practice in the actual keeping of books, they may not have some of the manual and mental dexterity required to perform the work accurately and quickly, the previous training is necessary to enable him to originate methods and to understand books and accounts. The close study now required of Railroad Accountants of rules, regulations, classification of accounts, preparation of reports to Commissions, State and Federal, and the laws and rulings governing the application of transportation charges, as well as Internal Revenue laws, and tax laws, might now properly classify them as Accountants at Law.

Organization and method is the basic principle of success in accounting as well as all other work. Many of the difficulties and hardships imposed on clerks are created and continue to exist through lack of proper consideration of the methods in force. Simplicity does not attend them, and consideration is not given to the elimination of the elements which tend to create more work than is necessary to produce the results desired. Attention should be given to the elimination of every operation which invites inaccuracy and fails to accomplish all that may be done mechanically so as to save the fatigue incident to the analysis or summarizing of figures, which is so manifest in accounting work, by mental failures. This interest on the part of the employer in the employe will, in some instances, bring forth criticism and antagonism from those it is intended to benefit. One of the conditions of success is the ability to withstand criticism without resentment, and encouragement will follow as an after reward.

In the introduction of the use of new methods, especially of mechanical appliances, a spirit of indifference will, as a rule, confront you from those accustomed to other methods, and it will take some little time to impress the employe with the fact that the advantages are largely his. The results of our system are that we have been able to cut out overtime, relieve the mental strain and make life decidedly more enjoyable, while the Company will have eventually a more efficient service at less cost. A change in method naturally calls for a temporary additional expense and disarrangement of affairs, but if the results are for the betterment of conditions, we should not hesitate to make the changes. Much of the heretofore expense in accounting is saved in the use of mechanical devices by reason of the avoidance of errors that are quite common in mental methods, and involve in computation, or where a large volume of figures are concerned, a complete rechecking.

Employes should realize that improvements in accounting work by the use of mechanical appliances mean a furtherance of effort to preserve the mentality of the individual. This necessarily results in less absence from duty and a prolongation of life. The physical improvement insures better service and the elimination of the too common nervous ailments caused by excessive worry due to failure to balance accounts, and make returns on schedule time.

The greatest difficulty in successful accounting is the constant inaccuracies which creep into work performed by those who are incompetent, careless, or who work under pressure in the preparation of records or reports, which, because of the ramifications of railroad accounting, requires the results so obtained to be used in various ways, and thus causes, in the subsequent rectification of these errors, more labor and cost than that involved in the original production. This, unfortunately, has been true in a very marked degree in the past, but owing to the more general use of mechanical calculating devices, or prepared tables of results, curtailment of mistakes is taking place to a large degree, and by the use of typewriters in waybilling it is possible to do more expeditious work and meet the freight train schedules, especially as there is no press-copying involved. The advance in this respect is parallel to the adoption of automatic signalling devices as against hand methods, in preventing errors in train movements.

Following out what is thought to be a correct principle, all persons desiring to enter the employ of the Accounting Department of the Pennsylvania Railroad Company are required to undergo a mathematical and physical examination. Applications are only considered from among boys ranging, as a rule, from sixteen to eighteen years of age. Those who satisfactorily pass the test examinations are, as the occasion demands, tendered an opportunity to enter what is known as the apprentice school, which is conducted with the object in view of giving the boy the benefit of a correct fundamental education at the hands of those representatives of the various offices in the Accounting Department who are the most efficient in their respective lines, so that the old practice of the junior clerk being employed, assigned to a desk and left to his own development disappears.

By the new arrangement the boy is taught the most improved methods in the application of mathematics and stenography, the proper manner in which to operate typewriters, and calculating, tabulating and sorting devices of all descriptions, the geography of the country through which the railroad operates and generally of other territory beyond, the organization of the company and its officials, the station numbers and names, junctions, divisions and foreign line connections, the manuals containing instructions for the conduct of the business and other features, so that the results are a correct, systematic and efficient beginning, with the various tutors acting as the final determinators (each without consultation with the other by separate designation of their own conclusion) of the fitness of the candidate to be graduated from the school to regular employment or advised of failure to meet the requirements to finally enter the service and at the latter time his school connection is also severed. The school is conducted with a head clerk in continuous charge on the same principle as any commercial school, being specialized, however, as to railroad work and having the benefit of instruction from practical men each devoting an hour or two a week, so as to vary the lines of instruction on each day and give some time for its practical application.

Entrance is at a nominal salary paid by the Company, with hours similar to school hours, and the term ranging from three to six months, sufficient to have the mind and the hands of the student trained in the correct direction, instead of being, as under the old principles, allowed to follow whatever manner of work performance might occur to him and without respect to the future failure that would arise from lack of direct and interested supervision of experts, no one under the old method having any time to devote to this feature, and also perform the daily required duties. The beneficial results in a gain of time, efficiency and cost is apparent by actual test. Studies of class features are continued after leaving the direct class work by the requirement that there shall be submitted from time to time for examinaion exhibits of the accomplishments of the younger clerks and weekly an hour or two are devoted to advanced work, which classes are attended by a limited number who desire to specialize in selected branches .

The regular forces of the Accounting Department of the Pennsylvania Railroad Company are organized on the basis of an endeavor to bring about a proper distribution of the work to be performed and to divide the responsibility and supervision so as to make as many as possible of the clerks feel that they are a part of the institution charged with an interest in producing results, with consequent development of their ability, thus offering the best opportunity to decide upon those who are the better entitled to promotion on account of their demonstrated proficiency in carrying the limited responsibility that is first placed upon them. The practice is also to keep continuously shifting the clerks and others higher in authority so as to make them generally acquainted with the various branches of the work, and in this manner have the benefit of as many minds as possible on the same character of work thus bringing to the development of the methods the broadest consideration possible, and in the recommendation of those exercising supervision bringing out the expressed opinion of more than one as to the worth and ability of the clerk. This has the tendency to relieve the monotony which, as a rule, accompanies clerical duties and prevents the active mind from becoming inactive and narrow for want of variation, and further avoids a failure of development in method which in many instances comes from inertia or continuance in a fixed groove.

This practice brings to the management, men of experience in the whole field of its accounting work adding a strength to the organization for the reason that knowing the effect the performance of one line of work has on another naturally brings a more intelligent treatment on the part in hand, and further makes the organization such that it is not dependable upon any one individual for the knowledge of any general part of its affairs.

The forces are assigned in squads, of as nearly ten clerks as possible, including a head clerk in charge, who is a member of the squad. Each squad is assigned certain work to perform which is distributed among the members, the head clerk as a working member being responsible to see that proper performance takes place and that the rules of discipline are enforced, with the first clerk acting in his absence.

Three squads constitute a company in charge of an Assistant Chief Clerk, who is a working member of the body, and has charge of the special and more intricate questions pertaining to and involved in the work and is charged with the responsibility of handling infractions of discipline when too serious and beyond the control of the head clerk and with the duty of equalizing the work between squads so as to get the full accomplishment without pressure being too heavy at one point and too light at another. The oldest head clerk acts for the Assistant Chief Clerk in his absence. Two companies constitute a force in charge of a Chief Clerk whose duties are to supervise in such a way as to determine and enforce the most efficient methods of handling the work, bring the assistants in daily conference, and review all matters needing general attention. The First Assistant or the Second Assistant acts in his absence.

Two or more forces are in charge of a Chief Accountant who supervises and adjusts matters between the forces.

The Chief Accountants report to and receive their instructions from the Auditor or Assistant Auditor.

Before any promotions are made clerks and those of higher positions are graded under a system of efficiency reports and the first of each class before being promoted to a higher position other than that of clerk must be recommended by the Auditor and appear before the Comptroller, Deputy, and Assistant for oral examination and determination on their part as to his fitness to be given a trial in the higher position and subsequently for final appointment.

Salaries are fixed for the positions of a grade higher than clerk, and those of clerks are divided into classes of multiples of five dollars to which promotion is made after the expiration of periods of service and satisfactory performance to warrant it.

The Department as constituted officially is as follows:

Comptroller aided by a Deputy and an Assistant Comptroller.

In general charge of the Department, with specific performance in their offices of the audit of Treasury Department transactions, the preparation of all statistical reports issued by the Company, and the compilation of data bearing on rate cases before the various Federal and State Commissions, and supervision by traveling representatives over accounting features in the various offices and agencies throughout the system.

The Comptroller is further aided by:

Auditor Passenger Traffic and Assistant, in charge of auditing passenger traffic accounts.

Auditor Merchandise Traffic and Assistant, in charge of auditing merchandise freight traffic accounts.

Auditor Coal Traffic and Assistant, in charge of auditing coal and coke traffic accounts.

Auditor of Miscellaneous Accounts and Assistant, in charge of auditing miscellaneous traffic accounts and settlements.

Auditor Disbursements and Assistant, in charge of auditing disbursements for wages, and for material made by voucher.

The working forces number approximately 1800.

In the face of the many erroneous statements which are made of failure and lack of efficiency in railroad work, it may be interesting to recite that in the Accounting Department a "roster chart" is the means by which a close check is made upon the performance of each clerk. The arrangement is such that it is known how many hours monthly are taken by each clerk to perform each specific feature of their duties, and also the total time involved in the completion of each specific class of work by the several clerks engaged on a class. This indicates where there is necessity for an analysis of methods, so as to determine whether improvement can be made, this result being obtained by the official in charge personally observing the actual performance and ordering changes. Very close attention is given to the economical use of materials, forms, and supplies, and to accomplish this a committee comprised of official representatives from the various Auditors' Offices meet weekly to approve and pass upon any changes in forms, blanks or supplies. The various forms of economy practiced in the use of stationery are the equal of those prevailing in any commercial or government practice.

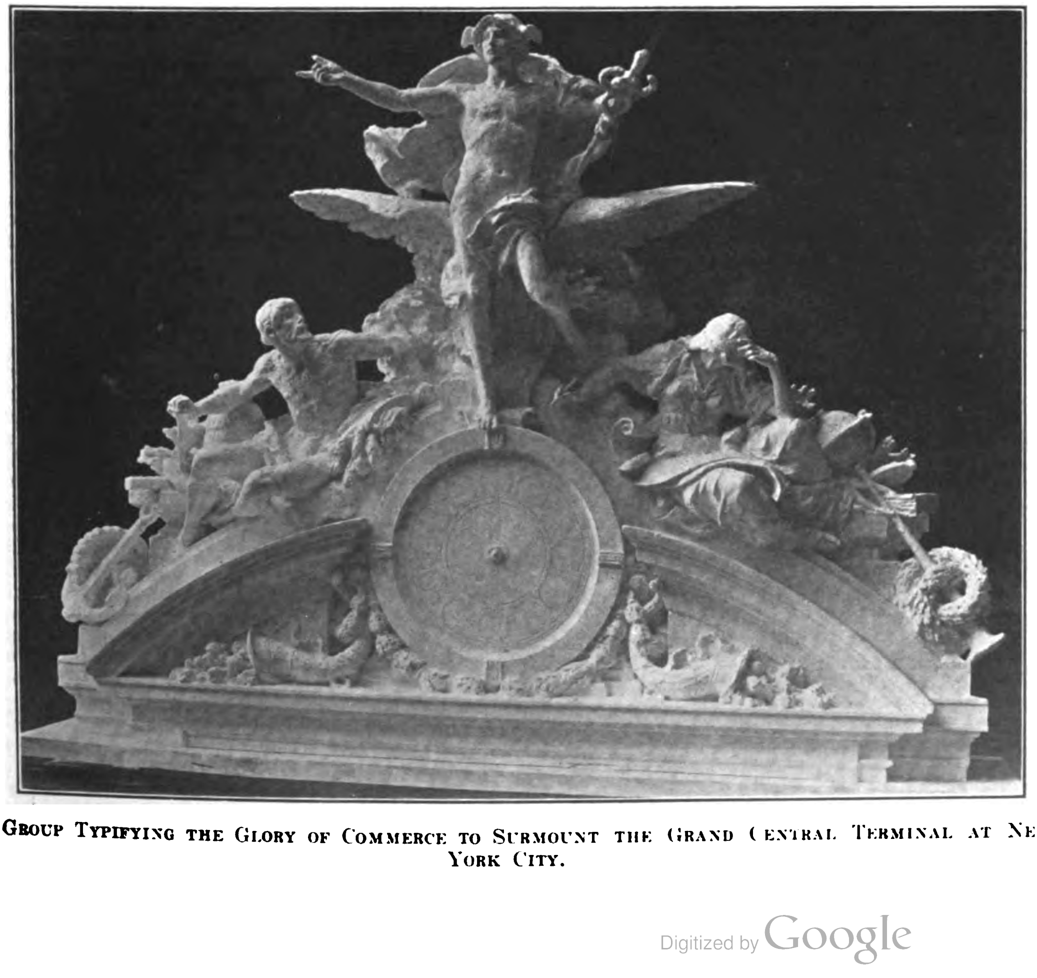
Conferences are held during the month between the Auditors and their Chief Clerks and Assistants, reviewing such matters as are suggested for consideration as improvements in methods, and the Head Clerks are daily brought together with their Chief Clerks and Assistants to review the previous and present days' affairs, and the clerks are invited to offer and submit suggestions which must be considered and submitted to the Auditor with recommendations (affirmative or negative) for final decision. All employes are subjected to standard rules of discipline with the right of direct appeal to the head of the Department, without prejudice.

The Monumental Sculptural Group Surmounting Grand Central Terminal

ARCHITECTURE being a reasoned art, for any specific purpose there should be precedent and tradition—every motive and element should have its reason for being,and in all compositions, no matter how simple, the elements must explain themselves and justify their presence.

In ancient times the entrance to the city was through an opening in the walls or fortifications. This portal was usually decorated and elaborated into an Arch of Triumph, erected to some naval or military victory or to the glory of some great personage.

The city of to-day has no walls surrounding that may serve, by elaboration, as a pretext to such glorifications, but none the less, the gateway must exist, and in the case of New York and other cities, it is through a tunnel which



GROUP TYPIFYING THE GLORY OF COMMERCE TO SURMOUNT THE GRAND CENTRAL TERMINAL AT NEW YORK CITY.

discharges the human flow in the very center of the town.

Such is the Grand Central Terminal, and the motive of its facade is an attempt to offer a tribute to the glory of commerce as exemplified by that institution. The architectural composition consists of three great portals crowned by a sculptural group, the whole to stand as a monument to the glory of commerce as typified by Mercury, supported by physical and mental energy—Hercules and Minerva.

It is this monumental group of heroic proportions that the workmen will soon finish placing in position.

The group was designed by Jules Coutan, a member of the French Institute and by many regarded as the greatest decorative sculptor of the age in work in which the human figure plays a part.

Mr. Coutan was three years in creating the design and making the working model, which is one-fourth the size of the completed group. When commissioned to do the work he was asked to expedite it so that the group might be ready when the terminal was opened, but he declined to be hurried, saying he was putting his reputation in the work and it must be the best of which he was capable. The result speaks for itself.

The execution of the group from Coutan's working models was done by William Bradley and Sons under the direction of Silvan Saligres, who modeled and executed all the ornamentation on Grand Central Terminal excepting the Coutan group.

The group is carved in Indiana limestone and weighs 1,500 tons. It is 60 feet long and 50 feet high. Mercury, the god of Speed and the messenger of Jupiter, is the central and dominant figure. He is 27 feet high. Sharing the center of the group with him is the eagle with outspread wings measuring 35 feet from tip to tip or more than the distance from curb to curb of an ordinary street.

At the right of Mercury is the massive figure of Hercules, typifying physical energy and industry; a very life-like figure with a serious cast of countenance and wonderfully developed muscles and surrounded by the symbols of industry—the wheel, the anvil, the sickle and the anchor.

The other figure in this wonderful group is Minerva, in thoughtful attitude symbolizing intelligence or mental energy. Near her are the compass, globe, book and pencil.

The chiseling and setting of the enormous blocks of stone making up the group were no small achievement. The stone from which the head of Minerva was carved weighed 20 tons, and many other pieces were of equal or greater weight.

It is no child's play to handle stones of that weight and magnitude and follow the model correctly. Enormously powerful electric cranes were used in the workshop where the stones were carved and a specially constructed derrick at Grand Central Terminal was required to place them in position.

Below the center of the group and forming a part of the general scheme will be a clock, the dial of which will be 13 feet in diameter.

The Railroad Conquest in Africa

UNDER the above caption, the "American Review of Reviews" for July, published an interesting article by Louis R. Freeman which goes more thoroughly into railway developments in Africa than anything heretofore published. One of the most striking things about the railway developments on that continent is the comparative evenness with which the various lines are, and will be distributed. At the present time nine-tenths of the 25,000 miles already constructed, are at the northern and southern ends of the continent. It is also true, as the accompanying map illustrates, that upon the entire African coast line, there are only two or three intervals of over 500 miles in all its 20000 miles and more of length which are not marked by at least the beginnings of a railway and most of these lines are going somewheres either pushing on through the desert or jungle to meet another advancing rail head, five hundred, a thousand or two thousand miles away, or reaching out to connect with some navigable stretch of river which has steamer connection at a distant coast.

Mr. Freeman states that Africa is building close to two thousand miles of railways at the present time and that in all probability will in another five years be adding new lines at a 50 or 100 per cent greater rate. While it is never likely to have the great aggregate mileages of Europe, Asia and North America, it is not improbable, at the present rate of progress, that it will have one and possibly two north and south lines traversing its whole length before any such consummation is affected in Asia, Australia or either of the two Americas. Nine-tenths of the railway mileage of Africa, at the present time, is included in the British systems of the Nile Valley and South Africa and the branch systems of Algeria and Tunisia. The work of the Germans which ranks third in magnitude, is confined to ambitious conditions in the jungle of the east and west coasts of the tropics. The following photographs which are published through the courtesy of the "American Review of Reviews" give an excellent idea of some of the leading characteristics of the African railways.

In discussing railway developments in South Africa, Mr. Freeman has the following in part to say:

"The South African railway system is by far the most extensive and important on the continent; indeed, the three administrations—the Cape Government, the Central South African (representing the Transvaal and Free State Governments), and the Natal Government—taken over and consolidated under state management at the time of the South African Union in 1910, form one of the largest systems under the direction of a single man in the world. The work of W. W. Hoy in bringing order out of the South African railway chaos and making the lines under his management the leading factor in the development of their tributary territory is worthy of comparison with that of James J. Hill in the American Northwest. The fact that the states of the South African Union—hitherto very backward in agricultural development—have more than doubled their production of fruits and grains in the last five years is the best commentary on the success of the regenerative movement led by the railway.

"South African railway construction was in-

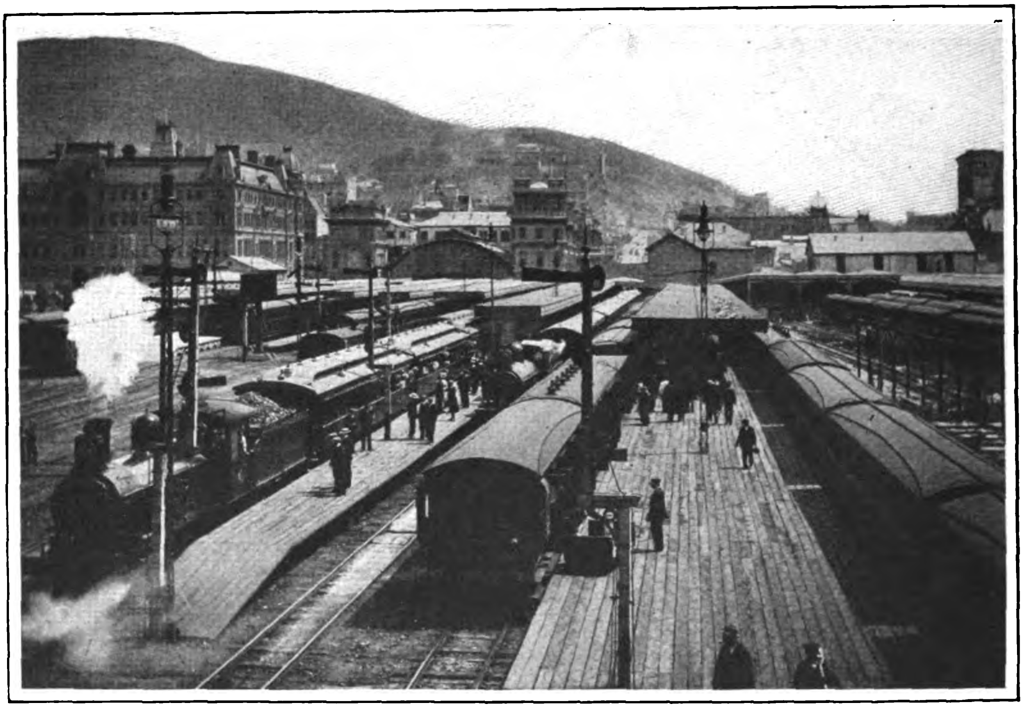
augurated with the beginning of a sixty-three-mile line from Cape Town to Wellington in 1857. Intermittent development continued until 1872, when the Cape Colony Government took over all of the completed lines. Active railway extension may be said to date from that time. Early South African construction was almost entirely directed toward one objective—the great mining and consuming centers in the north. First Kimberley and its diamonds, was the goal; then the Rand, with its gold. Kimberley was the magnet which deflected the western line through the Karoo, the most arid district in South Africa, instead of across the fertile regions to the southwest. Kimberley was reached in 1884, and a few years later, following the discovery of gold on the Rand, lines were built to connect with those constructed by the Boers in the Transvaal and Orange Free State. The main part of the Transvaal business, however, was done by a line that had been pushed through Natal from Durban, which offered a much shorter route to the coast.

"These three systems all figured prominently in the Boer War, the Africanders for some time holding not only their own lines in the Transvaal and Orange Free State, but considerable lengths of the Natal and Cape Colony lines as well. The control of rail transportation was the fiercest object of contention during this sanguinary struggle, as a result of which such portions of the lines as fell within the war zone were greatly damaged, principally through the dynamiting of bridges and culverts. Practically all of this part of the South African system has been rebuilt throughout since the war.

"Generally speaking, all of the South African railways, like most pioneering ventures, were run at a loss during their earlier years. With the tremendous wave of advancement and pros-

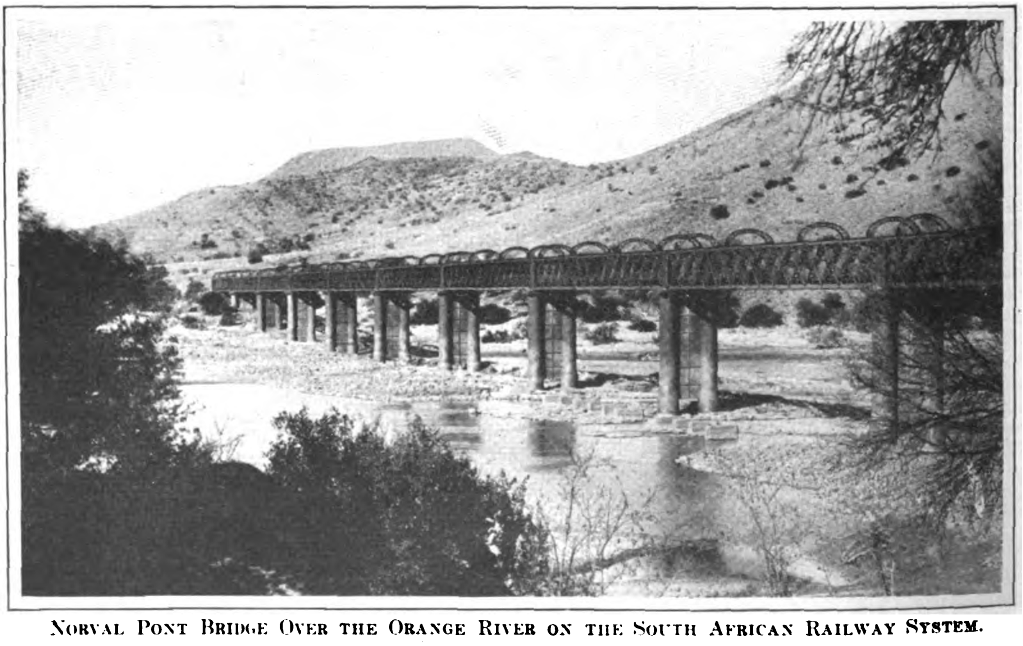


THE STATION AT CAPE TOWN ON THE SOUTH AFRICAN RAILWAY.

perity which swept over the country following the discovery of gold on the Rand, this was changed, and up to the time of the war—1899, 1900,—all of the roads, in addition to financing heavy extensions, paid handsome dividends. The heavy slump which followed the war was responsible for several lean years for the railways, and it is only since about 1907 that they have been paying as well as in the '90s.

"The most striking fact in connection with the growth of the South African railways has been the way in which their development has followed that of the mines. It was the locality of the gold and the diamonds which dictated the route of the trunk lines, and it has been the carrying of supplies to the mining centers which has been the main source of the prosperity these railways have enjoyed for many years.

"Active extension was kept up by all of the South African systems during both good and bad years, so that in 1910, when they were consolidated at the time of the formation of the



NORVAL PONT BRIDGE OVER THE ORANGE RIVER ON THE SOUTH AFRICAN RAILWAY SYSTEM.

THE RAILWAY STATION AT ORAN, ALGERIA—ONE OF THE FRENCH LINES.

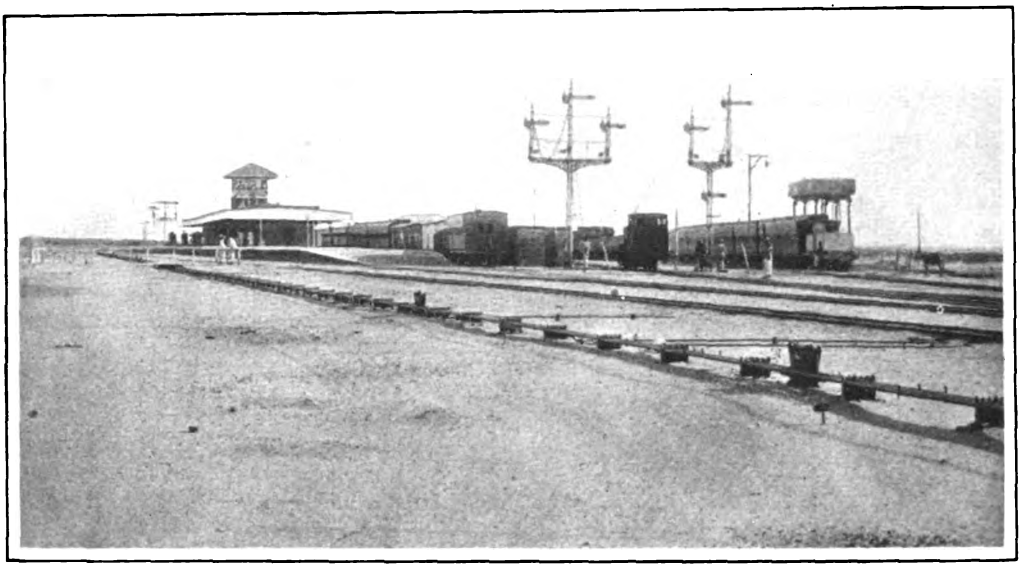
(All travelers are impressed with the way the character of the architecture fits in with the landscape. In the front is seen a section of one of those famous macadamized highways with which the French have networked all North Africa.)

Union of South Africa, they had a total of over 7,000 miles open to traffic. Of this, 3,329 miles were in Cape Colony, 998 in Natal, 1,728 in the Transvaal and 987 in the Orange Free State. The combined systems at that time represented a total expenditure of over $225,000,000. Since 1910 from one to two hundred miles of new line have been opened each year, at an increased capital expenditure of from $12,000,000 to $20,000,000 annually. The total mileage at the present time is very close to 8,000, with construction in progress or sanctioned that will bring the aggregate up to 10,000 miles within a very few years. This does not include the 3,000 miles of the Rhodesian system, which will be referred to presently.

"What is generally spoken of as standard gauge throughout the world—4 ft. 8½ in.— was used in only one or two of the pioneer lines in South Africa. After that the expense of construction in the unpopulated desert districts and through the mountains indicated a narrower gauge as desirable, and that of 3 ft. 6 in. was adopted. Ninety-five per cent of the present construction is of this gauge, with the remainder —less than 500 miles—of a 2 ft. width. The construction is of a very high class. Rails of from sixty to ninety pounds to the yard are used, and ties on much of the new line are of steel. Ties, indeed, on account of the scarcity of wood in the country, form one of the serious problems, and it is interesting to note that extensive plantations—similar to those set out by two of the California railroads—are now being tried to remedy this deficiency. Stations are generally of brick and concrete, bridges and culverts of steel and concrete, and the ballasting of crushed rock.

"The proportion of natives employed on the South African railways is remarkably small for a system in a country whose principal population is non-Caucasian, a circumstance due, doubtless, to the low mental capacity of the Kaffir. In China and India—and to a somewhat lesser extent even in Egypt and Algeria—supervision and technical work only are in the hands of whites, from 95 to 98 per cent of the employes of all lines in these countries being native. In South Africa, the percentage is, roughly, 45 per cent

A THIRD-CLASS WAITING-ROOM IN THE ORAN STATION SHOWN ABOVE.



ATBARA JUNCTION: A TYPICAL DESERT STATION IN THE SUDAN.

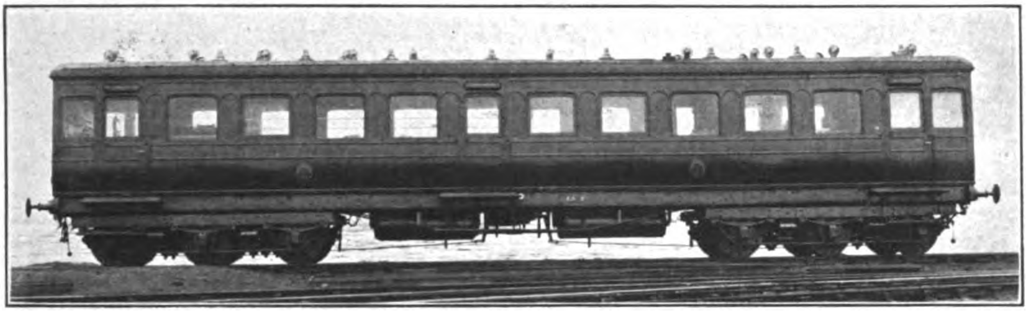
black and 55 per cent white. At the time of the consolidation of the systems in 1910 the exact figures were: White, 26,331; black and East Indian, 21,631. Since then each class has been added to at the rate of about 3,000 a year, with the relative proportion of natives and East Indians gradually increasing. This increase may have something to do with the labor unrest which, centering about the railways, has stirred South Africa for the last year."

PUSHING THE FRENCH ALGERIAN RAILWAY SOUTHWARD THROUGH THE DESERT.

British Enginemen's New Instruction Van

From Our London Correspondent.

SPECIAL interest has been aroused in connection with the new enginemen's instruction van recently put into service by the Great Eastern Railway Company of Great Britain, the company which now has an American general manager in the person of H. W. Thornton. As a consequence of the increased service which is being demanded from locomotives year after year, the simple type is gradually being superseded by larger, heavier, and more powerful machines, with a corresponding increase in the number and complication of their



Great Eastern Railway Company of England Engineer's Instruction Van.

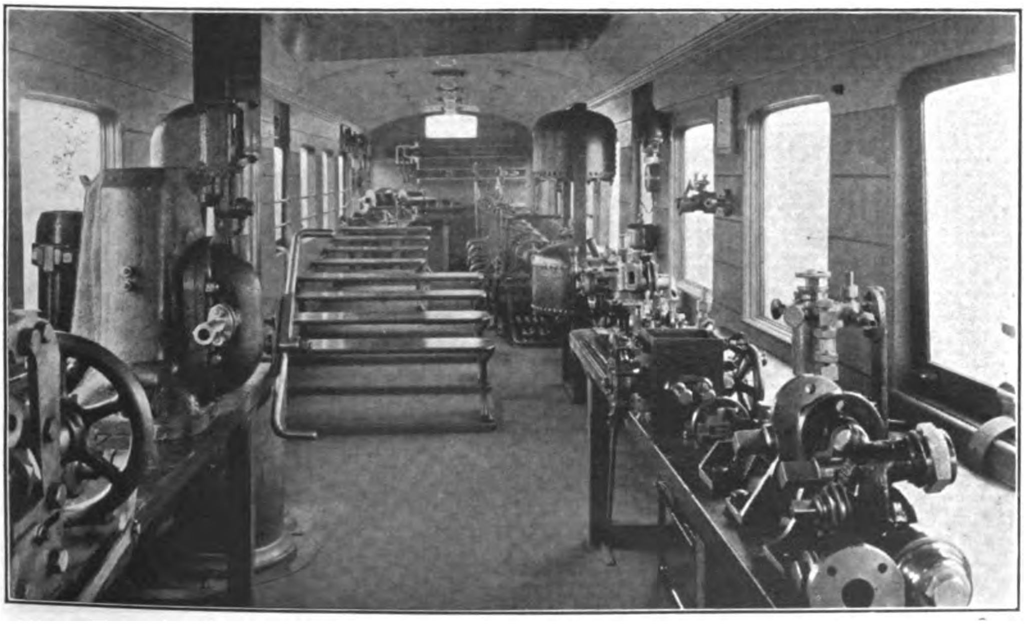
working parts. Heavier valve motions have been mastered by the air pressure reversing gear, the need for economy of coal and for the best results from a given grate area under varying conditions has been met by the variable blast pipe and the superheater, and the use of superheated steam has in its turn brought with it the need for more efficient lubrication.

All these pieces of apparatus demand careful and intelligent handling, and the best results can only be obtained from them by men who understand their construction and the principles underlying their action. This knowledge also enables the driver to detect more readily any defects while the engine is in steam and results in a saving of time and needless trouble to the running shed staff, when, for example, the exact position of a blow in the air reversing gear can be indicated, instead of the whole apparatus being booked for examination. It is with the object of making this information more readily accessible to enginemen that the new instruction van has been fitted up, and is now on a tour of the locomotive districts.

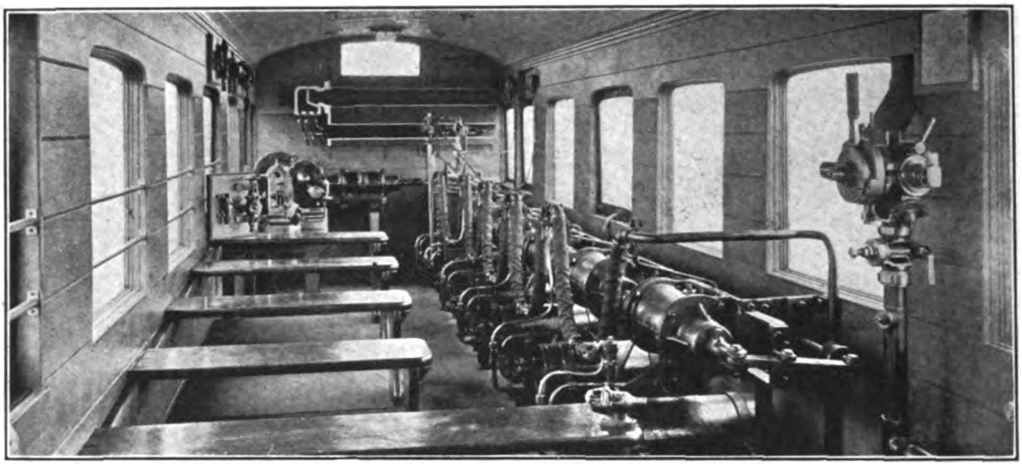
The vehicle which has been utilized for the purpose is a six-wheeled bogie saloon. The partitions and interior fittings have been removed, and their place taken by benches carrying the various apparatus, while the center portion of the saloon constitutes a small lecture theater, with seats for the men, and a blackboard hinged to the roof. Working drawings of all important parts of a locomotive are contained in a cupboard near the entrance to the van, and instruction books on different subjects are also provided.

The Westinghouse brake is represented by a complete set of fittings, corresponding to an engine and train of six coaches. The main reservoir is connected to the external train pipe, so that the action of the brake can be studied under working conditions, while connected to the driver's valve on the "engine" and to the triple valve on the first "coach" are corresponding valves, sectioned so that their positions can be seen when the brake is "on" or "off." A Westinghouse pump in addition to engine and carriage brake cylinders is also shown in section.

One of the most interesting experiments to be made here is to test the vexed question whether the brake is applied on the front or the rear



View Showing Lecture Theatre in Instruction Van.



WESTINGHOUSE BRAKE APPARATUS AND VACUUM BRAKE EJECTOR IN INSTRUCTION VAN.

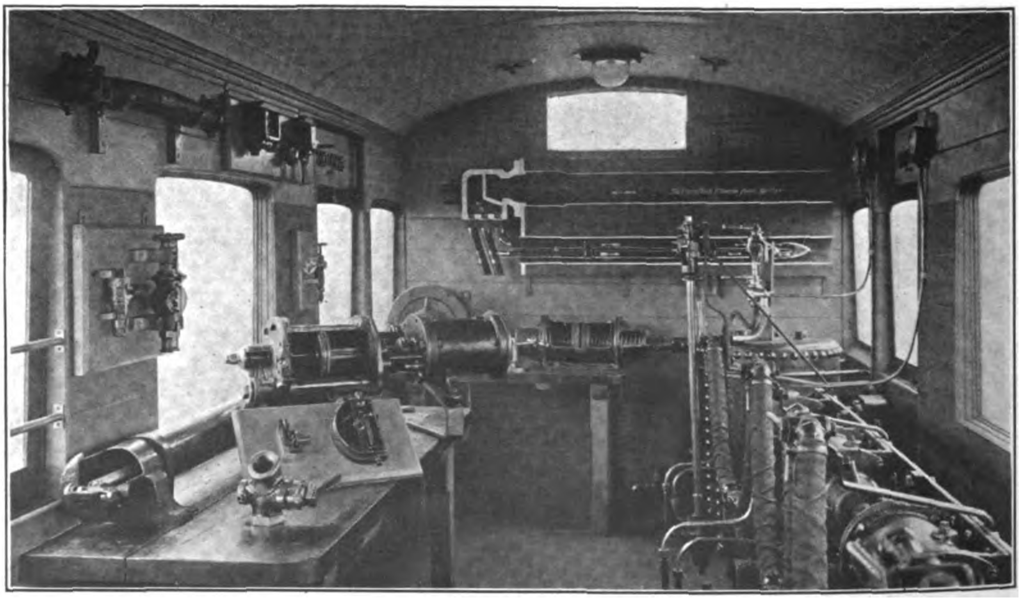
of the train first. Disregarding the first "coach," where the triple valve has to actuate the sectioned duplicate to which it is attached, one cannot detect any appreciable interval between the times of application on the different coaches, except the small irregular differences which may be accounted for by the slightly varying conditions of the triple valves.

The vacuum brake is also shewn in full, by sectional ejectors of the ordinary and "dreadnought" types, with a length of train pipe connected up to a brake cylinder complete with its release valve and to the guard's emergency valve, which can be seen to lift when a sudden application of the brake is made from the engine.

Other air power apparatus includes the water pick-up with its actuating valve, the air standing apparatus, and the air-reversing gear complete, with one side of the casing cut away to expose the locking gear and the lifting nut.

Now that practically every main line train of importance is warmed in cold weather, all express engines and many others are fitted with the steam heating apparatus . It will be remembered that live steam from the engine is passed through a reducing valve, and is then led through a pipe along the train, with flexible couplings between the coaches, and a branch pipe leading to the heater in each compartment, the steam in the heaters being at atmospheric pressure only. A complete set of fittings is shown including the reducing valve, relief valve, drip valves, heater, etc. The reducing valve in particular is a complicated piece of apparatus, but its action can be clearly grasped by a study of the section.

One of the most interesting exhibits for enginemen will be the sectional model of a superheater. A complete superheater smoke tube



WESTINGHOUSE PUMP AND SUPERHEATER MODEL IN G. E. R. INSTRUCTION VAN.

and element would be of too great length for convenient exhibition in the van, and so this model has been prepared, an actual element being shortened so as to occupy a smaller amount of space while still shewing clearly the principle.

With superheated steam a mechanical lubricator is generally provided. The standard lubricator has eight feeds, but in that in the van two feeds only are fitted, the pump for one being complete and for the other sectioned so that the working can be seen. A small amount of oil is kept in the reservoir, and by regulating the feed plugs of the two pumps in unison, the increased or diminished discharge of oil obtained from the complete pump can be seen at the same time as the action of the plunger is visible in the sectional pump.

Almost the simplest fitting in the whole of the instruction van is yet perhaps the one from whose presence most immediate and direct benefit will be derived by the enginemen. A variable blast pipe has been in use on this railway for many years, but the present pattern has been standardized quite recently and is not used to the fullest advantage by many drivers who do not realize its possibilities. In the example shown the casing of the butterfly valve which governs the blast pipe orifice has been cut away, and it can be seen how by setting the lever in the cab in different positions the blast can be regulated to suit any condition of the fire and the steam pressure. With this blast pipe the damper should be kept fairly wide open, and the draught regulated by means of the blast pipe lever in the cab.

Space is wanting to describe the many other pieces of apparatus displayed on the benches and the walls of the van, but all are so arranged that their working parts are exposed. The action of the first part of the regulator, the reason for injectors choking up and the methods by which this can be prevented and remedied, the construction of the sand trap and its arrangement for cleaning out, are a few of the examples which can be seen by little more than a casual inspection, and, if a thorough examination of everything is made, considerable benefit is certain to be derived.

Much interest has been displayed among the enginemen during the time that the instruction van has been open to inspection, particularly by those expecting shortly to be called up for examination. For some time the van has been located in the Ipswich District, whence it proceeded to March on April 6th. After leaving March it will cover by degrees the whole of the system and if the interest shown so far is maintained, it should do much to increase the efficiency of the running staff, and thereby improve still further the regularity of train service for which British railways are noted.

Railway Mileage of the World

THE *Archiv fur Eisenbahnwesen*, official publication of the Prussia Ministry of Public Works, has issued its compilation of the railway mileage of the world for the year 1912. It also has made a compilation of the mileage of railways owned by Governments and all private companies for the years 1910 and 1912. Following are the statistical results in miles:

EUROPE.

Country.	Private railways.	State railways.	Total.

Financial

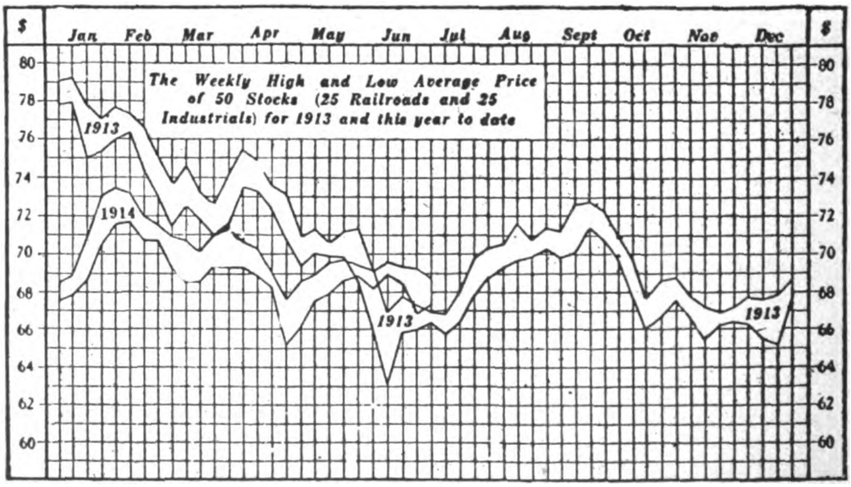
The Developments During June.

JUNE was a quiet month, both in the bond and stock market. So far as statistics show, the variations in the prices of leading securities were so small as to pass unnoticed. For example, the average of ten representative railroads and ten industrial stocks, show a loss of barely a point for the whole month, while bonds, except in a few instances, where specially influenced, barely moved, although such movement as took place registered a slight advance.

The stability of the market during June must be interpreted in the main as favorable, and indicates that it has reached the point of resistance where only conditions of a most unusual character can drive it much lower. Should the Interstate Commerce Commission render a decision favorable to the carriers in the advance rate case and should the grain crop measure fully up to expectations, such developments would be almost certain to produce a stimulating effect upon the general market in spite of the Mexican situation and the President's evident determination to carry his legislative trust program to a definite conclusion. From the present outlook, it may be confidently predicted that the energy of the American people will not remain pent up much longer. It may require a political upheaval to bring about the desired results, but there are many indications that a remedy is going to be applied soon, and with beneficial results.

June was a notable month in many respects. To begin with, the outflow of gold was of unusual proportions but apparently had no effect upon the market in spite of the fact that it occurred at a time when preparations were being made for one of the two heaviest interest and dividend periods of the year. The Supreme Court rendered two decisions, both of which were in the main, favorable to the railroads. The first established the title of certain Western railroads to land grants of inestimable value and extent and the second, in what was known as the Shreveport case, asserted in definite terms the supremacy of federal over state control of railroad rates. The Intermountain decision also rendered by the Supreme Court during June was not so favorable to the railroads, confirming as it did the zone system of applying rates and, in effect, considerably en-

The Course of the Market



The chart indicates that during June the stock market for the first time during the year, reached a higher average level as compared with the average movement for the corresponding period in 1913.

STANDARD BONDS

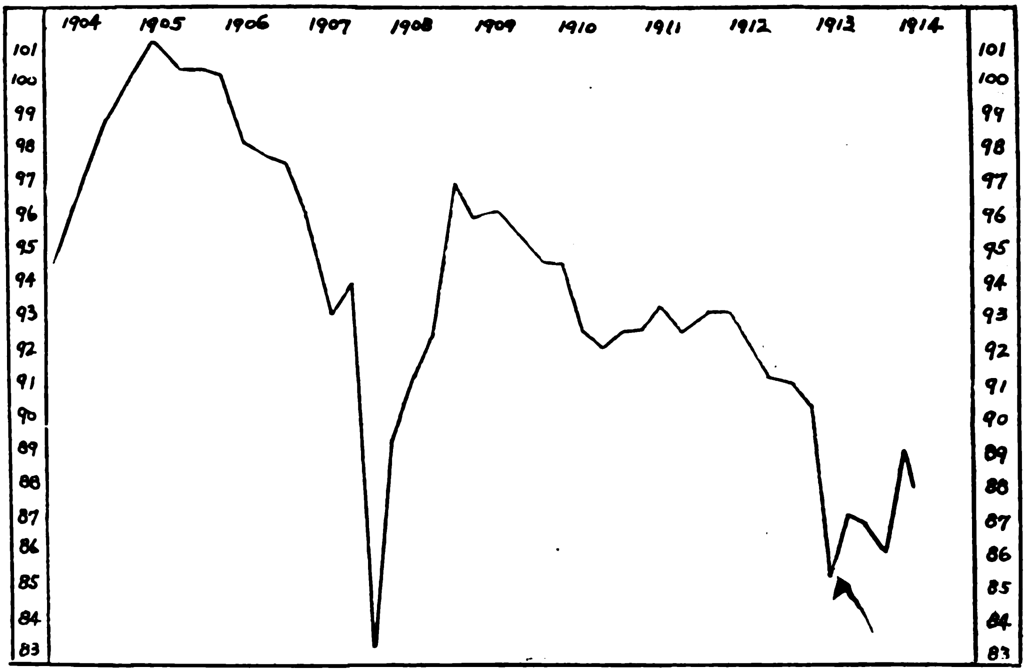


Chart of Prices of Twenty-five Railroad Bonds, 1904-1914

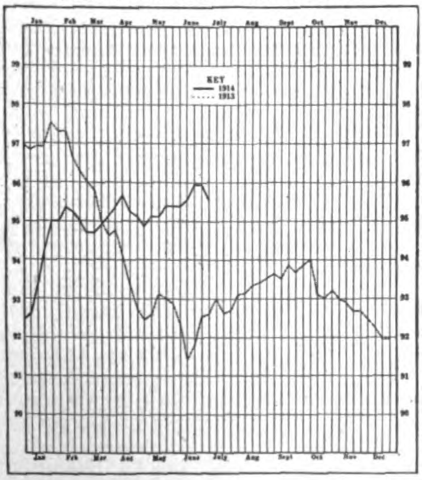
larging the powers of the Interstate Commerce Commission . The decision will have no inconsiderable effect upon the freight revenues of Western roads.

The following chart, published in the New York Analist, and which is constructed by employing the average yield of ten select savings bank bonds capitalized on a four per cent basis and so converted into a market price, shows that the weekly fluctuations during 1914 have had, in the main, a distinct upward tendency, while the present market price is considerably in advance of what it was a year ago.

Curve of the Basic Price of Bonds



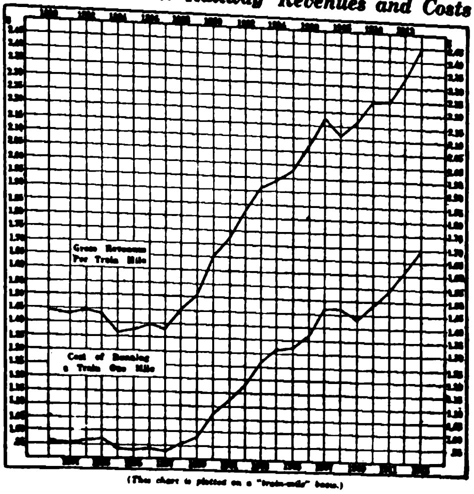
The diagram on page 550 shows that the movement in stock prices has recently been of a more encouraging character and during June, for the first time in 1914, the average was above that for the corresponding period of the preceding year. Whether prices will continue to advance depends largely upon legislative activities at Washington, upon developments in the Mexican situation and upon the freight rate decision soon, we hope, to be issued by the Interstate Commerce Commission. Should developments in this particular prove of a favorable character the tariff could hardly prove a factor in delaying a return to more general prosperous conditions.

The above diagram has recently been prepared by Redman and Company, of New York, and shows the fluctuation in the price of twenty-five representative railroad bonds from the beginning of 1904 to May, 1914, inclusive.

The Growth of Railway Revenues and Operating Expenses.

THE New York *Annalist* has recently published the following chart showing the remarkable growth of railway revenues and operating expenses in the United States since 1890. The chart has been plotted on a train mile basis. The period from 1890 to 1897, was one of receiverships and reconstruction and during these years the lines show only minor fluctuations going downward as often as upward. That period of inactivity was followed by one of great expansion and since then the lines have moved steadily upward, the only reaction being in 1900, which was the result of the panic of 1907. Figures employed in plotting the chart are taken from the reports of the

The Expansion of Railway Revenues and Costs



(This chart is plotted on a "train-mile" basis.)

Interstate Commerce Commission to 1911, and from the reports of the Bureau of Railway News and Statistics for 1912 and 1913. They include all revenue trains, both freight and passenger.

The increase in revenue per train mile in 1913 over 1890 was $1.005, or 69.6 per cent, and the increase in operating expenses per train mile, $0.738, or 76.8 per cent. Net operating revenue, which is shown by the difference between the two lines, has grown from 48.2 cents in 1890 to 74.9 cents in 1913, a gain of 26.7 cents, or 55.4 per cent.

That, however, by no means implies that net profits have increased proportionately—in fact, they have not—because the factor of capitalization must be considered. In order to produce greater revenue per train mile it was necessary to spend enormous sums upon equipment, improvement of roadbed, terminals, and so forth, and in that way fixed charges have been greatly increased. The amount of new capital put into the railroads, year by year, is shown in the following table, which gives the net outstanding capitalization of all the railroads in the United States:

NET CAPITALIZATION OF RAILWAYS IN THE UNITED STATES.

(Railway securities owned by the railroads excluded.)

1913....	*$15,508,849,822	1901....	$9,482,649,182
1912....	*14,657,545,069	1900....	9,547,984,611
1911....	**15,008,707,570	1899....	9,432,041,731
1910....	14,338,575,940	1898....	9,297,167,776
1909....	13,711,867,733	1897....	9,168,071,898
1908....	12,833,591,510	1896....	9,065,518,857
1907....	12,920,352,548	1895....	8,899,572,695
1906....	11,671,940,649	1894....	8,646,600,008
1905....	11,167,105,992	1893....	8,331,603,006
1904....	10,711,794,078	1892....	8,294,689,760
1903....	10,281,598,305	1891....	8,007,989,723
1902....	9,925,664,171	1890....	7,577,327,615

***Does not include returns for switching and terminal companies, included prior to 1911. *As computed by the Bureau of Railway News and Statistics. The decrease in 1912 was due to a large increase in the railway securities owned by railroads.*

The average yearly increase in capitalization during the twenty-four-year period was about $330,000,000.

Cash Investments of the Railways During Six Years.

DURING the six fiscal years 1908 to 1913, inclusive, the steam railways of the United States of Class I invested in their road and equipment cash to the amount of $4,010,385,303. Railways of Class I, so designated by the Interstate Commerce Commission, are those with annual operating revenues of over $1,000,000. They include about 90 per cent of the mileage, receive more than 96 per cent of the revenues, and handle more than 98 per cent of the traffic.

This cash investment of the operating railways of Class I of the Eastern District during the six years was greater than the amount of capital securities issued by them during this period, and was 19.9 per cent of the aggregate of their capital securities outstanding June 30, 1913; of the railways of the same class of the Southern District it was 21.1 per cent, and of the railways of the same class of the Western District it was 23.2 per cent of the aggregate of their capital securities outstanding June 30, 1913. That is, the cash actually expended by these railways during the last six years upon their properties used in transportation amounts to more than one fifth of their total capitalization at the close of the last fiscal year. This is at the rate of $668,397,551 per year.

These figures are obtained through a compilation made by the Bureau of Railway Economics from the reports of the railways to the Interstate Commerce Commission, and have not heretofore been collated.

Summary of Financial Results for April.

THE Bureau of Railway Economics at Washington has issued a bulletin showing the revenues and expenses of steam roads in the United States for the month of April. Returns for that month reduced to a per mile of line basis and compared with the returned for April, 1913, show a decrease in total operating revenues per mile of 4.1 per cent and a decease in operating expenses per mile of five per cent. Net operating revenue per mile was less by $4.00, or 1.5 per cent than for April, 1913, while that for April, 1913, was 2.4 per cent greater than for April, 1912.

Railways operating 225,821 miles of line are covered by this summary, or about ninety per cent of all steam railway mileage in the United States. Their operating revenues for the month of April, 1914, amounted to $230,534,172. This amount includes revenues from freight and passenger traffic, from carrying mail and express, and from miscellaneous sources connected with rail operation. Compared with April, 1913, total operating revenues show a decrease of $7,970,644. Total operating revenues per mile averaged $1,021 in April, 1914, and $1,065 in April, 1913, a decrease of $44, or 4.1 per cent. There was a decrease of 5.2 per cent in freight revenue per mile, and a decrease in passenger revenue per mile of 0.2 per cent.

Operating expenses, which include all the costs of maintaining track and equipment, operating trains, securing traffic, and of administration, amounted to $172,231,630. This was $7,556,970 less than for April 1913. These operating expenses per mile of line averaged $763 in April 1914 and $803 in April 1913 a decrease of $40 per mile or 5.0 per cent.

Net operating revenue that is total operating

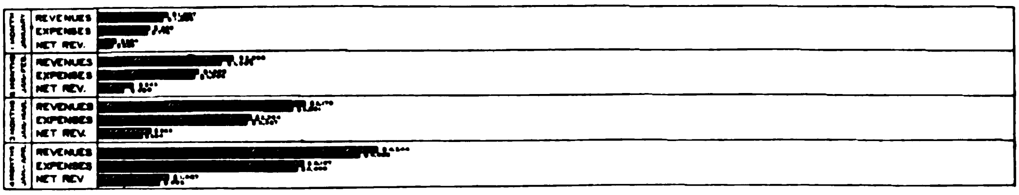


DIAGRAM COMPARING FOR THE INDICATED PERIODS OF THE CALENDAR YEARS 1913 AND 1914
CUMULATIVE REVENUES, EXPENSES AND NET REVENUE PER MILE OF LINE
ROADS HAVING ANNUAL OPERATING REVENUES ABOVE $1,000,000
1913 ▬ 1914 ▬

revenues less operating expenses amounted to $58,302,542, which was $413,674 less than for April, 1913. Net operating revenue per mile of line averaged $258 in April, 1914 and $262 in April, 1913, a decrease of $4 per mile, or 1.5 per cent.

Taxes for the month of April amounted to $11,465,060, or $51 per mile, an increase of 9.3 per cent over April, 1913.

Operating income, which is net revenue from rail and auxiliary operations, less taxes, averaged $206 per mile of line, and in April, 1913, $214, thus decreasing $8, or 3.5 per cent. Operating income for each mile of line for each day in April averaged $6.88 and for April, 1913, $7.14. Operating income is that proportion of their operating receipts which remains available to the railways for rentals, interest on bonds, appropriations for betterments, improvements, new construction, and for dividends.

The operating ratio for April, that is, the per cent of total operating revenues absorbed in operating expenses, was 74.7 per cent, which is comparable with 75.4 per cent in April, 1913, and 73.6 per cent in April, 1912.

Southern Railway Voting Trust Dissolved.

THE voting trust with respect to the stock of the Southern Railway Company, which has been in existence since the organization of the company in June, 1894, has been dissolved. In giving notice of such dissolution the voting trustees have issued to the stockholders a circular in which they say:

"Since October 15, 1894, the voting trustees under the voting trust agreement have represented certificate holders primarily in the nomination of the board of directors and in voting on propositions recommended by the board of directors for the provision of new capital for the company. In view of the company's present financial strength, conservative management and excellent physical condition, the voting trustees believe that the time has now come when they may properly and safely terminate the voting trust. In surrendering their

The points on the vertical lines are of significance only in showing the condition for the particular month. The lines connecting the points assist in tracing the change from month to month but do not indicate the trend during the month, nor are they cumulative for the period.

trust to the stockholders the voting trustees have the satisfaction of reporing a gratifying development of the system of railroads coincident with the extraordinary and steadily increasing growth in population, industrial development and wealth of the territory served, a development largely due to the activities of Southern Railway Company in promoting the commerce and industry along its lines.

"In surrendering our trust, we do so with confidence that the territory served by the Southern Railway Company will continue to increase in population, industry and wealth, and that the company will share in such prosperity. From a disjointed collection of incomplete single track lines the system will have been developed into an efficient double tracked trunk line for the entire main line from Washington to Atlanta, with adequate shops and terminals at the principal cities of the entire territory served by the company, all well adapted to meet the requirements of the prosperous and growing communities which the Southern Railway Company serves. We commend, therefore, to the stockholders the continuance of the policy of progressive betterment which has been constantly urged by the management since the organization of the company, and to that end that there shall be liberal provision of new capital. It is the true policy of the company to lead, rather than to follow, in the future development of the South, and to maintain its reputation and its past achievements in such leadership."

The St. Paul New Four and One-Half Per Cent Bonds.

RAILROAD officials will watch with interest the manner in which investors will receive the recent offering of the Chicago, Milwaukee and St. Paul 4½ per cent bonds. These bonds are not underwritten, but are being offered by Kuhn, Loeb and Company and the National City Bank, both of New York, and can, of course, be bought through any banking or bond house, but the two strong banking houses, which are making the offer are acting simply as agents for the railroad company. It is understood that they are taking one-half of 1 per cent as compensation for their services in calling the attention of their clients to the issue and are not obligating themselves in any way to take bonds that are not subscribed for by the general public. This saves the railroad company about 1 per cent net—the usual banker's commission being 1½ per cent—and gives it the benefit of the full price at which the bonds are offered to the public, the bonds usually being sold to an underwriting syndicate at in the neighborhood of 2 per cent less than the offering price to the public. This is a total saving of about 3 per cent; but on the other hand the railroad company has no assurance that it can sell all of the $30,000,000 bonds at this price, nor can buyers of these bonds have any assurance that all of the needs of the railroad company for which it is selling the bonds will be met through their sale.

The Lease of the Northern Central Railway.

THE lease of the Northern Central Railway Company by the Pennsylvania Railroad is at last about to be put into effect. Under this agreement the Northern Central Railway Company is to pay the stockholders an extra cash dividend of five per cent or $5.00 per share amounting to $1,934,320, and is to pay a stock dividend of forty per cent amounting to $7,737,000 with interest at the rate of eight per cent per annum from the first of January, 1911, to the 30th of June, 1914, amounting in cash to $1,773,916. If Northern Central stock ex the stock in cash dividends and the interest on the stock dividend should sell at $90,00 per share, the 154,740 shares of Northern Central stock to be received by the present stockholders will be worth $13,926,600. This together with the $5 per share cash dividend $1,934,320, and the dividends on the 154,740 shares of new stock from January 1, 1911, amounting to $1,773,916, will in the aggregate amount to $17,634,836. This is the amount of values in money which was secured for the Northern Central stockholders by the Moore Committee.

Baltimore and Ohio Declares its Regular Semi-Annual Dividends.

ON July 9th, the Board of Directors of the Baltimore and Ohio Railroad, declared the regular semi-annual dividends of two per cent on the preferred stock and three per cent on the common stock. With this declaration, the customary dividends of four per cent on the preferred and six per cent on the common are maintained, accumulated surplus contributing $2,469,095 of the $11,538,888 required for this purpose.

There was also charged against surplus the sum of $909,272, representing interest accrued but not collected during the year on advances made to and on account of the Cincinnati, Hamilton and Dayton Railway Company.

The statement of the year's operations, considered at this meeting, were based on actual figures for eleven months, and estimated figures for the month of June. The comparative figures for 1914, and 1913, are as follows:

	1914. June estimated)	1913. (Actual)	Increase or Decrease.
Total oper. rev. .	$97,410,138	$101,556,132	*$4,145,994
Total oper. exp. .	72,053,286	73,779,638	*1,726,352
Net oper. rev. ..	25,356,852	27,776,494	*2,419,642
Outside oper.—Net rev. (deficit)	909,088	874,311	*34,777
Total net rev. ..	24,447,764	26,902,183	*2,454,419
Taxes accrued ..	3,225,823	2,960,905	†264,918
Oper. income ..	21,221,941	23,941,278	*2,719,337
Other income ..	5,923,135	5,212,206	†710,929
Gross corp. inc..	27,145,076	29,153,484	*2,008,408
Deduc., int., etc..	18,075,076	15,819,233	†2,256,048
Net income	9,069,795	13,334,251	*4,264,456

†Increase. *Decrease.

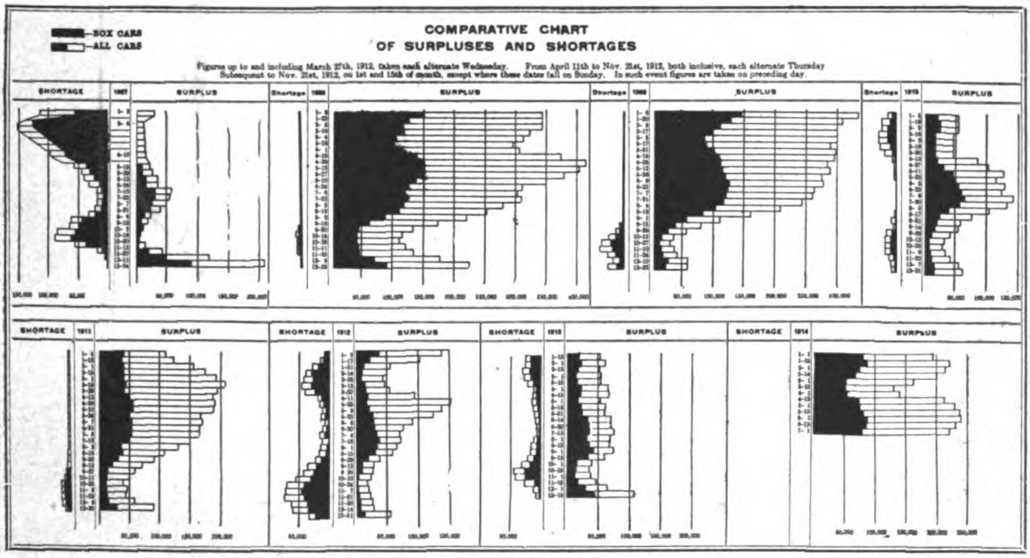
The expenses for the year have been augmented by extraordinary charges, amounting to $2,112,085 for permanent reconstruction of property damaged or destroyed by the flood of March, 1913. The restoration of the property so damaged has been completed and practically all charges on this account have been disposed of in the year just closed, it being thought preferable to charge these expenses out at present rather than to extend them over a series of years.

Operation

The Car Situation.

According to the latest report of the American Railway Association there has been a reduction of approximately 22,000 in the idle cars between June 15th and July 1st. The figures on the latter date being 220,875 and on the former date 232,994. While this is an encouraging reduction, it is far from the more favorable conditions of a year ago which show on a corresponding date a total surplus of only 70,740 cars. As to location, the report shows that there has been a reduction in box car surplus in New England, official classification territory and in the western half of the southeast. In the winter wheat section, there is a small increase of surplus box cars while in the spring wheat section, there was practically no change from the figures of the preceding statement. There has also been a reduction in surplus box cars on the Pacific Coast and in Canada. The following table shows the surpluses and shortages on the last two reported dates, together with a comparison of the previous year's figures:

	Total Surplus	Total Shortage
July 1, 1914	220,875 cars	1,333 cars
June 15, 1914	232,994 cars	660 cars
June 30, 1913	70,740 cars	7,036 cars

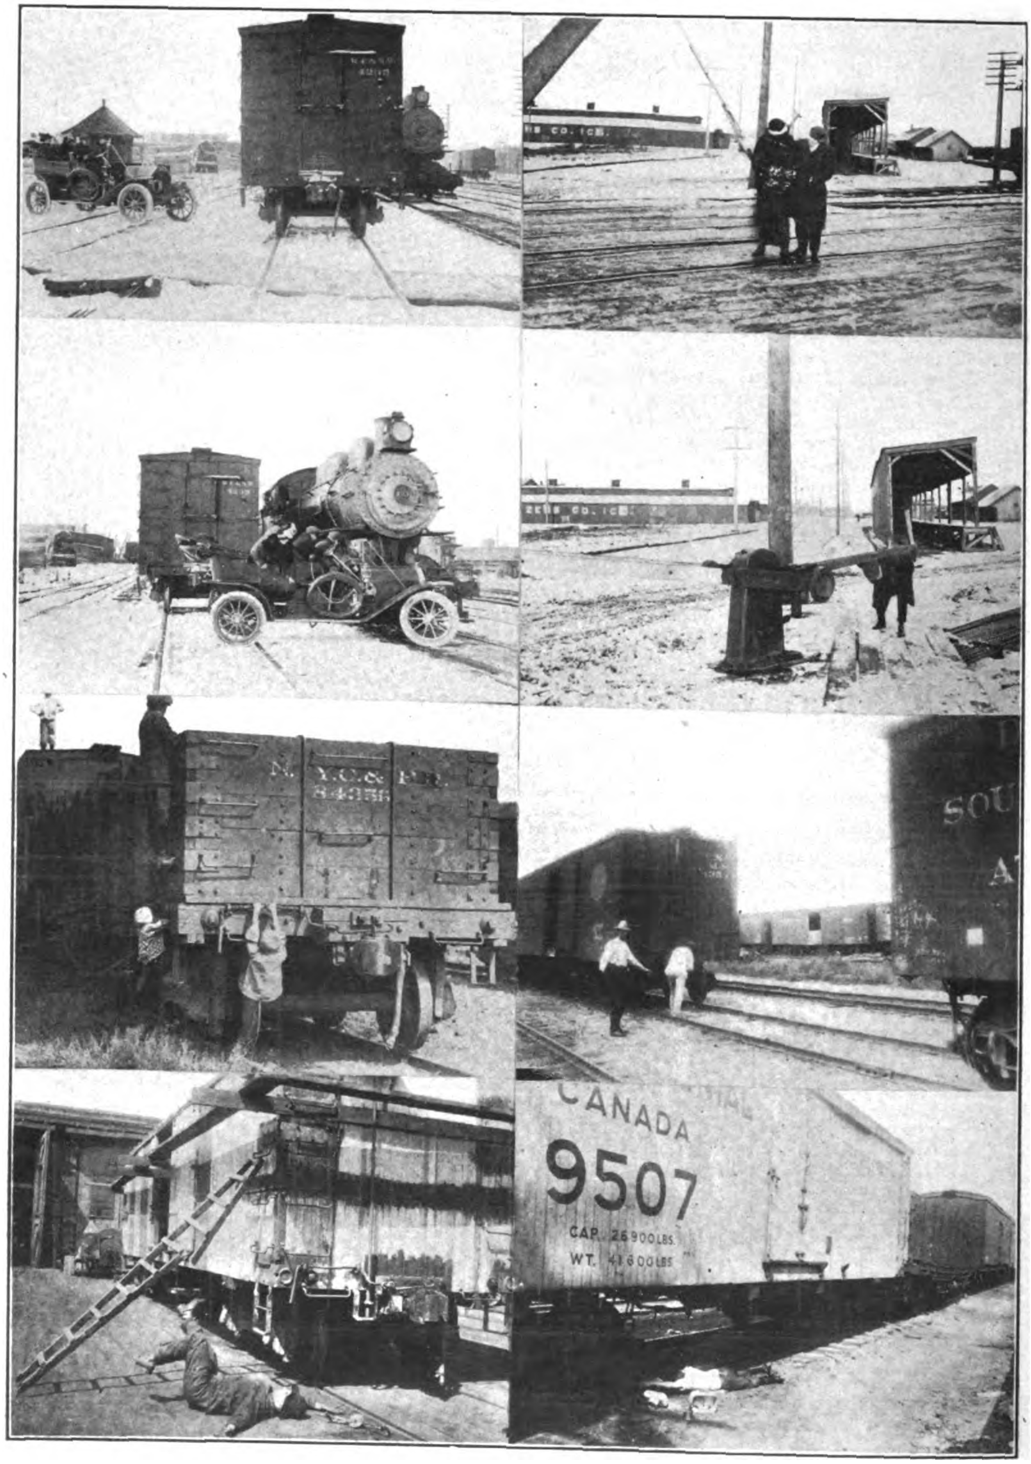


Safety Developments on the New York Central Lines.

The safety work in the roads comprising the New York Central Lines has been carried on during the past few years in a most thorough and systematic manner. The work is conducted through a special bureau, in charge of a general safety agent, who has under him a staff of assistants who devote their entire time to safety work. The roads included under this organization are the New York Central & Hudson River R. R., Lake Shore & Michigan Southern Ry., C. C. C. & St. L. Ry., Michigan Central R. R., T. & O. C. Ry., L. E. & W. Ry., C. I. & S. R. R. and Indiana Harbor Belt Ry. The work of the men employed in the Safety Bureau includes inspecting yards, shops, etc., and educational work among the employes. Standard Specifications covering the application of safeguards about machinery in shops, roundhouses, etc., and special rules governing the practices of employes that effect the personal safety of themselves and others have been adopted.

Safety Committees, composed of both officers and employes, were organized on each operating division two years ago. Through these committees recommendations were received as to the installation of mechanical safeguards and the improvement of conditions which would help to increase the safety of employes, passengers and others. During the two years these committees have been in existence approximately 10,000 recommendations made by the committees have been accepted and improvements made as recommended.

It has been the experience of officials on the New York Central Lines that one of the most important parts of the safety work has been the education of employes looking toward the elimination of unsafe practices. With this end in view schools or classes have been held in lecture cars at all terminals, where employes have received instruction as to the safe way of doing their work. Stereopticon views, illustrating the unsafe and safer way of doing work, have been used, and where they could not be reached otherwise, such as in shops, they have been required to attend the classes on the Company's time. An average of 500 employes every day receive safety instruction in these lecture cars. In ad-



EXAMPLES OF ILLUSTRATIONS USED IN SAFETY WORK.

The first two pictures show the necessity for automobile drivers to exercise care in crossing railway tracks. Children trespassing are shown in the next illustration. Many lose their lives in this manner annually. The fourth picture shows the results of failure to inspect defective ladder. One of the most fruitful sources of accidents is illustrated in the fifth picture and is caused by persons crossing track without looking both ways. Illustration six shows child disregarding lowered gates. Illustration seven shows the proper protection for employe when making necessary examination of car. The eighth illustration is an example of an attempt to hop on cars while in motion.

dition, many large safety rallies have been held in the more important terminals where illustrated lectures on safety have been given for the employes and their families. An interesting and instructive exhibit car, containing an exhibition of photographs and models of safety appliances and practices, has been equipped and sent over the entire system in charge of a competent instructor as a means of further education to employes.

The New York Central Lines' quarterly magazine "Safety" sent to all English-speaking employes, and numerous bulletins, circulars, etc., some of them printed in several languages, and distributed to the men, have further aided in this educational work.

The results as indicated in reductions in serious injury and death cases has been most gratifying. For instance, it was found that during the year ending June 30th, 1913, after the safety movement had been fully organized for one year, there were 72 fewer employes killed on duty on all the New York Central Lines, than during the year ending June 30th, 1911, before the special safety organization on these lines was completed. As for the results during the first four months of 1914, as compared with similar months in 1913 and 1912, the following figures show what a remarkable improvement has occurred in the safer operation of the various lines which comprise this system:

117 fewer persons killed in 1914 than 1912, a decrease of 37 per cent.
104 fewer persons killed in 1914 than 1913, a decrease of 34 per cent.
657 fewer persons injured in 1914 than 1912, a decrease of 15 per cent.
1409 fewer persons injured in 1914 than 1913, a decrease of 27 per cent.

The New York Central policy has been to conduct this safety work along the broadest lines, in order to prevent accidents where the least degree of responsibility rests upon the road as well as those where the highest responsibility rests upon it. With this end in view a vigorous campaign has been carried on against trespassing on the Company's tracks. This campaign has been carried on principally in New York State, where there is a law making trespassing on railroads a misdemeanor. Beginning in August, 1913, under the direction of Marcus A. Dow, the general safety agent, a campaign of publicity was started. Notices were posted conspicuously along the entire right-of-way, warning persons against walking the tracks. The newspapers were interviewed and it was advertised broadcast that the road would begin prosecuting offenders. A representative of the Safety Department spent weeks calling upon the police court magistrates and justices in all towns along the line, enlightening them as to the great number of citizens killed and injured annually from needless track walking and soliciting their co-operation in stamping out the evil. Then the road's special officers began making arrests and hundreds of convictions followed. The result has been that during the seven months ending April 30th, 1914, there were 38 fewer trespassers killed and 42 fewer injured than during the same period the year previous.

It has developed that a large percentage of grade crossing accidents of more recent years have been occasioned by the reckless or careless driving of automobiles, many of whom seem to find it unnecessary to pay any attention to the Stop, Look and Listen signs, prominently displayed at all railway crossings. In order to induce greater care in this particular, the New York Central has recently issued the following notice which has been sent out to automobile clubs for publication in automobile journals and also for distribution in other ways to owners of automobiles.

"Railroad officials throughout the country note that accidents to automobiles on grade crossings appear to be increasing at an alarming rate. An official of one of the principal roads in the

GOGGLES THAT SAVED MANY EYE INJURIES
WHEN YOU DO WORK THAT REQUIRES GOGGLES WEAR THEM BY ALL MEANS

The Constant Employment of Goggles is the Only Manner to Protect Eyes in Certain Classes of Shop Work.

country is authority for the statement that fifteen out of every hundred persons killed or injured in grade crossing accidents are occupants of automobiles. On this basis there are approximately 300 persons killed and 750 injured driving automobiles over grade crossings in the two years ending June 30, 1912, and, while complete figures for the succeeding year are not available, the frequency with which such accidents occur would indicate there has been no diminution but rather an increase in this class of accidents.

"On three important crossings on a large eastern railway system a test was recently made to determine with what degree of care the average person approached and crossed the tracks. During a period of eight hours, 923 automobiles crossed the tracks. Of that number the drivers of 801 cars or 87 per cent did not look in either direction along the tracks before crossing. There were 83 of them or nine per cent who looked in only one direction, while only 39 or four per cent took the precaution to look both ways. The automobile accidents that occur on crossings are most lamentable, the victims usually being men or women of intelligence and high social standing. What makes it all the more distressing that these accidents should occur, is the fact that a little ordinary care and caution on the part of the drivers of cars would prevent them. The rule of stop, look and listen should always be faithfully observed at railroad crossings. But few persons properly observe these three words of caution. Oftentimes an accident is the result of attempting to cross the tracks at high gear, when the machine has momentum, but no power, with the result that the machine gets stalled on the track and before the gear can be changed and another start made, the accident has happened. Drivers should always approach and cross a railroad crossing at low gear, and never fail to "Stop, Look and Listen" before crossing."

The New York Central Lines are making a particularly strong effort to lessen the chance of eye injury by the employment of goggles, and the photograph on page 557 shows an exhibit which has been placed in all of the principal shops on the various lines of the system. This exhibit shows six men employed in one of the shops who lost an eye because they did not wear the eye protectors and six other men who did wear them and had their eyes saved by so doing. These pictures tell a very graphic story of the beneficial results of the greater safety movement.

Safety Developments on the Grand Trunk.

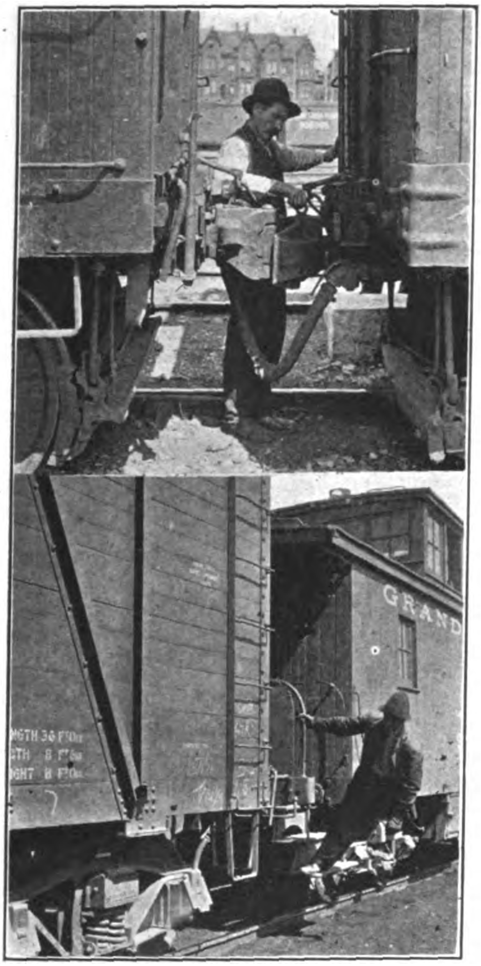
In the early part of 1913, the Grand Trunk Railway decided to begin a systematic safety first campaign and for this purpose engaged the services of the Bradshaw Safety Bureau, of which Mr. George Bradshaw is manager. Mr. Bradshaw took up the work in person and in August of last year, began his campaign by delivering lectures at all important centers on the Grand Trunk System on: "The Unsafe and the Safe in Railroading." These lectures were illustrated by stereopticon views and created an unusual interest among the employes, the attendance running as high as 1500 at a single meeting and the Company being frequently compelled to run special trains at the request of employes in order to permit their attendance.

After a series of lectures in which the employes procured a good general idea as to what the safety involved, a safety organization was perfected by appointing the usual safety committees. These consisted of a general safety committee, whose membership included two vice-presidents, the chief engineer, the engineer, maintenance of way, the superintendent of motive power, the superintendent of the car department, the general superintendents and the chief claim agent in addition to Mr. Bradshaw as safety engineer and secretary. The division safety committees were as a general rule, composed of the following men with the superintendent of the division as chairman; master mechanic, trainmaster, assistant engineer, supervisor of B. & B., one superintendent of track, one road foreman of engines, station agent, passenger conductor, freight conductor, passenger brakeman, freight brakeman, engineer road service, engineer yard service, fireman road or yard, yardmaster, bridge foreman, section foreman, locomotive foreman and car foreman. At Montreal, Toronto, Detroit, Port Huron and Buffalo, there were also appointed terminal safety committees organized along the same general lines as a division safety committee. In addition to these there were shop safety committees, so that the whole organization of the road in its various branches was well represented in the safety first movement. In brief, this resulted in the organization of twenty-five different safety committees composed of about 600 members of which 500 were employes. In addition to the work of these committees, a large amount of literature was distributed by the General Safety Committee bearing on the general subject of greater safety. Copies of all this literature has been distributed in such a manner as to be brought to the attention of every employe of the road who would read.

Since the organization of the various committees, it has developed that about 400 unsafe physical conditions are being corrected each month and about the same number of employes are being cautioned by the members of the Committee against unsafe practices. In the latter work, a form which has been prepared by the General Safety Committee has proved of great value. This form calls for frequent reports on the safety work from the members of each division Safety Committee, and as there is a natural competition between the members of each Committee and between the various Committees regarding the development of this work. it leads to an enormous amount of constructive information being supplied the Central Safety Committee, who, in turn, is able to disseminate the work of each Committee in order to stimulate intelligent progress in the general movement. For example, the following were among the various activities reported along safety lines between September 1st and September 10, 1913, inclusive:

"September 1st—Shop and trainmen riding to work on pilot of engine. Cautioned them upon the risk which they were taking and asked them not to repeat the practice."

"September 3rd—Saw engine foreman in yards go between moving cars to pull pin with hand. Called his attention to rule 254 which forbids this, told him he could not afford to take such



First illustration shows employe walking between moving cars, and second trainman leaning far out from moving train and liable to be struck by side obstruction. Both dangerous practices.

chances and requested him not to repeat the offense."

"September 7th—While walking through yards saw workman tearing up old planks and throwing same too near track. Explained the danger of injury from this source to the foreman who said he would move the material and not put any more in such position."

"September 10th—Found cover from catch basin in yards removed. Replaced it and called matter to the attention of section foreman."

These are examples of the reports that are constantly being made on the blanks referred to. Members of every Committee are encouraged to be personally active in the interest of safety and to turn in as lengthy a report as necessary at each meeting. Attention is called to the fact that "little matters" such as referred to above, are just the things that are causing large numbers of injuries and that to correct them means a decided decrease in the casualties daily occurring in railroad work.

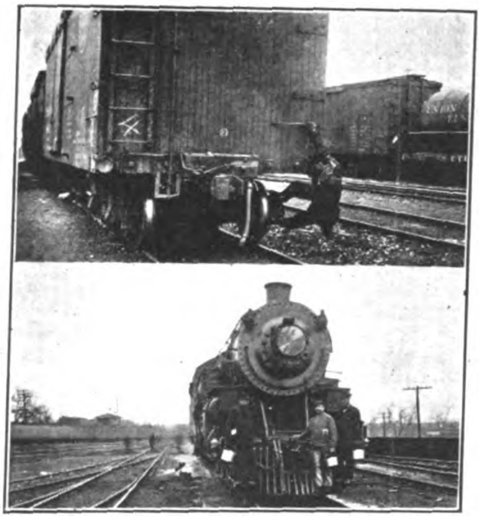
The results which have thus far been obtained on the Grand Trunk through the prosecution of this safety work have been extremely gratifying. It was not until September, 1913, that the Committees were thoroughly organized and the work well under way. During the first six months of the effort, that is, during the last four months of 1913, and the first two of 1914, there was a decrease of 46.6 per cent in the number of employes killed and a decrease of 16.4 per cent in the number of employes injured, as compared with the casualities which occurred during the last four months of 1912 and the first two months of 1913.

The employes generally realize how important this work is to their individual welfare and are enthusiastic in their efforts to promote it. Not only has there been a great reduction in personal injuries but also a great falling off in damage to equipment through a more careful handling of rolling stock. This is strikingly indicated by the following extract received by the General Safety Committee from L. H. Nolan, superintendent of terminals, at Detroit, Mich.:

"For your information I attach herewith a statement from Mr. C. Bradley, yardmaster, West Detroit yard, which shows that 46,070 cars were handled during the month of January, 1914, with no damage done to drawbars."

Mr. Nolan's letter also reports a decrease of nearly fifty per cent in the damage to equipment in general which he attributes largely to the greater safety movement. With such results as these it is self-evident that the greater safety movement is not only conserving human life but is saving no inconsiderable sums of money for the carriers as well as tending to generally improve the operating service. It is a movement in which every employe can take a legitimate interest and one which, now that it has become more thoroughly understood, is receiving their enthusiastic support.

The accompanying illustrations are examples of the many used by Mr. Bradshaw in his illustrated lectures.



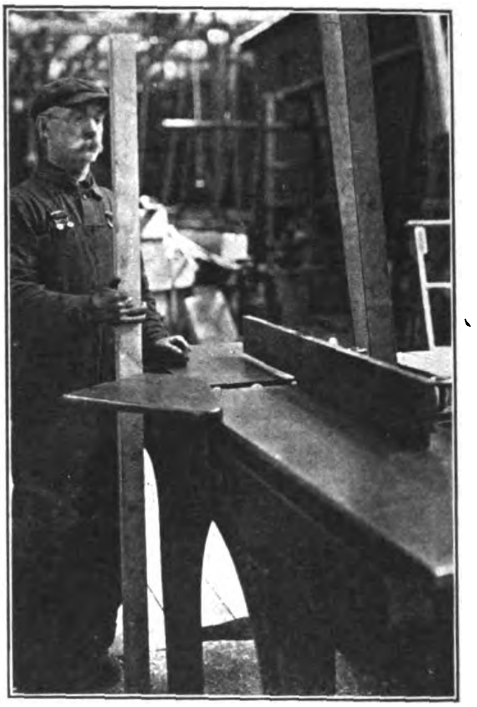
First illustration shows unsafe method of riding a car, and second, shows men riding on engine tender through which practice many are killed annually.

The Development of Safety First Work on the Boston and Maine.

S. T. WATKINS, general secretary of the Safety First Organization of the Boston and Maine Railroad has submitted the following interesting account of the development of the safety movement on his Company's lines:

Safety First work was started on the Boston and Maine Railroad, November 8th, 1913, when a Central Committee was formed composed of all the general officers and a general secretary appointed, who gives his whole time to the organization. This was followed by a mass meeting at terminal and junction points over the entire system. These meetings were addressed by the division superintendent, one or more general officials, and the working plan of the organization was explained by the general secretary. An opportunity for asking questions and discussion was a feature of these meetings. A brass band composed of employes of the Boston & Maine Railroad volunteered their services and assisted at most of the meetings. Special trains were run for the accommodation of employes, whose appreciation of the privilege resulted in great and enthusiastic gatherings; probably the largest number was at the Concord, N. H., meeting, where it was estimated more than 1,000 men were present. Committees were formed on each division and in each shop, made up of permanent and rotating members, the permanent members being the superintendent and other division officers; the rotating members—serving for six months—being chosen from the ranks. These Committees consist of from fifteen to twenty members and, as far as possible, all branches of the service are represented. These Committees meet one day each month, their time and expense being paid by the Railroad. Cards have been distributed over the entire system on which employes are invited to report any unsafe condition or unsafe practices. These cards are carefully gone over by the Committee at their monthly meetings and necessary action taken. The Central Committee meet once each month, and handle such matters as are referred to them by the Division Committees and adopt such methods as seem advantageous to the work. The months of November and December were used in perfecting the organization, so that the actual work began about January 1, 1914.

The response from the men has been such as to insure the success of the movement, and the Committee have had all they could do to correct the items reported. The encouraging features are that not only unsafe conditions, but unsafe practices, are being reported and the men in talking about Safety First and seeing the corrections made are becoming more careful in their habits: to illustrate, Safety First Card No. 55 states that opposite a certain station a tie was lying so near the track as to be dangerous to trainmen in the dark. The chairman of the Committee upon receipt of this card immediately notified that agent regarding the contents of the card and requested not only that the matter be corrected, but that he be informed as to who was responsible for having the tie where it was. The agent in seeking for the information as to who was responsible showed the correspondence to the section crew. They made inquiries and found that the crew of a certain freight train in doing shifting there a few nights previous, had used this tie to stake cars with and dropped it where they had used it. All this information was returned to the chairman of the Committee, who immediately forwarded it to the conductor of the freight crew and requested the name of the man who used the tie. The conductor interviewed his crew and found a man who said he did take a tie from the pile and used it to stake cars with, but that when he had finished with it he carried it over and laid it down beside a fence and did not drop it opposite the rail.



Simple but effective guard employed by Boston and Maine on buzz planer.

Now this card accomplished not only the picking up of this tie, but the agent, the whole section crew and all the train crew by this agitation and correspondence were educated along the lines of Safety First, and the nature of the card was such that even the man who was responsible for having left the tie where it was could readily see by the correspondence that the safety of himself and his fellow workmen was the end in view.

During the first three months of the year we had about 800 items reported, of which, in spite of the snow and cold weather during January and February, nearly 700 were corrected. The men in our shops have been especially active, and marked improvement has been made in safeguarding the machinery. Gears have been cased in and grinding wheels, belts, band saws and buzz planers guarded.

The one feature which seems to be most pleasing to shop men is the simple but effective guard placed on the buzz planer. The old type unguarded planer, with its square cutter with wide space between the table and the knife, was a menace from which very few escaped, but the simple guard shown in the photograph makes the planer absolutely safe. An upright spindle is placed on the side of the planer and a hard wood board ¾-in. thick is shaped so as to cover the knife; a sleeve is attached to the outside corner which slips down over the upright spindle by means of a spiral spring on this sleeve. This piece of board is continually pressed against the back of the planer and the man using the planer slips his material in between this board and the back of the planer. The spring continually presses the guard against the material in his hands and keeps the blade covered all the time, making this planer, as the man in the picture remarked even "Fool Proof." This man is in a position to appreciate this guard, having lost the ends of his fingers and thumb in this same planer some years ago.

It is too early to say very much about results, but in comparing the first three months of the last three years we find a decrease of fifty per cent in fatal accidents to employes this year, and there is a marked falling off in the number of serious injuries.

The rotating members of the Committee, as their term of office is drawing to a close, speak of it with regret and express a desire to continue to wear the Safety First Button. The willingness of the Committee to correct unsafe conditions and the good results shown lead us to believe that, although we have hardly made a start in the Safety First Work, the unsafe condition and unsafe practice will gradually disappear.

Safe Guarding the Health of Passengers.

THE Pennsylvania Railroad has issued an order that every employe engaged in the preparation of serving of food must undergo a physical examination at least every thirty days to determine whether they have even a tendency towards a communicable disease. This regulation includes the employes of dining rooms, dining cars and kitchens and the railroad's medical examiners, who are also officers of the State Board of Pennsylvania, will act as inspectors. It is also their duty to inspect dining cars and restaurants and kitchens; silverware, linens, cooking vessels and other utensils belonging to this branch of the service will come directly under their scrutiny. Every car and restaurant will be inspected at least once every month. The new regulations also require that every piece of meat or poultry be enclosed in an air tight bag before being taken from the refrigerator, thus insuring it protection against dust and other foreign matters.

Rewarding Enginemen on Southern Railway.

SOUTHERN RAILWAY engineers who have made exceptionally good records in keeping their locomotives in good condition are to be honored by having their names painted on the panels of their cabs. In announcing this new plan, Vice-President and General Manager E. H. Coapman states that it has been adopted as a mark of Southern Railway's appreciation of the interest which its engineers have taken in the condition and appearance of their locomotives. Southern Railway practice is, as far as possible, to allow each regular engineer to have his individual locomotive. The engineers feel a great personal pride in the appearance of their locomotives and many of them have been beautifully decorated in which the Company has co-operated with the men. As a result of the attractive appearance of Southern Railway locomotives, they have attracted wide-spread attention and much favorable comment. Under the new arrangement each engineer who has run an individual locomotive for a stated number of miles, rated according to the class of the engine, without going into the shop for general overhauling, will have his name placed on the cab panel. The arrangement was effective July 1st, but mileage made during the past two years by engineers running individual locomotives will be applied.

Practical Education of Railroad Employes.

TO broaden the knowledge of its officials and give them the benefit of a thorough training with respect to the methods of administering the affairs of the company in the general offices at Baltimore, the Baltimore and Ohio Railroad has inaugurated a plan of putting its division officers through a course of employment which will equip them for promotion to positions of greater responsibility. Officials in the operating branch of the service, including assistant superintendents, train masters and, in some instances, their subordinates, under the new arrangement are transferred to Baltimore so that they can study the problems of operation from the viewpoint of the general officers. While the staff officials are thus engaged their subordinate officials discharge the regular duties of the office, which has the double advantage of equipping the men lower in rank to qualify when vacancies occur.

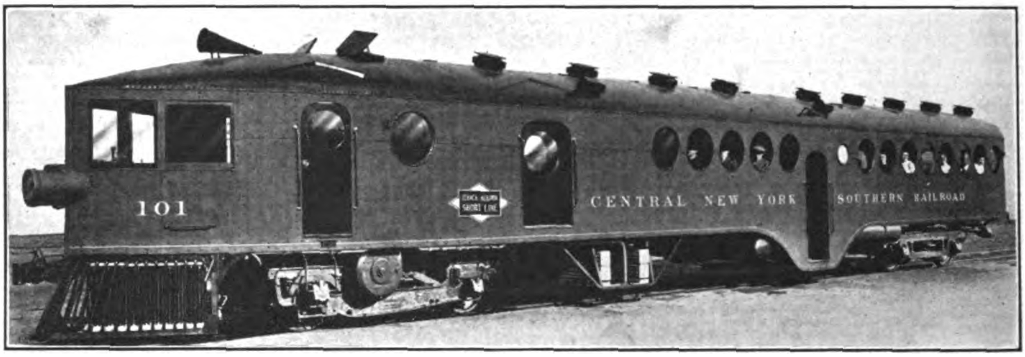
The officials who take the course in the general offices are employed for a period in the transportation department, in maintenance of way work, in the motive power office, the accounting, statistical, tonnage, discipline, employment, station service, rates of pay and other bureaus of the operating service, so that when they return to their respective divisions it will be with a general knowledge of the relation of their work to the operation of the property. Several officials are in the Baltimore offices constantly, and their places are filled when they go back to their regular duties.

Mechanical

Self-Propelled Freight-Passenger Car for Minneapolis & Northern Gasoline Motor Railway.

THE Minneapolis & Northern Gasoline Motor Railway has recently purchased a gasoline motor freight car from the McKeen Motor Car Company which is being used for freight and express service between Minneapolis and Anoka, Minnesota. It is a semi-convertible car which, during periods of heavy passenger traffic, can be used for transportation of passengers—removable seats and chairs being installed for that purpose.

It is equipped with the McKeen Motor Car Co., Type "A" motor truck in which has been incorporated many of the important fool-proof and economic features of the latest model Type "C" Motor Truck. The air brake system has a special Gregory motorman's valve for operation of straight air on motor car and automatic air on trailers.



McKEEN MOTOR CAR, ONE OF A NUMBER RECENTLY CONSTRUCTED FOR THE CENTRAL NEW YORK SOUTHERN RAILROAD.

The car's length over end sills is 45 feet while the total length is 52 feet 2 inches.

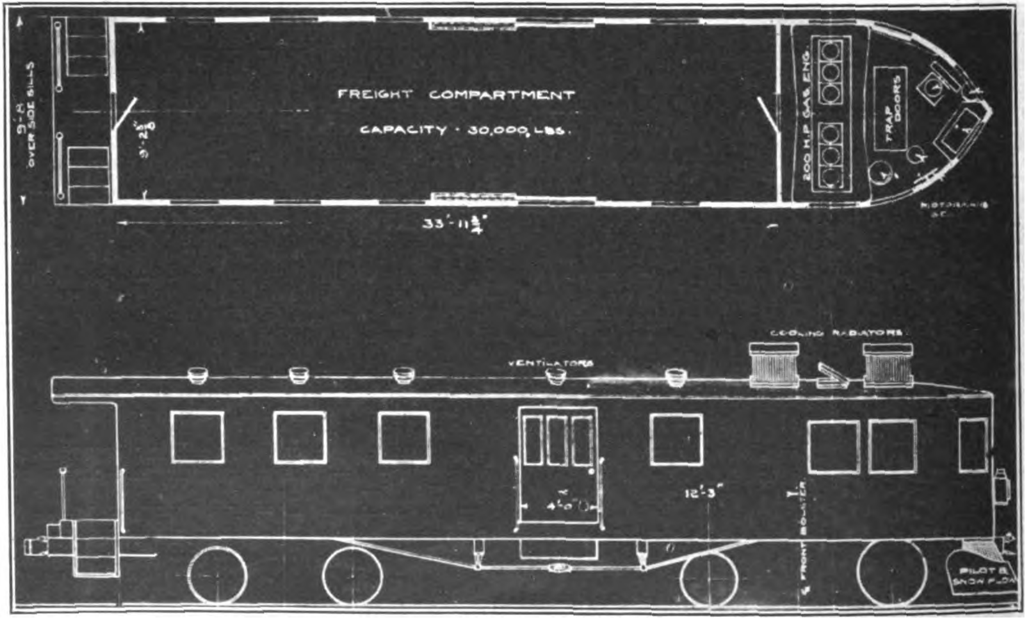
The accompanying floor diagram and side elevation illustrate the general design of the car, from which it will be noted that the front end is wedge shaped and the rear end has a platform for passengers ingress and egress. The McKeen depressed center side entrance is not a feature of this car, inasmuch as its use is chiefly for freight and express service. The car structure consists of a metal underframe, and continuous two-inch grooved steel combination side posts and carlines extending from side sill to side sill with metal diagonal bracing. The outside and inside wall sheathing is of 13-16-inch fir. The floor is of 1⅝-inch fir. Main dimensions are:

Length over end sills, 45 ft. 0 in. Length over platform, 49 ft. 0 in. Length over all, 52 ft. 8 in. Width over side sills, 9 ft. 8 in. Width over sheathing, 9 ft. 9⅝ in. Width over all, 10 ft. 4⅛ in. Width inside, 9 ft. 2⅜ in. Length freight compartment, 33 ft. 11¾ in. Height, rail to roof, 11 ft. 11 3-16 in. Weight 56,000 lbs.

The same Company has recently delivered two 1914 model "C" engine motor cars to the Central New York Southern Railroad, Ithaca, New York. This line, extending between Ithaca and Auburn, New York, 39 miles in length, was formerly the New York, Auburn & Lansing Railroad, the corporate name of which was changed upon the recent elimination of the receivership.

Steam equipment, heretofore providing the passenger service, has in accordance with the reorganization plans, been displaced by these 70 ft. motor cars, which action was considered of paramount importance in adopting ways and means of operating the passenger schedules attractively, economically and profitably.

The motive power machinery of the cars is the McKeen Motor Car Company's Type C, latest model, foolproof, encased, 200 horsepower, gasoline engine and mechanical transmission,



GENERAL PLAN OF FREIGHT MOTOR CAR CONSTRUCTED BY THE McKEEN MOTOR CAR COMPANY FOR THE M. & N. RAILWAY.

similar to the equipment furnished the Bessemer & Lake Erie, Soo Line and Sunset Central Lines, description of which was published in the "Railway World" in the January, 1914, issue.

Special features with which these cars are equipped are:

The Warner Railway meter which is so constructed as to register the mileage (ahead and backing up) per trip in addition to total mileage covered.

Pneumatic gong ringer.

Steam connection for heating cars in winter when not housed at terminal.

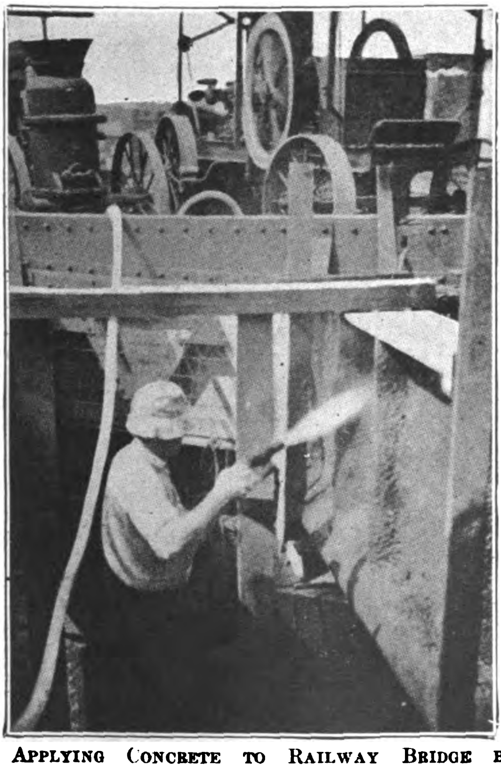
Rear door in passenger compartment for communication between motor car and trailers.

Conductor's brake valve and pedal operated whistle in rear for use of conductor when backing up.

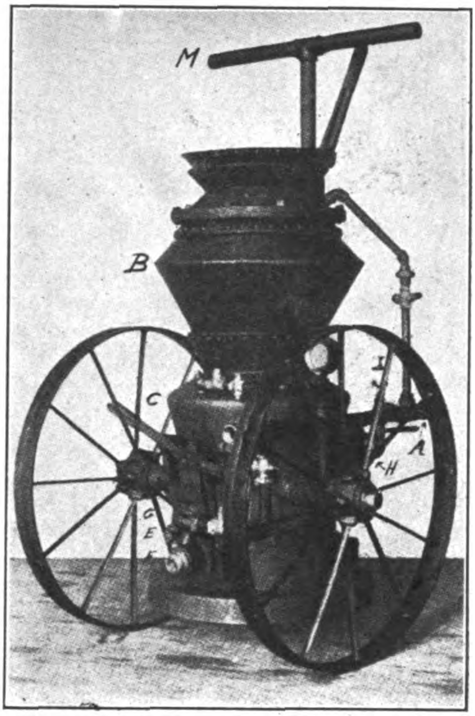
An illuminated indicator on rear similar to observation platform indicators on first class passenger trains.

Applying Concrete to Structural Steel.

THE gun-crete method of applying concrete to structural steel is shown in the accompanying illustration. This system is now extensively used for the encasing of steel bridges and other structural work as a protection against rust and fire. It is also employed for the lining of tanks, reservoirs and for the fire-proofing of wooden trestles. Mr. Carl Webber, the president of the Gun-Crete Company, is a concrete engineer of national reputation and is the inventor of the reinforced concrete chimney of which thousands have been built in this and foreign countries.



Applying Concrete to Railway Bridge by Means of Cement Gun.



Modern Type of Cement Gun.

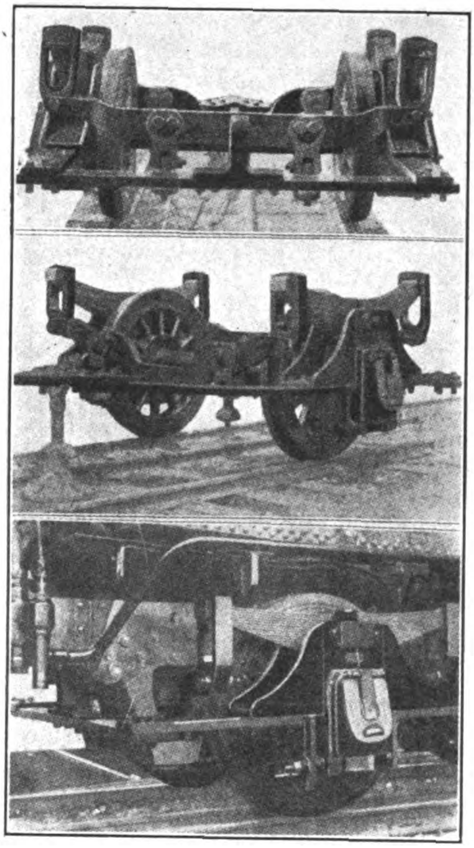
At the present time the Chicago Terminal Railroad engineers are covering their forty bridges and viaducts with gun-crete, and a large viaduct at Little Rock, Ark., belonging to the Iron Mountain Railway Company, is being treated in a similar manner. All of the steel work on these viaducts is being coated with gun-crete from 1½ to 3 inches in thickness and the work is applied as shown in the illustration.

At the New York Grand Central Terminal Station, all of the steel work in the lower levels, approximately 4,000,000 square feet, has been covered with gun-crete reinforced with Clinton wire mesh and the steel work of several round houses has been encased with gun-crete in order to protect it against the deteriorating action of the locomotive gases. The application of concrete to coal bunkers is also found extremely beneficial as the sulphur in the coal has a bad effect upon the steel work on such bunkers unless lined in the manner indicated. In this event, they are protected indefinitely.

A New Trailing Truck for Locomotives.

THE Austin improved trailing truck which is manufactured by the Lima Locomotive Corporation, Lima, Ohio, contains a number of new features and is designed with the view of improving the action and maintenance of trucks applied as trailing wheels. The suspension cradles system of cross equalizers, while the rear is attached to the outside spring hangers and in turn suspended from a positive fulcrum by heart-shaped links which are somewhat in the form of universal couplings. The lower portion of these links has a spherical head which allows a twisting movement in all directions and also allows a transverse radial motion for the entire cradle.

The first knuckle joint above this spherical end



Two Views of the Austin Trailing Truck, with a Third, Showing Its Application to Locomotive.

allows a fore and aft movement, so that when the truck radiates the apparent lengthening and shortening of the side members is fully accounted for. The transverse movement of the cradle is governed at the bottom by the spherical head, but at the top by two pins connecting the heart links with the cradle. These pins give a positive bearing while the engine is on a straight track and assure stable equilibrium on account of their three point suspension effect. When transverse movement on the cradle occurs, the heart links radiate from one or the other of their pins, according to the direction of movement and always tend to recenter by falling back on the double pins; the condition of the link while raised on one pin being always one of unstable equilibrium. The truck is thus a gravity suspension truck, and is similar in its action to any other positive heart-shaped link, such action being well demonstrated by front trucks having this type of bolster suspension.

By the employment of this truck, the rear end of the engine is held in alignment with the drivers by the force of gravity instead of being held by the more or less capricious action of helical centering springs. The cradle on the front of this truck is essentially the same as the one described at the rear, except that it connects with the driving equalization through the medium of the equalizer located at the back of the rear drivers. Particular emphasis is placed upon the fact that this cradle is not restrained by any jaw or contrivance on the frame and is therefore subject to no tendency to nip off outside the frame.

When this truck acts on a curve there is very little angular stress on any one component member of the cradle construction, as transverse flexibility occurs not only at the spherical end of the heart link but also at the top or centering end and again at the outside connection of the cradle to the spring hanger. These trucks have been observed on 23-degree curves, and their action, it is stated, is remarkable in this particular, the compensating effect of the members of the cradle being particularly noticeable. The angular position of any one member is slight, as the component members of the cradle adjust themselves in the manner described.

Vanadium Steel in Locomotive Construction.

THE accompanying chart shows in an interesting manner the development during the last six years in the application of vanadium steel and iron to locomotives. As late as 1908, this material was specified on only fifty locomotives. In 1913, over eleven hundred locomotives had vanadium parts. During the present calendar year up to May 15th, vanadium steel has been specified on 349 new locomotives. This chart which appears in a recent issue of the *Railway Review* is plotted from official returns from the locomotive builders to the railroads and from statistics as to the annual locomotive output published in the railroad technical papers.

These latter statistics, on which the percentage curve is based, include, of course, all classes of locomotives from Mallets to contractors' "dinkeys."

Considering only what may be classed as heavier power for which vanadium steel is chiefly advocated or considered, the percentages would be much higher than those shown in the chart. For

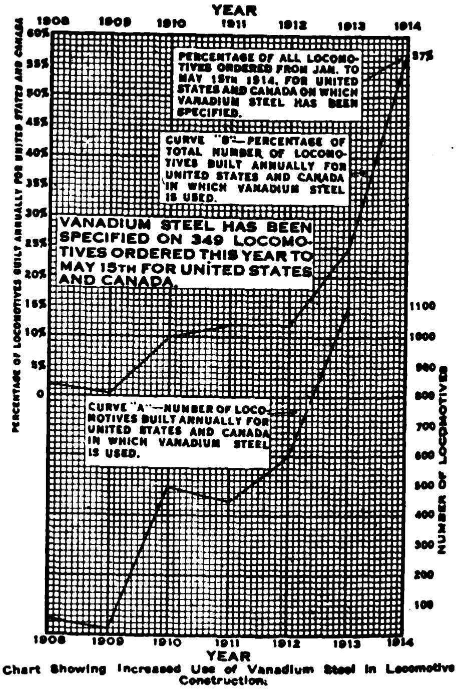


Chart Showing Increased Use of Vanadium Steel in Locomotive Construction.

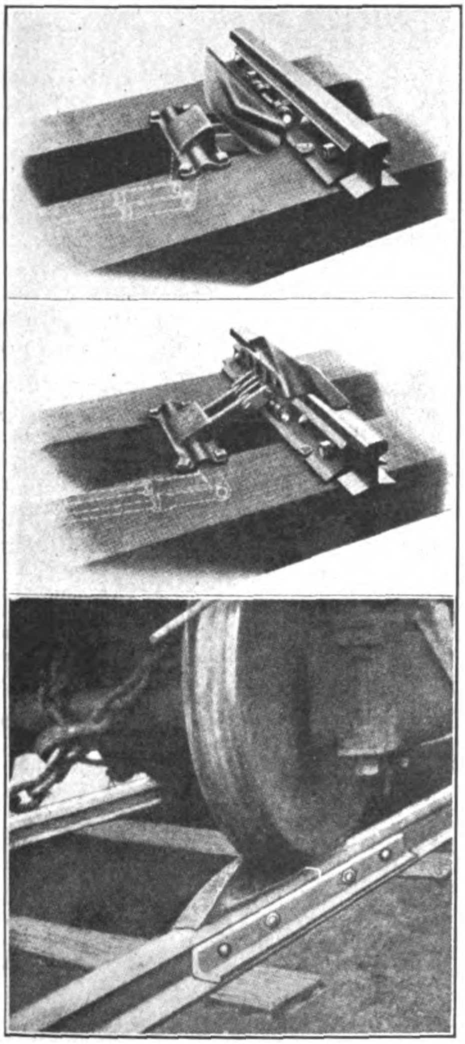
example, statistics show that last year this material was specified on 48 per cent of all the locomotives weighing over 225,000 pounds built for the United States and Canada. The curve showing the number of locomotives having vanadium parts includes only new power and does not cover the large number of locomotives to which vanadium steel parts have been applied in repair work. It is significant that this development has taken place during a period in which there has been greater curtailment by the railroads in their expenditures than in any other equal period during the past 15 years. This indicates that, while the use of vanadium steel as a locomotive material is in the first stages of development, it has passed far beyond the experimental stage and on many roads is now considered as standard for certain parts for heavy power.



Three Views of the Q and C Derail.

In the first, the rail is shown clear; in the second, the device is set for derailing and in the third, it is shown in the act of derailing a wheel.

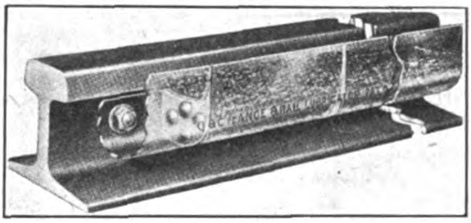
A New Derail Device.

THE Q & C Company of New York and Chicago has recently placed upon the market what it terms a "$5.00" derail as shown in the accompanying illustrations. This derail may be connected with interlocking, as shown in the figures one and two or may be connected with wires or pipes so as to be turned by the movement of the switch stand or it may be turned by hand. It is intended for employment on side tracks to prevent cars from running out and fouling the main line.

The device itself consists of one steel casting and two eye-bolts, the latter being adapted to be used in place of two bolts at a joint splice. The casting can be made to order, to fit the spacing of existing joint bolts. It can be applied, therefore, very easily, and without drilling of the rail, by substituting the two eye-bolts for two track bolts, and without the use of spikes. The height of rail and size and spacing of the joint bolts are all the data required for making the device to order; and it can be made in lefts and rights. It is operative under all weather conditions and lies so low that it does not interfere with snow flangers.

A Rail and Flange Lubricator.

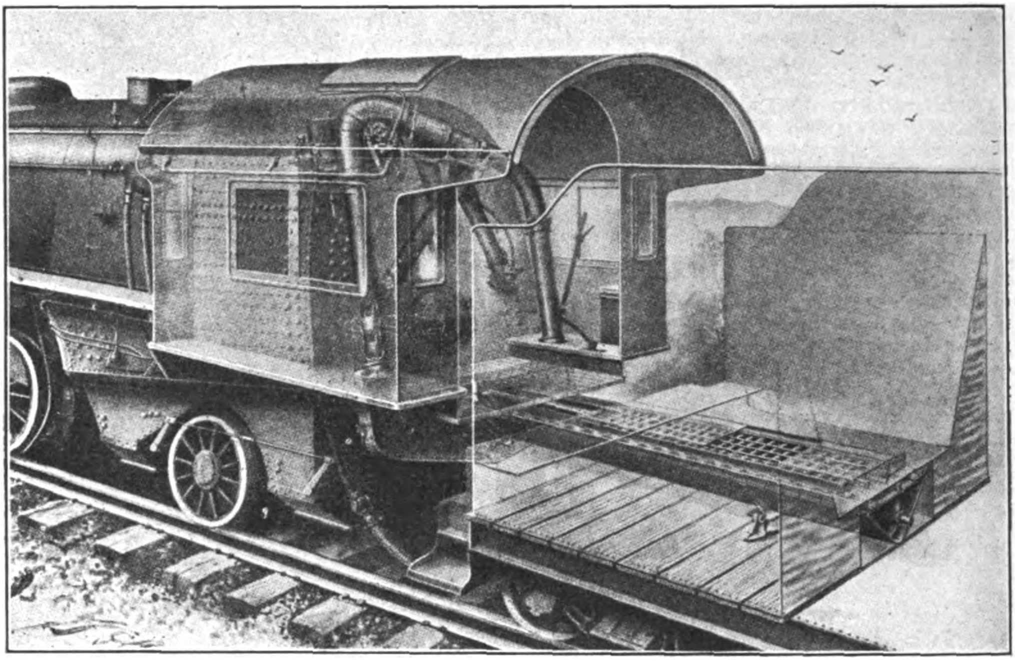
IN order to minimize the friction between the rails and the wheel flanges on curves to reduce both the rail and flange wear, a new lubricator has been designed by the Q & C Company, New York, N. Y., for application to the rails on the tangents approaching the curves. Each of these troughs which are of the form shown in the accompanying illustration, are 12 feet long and made up in sections. They are packed full of discarded cotton waste that has been removed from journal boxes, this waste being soaked with ordinary black oil. As this waste comes up within a half inch of the top of the rail, the flange of each wheel passing over the trough gathers enough oil to lubricate the rail and flange.



Device Employed for Lubricating Rails on Curves and Wheel Flanges.

New Type of Locomotive Stoker.

THE Locomotive Stoker Company, of Schenectady, New York, has recently brought out a new type of its Street locomotive stoker which is designated as Type C. This type differs from Type B in having a variable seat elevation for driving the engine and a friction clutch for making connection between the engine and the elevation. These improvements give the fireman an absolute control over the quantity of coal to be conveyed to the fire box. The variable speed engine has seven different speeds and is controlled by a small lever on the front of the crank case. By setting this lever in a given notch a fixed feed of coal is obtained and is maintained regardless of the hold of the engine. The friction clutch enables the fireman to stop and start the feed of coal instantly at any time. The elevator engine is allowed to run continuously and by throwing in the clutch lever, the elevator can be started and the feed of coal to the fire box begins instantly as, under normal conditions, the elevator buckets



THE NEW TYPE OF STREET STOKER AS APPLIED TO LOCOMOTIVE.

are full of coal. Throwing the clutch lever out stops the feed of coal instantly.

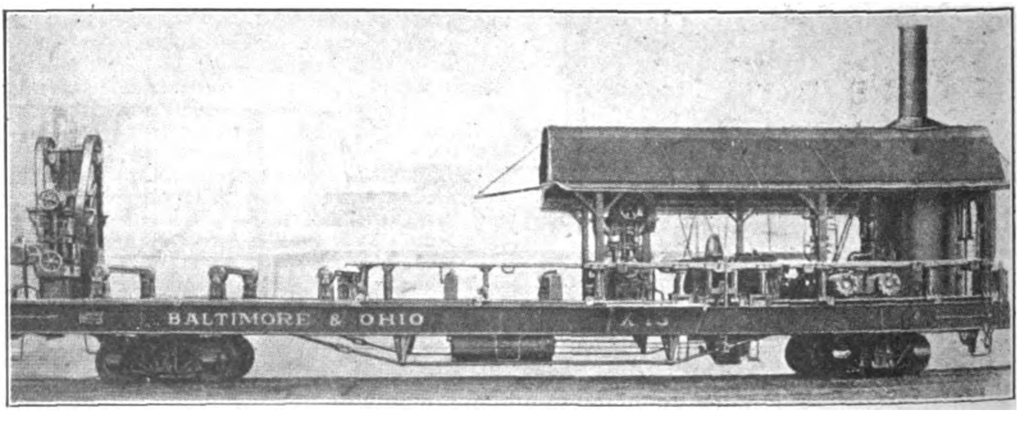
New Rail Sawing Machine Purchased by the Baltimore and Ohio Railroad.

THE accompanying illustration shows a new rail sawing machine which has recently been purchased by the Baltimore and Ohio Railroad and has been put in operation in a plant temporarily located at Lodi, Ind. A skid way has been arranged at a height somewhat above the floor of the car which affords storage space for the rails as they are unloaded and at the same time keeps them at a height which makes subsequent hoisting unnecessary.

A rail tongs suspended by a chain from a traveler on an overhead rail is shown in the illustration, but this is not used in the present plant. The rail to be sawed is laid over onto the set of carrier clamps, shown in the illustration, ranged along the side of the car, from the rear or boiler end, forward. These clamps are automatic and actuated by compressed air. As the rail is put onto them they grip it tightly, and then move it bodily over against the saw.

The saw is of the toothless or friction type, consisting of a water-cooled disk revolving at high speed, and the rail is severed in from 10 to 20 seconds. The two halves of the rail are next moved along lengthwise, so that its other ends may be sawed. They are then passed down along the rollers, and the ends successively presented to the two drilling machines, each of which drills its three holes in the web of the rail simultaneously. The drilling operations do not obstruct the movement of the rails at the saw, so that the capacity of the machine is one rail every thirty seconds, although, in practice, it does not often work actually to capacity on account of inability to furnish a constant supply of rails to the saw.

The housing of the principal part of the mechanism has hinged sides which may be let down to completely enclose the machinery, when not in use.



BALTIMORE AND OHIO RAIL SAWING CAR.

Electrical

Tractor Trucks for the Butte, Anaconda and Pacific Electric Railway.

FOUR additional electric freight locomotives have been ordered from the General Electric Company by the Butte, Anaconda and Pacific Electric Railway. Three additional tractor trucks have also been ordered to be used in combination with the standard locomotive units in order to make these locomotives suitable for low speed spotting service. These trucks increase the tractive of the standard unit to the equivalent of 120-ton locomotive and will be used especially for spotting cars and for low speed switching in the yards at Butte, Montana.

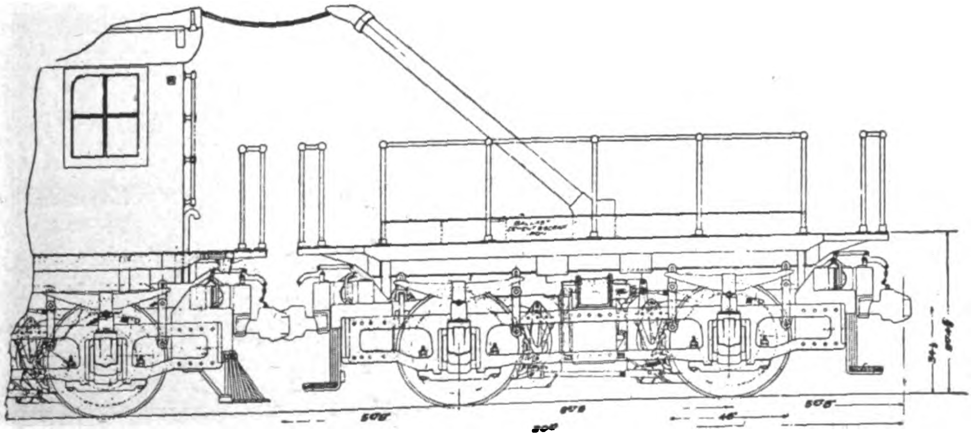
The three two-axle tractor trucks will each be equipped with two GE-229 motors insulated for 2,400 volts, similar to those on the locomotive. Cable and connecting plugs will also be provided for operation with the locomotives, so that the truck motors will be operated with the other motors from the same controller without change in the main control. The number of stops in the control will therefore be the same as on the locomotive; ten points with six motors in series and seven with two sets in multiple, each set consisting of three motors arranged in series. In operation, each of the tractor truck motors is connected in series with one pair of motors on the locomotive, making a six axle, six-motor unit which will furnish 50 per cent more tractive effort than the 80-ton locomotive alone, at about two-thirds speed, without increase in current input. The characteristics of the 120-ton unit are as follows.

Total weight on drivers	240,000 lbs.
Starting tractive effort at 30 per cent coefficient	72,000 lbs.
Tractive effort at one hour rating of motors	43,200 lbs.
Speed at one hour rating, motors in series	4.8 m. p. hr.
Speed at one hour rating, motors in series parallel	10.3 m. p. hr.

Mechanically these trucks are similar in construction to the trucks on the 80-ton locomotives. Instead of a locomotive body, however, a platform is supplied, built up of channels, angles and plates which are supported on the truck transom. Struts are provided at the corners to secure the platform to the side frame. Ballast, consisting of cement and iron punchings of sufficient quantity to bring up the weight of the truck to 40 tons, is placed between the center channels of the platform in a box-like structure built for this purpose. A passageway protected by a hand rail extends along each side of the platform.

In the center of the platform there is a crane which extends at an angle from the platform floor, suitable for supporting the eight cables necessary for connecting the motors of the tractor to those on the locomotive. This crane can be revolved 180 degrees so as to permit the coupling of the locomotive to either end of the track. When in operation, this crane is rigidly locked in position. Air brake equipment with the necessary triple valve, auxiliary reservoir, etc., is also installed on the truck.

Each of the four locomotives now under construction is provided with a junction box placed near the roof above the front window. This is designed so as to permit the removal of couplers with a small amount of labor and time, so that the tractor may be connected to any one of the freight locomotives which is provided with this junction box.



Tractor Truck Used as Auxiliary to 2400-Volt Direct Current Electric Freight Locomotive of the Butte, Anaconda & Pacific Ry.

Terminal Improvements

Pennsylvania Railroad's New Girard Point Elevator.

REFERENCE was made in the January issue of the "Railway World" to the new Philadelphia grain elevator of the Pennsylvania Railroad, then under construction at Girard Point. This new elevator, which is now complete and in full operation, was constructed at a cost of $1,200,000 and has a capacity of 1,100,000 bushels of grain. It is made entirely of concrete and steel, and the facilities it affords represent the last word in scientific practice. It is expected to prove the most rapid plant ever built for transferring grain from rail to water.

The new elevator is located at the mouth of the Schuylkill River within a few hundred yards of the main channel of the Delaware River. Towering high above the flat lands which surround it, it is the first sign of Philadelphia's industry which presents itself to voyagers coming up the Delaware. The elevator proper sits back 500 feet from a pier 900 feet long, on both sides of which vessels can dock. Grain will be delivered to ships for export by a conveying gallery, which extends out to the end of the pier.

The elevator has an unloading capacity of 240 cars per day of ten hours. It has sufficient trackage to accommodate 400 cars. The capacity and flexibility of the receiving and shipping plant is further increased by a six-track concrete shed, two cars long, permitting the unloading of twelve cars at once. The shipping gallery has a capacity for loading ocean steamers of 650 feet length, at the rate of 60,000 bushels per hour.

In general the elevator plant consists of a working house for the machinery, track-shed, storage house or annex, and conveyor gallery, pier, power house and drier. Grain is received in the track-shed receiving pits, and after unloading is carried to one of four receiving elevator legs and elevated to the garner over a receiving scale, from where, after weighing, it is spouted to bins in the working house for cleaning or shipment to vessels, or is carried on a conveyor belt to the annex for storage. Shipping facilities to vessels are provided by four belt conveyors from the working house to the pier.

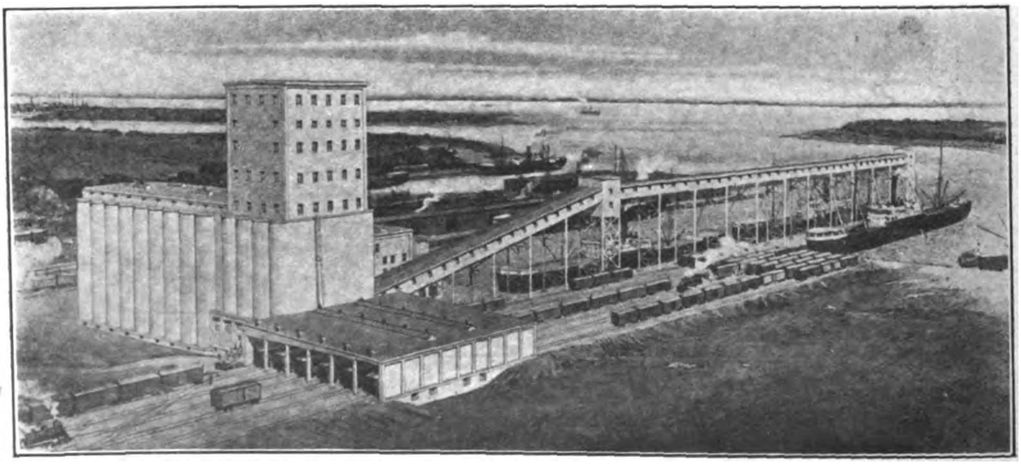
The new elevator is equipped with one of the largest grain driers in the country. It has a capacity of 3,000 bushels per hour. The plant also has the four largest grain cleaning machines in the country; 20,000 bushels can be cleaned in one hour.

To the east of the working house and connected to it by a concrete tunnel and bridge is the storage annex, consisting of fifty-four 13,000 bushel reinforced concrete circular tanks with a basement and cupola. The forty intermediate spaces have a capacity of about 3,300 bushels each. The storage annex has a capacity of more than 800,000 bushels.

Missouri Pacific's New Grain Elevator at Kansas City.

WHEN the additions and alterations to its huge grain elevator at Kansas City now under way are completed, the Missouri Pacific-Iron Mountain Railroad will have one of the largest plants of its kind in the world. As originally constructed, the elevator consisted of ten concrete circular storage tanks, with a capacity of 80,000 bushels each, or 800,000 bushels in all, and the elevator building proper, with a capacity of 200,000 bushels, a total plant capacity of 1,000,000 bushels. Forty additional concrete circular storage bins, 22 feet in diameter and 84 feet deep, with a capacity of 25,000 bushels each or 1,000,000 bushels all told, are under construction, besides 19 smaller bins, with a capacity of 7,000 bushels each or 133,000 bushels total.

The latter are what is known as "Interstice" storage bins, and they will occupy the space formerly left vacant between the circular bins of this style of elevator. The elevator will have a total of 69 units of storage space, with a capacity of 2,133,000 bushels, which is more than double its present capacity. Two hundred men



THE PENNSYLVANIA RAILROAD'S NEW GRAIN ELEVATOR AT GIRARD POINT, PHILADELPHIA.

have been kept at work on the plant, night and day, for the past two months. It is expected that the improvements will be completed and the elevator in operation by August 1st, in time to handle a good share of the heavy wheat crop now being harvested in that section of the country.

Brooklyn's Marginal Railway Plan Revised.—Revised plans for the Brooklyn marginal freight railway have been reported to the Board of Estimate by its Committee on Port and Terminal Facilities. Material changes have been made in the original plan and the Committee has expressed the opinion that it will be necessary to ultimately carry the route further north, probably for a considerable distance beyond the navy yard. In order to provide railroad facilities along the waterfront between Van Dyck Street and Hamilton Avenue, it is proposed to construct a ramp from the elevated structure west of Van Brunt Street, reaching the surface in Van Dyck Street, between Conover and Ferris Streets. At this point connection can be made with the present surface layout on Ferris Street.

The Committee proposes also to acquire the so-called "Baltic Yard" of the New York Dock Company, lying between Harrison and Warren Streets, and west of Columbia Street. This area will provide float bridge connections for the northern end of the line.

A schedule was submitted by the committee showing the estimated cost of the railroad with the changes as proposed in the present report, together with a map prepared by the Commissioner of Docks incorporating the changes in the map adopted July 10, 1913.

The total cost is put at $3,831,000.

Increased Terminal Facilities on Long Island for Baltimore and Ohio.—An important addition to its facilities for handling business in the New York terminals will be made by the Baltimore and Ohio Railroad, when a new freight station will be opened at Long Island City on July 1st. It will be known as the Long Island City-Queensboro Terminal and will be located at the foot of Thirteenth and Fourteenth Streets. Current New York rates will apply to and from the new depot. Shipments in any quantity will be handled through the new terminal, which will have direct connections with other terminals in the New York harbor as well as with the entire territory reached by the Baltimore and Ohio and its connecting lines. The only exception will be the articles usually restricted from such terminals which will be handled as heretofore.

Enlarged Facilities at Mobile for Southern Railway.—To provide adequate facilities for the proper handling of its business through the port of Mobile, Southern Railway Company is arranging for a general development of its freight terminal and authority has been given for the construction of new freight houses, storage yard and engine yard.

The facilities for handling freight will consist of an out-bound freight house, 26 ft. x 410 ft.; an in-bound freight house, 40 ft. x 410 ft. with office 56 ft. x 134 ft.; cotton platform 40 ft. x 330 ft.; ribbon platform 12 ft. x 410 ft.; and necessary tracks, team ways, drainage and paving with adequate fire protection.

The work to be done in providing engine handling facilities will consist of grading, track work, cinder conveyor and the provision of drainage and water supply. A new storage yard with a 50 ft. track scale will also be provided.

The Southern Railway has also begun work on new and enlarged freight yard and shop facilities at Richmond and South Richmond, Va. The work in Richmond proper will include the removal of the present passenger depot at Fourteenth Street and the erection on its site of a new out-bound freight depot 40 ft. x 480 ft.; the conversion of one of the existing freight depots into an in-bound freight depot and the other into a tobacco warehouse; the rearrangement of existing tracks and the construction of new tracks to serve all old as well as the new facilities, and the necessary paving and curbing around the new freight house.

The new depot, which will be of brick construction, with tile roof over office part of the building and tar and gravel roof over the remainder, will be divided as follows:

First Floor—Offices 40 ft. x 40 ft.
Warehouse 40 ft. x 440 ft.
Second Floor—Offices 40 ft. x 150 ft.

Bids for its construction are now being solicited from contractors and work will be started as soon as the contract has been awarded and necessary building material assembled.

Another terminal improvement begun by this road is the construction of the first unit of a two-way gravity classification yard on property already graded at North Birmingham, Ala., to be known as Finley Yard, in honor of the late Mr. W. W. Finley, President, Southern Railway Company.

The track construction now under way is being handled by a special force organized for that purpose and will provide a receiving yard, gravity classification yard, a storage yard, and repair tracks. A yard office will also be built.

There will also be constructed a twenty-five stall round-house and shop buildings, a modern coal, sand and cinder handling station and track scales of heavy capacity. Complete arrangements will also be made for water supply, lighting, and fire protection.

The round-house will be of reinforced concrete construction with brick walls, roof of concrete joist and tile. Contract for its construction has been awarded to the Consolidated Engineering Company, of Baltimore, Md.

The construction of this first unit of Finley Yard, even with a large increase in traffic will provide adequate yard facilities at Birmingham for at least five years, and provision has been made whereby if it is deemed necessary at the expiration of that time, the capacity of the yard can be approximately doubled; which based on increase during the past five years will provide for the handling of business for a future period of from fifteen to twenty-five years.

The completion of these improvements will enable the Southern Railway to concentrate at Finley Yard, work which is now done at four different points scattered over a territory of ten miles, and will insure against yard congestion and promote an easy flow of traffic thereby resulting in increased efficiency in handling the heavy business of the Birmingham District and the great amount of through business passing through Birmingham.

Interstate Commerce Commission

Commission Issues Its Annual Report on Steam Railways.

THE following abstract is based upon the 26th annual statistical report of the Commission covering the fiscal year ending June 30th, 1913, made from the reports of carriers having operating revenues above $100,000. Returns of switching and terminal companies are not included. The Commission states that advance figures in this abstract may be slightly modified by revision before final publication.

MILEAGE.

On June 30, 1913, the roads covered by this abstract represented 244,418.49 miles of line operated, including 11,162.97 miles used under trackage rights. The aggregate mileage of railway tracks of all kinds covered by operating returns for these roads was 369,579.80 miles. This mileage was thus classified: Single track, 244,418.49 miles; second track, 26,270.55; third track, 2,588.68; fourth, fifth and sixth tracks, 1,964.06; yard track and sidings, 94,338.02. These figures indicate, for the roads under consideration, an increase of 8,628.36 miles over corresponding returns for 1912 in the aggregate length of all tracks, of which increase 3,157.59 miles, or 36.59 per cent, represent yard track and sidings.

EQUIPMENT.

It appears, from the annual reports submitted to the Commission by the roads covered by this abstract, that there were 63,378 locomotives in their service on June 30, 1913, an increase of 2,102 over corresponding returns for such roads for the previous year. Of the total number of locomotives, 14,396 were classified as passenger, 37,924 as freight, 9,834 as switching, and 1,224 were unclassified.

The total number of cars of all classes in the service of such roads was 2,445,508 (or 76,566 more than on June 30, 1912), which equipment was thus assigned; Passenger service, 51,700 cars; freight service, 2,273,564; company's service, 120,244. The figures given do not include so-called private cars of commercial firms or corporations.

Of cars in freight service, there were classified 2,273,289, as follows:

Description.	Number.	Aggregate capacity. Tons.
Box	1,032,585	35,607,134
Flat	147,541	5,151,054
Stock	78,308	2,421,827
Coal	871,339	38,314,920
Tank	8,216	327,727
Refrigerator	43,389	1,357,403
Other cars in freight service	91,911	3,798,080
Total	2,273,289	86,978,145

It appears that the average number of locomotives per 1,000 miles of line was 259, and the average number of cars per 1,000 miles of line, 10,005. The number of passenger-miles per passenger locomotive was 2,341,269, and the number of ton-miles per freight locomotive was 7,843,663.

The returns indicate that the number of locomotives and cars in the service of the carriers under consideration aggregated 2,508,886, of which 2,492,891 or 99.36 per cent as against 99.20 per cent in 1912, were fitted with train brakes, and 2,505,283 or 99.86 per cent as against 99.81 per cent in 1912, were fitted with automatic couplers. Of the 2,273,564 cars in freight service on June 30, 1913, the number fitted with train brakes was 2,266,162 and the number fitted with automatic couplers was 2,270,302.

EMPLOYES.

The total number of persons reported as on the pay rolls of the steam roads of the United States on June 30, 1913 (not including those in the employ of roads the gross operating revenues of which were reported as less than $100,000 or those in the service of switching and terminal companies) was 1,815,239, or an average of 743 per 100 miles of line. As compared with corresponding returns for June 30, 1912, there was an increase of 115,298 in the total number of such railway employes. There were 67,026 enginemen, 70,477 firemen, 52,086 conductors, 146,855 other trainmen, and 38,253 switch tenders, crossing tenders, and watchmen.

The complete report will include summaries showing the average daily compensation of 18 classes of employes for a series of years, and also the aggregate amount of compensation reported for each of the several classes. The total amount of wages and salaries reported as paid to railway employes during the year ended June 30, 1913, for the roads under consideration was $1,373,830,589.

CAPITALIZATION OF RAILWAY PROPERTY.

On June 30, 1913, according to the annual reports submitted to the Commission by roads having gross operating revenues of $100,000 or more, together with returns made in reports filed in behalf of their non-operating subsidiary lines, the par value of the amount of railway capital outstanding was $19,796,125,712. This amount includes capital held by the railway companies concerned, as well as by the public. Of the total amount of such capital outstanding there existed as stock $8,610,611,327, of which $7,231,515,045 was common and $1,379,096,282 was preferred; the remaining part, $11,185,514,385, representing funded debt, consisted of mortgage bonds $8,186,366,426; collateral trust bonds, $1,189,636,796; plain bonds, debentures and notes, $1,107,076,783; income bonds, $250,290,655; miscellaneous funded obligations, $82,858,275; and equipment trust obligations, $369,285,450.

Of the total capital stock outstanding for the roads under consideration, $2,836,023,744, or 32.94 per cent paid no dividends. The amount of dividends declared during the year (by both operating and non-operating companies represented in this statement) was $368,606,327, being equivalent to 6.38 per cent on dividend-paying stock. The average rate of dividends paid on all stocks outstanding pertaining to the roads under consideration was 4.28 per cent. No interest was paid on $1,128,776,748, or 10.44 per cent, of the total amount of funded debt outstanding (other than equipment trust obligations).

INVESTMENTS IN ROAD AND EQUIPMENT.

The figures presented under this caption include returns for investment in road and equipment, shown by the operating roads covered by this abstract, as well as by their subsidiary non-operating roads (leased, operated under contract, etc.). The expenditures for additions and betterments, as well as the expenditures for new lines and extensions, during the fiscal year 1913 are analyzed in the following tabular statement:

the year ended June 30, 1913, over the returns for 1912, as applying to the roads represented in this abstract, was 37,618,843,854. The number of tons carried one mile per mile of road for the year ended June 30, 1913, was 1,245,158, as against 1,110,811 for the preceding year. The average number of tons of freight per train-mile was 445.45. The corresponding figure for the preceding year was 410.26.

The average receipts per passenger per mile, as computed for the year ended June 30, 1913, for the roads covered by this statement, were 2.008 cents; the average receipts per ton per mile, 0.729 cent. The passenger service train revenue per train-mile was $1.35.555; the freight revenue per train-mile was $3.24.347. The average operating revenues per train mile were $2.45.387. The average operating expenses per train-mile were $1.70.374. The ratio of operating expenses to operating revenues was 69.44 per cent.

	Expenditures for additions and betterments.	Expenditures for new lines and extensions.		
Investment to June 30, 1913			$16,351,639,266	
Investment to June 30, 1912			15,874,579,626	
Increase 1913 over 1912				$477,059,640
From cash or other working assets	$329,511,772	$54,819,241		
From special appropriations	48,079,165	473,281		
Through issue of securities	162,597,278	63,692,746		
Not assigned to any of the above classes	5,801,127	10,263,251		
Total	$545,989,342	$129,248,519	$675,237,861	
Miscellaneous charges not classified			4,847,012	
Total expenditures during year			$680,084,873	
		Credits.		
Property retired or converted		$79,495,571		
Adjustments		5,058,790		
Difference between record value of grantor and purchase price of grantee in cases of roads sold, merged, consolidated, etc.		118,470,872		
Total			$203,025,233	
Net increase during year				$477,059,640

PUBLIC SERVICE ON RAILWAYS.

The number of passengers carried during the year ended June 30, 1913, by roads represented in this abstract was 1,033,679,680. The corresponding number for the year ended June 30, 1912, was 994,372,283. The increase in the number of passengers carried during the year over corresponding returns of 1912 was 39,307,397.

The passenger mileage, or the number of passengers carried one mile, reported by roads represented in this statement, was 34,575,872,980. The corresponding return for 1912 was 1,536,762,172 less. The number of passengers carried one mile per mile of road was 143,067, as against 140,393 for the preceding year.

The number of tons of freight reported as carried (including freight received from connections) by roads represented in this statement, for the year ended June 30, 1913, was 2,058,035,487, while the corresponding figure for the previous year was 1,818,795,630, the increase being 239,239,857.

The ton mileage, or the number of tons carried one mile, as reported by the carriers under consideration for the year ended June 30, 1913, was 301,398,752,108. The corresponding ton mileage as reported for the year ended June 30, 1912, was 263,779,908,254, from which it will be seen that the increase in the ton mileage for

REVENUES AND EXPENSES.

It should be noted that, as in the case of other figures in this abstract, the revenues and expenses shown below exclude returns for roads the gross operating revenues of which were less than $100,000 for the year. The operating revenues of the railways in the United States for the year ended June 30, 1913, herein represented (average mileage operated 242,657.12 miles), were $3,125,135,798; their operating expenses were $2,169,968,924. The corresponding returns for 1912 (average mileage operated 238,220.11 miles) were: Operating revenues, $2,826,958,366; operating expenses, $1,959,094,658. The following figures present a statement of the operating revenue for 1913 in detail:

Freight revenue	$2,198,930,565
Passenger revenue	695,987,817
Excess baggage revenue	7,607,802
Parlor and chair car revenue	715,566
Mail revenue	50,789,212
Express revenue	79,717,266
Milk revenue (on passenger trains)	9,057,591
Other passenger revenue	6,110,252
Switching revenue	33,248,734
Special service-train revenue	1,980,362

Miscellaneous transportation revenue	6,861,901
Total revenue from operations other than transportation	31,628,843
Joint facilities—Dr	1,054,003
Joint facilities—Cr	3,553,890
Total operating revenues	3,125,135,798

Operating expenses, as assigned to the five general classes, were:

Maintenance of way and structures	$421,232,395
Maintenance of equipment	511,561,363
Traffic expenses	62,850,113
Transportation expenses	1,096,252,745
General expenses	78,072,308
Total operating expenses	2,169,968,924

With minor eliminations from the figures given above, operating revenues per mile of line operated (including line operated under trackage rights) averaged $12,873 and operating expenses $8,939 for the year.

Commission's Report on New Haven System.

On July 13th, the Commission sent to the United States Senate a report which censures in a drastic and even bitter manner, the financial operations of the New York, New Haven and Hartford Railroad Company under the administration of Mr. Mellen and the Board of Directors which controlled the company's affairs at that time. The Commission holds that the New Haven directors were "criminally negligent" and indicates that it expects them to be prosecuted under the criminal statutes. With this in view, copies of the testimony taken during the investigation have been furnished to the Department of Justice and in order that State authorities may take action the Commission has also furnished evidence "concerning local occurrences in New York City to the district attorney for the proper district," while testimony relating to irregularities in Massachusetts and Rhode Island have been laid before the proper authorities in those States. The enormous amount of testimony taken during the investigation is summarized in the report which comprises thirty-nine printed pages with sixty additional pages of appendices, the whole making a document of more than sixty thousand words.

According to the Commission, the story of the "reckless and profligate" financial operations probably forms the most remarkable chapter in the history of American railroads and American financing. It tells of millions used like stage money; of corporations as pawns in a monster game with all New England's transportation as a prize, which led the New Haven in the ten years just passed from the height of prosperity to the point where a dividend has been passed, where a dissolution suit is threatening, and where criminal indictments of many of the directors who figured in its deals are at least a possibility.

Hampered by unwilling witnesses, by burned books and by all the mazes which lawyers invented to cover the trail, the Commission estimated that in the progress toward a monopolization of New England transportation the New Haven stockholders have lost between $65,000,000 and $90,000,000, but little of which they may recover.

The combination reared by the hands of Mr. Mellen and approved by the late J. Pierpont Morgan and William Rockefeller, the Commission finds to be clearly in violation of the Sherman anti-trust act and a monopoly in practical control of the transportation of five States.

That the refusal of J. P. Morgan to permit a full examination of the books of J. P. Morgan and Company in connection with that firm's dealing with the New York, New Haven and Hartford Railroad, brought the Commission's New Haven investigation to an end, is indicated in correspondence from J. P. Morgan and Interstate Commerce Commissioner McChord and Examiner David E. Brown, of the Commission, made public in an appendix in connection with the Commission's report.

The directors of the New Haven system are scored by the Commission, because, so the Commission says, they "actually or passively acquiesced in the efforts of the Mellen-Morgan-Rockefeller regime to extend the domination of this corporation over the whole transportation fields of New England"

These directors, the Commission asserts, were guilty of "a gross dereliction of duty and a breach of trust that was morally wrong and criminal in its fruits."

The Commission calls for their civil and criminal prosecution.

The report speaks of criminal mal-administration and negligence, asserts with positiveness that the directors knew they were perfecting an illegal combination and says that the dream of a transportation monopoly was unsound and mischievous. The New Haven, the Commission says, employed dummy directors, manipulated accounts, used questionable methods in increasing its own stock, paid the dividends of subsidiaries to make a showing and used many other devices to deceive the stockholders and the public. It dipped into politics, was a factor in "invisible government," made large campaign contributions to the dominant political parties, bought officials and tried to distort public opinion. All this it did, the Commission says, "to carry out a scheme of private transportation monopoly imperial in its scope."

Of all the millions lost to New Haven stockholders, the Commission estimates that possibly $8,000,000 may be recovered by proper action.

In its investigation the Commission found that the New Haven had 336 subsidiary corporations, many of which served no purpose except "an evil one."

The Commission defends its action in compelling Charles S. Mellen and other New Haven directors to give testimony. The Commission, it is set forth, proceeded upon the idea that it is better to expose wrong-doing even at the expense of giving immunity to a few witnesses than to leave facts uncovered, and thereby give immunity to all "not only as to prosecution but to the stigma of exposure as well."

Commission Denounces Pass Policy of Louisville and Nashville.

The Commission has sent to the Senate its answer to Senator Lee's resolution asking how the Atlantic Coast Line secured control of Louisville and Nashville, where there was an outright purchase of the Nashville, Chattanooga and St. Louis road, under what terms it was being operated and to whom free passes have been issued by the Louisville and Nashville.

During the year ended December 31, 1913, the Louisville and Nashville Railroad issued to or on account of members of legislative bodies and other public officials, attorneys, newspaper representatives and various other persons, 11,805 free passes, involving 4,577,928 miles of travel, the value of which was $130,839. For the same year 1913, at the request of like officials, 22,355 passes, involving 7,133,944 miles of travel, the value of which was $209,420, were issued.

In the list of those to whom passes were issued are included one United States Senator, two United States Representatives, other Government officials to the number of 139 passes, to State Senators, 1,556, State Representatives 2,183, other State officials 1,769, county officials 288, city officials 611, judges 89. The report that the aggregate value of the actual travel upon the passes which it was possible to establish statistically is $340,026.

Commenting on the free passes issued, the Commission concludes: "There is scarcely a walk of life which is not represented in this procession of recipients of passes, from the Federal bench to the local politician and the sheriff who summons the jury. The threads represented by these passes tie thousands of citizens to the carriers through improper relations. The lack of morality reflected by the facts here compiled is a menace to the institutions of a free people. These citizens who sell their influence, quite as much as though they accepted money bribes, seem to be as willing to be tied as the carriers are ready to tie them. Men pledge their influence quietly in the home, or school or club, in the professions, in business, in city councils, in administrative boards, in courts of justice, in legislative halls and at the polls."

Railroads to Report on Abandoned Property.

THE Physical Valuation Board of the Interstate Commerce Commission has called upon the railroads for a report on property abandoned prior to June 30, 1914. The report is to be filed with the Board not later than February 1, 1915, and is to be accompanied by a detailed statement of the claims of the roads in respect to such property abandoned. The order says:

"Such schedules shall show this property classified in accordance with the Interstate Commerce Commission's investment accounts and shall give the physical units of the property, with the original cost of same to date of abandonment; also date of abandonment and disposition and present status of abandoned property. Carriers shall accompany such schedules with a descriptive list of all maps, profiles or other records which refer to the property and which will serve to aid the Commission in identifying and examining the same, and upon request from the Commission shall file with it such maps, profiles and other records or copies of the same as may be required."

All the railroads having an annual gross revenue of $100,000 or more were this week directed by the Valuation Board to assemble for examination their physical valuation maps. The roads are permitted to submit any maps they may now have, instead of being obliged to prepare new ones, provided those now available meet with the requirements of the Commission's order of last February. The Commission has requested the roads to collect such maps at some convenient point for examination by one of its representatives. Ordinarily, it is stated, the Commission will give three months' notice to a carrier whose property it intends to value before the work is undertaken. The Commission has issued a circular in the matter, saying:

"As soon as the Commission has passed upon the maps and profiles the carrier should proceed to make the changes or additions required in present maps and profiles or to prepoare new ones, as the case may be. Carriers having no maps and profiles, or whose maps and profiles are clearly of such a character as to be insufficient for this work, should at once proceed to prepare those called for by the order of the Commission."

The notice of the Commission also contains the following:

"All carriers should at once prepare a list of their lands, showing grantor, grantee, instrument, &c., as called for in the order. If the carrier prefers, it may in the first instance prepare typewritten schedules which may be so arranged upon separate sheets as to be mechanically transferred to the maps finally. In the end the schedule of lands must appear upon the maps as set forth in the order pertaining to maps and profiles."

Conferring on Inter-Ocean Rates.

REPRESENTATIVES of the Santa Fe, Union Pacific, Southern Pacific, Missouri Pacific and Northern Pacific, held a conference with examiners of the Commission on July 7th, over the details of the decree of the Supreme Court in the so-called intermountain rate case. These railroad officials conferred with certain members of the Commission and they were directed to prepare a statement in consultation with the examiners for submitting to the Commission.

It is understood that the roads will attempt to conform to the decree of the Commission, affirmed by the Supreme Court, and make rates from the Eastern territory to the intermountain territory upon the proportions fixed by the Commission in the opinion issued over two years ago. Upon certain commodities, however, the roads believe they should be granted greater relief than permitted by the Commission in the old order and it is upon this point that the conferences are being held.

Decrease in Pig Iron Rates from Birmingham District Ordered.

IN a decision made public on July 7th, the Commission held to be unreasonable, freight rates on pig iron from the Birmingham, Ala., districts to Louisville, St. Louis, Chicago and to Boston by rail and water. Rates representing in some instances as much as a ten per cent reduction, were prescribed to become effective August 15th, over the Louisville and Nashville and other roads.

The Commission likewise held to be unreasonable existing rates from Birmingham to interior New England points and prescribed new rates. It was also directed that the proportion rates to and from Ohio River should be so revised as to make the through rate from Chicago not in excess of $4.00 per gross ton. The case has been pending before the Commission for more than a year.

STATE COMMISSIONS.

Louisiana.—The recent decision of the United States Supreme Court in what was known as the Shreveport case is already having its effect upon the State Commissions in their rate regulation activities.

In a case decided on June 30th by the Railroad Commission of Louisiana in which the Lafayette Chamber of Commerce petitions the Commission to reduce certain rates on cement on the Morgan's Louisiana and Texas Railroad and Steamship Company, the Commission holds that the purpose of the complaint is not to have established a reasonable rate for the transportation of cement between points in the State of Louisiana, but to have the Commission establish a low rate with the declared purpose of using this rate only on shipments from interstate points. The complainant's remedy is to file his complaint with the Interstate Commerce Commission and ask that a reasonable interstate rate be established. It is not the duty, nor is it within the power of this Commission, to establish a rate between two points for the sole and only purpose of lowering an interstate rate.

Missouri.—The Public Service Commission has issued an order which will oblige the owners of a thirty-mile railroad in the southwestern part of the State to open the line to the public as a common carrier. The railroad is the Sligo & Eastern and is owned, it is understood, by a subsidiary of the American Car & Foundry Co. It extends through a district about fifteen miles wide in Dent, Crawford, Iron, Washington and Reynolds counties, and furnishes the only outlet to the timber cut in that district. As part of the railroad has been operated as a private carrier, it is claimed, shippers were prevented from sending their timber to the general market, but were forced to sell a subsidiary of the American Car & Foundry Co., which thereby was enabled to dictate its own price. The Commission ordered the railroad to operate trains over the entire thirty miles, including the eleven miles built as a private line, as a common carrier, and to file a schedule of tariffs with the Missouri Public Service Commission.

New Jersey.—The Railroad Commission has issued an order, effective July 6th, requiring the New York, Susquehanna & Western and the Erie Railroads to "clean and maintain in reasonably clean condition the outside of each passenger car, including windows." Formal complaint, on which the commissioners based their order, was brought by H. P. Dilliston, of Ogdensburg, who set forth, that, on a number of trips, he and other passengers found the windows of the cars were very dirty. The board declared that the defendant roads had produced no evidence of financial condition which would prevent compliance with the order.

Ohio.—The Public Utilities Commission held a hearing at Columbus, June 0th, on the application of the New York Central & Hudson River and the Lake Shore & Michigan Southern railway companies to combine, and at its conclusion dismissed the application on the ground that the Commission had not jurisdiction to investigate whether the merger would effect monopolization of lines running through Ohio from Buffalo to Chicago. The proposed merger involves an issue of securities aggregating $300,000,000. In announcing the decision, Oliver H. Hughes, chairman of the utilities commission, explained that the Ohio law does not confer authority on the Commission to determine when competition is eliminated by combination of railroads, though it gives this power in cases of other utilities. Similar petitions have been filed with Public Service Commissions of New York, Pennsylvania, Michigan and Illinois. Albert H. Harris, vice-president of the New York Central, and F. J. Jerome, of Cleveland, general counsel for the Lake Shore, declared after the decision was announced that it will not affect materially the status of proposed merger action. They will press their application in other states.

LEGISLATION.

Louis D. Brandeis Proposes Amendment to Railroad Security Bill.—Louis D. Brandeis, special council for the Interstate Commerce Commission, who has been studying the railroad securities bill now before the Senate Committee, has submitted an amendment providing for government supervision, which the committee will take up for consideration. It is understood that the proposed amendment has been approved by Judge Lovett and other prominent railroad men.

The amendment provides that after January 1, 1915, it shall be unlawful for any railroad company subject to the interstate commerce act, even though permitted by the authority creating such company, to acquire any interest whatsoever, directly or indirectly, by stock ownership or otherwise, in any property, or to issue any capital stock or any bond or other evidence of interest or indebtedness of such railroad company or to incur or assume any obligation as guarantor or surety for the security of any other company, or to spend the proceeds of any security or any part of its surplus for any purpose other than:

a. The construction, improvement of equipment, operation or extension of, or provision or betterment of facilities for its railroad or some railroad, boat line or trolley line, comprised or to be comprised in the transportation system of which it forms a part, and which it may lawfully own or operate.

b. The discharge or refunding of any securities or indebtedness lawfully issued or incurred by the company or by other companies comprised in its transportation system.

c. The reimbursement of the treasury of the company for expenditures for any of the purposes in this act specified.

d. The acquisition of any railroad, boat line or trolley line, of any stock, or other interest in any such railroad, boat line or trolley line, the acquisition of which shall be authorized by the Interstate Commerce Commission.

e. Some other purpose for which the Commission may on application and hearing find to be a proper railroad or transportation purpose, and as to which the Commission shall likewise find that the expenditures therefore will not impare the capacity of the carrier to perform its duty.

The amendment also proposes that it shall be unlawful for any railroad company subject to the interstate commerce act to acquire or lease any interest in any railroad, boat line or trolley line, or any stock or other security of any corporation, owning or controlling the same, unless the Commission upon application and hearing shall have authority such acquisition on a finding that the acquisition will not impair the ability of either such carriers to perform its services to the public.

The Cost of Legislation to the Pennsylvania Railroad.—Then Pennsylvania Railroad has compiled elaborate statistics which disclose what it has cost that company to comply with the recent legislation, both state and federal, regulating the operation of railroads. Three classes of laws alone have added an average of $2,775,000 a year to the operating expenses of the Pennsylvania System, including both eastern and western lines. All of this money is being spent in directions assumed by the lawmakers to be of advantage to the traveling public, or to the employes of the system, but which add nothing at all to its yearly revenues. The laws of the three classes, with the yearly cost of complying with each class, follow:

Hours of service laws	$1,080,000
Boiler inspection laws	515,000
Full or "extra" crew laws	1,180,000

In addition, when the Pennsylvania System has placed on all its equipment the safety appliances required by law, a sum estimated at $5,185,000 will have been expended for this purpose. To date the system has spent $603,000 in complying with the law regulating the character of ash pans on locomotives, and the work of replacing the old ash pans is not yet finished.

Paying off employes semi-monthly, instead of monthly, involves an additional expense for the work of clerks, paymasters, etc., of $400,000 a year in round figures, which is not included in the first mentioned total of $2,775,000. Another cause of added expense of which few outsiders probably would ever think is found in the "Jim Crow" laws. Compliance with these statutes in the portions of "Jim Crow" territory through which the Pennsylvania lines run costs the system about $43,000 a year, a small sum compared with other items of legislative expense, but typical of a numerous class of small expenses, which, in the aggregate, run into a good deal of money. The total cost to the Pennsylvania System of obeying the "Jim Crow" laws from their first appearance on the statute books to June 30, was $300,700.

Expenses directly incurred by the Pennsylvania lines in obeying specific orders of various State Commissions up to June 30, 1913, were as follows:

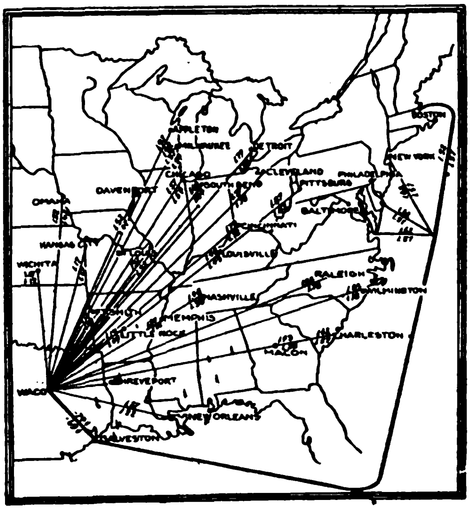
New York	$233,314
New Jersey	196,606
Pennsylvania	65,704
Maryland	6,485

If the letter of all the laws regarding grade crossings removal were to be enforced the cost to the Pennsylvania lines would be $63,850,000, the statistics show. By far the greater portion of this sum would be spent in New Jersey, which enacted a most drastic grade crossing law, placing the full burden of the cost on the railroads. As a matter of fact, railroad men say, the New Jersey law is not being enforced to the letter because of its obvious impracticability from a financial point of view.

LEGAL.

The Influence of the Shreveport Rate Case Decision.—The following map which appeared in the "Annalist" of April 28, 1913, is of interest at the present time on account of the recent decision of the Supreme Court in the Shreveport case which was discussed in the June issue of the "Railway World." This map indicates how delicately the rate situation throughout the country is adjusted and how any change in a local rate necessarily throws out rates on lines for hundreds and even thousands of miles. The map shows the effect of a reduction of five cents in a local rate between Waco and Galveston in Texas. This reduction forced changes in rates on the radiating lines clear to the Atlantic Coast and to the Great Lakes and on the water routes around to Boston.

Ramifications of a State Railroad Rate



In the recent Shreveport decision, the Supreme Court holds that Congress through the Interstate Commerce Commission, has the power to control interstate rates over an interstate carrier to the extent necessary to prevent injurious discriminations against interstate traffic; that is to say, that the State's power over even local rates cannot be permitted to interfere even indirectly with the regulation of interstate rates. How such power does interfere is graphically portrayed by the accompanying map and indicates that eventually State Commissions will largely cease to have authority over rate construction even of a purely local character.

Louisville and Nashville File Case Taken to Supreme Court.—United States Attorney-General McReynolds has filed with the United States Supreme Court an appeal from the Federal District Court in Kentucky, denying the application of the Government for an order compelling the Louisville and Nashville Railroad to permit examiners of the Interstate Commerce Commission access to its files of correspondence.

The Attorney-General makes the contention that a railroad can have no secrets from the Government. The case will be watched with great interest by railroad officials.

Supreme Court Sustains Commission in Intermountain Rate Case.—The United States Supreme Court has handed down its decision in the intermountain rate case and reversed the decree of the Commerce Court which held that the Commission had exceeded its power in ordering its own system of rates and the Congress could not delegate such powers to the Commission. As the justice of the zone percentages prescribed by the Interstate Commerce Commission were not attacked, the only question at issue was that of power and this was sustained by the Supreme Court's decision.

Rates from the east to Pacific Coast cities had for years been fixed by water competition. Rates to intermountain or interior Pacific slope points were made by adding to the through coast rates, the return rates to the interior points. That is the rates from the east were blanket rates, being the same from all eastern points; and were on the theory of competing with water and rail rates from the east. Spokane, for instance, paid the water rate from the Atlantic seaboard to, say, Seattle, and the rail rate from Seattle to Spokane. The railways under the long and short haul clause of the laws were permitted to allow the coast cities the competitive value of their location, and still pocket their revenue from the east to points between the Rocky and the Sierra mountains. The act of June 18th, 1910, gave power to regulate long and short haul rates as affected by water competition, into the hands of the Commission. The railways had held that they could make competitive rates to the coast points, and that their rates to the interior intermediate points could only be attacked as to their reasonableness, independent of what the through rate might be.

The Commission after long investigation with a view to equalizing conditions between manufacturers in the east and making lower rates for the intermountain cities, made an order establishing a zone system of percentages. From points west of the meridian of St. Paul, intermountain rates could not exceed coast rates; between the meridian of St. Paul and that of Chicago, intermountain rates could be seven per cent greater than coast rates; between Chicago and Pittsburgh, fifteen per cent, and east of Pittsburgh, 25 per cent. This order amounted to a considerable reduction from the revenue from existing rates, and the railways applied to the Commerce Court which sustained their contention as above. The Supreme Court upholds the power of the Commission as delegated to it by Congress; and incidentally not only establishes its power to establish zone systems but to act on rates en bloc in a given territory, as it is asked to do in granting a five per cent increase in the official classification territory. The contention of lawyers opposing that increase that rates could only be passed upon individually, one at a time, and after thorough investigation of each case (an impossibility) is thus finally disposed of.

Interesting Recent Decisions.

IN this issue the "Railway World" begins a new department in which an effort will be made to record each month a careful analysis of the different court decisions pertaining to the operation, management and regulation of railways. The necessary reference to court records and authorities will be given in each case and if any further information is desired concerning such cases, it will be gladly furnished upon request.

Giving and Receiving Rebates.— (Federal Court). The United States Circuit Court of Appeals during the present term has disposed of two important railway rebate cases; United States v. Grand Rapids and Indiana Railway Company and United States v. Nickols & Cox Lumber Company. The former case was a prosecution under the Elkins Law of February 19, 1903, which forbids a carrier in interstate commerce to employ any rebate, concession or discrimination or device whatever respecting the transportation of property at a lower rate than that named in the tariffs published and filed by the company. The alleged rebates grew out of abuse of transit privileges accorded to shippers of lumber. In the last named case the Cox Lumber Company was prosecuted for having accepted rebates from the Grand Rapids and Indiana Railway Company. The evidence at both trials tended to prove that a number of cars of lumber had been shipped from Grand Rapids and an equal number shipped into Grand Rapids. Neither shipment had any relation to the other and was therefore not entitled to certain transit rates which were prescribed in certain instances where outgoing and incoming shipments were part of the same transaction. Each shipment was entitled only to the local rate. The Circuit Court of Appeals in reviewing the holding of the District Court decided that both companies were guilty as charged in the indictments of giving and accepting rebates. (Grand Rapids & Indiana Ry. Co. v. United States; Nickols & Cox Lumber Co. v. United States, 212 F. 577-588.)

Reasonable Passenger Fares.—(U. S. D. C.) In 1907 the Railroad Commission of South Dakota promulgated an order declaring a maximum passenger rate of 2½ cents per mile over certain railway lines within the State, including the lines of the Chicago and North Western Railway. Several of the companies affected filed bills in equity to restrain the Commission from enforcing the order, the ground being that the same was confiscatory and denied to the railroad companies affected the equal protection of the laws. The District Court, division of South Dakota, before whom the proceedings were had, held after making a thorough investigation of the earnings, expenses, value of property, etc., that a rate of 2½ cents per mile was reasonable, though a rate of two cents would be confiscatory. (Chicago & North Western Ry. Co. v. Smith, et al; Smith v. Chicago and North Western Ry. Co., et al, 210 Fed. 632.)

When Engaged in Interstate Commerce.—(Missouri). An interurban electric railway running through more than one State, carrying passengers or freight, is engaged in interstate commerce, and is a railroad within the federal Employers' Liability Act (Act, 1908, 35 Stat. 65), and while it is doubtful whether a street railway is a railroad within that act, an electric interurban railway which transfers its cars, with passengers therein, from its tracks to the tracks of a street railway, and transports them over such track in another State, dividing the fare collected for that part of the transportation covering the street railway tracks, is a railroad within the act, the use of the street railway tracks being no more than the use of a terminal facility. (McAdow v. Kansas City Western Ry. Co., 164 S. W. 188.)

Payment of Cash Fare on Train.—(N. C.) In view of Statutes 1908, allowing a railroad to impose an extra charge for a passenger's failure to procure a ticket, and to expel a passenger who wrongfully refuses to pay such extra charge, the parent or custodian of an infant who is responsible for its fare on failure or refusal to pay it together with the extra charge may be ejected. (Lankford v. Southern Ry. Co., 81 S. E. 998.)

Demurrage Charges.—(W. Va.) In the absence of special contract, a shipper of coal in carload lots to a consignee who declines to receive it is liable for demurrage accruing after notice of such refusal. (Baltimore & Ohio Ry. Co. v. Luella Coal & Coke Co., 81 S. E. 1044.)

Regulation by Commission.—(Nebraska.) By the constitutional amendment of 1906, and the statute pursuant thereto, the power and duty of the State Railway Commission "shall include the regulation of rates, service and general control of common carriers."—Const. Art. 5, Sec. 19a.

When a Company has obtained a franchise from the city to construct and operate its railways on certain streets of the city, and has constructed its tracks and is operating its cars thereon pursuant to such franchise right, it will be enjoined from removing such lines or withdrawing its cars from such service without first obtaining authority from the State Railway Commission so to do. (H. Herpolsheimer Co. et. al., v. Lincoln Traction Co., 147 N. W. 206.)

Review of Orders of Railroad Commission.—(Wisconsin.) An order of the Railroad Commission for the refund of excessive freight charges is reviewable on appeal from a judgment of the circuit court affirming it. (Minneapolis, St. P. & S. S. M. Ry. Co., et. al., v. Commission, 147 N. W. 366.)

The Regulation of Waiting Rooms.— (Kentucky.) Ky. St. section 784, requiring railroad companies to keep their waiting rooms open for passengers and comfortably warm for thirty minutes preceding schedule time of departure of all passenger trains, and until the train departs, does not require railroads to keep waiting rooms open for passengers at flag stations during the night-time, but does require it to keep its room open at a passenger station for a train that stops regularly at such station. (Chesapeake & O. Ry. Co. v. Lauhorn, 167 S. W. 132.)

Crossing Accident.—(Missouri.) A traveler about to cross railroad tracks is bound to stop, look and listen only when he can neither see nor hear, and where, from a point forty feet from the crossing, he saw that there was no train within between seven hundred and nine hundred feet, he is not bound to stop before proceeding on the tracks. (Lagrace v. Missouri Pac. Ry. Co., 166 S. W. 1063.)

Removal of Snow and Ice from Platforms.—(Michigan.) In the absence of unusual conditions, those operating trains are not bound to free the platforms from snow and ice until the storm has abated and a reasonable opportunity is had to remove the ice and snow at places where such work is done, and hence a passenger, who slipped on ice and snow on the platform of a train which was free from snow when it left a main station, cannot recover where snow was drifting up to a short time before the accident and many accumulations were from the feet of other passengers. (Meyers v. Michigan Central Ry. Co., 147 N. W. 485.)

Termination of Liability.—(Oklahoma.) If a common carrier accepts freight for a place beyond his usual route, he must, unless he stipulates otherwise, deliver it at the end of his route in that direction to some other competent carrier, carrying to the place of address, or connected with those who thus carry, and his liability ceases upon making such delivery. (St. Louis & S. F. Ry. Co. v. Close, 140 Pac. 1176.)

Negligence of Inspector.—(Maine.) Where decedent, a railroad car inspector, started to inspect a string of cars on a siding and placed himself in a dangerous position over the rail without displaying a blue signal, as required by rule, in order to protect the cars, and, as he was so engaged, the cars were moved in switching, and he was instantly killed, he was guilty of contributory negligence precluding recovery for his death. (Gates v. Maine Cent. R. Co., 90 A. 703.)

Obstruction of Water Courses.—(New York.) Where a railroad under authority of law builds a bridge, it is not liable for an obstruction even of the bed of the stream, unless by due care obstruction could have been avoided, but it is bound to minimize the interference with the flow of water so far as it reasonably can; this duty being confirmed by Railroad Laws, 1913, c. 284, section 17. (Howard, et. al., v. City of Buffalo, et. al., 105 N. E. 426.)

Transportation of Goods.—(N. Y. C.) The Carmack Amendment to the Hepburn Act (Act, June 29, 1906, c. 3591, U. S. Comp. St. 1911), providing that any carrier receiving property for transportation "from a point in the State to a point in another State" shall be liable for loss or damage caused by it or any connecting carrier, and that no contract, receipt, etc., shall exempt it from such liability, does not apply to transportation from a point in one State through another State to an adjoining foreign country. (Burke v. Gulf, C. & S. F. Ry. Co., 147 N. Y. 794.)

Connecting Carriers.—(Maine.) Under the Carmack Amendment of June 29, 1906 (Act, June 29, 1906, c. 3591, U. S. Comp. St. 1909), to the Interstate Commerce Act, declaring in substance that the receiving carrier has the obligation of through transportation with a carrier's liability throughout, a receiving carrier issuing bills of lading only over its own line was not liable for nonperformance of a special agreement to heat the cars made by a connecting carrier, but such connecting carrier was, as to defaults in the heating during transportation, to be deemed the initial carrier. (Ross, et. al., v. Maine Cent. R. Co., 90 A. 710.)

Elevation of Grade Crossings.—(Illinois.) In the exercise of its police power, a city may, subject to constitutional limitations, require a railroad company to elevate its tracks so as to avoid grade crossings. (Otis Elevator Co. v. City of Chicago, 105 N. E. 339.)

Crossing Accident Caused by Negligence.—(Penn.) Where plaintiff, when within ninety feet of a two-track railroad crossing, stepped to the pole of the hay wagon which he was driving and looked both ways from a point where he had an uninterrupted view toward the train of three-fourths of a mile, and, after resuming his seat, where the hay limited his view to a few feet of the track immediately in front of him and interfered with his hearing, approached the track at an acute angle, so that his back was toward the train, and, without further precaution, drove at a slow walk onto the tracks, where the hind wheel of his wagon was struck by the engine of a passenger train on the second track, he was guilty of contributory negligence barring his right to recover for the resulting injuries. (Higbee v. Atlantic City R. Co., 90 A. 635.)

ORGANIZATION NOTES.

Organization of Foreign Trade Council.—For the purpose of co-ordinating the foreign trade activities of the nation in an aggressive and systematic extension of American over-sea commerce, Mr. Alba B. Johnson, President of the National Foreign Trade Convention, held at Washington, May 27th and 28th, has announced the personnel of the Foreign Trade Council, created by resolution of the several hundred delegates from all parts of the United States who attended that conference. Mr. James A. Farrell, President of the United States Steel Corporation, is named as the chairman, and all sections of the country, and practically all branches of industry, commerce, transportation and finance are represented among the members.

Sixth World's Aeronautical Congress.—One of the most important corollaries of the Aerial Race Around the World organized by the Panama-Pacific International Exposition will be the bringing together at the exposition of the Sixth World's Aeronautical Congress. Such men as Ch. Maurain, Le Directeur Institut Aerotechnique de I, Universite de Paris; R. T. Glazebrook, C.B., M.A., D.E., F.R.S., Director National Physical Laboratory, Teddington, England; Chairman British Government Advisory Committee on Aeronautics; Baron Deutsche de la Meurthe, President Aero Club of France; Dr. L. Prandtl, University of Cittengen; are among the delegates to the congress who will come from all over the world to discuss the advances made in the science of aerial navigation and to consider from a scientific standpoint the results of the World Flight.

The congress, the sixth one of its kind that has ever been held, will be the first that has been brought together since the real development of practical aviation. The first was assembled at Paris in 1899 on the initiative of Jannsen, the French astronomer and each of the succeeding congresses have been held coincidental with universal expositions. Eleven years passed before the second congress was held in 1900 and six more before the third at Milan. The fourth met at Nancy three years later and the fifth at Turin in 1911.

No such opportunity for the gathering of important data concerning the navigation of the air has ever been afforded to compare with the observations made by the pilots of the various types of aircraft while they are circling the globe. These reports will be presented to the congress for discussion and comment, and will be purely of scientific interest.

The sporting side of the world race will be under the supervision of the Aero Club of America which is affiliated with the Federation Aeronautique International, the International body having sporting jurisdiction over all aviation sporting events throughout the world. The Aeronautical Society in the United States, allied with the Aeronautical Society of Great Britain, which inaugurated the movement for the congress is the second oldest aeronautical organization in the world and the oldest of the kind in the United States.

The organizing committee of the congress is composed of Hudson Maxim, Inglis M. Uppercu, Thomas A. Hill, Alfred W. Lawson and Ernest L. Jones. Among the prominent delegates from the United States are Prof. David L. Gallup, M.E., Worcester, Polytechnic Institute; William J. Hammer, Clifford B. LePage, M.E., Asst. Professor of Physics, Stevens Institute; T. R. MacMechen, expert technical observer of dirigibles; N. B. Sellers, John E. Sloane, head of the Sloane Aeroplane Company and Captain Chambers, head of the aviation department of the United States Navy.

Dallas, Texas, is the first city officially to enter an aeroplane in the around-the-world aviation race. Captain J. H. Worden, aviator now with the Mexican federal army is to be the pilot and the machine is called "The Dallas." The city has agreed to build the machine and will back his flight with $250,000. He is the first aviator to participate with his machine in actual warfare in the western hemisphere.

Prime Minister Richard McBride of British Columbia has written the department of aeronautics recommending Prince Rupert, B. C., as a control station for the around-the-world aviation race. Arnold Kruckman, chief of the Bureau of Aeronautics has returned from his tour of the United States in the interests of the 1915 flight and has started on his trip around the world to establish foreign control stations.

One of the famous German dirigibles will be seen at the Panama-Pacific International Exposition. Baron von Brandenstein, representative of the Parseval Airship Company of Berlin, is in San Francisco and has just made the final arrangements. He states that the dirigible that will be brought to the Exposition will be 350 feet long, will have a speed of 45 miles an hour and the gondola will afford accommodation for 20 to 25 passengers. The hangar will be built near the aviation field.

Annual Meeting of Traffic Club of Louisville and Nashville Railroad.— The Louisville and Nashville Traffic Club held their Fourth Annual Outing at French Lick Springs on June 20th. One hundred and seventy-six members were present. The sports included a game of baseball, tennis, golf and bowling tournaments.

Meetings of the Board of Governors of the Pittsburgh Traffic Club.—The new Board of Governors of the Traffic Club of Pittsburgh met on June 22nd, in the Fort Pitt Hotel. The first action taken was the election of a chairman and Wm. A. Sproull, Traffic Manager, Cambria Steel Company was honored. President E. F. Lalk announced the following committees to serve for the ensuing year:

Bi-Monthly Entertainment Committee: R. B. Merrick, G. A., Frisco Lines, Chairman; C. E. Barnhart; T. M., Babcock Lumber Company; J. A. Fitzpatrick, G. A., T. St. L. & W. R. R.; F. A. Higerd, Asst. T. M., H. J. Heinz Company; J. G. Hill, Com. Agt., Q. & C. Route; J. C. Kimes, Com. Agent, B. & O. R. R.; John F. Lent, T. M., of various interests; T. B. Moss, G. A., T. & P., I. & G. N. Rys.; C. McNicholl, Asst. T. M., American Bridge Company; A. H. Orr, Agent, Atlantic Coast Despatch; W. H. Pfahl, Jr., T. M., Armstrong Cork Company; A. Waldbauer, G. A., Orient Ry.; E. R. Worcester, T. M., MacBeth Evans Glass Company.

Publicity Committee: G. A. Aiken, T. M., Spang Chalfant & Company, Inc., Chairman; J. F. Constans, G. A., C. P. & St. L. R. R. Co., Assistant Chairman.

Relations with other organizations, J. E. Corfield, G. A., Union Pacific R. R., Chairman.

American Association of Railroad Superintendents.— The committee on interchange car inspection of the American Association of Railroad Superintendents held a meeting in St. Louis on June 27th, there being in attendance the following railroad officials:

Chas. Burlingame, President of the Association, and Superintendent, The Wiggins Ferry Co., St. Louis, Mo.; M. Marea, General Superintendent, St. Louis Troy and Eastern Railroad, East St. Louis, Ill.; Newman Kline, Superintendent, Northern Pacific Ry. Co., Minneapolis, Minn.; J. E. Mechling, Master Mechanic, Vandalia Railroad, Terre Haute, Ind.; C. S. Shearman, General Foreman, Chicago Junction Ry. Co., Chicago, Ill.; J. J. O'Brien, Superintendent Car Department, Terminal Railroad Association of St. Louis, St. Louis, Mo.; A. S. Sternberg, Traveling Inspector, Car Department, Wabash Railroad, Springfield, Ill.; E. H. Harman, Secretary, The American Association of Railroad Superintendents, St. Louis; J. G. Fields, Assistant Secretary, The American Association of Railroad Superintendents, St. Louis.

The Committee formulated a number of recommendations to be submitted at the annual meeting of the American Association of Railroad Superintendents to be held in New York City, August 20 and 21, 1914.

Annual Meeting of Railway Supply Men's Association.—The Railway Supply Men's Association held its annual meeting at Atlantic City on June 13th. The report states that 82,424 square feet of exhibit space was taken as against 87,360 square feet last year.

Officers for 1914-1915 were unanimously elected as follows: President, J. Will Johnson; vice-president, Oscar F. Ostby.

Members of the Executive Committee: Third District, C. E. Postlethwaite and P. J. Mitchell. Fifth District, George H. Porter, Sixth District, Frank E. Beall.

Votes of thanks were given the retiring officers for their efficient service. Later the executive committee organized and the president appointed the following committees:

Exhibit: Joseph H. Kuhns, chairman; J. C. Whitridge, C. E. Postlethwaite.

Finance: F. M. Nellis, chairman; J. C. Currie, C. F. Elliott.

Badge: C. B. Yardley, Jr., chairman; Oscar F. Ostby, George H. Porter.

Hotel: Oscar F. Ostby, chairman; S. M. Dolan, Phillip J. Mitchell.

By-Laws: C. F. Elliott, chairman; F. E. Beall, George H. Porter.

Entertainment: George R. Carr, chairman.

Enrollment: Harold A. Brown, chairman.

Transportation: George T. Cook, chairman.

J. D. Conway was re-elected secretary-treasurer.

Convention of Association of Railway Electrical Engineers.—The Association of Railway Electrical Engineers held its mid-year convention at Atlantic City, N. J., June 12th, while the Master Car Builders' Association was in session. Reports were received from the various standing committees, covering the following subjects: Axle equipment, data and information, electric traction, head end equipment, illumination, outside construction and yard lighting, wire crossings, shop practice, axle belting, standards, rules for car wiring, wiring cables and yard facilities for chaging storage batteries. These reports were in general limited to progress. The Committee on axle belting, however, presented a report which included a final draft of specifications for belting for the purpose of driving axle generators as agreed upon by the committee. The committee on illumination presented a report covering a series of illumination tests in day coaches, made by the Association in the shops of the Lake Shore & Michigan Southern Railway, at Cleveland, Ohio. The committee on standards reported an outline of subjects recommended for discussion at the next annual meeting. A special committee on lamps reported action taken at a meeting held in Chicago, May 18th, at which a schedule was adopted of lamps divided into two general classes: first, lamps to be recommended for adoption as standard for train lighting service; second, lamps accepted for train lighting service, but the use of which is not recommended.

Annual Convention of Train Despatchers' Association.—The Train Despatchers' Association of America, held its 27th annual convention at Jacksonville, Fla., on June 16th. President J. P. Finan took the chair and appointed a credentials committee, which reported sixty-eight members present. Fourteen members have withdrawn during the past year and 55 applications for membership and reinstatement were approved. Later there were other applications, and in all 61 members were added. The report of the executive committee showed a total membership of 1,155. The total receipts during the year were $3,603, and total disbursements $3,814.

The principal business of the convention was the discussion of the report of the Train Rules Committee, the same that was discussed by the American Association of Railroad Superintendents last August, at Chicago, and printed in the superintendents' proceedings.

On Tuesday, the convention was addressed by W. L. Stanley, general claim agent of the Seaboard Air Line, on the subject: "Does the prosperity of the railroads interest me personally?" The address evoked great applause. On the same day, W. H. Potter, superintendent of telegraph of the Southern Railway, addressed the convention on the subject of telephone train despatching. On Thursday the convention completed its discussion of the Train Rules Committee report and elected C. A. O'Connor (Boston & Albany), Springfield, Mass., president; T. W. Fitzgerald (Southern Pacific), Sparks, Nevada, vice-president, and O. L. Taylor (Atlantic Coast Line), Sanford, Fla., member of the executive committee for four years. J. F. Mackie was re-elected secretary-treasurer and editor for the term of two years. Minneapolis, Minn., was selected as the place of meeting for 1915, and June 15th the day. A proposed constitutional amendment providing for the raising of a fund of $1,000 to be used for the relief of disabled members was defeated.

Summer Meeting of Transportation Car Accounting Officers.—The Association of Transportation Car Accounting officers held their summer meeting at Atlantic City, June 18th and 19th, with 116 members in attendance. Ivy L. Lee, executive assistant, Pennsylvania Railroad, addressed the members and referred to the present political unrest prevailing in the United States and other parts of the world, due to a demand by all classes of labor to a more general distribution of wealth. He pointed to the great problems to be solved in adjusting the various situation so as to produce equity in the various distributions for service performed and in this connection referred to the unfair and confiscatory legislation which is being continually directed against the railroads by the various legislatures, tending to increase the cost of operation and to decrease efficiency.

The Committee on Car Service expressed the opinion that a regulated pool of car equipment would offer substantial relief in the handling of cars as between railroads but it also recognized certain obstacles which will have to be overcome before such a pooling could be workable. Among these obstacles were:

(1) The manifest necessity that equipment be controlled by neutral parties, where now the responsibility for such control rests with the executive of each owning road.

(2) A large proportion of the equipment has been placed in service under car trust obligations that should be adequately conserved in any transfer of control.

(3) The variation in age, design, condition, capacity and dimensions of each class of equipment.

(4) Special equipment necessitated by variety of traffic peculiar to various sections of the country.

(5) The necessity for each carrier to provide its quota of equipment.

The committee suggested the following possible features of a pool as points for discussion:

(1) Carriers to form a holding company empowered to purchase or lease equipment.

(2) Ownership or car trust obligation to be indicated by plates attached to car.

(3) Pool to be started with so-called legal tender box cars.

(4) Special equipment to be handled strictly in accordance with Car Service Rules.

(5) A per diem charge to be determined upon which shall defray the recognized costs of car ownership, plus an amount that will cover all overhead and general expenses incident to pool operation.

(6) Operation of the pool to be divided into zones, under local management, the general manager reporting to the executive vommittee of the holding company.

(7) Pool storage and repair yards to be located at convenient points.

(8) Surplus and bad order cars to be delivered to nearest storage yard, per diem ceasing upon such delivery. All cars leaving storage yard to be in first class, serviceable condition.

(9) All repair and maintenance chargeable to owners to be assumed by holding company. Repairs due to unfair usage to be charged as at present.

(10) Movement of cars empty from storage yards to be paid for at tariff rates by the holding company.

These were thoroughly discussed and the subject returned to the committee for further consideration.

The list of accepted assignments of reporting marks for cars of private ownership, presented by the Committee on Office Methods and Accounting, was adopted for submission to the American Railway Association. Approximately 365 owners of private cars have accepted assignments.

The Association approved the action of the committee in recommending to the American Railway Association the elimination of the footnote reference to per diem rule 1. It is now understood that reporting roads shall have six months from the last day of the month in which the per diem is earned to report the same to car owner, failing in which the per diem rate shall be increased five cents per car per day.

The Association adopted for submission to the American Railway Association the form recommended by the committee for use by the holding road in reporting cars held under per diem rule 14. The amended form of "summary of per diem reports," presented by the committee, was adopted for submission to the American Railway Association with a slight amendment. It was also decided to recommend to the American Railway Association that per diem rule 11 be amended to provide that the use of A. R. A. prescribed form "G" shall be mandatory in reporting per diem to car owner.

The Committee on Conducting Freight Transportation reported that several roads which have taken advantage of the recommendations of the committee with reference to methods for reducing delays to cars in yards, have obtained very gratifying results; one road reporting a net saving in per diem alone of $2.494 in two weeks, in a single yard, and an increase in the average miles per car per day for the division of 48.1 per cent over the same month of the previous year.

The Committee on Conducting Passenger Transportation reporting a proposed cut of rules to govern the interchange of passenger cars which was referred to letter ballot. The Committee on Joint Interchange and Inspection Bureaus reported that interchange and inspection bureaus had been established at Chicago, Denver, Des Moines, Dallas, Peoria, Pueblo and Shreveport. The election of officers for the ensuing year resulted as follows:

President, J. M. O'Day (Illinois Central); first vice-president, J. T. King (Atlantic Coast Line); second vice-president, F. E. Higbee (Central of New Jersey); secretary, G. P. Conard and treasurer, F. M. Luce. The next meeting will be held at Richmond, Va., December 8th and 9th, 1914.

LABOR.

A Comparison Between British and American Railway Employes.— The Bureau of Railway News and Statistics of Chicago, has recently issued an interesting comparison between the number of employes engaged in operating railways in the United Kingdom and those engaged in a similar capacity in the United States. According to the Bureau's statement, there were 643,135 wage earners employed on the railways of the United Kingdom at the close of the year 1913, of which 594,088 were classed as adults and 49,047 as boys, i. e., under eighteen years of age.

These figures show an increase of 44,385 over the census report of 1910, but only 21,794 over the number reported in 1907. The British figures, which do not include the salaried staff, for the last seven censuses may be compared with those for the United States in the corresponding years also exclusive of general and other officers, as follows:

	Number of Railway Employes.	
	United Kingdom.	United States.
1913	643,135	1,714,603
1910	608,750	1,684,552
1907	621,341	1,672,074
1904	581,664	1,281,581
1901	575,834	1,061,466
1898	534,141	866,992
1895	465,112	777,093
Increase 18 years	178,023	937,570
Increase per cent ...	38.3	120.7

The contrast in these figures of increase emphasizes the difference in the demands for transportation on British and American railways. Where the number of employes per 100 miles of track in the United Kingdom has increased from 2,197 to 2,743 in eighteen years, or nearly 25 per cent on American roads they have increased from 437 per 100 miles to 743, or over 70 per cent.

The compensation of British railway employes between 1901 and 1912, for which figures are available, increased from £29,354,000 to £34,912,000, or nearly 19 per cent, where the wage earners increased less than 11 per cent. During the same period the compensation of American railway employes, exclusive of general and other officers, increased from $588,517,000 to $1,227,933,000, or 108.5 per cent, against an increase of only 61.5 per cent in numbers.

During the eighteen years covered by the above reports of persons employed, the compensation of American railway employes increased 187 per cent against the increase of only 120.7 per cent shown in the number employed. The average pay of British railway men in 1901 was approximately $255 a year against $271 in 1912; that of American railway employes in 1901 was $555 against $716 in 1912. These figures are exclusive of salaried officials in both cases.

TRAFFIC.

United States Express Company Dissolution.— With the close of business on June 30th, the United States Express Company discontinued handling express shipments on approximately 32,000 miles of railway. The territory previously served by this company has been taken over in the main by the Adams, American, Southern and Wells Fargo.

The Foreign Trade of Leading Nations.— Great Britain, the United States and Germany established new records in 1913 for foreign trade. Exports from the United States last year aggregated $2,484,311,176, an increase of 3.5 per cent over 1912, the previous high point, but imports dropped off 1.8 per cent from 1912, the record year, the total for 1913 being $1,792,183,645. England's exports in 1913 went up nearly 8 per cent over 1912, and its imports expanded 3.3 per cent, the respective totals being $3,845,170,000 for imports and $2,627,305,000 for exports. Germany's imports in 1913 decreased a fraction of one per cent, while its exports increased 12.5 per cent, the imports amounting to $2,566,800,000 and exports to $2,419,440,000.

Southern Railway Withdraws from Colonists' Rates.—No more low, one-way colonist rates from any point on its lines to the West and Northwest will be sold by Southern Railway Company. President Harrison announces that Southern Railway Company has permanently withdrawn from participation in such rates from points where they have been in effect by Southern Railway to meet similar rates offered by competing lines.

This announcement is in accordance with the policy of President Harrison to do everything possible to discourage the movement of people from the South. For a number of years Southern Railway has endeavored to discourage the offering of low colonist rates from the South and has only placed them on sale at points where it was felt necessary to meet competition. From this time on, however, no such rates will be offered by Southern Railway regardless of any action that may be taken by any other line. Southern Railway will continue to offer homeseekers' rates into the South and will do everything possible to encourage the coming of desirable settlers to the territory along its lines.

Packing Crated Eggs in Straw.—Experiments in handling eggs so as to avoid breakage in transit have been made by the Baltimore and Ohio Railroad in an effort to reduce the loss and damage claims to the minimum. For some time eggs handled at several of the larger freight terminals of the company have been packed in straw, both for carload and less carload shipments, and the results have proven highly satisfactory. Arrangements are being made, as a result of the experiments, to pack egg crates in straw.

Latest Immigration Statistics.— The United States Department of Labor publishes the following statistics of immigration:

Year ending June 30, 1913.

Month.	Immigrant aliens admitted.	Emigrant aliens departed	Net change in population from alien immigration and emigration movement.
July	78,101	24,673	+ 53,428
August	82,377	25,725	+ 56,652
September	105,611	23,728	+ 81,883
October	108,300	27,153	+ 81,147
November	94,739	41,444	+ 53,295
December	76.315	45,048	+ 31,267
January	46,441	29,730	+ 16,711
February	59,156	15,253	+ 43,903
March	96,958	15,044	+ 81,914
April	136,371	18,331	+118,040
May	137,262	19,131	+118,131
June	176,261	22,930	+153,331
Total	1,197,892	308,190	+889,702

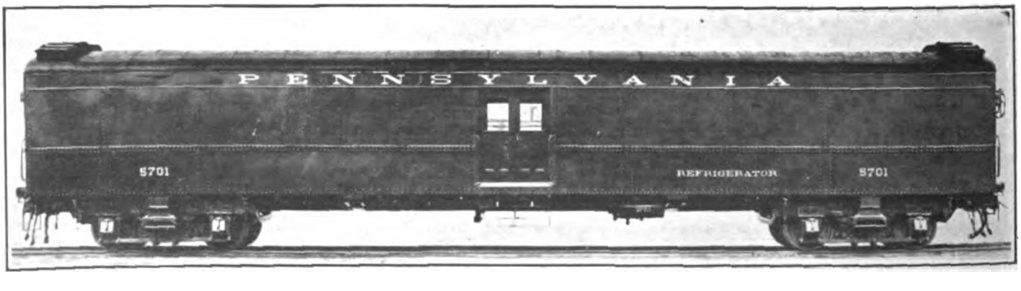
July, 1913, to May, 1914.

Month.	Immigrant aliens admitted.	Emigrant aliens departed	Net change in population from alien immigration and emigration movement.
July	138,244	26,434	+111,810
August	126,180	23,242	+102,938
September	136,247	19,241	+117,006
October	134,140	26,998	+107,142
November	104,671	27,632	+ 77,039
December	95,387	30,243	+ 65,144
January	44,708	34,216	+ 10,492
February	46,873	17,074	+ 29,799
March	96,621	13,500	+ 79,121
April	119,885	22,801	+ 97,084
May	107,796	23,544	+ 84,252
June	......	......	....
Total	1,146,752	264,925	+881,827

Milk Traffic on the Pennsylvania Railroad.— How important an item the milk traffic is to some railroads is well illustrated by the daily movement over the Pennsylvania Railroad which, into the cities of Philadelphia, Brooklyn, Baltimore and Jersey City, aggregates 265,000 quarts of milk and cream daily which, by the way, is an increase of 42,000 quarts a day over the record of a year ago.

Doubtless the principal reason for this increase in milk traffic over the Pennsylvania Lines is the effort being made by this Company to transport milk in such a manner that it reaches the consumer in the best possible condition. In order to conduct this branch of its service in the best possible manner, the Pennsylvania Railroad has recently spent $300,000 for thirty-six refrigerator cars of which the accompanying illustration is an example. These cars are all steel and are considered the most complete and practical ever constructed for handling milk shipments. The brine tanks, which are located in each end of the car, hold a sufficient mixture of salt and ice to maintain a temperature of about forty degrees during transit, which is considered ideal for the production of milk. This class of refrigeration also has the advantage of being absolutely dry which further serves to keep the milk in perfect condition. Each one of the new cars has a capacity of 12,000 quarts. Furthermore, the new refrigerator cars have enabled the Pennsylvania Railroad to greatly extend its service and now long hauls are being made from points in Northwestern New York and Pennsylvania to Philadelphia, New York and Brooklyn, with perfect satisfaction to the dealer and consumer. Owing to its tunnels under the Hudson and East Rivers, the Pennsylvania Railroad is the only line that has an all rail milk service to Brooklyn.

Commerce and Navigation of the United States for the Fiscal Year.—The annual report on the commerce and navigation of the United States in the fiscal year 1913, just published by the Bureau of Foreign and Domestic Commerce, Department of Commerce, reveals conditions of trade and industry in marked contrast with those prevailing in earlier years. In a total trade of 4,279 million dollars last year, exports exceeded imports by 653 millions, while at the middle of last century, as shown by earlier reports of the series, imports were largely in excess of exports. Then imports of manufactures were more than five times the exports thereof, while in 1913 exports of manufactures were more than six times the imports of like classes. Meanwhile manufactured articles have largely replaced farm products and raw materials (except cotton) as the leading articles contributing to the export trade. Only in the carrying trade has the United States lost ground in the last half century. In 1850, for example, 70 per cent of the foreign commerce was car-



One of a Number of Steel Milk Cars Employed by the Pennsylvania Railroad.

ried in American bottoms, while last year 80 per cent was carried in foreign bottoms.

Additional interest attaches to the 1913 report entitled "Commerce and Navigation of the United States" by reason of the fact that it contains the final statistical exhibit of the commerce handled at individual ports, many of which, under the reorganization effective July 1st last, lost their identity and are now included in rearranged customs districts bearing general titles such as "Massachusetts," "Michigan," and "St. Lawrence." The continued relative advance in importance of the Southern ports is strikingly brought out in the report. While New York still holds a pre-eminent position, having handled two billions of the 4¼ billion dollars' worth of merchandise making up our foreign trade, Galveston has rapidly gained and is easily the second port of the country in value of goods handled, with a total of 290 million. Other Southern ports and certain of those on the Canadian border and Pacific Coast are also growing rapidly in commercial importance. New Orleans is the third port, with a total of 252 million; Boston fourth, with 216 million; Philadelphia fifth, with 170 million; Baltimore sixth, 150 million; San Francisco seventh, 130 million; the Puget Sound ports eighth, 114 million; and Buffalo ninth, 81 million, closely followed by Detroit, 71 million dollars.

Car Shortage Predicted.—Western traffic officials appear to feel that a car shortgae of some extent is inevitable before the movement of the grain crops has been completed. If as the Government reports indicate, a record crop is to be expected, there can be no doubt that in some localities at least, cars cannot be promptly furnished to meet all requirements. The condition of the carriers for the past two or three years has been such as not to engage liberally in the purchase of rolling stock, and while at the present time there is a large supply of idle cars, this condition will be rapidly changed if the crop proves to be of the proportions officially reported. The fact that general merchandise is not moving as freely this year as in previous years may help to somewhat relieve the situation, although every indication now points to a shortage which is likely to be severe in certain sections.

What restrictions the Eastern roads may impose will be determined probably by what they can see in the way of a haul for them by letting an idle car go into Minnesota or the Dakotas or to St. Louis or Kansas City. But if the Northern lines put on an order stopping incoming grain cars at Minneapolis and Duluth and turning empties back rapidly for new grain loads, the Eastern lines probably will protest, unless they can see a flour or by-products haul for themselves from the Minneapolis mills, as the result of letting the Northern lines keep cars.

Probably it will work out at first by the "spotting" only of Eastern cars for Eastern loading by the flour mills, and the return to the grain fields of the system cars bringing grain to Minneapolis terminals. But if the combined wheat crop of the winter and spring wheat States is anywhere near the 900,000,000 bushels that now is indicated, the idle surplus of cars in the United States as a whole will dwindle rapidly and it will be a scramble of all roads to see who gets them.

Pass Regulations on the Philadelphia and Reading.—The Philadelphia and Reading Railroad Company has issued the following general notice with regard to the employment of passes over the Company's lines:

The attention of all holders of annual and term passes of the Company's issue is directed to paragraph No. 15 of the Regulations of the Interstate Commerce Commission governing the Issuing and Recording of Passes, effective January 1, 1912, which reads as follows:

Signatures of Users of Passes

15. All passes must bear the signatures of the users, preferably in ink. On the back of each pass must appear a statement that the holder is not prohibited by law from receiving free transportation, and that the pass will be lawfully used. This statement may be shown among other conditions, if any, and must be subscribed to by the holder.

In order to comply with this regulation, holders of passes are requested to affix their signatures to the passes which they hold, in space provided on the back thereof.

Passes unsigned must not be honored by conductors, who shall, upon presentation, request the holders to sign. If the holders refuse to sign, conductors shall take up such passes.

May Imports and Exports.—Imports increased during May over May of last year and exports decreased in the corresponding periods, according to figures announced by the Bureau of Foreign and Domestic Commerce, Department of Commerce.

May imports aggregated $163,637,386, against $133,723,713 in May of last year, free merchandise representing $102,507,928, or 62.7 per cent of the month's total, against $69,006,928, or 51.6 per cent in May a year ago. Domestic exports in May totaled $157,406,572, a decrease of $33,649,228 as compared with May, 1913. Foreign exports totaled $4,243,631, against $3,551,622 in May, 1913. The above figures show a decrease in the May imports of $10,259,090 as compared with those for April. The May exports show a decrease from those for April of $1,560,731.

The excess of imports over exports in May was $1,987,183, as compared with an excess of imports over exports in April of $11,345,606, and the excess of exports over imports in the eleven months' period is $471,538,948.

Gold imports during the month totaled $1,972,411, compared with $4,561,260 in May, 1913, while gold exports were $16,835,902, against $12,467,492 in May last year.

EQUIPMENT.

Electric Block System on the Southern Railway.—An automatic electric block signal system has just been completed and placed in service by the Southern Railway Company on the main line between Seminary, Va., and Orange, Va., a distance of 80 miles, all double track, providing continuous automatic signal protection for trains from Orange into the Washington Terminal Station. This system is now in use on other portions of the line in Virginia and North Carolina, giving in all a total of 198 miles of double track so protected, while arrangements have been made for equipping 120 miles more.

Steel Car Equipment on the Pennsylvania Railroad.—On January 1, 1914—the latest date for which statistics are available—the Pennsylvania Railroad System, with 2,554 all-steel passenger cars in service and 379 others under construction, owned more than one-third of all the steel passenger equipment cars in use in the United States.

The above figures are exclusive of sleeping and parlor cars. The total number of all-steel passenger cars, other than Pullman cars, in service in the United States on January 1, 1914, was 7,377. To replace with steel all wooden passenger cars now in use in the United States will cost about $581,000,000.

There were 2,115 steel sleeping and parlor cars in service on all roads on January 1, 1914, and 750—more than one-third—of this number were in use on the lines of the Pennsylvania System. Every sleeping car normally in use on the Pennsylvania System is of all-steel construction.

The Pennsylvania Railroad announced in 1906 that all future additions to its passenger equipment—passenger coaches, postal cars, baggage cars, express cars, etc.—would be of all-steel construction, and on January 1, 1914, almost exactly one-half of its passenger equipment had been replaced with steel cars. The Pennsylvania had 6,100 passenger equipment cars in service on January 1, 1914.

Pennsylvania Railroad Awards Large Rail Contracts.—The Pennsylvania Railroad Company has awarded contracts for 100,000 tons of steel rail to cover the requirements of its system for 1914, for which bids were requested some ten days ago.

The orders are placed with the following companies:

U. S. Steel Corporation	44,000 tons
Pennsylvania Steel Co.	22,000 tons
Cambria Steel Co.	22,000 tons
Lackawanna Steel Co.	6,000 tons
Bethlehem Steel Co.	6,000 tons

All these rails will be of 100 pound section except 15,000 tons of 120 pound rail. The 120 pound section will be used on the Main Line.

CONSTRUCTION.

Double Tracking the Southern Railway.—Within five years the management of the Southern Railway expects to have a double track line the entire distance, 649 miles, from Washington to Atlanta. President Harrison has made arrangements for financing this great undertaking of immense importance to the entire South, and it is planned that the work shall go forward as rapidly as it is possible to carry it on without interfering with the heavy freight and passenger traffic which moves over this line.

The funds for this work will be provided by the sale of $20,000,000 of bonds of the Atlanta and Charlotte Air Line Railway Company, the issue of which has been authorized and approved by the Georgia Railroad Commission. Of these bonds $5,500,000 have already been sold and the proceeds will be used to refund an equal amount of Atlanta and Charlotte Air Line bonds now owned by the Southern Railway. This sum will be used by the Southern Railway in double-tracking those portions of its line between Washington and Charlotte which are still single track. When this has been completed attention will be turned to double-tracking that portion of the line between Charlotte and Atlanta which is still single track. This will involve a great deal of heavy work, especially in the mountains of North Georgia, and will call for the expenditure of between $13,000,000 and $14,000,000.

Construction Work on the Southern Railway.—Contracts for construction of nineteen miles of double track on the Washington Division between Amherst and Elma, Va., have just been let by Southern Railway. Contract for the eight miles Amherst to Tye River was awarded to C. W. Lane and Company of Atlanta and for the eleven miles between Tye River and Elma to H. J. Dunavant and Company, of Chattanooga. The lines to be constructed are through the Virginia Piedmont country and will involve some very heavy work. These are the first contracts let under the plan by which Southern Railway Company expects to complete its double track between Washington and Atlanta in the next five years.

Bridge Completed Over Fraser River on Grand Trunk Pacific.—Advice has been received at headquarters in Montreal that the Grand Trunk Pacific is now carrying passengers from Fort William to Prince George, B. C., over an all rail route, a distance of 1729 miles. As the steel bridge across the Fraser River at Prince George has now been completed, trains will run directly to and from Prince George Station and no ferry transfer is necessary.

From Prince Rupert, Eastward, passenger service is in operation to Priestley, 337 miles, and while steel is laid over the gap between Priestley and Prince George, work is going forward to bring the roadbed up to the highest standard before inaugurating through passenger service between Winnipeg and the Pacific Coast terminal of the line.

ELECTIONS AND APPOINTMENTS.

Executive.

Frank H. Alfred, chief executive officer for receivers, Pere Marquette Railroad. Headquarters, Detroit, Mich.

E. B. Boyd, chairman, Western Trunk Line Committee. Headquarters, Chicago, Ill.

A. A. Brown, president, Rio Grande Railway. Headquarters, Brownsville, Texas.

J. W. Everman, first vice-president and general manager, St. Louis Southwestern Railway of Texas. Headquarters, Tyler, Texas.

Charles Hamilton, vice-president, Nevada-California-Oregon Railway and the Sierra & Mohawk Railway. Headquarters, Reno, Nev.

Judson Harmon, receiver, Cincinnati, Hamilton and Dayton Railroad.

William A. Harriman, vice-president in charge of the purchasing department, Union Pacific Company. Headquarters, New York.

D. A. O'Brien, vice-president and general manager, Rio Grande Railway. Headquarters, Brownsville, Texas.

Dr. Henry S. Pritchett, director, Atchison, Topeka and Santa Fe Railway.

Rufus B. Smith, receiver, Cincinnati, Hamilton and Dayton Railroad.

Albert J. Stone, vice-president, Erie Railroad. Headquarters, New York.

George C. Taylor, president, American Express Company. Headquarters, New York.

Legal.

James F. Green, general attorney, Missouri Pacific and St. Louis, Iron Mountain and Southern. Headquarters, St. Louis, Mo.

W. Scott Hancock, assistant general attorney, Missouri Pacific-Iron Mountain Lines.

James E. Kelby, general attorney, San Pedro, Los Angeles and Salt Lake Railroad. Headquarters, Los Angeles, Cal.

Benjamin F. La Rue, assistant general solicitor, Lehigh Valley Railroad. Headquarters, New York.

Financial.

H. Vance, secretary and auditor, Rio Grande Railway. Headquarters, Brownsville, Texas.

George W. Wiley, treasurer, Lehigh Valley Railroad. Headquarters, Philadelphia.

Accounting.

Benjamin A. Brown, auditor and assistant secretary, Colorado, Kansas and Oklahoma Railroad. Headquarters, Scott City, Kansas.

P. J. O'Malley, auditor of merchandise receipts, Baltimore and Ohio Railroad. Headquarters, Baltimore, Md.

A. L. Williams, car accountant, Macon, Dublin and Savannah. Headquarters, Macon, Ga.

Engineering and Mechanical.

F. C. Baluss, engineer of bridges and buildings, Duluth, Missabe & Northern Railway. Headquarters, Duluth, Minn.

J. A. Carleston, general foreman of shops, Texas and Pacific Railroad. Headquarters, Marshall, Texas.

C. W. Coburn, resident engineer, Canadian Pacific Railway. Headquarters, Brandon, Man.

F. B. Costello, acting supervisor, Northern Pacific Railroad. Headquarters, Spokane, Wash.

John J. Daley, roadmaster, Dunkirk, Allegheny Valley & Pittsburgh Railroad. Headquarters, Dunkirk, N. Y.

A. F. Dorley, principal assistant engineer, Missouri Pacific Railway. Headquarters, St. Louis, Mo.

W. H. Finley, chief engineer, Chicago and North Western Railway. Headquarters, Chicago, Ill.

David Gratton, master mechanic, Oregon Short Line. Headquarters, Pocatello, Idaho.

J. Hainen, general superintendent of motive power and equipment, Southern Railway Company. Headquarters, Washington, D. C.

R. H. Hallstead, assistant engineer, Missouri Pacific Company. Headquarters, Kansas City, Mo.

R. E. Hammond, acting road foreman, Northern Pacific Railway. Headquarters, Minneapolis, Minn.

George W. Hand, valuation engineer, Chicago and North Western Railroad. Headquarters, Chicago, Ill.

S. Hickson, roadmaster, second district, Oregon-Washington Railroad and Navigation Co. Headquarters, Colfax, Wash.

John Horan, acting master mechanic, Northern Pacific Ry. Headquarters, Minneapolis, Minn.

George H. Jedele, roadmaster, Alliance division, Lake Shore and Michigan Southern Ry. Headquarters, Alliance, Ohio.

K. K. Kuney, locating engineer, government railway surveys in Alaska.

J. A. Lahmer, assistant engineer, Missouri Pacific Company. Headquarters, St. Louis, Mo.

F. Neher, assistant engineer, maintenance of way department, Missouri Pacific Company. Headquarters, St. Louis, Mo.

Hans Olson, assistant roadmaster, Northern Pacific Railway. Headquarters, Staples, Minn.

Walter N. Polakov, supervisor of power plants, New York, New Haven and Hartford Railroad. Headquarters, New Haven, Conn.

J. E. Roberts, superintendent, car service, Delaware and Hudson Company. Headquarters, Albany, N. Y.

E. C. Sasser, superintendent of motive power, Northern and Eastern districts, Southern Railway Company. Headquarters, Washington, D. C.

J. C. Schepp, master mechanic, Texas and Pacific Railroad. Headquarters, Texarkana, Texas.

H. B. Shoemaker, engineer maintenance of way, Chicago, Indiana and Southern Railroad. Headquarters, Gibson, Ind.

A. E. Sorley, principal assistant engineer, Missouri Pacific Company. Headquarters, St. Louis, Mo.

C. G. Washbon, resident engineer, Canadian Pacific Railway. Headquarters, Souris, Man.

C. Whitfield, general road master, Denver and Rio Grande Railroad. Headquarters, Denver, Colo.

Operation.

James M. Barrett, superintendent, district No. 2, Canadian Pacific Railway, Eastern division. Headquarters, Windsor Station, Montreal, Que.

C. W. Bearden, chief despatcher, Chicago and Alton Railroad. Headquarters, Chicago, Ill.

E. H. Beckley, trainmaster, Macon, Dublin and Savannah. Headquarters, Macon, Ga.

F. W. Brandt, assistant trainmaster, Susquehanna division, Delaware and Hudson Company.

R. L. Brown, trainmaster, Third and Fourth districts, First division, Denver and Rio Grande Railroad. Headquarters, Walsenburg, Colo.

F. G. Bullock, trainmaster, Florida East Coast Ry. Headquarters, New Smyrna, Fla.

F. D. Campbell, trainmaster, Chicago, Milwaukee and St. Paul Ry. Headquarters, Mobridge, S. D.

J. B. Chandler, superintendent of car service, Texas and Pacific Railway. Headquarters, Dallas, Texas.

A. B. Copley, assistant general manager, Third district, Rock Island Lines. Headquarters, El Reno, Okla.

Ramsey M. Cox, general manager, Nevada-California-Oregon and the Sierra and Mohawk. Headquarters, Reno, Nev.

I. K. Dye, general manager, Coal and Coke Railway. Headquarters, Elkins, W. Va.

James Flynn, assistant superintendent, Denver and Rio Grande Railroad. Headquarters, Gunnison, Colo.

J. N. Haines, superintendent, Seneca division, Lehigh Valley Railroad. Headquarters, Sayre, Penna.

J. B. Heafer, superintendent of transportation, International and Great Northern Railway. Headquarters, Houston, Texas.

J. P. Houston, superintendent, Eastern division, Minneapolis and St. Paul Railroad. Headquarters, Oskaloosa, Iowa.

James R. Kearney, general superintendent of transportation, Baltimore and Ohio, the Baltimore and Ohio Southwestern and the Cincinnati, Hamilton and Dayton. Headquarters, Baltimore, Md.

Edmund Lehigh, general superintendent, of police, Baltimore and Ohio Railroad.

J. M. Losey, chief train despatcher, Chicago, Milwaukee and St. Paul Railroad. Headquarters, Perry, Iowa.

R. J. McCarty, Jr., general superintendent, Greenwich and Johnsonville Railroad. Headquarters, Greenwich, New York.

W. R. McCullom, assistant superintendent of terminals, Chicago and Alton Railroad. Headquarters, Chicago, Ill.

J. A. McDougal, superintendent, Colorado division, Rock Island Lines. Headquarters, Colorado Springs, Colo.

J. A. MacGregor, acting superintendent, Alberta division, Canadian Pacific Railway. Headquarters, Calgary, Alta.

R. S. Marshall, superintendent, Virginia division, Seaboard Air Line. Headquarters, Richmond, Va.

C. W. Miller, superintendent of terminals, Chicago and Alton. Headquarters, Chicago, Ill.

J. W. Mulhern, superintendent, Northern division, Pere Marquette Railroad. Headquarters, St. Paul, Minn.

Mark H. Reasoner, assistant supervisor of stations, Minneapolis, St. Paul and Sault Ste. Marie Railroad. Headquarters, Minneapolis, Minn.

H. L. Reed, superintendent, Kansas division, Rock Island Lines. Headquarters, Herington, Kansas.

F. L. Richards, trainmaster, Chicago, Milwaukee and St. Paul Railway. Headquarters, Savanna, Ill.

J. E. Roberts, superintendent of car service, Delaware and Hudson Company. Headquarters, Albany, New York.

J. G. Sharp, trainmaster, Tampa and Gulf Coast Ry. Headquarters, Gary, Fla.

W. A. Sheahan, superintendent, Nebraska division, Rock Island Lines. Headquarters, Fairbury, Neb.

J. D. Stack, general superintendent, Norfolk Southern Railway. Headquarters, Norfolk, Va.

E. E. Sutton, assistant chief despatcher, Chicago and Alton Railroad. Headquarters, Chicago, Ill.

J. E. Taussig, general superintendent, Texas and Pacific Railway. Headquarters, Dallas, Texas.

C. P. Torrey, superintendent of transportation, Hocking Valley Railway. Headquarters, Columbus, Ohio.

A. O. Veitch, chief train despatcher, Chicago, Milwaukee and St. Paul Railroad Company. Headquarters, Miles City, Mont.

O. H. Wadleigh, trainmaster, Nevada-California-Oregon Railroad. Headquarters, Reno, Nev.

A. E. Walker, superintendent, Arkansas division, Rock Island Lines. Headquarters, Little Rock, Ark.

W. A. Whitney, general superintendent, Oregon Short Line. Headquarters, Pocatello, Idaho.

F. M. Woodall, superintendent, Birmingham division, Atlanta, Birmingham and Atlantic Railroad. Headquarters, Manchester, Ga.

T. J. Worthman, superintendent, Iowa division, American Express Company. Headquarters, Omaha, Neb.

Traffic.

F. G. Abbey, assistant general freight agent, Missouri, Kansas and Texas Railroad. Headquarters, Dallas, Texas.

Brent Arnold, Jr., general agent, Cleveland, Cincinnati, Chicago and St. Louis Railway. Headquarters, Cincinnati, Ohio.

C. B. Austin, general agent, freight department, Western Maryland Railroad. Headquarters, Cleveland, Ohio.

E. R. Bardgett, commercial agent, Lehigh Valley Railroad. Headquarters, Cleveland, Ohio.

George E. Bates, industrial agent, Delaware and Hudson Company. Headquarters, Albany, New York.

Max V. Beckstedt, freight solicitor, Delaware and Hudson Company. Headquarters, Albany, New York.

A. J. Blaisdell, general agent, passenger department, Canadian Pacific Railway. Headquarters, St. Louis, Mo.

J. M. Breen, general agent, Cleveland, Cincinnati, Chicago and St. Louis Railway. Headquarters, Pittsburgh, Pa.

Streeter C. Cauble, assistant city ticket agent, Southern Railway. Headquarters, Charlotte, N. C.

A. S. Collins, general dairy agent, Rock Island Lines. Headquarters, Cedar Rapids, Iowa.

J. A. Cooley, immigration agent, South Dakota Central. Headquarters, Sioux Falls, S. D.

John J. Coyle, division freight and passenger agent, Delaware and Hudson Company. Headquarters, Scranton, Pa.

A. M. Crawford, city passenger and ticket agent, Southern Railway. Headquarters, Memphis, Tenn.

Walter J. Dill, soliciting freight agent, Tennessee Central Railroad. Headquarters, Chicago, Ill.

Charles K. Duncan, traveling freight agent, Tennessee Central Railroad. Headquarters, Chicago, Ill.

M. J. Fahey, commercial agent, Cleveland, Cincinnati, Chicago and St. Louis. Headquarters, Memphis, Tenn.

B. S. Fay, commercial agent, Winston-Salem Southbound Railway. Headquarters, Jacksonville, Fla.

M. C. Finkle, traveling freight agent, Carolina Despatch. Headquarters, Cincinnati, Ohio.

R. D. Fitzmaurice, superintendent, Providence division, New York, New Haven and Hartford R. R. Headquarters, Providence, R. I.

J. H. Ginet, Jr., western immigration agent, Chicago, Milwaukee and St. Paul Railroad. Headquarters, Seattle, Wash.

W. F. Greaves, general southern freight agent, Cleveland, Cincinnati, Chicago and St. Louis Railway. Headquarters, Birmingham, Ala.

Frederick N. Hait, commercial agent, Lehigh Valley Railroad. Headquarters, Pittsburgh, Pa.

H. H. Hamill, commercial agent, Grand Trunk Railway. Headquarters, Detroit, Mich.

Arthur B. Hoff, industrial commissioner, Erie Railroad. Headquarters, New York.

H. L. Hudson, district freight and passenger agent, Oregon-Washington Railroad and Navigation Company. Headquarters, Lewiston, Idaho.

T. J. Keen, commercial agent, Texas and Pacific Railroad. Headquarters, Texarkana, Texas.

C. H. King, traveling freight agent, Cleveland, Cincinnati, Chicago and St. Louis Railway. Headquarters, Louisville, Ky.

J. O. Jones, traveling passenger agent, Southern Railway Company. Headquarters, Charlotte, N. C.

S. G. Langston, division passenger agent, Missouri, Kansas and Texas Railway. Headquarters, St. Louis Mo.

T. H. Lawrence, assistant general passenger agent, St. Louis Southwestern Railroad. Headquarters, Tyler, Texas.

C. L. Lyons, assistant general freight agent, Missouri, Kansas and Texas Railroad. Headquarters, St. Louis, Mo.

P. L. McGue, commercial agent, Rock Island Lines. Headquarters, Buffalo, New York.

C. L. Macmanus, demurrage supervisor for Texas, American Railway Association. Headquarters, Dallas, Texas.

B. S. Merritt, general agent, Great Northern Railway. Headquarters, Great Falls, Mont.

A. F. Meyers, commercial agent, Cleveland, Cincinnati, Chicago and St. Louis Railway. Headquarters, Nashville, Tenn.

K. A. More, commercial agent, Cleveland, Cincinnati, Chicago and St. Louis Railway. Headquarters, Nashville, Tenn.

L. W. Mosher, commercial agent, Missouri, Kansas and Texas Lines. Headquarters, St. Louis, Mo.

Walter Nichols, chief of traffic bureau, Cleveland, Cincinnati, Chicago and St. Louis. Headquarters, Cincinnati, Ohio.

J. H. Owings, city ticket agent, Southern Railway. Headquarters, Charlotte, N. C.

E. D. Perkins, assistant traffic manager, Pacific and Idaho Northern Railroad. Headquarters, New Meadows, Idaho.

C. W. Pinney, assistant general freight and passenger agent, Coal and Coke Railway. Headquarters, Elkins, W. Va.

E. J. Pope, commercial agent, Missouri, Kansas and Texas Railway. Headquarters, Wichita Falls, Texas.

B. W. Robbins, assistant general freight agent, Denver and Rio Grande Railroad. Headquarters, Denver, Colo.

C. E. Rolfe, general eastern freight agent, Delaware and Hudson Company.

D. L. Rupert, division freight agent, Detroit, Toledo and Ironton Railroad. Headquarters, Ironton, Ohio.

C. W. Smith, commercial agent, Cleveland, Cincinnati, Chicago & St. Louis Railway. Headquarters, Dallas, Texas.

H. B. Sperry, assistant general freight agent, Missouri, Kansas and Texas Lines. Headquarters, Kansas City, Mo.

W. T. Stevenson, assistant general freight agent, Cleveland, Cincinnati, Chicago and St. Louis Railway. Headquarters, Cincinnati, Ohio.

W. O. Sydnor, assistant general freight agent, Chesapeake and Ohio Railway. Headquarters, Charleston, W. Va.

Albert B. Thoeny, general agent, Western Express Company. Headquarters, Milwaukee, Wis.

O. C. Thomas, commercial agent, Missouri, Kansas and Texas Lines. Headquarters, Oklahoma City, Okla.

S. A. Townsend, division freight agent, Cleveland, Cincinnati, Chicago and St. Louis Railway. Headquarters, St. Louis, Mo.

S. H. Waddell, traveling freight agent, Chicago, Milwaukee and St. Paul Railway. Headquarters, Cincinnati, Ohio.

T. J. Wall, general agent, Canadian Pacific Railway. Headquarters, Minneapolis, Minn.

Joseph A. S. Wallace, commercial agent, Western Maryland Railroad. Headquarters, Youngstown, Ohio.

H. W. Willard, commercial agent, New York, New Haven and Hartford Railroad. Headquarters, Brooklyn, N. Y.

R. W. Wirt, traveling agent, Queen and Crescent Route. Headquarters, Chattanooga, Tenn.

O. F. York, traveling passenger agent, Southern Railway. Headquarters, Raleigh, N. C.

Purchasing.

Ernest Baxter, purchasing agent, St. Louis Southern. Headquarters, St. Louis, Mo.

A. A. Dawley, purchasing agent, Denver and Salt Lake Railroad. Headquarters, Denver, Colo.

E. L. Fries, general storekeeper, Union Pacific Railroad. Headquarters, Omaha, Neb.

H. B. Martin, purchasing agent, Coal and Coke Railway. Headquarters, Elkins, W. Va.

G. W. Saul, purchasing agent, Oregon-Washington Railroad and Navigation Company. Headquarters, Portland, Ore.

G. E. Scott, purchasing agent, Missouri, Kansas and Texas Railway. Headquarters, St. Louis, Mo.

RESIGNATIONS.

Executive.

T. E. Dunaway, vice-president and general manager, Nevada-California-Oregon Railroad and the Sierra and Mohawk Railroad.

J. C. Fargo, president, American Express Company.

W. V. S. Thorne, vice-president in charge of purchases, Union Pacific Company.

Legal.

R. T. Railey, general attorney, Missouri Pacific and St. Louis, Iron Mountain & Southern Railroad.

Engineering and Mechanical.

M. C. Cleveland, engineer maintenance of way, Chicago, Indiana and Southern Railroad.

J. H. Conlan, general roadmaster, Colorado Lines, Denver and Rio Grande Railroad.

T. Keaveny, roadmaster, second district, Oregon-Washington Railroad and Navigation Company.

Operation.

W. B. Causey, superintendent, Northern division, Chicago, Great Western Railroad.

J. C. Collins, superintendent, Illinois Southern Railroad.

E. A. Gould, assistant to general manager, Cincinnati, Hamilton and Dayton Railway.

D. F. Kirkland, superintendent, Birmingham division, Atlanta, Birmingham and Atlantic Railroad.

R. S. Marshall, superintendent, Eastern division, Minneapolis and St. Paul Railroad.

W. P. Moran, trainmaster, Chicago, Milwaukee and St. Paul Railroad.

J. H. Witt, superintendent, Virginia division, Seaboard Air Line.

Traffic.

Brent Arnold, Jr., general agent, freight department, Western Maryland Railroad.

Willis Callaway, commercial agent, Winston-Salem Southbound.

J. C. Finch, assistant general freight agent, Missouri, Kansas and Texas.

C. L. Hilleary, general agent, New York Central Lines.

Luis Jackson, industrial commissioner, Erie Railroad.

W. D. Jones, traveling freight agent, Tennessee Central Railroad.

A. MacCorquodale, district freight and passenger agent, Oregon-Washington Railroad & Navigation Company.

Rufus M. Pile, assistant general passenger agent, Pennsylvania Railroad.

C. H. Roemer, traveling freight agent, Chicago, Milwaukee and St. Paul Railroad.

Purchasing.

R. Koehler, purchasing agent, Oregon-Washington Railroad and Navigation Company.

G. S. Pratt, storekeeper, Macon, Dublin and Savannah Railroad.

J. H. Stafford, general storekeeper, Union Pacific Railroad.

BOOK REVIEWS.

Terminal Facilities on North Pacific Ports.—Under the above head, the Terminal Publishing Company of Seattle, Wash., has recently issued an annual reference book on North Pacific shipping, which covers the principal ports from San Diego on the south to Nome on the north. The regulations governing these ports are given in full, and all charges that are assessed against either the ship or the cargo are included. The names and addresses of government officials, foreign consuls and others in each port, whose names and addresses are of value to masters and shippers, are given. One section is devoted to the depth of water in all the bays and inlets on the United States Coast. The customs, marine insurance, immigration regulations and matters of that sort are set forth in detail.

There are scores of tables in the work. The money of all foreign countries is reduced to its Canadian and United States equivalent and foreign weights are reduced to avoirdupois pounds. One remarkably useful table which is included and which is here published for the first time gives at a glance the amount of freight due on any shipment that is paid by its cubic measurement. With this book at his elbow a transportation man need waste no more time in figuring out rates. To find the cost of 17 cubic feet at $23.00 per ton entails no more labor than running a pencil along a line and copying down the figures.

No review of the book that does not contain its entire list of contents can give a comprehensive idea of the field it covers. The arrangement of the index is in itself a refreshing departure. As soon as one opens the front cover he finds the index, which is the first thing offered in the book. Typographically the work is easy to read and it is well and substantially bound in cloth. It should find a ready place in all marine libraries and on the desks of all busy people who have to do with shipping.

The "Terminal Facilities of North Pacific Ports" retails for $2.00 per volume and will be published annually.

The 1914 Edition of the Manual of Statistics.—Many changes of importance to the investing and stock market public have marked the past year. New issues of securities of both railroad and industrial companies have been numerous, and a variety of new organizations of that character have come into public notice. These matters are fully covered in the 1914 edition of "The Manual of Statistics," which is the thirty-sixth annual issue of that standard publication. It adequately presents the organization, finances and position of all the leading railroad and industrial companies in the United States and Canada. The figures in reference to industrial and utilities companies are presented with similar completeness, and the volume also includes statements of practically all the new organizations which have an interest for the stock market and investing public. A new and useful feature in connection with bond issues is the notation with securities of that kind showing if the company assumes payment of the United States income tax. The 1110 pages of this handsome, compact and carefully compiled reference volume present a greater fund of information for the use of investors and speculators than any other work of the kind. It also embodies ample information regarding government securities, mining stocks and the grain and cotton statistics. Its utility is increased by an arrangement facilitating references to the different sections. The volume is one which inve stors and all who are interested in the financial and other markets of the country cannot afford to be without. It is published by The Manual of Statistics Company, 20 Vesey Street, New York. Price, $5.00.

The 1914 Year Book of the Merchants' Association of New York.—The Merchants' Association's Year Book for 1914 is being distributed to the members of the Association. It gives the names of nearly 3,600 members, among whom are the leaders in 157 divisions of business and professional activity in New York City, scattered throughout the five Boroughs.

The Year Book contains the annual reports of President William A. Marble, of S. C. Mead, Secretary, and The Association's Bureau of Research, Publicity Bureau, Membership Bureau, Traffic Bureau, Industrial Bureau and Convention Bureau.

The reports, which cover the work of the year 1913, show a diversified field of activity in which results of importance to the trade and welfare of the City, to foster which The Association was founded, were achieved.

The membership list shows the membership on May 1, 1914. It represents every trade, industry and profession in the City, and consists of individuals, firms and corporations, the last two classes preponderating.

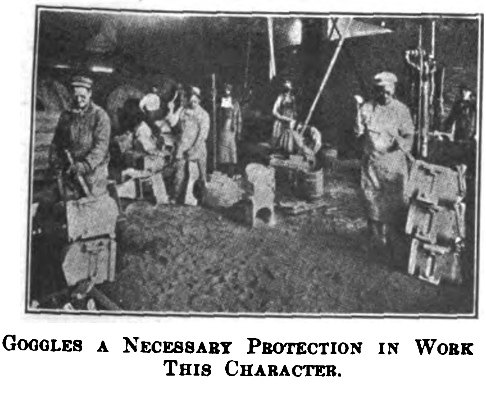
The names of the members are given in a finding list alphabetically arranged, and are repeated in classified groups, which again are subdivided by trades and industries. There are forty-eight large divisions which contain 157 sub-divisions.

The sub-divisions of the groups range from one to ten in number, with four to six as the average. There are nineteen groups in which there are no sub-divisions.

The Earning Power of Railroads.—The 1914 edition of Floyd W. Mundy's well known "Earning Power of Railroads" has come from the press. It contains its usual convenient tables of figures as to individual railroad companies brought down to date, as well as copious supplementary information and introductory chapters on the analysis of railroad reports. The book is published by the banking house of Jas. H. Oliphant & Co., 61 Broadway.

RAILWAY PUBLICATIONS.

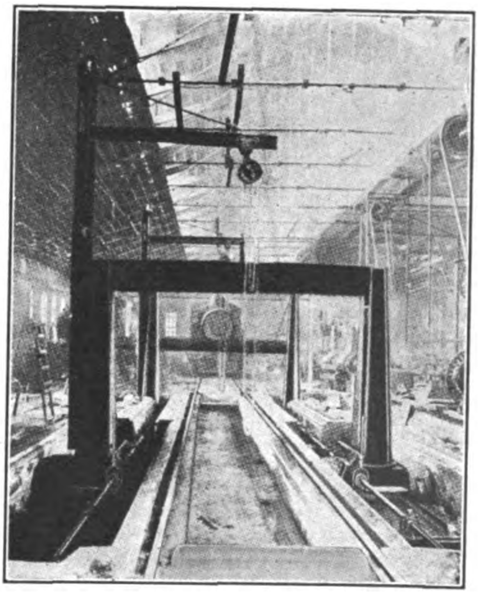
The Norfolk and Western's "Safety Magazine."—The Norfolk and Western Railway, like the New York Central Lines, has adopted the policy of publishing at frequent intervals, a safety magazine of about thirty-five pages, under the title of "Safety Bulletin." This not only contains a record of safety developments on the Norfolk and Western but includes various other matters relating to safety published either in railway journals or in the magazines of other railways. Photographs are also employed to illustrate certain features of the safety work and altogether the magazine proves an effective aid to the promotion of the safety movement on the Norfolk and Western. The accompanying illustration, showing the necessity for employing goggles in certain kinds of railway work, is a fair example of the kind that is employed from month to month.



Goggles a Necessary Protection in Work of This Character.

TRADE PUBLICATIONS.

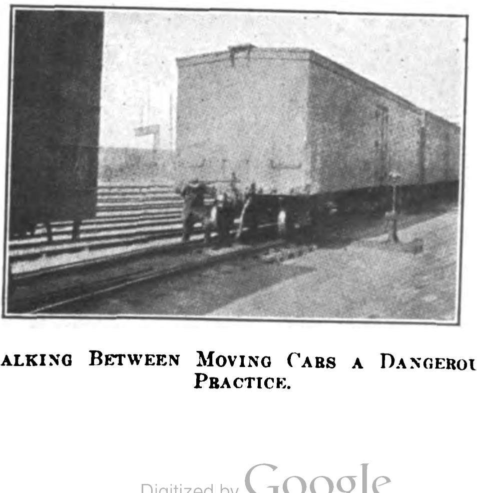
Locomotive Hoists.— The Whiting Foundry Equipment Company, of Harvey, Ill., has recently issued a locomotive hoist catalogue which sets forth the advantages of this economical machine for wheeling locomotives and fully describes the construction and operation. A number of photographs of actual installations show the different steps in operating the hoist. A list of the various railroads using this device is also included. The accompanying illustration gives an excellent idea of the appearance of the hoist.



Type of Locomotive Hoist Constructed by Whiting Foundry Equipment Company.

Latest Safety Bulletin of Chicago and North Western Railway.

THE Chicago and North Western Railway has issued its safety bulletin No. 6, which calls particular attention, as shown by the accompanying photograph, to the danger of at-



Walking Between Moving Cars a Dangerous Practice.

tempting to walk between moving cars. This is provided for by a rule of the Company which prohibits standing upon the foot boards of engines in motion, while coupling the cars, or going between cars or any car and engine while in motion or walking directly in front of a moving car or engine for any purpose whatsoever.

In spite of this rule, however, employes are constantly taking risks of this character which often end disastrously.

BOOK REVIEWS.

The Express Service and Rates.— By W. H. Chandler, Assistant Manager, Traffic Bureau, The Merchants' Association of New York. With appendix of test questions, and numerous tables and charts. 340 pages. Published by the La Salle Extension University, Chicago, Ills.

Mr. W. H. Chandler, in his treatise on "The Express Service and Rates," presents a work of timely and lively public interest. The vast field of express service has, strange to say, never been adequately treated. Stimson's "Express History" treats of the historical side, but it is now out of date. Various works on transportation devote short chapters to express service, but there has never been an adequate treatment. This fact, even if there were no other reasons for interest in Mr. Chandler's treatise, just published by the La Salle Extension University, Chicago, should make this carefully prepared manual noteworthy.

But there are other reasons. On February 1st, of this year, the new express rates went into effect. The Interstate Commerce Commission's activity, the parcel post competition, and other events are directing popular interest to this subject. Furthermore, the recent announcement that the United States Express Company is to discontinue brings another reason for popular interest.

It is interesting to note, in this connection, the following, concerning the United States Express Company, from the chapter on "Internal Organization of Express Companies" of Mr. Chandler's book:

"The United States Express Company is a joint-stock association or partnership composed of persons associated together to do express business each with full partnership liability for the company's obligations. It was organized April 22, 1854, in the State of New York, for a term of ten years which term has been several times extended.

"At the time of the organization of the United States Express Company, the ownership was divided into 5,000 interests. From time to time and down to March, 1876, the number of interests was increased, until at the last mentioned date the ownership was divided into 70,000 interests. During the month of September, 1887, 15,000 interests were sold for $1,000,000, which sum was at that time paid into the treasury of the company."

The new publication is more a practical than a scholarly effort, though no objection can be brought against it on that score. It covers the whole express field, from history, organization and service to rates and classifications. Express statistics and finance are subjects carefully treated; and both the old and the new rate-making systems are fully explained. This is of especial interest since the rates are lowered considerably. The relation to the parcel post is also carefully discussed.

Express forms, commodity rates, and all the details of the express work that a man who makes this his life work wants to know are practically discussed. Dozens of pages are given over to the actual reproduction of express material, such as classifications, documents, contracts, receipts, directories and schedules. Although most of the treatise is devoted to American express service, there are chapters devoted to Canadian express service and foreign service. The work should be very helpful to the occasional express shipper, as well as to the student of transportation. It forms a part of a series of similar treatises which serve as a basis for the course by correspondence in Interstate Commerce and Railway Traffic given by the La Salle Extension University, Chicago.

Improving French Locomotives.

From Our London Correspondent.

FOR a long time now very extensive tests have taken place on the Paris, Lyons and Mediterranean Railway of France between simple and compound locomotives. The results happen to be of more especial interest to countries which have to pay high prices for import coal, but railway corporations everywhere will find them worth careful study in view of the increasing importance of the fuel economy question. The tests I refer to were made on the most difficult section of the line between Paris and Marseilles, from Laroche to Blaisey-Bas, a continuous incline of saw-tooth profile, 133 km. long, termininating in a gradient of one in 125, the total vertical rise being about 1,050 feet. With a load of 456 tons (one ton equals 2,240 pounds) behind the tender the simple engine ran the distance in 98 minutes 45 seconds, developing an average of 1,178 drawbar h. p., and consuming 3,870 kg. of coal, or 1.982 kg. per drawbar h. p. hour, and 14.2 litres of water per h. p. hour. With 487 tons behind the tender the compound engine ran the same trip in 87 minutes 2 seconds developing an average of 1,246 drawbar h. p., consuming 3,116 kg. of coal (1.58 kg. per drawbar h. p. hour) and 12.28 litres of water per h. p. rour. Thus the compound hauled a load eight per cent heavier in eleven per cent less time with a total coal consumption reduced by nearly twenty per cent and a coal consumption per drawbar h. p. hour reduced by 20.3 per cent.

In a second run with a load of 487 tons the time taken by the compound was still less—85 minutes 39 seconds—but the higher speed entailed a greater consumption of coal—3.199 kg. With a smaller load the speed of the compound was even more remarkable. A load of 278 tons was hauled in 77 minutes 14 seconds, the consumption of coal being 2.07 kg. per drawbar h. p. hour, while the simple engine, with 272 tons took 90 minutes 40 seconds, and burnt 2.531 kg. of coal per drawbar h. p. hour. In this case, therefore, the compound saved fourteen per cent in time and eighteen per cent in fuel. The average start to stop speed was 64.3 miles an hour.

The dynamometer records reveal extreme regularity of speed and power with the compound, whereas the lines of speed and power with the simple engine are "hillocky," indicating that it was specially sensitive to variations in resistance due to ups and downs of the line. They show that the boiler of the simple engine was more severely taxed to supply steam for four large cylinders than was that of the compound to supply two small cylinders. A small boiler, therefore, suffices for the compounds and the latest engines are designed accordingly. In consequence of this demonstration of the superior speed, power and economy of the compound, and its greater elasticity, or higher power range, the Paris, Lyons and Mediterranean has ceased to build simple engines, and has at work or under construction 85 new compounds of the Pacific type, weighing 1.6 tons less than the simple engines yet seven or eight per cent more powerful than the compound with which the above results were obtained. Behind these engines travelers to the Mediterranean will be conveyed in heavier paying train loads, at higher speeds, and at less cost for fuel. The engines are rated for ten per cent heavier trainloads, and at the same time their speed capacity is ten per cent higher than simple engines of greater weight.

The Paris, Lyons and Mediterranean has also conducted elaborate tests on a large scale between engines of the same type using saturated and superheated steam. These tests showed that while there was an economy in coal of about seventeen per cent with superheated steam during the tests, yet the power developed per cubic foot of steam used and per pound of steam pressure entering the cylinder, was from fourteen to twenty-three per cent less than with saturated steam. These figures agree fairly well with the steam tables generally used, which show that, at the pressure and maximum temperatures employed by the Paris, Lyons and Mediterranean the specific internal energy in each cubic foot of superheated steam is twenty-three per cent less than in theoretically dry saturated steam.

In practical working there is an important difference between the relative economies possible with superheating and with compound expansion. With superheating an economy of seventeen per cent in coal can be guaranteed provided that the steam is kept at a certain temperature, almost uninterruptedly. With a compound engine having a ratio of cylinder volumes of 1 to 2.85 the draughtsman can guarantee from his preliminary calculations a coal economy of 25 to 35 per cent provided the drivers are unable to alter the difference of the cut off in the two stage cylinders by more than three per cent; the engine then economizes thirty per cent of steam at each stroke, and the economy of coal will be about equivalent, no variation being possible. But with superheated steam the conditions that influence coal consumption vary at every moment, with the height of the water in the boiler, the condition and depth of the fire, the amount of regulator opening, the distance run without stopping and other factors. The result is that the coal economy realized in trials falls off in regular service by from ten to twenty per cent, sometimes leaving in the experience of the Paris, Lyons and Mediterranean and Italian State Railways a saving of only three to eight per cent on a year's working.

The trials which were carried out by the Paris, Lyons and Mediterranean and which resulted in the application of superheaters to the boilers of its compound express engines, gave the following results on the Laroche to Dijon line:—Coal consumption per h. p. hour with saturated steam 1.593 kg. and with superheated steam 1.313 kg., the saving with superheating being thus 17.57 per cent. In regular working during fourteen months the monthly consumption of coal per 100 ton-kilometers run with the same engines and services averaged 4.4 kg. with saturated steam, and 4.08 kg. with superheated steam, or an economy of little over seven per cent. This may be regarded as the saving in coal effected on the average by the application of superheating to engines of the Pacific compound type, and the drop in economy between the test-trip figure and the annual figure is therefore about ten per cent.

What will be the drop between the economy of the new compound engines as shown by the tests already referred to, and their annual economy? To judge by the difference between test results and annual results obtained elsewhere as between simple and compound engines, the probability is that the drop will be only three to five per cent or less, according to the loading of the trains. On the Paris, Lyons and Mediterranean the drivers cannot interfere with the prearranged expansive working as they can on the engines of other French lines having two sets of reversing gears.

PERSONALS.

J. P. Hayden, auditor of the Texas State R. R., was suddenly killed in an automobile accident May 14th, at Rusk, Texas.

Edward Hogan, roadmaster of the Lake Erie & Western at Tipton, Ind., died on May 13th at Bloomington, Ill.

J. T. Loree, trainmaster of the Delaware & Hudson at Oneonta, N. Y., has been appointed superintendent of the Susquehanna Division, with office at Oneonta, succeeding J. H. Rosenstock.

Irving Mitchell, formerly for 26 years general dairy agent of the Chicago, Rock Island & Pacific, died on May 12th, at his home in Vinton, Iowa.

Benjamin A. Newland, general manager of the Tennessee Railway, was killed on May 9th, in an accident while riding in a motor car on that road, near Oneida, Scott County, Tenn. He was born in February, 1852, at Lenoir, N. C., and began railway work in 1876, and was consecutively to 1888, conductor on the Western North Carolina and the Richmond & Danville. He was then traveling passenger agent on the East Tennessee, Virginia & Georgia and the Chicago & Alton until 1892, when he was appointed traveling passenger agent on the Sea-

DIVIDEND NOTICE.

UNITED STATES RUBBER COMPANY.

1790 Broadway, New York, June 25th, 1914.

The Board of Directors of the United States Rubber Company has this day declared from its net profits a quarterly dividend of Two Per Cent (2%) on the First Preferred Stock, a quarterly dividend of One and one-half Per Cent (1½%) on the Second Preferred Stock, and a quarterly dividend of One and one-half Per Cent (1½%) on the Common Stock of the Company, to stockholders of record at 3 P. M., on Wednesday, July 15th, 1914, payable without closing of the Transfer Books, July 31st, 1914.

W. G. PARSONS, Treasurer.

"Pittsburgh Perfect" Railroad Fencing

Bought by leading railroads of the United States and Canada because it excels in strength and durability, and affords perfect protection to the right-of-way. Made of special formula Open Hearth wire, HEAVILY AND THOROUGHLY GALVANIZED. ELECTRICALLY WELDED JOINTS. A one-piece fabric, easiest to erect. Write for catalogue and prices.

PITTSBURGH STEEL CO., PITTSBURGH, PA.

NEW YORK. CHICAGO. ST. LOUIS. MEMPHIS. DALLAS

Manufacturers of "Pittsburgh Perfect" Brands of Barbed Wire: Bright, Annealed and Galvanized Wire; Hard Spring Coil Wire; Twisted Cable Wire; Telegraph and Telephone Wire; Straightened and Cut Wire; Fence Staples; Poultry Netting Staples; Regular and Galvanized Steel Wire Nails; Coated Nails; Large Head Felt Roofing Nails; Bale Ties, and "Pittsburgh Perfect" Fencing, all produced in our furnaces and mills from the ore in our mines to the finished material.

VOL. LVIII. AUGUST, 1914 No. 8

Important Developments in the Transportation Field

THE ADVANCE RATE DECISION

After an interminable delay, the Interstate Commerce Commission on August first rendered its decision on the petition of the railroads east of the Mississippi and north of the Ohio and Potomac Rivers, for permission to make a general advance in freight rates of five per cent. The best that can be said of the decision, is that though hopeful in tone, it is keenly disappointing in practical results. In a measure at least, it is a victory for the railroads, in that it shows that they have sustained their contention in favor of a percentage increase in rates as a means of meeting their increased expenses, but on the other hand, the actual gain in earnings which the decision promises is but a mere fraction of what the carriers asked for.

The proposed increases, had they been put into effect, would have yielded approximately $50,000,000 a year, while the decision, according to various estimates, will increase the carriers' income between $9,000,000 and $14,000,000 a year, although the opportunity is offered to the railroads to increase this sum largely by future readjustments, which the Commission suggests, and which refer to certain freight rates which are abnormally low, passenger rates, and the elimination of certain allowances. As to permitting the five per cent increase, however, only the carriers in Central Freight Association territory are allowed to apply this method, and only in specified instances. A general increase of five per cent in the balance of Official Classification territory is denied in totum, and the only benefit it may be possible to derive from the decision for the roads in this section, rests in the application of the various suggestions which the report contains.

The opinion was written by Chairman Harlan and is concurred in by Commissioners Clements, Clark, Meyer and Hall. Commissioners McChord and Daniels filed dissenting opinions, the former arguing that if the Central Freight Association were given five per cent advance, all the roads were entitled to it. To quote from his report, "The majority has cast the burden upon the commerce of a part only of this territory when * * * * it should be borne by the entire territory, not alone to maintain an equality in the rate adjustment, but to augment the revenues which the Commission has found that the carriers need."

Commissioner Daniels took even a more decided stand than Commissioner McChord and came out flat-footed for a gen-

READING FROM LEFT TO RIGHT: COMMISSIONERS HALL, McCHORD, CLEMENTS, HARLAN, CLARK, MEYER AND DANIELS.

eral five per cent increase, holding that this increase should have been granted for the entire territory because present revenues are not sufficient to afford a fair return upon the capital invested and to attract such additional capital as is necessary to the public interests. Commissoner Daniels further asserted that the decision had been delayed unnecessarily by combining the issue of the rate advance with an investigation to determine methods by which revenues might be conserved, without an advance of rates.

As surely as contracting revenues and growing expenses cannot go on indefinitely and leave any enterprise self-sustaining, the time has come for a public awakening to the railway problem. Commissioner Daniels, in his dissenting opinion in the Eastern rate advance case, has raised the caution signal. Its import should be grasped bv every one having at heart the welfare of the country, inextricably interwoven with an efficient transportation system. To quote from his decision:

"For more than a decade the operating and maintenance expenses of the railroads of the United States have constantly risen. The rates charged, on the other hand, have been either static or declining.

"Unable to raise their rates without the sanction of this Commission the railroads have found that the margin between their receipts and their outgo has progressively narrowed; that their net profit from operation has tended to decline; that their operating ratio—the number of cents out of every dollar received which are absorbed by the cost of conducting their business—has steadily increased.

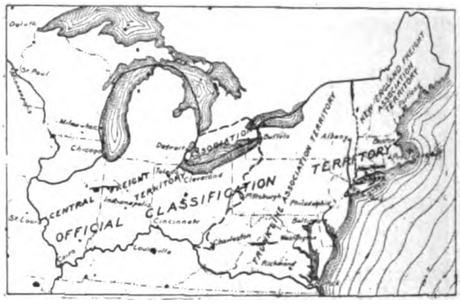
"Despite recent investments of hundreds of millions embodied in extensions and improvements, the addition to net operating income has been meagre in the extreme.

"In conspicuous instances, despite additional investments, there has been an absolute decrease in net operating income; this decline in net earnings has occurred during a period when carriers have handled an increasingly greater tonnage and carried more passengers than ever before. While furnishing greater and better service their net operating income has progressively dwindled.

"On the present property base * * * of $6,365,000,000 a net operating income of $269,000,000 yields a ratio of return for 1914 of 4.22 per cent.

"This disclosure is convincing that the return received, not on security issues, but on the book valuation of the property actually used in the service of the public, is wholly inadequate, when gauged from the standpoint of justice to the carriers and on the wider score of a continuance of adequate service to the public.

"That any such rate of return is compatible with railroad prosperity or that on such a showing additional capital in the vast sums annually required for extensions and betterments can be obtained by the sale of new railroad securities, seems only remotely within the bounds of possibility.



Official Classification Territory, showing sub-division into New England, Trunk Line and Central Freight Association Territories. Central Freight Association Territory was the only sub-division for which increase in rates was granted.

"It is becoming increasingly clear that passenger traffic does not bear its proper share of the joint costs incurred by the carriers for the transportation of freight and passengers. But it is even more clear that as a practical matter passenger fares cannot be speedily re-adjusted upon a higher basis. In recent years State Commissions and State Legislatures have established maximum intrastate passenger rates.

"The activity of the States in this respect has been so general that the carriers no longer can fairly be expected to look upon their intrastate passenger traffic as a possible field for the substantial augmentation of their revenue.

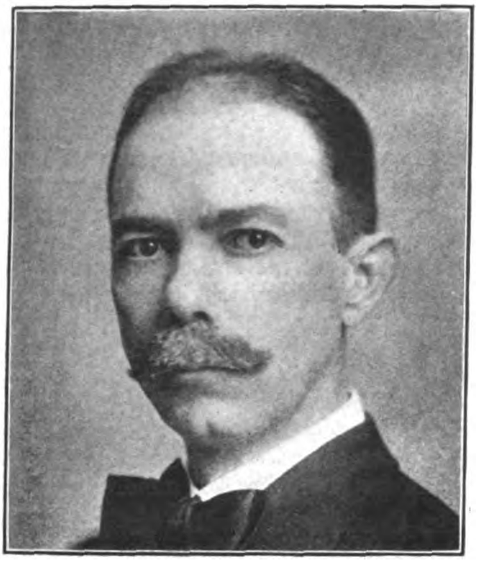
"The world-wide phenomenon of rising prices is by this time no novelty. Since 1906 the average rise in the world's price level is estimated at from 30 to 50 per cent.

"This rise in the price level must eventually be reckoned with in railroading. For a time its effects may be masked by adventitious increases in the volume of traffic, but this temporary relief in its very nature is uncertain and sooner or later the difficulty is sure to re-appear. For a time it may be circumvented by extraordinary economies but in its nature it is inexorable.

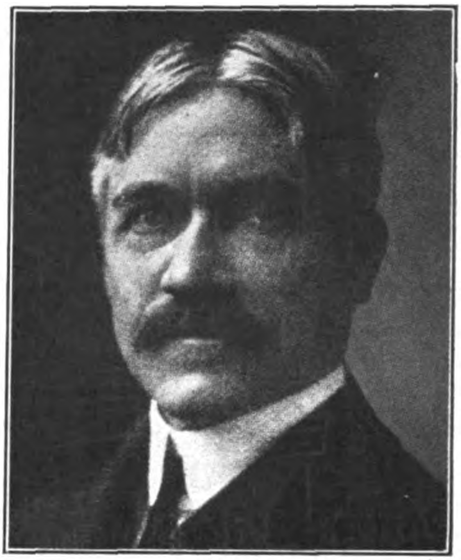
"It must be faced, not trifled with."

Viewed in its most hopeful light, the decision is a severe blow to the carriers and it is, to say the least, unfortunate that the Commission, under the circumstances, did not grant a more immediate and substantial relief. Certainly the roads proved beyond peradventure, the necessity for the full five per cent increase and while the Commission, it may be assumed, aims to serve the public by withholding their permission to make rate advances, the public, in the long run, will certainly be the chief sufferer from the inability of the carriers to procure the needed capital for the improvements and extensions necessary to conduct a progressive plant.

At this point we naturally turn to the composition of the Commission and their interest in, and relation to this most important subject. We make no comment on the



C. C. McChord.



Winthrop M. Daniels.

Commissioners McChord and Daniels dissented from the majority opinion, the former holding that if the rates were increased in Central Freight Association Territory all of the Official Classification Territory should be similarly dealt with, while the latter declared for a five per cent. increase in the entire territory involved.

honest effort of the Commission to deal with these momentous questions in a manner fair to all concerned, but the conclusions strongly suggest the absence of proper appreciation of the broader issues that were involved in the case. There has been a growing opinion that the carriers' interests have not received the fullest protection at the hands of the Commission, and this is evidenced by innumerable decisions against the carriers, and it would almost seem that conclusions are reached on preconceived ideas rather than from the definite facts disclosed.

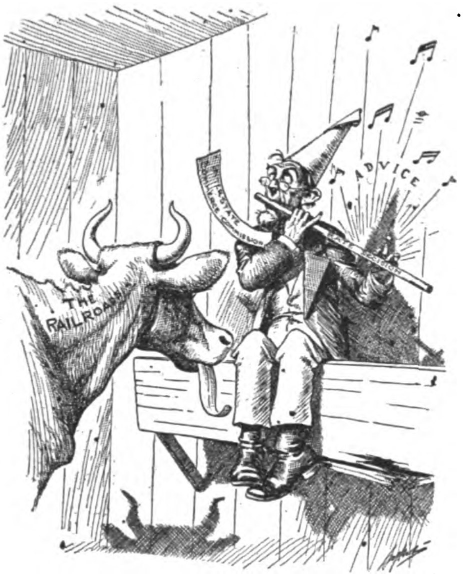
Those in charge of the case for the carriers were men of long and practical experience in the respective fields of operation, traffic and financial needs of the roads. With most deliberate and careful preparation all aspects of the existing condition of the carriers were honestly presented to the Commission, and this presentation received an extended support. This presentation was made on behalf of thousands of employes, stockholders and security owners, and honestly portrayed the needs, under existing conditions, of these interests.

Seemingly the Commission gave no weight to the integrity of purpose, and placed little value on the experience, knowledge and ability of the representatives of these interests to accurately make known their needs, and the Commission has assumed, notwithstanding this presentation, that it knew best as to the carriers' requirements in this instance.

The Commission, at the present time, is composed of four Democrats and three Republican members. Before occupying their present positions, four of these men were lawyers, one of them a professor of political economy, one a school teacher and professor of economics and one a railroad brakeman and conductor and vice-president of the Order of Railway Conductors. In the hands of these men, none of whom has had the advantage of personal experience in the consideration of the great problems of railroad management and railroad financing, apparently rests the future of our transportation systems. The only practical experience they have reecived has come through the testimony of those who really know, and as the Commission, on many occasions, has shown a disposition to discredit railway authorities and to form its opinions on preconceived ideas and theories derived very largely from sources antagonistic to railway interests, it can readily be appreciated that railway management views with apprehension the continued enlargement of the powers of that body.

Certainly the rate decision itself, affords the carriers no adequate relief, displays either lack of appreciation or sympathy with the real requirements of the carriers and in certain particulars, brushes aside, with an utter disregard of its importance, accumulated railroad knowledge built on practical experience of nearly a century.

The decision indicates that the Commis-



THE TUNE THE OLD COW DIED OF
There once was a man who had a cow,
And he had nothing to give her;
So he took up his pipe and played her a tune,
"Consider, good cow, consider!"

(From *Philadelphia Public Ledger.*)

sion is attempting to revolutionize the whole science of transportation instead of sitting as a judge to decide upon the simple question of reasonable rates, and this is clearly pointed out in the dissenting opinion of Commissioner Daniels. While railway officials are trying to accept the decision in an optimistic spirit, its influence is likely to prove both repressive and unwholesome.

The Commission undoubtedly makes an honest effort to deal with these momentous questions in a manner fair to all concerned, but its utter lack of financial responsibility, permits it to strangle an industry, or to at least experiment with it in a most dangerous manner, where, were it financially responsible, it would assume an entirely different attitude. Furthermore, the Commission, while composed of remarkably able men, has little technical knowledge of the many tremendous problems and difficulties involved in operating a modern and progressive railway plant and, therefore, lacks that sympathy which such technical knowledge always insures. Furthermore, the very nature of its work apparently places the Commission more in sympathy with the demands of the public than with the problems of the carriers, and it is little to be wondered at that the latter feel they have grave cause for apprehension in the developments of the future.

The one hopeful sign of the decision is that it helps to lighten, but only in a small measure, this apprehension as to the future, for it at least outlines, although in none too definite a manner, the methods which may be employed to augment revenues. Whether, however, the carriers may eventually be able to procure sufficient relief in the manner suggested by the Commission, is of course a matter largely for future determination. The outlook, however, is far from satisfactory and the entire industry has received a severe setback in not being permitted the immediate relief of which it stood so urgently in need. The decision, coming as it did, on the heels of the outbreak of the war in Europe, attracted the minimum attention and it has been impossible to measure what its effect might have been under more normal conditions.

The Commission, in its report, also took occasion to severely rebuke the carriers for what it considered constituted an organized effort to create public sentiment favorable to the five per cent increase. In view of the fact that this campaign was conducted openly, that it was subject to the most rigid tests of honorable procedure, and that, as representing hundreds of thousands of American citizens financially interested in the success of the railroads, the carriers had a perfect right to present their cause before the bar of public opinion, it is difficult to understand on what grounds the Commission finds it necessary to criticise the methods employed. Heretofore, the cry has been that the railways should take the people more into their confidence and now that such an effort is being consistently made, it hardly seems the duty, or within the province of the Commission, to discourage it. Certainly the Commission does not desire to set itself above the people and certainly the people have a perfect right to receive full information regarding controversies of great public interest.

Railway executives as a rule, appear adverse to expressing an opinion with reference to the decision. While it is clear that the great majority of them feel that the relief offered is pitifully small in view of the requirements of the case, they appear to feel that nothing can be gained at the present time in continuing the controversy. Many of them are now engaged in considering means and measures by which the relief suggested by the Commission, can be most rapidly accomplished. However, a few officials have publicly expressed themselves with regard to the decision and among such expressions have been the following:

President Markham, of the Illinois Central:

"While the decision as handed down by the Interstate Commerce Commission is not what was expected, nor what the railroads are justly entitled to, the report should be accepted and business be allowed to proceed along its natural course, as regards railroads and the public alike. The fact that the Commission has seen fit to recognize the railroads in their demands is of more importance than the immediate amount of money involved."

* * *

E. P. Ripley:

"The decision (in the advanced rate case) was a decided disappointment to all railroad men. The Commission appears to have given very grudgingly a fractional part of what was asked and what was proved to be needed. While I have not studied the decision, the published summary sounds to me as if it were a stump speech on the part of political aspirants. It is far from being the utterance of a judicial body. I cannot see where the roads interested will get much relief. About the only feature of the decision that is at all satisfactory is the mere recognition of the fact that the railroads need some relief."

* * *

Judge R. S. Lovett:

"It is extremely unfortunate for the whole country that the Eastern trunk lines were denied an increase in freight rates. The ruling in the Central Freight Association territory is not so bad. The Government cannot continue to deprive the carriers of an increase in rates and allow increased expenses to go on. The two must be dealt with sooner or later."

* * *

Ralph Peters:

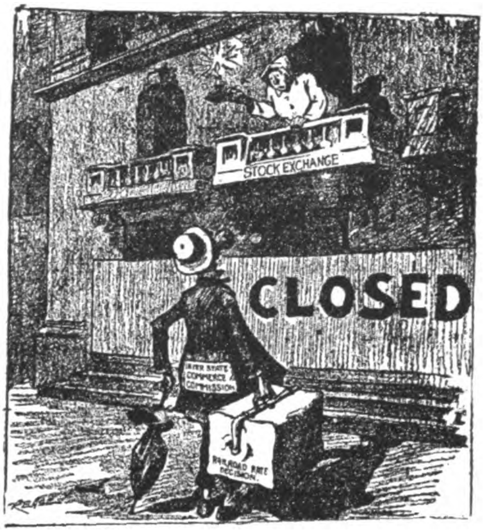
"I am very much disappointed. I had felt that the case of the railroads had been clearly proved. A ray of hope, however, lies in the making of extra charges for delivering cars on sidewalks, etc. If the railroads cannot raise rates they cannot raise wages, and they cannot continue extensive improvements. They will have to decrease facilities and class of service given the public. The decision means that the railroads will have a very hard and long road to travel for some time to come. They will not be able to increase their capital, because they cannot show sufficient earning capacity. It means that the railroads will have to run with their noses close to the grindstone."

* * *

F. D. Underwood, president Erie Railroad Company:

"There are no direct advantages to any railways in the territory covered by the decision, nor are the ways pointed out by it as a means of conserving revenue, worth while. It sets forth some constructive and valuable statistical tables. One cannot but wonder if they are worth as much as their cost. The axiom that 'when railways fare illy the business of the country shares in the depression' carried no weight in making the verdict.

"The railways' presumption was that they had made a case, and in this they were supported by their counsel and by a large contingent of intelligent freight rate payers. These now stand silenced, but not convinced. Meanwhile the business of the country is apathetic and must continue so until railway conditions improve. This is a fact that political doctors now in power do not seem able to recognize."



A Belated Arrival.
(New York World.)

* * *

Robert W. Davis, freight traffic manager, Buffalo, Rochester and Pittsburgh Railway:

"The conclusions of the Honorable Commission were, to us, a very great disappointment. We were hopeful that the carriers in trunk line territory had well sustained the importance to them of the modest advance applied for with sufficient proof, and that at least the proposed advance in class rate structures, which was distributed uniformly throughout the territory, would be favorably acted upon. Also that a large number of commodity rates would at least be subject to a compromise basis of advance. The dissent of the Honorable Commissioners, Messrs, McChord and Daniels from the majority conclusion, justified our hopes.

"I am of the opinion, however, that the situation is yet hopeful for the future welfare of the carriers. The suggestions advanced in the decision will be promptly acted upon, and will unquestionably, if indirectly, mean some substantial benefits, although it will take a long time and a large increase in the volume of traffic to even overcome in net, the tremendous burden of expense placed upon the carriers in the investigation of their application for the advance."

* * *

F. A. Delano, president Chicago, Indianapolis and Louisville Railway:

"It is perhaps hardly proper for me as I am about to leave the railroad service, to accept your suggestion, but I am at least making this very brief statement. The railroads did not get what they asked for, but they can get a good deal of benefit from the dicision of the Interstate Commerce Commission, if they read it with interest and with a disposition to make as much out of it as possible.

"The Commission's decision has a good deal of 'meat' in it and makes a good many suggestions with respect to abolition of objectionable methods and practices and suggests the necessity of a decided reformation in rates in C. F. A. territory and invites railroads to advance some especially low rates more than five per cent. If the railroads accept this decision as a sincere suggestion of what may be accomplished, I think they will get a good deal of benefit from it."

* * *

Frank Sullivan Smith, receiver Pittsburgh, Shawmut and Northern Railroad:

1. The decision of the Commission is a distinct recognition of the validity of the claim of the railroads that they are entitled to an increase in freight rates.

2. The Commission has committed an act of injustice in restricting the increase to railroads West and North of an arbitrary line drawn from Pittsburgh to Buffalo, inasmuch as there are railroads easterly of that line to which an increase is more important than some railroads to which it is granted. For example, this railroad encounters physical difficulties in operation in crossing the back bone of the mountain range between the Mississippi River and the Atlantic Ocean, involving unusual grades and curvature. To illustrate, a ton of freight moving from Kittanning, Pennsylvania, to Hornell, New York, must be raised 3,653 feet to overcome 326 feet difference in elevation between the two cities. Conversely, a ton of freight south-bound must be raised 3,327 feet to overcome the same difference in elevation, requiring eleven times the amount of work than would be required to overcome the actual difference in elevation.

Eighty-one per cent of the operating revenue of the railroad is derived from the transportation of bituminous coal, at an average rate of 4.72 mills per ton mile. The average revenue per ton mile of the railroads in the territory covered by the railroads applying for increase of freight rate is 6.06 mills per ton mile. Thus the rate on the chief product transported on this railroad is 1.34 mills per ton mile, or 22 per cent lower than the average rate obtaining on railroads in such territory. The cost of freight operation per ton mile in 1907 was 9.625 mills per ton mile; in 1913, it was 4.025 mills per ton mile, a decrease of 58 per cent. This would show that this railroad has exercised great economy, but that such economy has not been sufficient to put it upon an equality, in the freight rate received, with the average of other railroads in the classification territory, showing that the "high cost of living" of this railroad is entitled to some governmental relief, which would not obtain if this railroad had been permitted by the Commission to charge merely fair rates for freight transportation.

3. The decision of the Commission, together with the diminishing return from railroad securities due to increased cost of operation without increase in rates, will still further deter capital from investment in such securities for the construction of needed lines of railroad. If this is permitted to continue, it will result in the impairment of securities held by life insurance companies and bring distress to thousands of beneficiaries. Already this has been experienced by savings banks which have been supposed to be hedged about by the strictest conditions which the law can impose.

The decision of the Commission, while admitting the principle contended for by the railroads, is unjust and unfair in its application.

C. S. Sims, vice-president Delaware and Hudson:

In considering the freight rates of American railways it is necessary—

First, To realize the vast expanse and mileage of the country;

Second, To realize that for many years the American railway traffic manager's ideal has been to make the products manufactured, produced or grown along the rails of his company reach the broadest, greatest possible markets, frequently regardless of resulting very low rates; the traffic manager knowing that the local, the short haul, and the other business of a profitable manufacturing establishment or other business will warrant the few low rates necessary to greatly enlarge the market of this particular concern and thus keep it and its employes fully occupied;

Third, That these freight rates are lower than are found in any other place in the world, but this is largely due to the broadening out of the market and the shipping of goods great distances.

We concur in the opinion of Commissioner McChord—"To approve in central freight association territory the increased rates proposed in the majority report and to deny increases to the trunk lines appears to me to be unwarranted by the facts of record and not in harmony with the general basis of rate adjustment that has so long existed in official classification territory—"

And with Commissioner Daniels—"This disclosure is convincing that the return received, not on security issues, but on the book valuation of the property actually used in the service of the public, is wholly inadequate, when gauged from the standpoint of justice to the carriers and on the wider score of a continuance of adequate service to the public."

The Commission in its majority report states:

Page 408—"We suggest that all the railroads in official classification territory examine carefully their freight rates, rules and regulations with a view to increasing rates that are found to be clearly unremunerative, and modifying burdensome rules and regulations relating to minimum weights and similar matters where this may justly be done. The compilation prepared by the Commission of answers of the carriers to our questions in this proceeding calling for a statement of their earnings on representative traffic discloses many rates which yield barely enough in revenue to pay adequately for the mere use of the equipment. Our compilation also shows that a large proportion of traffic in many commodities is yielding less than seven cents per loaded car mile, although the record shows that railroad men ordinarily consider that the average earning per loaded car mile should be more than twice that amount. Many unremunerative rates had their origin in fierce competition for traffic or under the menace of the big traffic of powerful shippers. Many such rates have doubtless been continued through ignorance of the loss they entail upon the carriers."

Page 419—"Instances will be found of ton mile earnings as low as 0.58 of a mill and car mile earnings as low as 1.69 cents. Other rates, while yielding higher car mile earnings, appear very low when the value of the commodity is considered. For instance, there will be found through or proportional domestic rates on copper bullion below two mills per ton mile; the average yield on 676 cars of this commodity, as disclosed by the exhibits mentioned, was only 2.73 mills per ton mile and 11 cents per car mile, whereas the average yield on 2,486 cars of pig iron was 4.31 mills per ton mile and 17 cents per car mile. A compilation prepared by the Commission showing the market prices for a series of years of the commodities covered by the traffic exhibits together with representative rates thereon prevailing from time to time, will later be made available."

Page 391—"Passenger fares are paid directly to the carriers by those making use of the service, and they know what it costs them. Payments for freight charges, while less direct, are none the less actual. The general public does not know, and probably does not stop to consider what proportion of the cost of a ton of coal, or of the price of a dwelling, or the rent of an apartment represents freight charges, but the cost of freight transportation enters into the cost or selling price of practically everything used by the public. In many cases to be sure freight charges represent but a small proportion of the total cost of things used or consumed, but it is quite probable that the average family pays much more in the course of a year as freight charges that it does for passenger fares. We know of no provision of law under which we should be justified in increasing freight rates to provide a return upon property used exclusively in the passenger service, much less to take care of losses incurred in such service. In our opinion each branch of the service should contribute its proper share of the cost of operation and of return upon the property devoted to the use of the public."

While concurring with Commissioners McChord and Daniels in their statements that the railways proved the great need of increased rates, we agree absolutely with the Commission in the desirability of all railways in classification territory increasing those particular rates where the revenue return is very small and where increase in the rates will not disturb the market or sale condition of the article.

We also thoroughly agree in the statement relative to need of increasing passenger train earnings: at only a few points in the entire country do they actually carry any part of the overhead. It can, however, best be done by a decrease in the amount of train mileage, cutting down the service on branch lines to a figure more nearly in keeping with what the revenue warrants.

The Commission's influence and recommendations as to increasing those rates in classification territory which are very low, in decreasing unprofitable passenger train mileage, and in possibly increasing passenger train rates, especially mail pay, is so great with the general public and with the various State Commissions as to be of invaluable assistance to the carriers in accomplishing these desirable results, and if the Commission will use its great power and influence in behalf of the carriers the effort to bring about an increase will have been thoroughly warranted.

What a menace to the country's prosperity, the bankers consider the decision, is well indicated by the following letter sent on August 17th by J. S. Bache and Company of New York to over 32,000 bankers throughout the United States:

Dear Sirs:

Owing to the great European war, our financial situation is under an emergency pressure, because threatened by the unloading of railroad securities held by Europe. This was only temporarily halted by the closing of public markets.

Our securities are in disfavor because of low railroad earnings.

They should at once be made attractive to capital all over the world.

This cannot be done unless our railroad securities are given a safe margin of earnings. The value of all other securities depends upon the success of the railroads.

The railroads have proved and the Interstate Commerce Commission has admitted the necessity of enlarged revenues, but the rate decision grants only a meagre and insufficient pittance—not more than enough to increase earnings one-eighth of one per cent on the total capital of the eastern railroads which made the application.

This small advance will have no effect in restoring and establishing the confidence of the large investors here and the holders of our securities abroad.

These securities will be sent over as soon as possible to do so, to draw our gold or its equivalent, and they will not be taken up freely by our own large investors because they have not sufficient confidence in the success of the railroads under the present scale of low freights.

Rates need to be advanced materially in order to give such a margin of earnings that railroad securities will be sought.

Further than that; the credit system of the world has been upset. We have lost Europe as our bankers. We not only cannot hope to place new securities in Europe: We are compelled to take back vast quantities of existing securities which for many years Europe has been absorbing. Every year our railroad systems have to spend enormous sums to increase and extend their transportation facilities to meet the growing demands of American commerce. Where are the railroads to obtain the money with which to make the needed additions and improvements? They cannot turn to Europe: American investors are not attracted under present conditions; they will have to look to their earnings until the confidence of investors is restored. A liberal increase in earnings is absolutely necessary to keep up requirements of the transportation systems of the country.

Needed raises will start all the business of the country towards a prosperous level, because of the confident buying of railroad securities which will then take place, and because of the heavy purchases which the railroads will then be able to make, but cannot make now because of lack of funds and credit.

This is now a national question and relief should be given to the railroads immediately, in view of the emergency necessity.

We, therefore, earnestly suggest that you bring this matter at once to the attention of your representatives in Congress, and if you agree with us, urge them to favor the passing of—

A joint and concurrent resolution of the House and Senate directed to the Interstate Commerce Commission, requesting it, because of the emergency situation with reference to railroad securities, to review and revise the decision in the recent application of the eastern railroads, and in their discretion and in view of the great and extraordinary necessity for this action, to promptly grant further and adequate advances to all the railroads.

No financial move could be more beneficial now than to make our securities so attractive that the funds of the investing world would be irresistibly drawn to this country.

This would be accomplished if the railroads were given full and ample earning power. It would stimulate the whole industrial structure and enhance the values of all other securities. It would benefit every citizen of the United States by creating renewed and profitable activity.

Will you give this matter your earnest attention and will you kindly let us know if you agree and WILL ACT?

If you approve, please ask some of your larger shippers also to write or telegraph to Washington.

. We are, awaiting your reply,

Very truly yours,
(Signed) J. S. BACHE & CO.

While many editors see cause for encouragement in the Commission's decision, a large number of them condemn it in no unmeasured terms as they appear to feel that the Commission not only has failed to give the carriers a square deal but has rendered a decision which will make doubly hard a prompt return to more generally prosperous conditions.

The New York *World*, of Democratic leaning, discusses the decision in the following manner:

No one will ever be able to compute the damage that has resulted to business of all kinds by the delay in reaching this conclusion. Whether reasonably or unreasonably, finance, commerce and industry have been halted or checked for months while the issue has been under consideration. A state of mind is often as demoralizing as a state of facts, and it does not help much, as in the present instance, to say that there is no excuse for the state of mind.

On the score of mental influences the majority of the Commission itself appears to have been as powerfully swayed as anybody else. It has muck-raked the railroads. It has undertaken in one judgment to settle all their troubles and correct all their faults. It has laid down rules and regulations and volunteered advice enough to last for a generation. It has developed the idea that it is specially charged with the introduction of a new science. It has acted all along as though its decision, whatever it might be, was to stand forever.

Efficient public regulation of transportation lines cannot be conducted in this way. The problem which the Commission had to solve was a serious one, but it was overwhelming in its magnitude largely because the Commission refused to meet certain conditions and tendencies squarely in the beginning. It never took the Commission very long to reduce a rate or to suspend an increased rate. The abuses of which it complains have been going one ever since it was organized. Instead of dealing with one question, one system, one section or one commodity at a time it has attempted to create a new heaven and a new earth at a single stroke, with the usual result.

A Commission that is to fix railroad rates ought always to be well enough informed to act promptly. If it makes a mistake, as it is likely to do, no matter how long it discusses the question, it should be able and willing to remedy it on short notice. The Commission has failed in these respects because it is saturated with the spirit of bureaucracy.

The New York *Tribune*, on the other side of the political fence, also takes the occasion to severely criticise the Commission on its decision. Editorially it asserts:

The railroad rate decision, made public yesterday, is an amazing indictment of the Interstate Commerce Commission's intelligence and efficiency. In its pettiness the Commission's judgment is absolutely pitiful. The country would have far greater respect for the majority members if they had stuck boldly to their conviction that the Commission's primary duty is to starve the railroads. That would have been consistent and courageous, though bigoted. But to admit that the railroads really deserve larger returns and then to go through an elaborate performance of giving something with one hand while putting it back with the other convicts the Commission of inability to take its tasks seriously and to do its work in the light of the economic developments of the day.

In the last month the value of many railroad stocks has slumped from 10 to 20 points. On Friday all American stock exchanges closed in order to prevent further depreciation through the unloading here of shares held by foreign investors panic-stricken at the prospect of a general European war. Every intelligent man knows that credit here will be constricted and prosperity will be affected by the withdrawal of billions of capital about to be wasted in war. Every intelligent man knows that the great problem of to-day in the United States is to sustain enterprise and to soften the shock to business of the European conflict.

Yet on the very afternoon when Germany formally declared war against Russia the Interstate Commerce Commission handed down its piddling, petifogging decision giving the long maltreated Eastern railroads the advantage of a 1½ per cent increase in freight rates!

The present Commission has lost touch with actualities. It talks the language of 1908 or 1910, not that of 1914. One of the best things that could happen to this country would be the speedy creation of three or four vacancies in the Commission's membership.

An abstract of the Commission's decision, including the dissenting opinions of Commissioners McChord and Daniels, will be found in another section of this issue.

RAILWAY BUSINESS ASSOCIATION AND THE RATE CASE

Notwithstanding the fact that the Commission's decision is generally considered by railroad officials and the public press, as a severe check upon future railway developments, Colonel George A. Post, the optimistic president of the Railway Business Association, sees in it, by considering only its most favorable possibilities, a certain amount of encouragement for the future. While we cannot wholly concur in Mr. Post's view point, we admire his characteristic optimism, a quality which has made him the popular leader of one of the most aggressive and enterprising collection of business men ever brought together in one organization. In a recently widely circulated published statement, Colonel Post, discusses the Commission's decision in the following manner:

"Disappointment over the denial by the Interstate Commerce Commission of rate advances to the Eastern Trunk Lines in the face of the finding that they need more income, is softened somewhat by the temperate tone of the decision and by several important steps forward which are taken by the Commission in attitude towards the carriers.

"1. **Railway managers are frankly acknowledged to have shown sound judgment when they gave warning in 1908-1910 of an impending decline in net income.** The Commission in 1911 said: "We do not say that the carriers may not increase their income. We trust they may and confidently believe they will.' Three years have passed. The Commission now declares: 'We are of the opinion that the net operating income and the net corporate income of the railroads in official classification territory, taken as a whole, are smaller than is demanded in the interests of both the general public and the railroads'; while they specify with regard to two of the three Eastern systems selected by them in 1911 as 'typical' that 'in 1913 the New York Central Lines, with $49,000,000 greater gross revenues and $159,000,000 additional property investment, earned about $3,000,000 less net corporate income than in 1910,' and the Baltimore & Ohio with $91,500,000 earnings in 1910 and $105,000,000 in 1913, had in 1910 a net corporate income of $16,360,000 and in 1913 of $13,560,000. It would be hard to exaggerate the importance of this tribute to the integrity and far-sightedness of the railway executives. They have been assailed as needlessly alarmed, as insincere and even as juggling figures. Their influence has been injured by such charges. The Commission has given them a clean bill of health in all these particulars. A large part of the railway problem remains to be met and it is most fortunate that in future the railway managers can enter public discussion of railway needs having this high official certificate to their good faith and credibility.

"2. **Railway income in official classification territory is definitely pronounced too low.** This should put an end to another controversy. When the various proposed substitutes for a general advance in rates have been thoroughly tried, if the tendency of income is still such as to repel investment, the air will be cleared for dealing directly with the problem stated by Commissioner Daniels in his dissenting opinion when he says: 'the carriers must make a better showing of net revenue before they can as a whole enlist large additional supplies of capital,'—the problem which 'must be faced, not trifled with.'

"3. **Jurisdiction and obligation to consider railway earnings, income and credit in regulating rates are explicitly assumed by the Commission.** In 1911 this position was approached by the Commission cautiously and with references to the lack of statutory authority to consider earnings in ascertaining reasonableness of rates. In the proceeding just concluded Mr. Brandeis urged that 'the Commission has no power to consider the propriety of the rates taken collectively, except in so far as their reasonableness is determined by general considerations ....its power is limited to the determination, in the case of each rate, whether in and of itself it is just and reasonable.' Meantime the Commission in the Intermountain case had actually made rates wholesale and was upheld therein by the Supreme Court. The Commission, having now recognized the inadequacy of the net corporate income of the roads here concerned, makes this significant pronouncement: 'It is our duty and our purpose to aid, as far as we legally may, in the solution of the problem.' Three years ago solicitude for the financial health of the roads was expressed, but failed of its effect in strengthening credit because not accompanied by action. The present assumption of responsibility for permitting adequate rates is clinched by an actual and immediate grant of some substantial advances. The Commission says with regard to central freight association territory that carriers there ought to have the five per cent 'and possibly more'—the roads being urged to revise the whole rate structure in that region. With five commissioners voting an advance in a part of the territory and two dissenting because it is not given to all the petitioners, and considering that such increases as are sanctioned constitute the largest and most important general advance yet allowed in this country, it is not too much to say that this decision crosses the line into a new era of regulation, in which more than ever before the statements by the railroads of their necessities are given serious and sympathetic consideration.

"4. **To permit suitable rewards for foresight in promotion and efficiency in management is unreservedly declared wise public policy.** It has been urged in opposition to rate advances that profits should be limited. The Commission repudiates this doctrine. 'A carrier,' it says, 'may be entitled to a higher rate for a particular service because the existing rate is unreasonably low, although the carrier may not be in need of additional revenues'; and that 'there should be a liberal return . . . when the property has been wisely planned and honestly constructed and is efficiently managed.'

"5. **Roads of a region are granted advances notwithstanding that some of them have been criticized for their conduct.** Protestants before the Commission have emphasized and a large part of the public has been led to approve the idea that the people in doing business on a line not so criticized should be made to wait for facilities until every road in the territory competing with it on the same rates between common points shall have been purged of all sin. The Commission, while insisting that no road taken by itself shall be rescued from the consequences of wrong-doing at the expense of the rate-payers, ignores lines which are under fire where their neighbors are not.

"6. **Increase of passenger rates, very difficult to effect in the past, obtains the prestige of federal approval.** This will enable certain roads to lay before the Commission if they deem wise interstate rates not complicated with State rates, such as commutation into New York City from New Jersey and Connecticut, into Philadelphia from New Jersey and into Chicago from Indiana and Wisconsin. Immediate sanction for such advances will give the roads a strong backing when, as advised by the Commission, they appeal for higher passenger rates to the Legislatures and Commissions respectively of the States.

"7. **Necessity for proceeding to the immediate solution of income problems without waiting for collateral inquiries is recognized.** 'The practical necessities of the situation,' the Commission says, 'will not permit us to defer action, as suggested by some of the protestants, until our valuation of railway properties shall have been completed.' Commissioner Daniels goes further, expressing the opinion that the 'investigation into possible methods of conserving the revenues of carriers,' 'combined with the determination of the question as to the propriety of the rate advances,' had 'the unfortunate result that a decision upon the matter of approving or disapproving the tariffs filed has been quite unnecessarily delayed.'

"8. **Clear and definite standards are set up by which carriers may hereafter gauge their financial condition and determine whether the showing will be regarded by the Commission as requiring remedies from that body.** After discarding net corporate income as a standard for fixing rates on the ground that over-capitalization of some lines, unduly increasing interest charges, renders that standard defective, the Commission announces: 'We shall use the net operating income' (net earnings minus taxes and rental of facilities, but with interest and leased line rentals still to be paid before reaching dividends and surplus) 'as the product of transportation rates that should be examined in order to determine, so far as we may, the adequacy and tendency of their revenues.' This is to be employed in the form of its ratio to investment—accounts which are conceded to be imperfect, but which are declared to 'afford a usable basis for a fairly satisfactory study of the course and tendency of returns.' Any one who has followed the course of the rate advance litigation as it has groped its way from the pioneering in the 1910 case will agree that the development of a definite standard of railway financial health is a long stride forward and will save the roads large sums in the preparation of regional rate cases as well as substantially increase their chance of winning awards."

SERIOUS DECREASE FOR FISCAL YEAR

A study of the figures recently issued by the Bureau of Railway News and Statistics covering the financial results of railway operations for the fiscal year ending June 30, 1914, discloses conditions of a very unsatisfatcory character and tend to further emphasize the necessity for immediate steps to be taken to further augment the income of the carriers. Not within a decade has the net income of the railways of the United States been so low per mile of line as for the year ending June 30th. When it is further considered that a mile of railway in the United States represents a net investment of over $64,000 in 1914 as against only $52,000 in 1904, the heavy shrinkage in net assumes a startling significance.

A comparison of the gross operating revenues of the railways for 1914 by months with similar figures for a series of years, shows that the increase in revenues culminated in October, 1913, with a total of $301,083,625, almost duplicating the figures for the corresponding month in 1912. From that date, however, there was a steady decline in monthly revenues, so that the year closed with an actual loss of over $79,000,000 in gross. A further analysis shows that during the last eight months of the fiscal year, railway revenues fell off over $109,000,000, compared with the corresponding months of the previous year. Recent results indicate that the carriers, with all their strenuous efforts for greater economy, have been utterly unable to trim their cost of living to their depleted incomes.

How serious is the situation which confronts the carriers, may be judged from recent compilations showing the operating ratio which in February for the Eastern roads was 88.16 per cent, exclusive of taxes, and for the nine months ending March, 1914, 75.81 per cent.

Discussing the significance of these ratios, a recent bulletin of the Bureau of Railway News and Statistics, has the following to say:

> These ratios may be Greek to the general public, but to the initiated they are the gauge by which the health of the railway industry can be judged. Whenever the ratio, including taxes, for the railways of the United States as a whole runs over 70 per cent, there is need for a doctor, just as surely as when the temperature of an individual passes above 99 degrees.
>
> In last year's review it was stated that an average operating ratio of 73.40 per cent for the second half of the fiscal year was unprecedented. The last half of the year 1913-14 registers 75.70 per cent. Translated into absolute funds that difference of 2.30 per cent cost the railways over $70,000,000.

The following figures also prepared by the Bureau of Railway News and Statistics show the fluctuations in net operating income since 1907:

1906-07	227,454	miles	$760,278,000
1907-08	228,164	"	656,418,320
1908-09	233.022	"	742.987.190
1909-10	238.751	"	838.617.000
1910-11	243.229	"	768.303.345
1911-12	246.511	"	751.266.806
1912-13	248.817	"	842.409.336
1913-14	253.230	"	712.133.126

The figures show that the net operating income for 1913-14 is the lowest record in these eight years of railway travail except for the panic year 1907-08. Moreover, the mileage covered in 1914 was 253,230 against only 227,454 miles in 1907, and in the meantime, the net capital investment had increased from $12,920,352,548 in 1907, to $16,351,639,266.

Commenting on the significance of these figures, Slason Thompson, head of the Bureal of Railway News and Statistics, has recently had the following to say:

> There is no need of searching into the byways and dark passages of railway finance to find out what ails the railways. If they are being "looted"—as runs the favorite phrase of their inquisitors—it is by conditions as inexorable in their results as the laws of nature. Between 1907 and 1913 the average freight receipts of the railways was hammered down from 7.59 mills per ton mile to 7.29 mills. These are Commission's figures. That reduction of three-tenths of a mill reduced the railway revenues by a round $90,000,000.
>
> In 1907 the average daily wage of railway employes was $2.20; last year it was $2.49. That little increase of 29 cents a day added over $160,000,000 to the railway pay roll. Put these two items together and you have a quarter of a billion dollars lost in one year over which the railways have no more control than of the wind which bloweth where it listeth.
>
> Take the concrete case of the New Haven road over which the railway baiters gloat. In 1907 its average rate was 1.436 cents per ton mile; in 1913 it was 1.345 cents. That apparently insignificant decrease of 91 thousandths of a cent represented a loss of $2,303,000 on the freight carried in 1913. In 1907 the employes of the New Haven road, exclusive of general officers, worked 11,234,231 days, for which they received $23,754,807 compensation; in 1913 they worked 11,304,980 days (mark the coincidence), and were paid $27,793,112, an increase of $4,038,305 for practically the same days worked. These two items, due to rate reductions on one hand and wage advances on the other, account for a loss of $6,341,305 in the net revenues of the New Haven in 1913, and the proof is easy of access in the archives of the Interstate Commerce Commission.
>
> These reflections are only pertinent because rate reductions are proceeding apace, rate advances are suspended almost invariably, and wage increases, at the point of a strike or arbitration, are acquiesced in, because the railways must not falter in their public service; and there is no knowing what road may next fall under the harrow of a baseless hue-and-cry.
>
> There can be only one permanent remedy for the present intolerable situation. Like Saul on the plains of Damascus, the Interstate Commerce Commission must see a great light and, awakening to its vast responsibilities, cease to persecute the industry it was created to conserve as well as regulate.
>
> It must realize that rate discrimination may be due to unreasonably low rates as well as to unreasonably high rates and rectify the rates accordingly. It must also assume authority to forbid wage advances when it cannot or will not authorize a corresponding increase in rates and fares.
>
> The average of freight rates in the United States to-day is unreasonably low—relatively to rates in other countries it is ridiculously low. On the other hand, the average pay of railway employes is uneconomically high and relatively to freight rates it is ruinously high.
>
> Under government ownership the rates would be raised to a paying level or the wages would be reduced to their economic level. The two are interdeterminative and together constitute the crux of the railway problem.

DEVELOPMENTS IN RAILWAY MAIL PAY LEGISLATION

Since the statement regarding the development in railway mail pay legislation which appeared in July issue of the RAILWAY WORLD, the Moon bill has been amended by the committee so that the maximum rates now named would leave the total payments to the railroads just what they are at present. The maximum rates first named would have cut the total payments at least $3,000,000 below the amount actually appropriated for the current fiscal year.

The amendment referred to was quite widely heralded as a concession to the railroads and a number of newspapers which had recognized the justice of the carriers' contention for more adequate pay for carrying the mails, took occasion to congratulate them upon having obtained at least a part of what they were seeking. This impression was directly traceable to numerous news depatches sent out from Washington in which it was stated, more or less directly, that the amendment would give the railroads $3,000,000 more a year than they were getting at the present time. As the amendment referred to, however, merely restored what the first named maximum rates in the original bill would have taken away, it is readily perceived that the impression of a concession or any additional compensation to be furnished the railroads, was entirely incorrect. The best that can be expected of the amended bill is that it will probably leave the present total payments unchanged. While that would naturally be less unfortunate than to suffer a further reduction, it would be far from satisfactory as may be judged from the fact that the present appropriation allows compensation for probably only about half of the parcel post traffic and that the railroads demonstrated before the Joint Congressional Committee on Railway Mail Pay that they were underpaid more than $15,000,000 per year before the parcel post service started.

The weighing of the mails in two out of the four weighing sections of the country, since the parcel post was inaugurated, indicated over $4,000,000 additional pay due in each section by reason of the parcel post. It is a fair presumption that in the other two sections there is still a total loss of approximately $8,000,000 per year on this account, which will not be corrected until the mails are weighed in those sections.

The current appropriations, therefore, fail to provide for probably about $8,000,000 worth of parcel post service which is being performed by the railroads without pay. This, with the $3,000,000 additional cut of the Moon bill in its first form would have effected, gave the carriers an estimated loss of $11,000,000 per year which the passage of this bill would have caused, without taking into consideration the previously existing underpayment of over $15,000,000 per year.

The amendment, of course, betters to the extent of $3,000,000 per year the situation which the enactment of this would create, assuming that in practice the maximum rates would be accorded in every instance. But this sum is only a small part of the total underpayment that the measure would establish upon a definite statutory basis. Furthermore, the Moon bill makes the carrying of the mails compulsory, under penalty of $5,000 for each refusal. At present, the railroads are theoretically free to decline the service and this has no doubt been some protection against substantially confiscatory practices.

As a matter of fact the railroads have no apparent justification for assuming that, in practice, the maximum rates of the Moon bill would be allowed. Under the wide discretion the measure would confer on the Postmaster General, that official would allow as much less than the maximum rates as he chose, so that the actual reduction the railroads might suffer under this proposed law is entirely conjectural.

Furthermore, many illustrations are being constantly offered of the grave injustice under which the carriers are daily laboring due to present regulations.

Under these laws the Santa Fe recently received the generous sum of $2.50 for loading 11,000 pounds of condensed milk into one of its cars at Deming, New Mexico, the use of a goodly portion of a car en route, and transporting this milk to Silver City, New Mexico, a distance of fifty miles, unloading it and transferring it by wagons from the depot to the post office at Silver City.

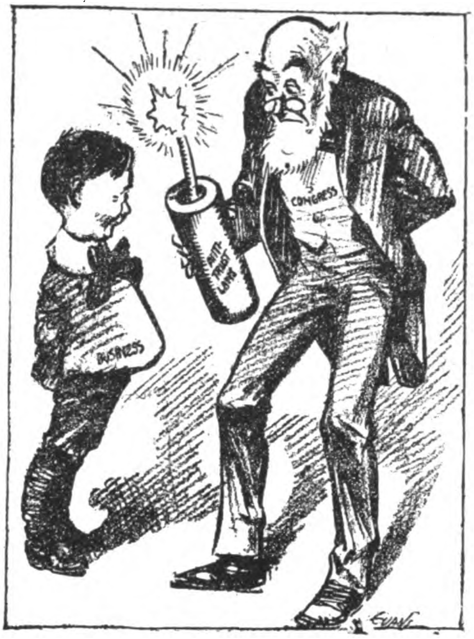
The parcel post rate on a 45-pound article from Deming to Silver City is 49 cents, so, on a shipment of 11,000 pounds between these two cities, the Post Office Department received $120.00, out of which it paid the railroad $2.50 for the great bulk of the service. Thus, the United States Government compelled one of the greatest factors in the welfare of the country, to work for it for virtually nothing. If this is not robbery, pure and simple, we should like to be informed under which head the Post Office Department classifies it.

GENERAL CONDITIONS

Predictions regarding the future, under existing conditions, are of course little more than worthless. Our international trade has been practically suspended and upon its reasonably prompt resumption will depend, in no small measure, the full return of trade and industrial activities of this country. Up to the time war broke out, while conditions were far from favorable, improvements were being noted in certain directions and the hope of a bumper grain crop held in it the possibilities of a greater business expansion with its resultant prosperity. The decision of the Interstate Commerce Commission in the five per cent rate increase case, disappointing as it proved to be, also might be said to hold out at least a small measure of encouragement to the struggling roads.

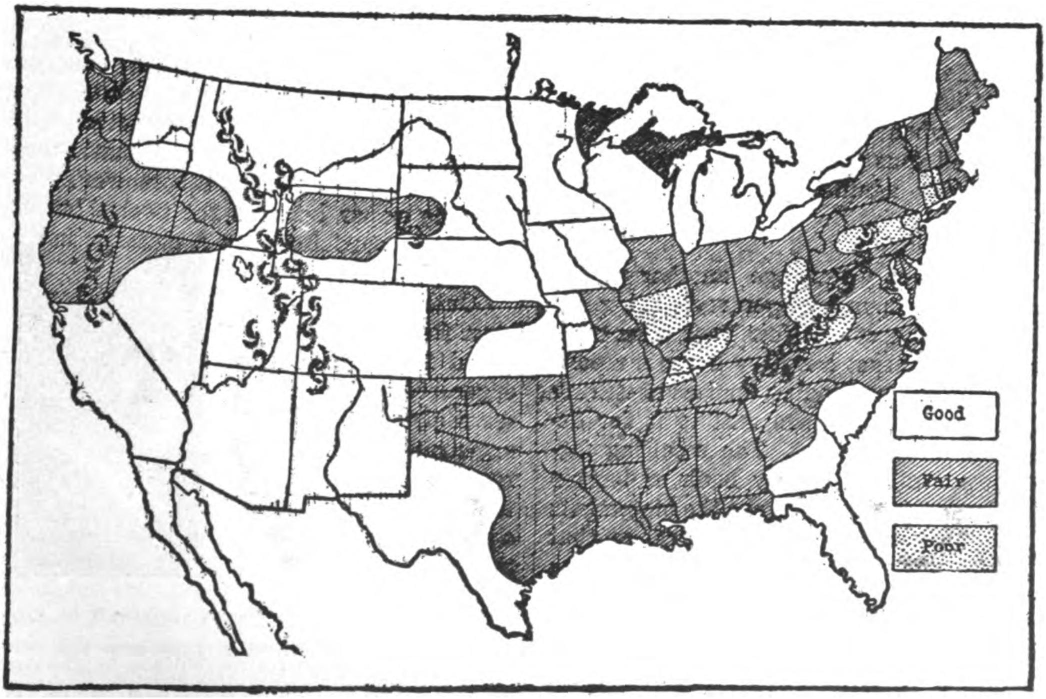
All these tendencies, however, have been swallowed up in the greater influence of a European war and the question now in the heart of the business world is not how large will our crops be or how soon will the railways be able to place themselves on a more favorable footing, but when will the war be over in order that we may resume our normal activities? All ordinary barometers fail in the time of war and so the country stands to-day, firm in the belief of its ability to weather the storm, but extremely conservative regarding its present or future activities.

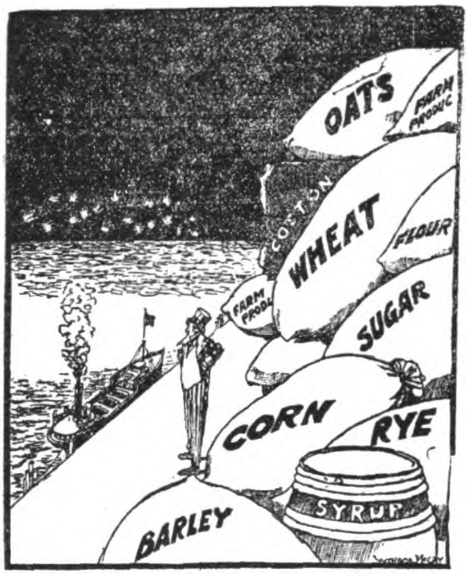
PSYCHOLOGICALLY SAFE AND SANE



CONGRESS.—Don't be afraid, Sonny. It won't hurt you.—(From *Baltimore American.*)

Fundamental Business Conditions





MILLIONS IN CROPS; NO SHIPS TO MARKET THEM!

(From *New York American.*)

It is of interest to note, however, the general condition of the country just previous to the beginning of the great European conflagration, and perhaps no better index is offered than the results of an investigation recently concluded by the United States Chamber of Commerce, the outlines of which are graphically portrayed by the accompanying map. This investigation shows the manufacturing industry to be exceedingly quiet throughout the entire ocuntry. Mining of nearly all kinds was suffering from strikes and lack of demand, lumber interests were feeling the dearth of building especially in small towns and in the country and the railroads, because of decreasing revenues and increasing expenses, had cut down their forces so far as possible and laid off many trains in the interest of economy.

Against these unfavorable conditions, however, the investigation disclosed the fact that the situation of agriculture was most encouraging despite drought conditions prevailing more or less extensively in widespread sections. While spring wheat and corn developments have been of a rather discouraging character recently, it is believed that the winter wheat crop will unquestionably be a record breaker and will probably not be less than 650,000,000 bushels. Other crops aside from grain indicate conditions above the average, while in the South, the cotton crops have shown remarkable improvement and more than an average crop is confidently anticipated. In other words, agriculture stands ready to deliver a wealth of products, which, under normal conditions, could not have failed to stimulate both commerce and industry. Under existing conditions, however, no one can measure its effect, as the usual channels of trade are closed and the country must wait to learn what disposition it can make of its resources before it can form any estimate as to what the results may be.

THREATENED RAILWAY STRIKE AVERTED

The threatened strike of Western locomotive engineers and firemen has again been averted, for the time being, by the familiar device of a pretended arbitration. The principal demands of the men, as usual, are for more wages in all classes of service, a shortening of regular time, with a corresponding increase in overtime, and an increase in the rate of pay for the latter, more allowances for preparation time and terminal delays and an arbitrary demand for the employment of two firemen on large coal burning en-

MEN WHO WILL TAKE PROMINENT PART IN THE WESTERN WAGE CONTROVERSY.

Reading left to right they are: Warren S. Stone, head of the Brothrhood of Locomotive Engineers; G. W. Hanger, member of the Arbitration Board; Hon. Martin A. Knapp; Hon. William L. Chambers, Chairman of the Board; and W. S. Carter, President of the Brotherhood of Locomotive Firemen.

gines regardless of the character or length of the run, the tonnage haul, or the work required of the firemen.

These demands could scarcely have been made at a less opportune time. Railway labor is thoroughly familiar with the fact that the carriers are passing through one of the most depressing periods of their history and are not only unable to pay any increases in wages, but many of them are finding it extremely difficult to keep their properties out of the hands of receivers. These considerations, however, have evidently not been given the scantiest consideration by the men, whose demands simply represent the latest development in the now familiar cycle of wage-extortion.

The men, at first, were extremely arbitrary in their attitude, and efforts by the Mediation Board, to have the matter mediated or arbitrated, were met with a peremptory refusal. Public temper expressed itself so forcibly, however, that labor leaders saw the wisdom of a compromise and gave a reluctant consent to the employment of arbitration.

The managers of the roads were and are opposed to the general manner in which these arbitration proceedings are conducted. They contend, and with the best of reasons, that the men are willing to arbitrate only one side of the questions at issue, and that the proceedings, in effect, bar them from proposing any sort of counter-claims against those which would be advanced in behalf of the men. If the roads can not be heard in arbitration on the claims made by them during their negotiations with their men, such arbitration degenerates into the merest farce, and so far as the railways are concerned, amounts to "heads you win and tails I lose." Even in the event of an unexpected result in which the men would fail to procure no award of increase, what guarantee is there that the men would go on as before? As a matter of fact, the utmost they venture on the proceeding is that they will not strike now, but may at some later date.

Notwithstanding the unfair conditions under which these labor controversies are now arbitrated, the Western managers, upon a personal appeal made by President Wilson to place patriotism above property interests, have consented much against their better judgment, to arbitrate the demands involved with the 55,000 enginemen and firemen and thus prevent what threatened to be one of the most extensive transportation strikes the country has ever witnesesd.

The railroad managers consented to present the case for settlement in a way already approved by the employes and the Federal Board of Mediation, to avert what the President characterized as a "national disaster," although they realized, and President Wilson pointed out, that all the merits of their side could not be taken into consideration.

Chairman Chambers, of the Board of Mediation, at once began preparations for bringing the dispute to arbitration but in view of the one-sided developments, the managers felt called upon to issue the following statement:

> "The controversy between the Western railroads and their enginemen finally narrowed to a single issue, namely: Can these railroads be heard in arbitration on the claims made by them during their negotiations with their men?
>
> "To avoid all possibility that under an arbitration award a reduction in pay might be forced upon the men, the railroads proposed that the arbitration agreement should give to the men on each road the right to elect, after a complete schedule was awarded by arbitrators, either to adopt the schedule thus awarded or to continue their prior schedules.
>
> "The railroads felt that their plain duty required them to insist upon a plan of arbitration which would recognize their right to be heard upon the claims on their behalf which were regularly presented and discussed with the men during their negotiations; but in response to the request of the President on July 29th, that both sides confer with him before final adverse decision by either side, the committee of managers came to Washington with open minds prepared to co-operate with the President and to make whatever contribution to a peaceful settlement of the controversy was demanded by our duty to the public and was consistent with the preservation of our rights.
>
> "At our conference with the President on Saturday, and again in his letter to us on Sunday, the President strongly urged that in view of world-wide conditions the situation had reached a crisis in which patriotism and a regard for public welfare were paramount to all other considerations, even to the sacrifice of what, in ordinary circumstances, might properly be insisted upon as a right. The railroads have responded to this appeal by accepting the plan of arbitration proposed by the mediators, which provides that no claims other than those of the employes as originally presented shall be submitted to arbitration, and which plan, in the judgment of the President, offered the only means under the existing circumstances of averting what might prove to be a disastrous strike."

The President's letter of appeal to the railway managers which brought about their agreement to accept the plan of arbitration as proposed by the Mediation Board, was as follows:

> "In view of world-wide conditions, unparalleled in recent history, which have arisen with-

in the last few days, it is obvious that the suspension of business on roads serving more than half the territory of the United States would be a calamity of incalculable magnitude. The situation has reached a crisis which hardly permits a full consideration of the merits of the controversy and I feel that in the circumstances I can appeal with confidence to your patriotism and to your regard for the public welfare to make whatever sacrifice is necessary to avert a national disaster."

The reply of the managers said:

"Under any ordinary circumstances we should feel that our plain duty to the interests committed to our charge would not merely justify but would require us to insist upon a plan of arbitration that would recognize our right to be heard upon claims regularly presented on our behalf. But we also appreciate keenly, as you have pointed out, that an unparalleled condition has arisen which hardly permits a full consideration of the merits of our case and which constrains you to ask us to waive any discussion of merits and accept the plan of arbitration proposed by the mediators which we feel convinced offers under the existing circumstances the only way of avoiding a disastrous strike upon all the railroads of the Western half of the United States.

"In view, therefore, of the situation as you have presented it and of your appeal to our patriotism and to our regard for the public welfare, we beg to express to you herewith our acceptance of the plan of arbitration proposed."

The Tree Which It Was Proposed to Fell.

(From New York Annalist)

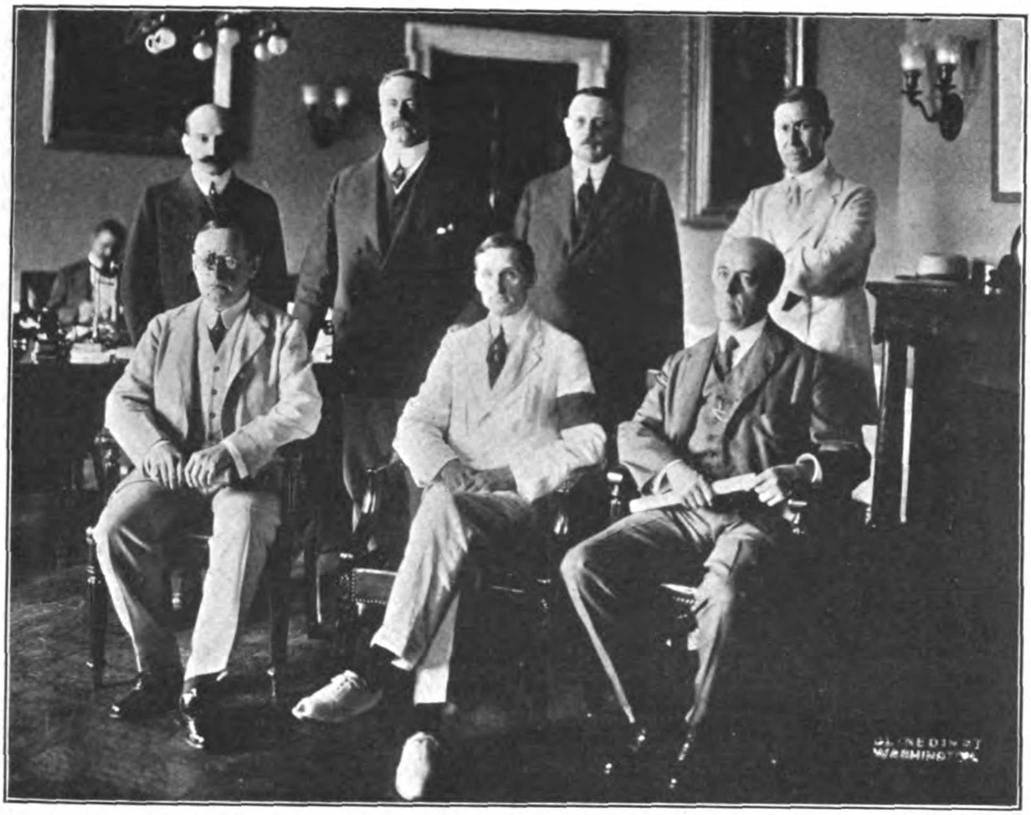
SUIT AGAINST NEW HAVEN WITHDRAWN

The Attorney-General of the United States, has taken a wise course in agreeing to the plan of the dissolution of the New Haven system as worked out by its board of directors; and also in agreeing to withdraw the civil suit in return for a promise made by the New Haven that it would make every effort to sell its Boston and Maine shares within a year and if a suitable sale cannot be made within that time, to request a further extension from the courts. Before the expiration of this period the Massachusetts court will again convene, and, it is hoped, will be more amenable to the company's efforts to persuade it to remove the oppressive conditions of sale to which such strong objection has been raised. This compromise, in effect, amounts to a virtual surrender of the position of the Government, and by its terms the New Haven is to be allowed to retain the New York and New England road by which it has reached its Ontario and Western lines and made connections with Pennsylvania.

This ray of sunshine, the first which has hit the New Haven system for many months, should prove a source of considerable encouragement to those New Haven officials who are now working so heroically and sincerely to rehabilitate the property. Evidently the Attorney-General has come to the conclusion that nothing can be gained by standing out for his original contention and that the property would be likely to be still further depreciated in value by dragging it through the courts. We believe the Attorney-General and the New England States will find that the New Haven will respond to a more friendly treatment in a manner highly beneficial to all concerned. The New Haven still constitutes one of the finest railway systems in the country and those now in charge are fully able to develop its latent possibilities for the good of the community to their fullest extent, providing they receive the encouragement from regulative authorities to which their efforts are entitled.

THE FEDERAL RESERVE BOARD

President Wilson has completed his nominations for the membership of the Federal Reserve Board and railway officials will note with pride that the President has appointed Frederic



THE FEDERAL RESERVE BOARD.

Seated from left to right are Charles S. Hamlin Governor; W. G. McAdoo, Secretary of the Treasury; F. A. Delano, Vice-Governor. Standing left to right: Paul M. Warburg, John Skelton Williams, Comptroller of the Currency; W. P. G. Harding and Adolf C. Miller.

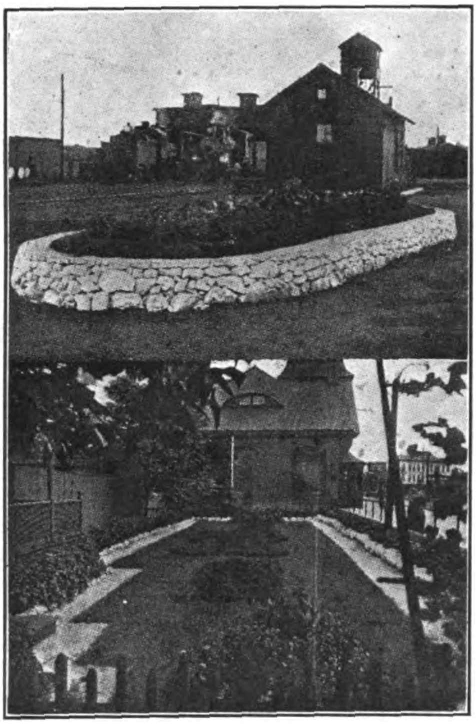
A. Delano to take the place of Thomas D. Jones, of Chicago, whose name was withdrawn some time ago. Mr. Delano and Paul M. Warburg, John Skelton Williams, W. P. President, have both been confirmed by the Senate so that the Board is complete and consists of the following members:

Charles S. Hamlin, Governor; F. A. Delano, vice-governor; W. G. McAdoo, Paul M. Warburg, the last two nominees of the G. Harding and Adolf C. Miller.

Mr. Delano, who, at the time of his appointment, was president of the Chicago, Indianapolis and Louisville Railway Company, is eminently fitted to fill the position to which the President has called him. He was born in Hong Kong, China, in 1863, but spent most of his boyhood days in Newburg, New York. He graduated from Harvard in 1885, with an A. B. degree and started his railway service in the same year with an engineering party of the Chicago, Burlington and Quincy and in 1890 became superintendent of freight terminals for the same road at Chicago and in the following year superintendent of motive power. From 1901 to 1005, he was general manager of the Burlington, subsequently becoming consulting engineer of the War Department in respect to Philippine railroads, and later president of the Wheeling and Lake Erie Railroad. President Taft named him a member of the Commission on Industrial Relations in 1912, and he was renominated for this Commission by President Wilson. During the past few years, Mr. Delano has been largely engaged in the development of financial and reorganizing plans of various Western roads and his activities have given him a broad experience in financial matters which will prove of practical value to him in his new work.

BEAUTIFYING RAILWAY STATIONS

An effort which has gained in popularity during the past few years, but which has recently been more or less restricted owing to the hard times confronting the carriers, has been the



Examples of Garden and Parking Developments on Frisco Lines, at Pittsburg, Kansas, and at Ft. Scott, Kansas.

beautifying of the grounds surrounding railway stations along the various rights-of-way. Considerable ingenuity has been expressed in the development of garden and parking schemes and a number of important railroads have, from time to time, offered prizes for the most successful efforts in this direction.

Not so much has been heard about these efforts within the past two or three years, but it is unfortunate that they should not have been continued and increased. Passengers are not unappreciative of well-kept and artistic station grounds and undoubtedly they give the railroad an air of refinement and prosperity which should prove no unimportant influence in stimulating passenger travel. The following photographs, which, in the first instance, shows the mechanical department grounds and facilities of the Frisco Lines at Pittsburg, Kans., and in the second the transportation department park of the St. Louis division of the same road at Fort Scott, Kans., are good examples of what may be done in developing attractive environments and, with a more liberal treatment of the railroads, it is to be hoped that these beauty spots may eventually be found along the right-of-way of every important system.

A COMPARISON OF RAILWAY RETURNS FAVORS EUROPEAN ROADS

Although railroads of the United States added a far smaller amount to capital per mile between 1910 and 1912 than any of the three principal railroad countries of Europe, so great was the burden of increased expenses on revenues that they totally failed to keep abreast of the foreign systems in return on the investment. This, as shown by the Bureau of Railway News and Statistics in its annual comparison of returns on United States railways with those of England, France and Germany, is in spite of the fact that our own railways made by far the largest increase, both actual and relative, in operated mileage.

In the two years ended with 1912, for which comparisons for all four countries are now possible, United States railways added 3.7 per cent to mileage on an addition of 5.2 per cent to capital. In contrast to this showing, Germany's Government roads added 6.4 per cent to capital to make an addition of only 2.5 per cent to mileage, while France, to expand by but 0.9 per cent in mileage, added 4.5 per cent to capital, and England, adding only 0.4 per cent to mileage, expanded capital 1.5 per cent.

The effect of this economical outlay of new capital on American roads is shown partly in the per mile comparisons. United States railways in 1912 were capitalized only 1.4 per cent higher per mile than in 1910, while German roads were 3.9 per cent higher, and French railways were 3.4 per cent higher. Though English roads show a smaller relative increase per mile than our own, this is because their capital per mile already is so excessively high, their 1.1 per cent representing more than three times our own 1.4 per cent in actual figures.

It is in the absolute increase of per mile capital, however, that the moderation of American capitalization becomes most apparent, for while the United States in the two years was adding a paltry $878 per mile, England was adding $2,784, Germany $4,245, and France almost $4,500 per mile.

Yet with all the advantage of moderate capitalization United States railways were so pressed between the millstones of sluggish revenue and rising expenses (spending 8.2 per cent more to do 3.3 per cent more business), that ratio of net to investment was 10.8 per cent smaller in 1912 than in 1910 (while with taxes included the loss is 12.5 per cent), Germany despite its excessive capital expenditure aided by gigantic increases in traffic and rates rigidly maintained in the face of public demands for reductions, displayed a ratio of income to capital 10.3 per cent larger in 1912 than in 1910. England's ratio fell 1.1 per cent, while that for France declined 3.7 per cent.

The percentages of increase in the various countries between 1910 and 1912 follow:

	England	France	Germany	U. S.
Length	0.4	0.9	2.5	3.7
Capital	1.5	4.5	6.4	5.2
Capital per mile	1.1	3.4	3.9	1.4
Revenues	3.9	9.0	15.0	3.3
Expenses	6.4	15.0	13.3	8.2
Net	-0.4	0.7	17.0	-6.2
Ratio to capital	-1.1	-3.7	10.3	-10.8

In the 15 per cent revenue increase on German railways is seen one of the most powerful reasons for the apparent success of the Government roads for although expenses to do the business rose 13.3 per cent, net was expanded by 17 per cent. In France, owing to lavish expenditures following nationalization of the Western Railway and laws requiring establishment of pensions, expenses rose 15 per cent against a 9 per cent gain in revenues, leaving net almost at a standstill.

In England, where a rise of 3.9 per cent in revenues was more than eaten up by a 6.4 per cent rise in expenses, the difficulty has been met partially by increases already awarded in freight and passenger rates.

For the United States an 8.2 per cent rise in expenses to do 3.3 per cent more business, rate reductions continuing and no prospect for adequate recompense in higher charges, is in sharp contrast to the prosperous showing for the Government roads of Germany, where expenses properly chargeable to operation are charged continually to new capital, and where in the face of enormous traffic expansion the minister of public works year by year stoutly resists public demands for reduction of what are pronounced excessive rates.

The Value of Courtesy.

(From the "Frisco-Man.")

SAY, this thing of being a grouch is a frost. There's nothing in it.

Keep it up and the first thing you know your draw bar comes out while you are pulling up a hill and you land at the bottom—Junk.

Put on the soft pedal and apply the air to this old rough and ready stuff. It don't get you any further than a dead engine.

I know some fellers think it a sign of feebleness to say "please," but believe me, I've found that little word good for anything from a hot axle to a mad "super."

Then, this thing of bawlin' out a man so that everybody in the roundhouse knows that you think he is all of the fifty-seven varieties of idiots, should go to the discard. I've found a heart-to-heart talk, sorter soft and low, went further and did more good than all the finest oratorical cussin' over a lengthy period and longer distance ever did get me.

Of course, we all get spells when the mad wells up into our systems until our collar button creaks. But the other fellow can get just as mad and we are a tie with nothin' doin' but a lot of humid conversation. It's a lot better to get him off into an unused corner and go at him something like this:

"Bill, you've got lots of good points and I know you are trying to do the best you can, but you are a little out of line and I want you to help get it right."

Bill swells up and says, "Sure," and you have turned up jack.

Then, there's the ignorant public. It's astonishing how little they know. You catch yourself wondering how they make a living anyhow.

This reminds me of Tom Shelton, who was a brakeman on a passenger run. An old lady asked him if the Ozark Uplift was north or west of where they was.

Tom took off his hat, and turned all the way round until he faced her, and said:

"Lady, durned if I know."

Tom didn't know it all, even though he had railroaded for thirty years. So we've just got to remember that the public that asks a lot of questions are trying to learn something worth knowing, and it should be our pleasure to help them along.

If one thing more than another gives me the original pip, it is these Smart Alecks who feel called upon to josh every one that wastes their time talking to them.

This kind of cattle finally wind up wonderin' why it is they can count their friends on the first joint of the index finger of their left hand.

Sure, they enjoy their wit, and maybe some other sap head grins, too, but the shudderin' victim remembers it longer than any one else, only different, and when his turn comes, which it generally does, the wit is walking slow, far behind his job.

Then there's the poor fellow that wants to be nice and polite and is playing the wrong system.

He don't know that kind words and dulcet tones are the panhandler friends. He reels off a line of talk with his eyes fixed upon the whole round world and hears nothin' except his conversation, or he uses the counter for an Ostermoor and rests a larger portion of his weary bulk thereon.

It all comes to this. You've got to be attentive, listen carefully to what the other fellow says, cut out the slouch and give a real and timely smile occasionally and then you'll be pretty close to the genuine article.

If you haven't really got it, a little practice will get it.

Contemporary Opinion

The Safety First Movement.

(From the "Scientific American.")

WHATEVER may have been the sins of the great American trusts, a blind and cruel disregard of the physical welfare of their employes was not one of them. To be sure, there have been instances of long hours and arduous labor; but the men who had imagination enough to create corporations capitalized at half a billion dollars and more had also imagination enough to see the business folly of endangering life or of working a man to the point of exhaustion. Taken as a whole, accident prevention and welfare work have been more developed by our great industrial companies than by smaller manufacturers. Indeed, were it not for the salutary laws that have been passed in most States to check the frightful loss of life and limb that has hitherto marked the course of our industrial expansion, it is probable that those merciful provisions which stand not only for humanity, but also for good business, would still be confined to the trusts.

The history of the Safety First Movement in America is in that respect a duplicate of the history of the movement abroad. Long before the social democrats insisted upon the passing of those stringent accident prevention laws, for which Germany is famous the world over, the larger German manufacturing companies had instituted accident prevention and welfare systems that testified to their humanitarian instincts and their good business sense. Systematic accident prevention is at least fifty years old in Germany; in the United States hardly fifteen years old. While we can hardly boast that we have approached the high standard set by Germany, still the record which we have to show for our fifteen years is creditable indeed.

But much more remains to be done—how much can be gleaned by examining statistics. From a chart which was exhibited by the Prudential Insurance Company of America at the recent International Exposition of Safety and Sanitation, it would follow that there are 25,000 fatal industrial accidents per annum in the United States, and some 300,000 injuries. The mere possibility of being able to state in statistics the approximate number of our industrial casualties is a step in advance; for as late as 1908 it was impossible to estimate with any accuracy at all what was the toll we paid in crushed limbs and snuffed-out lives. Now at least we know how vast is the problem to be solved, how much needless suffering we inflict and how much we lose in dollars and cents, because we have hitherto failed to realize the necessity of guarding men as well as machines.

It has been estimated that it costs about $300 to train a skilled workman to perform a new task, and that ultimately he represents an investment of about $2,000 to his employer. Considering the subject of accident prevention from this cold-blooded standpoint, our business policy has not been all too wise.

Now that there is an awakening of employers to the duty which they must exercise, now that employers' liability statutes have done away with the antiquated common law conception of negligence, we may watch for a very marked improvement in deaths and injuries.

As an example of the splendid work which the large corporations are doing in the education of their employes, we may instance the Pennsylvania and New York Central Railways and the United States Steel Corporation. The work of the steel company is particularly difficult because it is dealing with employes who come from half a dozen different countries and who speak not one word of English. Railroad companies have their problems, too, because they are dealing with the most ponderous and, at the same time, the most swiftly moving machinery that we know.

It would be hard to estimate with any degree of accuracy how much money is annually spent in driving home the Safety First principle; but it must run well up near a million dollars, if we take into consideration what the larger companies spend in issuing educational pamphlets, in employing lecturers, in installing safety guards in machine shops, and in maintaining splendidly equipped emergency hospitals. That it pays to do this is evident from the figures published by the Pennsylvania Railroad. Surely, the reduction of serious accidents to the shop employes of that company alone from five to seventy per cent is magnificent.

Some Truths Gleaned from a Busy Life.

(By William J. Barker in the "Rio Grande Service Gazette.")

IT does not cost anything to be civil at all times, and many times civility brings back a return that means a lot in dollars and cents.

Make up your mind to get along with people in your business life, no matter how much of a task is may be at times.

The man who comes out boldly asserting that his knowledge is superior to that of someone else will never be taken at his word. Let the other fellow tell about your superiority. If it is worth telling, it will soon go the rounds.

Loyalty is three-fourths of the battle.

Be faithful to whatever interests you. It is one of the best traits in man, and, as he grows older, develops into one of his greatest assets.

Sometimes a man will feel himself becoming indifferent to his employer and to his work. That is just the time for him to find another employer, because he is no good where he is, and he is wasting his own and his employer's time.

There is no use being anything but natural. A bluffer is rarely accepted at his face value. No sane man should try to pretend he is something he is not.

There is nothing in being too independent. No matter how high a man goes in business life, he is, to a great extent, dependent on others.

One of the greatest guides in going through business life, and one that will point you right always, is self-control. It is pretty hard work to swallow your pride at times, but most times everything is all right—in fact, better—after you have swallowed it.

Watching the clock will not get a man anywhere. Hard work and the average amount of common sense will shove you along quicker than anything else.

Doing things in a limpy, listless way is not really doing them. Things are only done well when there is plenty of heart behind the effort.

In every game of sport there is a penalty prescribed for every kind of foul. Every man who has been in business many years will tell you it pays to play fair in all dealings.

Play a little every day, if it's only a good laugh or enjoying a good story at luncheon with some of your friends. It holds the capacity for play in good condition and keeps a man in better shape for work.

Ought We to Help?

(By an Employe of the Frisco Lines.)

SHOULD we not, in the interest of the company which employs us, whose interests after all are our interests, cast our votes for the man or men, who will not continually introduce bills, or help pass them, that will be detrimental to the railroads?

If you or I were conducting a business of our own, would we not expect our employes to work for our interests along business lines, and would this not be proper? Therefore, would it be right for our employes to cast their votes for a man, or class of men, who they knew would legislate against our interests?

We are, year after year, asking for higher wages, better working conditions, etc., and have in the past received them, but can you or I expect things to work for our welfare in the future, as they have in the past, if we do not lend a helping hand, I mean by our vote?

The men we send, or help to send to Congress, make the laws by which we are governed and which we work under. It is these men we help to elect who pass laws reducing rates and causing loss to our company, and in the end loss to ourselves.

Study this over, fellow workers, and interview the men who are asking for your support in the coming election with a view to determining how they stand on the question.

Ought we to help?

Ships versus Railroads.

(From the "Southern Pacific Bulletin.")

"CAN you tell me," asks Chairman Hemans, of the Michigan Railroad Commission, "why we get so excited when we hear that the government is going to do something for American ships, and why on the other hand we seem to care so little about anything for American railroads? Some of us are deeply perturbed because American ships may have to pay tolls for carrying freight through the Panama Canal; but none of us are clamoring for the purpose of a free right of way, for instance, for any American railroad that carries freight. We cheerfully spend millions of dollars on the Lime Kiln crossing and the Livingstone Channel to promote shipping on the great lakes, and many more millions for locks at Sault Ste. Marie. And we take pictures of these waterways improvements and put them on postcards which we proudly send to our friends. But I wonder what would happen to the statesman who would suggest that we appropriate funds from the public treasury to break down heavy grades on some of our railroads so that they could haul freight at less expense. As far as public aid is concerned, I can see no difference between the man who invests in ships and the man who invests in railroads."

Can we possibly find the answer to Mr. Heman's conundrum in the fact that the improvement of inland waterways is paid for out of federal coffers, which are far enough away to seem cheap, and filled largely through indirect taxation? We are quick enough to complain about any local government officer who seems to be in any way responsible for an increase in the local tax rate, but we usually applaud the congressman who helps to open the pork barrel and "get something for his district."

The Human Railroad.

(By Elbert Hubbard in the "New York American.")

HISTORY is mostly a record of fights. Business is a record of boosts.

Business builds, constructs, enlarges, bridges the rivers, tunnels the mountains. Business sets people to work and pays them what they are worth.

The big railroad man takes out the seventy pound steel and puts in one hundred; he creosotes the ties, paints the station, replaces wooden platforms with brick pavements, tears down old structures and builds better, replaces wood with steel, and steel with concrete; replaces dirt with cinders, and cinders with stone ballast.

He gives opportunity to the laborer, encourages genius, helps initiative, joins hands with the inventor, co-operates with the farmers, works for better schools, for school gardens, for playgrounds, good roads, concrete sidewalks, removes the rubbish, plants trees, shrubbery, flowers, waters the waste places, drains the swamps, knows what the factory men and the business men are all doing along the line; gets in touch with them, clasps hands with them, eats with them, laughs with them, talks with them, advises with them, knows their wants and sympathizes with them in their problems; settles contentions, and settles them rightly.

The railroad is a citizen of every town, city, village or township through which it passes.

It is a taxpayer, and it is interested in everything that makes for human happiness and betterment. Nothing that is human is alien to it. Treat it well.

The Main Chance.

(From the Grand Rapids, Mich., "Herald.")

WHO says "there's no chance" for the boy "without a pull"?

In the greater Pennsylvania Railroad System there is a corps of 170 ranking officers—BIG men in BIG jobs. Out of this 170, 163 (including the President) started at the bottom. Not NEAR "the bottom." AT "the bottom." Some of them were office boys. Some of them were water boys. Some of them were section hands. Some of them were janitors. ALL of them—163 out of 170—started in with the Pennsylvania in the most ordinary and commonest kind of labor.

Genius and Loyalty and capacity and preparedness are their own blessed reward. A thought worth remembering just now when school and college are contributing their fresh young blood to the commerce of America!

Meanwhile, ANOTHER thing! Out of this corps of 170 ranking officers in one of the greatest railroad systems in the world, 142 have been in the service over twenty years.

It pays to STICK!

A rolling stone gathers no moss. Wandering time servers never "arrive."

Some "Don'ts" for Officials.

MANY railroads have sent broadcast among their employes long lists of "Don'ts" for their guidance, but here is a completed list of "don'ts" for the officers which are being scattered among the officials of the Missouri Pacific as well as a number of other railroads, which are applicable not only to railway officials but to all who happen to fall into a little bit of authority. They were compiled by C. H. Carson, superintendent of the Ft. Dodge, Des Moines & Southern road:

"Don't nag. Many a good man has been nagged into inefficiency. Don't humiliate a man by advertising his shortcomings from the housetops, but quietly point them out to him. He will lose an arm for you, if necessary. Don't treat your men as if they belonged to a kindergarten class. Chances are they are better posted than you are. Don't be afraid to compliment an employe for some commendable service. He is made of precisely the same kind of stuff you are.

Don't forget that the subordinate has as much gray matter as you have. Don't forget that where some of your men are making mistakes that cost dollars, you, by pursuing a mistaken idea and policy, may be costing the company thousands. Don't forget that a man who is made out of the right kind of material will resent a brutal call-down, and you should not complain if he knocks you down. Don't forget that a man who will stand for a 'cussing' because of some mistake or oversight is not the man to help your administration. He should be fired. Don't forget that a whole industrial world has changed since you had your ear close to the earth and that what might have been done 25 years ago, would be impossible now. Don't forget that while you are checking everybody else up it might be a good idea for the company you represent to make a careful inventory of yourself. You might be 25 years behind the times."

In Lighter Vein.

(From the "Chicago Traffic Bulletin.")

Adirondacks, July 24, 1914.

Dear Tom:

Me for Geology every time! It doesn't split any infinitives with me whether hard headed, practical, tired business men believe in science or not—for these guys who depressed the earth to make oceans when the clouds came down, and weakened the outer casing of Mother Earth so that a blowout produced these hills, can have my ballot. It's great beyond the expressive power of Boston English up here. Birds, trees, flowers, brooklets—everything but the real Rosalind—and the transparent drop for a sunset and moon rise within ten minutes in a Belasco production. But we're not worrying about that just now—we're trying "for to forget" the long and weary hours of waiting we've put in, hoping we'd hear a noise like the I. C. C. granting that one-twentieth of one hundred per cent advance.

I wonder just how long those Mr. Commissioners think business can stand on one foot. There are a good many ostriches and pelicans in the commercial world—but not many of the circus kind. When your competitor is doing every stunt calculus offers to figure out how he can sell his goods without going completely broke it's no symptom of joy to wait, like the bunch at the county fair, for the balloon to go up, before you know what it's going to cost to send your stuff to the fellow who buys it f. o. b. his own back door. What's more, these R. R.'s have got to know what's doing. How can they make out a decent budget when nothing will budge? You can't buy ten dollars' worth of stuff for fifty cents—but that's what the efficiency experts who get rich writing for magazines want 'em to do. You've got to show me, Tom—I don't want to pay a bonus to any railroad for anything—but I do want to get a "quid-pro-quo." A little less howling about a "living wage" and a bit more action on a fair and profitable rate will solve so many of the ills that are inoculating business that everyone will say—when it comes—"Why didn't we think of that before?"

The great trouble is, Tom, we don't realize that "Transportation" is part of our social, moral, financial, physical, mental and philosophical existence. But it costs money—and it's about time some real big fellow with genuine nerve got up and said so in a voice like Thunder. Then maybe the "dear peepul" would come to—the I. C. C. would throw in their high gear—the R. R.'s could buy a new suit of clothes occasionally—and commerce would come into its own again.

Yours hastily, but always for that five per cent,

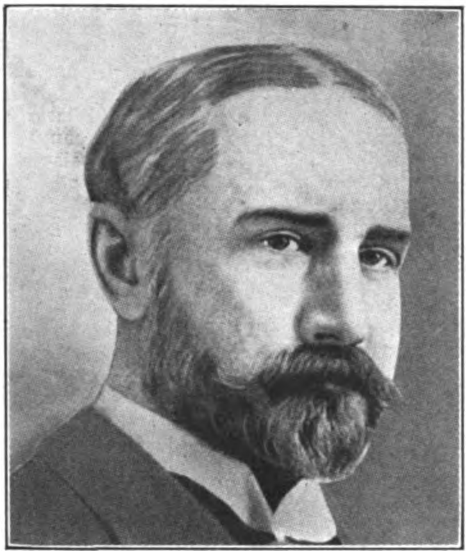
S. H. IPPER.

A hundred-point man is one who is true to every trust; who keeps his word; who is loyal to the firm that employs him; who does not listen for insults nor look for slights; who carries a civil tongue in his head; who is polite to strangers, without being "fresh"; who is considerate toward servants; who is moderate in his eating and drinking; who is willing to learn; who is cautious and yet courageous.

Hundred-point men may vary much in ability, but this is always true—they are safe men to deal with, whether drivers of drays, motormen, clerks, cashiers, engineers, or presidents of railroads.—Elbert Hubbard.

"A nursed grudge, growing out of a surly answer, has been responsible for many of the troubles of the railroads."—Fairfax Harrison, President, Southern Railway.

Personal



Henry S. Pritchett.

DOCTOR HENRY S. PRITCHETT, president of the Carnegie Foundation, has been elected director of the Santa Fe System to fill the vacancy caused by the recent death of Byron L. Smith, of Chicago. Doctor Pritchett was formerly president of the Mississippi Institute of Technology and is known as one of the greatest educators in the United States. As a philanthropist and president of the Carnegie Foundation, he has wielded a great influence for the betterment of mankind.

Frank Scott.

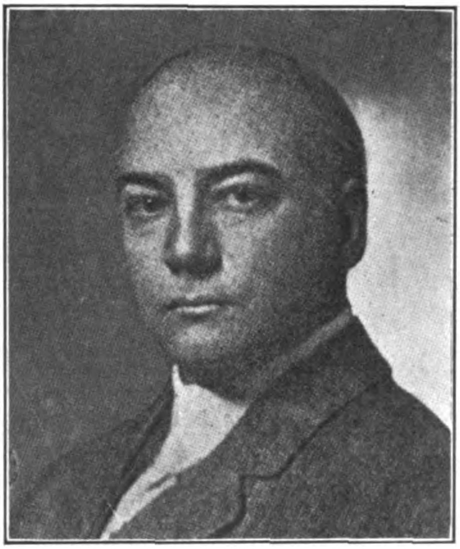
OWING to the death of Mr. M. M. Reynolds, vice-president in charge of finance and accounting, Frank Scott has been appointed vice-president and treasurer in charge of all finances of the Grand Trunk Railway Company. Mr. Scott is a member of a distinguished Montreal family, being the son of the late Dr. William E. Scott, M.D., for many years Professor of Anatomy at McGill University and Chief Medical Officer of the Grand Trunk Railway Company and is a brother of the Rev. Canon Scott, of Quebec, one of the leading Canadian poets. Mr. Scott has been treasurer of the Grand Trunk Railway for the past thirteen years adding to that office treasurership of the Grand Trunk Pacific in 1906. He entered railway service in 1879 as clerk in the Audit Department of the Grand Trunk and has risen steadily to the vice-presidency. In 1891 he was appointed secretary of the Audit Board and Purchasing Committee. Two years later he was made assistant treasurer and succeeded Mr. Charles Percy as treasurer in 1901. He is a member of the Board of Directors of the Grand Trunk Pacific; past president of the Society Railway Financial Officers of America and is a former chairman of the St. James Club, Montreal.

William C. Tompkins.

WILLIAM C. TOMPKINS, who has recently been appointed assistant to the vice-president of the Grand Trunk Railway Company, entered the service of this road September 1, 1885, in the office of auditor of pay rolls. Two years later he went over to the office of the general manager, which afterwards became the president's office. In May, 1908, he became secretary to the late vice-president, Mr. M. M. Reynolds, remaining in charge of that office during Mr. Reynolds' service with the company.

Albert J. Stone.

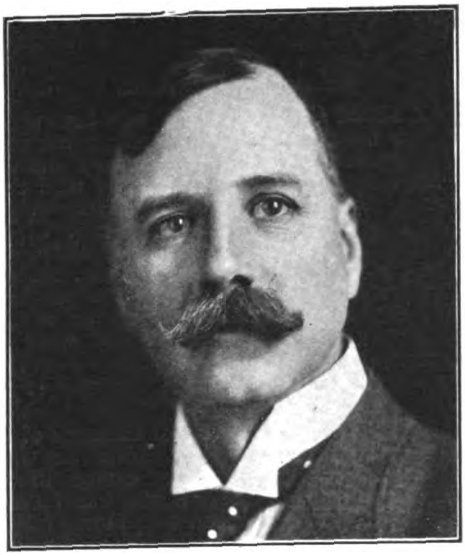
ALBERT J. STONE, general manager of the Erie Railroad at New York, has been elected vice-president in charge of the operating department. Mr. Stone was born at Holly, Mich., 1873. Educated at Hornell High School, Hornell, N. Y., and the Elmira Business College, at Elmira, N. Y. He entered railway service in 1888 as messenger on the New York, Lake Erie and Western, and remained with the road and its successor, the Erie, in various positions in the operating department until 1902, when he became assistant to the general manager. In 1903 Mr. Stone entered the service of the Delaware and Hudson Company as general superintendent. In 1905 he was appointed assistant general manager of the Erie and its controlled lines, and in 1907 he became general superintendent of the same road, until January, 1913, when he was appointed general manager.



ALBERT J. STONE.

Walter H. Ardley.

WALTER H. ARDLEY, who has been appointed comptroller of the Grand Trunk Railway System, has been thirty years in the services of this road and has risen from

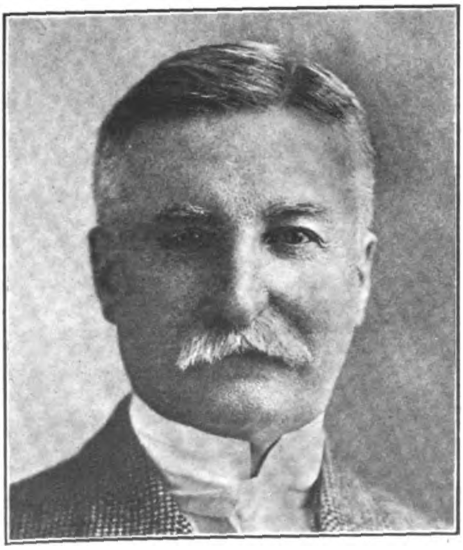


Walter H. Ardley.

the junior clerkship to his present position as Chief of the whole Accounting Department of the big System. He entered railway service November 5, 1884, and has been chief clerk and general bookkeeper in general auditor's office 1893 to 1907; auditor of disbursements, 1907 to 1908; acting chief auditor, August 31 to December 31, 1908 and general auditor Grand Trunk and Grand Trunk Pacific Railways from January 1, 1909 to date. He was recently appointed to the Board of Directors of the Grand Trunk Pacific Railway.

W. R. Campbell.

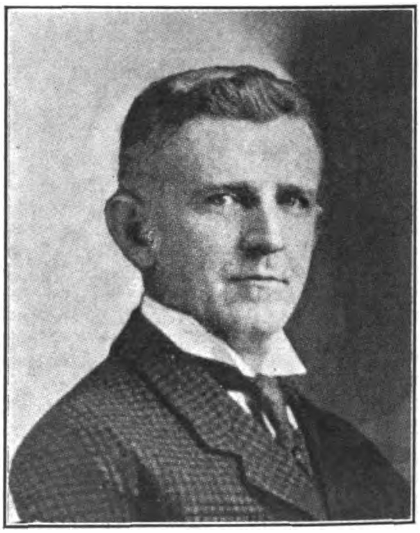
W. R. CAMPBELL who, on July 20th, became vice-president of the Susquehanna and New York Railroad Company, was engaged in various commercial occupations until 1885, at which time he entered the services of the Louisville and Nashville Railroad. He occupied various positions in the freight department of this road and with the Illinois Central, until October, 1889, when he was made secretary of the Transportation Committee of the Louisville Board of Trade. He left this position in 1893, to become freight claim agent of the United States Leather Company, with headquarters in New York and later became traffic manager of the same company. On January 13, 1908, he was appointed assistant to the president of the Susquehanna and New York Railroad, which position he held at the time of his recent elevation to the position of vice-president.



W. R. Campbell.

W. B. Groseclose.

W. B. GROSECLOSE, who was formerly assistant freight traffic manager of the Missouri, Kansas and Texas Railway, has been appointed traffic manager of the Detroit, Toledo and Ironton Railway, with headquarters at Detroit. Mr. Groseclose was born October 27, 1858, at Salisbury, N. C. He entered railway service in 1876 and from that time until 1888 was consecutively clerk, operator and agent of the Indianapolis & St. Louis and the Atchison, Topeka & Santa Fe, and cashier, agent and route agent of the Adams and Wells Fargo expresses. On December 10, 1888, he was appointed agent of the St. Louis, Arkansas & Texas, retaining that position until April, 1890, when he became general agent. From July, 1890, until July, 1893, he was general freight agent of the same road which is now the St. Louis Southwestern, of Texas. In July, 1893, he became the general manager of the Tyler Car & Lumber Company, Tyler, Tex., but in June, 1894, was appointed commissioner of the Galveston Freight Bureau. From January 15, 1895, to November 15, 1898, he was assistant general freight agent of the Missouri, Kansas & Texas, of Texas, at Houston, Tex. On November 15, 1898, he was appointed to a similar position on the Missou-



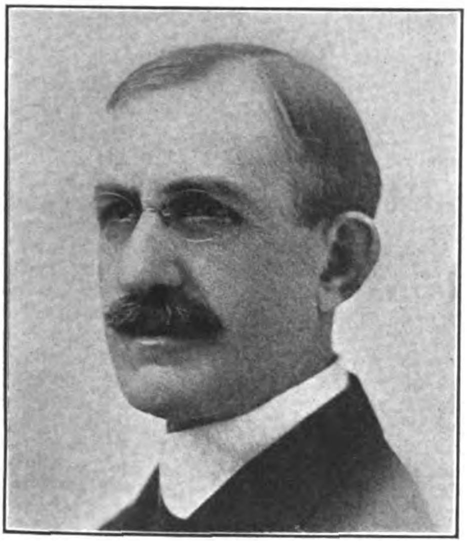
W. B. Groseclose.

ri, Kansas & Texas, at St. Louis, and on January 15, 1901, succeeded to the position of general freight agent. From June 1, 1910, to January 1, 1914, he held the position of assistant freight traffic manager, with headquarters at Chicago, as above noted.

C. B. Heiserman.

C. B. HEISERMAN, who recently became general counsel of the Pennsylvania Lines West of Pittsburgh, was born in Urbana, Champaign County, Ohio, September 18, 1862. He was educated in the Urbana public schools, and at Ohio Wesleyan University, graduating from the latter institution with the class of 1884.

Mr. Heiserman taught in the Urbana High School for two years while studying law. He was admitted to the Ohio bar in December, 1887, and in 1889 he was elected prosecuting attorney of Champaign County, Ohio. He served in this capacity until 1894, at which time he resigned to become Judge of the Common Pleas Court for the Second Judicial District of Ohio, to which he was elected in 1894 for a term of five years.



C. B. HEISERMAN.

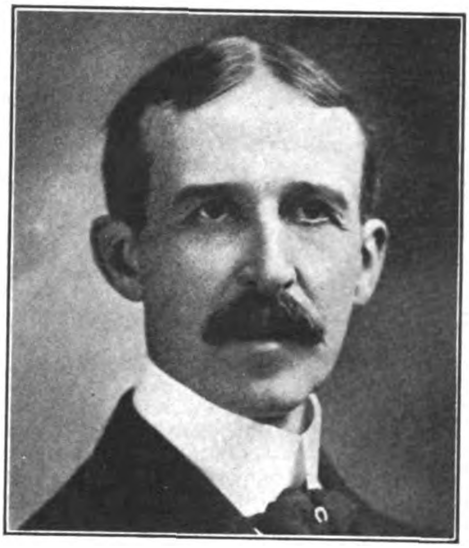
Mr. Heiserman was re-elected in 1899 for a second term of five years, but before the expiration of this term he resigned to become solicitor for the Pittsburgh, Cincinnati, Chicago and St. Louis Railway Company, at Urbana, Ohio.

On May 1, 1910, Mr. Heiserman went to Pittsburgh as general solicitor of the Pennsylvania Lines and on May 1, 1914, he was elected general counsel.

W. G. Phelps.

W. G. PHELPS, who has been promoted to the position of purchasing agent of the Pennsylvania Lines West of Pittsburgh, was born at La Porte, Ind. He was educated in the public and private schools of La Porte and Valparaiso.

Mr. Phelps was employed by the Vandalia Railroad from 1877 to 1884 at telegraph operator and agent, but he left the service in 1884. He re-entered the service of the Vandalia Railroad on November 5, 1888, as clerk in the general freight office at St. Louis. He was made chief clerk to the fourth vice-president, Pennsylvania Lines, on June 9, 1901; on January 1, 1913, he was appointed assistant purchasing agent, and on June 1, 1914, purchasing agent of the Pennsylvania Lines.



W G. PHELPS.

Ernest Baxter.

ERNEST BAXTER, who has recently been appointed purchasing agent of the St. Louis Southwestern Railway, was born October 11, 1882, at Delmer, Ont. He was educated in the public schools and in March, 1903, entered the service of the Michigan Central Railroad as a messenger. From May to Sep-

ERNEST BAXTER.

tember, 1903 he was a clerk with the Algoma Central & Hudson Bay Railway, at Sault Ste. Marie, Ont., October, 1903, to March, 1905, secretary to superintendent of the Grand Trunk Railway, London, Ont., and from April, 1905, to February, 1906, operating departments of the Cincinnati, Hamilton & Dayton Railway, at Indianapolis, Ind., and Missouri Pacific Railway at St. Louis, Mo. Mr. Baxter took service with the St. Louis Southwestern Railway and from February, 1906, to April, 1909, was secretary to general manager and from then until his recent promotion chief clerk to president. His appointment as purchasing agent of the St. Louis Southwestern was effective June 22, 1914.

R. E. Simpson.

R. E. SIMPSON who was recently appointed general superintendent of the Southern Railway, was born at Glen Alpine, N. C., in 1870. He was educated in the common schools and began railway work in 1882, as a water boy for the section gang on the old Western North Carolina Railroad, now part of the Southern. From water boy, he became a section man, then section boss and later work train boss. After that, he became a conductor, trainmaster, assistant superintendent and finally superintendent. In the latter position, he has at various times, had charge of three different divisions and was superintendent at Knoxville, at the time of his promotion to the general superintendency. His actual services to date, have covered a period of thirty-two years.

R. E. SIMPSON.

Edward L. Lalk.

EDWARD L. LALK, general agent of the Santa Fe System at Pittsburgh, has been elected president of the Traffic Club of that city. Mr. Lalk was born on June 15, 1857, in Burlington, Ia., where he was graduated from the high school. He entered railway service in 1873 as a clerk in the treasurer's office of the Burlington & Missouri River Railroad. From July, 1873, to 1875 he was with the Chicago & Paducah Railroad of Streator, Ill.; from 1875 to January, 1876, paymaster for the Quincy, Alton & St. Louis Railway, Quincy, Ill.; January, 1876, to August 1, 1877, clerk in the general freight office of the C. B. & Q. in Chicago; August 1, 1877, to October 1, 1881, cashier and paymaster of the Burlington & Missouri River Railroad and agent at Atchison, Kan.; 1881 to October, 1884, auditor, Northwestern Traffic Association, and acting commissioner for the Burlington, Wabash and Rock Island pool, Chicago; October, 1884, to October, 1886, freight agent, National Despatch Lines, Chicago.

EDWARD L. LALK.

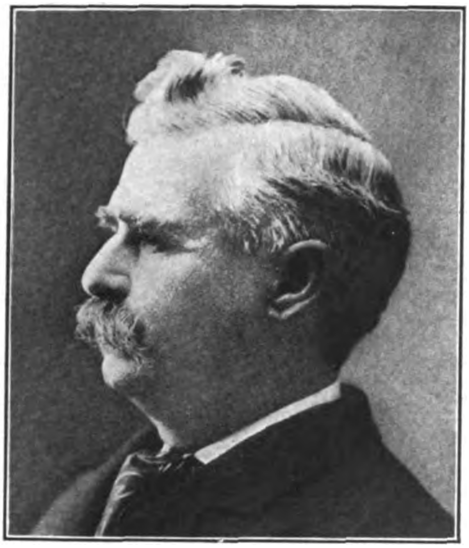
Mr. Lalk commenced service with the Santa Fe in the auditor's office in Topeka, where he remained from October, 1886 to March, 1887, from which date until 1896 he was out of railway service. In March, 1896, he returned to the Santa Fe as a clerk in the freight department in Chicago. He was appointed general agent for the freight department in Pittsburgh, Pa., on September 1, 1898.

He is one of the best known traffic officials in the State of Pennsylvania.

OBITUARY.

William E. Clark.

WILLIAM E. CLARK, who for a number of years was connected with the Boston and Maine Railway, died at Charlestown, N. H., on July 5th. Mr. Clark was born in Manchester in 1847. He enlisted in the navy at the age of sixteen and served in the navy for three years, participating in the capture of Fort Fischer. Soon after the war, Mr. Clark engaged in the business of railroad bridge building and later was made roadmaster of the Connecticut Division of the Boston and Maine, where he served for nearly twenty-five years. About 1897, he accepted a position with the



William E. Clark.

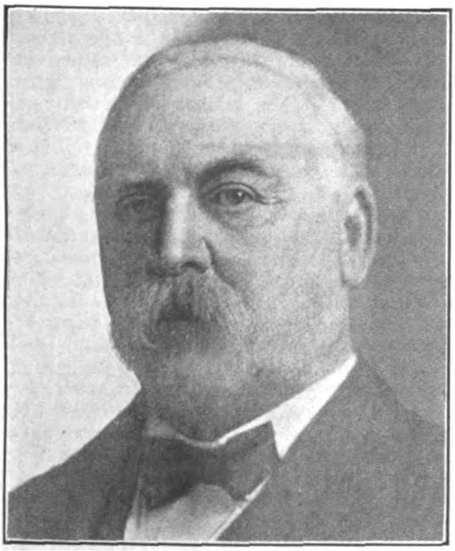
Rail Joint Company of America, and since that time has been actively engaged in the sales department of that company, there having been few sections of North America that he has not visited.

Martin L. Clardy.

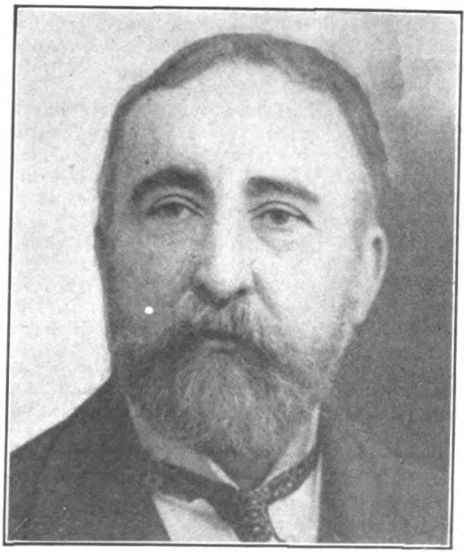
MARTIN L. CLARDY, vice-president and general solicitor of the Missouri Pacific and of the St. Louis, Iron Mountain and Southern Railway Companies, died in St. Louis, on July 5, 1914. Mr. Clardy was born in Ste. Genevieve County, Mo., in 1844, and served as a boy in the Confederate Army, from which he retired at the close of the war with the rank of major. He was educated at the St. Louis University, the University of Mississippi and the University of Virginia. He was a graduate of the Academic Department of the University of Virginia and also studied law in the same institute. In 1878, Mr. Clardy was elected as the representative in Congress of the whole first district of Missouri. He represented this district in the 46th and 47th Congresses and after the State was redistricted, represented the 10th Congressional District of Missouri in the 48th, 49th and 50th Congresses, serving until 1889. He had the distinction of being the chairman of the Committee of Commerce of the House of Representatives at the time of the passage of the original Interstate Commerce Act and had no small part in the preparation of the measure. In 1884, Mr. Clardy was a delegate at large to the Democratic National Convention in Chicago.

About a year after his retirement from Congress, he first became associated with the Missouri Pacific and Iron Mountain companies as assistant to Judge H. S. Priest, who was at that time general attorney of the companies for Missouri. When Judge Priest was appointed to the United States bench in 1895, Mr. Clardy succeeded him as general attorney for Missouri and served the companies in that capacity, also having charge of all matters pending before the Interstate Commerce Commission until 1909, when, upon the retirement of Mr. A. G. Cochran, he became vice-president and general solicitor which position he continued to occupy until the time of his death.

Melville Ezra Ingalls, former chairman of the Board of Directors of the Cleveland, Cincinnati, Chicago & St. Louis Railway, died July 11th, at Hot Springs, Va. Mr. Ingalls was born in Harrison, Me., September 6, 1842. He was reared on a farm and was educated at Bridgeton Academy and for a time studied at Bowdoin College. He received the degree of LL.B., from Harvard in 1863, and also received the honorary degree of A.M. from Bowdoin in 1902. He began to practice law at Gray, Me., but soon removed to Boston, where in 1867 he became a member of the Massachusetts senate. In 1870



Martin L. Clardy.



Melville E. Ingalls.

Mr. Ingalls entered the railway business. In 1871 he was appointed receiver of the Indianapolis, Cincinnati & Lafayette Railroad and moved to the Middle West. He reorganized the company and in 1873 became the president of the road. In August, 1876, it failed again and he was once more appointed receiver. Out of this ruin in 1880 rose the Cincinnati, Indianapolis, St. Louis & Chicago Railway of which he was elected president. In 1889, this road and the Cleveland, Columbus, Cincinnati & Indianapolis Railway were consolidated under the name of the Cleveland, Cincinnati, Chicago & St. Louis Railway. Mr. Ingalls was elected president and continued in that office until February 1, 1905, when he was elected chairman of the Board of Directors. From October 1, 1888, until February, 1900, he was also president of the Chesapeake & Ohio Railway and from January, 1881, to October, 1883, he was president of the Kentucky Central Railroad. His retirement from the chairmanship of the Board of Directors of the "Big Four" in 1912, which was really a declination to be re-elected, was inspired by a realization of failing health. He was also formerly president of the Merchants' National Bank in Cincinnati. The Joint Traffic Association, which the United States Supreme Court later held to be in conflict with interstate commerce and anti-trust laws, was organized by Mr. Ingalls. Besides the widow and daughter, Mr. Ingalls is survived by four sons, Melville E. Ingalls, Jr., and Fay Ingalls, of New York; George H. Ingalls, of Chicago, and Albert S. Ingalls, of Cleveland.

Henry A. Angell, a pioneer car manufacturer of Adrian, Mich., died at his home in that city on July 27th, at the age of 88 years. About the time of the Civil War he held the contract for supplying the Michigan Southern and Northern Indiana R. R. with car wheels.

W. S. Becker, assistant to vice-president of the Norfolk & Western Railway and formerly general superintendent of the Western Division, with headquarters at Bluefield, W. Va., died at his home in Bluefield, July 20th. Mr. Becker was born at Salem, Ala., in 1857. He began his railway career in 1899 as a brakeman with the Union Pacific R. R. He was assistant trainmaster, trainmaster and chief clerk to general manager of the Norfolk & Western Railway from 1898 to 1902 and then for a time was with the Chicago & North Western Railway. He returned to the Norfolk & Western as superintendent of the Pocahontas Division. He was appointed general superintendent in 1905 and assistant to vice-president, in December, 1912.

Robert M. Boyd, general agent of the freight department of the Chicago, Milwaukee & St. Paul Railway at Seattle, Wash., died in that city, July 5th, aged 45 years.

Henry R. Emerson, formerly from 1904 to 1907, minister of railways and canals for Canada, and previous to that premier of New Brunswick, also a member of the Dominion Parliament, died on July 9th, at Dorchester, New Brunswick.

P. J. Halloran, chairman of the executive board of the Brotherhood of Railroad Conductors, died suddenly of heart disease in Boston on July 16th.

Robert Moran, master mechanic of the Louisville & Nashville Railroad, with headquarters at Nashville, Tenn., died in the surf at Pensacola, Fla., on July 31st. It is believed heart failure was the cause of his death.

Daniel J. Malone, superintendent of shops, of the Oregon Short Line, at Pocatello, Idaho, was shot and killed, July 24th, by Frank Madden, foreman of the tin shop. The murderer, with the same revolver, at once killed himself. The men were both old employes and had long been friends, but Madden, it is believed, had become mentally unbalanced because of criticisms received on account of unsatisfactory work. Mr. Malone was born at Western Point, Md., in 1860, and he was on the Union Pacific for a number of years before going to the Oregon Short Line in 1890. Madden was 60 years old. Malone had four brothers, two of whom met death in murders very much like this one; Edward in West Virginia in 1896, and Michael, division foreman on the Southern Pacific in Nevada, in 1906.

John Niblock, formerly superintendent of the Canadian Pacific Railway at Calgary, died at his home in Victoria, B. C., on July 30th.

Eugene E. Osborn, formerly vice-president of the Chicago & North Western, died at Frederick, Md., July 20th, aged 60 years. Mr. Osborn was born at Norwalk, Conn., May 1, 1854, and was a graduate of the Sheffield Scientific School of Yale University. He entered railway service in 1894 as general attorney for the Chicago & North Western. In June, 1901, Mr. Osborn was elected vice-president and secretary of the North Western and assistant secretary of the Chicago, St. Paul, Minneapolis & Omaha, which positions he held until his retirement from active service in 1911.

William Barstow Strong, formerly from 1880 to 1889 president of the Atchison, Topeka & Santa Fe, died at Los Angeles, Cal., on August 3rd. He was born at Brownington, Orleans County, Vt., on May 16, 1837, and graduated from Bell's Business College, Chicago, in 1855. He began railway work as station agent and telegraph operator in March of the same year at Milton, Wis., and was later station agent at White Water and at Monroe, and then general western agent of the Southwestern Division of the Chicago, Milwaukee & St. Paul at Janesville, Wis. From 1865 to 1867, he was assistant superintendent of the McGregor & Western, now a part of the Chicago, Milwaukee & St. Paul. He was then to 1870 general western agent of the Chicago & North Western, and from 1870, to 1872, was assistant general superintendent of the Chicago, Burlington & Quincy at Burlington, Iowa. In 1872 he was appointed assistant general superintendent of the consolidated Burlington & Missouri River and the Chicago, Burlington & Quincy at Chicago, and in 1874 became general superintendent of the Michigan Central at Chicago. The following year he was appointed general superintendent of the C. B. & Q., and from 1877 to 1880 was vice-president and general manager of the Atchison, Topeka & Santa Fe at Topeka, Kan. He was then president of the same road, with headquarters at Boston, Mass., until 1889, at which time he retired from active service.

Newspapers and Railroads as Factors in Southern Development*

THE interests of Southern newspapers and Southern railroads in the development of our section are very closely interwoven. Every increase in the population of a community and every advance in community prosperity mean increased circulation and advertising patronage for its newspapers and increased traffic for its railroads. This identity of interest, therefore, affords a sound business basis for co-operation between the newspapers and the railroads for community development, and, as representing one of the important railroad systems of the South, I am glad to have this opportunity to suggest some of the lines along which I believe that the newspapers and the railroads may co-operate most effectively.

If our efforts are to be most successful, we must work along three lines: First, that of aiding those already living in the South to make a larger and more profitable use of their opportunities; second, that of endeavoring to retain in the South those who may contemplate leaving in the hope of bettering their condition, and, third, that of attracting to each community additional population of the character that may be desired by the people already living there. From its organization Southern Railway Company has been a champion of the South. Its management has believed that one of its highest functions was that of co-operation with the people along its lines for the highest development of the territory that it serves for the benefit of all alike. Southern Railway Company was a pioneer in this co-operative work and I take pride in claiming that it is doing more work of this kind and doing it more effectively than any other railroad company in the United States. We have gradually broadened the scope of our co-operative efforts until we now have a strong auxiliary organization, co-ordinated with but not part of our regular operating organization, and this active and militant force is devoted exclusively to co-operating with the Southern people for mutual welfare. The largest unit of this organization is that engaged in promoting the larger production in the South of staple field crops, fruits and vegetables, and the building up of all branches of the live stock industry through the raising of more and better animals. As successful production depends largely upon profitable selling, we have market agents who devote their entire time to bringing producers along our lines into touch with buyers and advising as to the best methods of packing and shipping. We are endeavoring to retain Southern people in the South by disseminating among them better information as to Southern resources and opportunities, by seeking out individuals who contemplate removing and presenting facts to demonstrate that the opportunities which they have in the South are equal to or superior to those which they may hope to find in the localities to which they contemplate going, and by declining the allure of immediate revenue and the competitive temptation to participate with connecting lines of railroads in reduced rates for home-seekers leaving the South. We are endeavoring to attract additional population and capital to the South by direct solicitation of industries and farm settlers and by disseminating information as to the resources and opportunities of the South throughout the United States, Canada, and Europe. In this connection, I may mention that Southern Railway Company is the only railroad company in the United States which has an exhibit in the Anglo-American Exhibit now in progress in London, this exhibit being devoted entirely to showing the resources of the territory which we serve. It is our purpose to continue our work along these lines and constantly to endeavor to make it more efficient, and I know, from past experence, that one of the most effective ways of doing this is through the co-operation of the press of the South. It is our practice, from time to time, to send to the newspapers information which we believe will be of interest to their readers and, at the same time, may be helpful to the entire South, or to particular localities. That our view as to the interest and helpfulness of the information thus sent out is shared by the editors is demonstrated by the general publication which our bulletins have received.

In addition to promoting the development of the South through publicity, the Southern press can aid materially in this work through the influence of its editorial columns upon public opinion affecting governmental policies. Every community in the South is inviting the investment of new capital, and it is self-evident that one of the inducements to invest money in any community will be a knowledge that the public opinion of that community is such as to conserve the capital already invested there and attract additional investments by something more enduring than a personal welcome. In urging the building up of a public opinion that will support such governmental policies as will encourage investments, I have in mind, not merely investors in other parts of the United States and in Europe, but also, and more particularly, our own Southern people, for the time has now come when, by reason of the accumulations of her recent prosperity, the South is able, in a greater degree than ever before, to finance her own enterprises. As an illustration of this, I may mention that Southern Railway Company recently arranged for an issue of Atlanta and Charlotte Air Line Railway bonds to the amount of $20,000,000 to be used in completing the double-tracking of the line between Washington and Atlanta. The first installment of these bonds, to the amount of $5,500,000, were sold to a syndicate in accordance with the practice in such matters, but, believing that Southern bankers would be glad to participate in this financing and thus become more directly interested in one of the great transportation systems of the South, as I would like every responsible man in the South to be, I secured the consent of the syndicate to reserve a limited amount of these bonds to be offered to Southern Railway depository banks throughout the South. The response to this offer far exceeded my expectations and was most gratifying, for it was a new departure in railroad financing. Subscriptions were received footing up more than twice the amount of bonds originally set aside for the purpose and exceeding by more than $100,000 the amount which I was finally able to obtain for

---

*From an address delivered by Fairfax Harrison, president of the Southern Railway, before the South Carolina State Press Association on July 7, 1914.

Southern subscribers. The success of this bond offering is eloquent testimony to the growing financial strength of the South. It is an indication that the South will henceforward, in constantly increasing measure, finance Southern enterprises and keep at home money which would otherwise be sent to other localities for the payment of interest and dividends. It should encourage us to promote and to support by public opinion policies which will hasten the conversion of the South into a section of investment as well as of production.

In speaking of the attitude of the press toward invested capital I should not be understood as opposing just criticism of any improper policies or unjust acts on the part of corporation officials or others. Speaking for Southern Railway Company, I court the widest publicity for all of its corporate acts and policies and invite the freest discussion of them. I acknowledge that my official conduct is frequently stimulated and modified by the comment of the press. I do ask, however, that criticism shall at all times have for its basis complete knowledge and that, prior to accepting as the truth any report concerning our affairs that may become current, enquiry as to it shall be directed to me or to some other responsible officer of the company.

Judged by the editorial comment in the Southern press as well as by personal contact with Southern men, I believe that there is to-day throughout the South a better and more general understanding of railroad policies and the difficulties encountered in railroad operation than ever before. I find that there is a general disposition on the part of the public to appreciate that the business practices of the railroads to-day are founded, not upon an arbitrary system of exploitation, but upon the necessity of securing and of conserving a revenue adequate at once to carry the responsibilities of the past and to permit progressive growth in the future—in other words, that a railroad, like every other living thing, has to struggle for existence and make both ends meet. The public view of the railroad question has undoubtedly been clouded by revelations of the exploiting of certain railroads for the purely selfish ends of those who controlled them, but when the "shouting and the tumult," which has been stirred by these revelations, and the political use made of them dies away, the sober second thought of our people will, I am confident, differentiate in their criticism between the purely dishonest acts of some individuals on the one hand and on the other hand the survival in the practice of other individuals of a conception of the economic status of a railroad utterly and entirely different from the conception which a changed view of public questions has established as a rule of conduct today. It has been demonstrated to be impossible to change in a year, or in a few years, habits of mind and habits of action which were once fostered by government and applauded by public opinion simply because there are new leaders of public opinion with radically different views. I belong to the new school of opinion myself and I suggest this point merely that intelligent men who are onlookers may appreciate it as I have appreciated it in my experience in the heat of the conflict of economic change. To illustrate: the State of South Carolina has been one of the leaders in the movement now experienced in all parts of the United States for what is called "state wide" control of the sale and distribution of intoxicating liquor. There is an important body of public opinion in every State of the United States which earnestly contends that the control of the liquor traffic is not merely a policy of government revenue, not an economic measure, but a moral issue and yet, for all the growth of this view, public opinion generally has not yet accepted as a truth that there is a moral degradation to a gentleman who takes a drink in his own or a neighbor's house. So it is with the railroad question: there are still many respectable men who believe in the policy of monopoly of public utilities as a doctrine of efficiency and of economic strength, despite the clamor of the advocates of a strict enforcement of the doctrine of competition.

I find that the chief criticism of the administration of the railroads in the South to-day is on the adjustment of rates. Many communities in the South have told me that they do not care what the rates are, if only they are so adjusted that there shall be no discrimination in favor of one locality at the expense of another. To some earnest and intelligent men it seems that it must be an easy matter for a railroad manager who is so disposed to wipe out all the existing discriminations: and I find some impatience at references to the history of rate-making in the South in attempted explanation.

Most of those to whom I am now speaking know that railroad freight rates in the South were built on the so-called "basing point" system, a system which started with admitted discriminations but justified them by the competition, whether by water or by rail, which existed at the favored points. There is little doubt that the growth of the basing points, which this system stimulated, has been of advantage to the entire South by creating important distributing towns in the interior of a country where, when the railroads were built, there were few towns of any size away from the seaboard. It is difficult also to believe that the historical rate system in the South, whatever was its justification, has been oppressive to the country, for we see Southern towns, still growing and prospering with a vigor which excites the astonishment of all observers, which for their entire municipal existence have been in dependence for communication with the rest of the world upon these rates which are now condemned. In the demands for readjustment one must recognize, therefore, an expectation of selfish advantage back of the words "fair" and "just" which are so eloquently used against the railroads, but I, for one, respect this selfishness as an expression of a virile community ambition, and I recognize that the railroad is going to share in the prosperity of a growing town and in the multiplication of towns and, to the extent of its abilities, should do its part to promote that prosperity without preconceptions as to methods. Such being the disposition, the problem of the railroad manager has practical limitations. He has inherited a situation for which he is no more responsible than for the shape of his nose, and it is as much part of the railroad as his nose is of his face. The sudden application of a new rule of absolute equality, the literal and immediate measure of the principle that the rate for the short haul shall always be less than the rate for the long haul, without other compensation, would necessarily bring a railroad face to face with an important reduction of its total revenue. If the railroad is to continue to live and to grow after such a surgical operation there must at the same time be a general readjustment of its rates with advances in one direction compensating for reductions in another. At a time when there has been an increase in all of the elements of its operating costs, a railroad finds a serious economic difficulty in arbitrarily reducing its revenue, especially when it depends upon the growth of its income to justify the provision of new capital to enlarge and improve its plant in compliance with public expectation. In this posture of the problem, I, for one, welcome the intervention of regulating authority, if only regulating authority recognizes that the exercise of power carries with it a correlative assumption of responsibility. I do not say this from any lack of courage or from any lack of confidence in our ability to work out the problem fairly on our own responsibility, but from a realization of the practical position of the railroads in public opinion to-day. I trust that it may prove easier for a government board so to adjust rates as to satisfy every one and at the same time produce a total requirement of revenue, that it can be for a corporation subject to all the limitations of a reputation for rapacity, which unfortunately the railroads still have in the minds of many good people.

If the Interstate Commerce Commission would prescribe all our rates, as they have the power to do, adjusting them on a basis to yield us a revenue sufficient to carry on our operations, make improvements and pay a just hire to capital, as well as to labor, I would rejoice in their action in the consciousness that we were thus left free to devote our energies to the improvement of our competitive service, with the confidence that we could give such service as would win and hold for us the respect and affection of all the Southern country. But, whether this consummation ever can be attained, I rely upon our action in the future, based as it will be upon a desire at all times to be fair, to illustrate our motives, and to bring home to the public a realization that a railroad can claim all the respect due to integrity and patriotism.

I believe then that we may expect in the future a better understanding between the public and the railroads than ever before, that the railroads will better appreciate the viewpoint of the public, and that the public will better understand their interest in prosperous and efficient railroads. I believe, too, that, in bringing this about, the press of the South will be a most important factor and that the newspapers and the railroads, working together, will become ever more efficient factors in the promotion of Southern prosperity.

Car Supply in Relation to Marketing the Wheat Crop of 1914

By G. C. White, Transportation Specialist, Office of Markets, U. S. Dept. of Agriculture.

SINCE the publication in the *Agricultural Outlook* of May 22 of the forecast of the yield of wheat in the United States for 1914, the question of car supply to move the crop has been engaging the attention of the railroads and grain men. Trade journals have called attention to a prospective car shortage, and railway periodicals have pointed out the necessity of having all box cars thoroughly overhauled and put in condition to handle bulk grain.

The Office of Markets of the United States Department of Agriculture has undertaken some investigations to ascertain to what extent a car shortage this year is anticipated by the grain trade, on what roads shortages are most acutely felt, to what extent the trade keeps in touch with the roads, advising prospective needs, what information is given out by the roads as to ability to fill all orders promptly or steps taken to minimize shortages, and whether or not the car supply keeps pace from year to year with the increasing need for cars. Replies received cover the States of Texas, Oklahoma, Kansas, Missouri, Nebraska, Iowa, and Illinois. These seven States have for 1914 an estimated wheat yield of 385,000,000 bushels.

The sentiment is by no means universal among the country elevators that there will be a car shortage. The belief that there will be a shortage is most prevalent among the country elevators of Kansas. Expressions from terminal elevator points indicate that there will be a shortage in all States.

Opinions as to the roads on which car shortages are most acutely felt amount to little and are apparently based on the particular road on which a man's elevator is located. One man answers that a certain road is most prompt in furnishing cars and another man names the same road as least prompt. Attention is called to the fact that adequate car supply is sometimes due to the volume of inbound merchandise, which, when unloaded, makes available empties for outbound grain shipments. Points served by more than one road testify that they can get cars even when noncompetitive points are suffering from a shortage.

Information from the country elevators is, for the most part, that their advice to the roads of cars needed is in the form of orders for cars at the time they are wanted. Terminal elevators and large grain dealers, however, have kept in closer touch with the situation and have advised the carriers as far in advance as possible of the prospective needs.

On the part of the roads statements from officials through the press are given to the public, and growers and elevator men are personally advised by local agents, traveling freight agents, and other representatives of all steps taken to minimize shortages. Every purchase of new cars is advertised and assurance is given that all cars are being put in condition to handle bulk grain. In some cases large numbers of stock cars are being temporarily fitted up for handling grain. As far as possible, foreign empties are being held by the grain-carrying roads, and country sidings are being filled with empties for the first rush.

It is the consensus that the increase in car supply does not keep pace from year to year with increasing needs for cars.

The average carload of wheat contains 1,250 bushels. On this basis it would require 524,000 cars to move the estimated crop of winter wheat for the entire United States the present year and 308,000 cars to move the crop of the seven States here discussed. However, as noted in the *Agricultural Outlook* of March 23, 1914, only 58.1 per cent of the wheat produced is shipped out of the county where grown, and on this basis the number of cars required would be 304,444 and 178,948, respectively. On the same basis it would require approximately 432,000 cars to move the entire wheat crop of the United States.

The total number of box cars owned by all the roads in the United States June 30, 1911, (the latest report available), was 990,313. Taking 15 of the principal roads in the seven States covered by our investigations, we find that they had on July 30, 1913, 60,446 miles of road and 223,487 box cars. Their aggregate mileage increase for the two years from June 30, 1911, to June 30, 1913, was 3 per cent, the increase in the number of their box cars, 3 per cent, and the increase in the tonnage capacity of their box cars, 7½ per cent. The figures for individual roads vary from a decrease of 14 per cent in the number of box cars to an increase of 32 per cent, and in tonnage capacity from a decrease of 5 per cent to an increase of 50 per cent. These 15 roads contain approximately 25 per cent of the entire mileage of the United States and own approximately 22 per cent of all the box cars. The seven States in question produce approximately 40 per cent of all the wheat of the United States. What the percentage of increase is over the 1911 crop is hard to determine for the area served by these 15 railroads, but it is safe to say that it has been far greater than the percentage of increase in car supply, inasmuch as the estimated yield of winter wheat for the entire United States for 1914 exceeds the 1911 crop by 52 per cent, and the increase in car supply during 1913-14 has been below normal throughout the country.

These figures are given, not as furnishing an exact formula for determining the number of cars needed to move this year's wheat crop and for estimating the shortage in number of cars, but as indicating some of the factors to be taken into consideration in the problem of car supply and car shortage. Other factors are these: The wheat harvest will extend over three months or more from about June 10. Doubtless much wheat will be stored after harvest awaiting better prices. Not all the cars of any road serving the wheat belt are available for wheat traffic. The Santa Fe system, for instance, with extensive mileage in New Mexico, Arizona, and California, must necessarily keep a large part of its cars confined to the business of those States. Account must be taken of general commercial conditions also, and of whether the tonnage of other commodities handled in box cars is above or below normal during the wheat movement. Indications this year are for a heavy crop of corn and oats, the movement of both of which commodities will still further complicate the situation as regards wheat.

Even where the entire mileage of a road is confined to wheat-producing territory, many of its cars are absent on other roads, and it may or may not have on its line a sufficient number of foreign cars to offset the absence of its own.

The terms used by different individuals in estimating shortages are by no means uniform. The majority express it in terms of percentage, which is accurate enough if we understand thereby that for a given period only a certain percentage of the cars ordered are furnished. In the long run every man gets all the cars ordered, and from that point of view there is no shortage. No statement of "car shortage" means anything until we know the time limitation and other conditions on which it is based. In its semi-monthly bulletins of car surpluses and shortages the American Railway Association lays down the rule that the figures must represent the differences between "cars ordered" on a given day and "cars available." "Cars available" is defined as any empties of the kind ordered, either en route in trains or on sidings, which can be used to fill the orders of that day, and includes also such loaded cars as will be made empty within 24 hours.

The opinion prevails in some sections that any shortage this year will be due more to lack of motive power and terminal facilities than to lack of cars. One of the greatest drawbacks has always been failure to load and unload promptly and too frequent reconsigning of shipments. The indications are that shippers and carriers are co-operating this year more closely than ever before in their efforts to avert a car shortage in the movement of the wheat crop.

Thou Shalt Not Kill

NOTE:—In the development of the safety movement, many novel appeals are made to employes in order to secure their active co-operation in the conservation of human life. The following appeal recently issued by the Frisco "Safety First" Bureau, constitutes a striking example of efforts made along such lines:

WHEN that supreme tragedy occurred—the death of Abel at the hand of Cain—a cry went forth over the land that has echoed downward through the ages until it is now striking the heart of every railroad man and his family—"THOU SHALT NOT KILL."

In this country when the watchword is SPEED, when the eternal cry is "DISPATCH," it remains for every employe of those who manufacture speed—the railroads—to ever keep before his eyes those words written in the first crimson flow of humanity's life blood—"THOU SHALT NOT KILL."

Where is there a trainman, shopman, carman, station or section man who has not watched with silent tongue and pallid cheek the bringing home of some bread winner, mangled, torn, thrust aside forever from the ranks of his comrades, through the thoughtlessness of a trusted employe; and heard the anguished gasp of the mother, wife, sister or daughter, as their all, their anchor in life was laid before them. And the whisper has passed among you—"Carelessness, that's all."

And you have turned away from the lifeless form, leaving Sorrow to keep silent company with Death, thoughtless of the lesson given you through this casting aside of another of your ranks.

Perhaps it was the defective belt, twisting and curling overhead, neglected a moment too long; perhaps a defective engine step, a baggage truck thoughtlessly rolled aside.

Every hour, every minute, some one, somewhere, is forgetting one of the rules of SAFETY, formed with the first law of nature, old as Time and blood-kin to the commandment—"THOU SHALT NOT KILL."

In a terminal yard of one of our Western railroads, a derailing switch designed for the protection and safety or the lives of those on incoming trains as they toiled up the mountain side through the silent watches of the night, was defective. Those who handled the switch many times each hour, knew of the weakness, the broken spring, but, they relied on the trackmen to find it. "They are paid to do that."

One morning at the dawn, four cars of rails slipped silently downward, passed uninterrupted through the costly derailing machine and dashed away as if in glee of victory.

Picture the mangled bodies found fourteen miles below, ground out of existence by the unerring aim of these steel projectiles. Picture the sudden realization of those thus robbed of their comrade, friend and breadwinner, that some one, somehow, had failed in his duty—had become a traitor to the cause of SAFETY.

To this day the switchmen in the shanty speak in whispers of the mad dash of those four cars down the mountain side and conjecture as to the scenes which transpired when the cars met their victims. Conjecture, yes, because not a living thing was found in that piled up mass of wreckage.

Did that command which has clung to humanity since the world was young occur to the regretting comrades? Did they point an accusing finger at the other and cry, "THOU SHALT NOT KILL?"

In the lands where standing armies are the pivots around which home, country and happiness center, it is considered a failure of life to become so maimed that army service is impossible. The one responsible is looked upon as a traitor to his country.

In the standing army of our railroads your generals look upon you, who through haste and contributory carelessness, deplete the ranks of a valuable lieutenant, as a traitor to your cause. They feel the need of each of you. When an accident occurs, they harken mostly to that part of the telegraphic report which tells of the death or injury of him who gave such full promise of faithful service on the firing line—the breadwinning line—but who must now forever lay aside his chosen profession and turn to the ranks of those who, likewise, have suffered irreparable wrong either through his own failure or the failure of others, to recall before too late, the one great law—"THOU SHALT NOT KILL."

A youth, a brakeman, in all the vigor of young manhood, was trying, years ago, to arrest the downward speed of a freight train, with the sleet and snow of a winter's night blowing about him and which glazed the car top with an icy coat that made treacherous footing underneath. This was at a time in our railroad history when the air brake was a stranger to our freight trains.

A few hours before these cars had been inspected and pronounced safe by those intrusted with their condition. From the top of one of the brake staffs a nut was missing.

In that rushing darkness where hands are eyes and where dependence is placed in comrades and co-laborers for the protection of life and limb, the brake wheel slipped from the staff.

Down, down, into nothingness a body was flung, to be mercifully received sixty feet below by the cradling strands of a right of way fence.

The boy lived, but during the year or longer that he was carefully nursed, did that thought come to him?—"THOU SHALT NOT KILL.' No. He thought only as you are thinking to-day,—"It's coming to us sooner or later."

There is nothing "coming to" railroad employes to-day, nor has there ever been, except through the lack of realization that in your hands you hold the life and happiness of many; that railroad men are not held hostages to the greedy maw of Destiny, but are the arbiter of their own fate.

Pick up the board with the protruding nail; report the improperly hung water spout, the defective coal chute apron, the defective bridge warners, the missing bolt. Don't be afraid to cry out against the faulty belt flapping overhead, the handcar with the weakened handle bar, the switch chain or draw bar lying in wait—a silent death—in the yards.

Don't pause in reporting the platform built too near the track, the broken board in the depot platform, the defective coach step, the lubricator glass in the engine cab and remember for all time—"THOU SHALT NOT KILL."

Don't hesitate in the belief that it's the other "fellow's job," don't pause to see if some one else intends to arrest the subtle hand of Death, but let the victory be yours. Taste the pleasure of having succeeded in saving a life, a limb, an eye.

Don't believe for one moment your employer—your General—will accuse you of interfering with his duties. These are YOUR duties. He is your partner in preserving life and preventing injury. He will take you by the hand and give you that true grip of fellowship that ever exists between those who have stood shoulder to shoulder in "doing unto others as you would be done by," in protecting the home, the women and children of our country.

Let me tell you right here, there never was and there never will be a general worthy of the position he has gained, but will salute the one in the ranks who shows the courage, and moral balance, to step forward and tell from whence comes the unseen bullet that is depleting the ranks. He wants to know it ten thousand times more than you, because, every man lost from his ranks decreases the efficiency of his machine, whether it be one to fight an enemy or one to fight a commercial opponent. He wants to know it because his eyes—like yours—can never grow accustomed to the sight of mangled bodies. Neither like you can he ever reconcile himself to the thought that "another good man is gone."

In all the mass of machinery in railroad shops, on railroad rails and in railroad yards, there is no machine so valuable as YOU. Did you ever think of that? Have you ever considered yourself as the most valuable, the ALL IMPORTANT machine possessed by railroads? You are. And the last thing you would ever do would be to damage or destroy ANY machine used by your employer, yet, you may be damaging or destroying one of those machines to-day.

A mechanical contrivance designed and built to perform one certain function in the day's great work of a railroad, can do no more. You, in the completeness of your being, can be remodeled, transferred from one level to another. The value of a machine is known. Your value is unlimited.

Add to you—the wife, the daughter—you possess more than all else. The human machine is yours by right of possession and to you is left the task of influencing that machine towards perfect service. The greatest influence that you can exert towards perfect service—and which means perfect happiness—is to instil into that human machine around which everything for you centers, the one thought,—

"To injure another is to harm yourself.
"To injure yourself is to harm your family."

Have you —the wife and mother—ever thought of the responsibility resting on your shoulders toward your son, the boy, who, in after years is entitled to his legacy of a place in the bread-winning class? Does his way to school lie across some railroad track? Along a pathway near which moving cars offer an attraction which may terminate in permanent injury and perhaps death?

Not only does your duty impel you to caution the breadwinner into the by-ways of safety, but also the boy—the breadwinner of the future.

Encourage him to see the death lurking in every moving car. Make him see the certain disaster hovering beneath the wheels, and bring him to that realization of the uncertainty of life which will cause him to resist the temptation.

From July 1, 1910, to December 31, 1913, there were 373 trespassers and outsiders killed on the lines of the Frisco Railroad and 1,404 injured.

A large number of these persons were boys, who, as a pastime, attempted to jump on and off moving trains. Think of the despair brought into their homes by the thoughtless act of a moment. Think what joy would fill a mother's heart could she be continually conscious of shielding her boy from the terrible horror that lurks everywhere the wheels of railroads revolve.

Some one has said:

"Men, by habit and nature, who are untrue to a trust are dangerous."

Are you—the mother—untrue to your trust? Are you dangerous? You are if your lips fail to caution the boy of his danger; fail to whisper into the husband's ear at morningtide,—"THOU SHALT NOT KILL."

The Red Tape Worm

By Howard Elliott, Secretary, Central Safety and Efficiency Committee, San Pedro, Los Angeles and Salt Lake Railroad.

I BELIEVE in my company and am proud of my profession.

I believe it is no offense to be in the business of moving persons and property from place to place.

I believe the railways of the United States for safety and efficiency stand supreme.

I believe their capitalization and rates are the lowest and their wages the highest among nations of the earth.

I have faith in their ultimate triumph.

I believe that there is, however, much red tape in the conduct of their business; that this red tape is as real a disease of the railroad system as is the tape worm of the human system, and that it acts similarly in that it performs no useful function and consumes energy that should be otherwise expended.

I believe that red tape may properly be defined as the unnecessary steps in the transaction of business.

I believe that red tape results from the shifting of responsibility, and that this is usually done through the medium of letter-writing.

I believe that many men look upon railroading as the science of shifting responsibility.

I believe that men try to evade responsibility for three reasons:

(1) Because it is easy to shift it.

(2) Because they feel incompetent to shoulder it.

(3) Because they fear criticism if they assume it.

I believe that the remedy is two-fold, compulsion and impulsion.

I believe that it should be made difficult to sidestep responsibility, and that this can be accomplished by broadening the scope of interest and authority, so that a man becomes charged with the duties of more than one department—then in the same way that a man cannot make a contract with himself, so no man could escape responsibility by writing letters to himself.

I believe that the hesitancy which men feel about tackling new problems is often ill-founded and that if given the necessary authority and the proper tools with which to work, they can produce creditable results.

I believe the ideal condition on any railroad is where all the officers and employes are allowed and encouraged to use all the knowledge that they have all the time.

I believe that red tape is expensive, directly in the cost of typewriters, stationery, letter presses and filing cabinets, and the salaries of stenographers and clerks, and indirectly in the loss of vital energy which results when men spend their time in "relay" work.

I believe that many men in railroad service think they are doing things really worth while, whereas an analysis of the day's work would disclose a mass of communications saying "Please note" and "respectfully referred" in a variety of ways.

I believe the distinction so well known to the law between "dilatory pleas" and "issues" should be understood and appreciated by railway men, and that instead of entering a "dilatory plea" (one which merely postpones the day of reckoning) when a matter is put up to them for solution, they should promptly resolve it into an issue—the exact point in controversy—and then *act*.

The "squib case" is the popular name for a famous lawsuit. No law course is complete without it. It appears in the reports as "Scott vs. Shepherd," and the facts are these:

Shepherd threw a lighted squib into the market place. (Now a squib is a dangerous article. I do not know the ingredients of which it is composed. Perhaps Colonel Dunn, of the Explosive Bureau, may know.) It alighted on a certain booth and the owner thereof, realizing its dangerous nature, immediately relayed it to another booth where the process was repeated. After several such performances, the squib fell on the booth of Scott, the plaintiff, where becoming "ripe," it exploded and put out one of Scott's eyes. Scott sued Shepherd and recovered, and the principle was then and there established that a man is responsible for the natural consequences of his own acts.

The railroad market place to-day is full of squib throwers. Important matters are tossed from one to another just as though they were squibs or infernal machines, likely to explode if held a moment longer. Shepherd throws it to Smith, he to Jones, Jones to Brown,—it is not until the matter becomes "ripe" that anything really happens. And all the while the man who is to be affected by the result, passes back and forth, impatiently waiting for a decision and wondering why no one seems to have sufficient interest or authority to bring the matter to a head and settle it. The next thing we know the man has gone to Springfield or Topeka or Washington and his grievance is embodied in House Resolution number so and so.

Go into the average railroad office to-day and take down the tissue copy book. Analyze the letters, dividing the wheat from the chaff. Under the former put the "issues," those letters which really decide something. Under the latter, put the "dilatory pleas,"—those which either "pass the buck" or which need never have been written at all.

I did go into a general superintendent's office one time and make just such an analysis. Here is what the first 100 letters in the copy book showed:

Plain letters of transmittal referring the matters to others for attention	40
Asking or answering simple routine questions	20
Enclosing agreements to heads of department in same building, for approval	20
Approving train service, details of which had been arranged by division officers	10
Definite rulings on sundry matters	10
	100

I went into a bank and asked the cashier this question:

"If you want to find out something from another officer of the bank, do you sit down and write him a letter?"

"By no means," he replied. "I either go to him, ask him to come to me, or send my clerk to get the information. The officers of this bank are all in plain view, as you see. How preposterous it would be to spend my time writing letters to them, and their time in answering them, when I can get the information so much easier and quicker, and all of us can devote our time to deciding important questions."

Strange indeed that a practice manifestly so unnecessary and unwise in the bank should on a railroad where the officers are separated by partitions, become at once reasonable and indispensable.

I am not unmindful of the fact that in a great many cases the man to whom an important question is addressed for adjustment, must, according to the plan of organization in effect on his line, refer it to another for attention. If it must needs be sent to him why dignify the transaction with a formal letter of transmittal which requires all the red tape that a really important communication deserves? Why not write his initials on the corner, and keep a memorandum showing where it went?

But in many cases it is extremely desirable that there be such change of organization as would place in one person the authority over more than one department, so that it would be unnecessary to refer most matters to others. There is no reason why a freight solicitor should not also solicit passengers, nor why a division superintendent should not be general manager of his division, and let all departments report to him. He is responsible for results. Why withhold from him the tools with which these results must be accomplished?

The question of whether the division or the department is the proper unit has able champions on both sides. But I think it is conceded that the trend of the times is in the direction of localizing authority and giving the man "on the ground" more power and discretion. Whenever you make it so that matters have to be referred to this place and that before a decision is arrived at, you create a system which demands a great amount of unnecessary work, dwarfs the natural initiative of the individual, saps vitality from the organization, and is distasteful to the public. And this, my friends, is the red tape in railroading.

That railroads need experts is conceded. But a man should not specialize to the point where he thinks, either consciously or unconsciously that the railroad is an adjunct to his department, rather than that his specialty exists as a part of a greater whole. And the most logical way of giving a man the proper perspective of the business is to give him such duties as will compel him to see that business from more than one angle. This cuts out the red tape which would have existed between the departments which he represents, and makes him a more efficient workman because of his better idea of the relation which his work bears to the whole.

This principle of broadening men is a very logical one. Some of our poorest paid employes are the broadest. Let me explain. Take the local agent at a one-man station. He is the representative of the operating, traffic, and accounting departments and must familiarize himself with the duties of each. He does this, in many cases remarkably well. When I was a traveling auditor, and thought I had a good "case" of violating the rules at some one-man station, the agent's defense would usually puncture my indictment as well as could a good many lawyers' briefs. I have the profoundest respect for the station agent. Yet he is supposed to be pretty well down the railroad ladder. Now if the local agent can prove himself an acceptable representative of three departments, why is it that men higher in the line than he are only thought capable of being charged with the duties of one?

But aside from the question of natural capacity, the reason why that agent must post himself along many lines is because the road cannot afford to keep a force of experts at every station. I maintain that the same argument applies all along the line, and that railroads to-day may increase their efficiency by combining certain departments at many points, and by encouraging every employe to take a broader view of the company's affairs, to look at the business in the same way that the president views it, and with the same idea in mind as had the automobile dealer who advertised "no limit to speed but the law," takes as their slogan, "no limit to my interest but my business."

Now some one is apt to inquire: "If you argue that it is logical for a man to qualify who is not an expert, how can you consistently criticise the representatives of governing bodies, commissions, etc., for acting upon matters that they know not of?"

To which I reply that it is one thing to deny to men outside the railway an intimate knowledge of its affairs, and quite another to say that a man in the railroad business cannot comprehend the duties of more than one department. A man without experience in a bank cannot be a paying teller or credit man, but because that is true, it does not follow that a man who DOES work in a bank is incapable of filling acceptably the offices of paying teller, receiving teller, bookkeeper and credit man. In the one case you have a man on the outside looking in—in the other a man on the inside looking around.

I sat one day at the feet of the second vice-president of the longest railway in the world. The conversation turned to a discussion of eucalyptus. "The roots go down thirty feet for water," said the vice-president. "They thrive only in certain thermal zones, such as Australia and Southern California. The commoner varieties are the blue gum, or globulus, the stringy bark, the peppermint and the cider. The trees grow to immense heights, exceeding the big trees of the Sequoia. We are using them for ties, with splendid results." He continued for a full half hour discoursing on the advantages of the eucalypti, manifesting an intimate knowledge of his subject. Now the fact of the matter was, he had under him a manager of tie and timber department who, as I read the other day, is an authority on wood preservation. Why, then, should the second vice-president undertake to post himself on the details of that department? Why not let the heads of departments run the railroad? There is not a single feature of railroad operation that could not be referred to some department, thus relieving the officer in whom all departments converge from interposing his own ideas in regard to anything. But that second vice-president knew, as all real "generals" know, that the ideal executive is the man who knows everything about something and something about everything. And he also realized that an administrative officer around whom the department heads assemble should be something more than a mere bumping post. He should be a centrifugal force radiating power and inspiration in all directions. My friends, you cannot make a broad man by training him along narrow lines, nor can a man who continually strives for departmental supremacy become, on his elevation to a generalship, a wide-gauge officer with the idea uppermost in his mind "my company, 'tis of thee." We must begin with the young men in railway service. Some roads already have inaugurated comprehensive courses of training. The handwriting on the wall shows that the next generation of railway officers will be those who succeed not in making their department predominate on their road, but in making their road predominate among its competitors.

Were I placed in charge of a railroad, I would appoint all of my employes "generals." Suggestions for improving the service would be welcomed regardless of the source from which they came. Instead of maintaining an organization where much of my energy would be devoted to promoting harmony between conflicting interests, and determining the line of cleavage between departments, I would charge them all with the responsibility of producing dividends, and we would meet as members of a common cabinet working for the general good.

I believe all railroad men want to see their companies prosper.

I believe we are anxious to increase our own effectiveness and the efficiency of the roads we love to operate.

I believe the most logical and natural method of accomplishing this is—on the employer's part, by making such changes in the organization and administration as will allow officers and employes to broaden the scope of authority without fear of criticism, and—on the employes' part, by taking a deeper interest in the company's affairs, each doing what he can do, and passing to others only those things that he conscientiously feels he cannot perform. Thus may we practically eliminate the expensive, useless, and vexatious red tape which now forms such a conspicuous part of all we do.

Little Economies in Railroading

(Taken from an article by G. E. Walsh, appearing in the *Sunday Magazine*.)

A station agent at a salary of sixty dollars a month had a record of wasting the company's money through carelessness or a run of bad luck. Freight consigned to or shipped from his point had a way of meeting accidents that caused a lot of damage suits. The man was cautioned, warned and finally peremptorily fired.

Another took his position, with a warning that he would meet a similar fate if he did not look after the company's interests with greater care. He made a two years' clean record. Then came a letter couched in these words:

"We cannot pay more than $900 at X. The business there will not warrant it. But we consider you worth more than $900 a year, and you are hereby transferred to W, with a salary of $1,200."

The station agent who mishandles a broom and wears it out beating the dog or using it for a baseball bat is the same man who roughly handles the freight and express packages and lays the foundation for endless damage suits. He also leaves the station with the drafts all turned on the stove so that it consumes twenty per cent more coal than is actually needed, and if by chance there is a wind blowing through the room it is his lamp chimneys that always are being cracked by it or blown off.

An employe can cost a railroad more than his wages amount to through failure to observe the rules of economy. A fireman, for instance, will pile the coal so high on his tender that many big lumps will be jolted off as the engine rounds sharp curves or jumps across switches. It doesn't take many big lumps of coal to make a hundred pounds, and every hundred pounds equals in cost the hauling of one ton of freight twenty miles.

An engineer can economize on oil in a way that will make a tremendous difference in the final cost to the road. A gallon of engine oil equals in cost the hauling of a ton of freight fifty miles; a gallon of car oil thirty miles; and a gallon of valve oil ninety miles. "How many gallons can you save a year?" is the question put up to the engineers.

Trifles begin to assume the importance of big things when you multiply them enough times. A gallon of oil or a shovelful of coal saved here and there will soon pay the wages of an extra man. Fifty shovels of coal used unnecessarily on a trip means that the company will have to haul an extra ton of freight two hundred miles to pay for it.

An engineer can rough-handle his engine so that he will not only waste steam, and hence fuel, but he can jolt and jar the locomotive so that the mechanism will soon give out. Rewards are today offered on a dozen different roads to engineers and firemen who make their regular trips on a minimum supply of coal and oil. This policy of encouraging economy has resulted in enormous savings.

"We have cut down our fuel consumption on regular train trips twenty per cent in the last two years," stated the division superintendent of one road, "through a system of penalties and rewards. The average amount of both fuel and oil we take for the standard has been worked out carefully. A maximum of ten per cent over this amount is allowed for each locomotive. If more than this maximum is used the engineer or fireman or both are fined unless good reasons, such as delay and accidents, can be given. For anything less than the average used on each trip the engineer and fireman get credit. If they save more than ten per cent of the standard amount, they receive fifty per cent of the cost of the fuel saved. In the course of several hundred trips made in a year these rewards sometimes amount to considerable for the men. They appreciate it and work accordingly."

An engineer who is careless in starting and stopping, easily may break the air hose in time, and the cost of that equals hauling a ton of freight two hundred and twenty-five miles. A broken drawbar knuckle equals hauling one ton of freight three hundred miles, and a fireman's lost shovel means hauling a ton ninety miles to pay for it.

The economy bug is carried into every department of the road, and trackwalkers, switchmen, yardmasters and shop workers are brought under the new system. Trackmen and switchmen are warned that lanterns must be handled with greater care. A white lantern globe equals in cost the hauling of a ton of freight twenty miles; a red lantern globe, seventy-five miles; and a complete lantern, one hundred miles. Even a pound of waste for wiping engines and switch locks is worth ten and a half miles of freight haulage.

The yardmaster and yardmen are responsible for a lot of losses that formerly were overlooked. The cost of a freight car belonging to another railroad is from thirty to thirty-five cents a day when held unduly. Railroad economy as well as railroad efficiency demands that all cars shall be dispatched to their destinations as quickly as possible, unloaded and returned to their owners. The system of handling these foreign cars differs on the various roads. Some apparently have no system, or at best a very clumsy and involved one.

Years ago, through lack of system, many freight cars had the disagreeable habit of disappearing for long periods, and the different roads had to employ car tracers to hunt them up. Some roads, either intentionally or through lack of system, retained borrowed cars indefinitely and then sent them back home by the longest route.

There were car runaways or wanderers in those days which traveled several thousand miles before they finally reached home again. One such freight car, known as No. 6184, left its home on February 22, 1893, and wandered almost continuously until March 3, 1895, when it at last rolled into its home shed. Car tracers had chased it over a good part of the United States, and more than once it had been started homeward; but it managed to get away again, and during its wanderings it visited nearly all the principal cities of the country. It was estimated by the owners that it had traveled over twenty thousand miles and had carried all sorts of merchandise and provisions—wheat from the prairies of the Northwest, corn from the fields of the Mississippi Valley, melons and oranges from the South, Oregon and Washington apples from the far Northwest, manufactured articles from New England mills, and mineral products from the mines of half a dozen states.

In those days the roads charged one another six-tenths of a cent a mile of distance traveled as rental for common freight cars and three quarters of a cent for refrigerator cars. This charge was really so small that railroads equipped with an insufficiency of cars found it more profitable to retain foreign cars than to buy new ones for themselves.

This old system has been abolished, however, and cars must be returned as soon as unloaded. So now the foreign car question is a fruitful source of loss to the railroads if they are not handled properly and efficiently. Costing the road thirty to thirty-five cents a day, it means money to the company to unload and send them back quickly.

Yardmasters and yardmen find their chief source of saving to the company in making up the freight trains so there will be a minimum of handling after they leave the yards. Every unnecessary switching of a train to sidetrack a few cars or to get a single one out of the middle of a train means the loss of fuel sufficient to pay for the haulage of a ton twenty miles. The yardmaster thus is held responsible for these unnecessary delays. Besides the loss of time and waste of fuel, unnecessary switching causes wear and tear on the track and train mechanism that amounts to thousands of dollars a year.

The rough handling of freight by trainmen and employes at terminals results in the loss of tens of thousands of dollars every year. Damage claims and suits have become so numerous that the railroads have had to combine to combat the evil.

More than a year ago, when the economy idea began first to make itself felt on some of our railroads, the president of the Missouri Pacific issued orders to the New York offices to give up their private telephone wires to St. Louis. Why? "There was altogether too much unnecessary talking going on over the wires." He figured that he could save several thousand dollars a year to his road if this convenient method of sending messages to St. Louis was cut off. A lot of messages were despatched over the wires that should have gone by mail. It was easier to talk in a telephone than to write a letter.

Six other roads at about the same time issued orders to their telegraphers to cut their messages to the minimum. This order perhaps saved a million words a year sent over the wires. Special penalties were fixed for delays in not coming in promptly on wires when called. This greatly reduced the delays in handling trains.

Down in the passenger and ticket departments the ruthless hand of the economizer went, and before it was through a lot of duplicate pasteboard used for tickets was confiscated. There was such a multiplicity of forms and tickets in use on some roads that it took most of the time of a private printing establishment to print them.

On a single branch line there were six hundred different styles of printed railroad tickets, and on the main system upward of ten thousand. Most of the big roads had as high as five thousand standard forms of tickets, with any number of special forms to be printed from week to week. Every excursion, special train or convention gathering meant the printing of a lot of new special tickets.

Simplified tickets have supplanted many of these old duplicate and intricate forms, and many of the roads are adopting machines that, working somewhat on the principle of the cash register, will stamp and date tickets in indelible ink and give the destination just as plainly as if printed.

One big road whose ticket-printing bill was over fifty thousand dollars three years ago reduced it to thirty thousand dollars last year through these economy methods. Another had its annual bill of forty thousand dollars for tickets cut to twenty-eight thousand. A lot of expense of railroading is still wrapped up in red tape that costs the roads thousands of dollars. An elastic rate sheet would be a wonderful boon to the railroads. Some expert accountant may one of these days work out such a thing and save the companies huge annual sums.

When an elaborate and cumbersome rate sheet is made out and tens of thousands of them are printed and distributed, a change in the rates of some connecting road may make it almost worthless. The whole thing must be worked out and reconstructed to meet the new rates. The printing and reprinting of these sheets cost a lot of money, and the roads are trying to find some way of reducing it.

There are one million seven hundred thousand persons employed on all the railroads of the United States, with total annual wages and salaries of twelve hundred million dollars. If each one saved a nickel a day for his company the amount would reach eighty-five thousand dollars a day, or a trifle over thirty-one millions a year.

Operating expenses for the roads in 1910 were $1,823,000,000, and in 1911 had increased to $1,915,000,000, an increase of $92,000,000. For subsequent years operating expenses have shown still further increases. After making allowances for increased mileage, this increase in expenses was large enough to make one think seriously. Yet if the employes each would save a dime a day for the roads the increase would be wiped out.

How to Systematize a Railway Office

BY C. S. HUNSINGER.

EDITOR'S NOTE:—The following article by a Pennsylvania Railroad station agent of long experience describes seventy-four practical short cuts and systems which have been tried out and found effective in saving time and producing greater efficiency. While these may not all apply to all stations, they constitute a most complete and detailed statement covering systematized station work and should prove a valuable assistance to all those who desire to produce a higher efficiency in work of this charatcer.

RAILWAY officials have given but little attention to the efficiency of their clerical forces until the last few years. Lack of literature and organization have been responsible for this delay, but the office men are now coming into their own.

These conditions have been due to the low wage, inadequate assistance and long hours of these positions, but railroad companies are offering improved conditions each year and it is now up to the desk men to make good. This can be accomplished by the study and practice of system—the modern qualification of business, which is essential to the success of every office employe.

Before an agent or assistant can expect promotion he should be able to handle all the numerous details of his position with precision and despatch, complete each task before passing it on, keep his desk entirely free of all dead material and check up the work at night and satisfy himself that he has overlooked no promise and forgotten no task.

System does not mean a lot of cards, records and other imaginative red tape but denotes shorter and more efficient ways of getting the work done right and on time. This ability however depends altogether on the man himself and can only be learned by practice, beginning with system in the little things. By using the following short-cuts and systems which have been tried out in one of the most systematic railway offices in the United States, any desk man can obtain a splendid start in real efficiency.

No matter how inconvenient an office is, it can be made one of the most modern and systematic with but little expense and a small outlay of time. The first rule of system is classification—a right place for the right thing. Take everything out of the desk or stationery cabinet and classify the contents into six piles. In the first pile put the working tools, such as pins, ruler pencils, etc. In the second the report forms and other papers used several times each day such as way-bills, bills-of-lading, etc. The daily report blanks in the third, the weekly reports and forms used occasionally in the fourth, the monthly report blanks and forms used once in a while in the fifth and in the sixth throw all the articles that cannot be included in the above classification. While everything is out of the drawers it is a good idea to clean them carefully for neatness is one of the necessary principles of system.

Then select the most convenient place in the desk for the articles in the first pile. In the next handiest drawer put the forms in the second pile and so on until a regular place is established for everything in the entire office. If these things are always kept in their respective places they can always belocated readily. After a special place is decided for everything it is a good plan to make out an index to use until accustomed to the changes.

Some of the smaller stations are equipped with only a common table for a desk. In these cases it is necessary ta study out original schemes and places to keep the many report forms and other material but with a little time and patence it is possible to make even the most inconvenient office a model.

It has been found that the only really necessary articles on top of the desk are: one inkwell for writing fluid, one for copying ink and another for red, if it is used more than once every two or three days. Many agents only use the red fluid once a week or so and in these cases it is well to keep the pen and ink in some other place. Two or three penholders and pencils in a convenient pen rack, blotter, paper weight, desk pad, two letter trays, scratch pad and an office tickler (as suggested below) complete the equipment for the top of the office man's work bench.

In the most convenient drawer of the desk make several small compartments suitable for rubber bands, paper clips and pins. IIn a larger division keep a rubber eraser, scissors, pencil sharpener, a few extra pens and pencils, ruler, letter opener an dany other tools that are used many times daily. It would be fifteen minutes' study well spent to find the most convenient place to keep the pen pencils and blotters that are picked up twenty or more times each day.

Every station agent should have a desk tickler in constant use on account of the numerous details that he is supposed to remember. There are several different styles of desk reminders on the market but a small box file, fitted with a weekly or a monthly card index is the most practical for railway offices. Any work, promises or appointments that an agent wishes to remember several days or weeks later will be brought to his attention on the desired day by simply making a notation on a small piece of paper and slipping it behind the card of the desired date. On the morning of that day the card will bring the matter to his attention. It is well to carry a note-book around in the pocket to jot down things thought of while away from the office. It can then be filed in the tickler with the assurance that it will not be forgotten. A person will soon learn to depend on this convenience instead of burdening the memory with numerous details.

Eight or ten blank guide cards are sometimes placed in the tickler to file information of various kinds. One of the division guides can be labeled "Requisitions" where a current list of needed supplies can be kept. Make up a list of the class and commodity rates to principal stations and file either under a general "Freight" guide card or under the special commodity name such as: "Grain," "Stone," "Baled Hay," etc. A State rate telegraph card, express rate scales, a list of the passenger connections mostly inquired about, the more important percentages and routes and a revised list of embargoes affecting the different commodities can be conveniently filed in the tickler.

A common box letter file makes a very suitable hold-over file in which to keep correspondence to be held for further information or consideration, circular letters, claim papers, corrections and matters to take up with officials, assistants and other agents. File all the papers in the lowest division of the file as soon as settled, until the end of the month when they should be taken out and filed with the other monthly records. It should be indexed so the contents can be located readily.

Nearly all agents dislike to make out requisitions. Here is an effective plan to overcome this drudgery satisfactorily. Place small slips of colored paper in with the various forms, leaving an ample number of blanks under the slips to last until the next requisition arrives. Whenever a colored slip comes to the top simply make a note of it and file the list in the tickler. In this way an accurate order can be copied from this list, thus saving the handling of all the forms each time.

Where billing machines are used a list of the six class and principal commodity rates with routes, percentages, etc., can be placed in a small frame, covered with glass and suspended from the ceiling, directly over the typewriter. A small spring or two foot rubber band is generally used on the bottom of the suspended string so the frame will be drawn out of the way when not in use.

Two wire or wooden letter trays about 9 by 15 inches in size placed on the desk are conveniences that no office should be without. Have it understood in the office that all in-coming matter is to be placed in one tray and all out-going matter in the other. In this way there is less liability of any paper being overlooked or mislaid and the saving in time is very noticeable. Aim to keep the incoming tray empty. Some agents find that time can be saved by placing all work in the out-going tray as soon as it is finished and near the close of the day an assistant can enclose the letters and reports in envelopes and file the other matter in its proper place.

If there are a dozen or more letters to seal, spread them on the desk in regular order and wet the mucilage with a sponge. They can then be sealed with but a few movements.

Make a note of all the freight claims in suspense in the weekly tickler and use the follow-up system to secure prompt replies.

Keep a small card in the money drawer and get into the habit of making a note of all the amounts taken out, the amounts due and a list of miscellaneous collections. It will save a great deal of nervous figuring in checking up.

Cut off the top corner of the carbons in the bill of lading and expense bill books. This scheme will aid considerably in taking the carbons out as it is only necessary to grip the pad at the corner, shake lightly and they will drop out readily.

An agent handles his bunch of keys many times a day. If the keys used mostly are arranged so they can be found the quickest it will save a great real of unnecessary fingering.

Have the assistant stamp a sufficient number of report blanks, card bills, envelopes, etc., with the station name, division, signature of agent, etc., to last several weeks.

Attach a gummed tab or a paper clip to the top or bottom of the current pages of the account books or cut a small corner off of eacr page as it is used, to assist in locating the current page quickly.

Keep a note book or pad of clip at the business window to jot down information while talking to patrons.

It is a good scheme to keep carbon paper with all the blanks that it is necessary to take copies of. Also keep an extra carbon in a convenient place for miscellaneous copying.

If there are no printed envelopes to officials or agents to whom it is necessary to write often, have the clerk or office boy address fifty or more envelopes in advance.

Bend up one end or corner of the blotters so they can be picked up readily. Large blotters are generally a nuisance. The 3 by 6 size is the handiest.

Have a clerk make out fifty or more trial balance sheets similar to the following outline and a check of the cash can be made in a few minutes: On the debit side itemize the receipts of the office like this:

Telegrams, C. O. D. Collections, Money Order Sales ,Express Collected and Prepaid, Freight Collected, Ticket Sales, Balance, etc. On the credit side name all the denominations of cash in this way to prevent mistakes: Bills Dollars, Half-Dollars, Quarters, Dimes, Nickles, Pennies, Checks, Vouchers, Remitted, etc. File the reports until the end of the month. Check up every day and errors can be located readily. Instead of adding up the entire columns in the cash and ticket books each day add the amount of cash taken in each day to the previous total. These figures can then be copied on the trial balance sheets.

Instead of keeping train order blanks etc., on the desk or hung on the wall, make a small wooden cabinet with a special compartment for each order form, one for message paper, clearance cards and train registers and place under the telegraph desk. A file hook placed on each side can be used for messages and train orders.

In busy baggage offices it is a convenient plan to place the blank checks in the brass shells, ready to be attached to trunks. In this way they can be easily addressed and the duplicate torn off for the patron in a hurry.

To take quick impression copies place a piece of blotting paper under the leaf of tissue instead of using the common oil board, then with a brush or rag, wet the leaf thoroughly. Take off the surplus water with another piece of blotting paper, then place the written letter on the leaf, place in the press and in ten or fifteen seconds a perfect copy will be secured. To copy typewritten letters the leaves require more moisture than they do to copy letters written with pen and ink. This quick system will come in handy many times when quick legible copies are required.

Get rubber stamps for all notations used frequently. The following is a comprehensive list for the average station: Duplicate, Please Rush, Second Notice, Prepaid, Void, Shippers Load and Count, Way-Bills, State, Interstate, Thank You, Weigh and Correct, Allow Inspection without Unloading Lightterage Free, Received in Bad Order, Nothing to Report, O. K. Entered, Paid, a dating stamp, Autograph Stamp of the Agent's signature, a Received dating stamp and the names of stations mostly used. Label and keep in a stamp rack in a convenient drawer on the desk. The stamp pad can be kept there also.

It has been found best to keep records three months old and less separate from the older records as it is generally necessary to refer to these records occasionally and if mixed with other records, they are difficult to locate.

A very effective way to keep tissue paper from blowing about is to double the pad on a stick, hung on the wall. Tie a string over the lower edge of the pad, adjusting it so the paper can be slipped out easily, yet will not be blown away.

A very economical copy holder for typewriting can be made by hanging a common board clip on a nail just back of the typewriter.

During the study of system pay close attention to the arrangements of the desks and cabinets in the office. Maybe other positions would be more convenient.

Keep a blotter in all the books where ink is used. It is astonishing how much time is wasted in keeping track of the blotters.

A great amount of time is wasted in telegraphing. Be as brief as possible and a good reputation will be established which will be appreciated by the despatchers and other busy operators.

Some agents have found that by assembling all the monthly reports together and arranging them according to the dates they are to be sent in, they seldom miss a report.

To avoid forgetting messages, mail, etc., it is a good plan to have four separate and handy mail boxes; two for passenger trains in each direction and two for local freights.

A good fountain pen is a time saving office appliance for busy station agents. Count the number of times the pen is dipped in the ink well and the result will be surprising.

Post a local time table in the waiting room for the convenience of passengers and it will save the answering of many questions. Place a division time card on the tickler also.

A ticket agent is many times asked the distance between local points. Place the number of miles on the ticket rate card near the window and the annoying questions can be answered promptly.

Make use of the principles of system in arranging the tickets in the case. It is generally best to arrange them in geographical order.

Make a complete index of all the forms in the office, stating just where everything can be found.

Do not allow matters that will be referred to but once a month interfere with date consulted but once a day. If there are any torn or fly-specked papers about the office either make copies of them or burn the old ones.

The most convenient place to keep the troublesome needle is in a small tin box with a small hole in the top or side. The spool of thread can be kept there also and the thread pulled through as needed.

In filing monthly records tie them with a string and mark on a shipping tag the name of the record, the month and year. Make a yearly index of the file record case. This will enable a person to locate any record readily.

It does not take a great deal of practice to be able to use the left hand in writing short notations and in telegraphing and will prove a valuable accomplishment.

Place a pen and pencil rack over each desk where writing is done.

Before using a new pen, remove the grease which always covers new ones with a small cloth and a little pinch of cigar ashes. It will then write like a new pen from the start.

Make out a list of the weekly reports due on a card and file it in the desk tickler from the 7th to 14th, then to 21st, and so on. Other periodical reports and work can also be brought to the attention in this way.

Make a list of the telephone numbers mostly used and keep in the tickler or near the telephone.

Have a general house cleaning once a month and the office will be a tidy one.

Learn to use the typewriter by a standard touch system.

Learn to concentrate the mind. It is a rare accomplishment.

Divide the day's work: errands to office boy, routine to the clerk and the vital work for the boss.

Keep a calendar of the preceding and succeeding months in a place where it can be referred to easily.

Aim to keep the work up to date and the desk cleared for action.

Do not invite or encourage visitors to come to the office.

Mark down all the errors that are made each day and refer to the list occasionally. Everybody makes mistakes but efficient men do not repeat them.

Real personal efficiency is to save time and then more important of all is to use the spare minutes to advantage.

Through Routes for Chicago's Steam Railroads

Note: There are strenuous times ahead for the railways. The Interstate Commerce Commission's virtual denial of the right of railways in official classification territory to advance their freight rates five per cent., has left them without adequate means to increase their revenue sufficiently to meet the demands of a growing commerce. The Commission's decision, while woefully lacking in any immediate measure of relief, is, like most Government documents, full of gratuitous suggestions by which it is evidently hoped that the carriers' may improve their financial condition. One of these suggestions refers to passenger rates which, it is evident, in the opinion of the Commission, are in many instances, below what they should be in order to provide a proper compensation for the services rendered. In view of this attitude, the following extracts taken from a recent publication of the City Club, of Chicago, entitled "Through Routes for Chicago's Steam Railroads," will prove of interest to passenger traffic officials as well as those who are more directly interested in general financial results. This publication which is by George Elsworth Hooker, civic secretary of the City Club of Chicago, has been prepared for the purpose of setting forth Chicago's urgent need for better means of fast and comfortable local travel, which, it is held, should be largely met by the steam railways operating to and from that city. The author states, as his belief, that a properly designed and operated system of through routes for local travel on the steam lines would constitute, from a broad city planning standpoint, the most efficient trunk factor for a logical trunk-and-feeder scheme of passenger travel for the entire city and its suburbs, and would yield more accommodation in rapid transit for the same outlay than would be secured in any other way. The following paragraphs constitute an outline of the plan as developed by Mr. Hooker:

THE following figures have been secured from reliable sources as to the number of local railway passengers per year in Chicago and the approximate speeds at which they travel—the average speeds for the "Elevated" and steam lines being obtained by combining their respective local and express schedules.

Street railway passengers (excluding transfers) 600,000,000, average speed—9 miles per hour.

"Elevated" railway passengers 164,000,000, average speed—14 miles per hour.

Steam railway passengers (approximately) 41,500,000, average speed—24 miles per hour.

The street cars of Chicago, if operated at a speed appropriate for long hauls, become dangerous, deluge people with dust and deafen them with noise—in short, become inappropriate for the public streets. The elevated electric lines are faster than the street railways, but are slower and ramify less widely than the steam lines. For a considerable fraction of the 600 million street railway passengers and the 164 million elevated railway passengers the crowding is nothing less than a disgrace to the community. A very great number of those passengers also suffer a constant and enormous waste of time—as compared with steam travel—by using those facilities for long haul journeys.

It is, therefore, the steam railroads of Chicago—presumably soon to be electrified—which alone represent the speed and comfort appropriate for the long journeys so characteristic of the local travel of this diffused community. Yet only 1-20th of all the local passengers in Chicago enjoy that standard of travel. Despite the steady and rapid increase of the population of the city, and despite the fact that the number of street railway passengers has doubled within the last eleven years, the steam lines are not greatly increasing their *local passenger service*, and have not been doing so for years nor do their managers promise any important future increase. The steam railways in Greater Berlin—which include a great east and west four-track through route—carry eight times as many local passengers as do those in Greater Chicago.

It is the meagreness of local high speed travel by rail which in part at least explains the thousands of automobiles parked daily in the downtown streets. The space demands per passenger, however, of the automobile, whether moving or standing, are so great that no policy would be justified which would compel or even permit it to become a general means of travel to and from the ever-thickening business center. If it became such, all other vehicles would, from sheer lack of room for them, have to be put off the surface of the streets.

Nor will subways in the central district—facilitating increased speed for a short distance only—meet the case. Moreover, a subway system extending over the whole city, even if it reached the speed of the steam lines, would be enormously costly as compared to the expense of developing for local traffic, steam lines already existing, and would be open to the serious objections which attach permanently to underground travel. The steam lines should be more extensively utilized for fast travel.

To secure such utilization of the steam lines, however, they must be linked up into through routes—continuous from one side of the city, through the business center or through other important centers or districts, to another side. Passengers using a given through steam route could then ride *without change* from any station on one side of the city to any station on another side, or —on the downtown routes—to any of several stations which would presumably be established in the business district. Few would ride from one end of a through route to the other, but many would ride from one side of the city or of the business district to another side; and many would be convenienced by a choice between *several* different stations on each line in that district, where now they have but one.

With through routes thus operated, a logical system of surface feeder lines, crossing them at their various central, as well as outlying stations, could likewise be developed, so that a passenger starting at any point in the city or its environs could be certain of getting conveniently to or

MAP OF CHICAGO SHOWING POSSIBLE THROUGH STEAM ROUTES SUGGESTED BY BION J. ARNOLD, 1914

KEY

———Existing steam railway. - - - - -Chicago city limits, 1914. ○ Proposed new station.

. . . . . .Proposed subway connection. ● Existing station.

The four through routes, including branches, are identified by their respective numerals on the margin of the map.

near his ultimate destination, and of having the maximum opportunity to use the highest speed service.

Thus, through steam routes, properly fed by street railways, would actually give all parts of Greater Chicago rapid and convenient communication with each other. With few exceptions our characteristic long journeys could then be readily made in part or in whole on the swift and comfortable steam lines. With the exception, too, of such downtown sections of these lines as might possibly be placed in short subways, this high speed travel would be entirely above ground.

The stub-end steam terminal involves a great amount of excess trackage in its train shed and adjacent yard for reverse train movements and for cars waiting in the train shed longer than is necessary for loading and unloading. Its consequent great width necessitates correspondingly long subways or viaducts for the streets crossed. The through-route station need be perhaps only one half or one third as wide at street crossings as the stub-end terminal. By such stations for example, the street subways under the new Northwestern and the Rock Island terminals might be shortened perhaps one half or more. The cost of these terminals would also be correspondingly reduced.

The establishment of through steam routes, each with several stations in the business district, would remove a powerful pressure against the natural growth of that district.

The great majority of the 100,000 passengers into, and then out of, the downtown steam terminals daily, are destined for points widely scattered throughout the business area. Yet no passenger, save on the Illinois Central suburban service, has any option as to the place of leaving or taking his train. Since most passengers, however, would be adverse to spending an extra fare for street car or to spending more than ten or fifteen minutes walking between station and downtown destination, terminal routing is always tending to limit the business district to an area every part of which can be reached from every steam terminal, by walking, within ten or fifteen minutes.

The buisness district can never expand naturally until freed, not alone from the barricading effect of the surrounding steam railroad property, but also from the compression of the "Little Chicago" plan of steam railroad routing.

The through-route principle for urban transportation has been rapidly winning its way in modern cities respecting elevated and underground and, especially, street car lines. Chicago has adopted it for elevated and street railways. Despite peculiar difficulties, the principle has also been applied in a number of cities, and with conspicuous success, to steam lines. It is being applied to steam lines in several notable instances at the present time, and its application to steam lines has been officially recommended as the only satisfactory solution in other important instances.

Through routing on the steam lines of Chicago is recommended by Mr. Bion J. Arnold in his recent Chicago Railway Terminal Report, and he has suggested a tentative scheme of routes for carrying this out as indicated by the accompanying diagram. This scheme would employ properties already existing and would involve only a limited additional investment.

Electrified as they presumably will be in due course, amplified where necessary by additional tracks alongside, linked up into through routes, and properly crossed at stations by surface feeder lines, the steam lines should constitute a trunk system of popular, safe, comfortable, sun-lit and *rapid* travel throughout Greater Chicago.

At the present time the terminals of these railways are not even situated so that direct or even practicable transfers can take place between them for local travel. They are instead planted at arbitrary points distant from an eighth of a mile to a mile and an eighth from each other. These terminals also illustrate the same grave objections which attach to such terminals generally: they are inefficient for local transportation; they waste space, interfere with streets, cost extravagant sums, congest business, and distort city growth.

Not a through steam route exists in Chicago. The plan at the right shows the six arbitrarily located and disconnected downtown terminals at which Chicago's steam passenger lines for local as well as long-distance service now end.

This plan makes it plain why the passenger business of these lines, although they represent the highest standard of speed in Chicago, and although Chicago distances demand that speed, is so conspicuously small. It is chiefly because they are operated on the terminal instead of the through-route plan. No passenger can ride through and beyond the central district, or—save on the Illinois Central—choose between more points of arrival than one in that district. This lack of continuity is fatal to any large development of local passenger traffic on the steam lines.

The necessity of replacing terminals and terminal routes on these lines by through stations and through routes is further enforced by many objections inherent in steam line terminals irrespective of their location with reference to each other.

Local passenger service on the steam lines of Chicago has not increased in recent years in due proportion to the increases on other railways. Some of the steam railroads have closed local stations and taken off local trains, saying they do not pay. Railroad managers may also be heard to say that they would gladly discontinue the suburban service which they now maintain.

If the steam railroads find their local passenger service insufficiently remunerative, a reason is not far to seek. The "Elevated" and street car lines give each passenger the option of from 10 to 40 different stops in the business area (bounded by 22d street, Michigan boulevard, Chicago avenue and Halsted street), while most steam trains stop therein at one arbitrary point only. The street car and "Elevated" lines carry their passengers from one division of the city to another by through cars or direct transfer, while the steam lines offer their passengers neither through cars, convenient inter-station service, nor even connecting trains. It is inevitable, under these circumstances, that the steam lines should lose traffic.

Roughly speaking, there are three kinds of local passenger business which the steam lines should handle, namely:

1. Traffic to and from the small congested kernel of the business district.
2. Traffic to and from the surrounding portions of that district—portions less congested but more extensive, and fast filling up with business.
3. Traffic not destined for any part of that district, but taking place between points in one and points in another of the three great geographical divisions of the city, or their adjacent suburbs.

The steam lines now handle—and with terminal routing can handle—only the first of these three classes of traffic. If they would install through-routing, they could handle the other two classes also.

Through routes on Chicago's steam lines would benefit the railroads themselves, would greatly increase the means and rapidity of local travel, would aid the central as well as the outer portions of the city, and would in many other ways serve the welfare of the people.

Through routes would aid the railroads by eliminating reverse train movements in central stations, by lessening thus the number of station tracks required, by reducing in this way the size and cost of stations, by rendering the latter admissible thus at central locations, by inter-changing coach yards and so minimizing waste mileage to and from them, and by introducing a new era of development for the local passenger business of the steam lines. They would also aid the railroads by feeding long distance traffic and by smoothing the way for through-routing long distance trains where desired. They would, furthermore, accomplish all these various benefits by employing, in the main, existing facilities, easily capable of much more extensive use and requiring a smaller new investment than any other scheme of equal promise.

If railroad presidents will seek their monuments in the local development of our cities, rather than in pretentious architectural piles—surrounded, perhaps, by ugliness—and if the steam lines will accordingly put their speed at the service of the public on an up-to-date scheme of routing, local passenger traffic on those lines will assume entirely different proportions.

Through routes would vastly increase the means and the convenience of travel. By providing a few comparatively short links, they would bring into more intensive use for local passenger service, and on a new and comprehensive plan, an entire system of existing lines of the highest speed, ramifying throughout Chicago and into the surrounding country. By enabling passengers to ride from one of these lines to another without change, and also to transfer at junction points, they would more than double the number of different possible continuous trips or direct transfer trips, from one station to another station on Chicago's existing steam lines. They would abolish the awkward hiatus in steam travel at the business center, by reason of which it is now impracticable to use the steam lines for cross-town journeys, and would reduce thus by from 20 per cent to 50 per cent the time required for a considerable portion of such journeys.

They would make it possible for a much larger proportion than at present of the entire travel of Chicago to proceed at the steam line speed. They would effect thus an enormous saving of time to the community, while reducing also the excuses for overcrowded and dangerously speeded street cars. They would secure the maximum convenience for doing business in any part of Chicago, irrespective of one's residence.

Through routes would aid the business district. By lessening the width of stations they would economize downtown space and reduce the length of subways under or viaducts over trainsheds and yards. By furnishing more express travel they would tend to lessen the congestion from automobiles in downtown streets, and by bringing passengers nearer their destinations by means of additional central stations they would tend to relieve the congestion of downtown sidewalks. Through routes would benefit the territory next beyond the business district. They would release that district from the compression of terminal routing, and, through the additional downtown stops, distribute business over a wider central zone.

Through routes would benefit all Chicago, city and suburbs. Being continuous routes, traversing the business area and also stretching beyond the city limits, they would afford convenient and speedy intercommunication between different parts of the city, between all parts of the city and all parts of the suburbs, and between the different suburbs themselves. They would serve and tend to build up all of Greater Chicago.

Railway Developments in Europe

NOTE:—For more than two years the RAILWAY WORLD has been publishing a monthly article from its London Correspondent relative to railway developments in Europe. These have been found of considerable interest, as numerous letters received from subscribers indicate. Owing to the state of war which now exists in Europe, however, it may be found necessary, after the current issue, to suspend the publication of these articles, until peace has been re-established.

Germany Builds New British Passenger Expresses.

THE first instalment of the new and heavier type express engines Nos. 772 to 781 recently ordered to the design of R. E. L. Maunsell, the chief mechanical engineer of the South Eastern and Chatham Railway of England, from A. Borsig of Tegel, Berlin, have now been put into service. The accompanying photograph and weight diagram illustrate these engines, which are of the 4-4-0 type with inside cylinders and are fitted with Schmidt superheater, having a draught retarder instead of the usual damper arrangements. They have the company's standard equipment of steam reverse gear, bogie, &c., and the principal dimensions are as follows:

Boiler.—Barrel diameter 5 feet: length 11 feet 5 inches; firebox width shell 4 feet ½ inch; length shell 7 feet 5 inches; tubes 1¾ outside diameter 16 9inches: 5¼ outside diameter 21 inches; heating surface, firebox 160 square feet, tubes 1,252 square feet; total 1.412 square feet. 21 element Schmidt superheater 319 square feet;. grate area 22.5

square feet. Working pressure 160 pounds per square inch.

Cylinders.—20½ inches diameter by 26-inch stroke; piston valve 9 inches diameter.

Wheels.—Bogie 3 feet 7 inches diameter; coupled 6 feet 8 inches diameter; traction power at 80 per cent boiler pressure 17,472 pounds; weight on coupled wheels 84,448 pounds.

Tender.—Wheels 4-0; capacity—water 3,450 gallons, coal 8,960 pounds.

Total wheel base of engine and tender 46 feet 2¾ inches.

Total length over buffers engine and tender 56 feet 5⅞ inches.

Weight in working order.—Engine bogie 44,240 pounds, driving 43,120 pounds, trailing 41,328 pounds, total 128,688 pounds; tender leading 30,240 pounds, middle 29,792 pounds, trailing 30,240 pounds, total 90,272 pounds; total engine and tender 218,960 pounds.

Great Eastern's New Tank Engines.

Some interesting developments are promised in connection with the Great Eastern Railway, which it will be well known has now an American general manager. Orders have recently been placed for two passenger tank engines of the 0-6-2 type. These are to have Belpaire boilers pressed to 180 pounds per square inch, two inside cylinders of 18 inches diameter by 24-inch stroke provided with 9-inch piston valves, coupled wheels of 4 feet 10 inches in diameter with ¾-inch side play for the leading pair and 3 feet 9 inches radial wheels at the bunker end. The weight, with about 1,500 gallons of water and three tons (6,720 pounds) of coal, is estimated at 134,400 pounds distributed over a 23-foot wheel base which is thus divided between centers: leading to driving 7 feet 6 inches, driving to rear-coupled 8 feet 9 inches, rear-coupled to trailing 6 feet 9 inches. The tractive power will be 19,788 pounds and the adhesive power 23,495 pounds. One of these engines will also afford the first example of a superheater tank locomotive on the Great Eastern Railway.

Although the 0-6-2 wheel arrangement is a novelty on the Great Eastern's system it is by no means so elsewhere, and there are at the present time some 1,400 such locomotives in the United Kingdom. The type is, indeed, well over thirty years old, for in 1882 Barton Wright was building his No. 150 class of 0-6-2 engines for the Lancashire and Yorkshire Railway and in all probability even then he was only following Continental practice. Most of our railways possess a goodly number of such tank engines, the London and North Western having 380, the Great Central 206 (representing nearly half its tank stock), the Taff Vale 151 (equal to 86 per cent), the London, Brighton and South Coast 134, the North Eastern 102, the Rhymney 79, the Barry 72. It is a type which is especially prominent on the mineral carrying lines of South Wales.

"Moguls."

The employment of the "Mogul" type for main line general utility work is increasing on the railways of this country and Mr. Gresley, on the Great Northern, has lately added a new class to his stock, with a larger boiler than the original series of two years ago and fitted with the Robinson superheater. The boiler provides 40 per cent increased heating surface and brings the weight of the engine up from 138,320 pounds to 142,800 pounds. With 14,560 pounds of coal and 3,500 gallons of water the tender weighs 96,320 pounds.

Interesting Irish Stock.

The Great Northern Railway of Ireland has recently placed in service a class of five 4-4-2 tank engines (built by Beyer, Peacock and Company), which possess some points of interest. The total weight is 145,600 pounds of which 76,160 pounds is carried on an 8-foot 3-inch driving wheel base; 36,400 pounds is sustained by the bogie and the burden of the radial wheels approximates to 33,600 pounds. The bogie wheels are fitted with brake mechanism worked from a separate cylinder carried on trunnions between the bogie frames. The trailing truck is of the Bissel type with radial horn guides. It should be borne in mind that the gauge is 5 feet 3 inches. The engines have not been fitted with superheaters owing, it is said, to the work for which they are designed involving much shunting and many short runs.

Value of the Superheater.

A number of the London and North-Western Railway's newest locomotives are equipped with superheaters. According to figures just made public by the company's engineering department there is an unusual reduction in water consumption to the extent of a million gallons for each engine so fitted. The superheater is one of the very few notable developments in locomotive practice during recent years, and the number of engines now equipped with the device, which is in use in every part of the world, is already very large, and is constantly increasing. When it was first introduced the superheater naturally had to prove whether the cost of adding it to a locomotive would be balanced by a corresponding increase in efficiency. That question has long been answered in the affirmative. This point is mentioned because the superheater has this in common with some other recent railway inventions that while it represents an added cost, the outlay is a good investment. Automatic signaling comes into the same category. We do not yet scrap our locomotives and other machinery so rapidly as in the United States, but we certainly have adopted the idea that the first cost of a new mechanical appliance is a factor of much smaller importance than the increased efficiency resulting from its use.

Changing Locomotive Types.

A few years ago the eight-wheeled locomotive with four coupled wheels, was the standard for express passenger work not only in England but also throughout the greater part of the continent of Europe. On most foreign railways the standard type is to-day a bigger machine with ten to twelve wheels, of which six are coupled, and a similar tendency has influenced British railway practice during the past decade. The majority of our express trains are nowadays hauled by ten-wheeled locomotives of which two types are used, having four and six coupled wheels respectively. The latter type is particularly at home on the Great Western where over a hundred are now running on the fastest express trains, while the latest London and North Western engines are of the same type. The London and South Western has about thirty of them, the Great Eastern will soon have the same number in service, and the North Eastern, the Lancashire and Yorkshire and the Great Central, as well as three of the Scottish railways, have also built engines of the 4-6-0 type as they are technically known. This designation, it may be explained, denotes that the locomotive, excluding the tender, is supported on ten wheels, of which the six in the rear are coupled together, while the four in front play no part in propulsion, but merely help to carry the weight and take some of it off the rear wheels. It is particularly interesting that this type should now have become the standard because a few years ago indications rather pointed to the general adoption of another type, the so-called "Atlantic." This is also a ten-wheeler, but only four of the wheels are coupled, the hindmost pair merely serving as carrying wheels. It is a type which has for years been very much in vogue in England for suburban traffic work, and it has been used on the Lancashire and Yorkshire and on the Great Northern and other railways for express traffic, while the Great Western had a few built for experimental purposes, including its imported French compound engines. But the type has not caught on to the extent that might have been anticipated. The reason is undoubtedly to be found in the explanation given to your correspondent by the locomotive engineer of one of the large lines on which both the "Atlantic" and the 4-6-0's had been tried, with the result that it was decided to adopt the latter type.

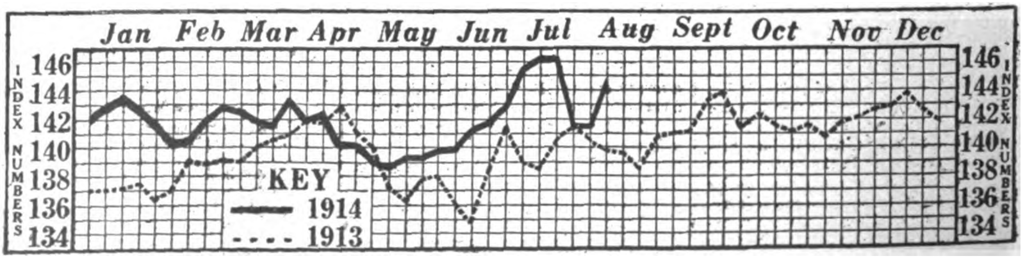
Financial

Recent Developments.

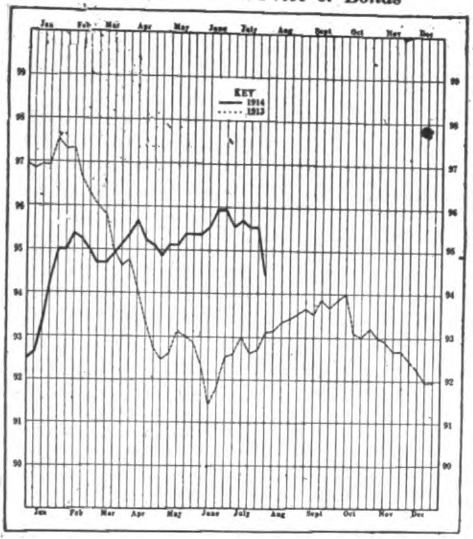
ALL ordinary signs fail in the face of such developments as have occurred during the past few weeks. The result of suddenly plunging Europe into an armed conflict such as the world has never witnessed, has been to throw out of gear the financial machinery of the world and to cause the collapse of the financial and security markets of this country as well as those of Europe. Ordinary calculations as to the effect of the war upon the markets are valueless, for the simple reason that past experience supplies no parallel for the situation which confronts the world today. Never has history recorded such an utter collapse of the credit machinery of Europe, or such a complete suspension of the international exchanges and a universal demoralization of the ordinary processes of trade and finances among the various countries of the world. The closing of the New York Exchange came only after the suspension of all European exchanges as well as those of Montreal, Can., and only after it had become apparent that this country would be made the dumping ground for the whole of Europe, if the Exchange continued open.

Under the circumstances, no other course was possible. It is a matter of congratulation, however, that during the earlier days of panic in Europe, our own market stood the strain with amazing stability and the record of Wall Street from the day on which the Austrian ultimatum was issued, until the closing of the Exchange several days later, is one which will stand, when the record is written, as an evidence of most remarkable resistance power. The closing of the Exchange was made necessary not only to protect American holders of our securities against the avalanche of sales which was crushing against our market, and under which prices were rapidly crumbling, but also because these foreign sales for cash furnished funds for gold exports, with reference to a continuation of which protective measures were imperatively necessary. The week ending August

The Cost of Living



Curve of The Basic Price of Bonds



first, saw exports of gold amounting to $48,000,000 and represented the third distinct gold movement to Europe this year; the first absorbed $16,000,000 and the second $63,000,000, or in all, a total thus far of $127,000,000. This movement fortunately occurred when our industry was slack and our bank reserves well protected, but it is manifest that it could not have continued much longer without causing the Nation serious embarrassment.

At no time in its history, has the United States more severely felt the necessity for a merchant marine. Great quantities of export products are now being held awaiting vessels in which to transport them to foreign countries. This situation is causing the gravest concern, and is one of the influences which is having an immediate effect upon our commercial activities. The grain crop is reported as unusually bountiful, the cotton crop has likewise shown great improvement within recent weeks, and other agricultural and meat products as well as manufactured goods are eagerly awaiting an opportunity to again enter international trade. No suitable methods have yet been found, however, by which this congestion can be relieved and unless one or the other of the warring combinations gets complete control of the ocean highways, there appears no satisfactory solution.

Of course railroad, as well as other, securities are at present a drug on the market; no efforts along the lines of new financing are being made, or may they be anticipated for some time to come.

The railroads are engaged in digesting the Commission's decision in the five per cent rate advance case, and to derive from it such comfort as it may contain. The decision, however, is held in the main to be extremely unsatisfactory, although it is hoped certain rate readjustments which the Commission has rather vaguely referred to, may be accomplished promptly enough to offer some measure of relief in the near future. Undoubtedly, should the international arteries of trade be again thrown open to our products, the railways would witness a decided improvement over their present condition, but any predictions, at the present time, are worse than useless.

Railway Revenues and Expenses for May.

THE Bureau of Railway Economics has issued its monthly summary of revenues and expenses of steam roads in the United States for the month of May. This summary shows in brief, that returns for that month, reduced to a per mile line basis, and compared with the returns for May, 1913, show a decrease in total operating revenues per mile of 10.4 per cent, and a decrease in operating expenses per mile of 6.1 per cent. Net operating revenue per mile was less by $70, or 21.7 per cent, than for May, 1913, while that for May, 1913, was 9.8 per cent greater than for May, 1912.

Railways operating 225,858 miles of line are covered by this summary, or about ninety per cent of all steam railway mileage in the United States. Their operating revenues for the month of May, 1914, amounted to $232,567,938. This amount includes revenues from freight and passenger traffic, from carrying mail and express, and from miscellaneous sources connected with rail operation. Compared with May, 1913, total operating revenues show a decrease of $25,038,021. Total operating revenues per mile averaged $1,030 in May, 1914, and $1,150 in May, 1913, a decrease of $120, or 10.4 per cent. There was a decrease of 13.4 per cent in freight revenue per mile, and a decrease of 2.8 per cent in passenger revenue per mile.

Operating expenses, which include all the costs of maintaining track and equipment, operating trains, securing traffic, and of administration, amounted to $176,029,940. This was $9,921,181 less than for May, 1913. These operating expenses per mile of line averaged $779 in May,

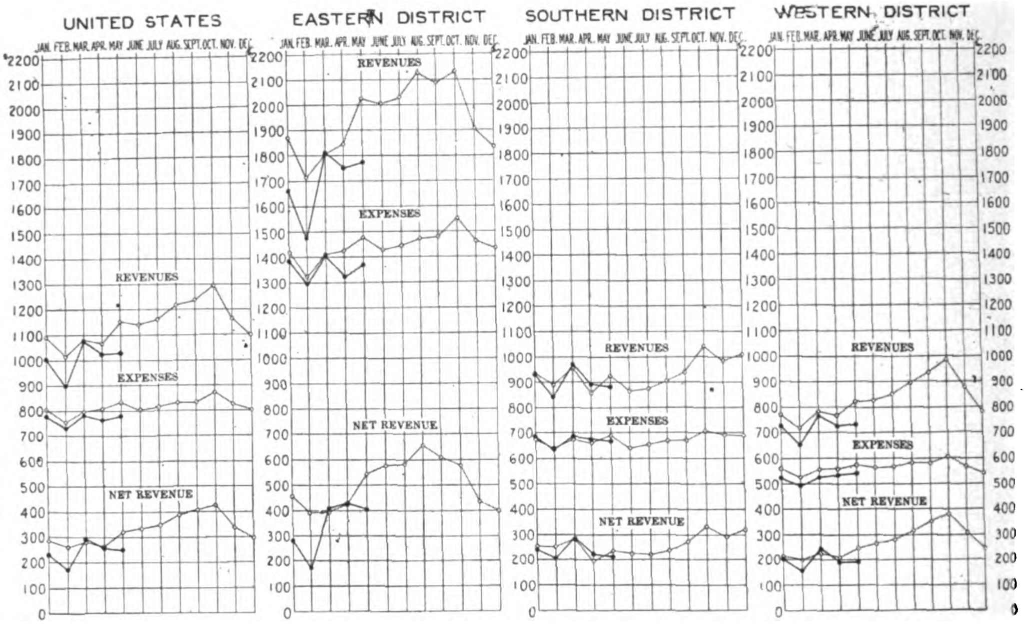
MONTHLY REVENUES AND EXPENSES PER MILE OF LINE

ROADS HAVING ANNUAL OPERATING REVENUES ABOVE $1 000 000

CALENDAR YEAR:
1913 •
1914 •



The points on the vertical lines are of significance only in showing the condition for the particular month. The lines connecting the points assist in tracing the change from month to month but do not indicate the trend during the month, nor are they cumulative for the period.

1914, and $830 in May, 1913, a decrease of $51 per mile, or 6.1 per cent.

Net operating revenue, that is, total operating revenues less operating expenses, amounted to $56,537,998, which was $15,116,840 less than for May, 1913. Net operating revenue per mile of line averaged $250 in May, 1914, and $320 in May, 1913, a decrease of $70 per mile, or 21.7 per cent.

Taxes for the month of May amounted to $11,905,010, or $53 per mile, an increase of 11.2 per cent over May, 1913.

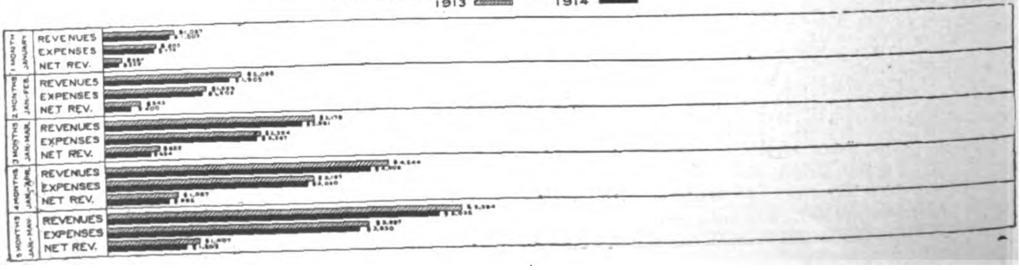
Operating income, which is net revenue from rail and auxiliary operations, less taxes, averaged $197 per mile of line, and in May, 1913, $273, thus decreasing $76, or 27.9 per cent. Operating income for each mile of line for each day in May averaged $6.35 and for May, 1913, $8.81. Operating income is that proportion of their operating receipts which remains available to the railways for rentals, interest on bonds, appropriations for betterments, improvements, new construction, and for dividends.

The operating ratio for May, that is, the percentage of total operating revenues absorbed in operating expenses, was 75.7 per cent, which is comparable with 72.2 per cent in May, 1913, and 71.4 per cent in May, 1912.

Railroad Gross Earnings for June and the Half Year.

THE latest report of railway earnings by the *Commercial and Financial Chronicle* show a continuation of the unsatisfactory results of the past few months. Out of forty-five roads which have contributed advance figures of gross earnings for June, only ten show gains, while the losses in a number of instances, are of large amount. In the aggregate, for the whole forty-five roads reporting, there is a decrease of $4,739,136, or 7.15 per cent. Furthermore, the decrease would have been of yet larger proportions except for the circumstance that the present year had the advantage of an extra working day, June, 1914, having contained only four Sundays, whereas June, 1913, had five Sundays. Comparison is on the whole, with pretty good return of earnings in June of last year, as for that month the early

DIAGRAM COMPARING FOR THE INDICATED PERIODS OF THE CALENDAR YEARS 1913 AND 1914
CUMULATIVE REVENUES, EXPENSES AND NET REVENUE PER MILE OF LINE
ROADS HAVING ANNUAL OPERATING REVENUES ABOVE $1,000,000
1913 ▨ 1914 ■



statement registered a gain in the aggregate of over $5,000,000, or 7.44 per cent, while in June, 1912, there was also a fair amount of improvement. The following statement prepared by the *Chronicle* shows all changes as compared with June of last year for the separate roads for amounts exceeding $30,000, whether increases or decreases:

PRINCIPAL CHANGES IN GROSS EARNINGS IN JUNE.

	Increases.
Chesapeake and Ohio	$60,328
Cin New Orl and Tex Pac	39,001
Yazoo and Mississippi Valley	31,556
Representing 3 roads in our compilation	$130,885

	Decreases.
Canadian Pacific	$1,626,000
Canadian Northern	522,900
Grand Trunk	504,855
Wabash	317,089
Louisville and Nashville	256,698
Buffalo Roch and Pitts	219,228
Colorado and Southern	190,389
Chicago and Alton	180,139
Missouri Pacific	165,000
Minn St Paul and S S M	150,239
Illinois Central	116,872
St Louis Southwestern	109,000
Chicago Great Western	106,780
Missouri Kansas and Texas	79,058
Denver and Rio Grande	69,500
Grand Trunk Pacific	y58,923
International and Gt Nor	53,000
Duluth So Sh and Atlantic	50,308
Toledo Peoria and Western	30,426
Representing 19 roads in our compilation	$4,806,404

y These figures are for three weeks only.

The contraction in the grain movement during June has probably had considerable to do with the present year's unfavorable showing. In the South, however, the cotton movement ran somewhat heavier than last year and some of the Southern systems make really satisfactory comparisons of earnings with 1913, the losses on the Southern Railway and the Seaboard Air Line being relatively moderate in amount.

For the half year, according to the *Chronicle's* figures, railroad gross earnings show a heavy reduction as compared with similar results in 1913. In fact, this showing applies both to the gross and net returns but at the present time, only the gross figures are available for the entire period. In brief, railway gross earnings in the United States during the first six months of 1914 fell off no less than $84,500,000 as compared with the first six months of 1913. In other words, the railroads earned only $1,379,095,321 this year against $1,463,696,430 last year, a reduction close to 6 per cent. When it is considered that last year's figures were seriously influenced by the tremendous floods which occurred in the Middle West during the spring of 1913, and which cut down railroad traffic and railroad earnings heavily on certain roads, the unusually poor showing of the roads for the current year is more clearly apparent. Furthermore, it is noteworthy that there has been little permanent growth in railroad revenues in the first few months of the last six years with the exception of 1913, which recorded an increase of $136,000,000. 1912, on the other hand, showed an increase of only $51,000,000, while 1911, showed a decrease of $26,500,000. While there were increases in 1910 and 1909, of $173,000,000 and $122,000,000 respectively, in 1908 there was a decrease of $197,000,000 so that the past seven years show a rather spotted and far from satisfactory record where gross earnings are concerned. Prior to 1908, the country was in the full flush of prosperity and the trend was almost interruptedly upward for a full decade. The following summary shows the comparative results of gross earnings during the first six months of 1914 and 1913:

	1914.	1913.	---Inc or Dec---	
	$	$	$	%
Jan.	.233,073,834	249,958,641	—16,884,807	6.75
Feb.	209,233,005	233,056,143	—23,823,138	10.22
March	250,174,257	249,514,091	+660,166	0.27
April	236,531,600	245,048,870	—8,517,270	3.48
May	239,427,102	265,435,022	—26,007,920	9.73
June	197,231,111	207,139,547	—9,908,436	4.80

Quarterly Earnings of the United States Steel Corporation.

THE United States Steel Corporation has issued its statement for the quarter ending June 30th. Net earnings were $20,457,596, a substantial increase over the preceding quarter when they amounted to $17,994,381, but a very large decrease over the earnings of the second quarter of 1913, when they were the highest ever reported in that quarter, being $41,219,813. The accompanying chart which has been prepared by the New York *Analist* shows the net earnings for each quarter since the organization of the Corporation.

Following is the monthly record for net for the first half of the year, compared with the same period in each of the two immediately preceding years:

Month	1914	1913	1912
January	$4,941,337	$11,342,633	$5,243,306
February	5,655,611	10,830,051	5,427,320
March	7,397,433	12,254,217	7,156,247
April	6,920,879	13,072,710	7,509,207

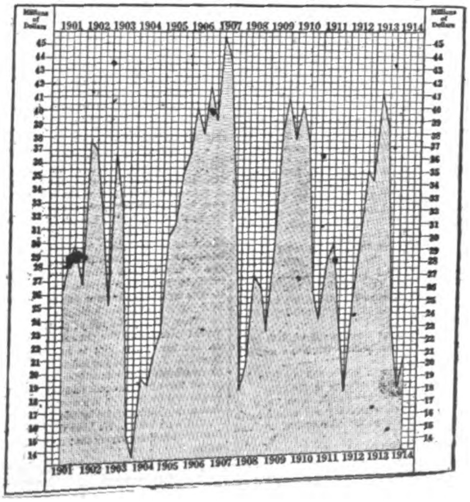
Steel Trust's Quarterly Earnings



It will be observed that for the first six months of the current year there has been a decrease in net of $32,476,132, or almost exactly 40 per cent from those of the same period last year.

The directors declared the usual dividends of quarterly dividends of 1¾ per cent on the preferred and 1¼ per cent on the common stock, but earnings fell short of dividend requirements by $5,159,237, and it was necessary to draw on previously reported surplus to pay them. In the preceding quarter the Corporation failed to earn dividends by $6,289,644, so that the deficit for the first six months of the year amounted to $11,448,881.

In trade circles it is the consensus of opinion that the iron and steel business will not be injured by the European war except insofar as it affects general business, unless a great migration of labor (that employed in the iron and steel industries is for the most part foreign) should ensue as a result of the call to military duty.

British Investment in United States Railway Securities on the Decrease.

APPLICATIONS for new capital by United States railways in the London market during the first six months of 1914 were the smallest reported in any similar period over the past five years. Reflecting directly the general slowing up of railway activity the world over and more conspicuously the reluctant attitude of British capital toward investment in American railway securities under prevailing conditions, this unfavorable showing is based on a summary of railway borrowing in the London market received in Chicago by the Bureau of Railway News and Statistics.

Total borrowing on the part of United States railways for the six months amounted to $7,400,000. This compares with $9,800,000 in the first half of 1913, $30,115,000 in the corresponding period in 1912, $45,020,000 in 1911 and $76,060,000 in 1910. The last previous first half year with a lower aggregate was 1909, with only $1,000,000, preceded by 1908 when the first half year's borrowings were $40,000,000.

The following tabulation shows how borrowing on the part of our own railways during the past few years has slumped in contrast with other nations, until in the first six months of 1914 the greatest railway system of the world played the least conspicuous part in the bidding for new capital. The figures are in thousands:

First Half	1914	1913	1912	1911
U. S.	$ 7,400	$ 9,800	$ 30,115	$ 45,020
Gt. Britain ..	10,000	8,375	4,000	10,600
Canada	27,725	83,295	19,055	19,975
Colonies and India ..	30,500	17,500	19,000	14,000
Other foreign ..	79,555	116,610	68,525	117,125
	$155,180	$235,580	$140,695	$206,720

Though total capital applications were below 1913 they were above 1912 and but for the impossibility of inclusion of large Canadian loans they would have nearly if not quite equalled the totals for 1911 and 1910. Canada, which reached a record for railway borrowing in the London market in the first half of 1913 at over $83,000,000, fell to less than $28,000,000 in the first six months of this year. Yet this total is very incomplete, as large borrowing has been done by the Canadian Government direct, the greater part of which was for railroad purposes in guarantees to the Grand Trunk Pacific and the Canadian Northern. Two government issues in which railway financing was included amounted to $50,000,000 alone, which, if the railway portion could be determined, would go far to swell the Canadian figure and to bring the grand total nearer those of 1911 and 1910.

United States roads, on the other hand, from being the largest source of borrowing in 1910 have fallen to the lowest in 1914. What factors are working toward this condition are stated vividly in an English commentary to the poor showing made a year ago:

"It is satisfactory that under the circumstances British holding in American securities remains at a low ebb, and it may be hoped that re-investment on the other side of the Atlantic will not take place until the outlook is more assured. The American market has suffered from a continuance of the political disturbance in the country and of the legislative and judicial inquiries and attacks on railroads and other organizations.

"Railroad interests are confronted with increased expenditure in wages and materials and with growing hostility to a proposed corresponding increase in rates and charges. At the same time growing traffic requirements call for enormous capital outlay."

Operation

Freight Claim Prevention.

THE Frisco Lines have been experimenting with a division freight claim prevention committee and have so far obtained most satisfactory results. This committee which represents the Northern division of the road and was formed at Fort Scott on May 7th, has, since its inception, held the following meetings: At Fort Scott, June 9th; Kansas City, June 10th; Pittsburgh, June 11th, and Springfield, June 12th. About 300 employes attended each of these meetings, the purpose of which was to devise ways and means not only to prevent claims but to improve transportation. In order to reduce freight claim payments, it is essential that the close co-operation of employes who handle freight, be secured. There are about 15,000 such men on the Frisco and through their active efforts it is hoped to bring about $100,000 reduction in freight claim payments in the next fiscal year. So far the payments for this year have been reduced $42,000, as compared with last year, and it is expected that the year will close with a decrease of $50,000. It is the intention of the Frisco to form similar claim prevention committees at an early date at Kansas City, St. Louis, Memphis and on the Eastern and Ozark divisions and to gradually spread the work until all divisions are included. At the various meetings brief talks are given by freight claim officials in which claim statistics are cited and specific cases reviewed in order to indicate how the claims might be avoided. It is the hope of the committeemen that the innovation will spread like the "safety first" plan and will produce practical results.

Lackawanna Experiments With Loud Speaking Telephones.

A SHORT time ago, the RAILWAY WORLD contained a record of successful experiments with wireless telegraph for communicating with moving trains which have been carried on by the Delaware, Lackawanna and Western. Another innovation recently installed by this road and which has real practical value, has been a loud speaking device installed in connection with its telephone system and manufactured by the Stentor Manufacturing Company of New York City. These loud speaking instruments have now been installed on two train dispatchers' lines including all the Lackawanna lines in New Jersey. The transmitter, which is much like the ordinary instrument, is, however, much more efficient, while the receiver is in like manner supersensitive and is furnished in addition with a horn similar to that used on the phonograph, as shown in the accompanying illustration. The telephones are simply intended to reproduce at the receiving end, the normal conversational tone of the voice and with the new device referred to, are reported to be giving excellent service.

LOUD SPEAKING TELEPHONE DEVICE SUCCESSFULLY EMPLOYED BY THE LACKAWANNA RAILROAD.

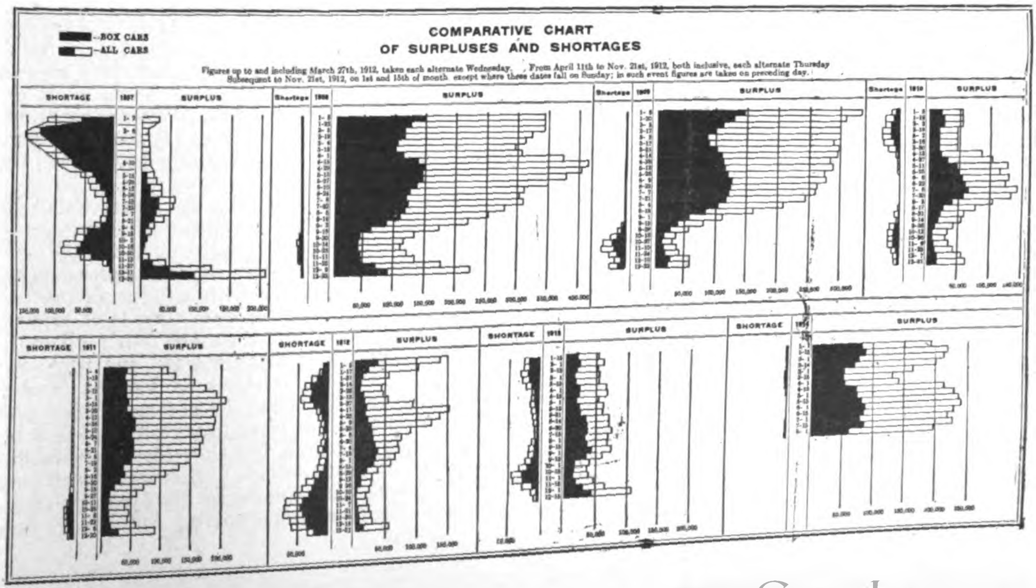
The cost of the instruments is small, there being no amplifying devices. A station, provided with both the loud speaking transmitter and the loud receiver, can be equipped at a cost of $50 exclusive of the batteries. In stations where the use of the loud speaking receiver is not necessary, the loud speaking transmitter alone can be put in for $25. The battery cost per station per year is about $1.80. The Lackawanna uses dry cells which have to be renewed twice a year. With complete installations at all stations a circuit can be worked without the use of selectors for calling. Without the calling bell the despatcher, to call a station, merely speaks the station's name into his transmitter in an ordinary tone of voice. The name is heard in all the loud speaking receivers on the line and for a distance of at least 15 feet from any one of them. The operator who is called can respond at once. An operator can call the despatcher in like manner.

The operator at a station equipped with the loud receiver can keep track of all that is going on, the same as with the Morse telegraph. As is well known, one of the chief objections to the use of telephones on the train wire has been the isolation of each office from all others except when the operator could take time to put the receiver to his ear. With the Stentor apparatus the operators have less occason to call on the despatcher for information as to the position of trains. The added opportunity for supervision on the part of the despatcher himself is also worth mentioning.

The Car Situation.

A REPORT of the American Railway Association issued on August 8th, shows that the total car surplus on August 1st. amounted to 198,998, as compared with 228,384 cars on August 15th, and 69,716 cars on August 1, 1913. The box car surplus decreased approximately 13,600 cars, the territory most heavily affected being the grain States and the Pacific Coast. There was a heavy increase in surplus box cars on the Canadian roads. The difficulty in securing vessels for export shipment has doubtless contributed in tying up a large number of cars at the various seaports.

The following diagram presents a record of car shortages and surpluses for a period of seven and one half years:



Time Tables of Fifty Years Ago.

IN these days of rapid progress and development, little time is permitted for even a casual study of the earlier efforts which marked our pioneer railway developments. Occasionally, however, an old document comes to light which illustrates in a forcible manner the wonderful progress which has been made during the past half century. The following reproductions of the title pages of a Chicago North Western Railway Company's time folder dated November 21, 1869, show how crude were the facilities of those days as compared with those of the present time. This is strikingly illustrated by the fact that the title page calls particular attention that the Chicago North Western in 1869 represented the only all-rail route from Chicago to Minneapolis and that in making this journey only two changes of cars were necessary. It is hardly necessary to state that a traveler of to-day would consider it an unusual hardship to have to make even one change in so comparatively short a journey, particularly in view of the fact that trips are now made from coast to coast, a distance of practically three thousand miles, without the necessity of a single change.

Time Table Folder Dated November 21, 1869

The Importance of Accurate Time to Safety Work.

THE importance of the official time inspectors' organization in railroad service was pointed out by R. J. Clancy, assistant to the general manager of the Southern Pacific Company, at a "Safety First" meeting of the watch inspectors of the Pacific system at San Francisco, June 25th. Mr. Clancy, in his address to the inspectors, said in part:

"As official time inspectors you constitute a most important branch of the organization of a railroad. There are few, if any, things more important in relation to safe and expeditious train movement than accuracy of clocks and watches used in connection with train movement. Accurate time grows in importance in progressive ratio with train and traffic density and with accelerated train movement. Close clearances between trains of the same class, time orders affecting trains superior by class and direction, many trains operated which have no time-table identification—wholly regardless of restrictive rules, these are conditions admonishing and necessitating the use of accurate time recorders by those directly associated with the movement of trains.

"On a busy railroad like the Southern Pacific with a train mileage (on the Pacific system) of about 32,000,000 miles a year—approximately sixty-five per cent of which is fast passenger and manifest train mileage with a large extra train mileage—correct and accurate time is of primary importance. True, the lines are nearly all equipped with automatic block signals, and while this in a large degree forecloses on hazards incident to differentials in time, the automatic block system has its own functions to perform and it is not intended as a crutch for time inspectors to lean on. The time inspector's duties are separate and distinct, and they should be discharged with the single thought and purpose of full and faithful compliance with requirements of the service. Inspection should be thorough, uniform and in strict accordance with rules and instructions. The certificate of the inspector should mean just what it says. From this there should be no variation.

"In early days, with few trains on the road, accurate time was not so essential, but to-day, with train and traffic density one of the great problems on nearly all single track roads—with many trains moving under conditions where accurate time is the essence of safety—time-recorder variations have no place and should not be indulged. It is indeed complimentary to the system of inspection that for many years no accidents have been occasioned by time variations and none attributed to it.

"The company offers neither excuse nor apology in exacting efficiency both from you and from all other officials and employes. It has itself set the pace. It has expended $3,600,000 for automatic block signals, and a large amount for interlocking plants and elimination of grade crossings. It has expended in the last twelve years about $260,000,000 in the improvement of its properties. It is the pioneer in passenger steel car use and equipment. It built its first steel car eight years ago, since which time no wooden mail, baggage, coach or chair car has been ordered or built. Steel cars are used very extensively in its passenger service, and two thirds of its freight equipment is steel underframe. It stands one hundred per cent in compliance with all safety appliance laws and in the conservation of life and property, both of its own employes and of the traveling public. It has marched and is marching well in advance of crystallized public opinion.

"It does not rely on mechanical devices alone, however perfect they may be, but conjugates these with intelligent supervision. In the year 1913, 15,194 efficiency tests were made on train and enginemen and the percentage of efficiency was 99.56."

A Splendid Safety Record.

THE lines of the Pennsylvania Railroad system carried 87,000,000 passengers in the six months between January 1st and July 1, 1914, and not one of them was killed in a train accident. In the calendar year 1913, the Pennsylvania Railroad Lines West of Pittsburgh, carried 108,000,000 passengers and not one was killed in a train accident. The remarkable achievement indicated by these figures is more clearly understood by stating that there are 26,198 miles of track in this great system over which more than 113,000 passenger trains are operated monthly. In other words, the six months' record referred to means the safe operation by day and night, through all kinds of weather of 680,000 passenger trains, while at the same time approximately as many more freight trains were being cared for. On the Pennsylvania Lines East no passenger has been killed since 1912, and during this period these lines alone have carried more than 161,000,000 people.

Norfolk and Western's Safety Record.

THE Norfolk and Western has issued a statement showing that during April, 1914, 260 employes were either killed or injured, against 314 for April, 1913, showing a decrease in casualties of 54. This improvement was made in spite of the fact that April of the current year had 90,000 more engine miles than the same month of a year ago. This fine record shows the remarkable effect of the safety movement on the Norfolk and Western, and is one of which every employe of that road has reason to be proud.

Novel Plan for Safety Development on Grand Trunk.

THE Grand Trunk Railway, in the development of its Safety First Work, has also taken a novel means of impressing upon its army of workers the necessity of promoting safe conditions and practices. To engineers, firemen, and others in the motive power and operating departments a label has been issued with a request that it be attached to the inside of hats and caps.

This sticker says, "No Grand Trunk employe is expected to take unnecessary chances for the sake of saving time or for any other reason." It will serve as a reminder, easily carried, that "Safety First" methods of work are expected of all for the protection of the employe and passenger alike. Indeed every factor that tends towards safe operation is being insisted upon by the officers of the Grand Trunk system. In a bulletin just issued right methods of living are considered.

"In order to continue in promoting safety, it is every engineer's duty," this bulletin says, "to conserve the natural organs of the body. Normal mind is necessary to good service, and good health is necessary to the normal mind. Temperance in living, plenty of rest, plenty of sleep, and the required amount of exercise must be taken in order to be a continuing element of safety in the service. These laws of health being observed, the normal mind is retained and continued and the service benefited accordingly."

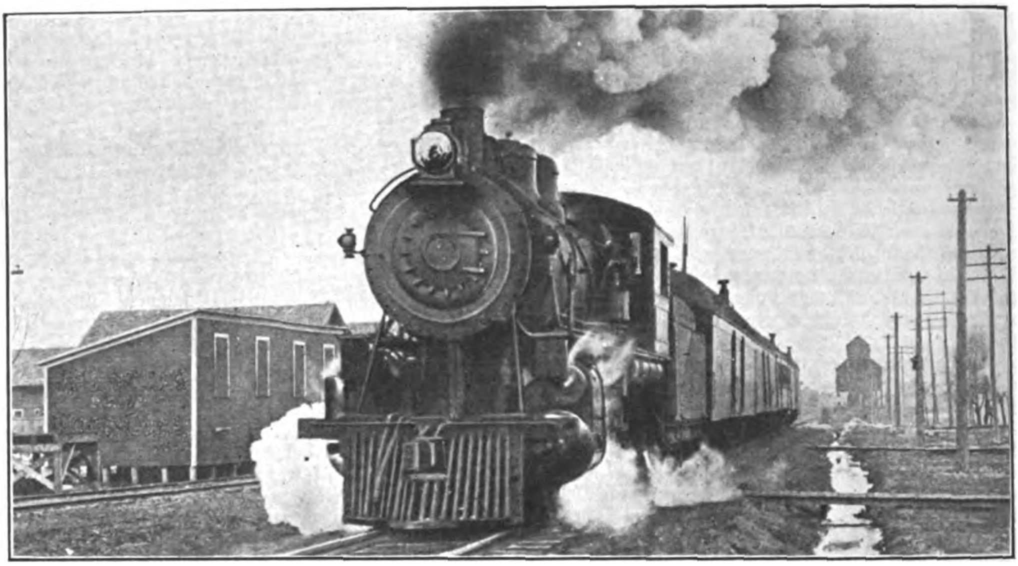
Recent Safety Results on the North-Western.

A REPORT just received from R. C. Richards, head of the Central Safety Committee of the North-Western road, stated that during the four years ending June 30, 1914, the North-Western has 10,516 fewer accidents than this road would have had on the basis of the number which occurred for the year ending June 30, 1910, which was the last year before the safety movement started.

During this four-year period, accidents on this road cost the company on an average per case of $136.04, so it can readily be seen that the actual cash savings effected since the installation of the safety movement have been very large, in fact, amounting to practically $1,000 a day for the entire period.

Safety Developments on the Boston and Maine.

A BULLETIN has recently been issued by the Boston and Maine Railroad showing that fatal accidents to employes during the first six months of the current calendar year totaled twenty, as compared with thirty-eight for a similar period in 1913 and thirty-three in 1912. A like comparison for serious accidents which involved the loss of an arm, leg or eye, show that for the first six months of 1914, only two occurred, while there were seven recorded for the first half of 1913 and nine in 1912. These figures show a decrease in fatal accidents as compared with the previous year of 46 per cent and in serious accidents of 71 per cent, clearly indicating the favorable influence of the safety movement.



The White Flyer of the Great Northern Railway Which Has Established a New Record for Carrying Mails.

A Remarkable Record.

THE accompanying illustration shows the White Flyer transcontinental mail train of the Great Northern Railway, which has recently established a record that is phenomenal in the annals of the United States Postal Service, in that it has made eighty-nine consecutive trips on time between St. Paul and Seattle.

This new mark in the carrying of Uncle Sam's mail was made from April 17 to July 15 and the record is all the more remarkable in view of the fact that during those eighty-nine days the White Flyer had to make up a total of seventeen hours and fifty-five minutes lost time, waiting for the Chicago connection which delivers the mail to it in St. Paul. On one occasion, for example, the White Flyer left St. Paul two hours and thirty-nine minutes late. Even that handicap did not mar its clean-score record, for the mail was delivered in Seattle on the dot.

Postal authorities in Washington, mail clerks and Government mail department superintendents all declare the record of this train is unprecerented in the history of the postal service.

The greatest single accomplishment of the Great Northern's White Flyer perhaps was the shortening of the time of mail delivery a whole business day between New York and Eastern points to Seattle, as well as between Chicago and Seattle and the Twin Cities and Seattle.

It is 1,814 miles from the Twin Cities to Seattle, and thirty minutes of each day there is only one of the White Flyer fast mail trains on the road. Monday's train arriving in Seattle thirty minutes before the departure of Wednesday's train from St. Paul. The scheduled time for the White Flyer from St. Paul to Seattle is forty-seven hours and thirty minutes, or an average of about forty miles an hour. This is the fastest long distance railroad operation in the world, notwithstanding that the Great Northern railroad's right of way extends over the two greatest mountain ranges of the continent—the Rockies and the Cascades.

Mechanical

New Electric Fan System for Passenger Coaches.

THE Safety Car Heating and Lighting Company in the July issue of the company's monthly, discusses at some length the installation of electric fans in passenger cars. Heretofore, the practice has been to locate such fans at either or both ends of the cars, but in this practice the area affected has been so small as to make the relief afforded of a negligible character. To quote from the article referred to:

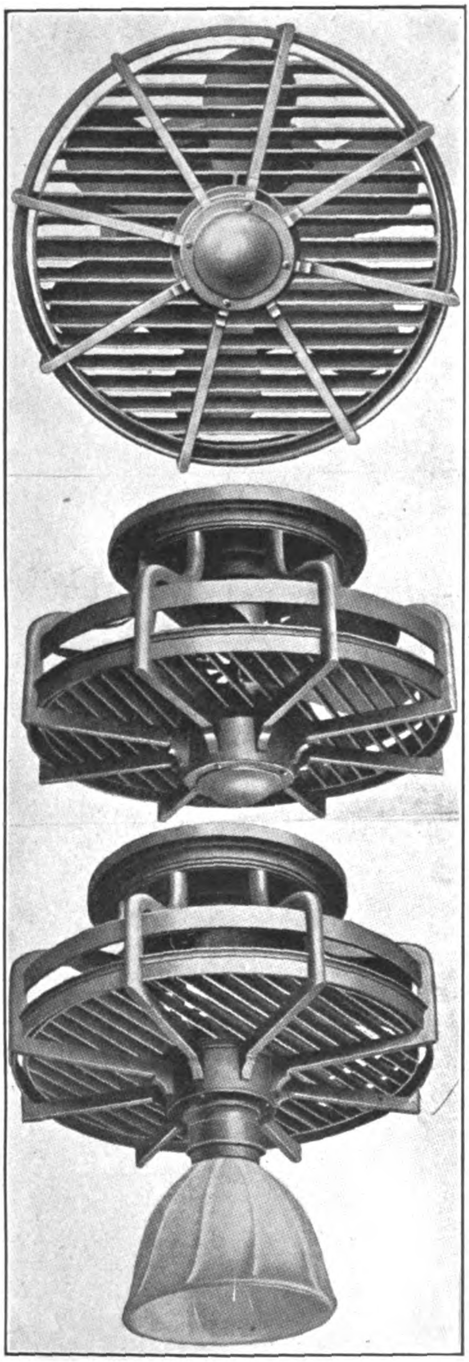
"The merit in design and location of electric fans is dependent on the area of the room or car affected by its operation and the amount of current required to cover the entire area. To place a fan at each end of a railway car and expect them to create sufficient movement of the air throughout the entire length of the car is impracticable. Even with a fan of large capacity with a consequent high current consumption, it is impossible to move the air in the center of the car and create an appreciable breeze when the fans are located only at the ends of the car. Such an air velocity would make it uncomfortable and dangerous for the passengers occupying seats at the ends of the car in close proximity to the fans. We, therefore, eliminated from consideration in our research work and development, any design of fan for use at the ends of the car.

"A fan hung from the ceiling on the longitudinal center of a car, if of the ordinary fixed type, would blow air with the maximum velocity in the aisle.

"This would be wasted energy, since it is the seated passenger who wants to receive the maximum benefit of the breeze from the fan.

"The next evolution in our study of fans was a consideration of the oscillating and gyrating types. Both of these types had an advantage over the fixed fan, and moved the air throughout a larger area of the car, but were deemed unsatisfactory on account of appearance, initial cost and high current consumption.

"About two years ago our developments reached the stage where we produced a fan which provided a wide range in the control of the direction of the air currents emitted by the fan. This control was effected by a combination of a sirocco fan and disc fan, with the sirocco fan starting the air current and the disc fan directing the breeze in a predetermined direction. This was probably the first successful attempt to absolutely control the range of air movement from an electric fan. The problem was near a solution, but the volume of air moved, in proportion to the current consumption, made this particular type of fan rather expensive to operate.



Three Views of New Electric Fan to be Employed in Passenger Coaches, Developed by Safety Car Heating and Lighting Company.

"The fan illustrated herewith is the final solution to a problem which has consumed exhaustive study; but the final result, as embodied in this fan, has well repaid the long, earnest efforts of our engineering department.

"In demonstrating this fan to a railway official, one of our engineers said: 'It consumes seventy-five watts, operates under three different speeds, directs the air where you want it, and can be used as a combination fan and lighting unit.' 'Well,' said the railway man, 'you are not overargumentative about its merits, but I suppose when you have said that the ordinary safety pin "holds and doesn't stick," you have covered its purposes, and the simple way it does what it was intended to do, leaves nothing to be said against it.' This fan so simply and successfully performs its functions, that a lengthy description of its features is superfluous.

"This fan moves the maximum volume of air at the greatest velocity over the largest area with a minimum expenditure of electric energy. Its current consumption is about 75 watts.

"It directs the breeze where it is most needed to cool and comfort the traveling passenger. Directly underneath the fan there is no appreciable movement of the air, so that energy is conserved. The greatest velocity of air is within a zone of between 30 and 45 degrees to the nadir or perpendicular, and tapers to zero at the perpendicular and at about 60 degrees to the perpendicular, thus insuring the maximum air movement at the car seats or dining car tables.

"The air deflecting planes rotate at a speed of about ten revolutions a minute and deflect the air in the proper direction. This rotating plane causes the cooling breeze to blow on the passenger twenty times a minute, eliminating the objectionable steady drafts of air.

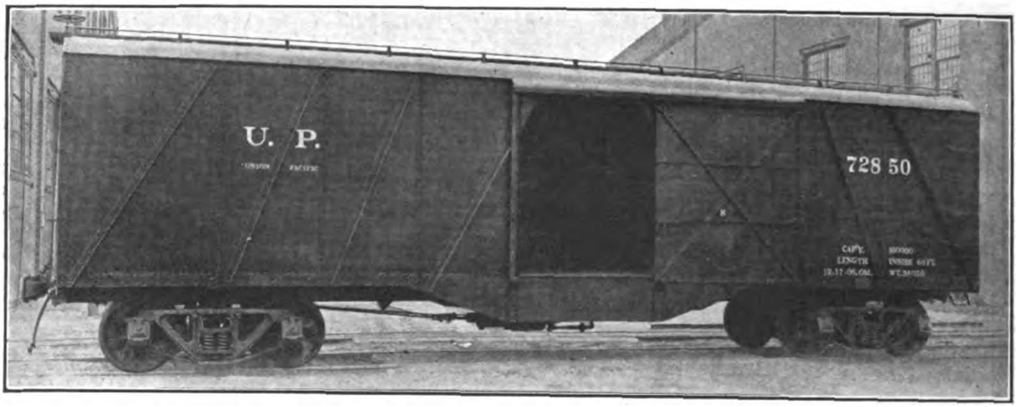
"The velocity of the air blowing on the passenger is always ample for comfort and cooling effect, but it is not so strong as to be annoying—a soft, cooling zephyr every three seconds.

"The velocity of the air is under control of the porter or trainman with minimum attention. The motor operates under three speeds, controlled by a small switch located at some convenient point in the car."

Important Patent Granted on Steel Car Construction.

On June 19, 1914, the United States Patent Office issued to William R. McKeen, of Omaha, Neb., a patent on new and novel features involved in the construction of all-steel box cars, which is of unusual importance to steel box car manufacturers. This patent has been in litigation since 1906 and has been argued before the highest of patent experts, including the examiners in chief, commissioner of patents and the Court of Appeals or the District of Columbia. Practically every claim made by Mr. McKeen has been awarded to him.

The accompanying photograph shows a Union

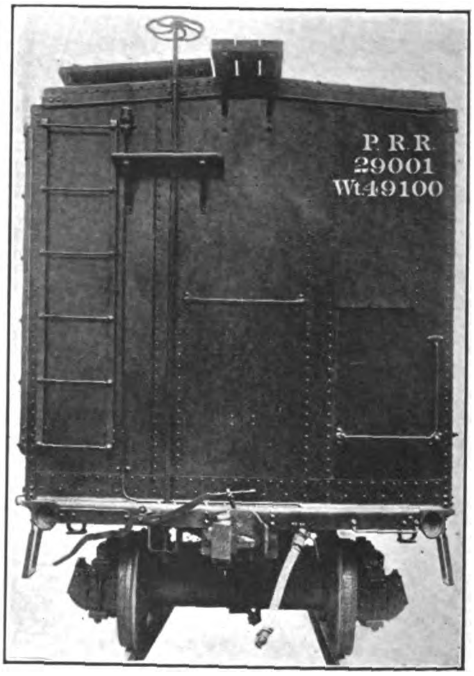


McKeen All-Steel Box Car on Which Important Patents Have Recently Been Granted.

Pacific car built under this patent in 1906. This car, together with one other, were the first two all-steel box cars built, and it is reported that they have made a remarkable record for efficiency and freedom from accident, as well as for carrying successfully all kinds of materials in all kinds of climates.

One of the particular features of the car, as constructed under the McKeen patent, is the diagonal braces, shown in the photograph, that start near and adjacent to the center door and extend up to the plate of the car, cutting off thereby a little triangle of the door aperture. This is considered an extremely advantageous feature in retaining the strength of the steel used in the car construction without sacrificing loading and unloading capacity.

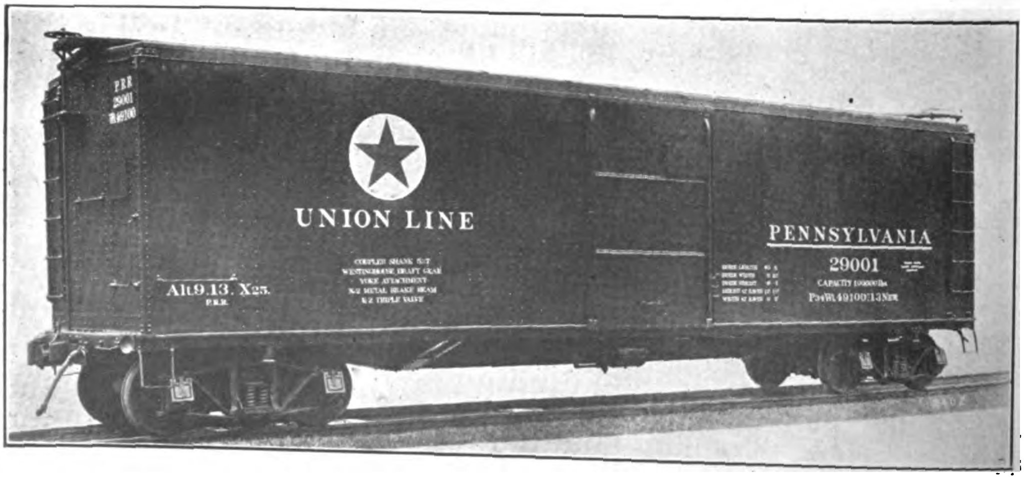
This car which is of remarkably light weight (38,050 pounds) has now been in active service for eight years without developing any structural weakness, and it is claimed that the saving in the cost of the car itself, in combination with the low cost of maintenance, is an important item in dollars and cents for a single car each year. When these figures are applied to the equipment of an entire road, striking economies are shown to be possible.



End View of Pennsylvania Railroad's New All-Steel Box Car.

All Steel Box Cars for the Pennsylvania Railroad.

THE Pennsylvania Railroad is adding a new feature to its equipment. It is an all-steel box car. The company now is well supplied with all-steel passenger cars and with a

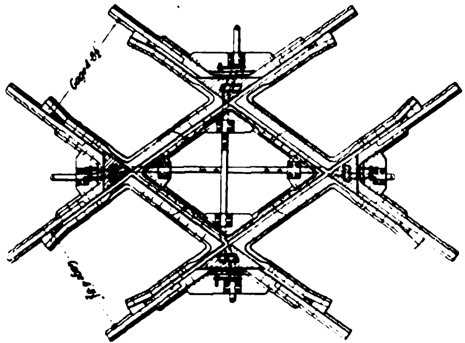


Example of a Number of All-Steel Box Cars Recently Installed on Pennsylvania Railroad.

number of all-steel milk cars, and in pursuance of its general policy to gradually change its rolling stock to cars of steel construction, it has now begun the installation of steel box cars. While the departure is experimental at the present time, it is believed that from an economic point of view it will prove successful for while a wooden box car only costs about $1,050 as against a cost of $1,500 for a steel car, the life of the latter is so much longer than that of the former that the change is expected to produce added ceonomies. Another feature of no inconsiderable importance is that the steel car affords a much greater protection against damage for freight than does its wooden competitor.

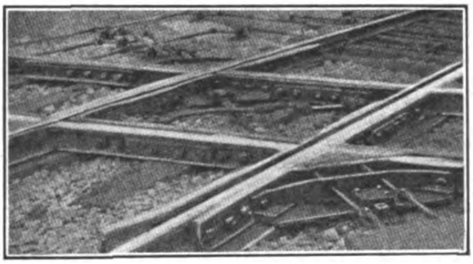
A Continuous Crossing of Simple Design.

THE Eymon Continuous Crossing Company, of Marion, Ohio, has recently developed a continuous crossing of extremely simple design. It consists of four triangular movable frog points at the intersections of the gage lines whose movements are controlled by rods passing under the base, with horizontal castings. These bars are directly connected with an interlocking tower, and move the points from one position to the other by the direct forward or backward movement of the bar without any intermediate points. To prevent the points from moving under a train, each corner is bolt-locked in its proper position by two bolt lugs, also operated from the tower independently of the movement controlling the point.



Plan of Eymon Continuous Crossing

One of these crossings was installed in the main track intersection of the Pittsburgh-Toledo and the Columbus-Sandusky branches of the Pennsylvania lines at Carrothers, Ohio, on May 25, 1914, and have been in continuous service since that date. Both lines at this point are single track, and carry a relatively heavy traffic. Twelve passenger trains, and over 1,500 freight cars, many of which are heavily loaded with coal, pass over this crossing daily. While it is too early to secure any definite or conclusive data regarding the cost of maintenance, it is reported that no expense has been required to date.



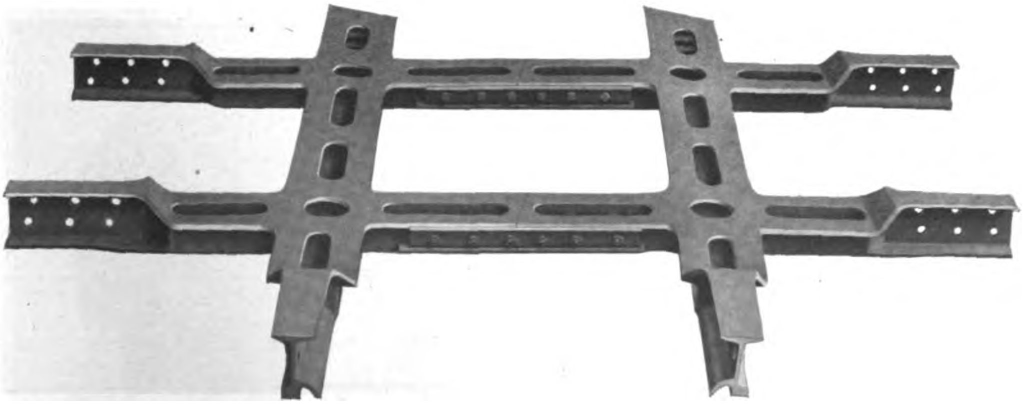
THE EYMON CONTINUOUS CROSSING.

This crossing is at an angle of about 70 degrees, and is built of 85-pound rail. It is of manganese construction and weighs 6,900 pounds. Before installation it was connected up at one side, and was then slid into place. A gang of sixteen men removed the old crossing, placed the new one, and connected it to the interlocking plant, with the exception of the bolt locking, ready for a train to pass in thirty-two minutes.

A New Steam Electric Crossing.

THE accompanying illustration shows the latest type of steam electric crossing, as now made by the St. Louis Steel Foundry Company, to whom patents have recently been granted.

In the past there have been many failures of solid manganese steel crossing, failures being caused by cracks in the bottom of the flangeways at the intersection. While some of these cracks were due to poor foundry practice, many of them were due to the fact that the crossing was not designed with proper beam strength across the intersection, many manufacturers leaving out all the lower cross members in the crossing.. These lower cross members are alternately subjected to tension and compression, due to the movement of the train over the crossing. Without the addition of these bottom members, as here shown, the metal under the flangeway had to carry all this strain, and as this metal was only about one inch in thickness



THE LATEST TYPE OF STEAM-ELECTRIC CROSSING.

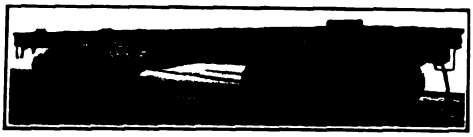
and was practically lacking in the neutral motion of the beam, early rupture was sure to occur.

With the addition, however, of these proper lower beam members, tying the crossing together, the entire crossing is made just as strong at the intersection as it is on the other parts of the running surface. This device has been in service for about a year, and has proven itself very satisfactory.

A New Pit Car for the Canadian Pacific.

THE Canadian Pacific Railway has recently had constructed a 75-ton pit car to be employed in handling heavy structural and machinery parts. We are indebted to the *Canadian Railway and Marine World* for the accompanying illustrations. The car has been designed so as to meet the requirements of the Canadian General Electric Company in transporting electrical machinery such as transformers, etc., and also to handle the heavy steel members being manufactured by the St. Lawrence Bridge Company and to be employed in the construction of the Quebec bridge. Six of these cars have been completed.

The bridge requirements called for a car that would carry members weighing 130,000 pounds, and 16 feet high. The clearance limit made necessary the pit construction. Following are the principal dimensions:



General View of Canadian Pacific's New Pit Car.

Length, 36¾ feet; width, 10 feet; top of rail to top of deck, 4 feet 2¼ inches; truck centres, 26½ feet; truck wheel base, 5½ feet; length of pit, 18 feet 1 inch; width of pit, 6 feet; wheels, 33-inch rolled steel; journals, 6 by 11 inches; draft gear, twin M. C. B. class G springs; load limit, 150,000 pounds; average tare weight, 48,000 pounds.

The pit cover is made in two pieces, and when the open pit is required, the two parts of the cover are carried on the ends of the car, where they are held in place by stakes and large steel angles rivted to the deck. The covers are composed of heavy wooden decking attached to steel I beams, the ends of which are equipped with cast steel lugs, resting on the top of longitudinal sills. The entire top of the car is covered with heavy wooden decking, and is provided with holes for bolting down blocking for the loads. When the pit covers are in place, the car presents the appearance on top of the ordinary flat car.

Each car has two complete sets of brakes, one for each truck. They are of the Canadian Westinghouse Company's schedule K. D. 812. The cars were designed in the office of R. W. Burnett, general master car builder, to whom we are indebted for the data on which the foregoing information was compiled, and they were built by the Canadian Car and Foundry Company.

We are officially advised that the four 75-ton pit cars, which the Intercolonial Railway has ordered from the Eastern Car Company, Ltd., will be exactly the same as the Canadian Pacific Railway cars above described.

Experimenting with Steel Rails.

TO ascertain whether added safety and more satisfactory results can be had from the use of heavier steel rails than those now in service, the Pennsylvania Railroad will experiment with rails weighing 125 pounds to the yard. The rails now used by the railroad weigh 100 pounds to the yard. Fifteen thousand tons of 125-pound rails have been authorized and 2,500 tons of this lot have been ordered.

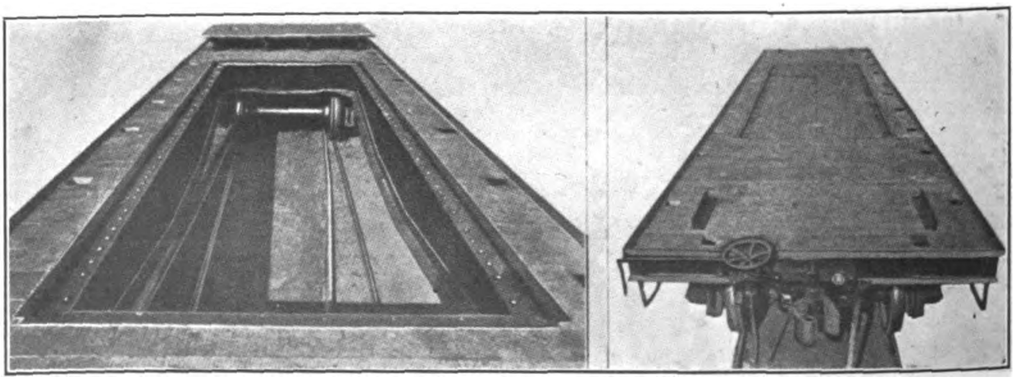
With the constantly increasing weights of locomotives and cars, it will be necessary gradually to improve the roadbed so that when it shall have been found that the 100-pound rail is unable safely to support the increased weight of equipment the new and heavier rail standards will have been so generally introduced that a full margin of safety will have been provided against in ample time.

A committee of experts has been at work for more than a year past, carefully reviewing the whole rail situation for the purpose of devising specifications to produce for the company a rail insuring the greatest factor of safety and promising most substantial qualities of endurance.

The first 100-pound rail was laid on the Pennsylvania Railroad in 1892. Sixty-pound rail had been introduced in 1881; 70-pound rail in 1884; 75-pound rail in 1886; and 85-pound rail in 1887. The 125-pound rails will be laid in the tracks of the Main Line on heavy grades and curves.

Rail Investigation by the Bureau of Standards.

THE main objects of the investigation recently completed by the Bureau of Standards, Department of Commerce, into the finishing temperatures and properties of rails were to determine, from measurements taken in representative rail mills, the present American practice regarding the temperatures at which rails are rolled;



Two Views of Canadian Pacific's New Pit Car, Showing Cover Removed and in Place.

to demonstrate the ease and accuracy with which such temperatures may be measured; to find out what the "shrinkage clause" in rail specifications really means; and finally to determine for rail steels some of the physical properties, particularly those of interest in manufacture.

Observations were taken with an optical pyrometer of ingot and finishing temperatures of rails in four representative mills. There is practical uniformity among the several mills for the rolling temperatures of ingots for steel rails, the range being from 1080 degrees C. (1975 degrees F.) to 1140 degrees C. (2085 degrees F.). There is no very considerable difference among the finishing temperatures of the rails as observed at the hot saws for the several mills, the range being about 880 degrees C. (1615 degrees F.) to 990 degrees C. (1815 degrees F.). Or, in other words, the four mills all finished their rails to within 50 degrees C. of 935 degrees C. (1715 degrees F.) on the average. This temperature of 935 degrees C. is 270 degrees C. (520 degrees F.) above the mean value, 665 degrees C. (1230 degrees F.) of the critical ranges of these rail steels. Concerning the distribution of temperatures within the head of a cooling rail, it is shown that the center of the head is some 50 degrees C. (120 degrees F.) to 60 degrees C. hotter than the optical pyrometer reading at 935 degrees C., therefore the center of the head is finished, on the average, at about 325 degrees C. (615 degrees F.) above the critical range for 100-pound sections.

Chemical analyses and microphotographic examinations were also made and the mechanical properties determined for a number of samples of rail, the rolling of which had been observed. From a comparison of these few observations, there appears to be not a sufficient degree of correlation to warrant associating very specifically any of the characteristics defined by these three methods of examination, either with the temperatures of rolling here observed, or with each other.

The following thermal properties of these rail steels were determined in the laboratory:

The critical range on heating is located (maximum) to within 7 degrees C. of 732 degrees C. (1350 degrees F.) for the ten samples of O. H. and Bessemer steels examined. On cooling the critical range lies between the limits 680 degrees C. (1256 degrees F.) and 650 degrees C. (1202 degrees F.).

The melting or freezing range for rail steel extends from about 1470 degrees C. (2680 degrees F.) to nearly the melting point of iron, located at 1530 degrees C. (2786 degrees F.).

The expansion for O. H. and Bessemer steels is not the same. Above 800 degrees C. (1470 degrees F.) the expansion for both increases linearly with temperature and the linear coefficient per degree centigrade has the following mean values between 0 degree and 1000 degrees C.:

(1) For Bessemer steel (carbon .40 to .50 per cent): alpha equals 0.0000146.

(2) For open-hearth steel (carbon .65 to .70 per cent): alpha equals 0.0000156 to 0.0000161.

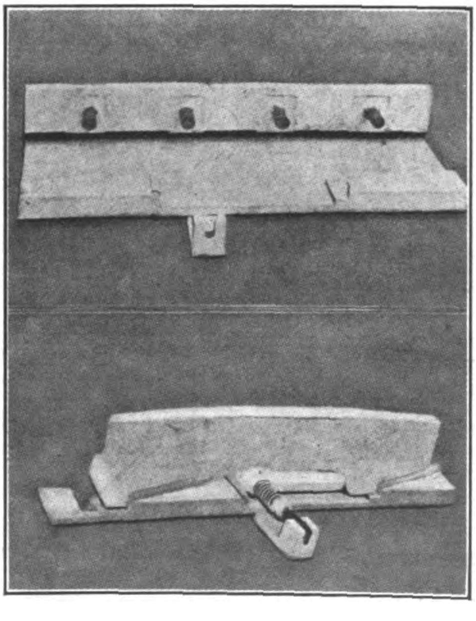
The average composition of the Bessemers was carbon equals 0.40 to 0.50 and manganese equals 0.76 to 0.93; of the open-hearths, carbon equals 0.66 to 0.70 and manganese equals 0.66 to 0.72.

The American Society for Testing Materials in 1909 limited the shrinkage allowance on 100-pound sections to 6¾ inches in 33 feet, or to an equivalent of 1947 degrees F. (1064 degrees C.) for O. H. and 2055 degrees F. (1134 degrees C.) for Bessemer rails. This specification is still in force. Such a shrinkage clause therefore does not serve the avowed purpose of limiting the finishing temperatures to a value slightly above the critical range.

In conclusion, it should be emphasized that the various series of observations recorded in this investigation are of but a preliminary nature and do not pretend to solve the question of the relations between temperature of rolling and the properties of rails. It would seem desirable to make a much more complete and comprehensive study of the various matters mentioned and of related questions than has hitherto been attempted, and on a scale commensurate with the importance to the community of the problem of sound rails.

Successful Experiments with Automatic Continuous Rail Joint.

FOR several months the automatic continuous rail joint has been under test by the Chicago and Eastern Illinois Railroad at Coler, Ill. These tests have proven so satisfactory that the company is now making preparations to place others in its No. 4 freight track in the near future. The joint as shown in the accompanying illustrations consists essentially of a base plate with an inside angle bar and lugs to engage the bolt holes in the rail, an outside angle bar and riser, and a pawl and spring to hold the joint in place. In applying the joint the combined base plate and angle bar is inserted under the rail. The other angle bar is then placed in position and driven endwise until the wedging action brings it in contact with the rail. The pawl and the spring hold the joint in place, as shown in the photograph. It is claimed that in this manner the joint is always tight, eliminating the expense and attention required to keep the bolts tight, that the riser prevents the battering of the rail, and that the joint is prevented from opening by the lugs on the inner angle bar. As installed in the Chicago and Eastern Illinois tracks, the joint is 26 inches long and weighs 100 pounds. While in the side track these

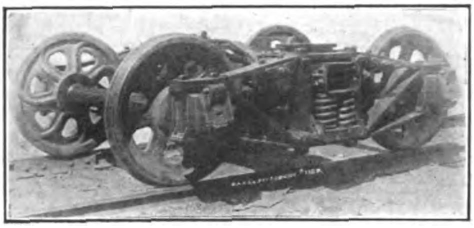


Two Views of Automatic Continuous Rail Joint, the First Showing Base Plate and Inside Angle Bar Section and the Second Showing Complete Joint in Place.

joints have been carrying the heavy Mikado engines of the Chicago and Eastern Illinois and the Elgin, Joliet and Eastern, drawing tonnage coal trains at speeds up to ten to fifteen miles per hour, and are reported to have required no maintenance in this interval. This joint has been patented and is made by Charles Troup, Watseka, Ill.

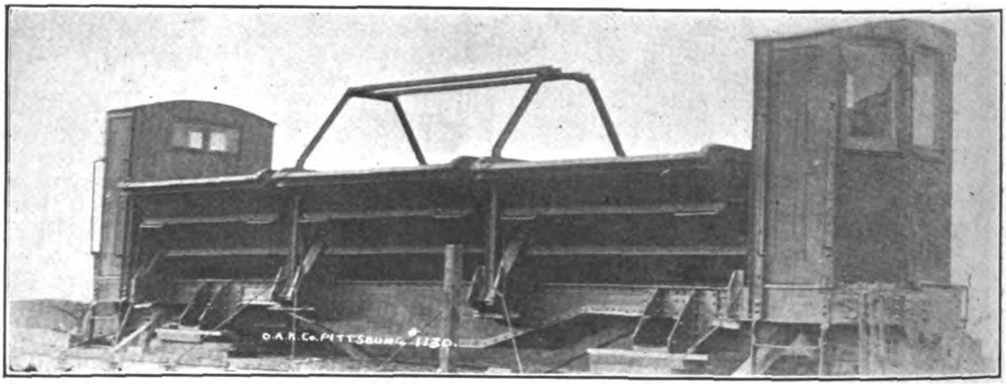
A New Car for Street Railway Construction Work.

IN the construction work of street railways there has long been a need for a steel car, which could be used without spilling any of the material along the street and in which several different materials could be handled at the same time.



Truck of Car Employed in Street Railway Construction.

Realizing this demand the Orenstein Arthur Koppel Co., of Koppel, Pa., have reecntly designed and constructed several cars for taking care of this work, a number of which have been shipped to the Dominion Power and Transmission Company of Toronto, Canada. Their general appearance is indicated by the accompanying illustrations.



Steel Car Specially Constructed to Facilitate Street Railway Construction Work.

The cars were each of a 15 cubic yard capacity loaded level and from 18 to 20 yards when heaped and not only can different kinds of material be transported, but part of the load can be dumped on one side and part on the other side.

The body is of the V shape and the entire construction covered by United States and foreign patents.

Locomotive Superheaters and Their Performance.

THE *Journal* of the Franklin Institute for August prints an interesting discussion by C. D. Young, engineer of tests of the Pennsylvania Railroad Company at Altoona, Pa., regarding the relative value of high superheat and low superheat in connection with locomotive superheaters and their performance. Mr. Young believes it has been definitely proven that for the high steam pressures now commonly employed, high superheat is much more advantageous for locomotives than low superheat. While he admits that the same difficulties in the way of deterioration of the metals employed in the superheater structure are not encountered with low superheat, he nevertheless, finds the net advantages of the high superheat to be much greater than its less intensive competitor.

He calls attention to the fact that on the Continent almost all locomotives of importance are now fitted with the Schmidt type of superheater which is a fire-tube superheater. More than one form of fire-tube superheater is, of course, used abroad but in the main, they are either a Schmidt superheater or one constructed practically upon the same principles. To quote from the article:

"In this country many fire-tube superheaters have been devised, but they have all grown out of the idea advanced by Mr. Schmidt. In regard to the fire-tube superheaters, it is very pleasing to me to know that an inventor, even though he may be a foreigner, has been able to preserve and establish in general use an invention of so much values as we can attribute to the Schmidt superheater. I have, of course, opposed the Schmidt superheater at times in very many places—sometimes successfully and sometimes not successfully—but for commercial reasons only; and when those commercial reasons were removed I was very glad of the opportunity to admit that, for general use in locomotives, I considered the Schmidt superheater superior to our own type of low-pressure superheater or any other type of high superheater which we may have employed. Simplicity of construction and the general accessibility of the device also commend it, and in this particular device and in similar devices I feel that nothing has been left undone to make it not only accessible at all times, but easy of maintenance, and as a general thing it is never found fault with by the locomotive engineer who must use the locomotive, but is always spoken of very highly by him.

"Now the advantage of using a superheater on a locomotive is, as Mr. Young states, to get more power out of the particular locomotive. That which gives a locomotive its power is its boiler, and any device which can be added to a locomotive to increase the effectiveness of its boiler increases beyond question the effectiveness of the locomotive.

The original hauling power or starting power of a locomotive it is impossible to increase because that depends entirely upon the weight on drivers, but it is possible to increase the hauling power of the locomotive in tons and in speed of miles per hour—or, in other words, in horsepower. If you are developing your tractive power at forty miles, you can still increase the horsepower, for the horsepower depends upon the number of pounds of water you are able to evaporate in the boiler. If by a device such as the steam suprheater you can get a certain horsepower with 20 per cent less water or 30 per cent less water, it is perfectly natural to suppose you can evaporate the same amount of water in this boiler and by the use of a superheater you can develop a speed of, say, 40 miles per hour and haul 30 per cent additional tons, and it is for this reason Mr. Young, I believe, makes the statement that the lighter-powered locomotives can have their hauling power increased by the addition of superheaters. But do not allow yourselves to be led astray by the fact that these locomotives can haul more tonnage because they can steam any more effectively, but they can haul more tonnage at the speed in miles per hour, and thus increase the earnings of the railroad company owning them accordingly and add to their own intrinsic value to that company. As locomotives have been increasing in size in the last few years, all of us have been struggling with the question of getting the greatest number of tons of freight over the road in a single unit, or at one train movement, and a train movement costs just the same whether it is large or small. The laws of the various States now prescribe the number of men that the railroad must carry to a train, and the principal number of these men are hauled in the caboose. The locomotive engineer really does the bulk of the work—when we dispose of the fireman—the conductor keeps tabs on his car numbers, and the remainder of the crew have a pleasant journey.

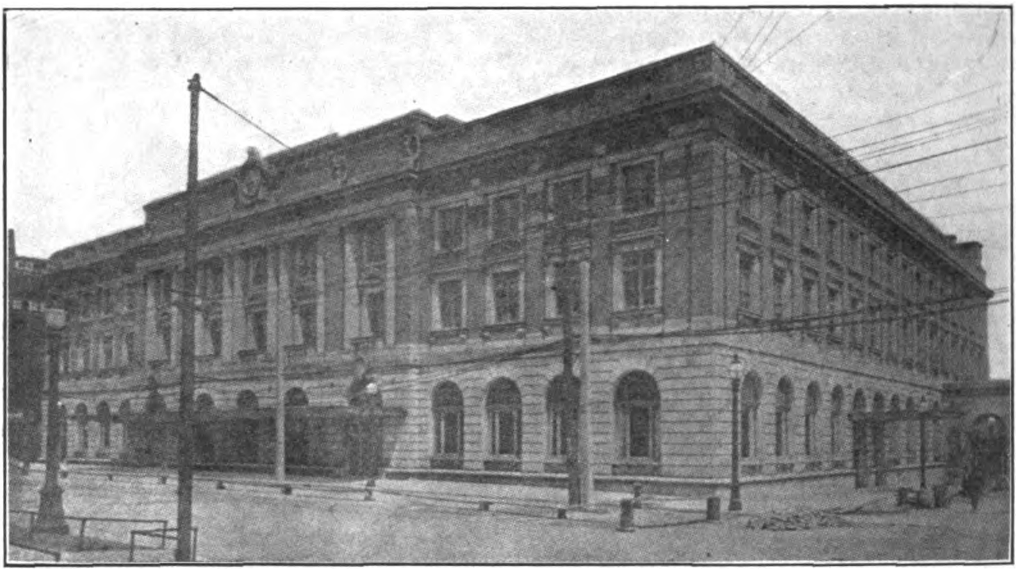
"The advance in the weight of locomotives in this period has been phenomenal, and even though we thought that we had reached a fair size of locomotive—or a really large size—these locomotives do not prove quite so effective as their size should have made them. It was apparent to us that the reason for this is that we are not able to work the boilers at what they should do on account of the human equation—the human equation being the fireman. Therefore, the superheater man comes along, and applies superheaters to these particular locomotives, and we find we have a very much greater result in hauling trains at different speeds and in their general efficiency, although the demands of railroads for heavy cars and moving heavy tonnage have led us to go back and modify our compound system to include the superheater system, for the purpose of still further reducing the water rate per horsepower and adding to the hauling power of such a unit as can be conveniently employed. Such locomotives are constructed up to a tractive power capacity of about 100,000 pounds, and the limit is supposed to be reached, because even with automatic power we could not get the full capacity of a boiler; and, although it may not have been apparent to any of you here present that a Mallet locomotive, for size, is a very much smaller type than any other locomotive in service, at the same speed at which these engines were operated and with the use of superheaters they seem to be a very desirable engine. Take the case of the automatic stoker; general opposition was made to the introduction of an automatic stoker, because it was said if a fireman was able to shovel the coal there was no necessity for applying automatic devices for this purpose. The result, however, of the experience with various automatic stokers has boiled the art down to probably one or two devices; one device especially is most effective, and, in my judgment, has solved the question of the compounding of locomotives. We have been able lately to construct, for one of the most progressive railroad presidents in the United States to-day, a locomotive of 160,000 pounds tractive force, and which, in our judgment, and from its ease of movement and its apparent life before any trial in service, is going to be a very successful unit of power. Now, such a locomotive has been arrived at by the careful and intelligent employment of the first principles of locomotive economy, the uniformity, similarity, and the continuity between the different sections. This locomotive is in three sections, with three pairs of cylinders, three sets of driving wheels, one tubular boiler, and an ordinary locomotive engineer and fireman. The compounding of the steam is in the ratio of two to one, which ratio is suitable for superheated steam. The superheater used is a Schmidt superheater similar to the one shown to you to-night by Mr. Young, and is capable of reducing the water rate from 24 pounds to 16 pounds under proper conditions. And, in addition to that, this locomotive has been equipped with a mechanical stoker for supplying coal to the fire and properly distributing it over the surface of the fire; it works admirably, and is successful in every way for firing this locomotive, which will require about 11,000 pounds of coal per hour. No effort whatever on the part of the fireman, with the exception of properly attending to the valves running the engine which drives the firing mechanism, is necessary.

"Therefore, you see that, at the present time enjoying the advantages of these economical mechanical inventions of the past one hundred years, the future geenration, commencing now in the year 1914, is going to really build large units of power for railroad transportation, and in a few years from now we will look back upon these insignificant pigmies with which we have been transportating trains throughout this country and smile that we did not tumble to these various inventions many years ago."

Terminal Improvements

New Passenger Station at Utica, New York.

THE new passenger station of the New York Central Lines at Utica, New York, which was opened recently, is as the accompanying illustrations indicate, a splendid structure. The building is three stories high, 192x204 feet. The front of the station is set back from the street line 18 feet and there are two main entrances on the front covered by heavy marquises. Auxiliary entrances are also provided on both sides of the building. Structurally, the station has a steel frame with Bedford stone facing up to the first floor and grayish rough textured



New York Central Line's New Passenger Station at Utica, N. Y.

brick for the remaining height. Limestone trim is used throughout.

The two main entrances on the south front of the building open through enclosed vestibules directly into the main waiting room, which is 120 feet by 132 feet, divided by rows of marble columns into a central and two end passageways and two seating lobbies. The central passageway continues to the north wall of the building where a connection is made with the passenger subway. Each seating lobby contains six double seats. The total capacity is about 400 people. All facilities for handling passenger business are grouped around this main waiting room, including the ticket office, information booth, the women's rooms, barber shop, men's rooms, parcel room and baggage check room, news stand, grille room, restaurant and lunch room. A large rental space, which will be occupied by a store, is located in the southwest corner. The floors in the main waiting room, men's rooms and restaurant are of terrazzo, in the vestibules and ramp leading to the subway of paving tile,

in the women's rooms of cork tile, and in the grille room of quarry tile.

The building contains two main office floors. Provision has been made for two elevators, one of which has been installed. The floors in the office portion of the main building are of steel and concrete construction, the corridor floors being finished with a cement surface and the offices with wood. The structure is made fireproof throughout.

The baggage house is a brick building with limestone trim. It is 604 feet long and 36 feet wide. It includes a baggage room, mail room and offices and storeroom for the National and American Express Companies.

The track layout at the passenger station includes twelve station tracks served by six platforms, twenty feet wide and with a maximum length of 1,200 feet. Two through tracks for fast freight and passenger trains which do not stop at Utica, are carried through the middle of the layout and are not adjacent to any platforms. The platforms are covered with canopies 600 feet long with provision for extension over the full length of the platforms. Each platform is reached by two stairways from the passenger subway below and by an elevator from the baggage subway.

New Terminals at Tacoma, Washington.—The Oregon-Washington Railroad Co. has awarded to O. F. Larson, of Tacoma, the contract for building its new freight house here. The Missouri Valley Bridge Company, of Leavenworth, is building a $300,000 bridge across the city waterway leading to the freight terminals. Other contracts will cover many miles of sidetracks and switching yards. The company is constructing these terminals five years later than originally intended.

Gould Line Authorized to Provide for New Orleans Terminal.—The St. Louis, Iron Mountain and Southern Railway has applied to the Public Service Commission of Missouri for authority to jointly guarantee with the Texas Pacific Railroad $7,500,000 in bonds to be issued by the Trans-Mississippi Terminal Company for the construction of passenger and freight depots, warehouses, wharves and docks and to acquire land for terminal facilities at New Orleans. The Iron Mountain has an agreement with the Texas and Pacific and the New Orleans Pacific Railroad to use their track from Alexandria, southern terminal of the Iron Mountain to New Orleans, this agreement to be subject to the approval of the stockholders at the meeting to be held September 8th at St. Louis. This agreement was made June 15, 1914. The Texas and Pacific and the Iron Mountain own jointly in equal shares the $100,000 of stock of the Trans-Mississippi Terminal Company. They acquired it to establish joint terminals in the City of New Orleans.

Santa Fe's New Union Depot and General Office Building at Galveston.—The Santa Fe has recently completed its new Union Depot and

THE NEW GENERAL OFFICE BUILDING AND STATION OF THE SANTA FE, AT GALVESTON, TEXAS.

general office building at Galveston, Texas. This magnificent structure, eight stories high and 100x125 feet, is built of vitrous buff brick and concrete, and rests on a re-inforced concrete foundation. The building is thoroughly fire-proof, the partition walls being of hollow tile. English stained oak has been used in interior wood work and the corridors with marble base and cement floors, combine utility with ornamental effect. On the ground floor are the main waiting room, ticket office, ladies' rest room, lunch room, etc., and a commodious baggage room adjoins the office building on the west. Both the new depot and the general office building rank with the most substantial business structures in Galveston.

Extensive Shops to be Constructed by Yazoo & Mississippi Valley.—The Yazoo & Mississippi Valley Railroad Company will, it is announced by local officials of the Illinois Central System, establish at Nonconnah, just below New South Memphis, the largest car building and locomotive repair shops south of Chicago. It is declared that these will give employment to at least 4,000 men and that a large percentage of the force of workmen now at McComb City, Miss., and Paducah, Ky., will be removed to Memphis when these improvements have been completed.

These two companies are also constructing new yards in New South Memphis. It is proposed to have these yards in readiness for use within the next few months and it is planned to have the new railroad shops ready for operation within another year.

St. Paul's New Office Building.— Contracts have been let for the construction of a 3,500,000 building in St. Paul to house the general offices of the Great Northern and the Northern Pacific Railroads.

New Union Station for Dallas, Texas.—The contract for the new Union Station and terminals at this city was let to John W. Thompson, a railroad and general contractor of St. Louis. In addition to the new station building, the contract includes rearrangement of terminal tracks and a bridge across the Trinity River. It is estimated that the entire contract will amount to $3,000,000. All the railroads entering Dallas, eight in number, are to use the new station and terminals, and the work is being paid for by them jointly.

Kansas City Station Nearing Completion.—Work on the Kansas City Union Station and terminal is now almost completed. The new station and train shed cover eighteen acres, and are the largest west of New York City. The total cost of work will be $75,000,000.

Work to Begin on Denver's New Passenger Station.—It is expected that ground will be broken about September 1st for the construction of the new union passenger station to be erected at Denver, Colo., at an approximate cost of $10,000,000. The roads interested are: the Union Pacific, Burlington, Denver & Rio Grande, Colorado & Southern and the Santa Fe.

Terminal Improvements at Buffalo.—In the course of the next year or two between $15,000,000 and $17,500,000 will be expended in improving the railroad terminals in Buffalo.

Plans for the new $5,000,000 Lehigh Valley Station have been accepted by the Buffalo Terminal Commission and the contracts will be awarded before August 1st. Though owned by the Lehigh Valley the terminal will be virtually a union station, as Erie, Nickel Plate, Wabash and the Grand Trunk will be joint occupants.

At present Erie, Nickel Plate, and Wabash use the same station and the Grand Trunk is in with Lehigh Valley in its present terminal.

In addition to the Lehigh Valley improvement, work is progressing on the new Lackawanna station, which will cost in all about $2,500,000 and plans are being developed for a new terminal by New York Central, which will run close to $10,000,000 as at present outlined.

Interstate Commerce Commission

(Abstract of Decision in the Five Per Cent Rate Advance Case, Including Dissenting Opinions of Commissioners McChord and Daniels.)

THE following is the majority opinion by Chairman Harlan:

The Interstate Commerce Commission on June 21, 1913, ordered a proceeding to inquire into the following matters:

1. Do the present rates of transportation yield the common carriers by railroad operating in official classification territory adequate revenue?
2. If not, what general course may carriers pursue to meet the situation?

In adopting this plan for the investigation the Commission was not unanimous. Two of its members dissented on the general grounds that until the proposed increased rates had been filed as required by law there could be no effective basis for the inquiry and no legal warrant for a finding or for an order based thereon. To avoid any such question of law, the carriers on October 15, 1913, filed tariffs providing increased rates on practically all freight traffic moving in official classification territory. These tariffs were suspended by the Commission.

The rates now proposed by the carriers are commonly spoken of as providing a five per cent increase in freight charges. As a matter of fact the increases range from less than three per cent on some traffic, and as high as fifty per cent in certain short haul traffic.

The additional revenue expected to accrue under the rate advances discussed in a case of 1910, was estimated at $27,000,000. The increased revenue under the proposed advance here under consideration, as estimated by the carriers' experts, would aggregate about $50,000,000.

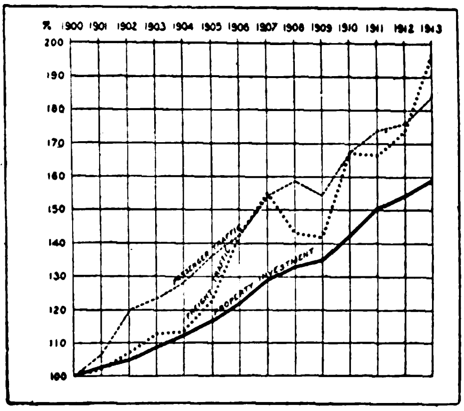
On November 24, 1913, the hearings were commenced and were continued at intervals until May 1, 1914. The record was closed so far as the first question in the general investigation is concerned, except as to certain inquiry formally addressed to the carriers by the Commission, to which they have not yet fully responded, and except as to the relations of the Baltimore & Ohio with the Cincinnati, Hamilton & Dayton, concerning which a hearing was had on May 29, 1914.

Protests against general increase in freight rates were presented by the railroad commissions of Iowa, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Arkansas and Missouri, and by the National Council of Grain Dealers' Association, and the Farmers' Association of Iowa. Protests against increase in lake and rail rates were presented by the Chicago Association of Commerce, and the Board of Trade of Duluth. Protests against proposed increases in rates so far as they effected specific articles of which the tonnage in some cases is large were presented by many shippers, particularly by shippers of coal, coke, ore, brick, cement, lumber, ice, sand, gravel, paper, pulp, corn products and petroleum. The hearing of these special protests occupied 36 days.

The general duties that common carriers owe to the public are well understood. They must provide prompt and safe service and they are held to strict responsibility for injuries or damage to property which they undertake to carry and for which they are under obligation not to charge an excessive rate for the services. This was a rule of common law, and it has been emphasized by specific legislation; on the other hand we cannot doubt that there are responsibilities on the part of the public to members of privately owned companies.

Investors in railroad securities share part of the consequences of dishonesty or inefficiency on the part of those selected to manage the properties. No one could reasonably contend that the public should pay higher transportation rates because once prosperous properties like the New Haven, Chicago & Eastern Illinois, the Alton, the Frisco, or the Cincinnati, Hamilton & Dayton, may now be in need of additional funds as a consequence of mismanagement. Investors in railroad securities must also take the risk of those errors of judgment which not infrequently attend the careful management of enterprises conducted for profit, but they likewise should be permitted to enjoy fully the profits which naturally flow under reasonable scale of rates, from the exercise of good judgment, integrity and efficiency in the management of the properties. The public owes to the private owners of these properties, when well located and well managed, full consent to earn a fair return on the investment, and the carriers owe to the public an efficient service at reasonable rates.

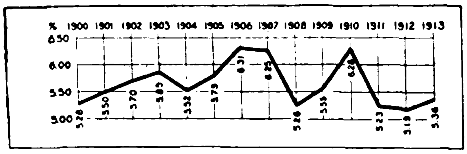
The property investment of the 35 railway systems in official classification territory, as shown by their exhibits, aggregated about $3,787,000,000 on June 30, 1898. The return upon this amount in net operating income for that year is stated at 4.39 per cent. During the next few years conditions in the transportation world improved rapidly. In 1900 the property investment as reported stood at about $3,952,000,000. The net



Comparison of increases in capital investment and traffic, 1900 to 1913 inclusive.

operating income for that year is stated at 5.28 per cent. In 1903 their property investment was reported at about $4,300,000,000. The net operating income for that year reached 5.85 per cent. It is obvious that if we select either the low ratio of the net operating income for 1898 or the high ratio of 1903, as a basis for comparison, some very unsound inferences may result. All things considered, it is clear that in place of a comparison of one particular year or period with another, we must take a more comprehensive view of the trend of railway earnings. We shall, therefore, begin our examination with the year 1900, omitting the years 1898 and 1899, which show relatively low earnings and appear not to be fairly representative of railroad conditions.

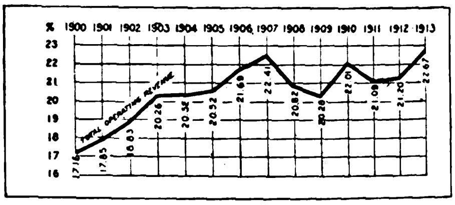
During those 14 years the property investment of these carriers has increased from $3,952,000,000 to $6,281,000,000. This represents an advance in the property investment account of 59 per cent. The operating revenue shows a far greater advance during the same period of years, having increased by 110 per cent. It will be noted, however, that the operating expenses increased even more rapidly, or by 133 per cent in the 14 years, the result being that the net operating revenue shows a lower ratio of increase than does the gross revenue. Expressing the thought in a more definite form, it may be said that in 1900 it cost the carriers 64.62 cents in operating expenses to secure $1 of revenue, while in 1913 the cost had risen to 71.77 cents. Had the operating cost of securing their revenue remained the same in 1913 as in 1900 the net operating revenue of these carriers in 1913 would have been greater than it was by more than $100,000,000. The taxes increased during that period in about the same proportion as did operating expenses; but the decrease in the capital cost per unit of production was so great that the ratio of net operating income to property investment was larger in 1913 than it was in 1900. The explanation of this reduced capital cost is due mainly to two facts; first, the advance in the art of railroading; and, second, the increase in the density of traffic, both resulting in the greater utilization of the plant.



Ratio of Net Operating Income to Property Investment.

We have already mentioned the fact that the returns of these carriers in gross operating revenues have increased much more rapidly since 1900 than the property investment. It will be observed, however, from the accompanying chart, showing the ratio between the two accounts, that while the gross revenues, as compared with property investment, increased quite regularly from 1900 to 1907, they have remained practically stationary, with some fluctuations, since the latter date. This has been due not to a relative decrease in the volume of the traffic moved but largely to a decreased return per ton mile and per passenger mile since 1904, and especially during the years 1906 to 1913. If the ton-mile and the passenger-mile rates earned in 1906 had been repeated in 1913 the net operating income of the carriers during the latter year would have been at least $30,000,000 greater than it actually was.

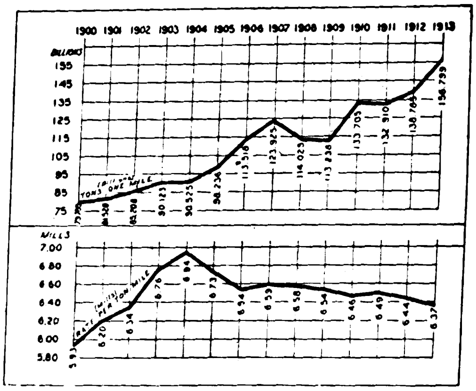
There is, however, no basis of record for the assumption that the reduction in these earnings per ton mile has been caused wholly by the adoption of lower rates for the service. There are many factors, other than rate reductions, that affect the earnings of carriers per ton mile.



Ratio of Total Operating Revenue to Property Investment.

Without any reduction whatever in the charge for the service a reduction in the revenue per ton mile will be brought about by a relative increase in the length of haul or in the volume of traffic taking low rates. A very marked reduction in revenue per unit of service results also from the absorptions occasioned by payments for switching, lighterage, elevation, etc. The record indicates that some of the decrease in the yield per ton mile was due to voluntary rate reductions by the carriers; some rate reductions have also resulted from the orders of this Commission and from the orders of State Commissions. But it may fairly be assured that the causes that we have just mentioned were more influential than any lowering of the rates on freight.

The reduced earnings on passenger traffic were caused largely by reductions which the carriers were compelled to make in their passenger fares in Ohio, Indiana, Michigan, Illinois and in other States, under local legislative action. We shall refer later to this very important phase of the case, but it is proper to say at this point that the returns made by ten of the roads, representing only a portion of the mileage in what is known as central freight association territory, show that during the period from 1906 to 1913, inclusive, there was an estimated loss of nearly $18,000,000



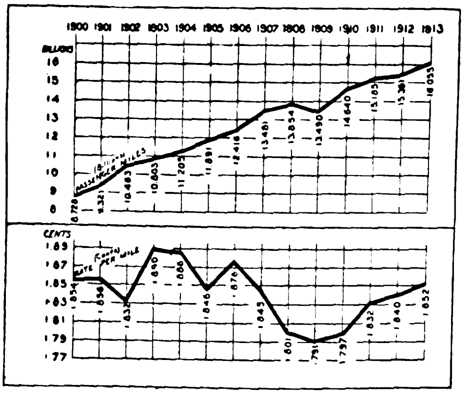
Freight Traffic and Revenue per Unit.

in revenues due to State legislation under which those carriers were compelled to make substantial reductions in their local passenger fares with accompanying reductions in their interstate passenger fares.

Another cause which has depressed the ratio of revenue to investment in recent years, is the increasing proportion of investment in property, which, although used in transportation and acquired in response to a public demand for better service, is relatively unproductive under present practices. Among other things, investments in equipment of improved type, displacing other equipment of equal capacity, the elevation of tracks, and the construction of expensive terminal facilities in the large cities, while adding to the value of the service rendered, have not yielded proportionate returns in revenue. The greater part of these expenditures has been for the immediate benefit of the passenger service.

The carriers were also prevented from realizing the full benefit of the increase in gross earnings by the great increases in operating expenses and taxes.

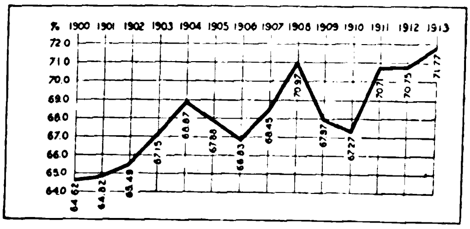
At two points, 1906 and 1910, the rising line in the operating ratio has been interrupted; but both those years were periods of relatively large railroad earnings. The lower operating ratios of those two years were obviously due to the greater density of traffic; and conversely the higher operating ratios of 1904 and 1908 were due to the lower density of traffic incident to the business depression during those years. There were also large revenues in 1911, 1912 and in 1913, but they were offset by the large increase in wages and other operating costs during that period, in consequence of which the operating ratio was held at a high level.



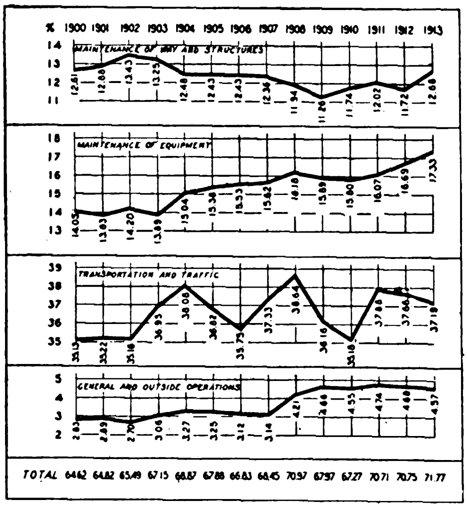
Passenger Traffic and Revenue per Unit.

Each of the different groups of expenses has played a part, but not an equal part, in increasing the operating ratio of railroads. The advance in relation to revenues of the last group of expenses, shown on the table and charts as general and outside operations, has been confined almost entirely to the expense of conducting outside operations, such as boat and ferry lines, harbor terminal transfers, sleeping, dining, and special car services, grain elevators, stock yards, hotels and restaurants. Many of these enterprises result in substantial losses to the carriers; and they often involve services for which no charge is made or for which the charge when made is unremunerative. The expenses incident to these so-called outside operations have grown rapidly in recent years.

The transportation and traffic expenses, as shown on the above chart, have very substantially advanced in ratio to revenue during the 14 years under review. This group includes expenses incident to the actual moving of traffic and the most important items are the cost of fuel and the wages of employes, both of which in recent years have been increased to such an extent as to account for a great portion of the total increase in operating expenses. Compilations made by the Commission of the answers of the carriers to its questions concerning fuel show that the average price of coal increased 7.7 per cent from 1910 to 1913. Exhibits filed by 30 of the 35 railway systems involved in this proceeding indicate an increase of 9.02 per cent in the average daily wage paid in 1913 as compared with 1909, and that if the scale of wages for 1909 had been in effect during 1913 the labor costs of the latter year would have been less by about $51,000,000 than they actually were. What part of this amount properly belongs to operating expenses and what part to the betterment and improvement accounts does not appear. It is interesting to note, however, that notwithstanding wages constitute an exceptionally large part of the transportation expense, this group of expenses has shown a relatively smaller advance than other groups. That the ratio was not still greater in 1913 is a tribute to the ability of operating officials and an evidence of the possibilities in the direction of economy. A relatively small portion of the increase was made necessary by the so-called full crew and hours of service laws and similar federal or state statutes. A substantial part of the increase in this group has been due to the increase in the special services performed at terminals and elsewhere without the imposition of any charge or for an



Ratio of Operating Expenses to Operating Revenues



NOTE.—Prior to 1908 the expenses of outside operations were not separately kept but were distributed among the other groups. This accounts for the sudden rise in the ratio line for general and outside operations.

Ratio of Groups of Operating Expenses to Operating Revenues.

inadequate charge. Such special services, which are considered later in this report, include reconsigning, switching, storage, teaming, etc., the cost of performing which falls for the most part within the group of transportation expenses.

The most extraordinary increase in the operating expense accounts from 1900 to 1913 was in the maintenance group and especially in the maintenance of equipment.

The safety-appliance acts, boiler-inspection laws, state legislation requiring the elimination of grade crossings, and other enactments show the demands of the public for a higher standard of service; and a portion of the increase in maintenance charges is due to such causes. These laws, to no small extent, enforce measures of precaution which the carriers ought to take and which they would voluntarily have taken in many particulars in pursuance of sound railway policy and practice. It is, nevertheless, true that in many cases they have had the effect of hastening improvements in equipment and roadway that would have come later, and of burdening the maintenance expenses of the years in which the improvements were made. Wise policy requires that a railway property should be kept up to the level of its highest reasonable efficiency at all times; and the postponement of needed repairs either in road or equipment because of a temporary falling off in revenues can not be justified or be regarded as true economy.

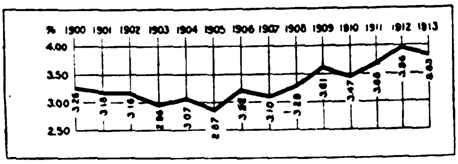
Findings as to the Adequacy of Present Revenues.

In view of a tendency towards a diminishing net operating income as shown by the facts described we are of opinion that the net operating income of the railroads in official classification territory, taken as a whole, is smaller than is demanded in the interest of both the general public and the railroads; and it is our duty and our purpose to aid, so far as we legally may, in the solution of the problem as to the course that the carriers may pursue to meet the situation.

The financial condition of the various railroads composing the 35 systems varies greatly, as disclosed by their net corporate income as well as by their net operating income. The condition of some of them is so prosperous that they clearly do not need a higher net income; the condition of others is such as to preclude the expectation of a return upon outstanding capital stock or the possibility of raising much additional capital without a thorough reorganization.

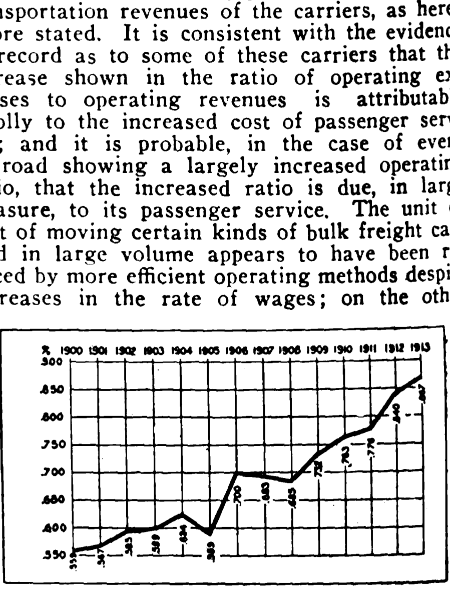
Treating as one road the 35 railway systems that have joined in this application for our approval of a so-called five per cent advance in their freight charges, we have reached the conclusion that their net operating income is insufficient and should be increased. We proceed now to consider under our general order of inquiry "what general course may carriers pursue to meet the situation."

They proposed but one remedy—the so-called five per cent increase in freight rates. As that remedy was offered through the formal filing of tariffs, we are legally bound to adopt it, if the new rates are just and reasonable, even though it may not seem to us the best remedy available. But we are unable upon the record to find that the rates so proposed are just and reasonable, except as hereinafter stated.



Ratio of Taxes to Operating. Revenue.

The proposed advance in rates is limited to freight traffic; and it does not extend even to all the traffic of that character. Yet practically every railroad seeking approval of these increases in freight rates maintains a passenger service also; and passenger train revenues amount to more than 24 per cent of the total transportation revenues of the carriers, as heretofore stated. It is consistent with the evidence of record as to some of these carriers that the increase shown in the ratio of operating expenses to operating revenues is attributable wholly to the increased cost of passenger service; and it is probable, in the case of every railroad showing a largely increased operating ratio, that the increased ratio is due, in large measure, to its passenger service. The unit of cost of moving certain kinds of bulk freight carried in large volume appears to have been reduced by more efficient operating methods despite increases in the rate of wages; on the other



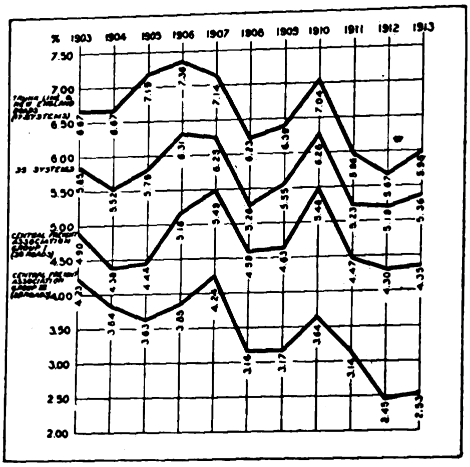
Ratio of Taxes to Property Investment.

hand, the unit cost of moving passengers has been almost uniformly increased independently of the effect of wage advances, through the use of heavier equipment, the adoption of safety devices, and better service.

Passenger fares are paid directly to the carriers by those making use of the service, and they know what it costs them. Payments for freight charges, while less direct, are none the less actual. The general public does not know, and probably does not stop to consider what proportion of the cost of a ton of coal, or of the price of a dwelling, or the rent of an apartment represents freight charges, but the cost of freight transportation enters into the cost or selling price of practically everything used by the public. In many cases, to be sure, freight charges represent but a small proportion of the total cost of things used or consumed, but it is quite probable that the average family pays much more in the course of a year as freight charges than it does for passenger fares. We know of no provision of law under which we should be justified in increasing freight rates to provide a return upon property used exclusively in the passenger service, much less to take care of losses incurred in such service. In our opinion each branch of the service should contribute its proper share of the cost of operation and of return upon the property devoted to the use of the public.

But even if the evidence clearly established an increase in the general freight operating expense ratio, we should not be at liberty on this record to conclude that the cost of transporting each kind of freight had increased, much less that it had increased proportionately. The evidence is clear that as to certain classes of bulk or heavy freight, like coal, coke, ore, cement, brick, tile, clay and plaster, the use of larger cars must have reduced operating costs, whereas in respect to expedited package freight, shipped in cars moving on a regular schedule regardless of the quantity of their contents, the use of larger cars, involving greater unused car capacity, must have increased the operating costs. Similarly the extension of the expedited service in carload freight must have increased the cost, while the heavier train loading of the slow train, in which the heavy or bulk freight usually moves, has tended to decrease the cost.

There is a wide difference in the character and profitableness of the traffic moving under substantially similar conditions in different parts of official classification territory. That territory is divided into three parts: The New England territory, with 8,071 miles of railroad reaching a population of 1,389 persons per mile; the trunk line territory, with 23,777 miles of railway line and a population of 889 per mile; and the central freight association territory, with 35,849 miles of railroad and a population of but 506 per mile. In the New England territory only 17 per cent of the population is rural, in trunk line territory 30 per cent is rural, and in central freight association 46 per cent. With 2,000,000 less population than trunk line territory, the area of central freight association territory is 74,000 square miles greater and is traversed by 12,072 more miles of railroad; it embraces nearly three times the area of the New England territory and is traversed by 27,778 more miles of railway. Its navigable lakes and rivers constitute one of the influences affecting the level of the rail rates now prevailing there. In the New England territory there are no coal mines, and a large part of the traffic is of a high-grade character. In trunk line territory the products of mines furnish a large part of the tonnage, while on group III of the central freight association lines the traffic is more diversified. The differences in the freight earnings per ton per mile are illustrated as follows:



Comparison of Ratios of Net Operating Income to Property Investment.

Illustration of Differences in Earnings per Ton-Mile in Three Territories

Readjustment of Central Freight Association Rates.

The testimony tending to show that a readjustment of rates in central freight association territory is what is needed was not disputed. The class-rate structure is honey-combed with inconsistencies.

The attitude of the officials of the roads operating in central freight association territory, as disclosed on the record, indicated that they joined in this proceeding not because they thought the so-called five per cent increase of rates would meet their requirements or that this form of relief is appropriate in central freight association territory, but only because of the desire of other and more powerful lines operating in trunk-line territory to present to us in this proceeding one general plan of relief. These officials, while stating that the so-called five per cent increase would add substantially to their revenues, expressly condemn the present basis of rates as unsuitable and unsatisfactory. The leading railroad witness on the question affirmed, with some earnestness, that "the class rates do not sustain any logical relation to each other," and that under the present basis of rates "certain shippers of certain classes of freight have not for years borne their share of the burden of transportation, and in addition to the rates being extremely low they are unscientific and illogical."

CONCLUSIONS.

In what has preceded we have found, treating as one road the 35 railway systems in official classification territory that have asked for this so-called five per cent increase in rates, that their net operating income is insufficient and should be increased. There remains for consideration the question whether the proposed increases in rates should be approved.

We have seen that the class rates in central freight association territory are on a lower scale than can be found elsewhere in the country, and that many of the commodity rates are too low and are probably unremunerative, considering the diversified nature of the traffic. The class rates and many of the commodity rates may therefore with propriety be increased. This approval, however, is subject to the following limitations:

(a) With respect to certain heavy commodities, namely, brick, tile, clay, coal, coke, starch, cement, iron ore, and plaster protestants made such a showing as to constrain us to hold that the carriers have failed to sustain their burden under the statute.

(b) Reference has therefore been made to the fact that the proposed tariffs are based on a minimum increase of five cents per ton on all commodities moving under rates stated in cents per ton when less than $1 per ton; with respect to certain hauls, this would result in increases much in excess of five per cent and in certain cases the increases would be as high as 50 per cent. The carriers have failed to establish the propriety of this minimum increase, and the evidence offered by the protestants makes it clear that it would work hardships and discriminations and can not be approved, since under it a disproportionate burden is cast upon the heavy short-haul traffic.

(c) The tariffs also name many other rates involving increases exceeding five per cent by varying amounts; these rates also must be condemned as throwing upon the traffic affected by them a disproportionate burden, for which no justification has been shown.

(d) There may be also a number of rates throughout central freight association territory that still are controlled by the force of unexpired orders of this Commission, entered after specific investigations in formal cases. No showing has been made why those orders should be modified.

Except in respect of the rates above referred to we are of the opinion that the proposed intraterritorial rates in the central freight association territory have been justified by the carriers and may be put into effect.

We find that the financial condition of the trunk-line carriers does not warrant a general increase of freight rates and shall also show that the needs of the New England lines are being cared for locally. The carriers failed to prove either that the existing rates in trunk-line or New England territories are too low or that the increased rates proposed for those territories would be just and reasonable rates. Nor have they proved that the existing interterritorial rates in official classification territory are too low or that the proposed increases in those rates would be just and reasonable. The carriers will be required therefore to cancel all the tariffs in which these rates are proposed.

Upon the whole record we find that the carriers have not met the burden of justifying their proposed increased lake-and-rail rates. On general grounds, also, those increases must necessarily fall with the fall of the increases in the all-rail rates. The carriers that have published such rates will therefore be required to cancel them except in so far as any increase here approved in central freight association rates may require, under established bases, some increase in the rail-and-lake rates or in the factors upon which those rates are based.

Increased revenues resulting from increases in rates in central freight association territory will afford some relief to practically all the lines in official classification territory which are in need of additional revenues, except the New England lines. The latter roads have only a relatively small interest in this proceeding, and their requirements are being considered locally in conferences with the state authorities and others. It will also aid several large roads not included in the 35 systems and more than 30 small roads in central freight association territory which appear to be in greatest need.

In the conduct of these inquiries the Commission has not had the full co-operation of the carriers and the shippers have not had an opportunity of being fully heard. For these reasons our suggestions as to the steps to be taken to secure additional revenues are to be regarded as tentative merely. The information collected and put on record convinces us, however, that great opportunity exists for increasing the net revenues of all carriers in official classification territory, otherwise than by resorting to a general advance in their freight rates.

The practice of granting free transportation of passengers and private cars, although less general than formerly, in part because of prohibitory legislation upon that subject, is still a heavy burden upon the railway passenger service, and it is recommended that the practice be still further restricted by the carriers.

Compilations prepared by the Commission show that the revenue from private cars handled free during the year 1913 on 88 of the roads which have made answer to our question would, at tariff rates, have amounted to $644,250.79.

We suggest a careful review of methods for increasing freight-car efficiency. In certain departments of railroading great advances have been made in efficiency in recent years; for instance, by increasing the train loading. On the other hand, the cost of the freight car as an element in the cost of transporting goods seems to have grown greater instead of less. The capital cost of equipment has increased more rapidly within recent years than the capital cost of the road. The ratio of the maintenance of equipment expense to gross revenue has grown largely, but it is not unreasonable to expect that such added costs can be overcome, as they have been in some other departments of railroading and in many other industries, by advances in management and methods. It is, however, in the use and operation of cars that we must look for the most substantial economies.

It was insisted during the hearings that the carriers are facing a crisis and that the need of relief is so urgent as not to permit of the orderly investigation of the possible sources of additional revenue other than by the proposed freight rate increase. The executives admitted the propriety and need of a general readjustment of many of their present rates and practices, and the possibility of further economies and of increased efficiency; but they insisted that grave and serious responsibilities would be incurred if we failed to relieve the situation by at once approving the proposed five per cent increase in rates. The principal danger suggested was that the carriers would encounter great difficulty in renewing their maturing short-term notes and other obligations unless investors were assured that the carriers' revenues would be increased immediately. Subsequent developments have shown that there was little foundation for any such view. During the world-wide financial stringency prevailing in 1913 the railroads, in common with states, cities and the industries, found it difficult to secure loans, however good the security, but with the growing ease in the money markets this difficulty has largely disappeared. According to the standard financial journals, nearly $500,000,000 of bonds and notes have been disposed of by the railroads since January 1, 1914. Recently $35,000,000 of Baltimore & Ohio Railroad Company short-term notes were taken at par in an afternoon. The interest rates exacted were undoubtedly high as compared with those prevailing generally during the 14 years preceding, but the burden of high interest rates is not confined to railroad securities.

The credit of our railroads has undoubtedly suffered in recent years, but largely from causes that were independent of their rates. Their borrowing power has suffered relatively, because of the great competition for money by governments, states, municipalities, public-service corporations and industries. It has suffered actually because of the mismanagement of great railroad systems of international repute. The conspicuous decline in the securities of certain railroads and the circumstances leading up to the appointment of receivers for others have impaired the confidence of the public in the stability of railroad securities. This feeling of insecurity has been increased, first, by the fact that recklessly mismanaged railroads have been largely under the control of powerful banking houses theretofore considered conservative; and, secondly, by the fact that the great railroad systems have become interlocked with weak lines either directly through stock ownership or by common directorships or otherwise.

The credit of some of our leading railroads has also been strained by the too free use of it in unwise and sometimes disastrous extensions of their lines, and even more seriously by the acquisition of properties not forming a part of their railroad system or used at all in transportation service. The campaign of publicity hereinafter referred to has also increased the strain on the credit of the railroads. But the earning capacity of our railroads is so great that their credit will soon be restored if their revenues are conserved. The crop estimates give promise of greatly increased gross revenues for the current fiscal year.

The Campaign of Publicity.

The letters and telegrams received disclosed an unmistakable purpose to hurry the Commission to a conclusion before the record had been closed and before there could be an opportunity to hear, much less to consider, the testimony that the protestants and others desired to offer in protection of what they conceived to be their interests as shippers. Respectable journals joined in demanding the immediate approval of the proposed rates. Cartoons appeared in the public press depicting the Commission as an obstruction to progress and prosperity, as if increasing the burdens of commerce by an increase in the rates for its transportation was the only solid foundation for our permanent prosperity. One traffic association offered to deluge the Commission's offices with thousands of telegrams; other organizations started chains of letters, some of which, in identical language, are still reaching the offices of the Commission from widely separated parts of the country; others took the trouble to send to members of the Commission clippings from newspapers and magazines containing editorials and news items relating to the case and denouncing our delay in disposing of it. All this was done regardless of the fact that the Commission is under the express statutory obligation of affording a full hearing in such matters to all who desire to be heard and have reasonable grounds for a hearing.

Most of these communications were doubtless well intended, but they have not been helpful. Those that have been examined disclose that the writers were without any real understanding either of the many intricate questions involved in the investigation or of the facts disclosed upon the record; and they show little appreciation of the statutory standards by which we must be controlled when considering the rates and practices of carriers. Many asserted that business was dull and that an increase in rates "would give things a start." The general thought running through practically all the communications was that new enterprises were being held up; that men were out of employment; that business was in need of a stimulus; and that the laying of an additional burden upon commerce through increased freight charges would be a sufficient tonic to start a general forward movement, because the railroads themselves would then become large purchasers of supplies. The law fixes the standards by which the rates and practices of carriers must be judged and the Commission can act only in accordance with those standards and after a full hearing; we have no authority to approve rate increases with a view to stimulating business. Nevertheless, the writers of many of these letters urged immediate action by the Commission on the ground that the prompt approval of the increased rates would "restore confidence" in the financial and business world and that such a result in itself would be a sufficient basis for action by the Commission; and in many cases they frankly stated that they would prefer an increase in rates rather than a continuance of the present dullness of trade because the burden of increased rates could "be passed along to the consumer."

Mr. Willard, president of the Baltimore & Ohio Railroad Company, and chairman of the committee of executives in charge of the presentation of the case of the carriers, while frankly admitting that the carriers had established a publicity bureau for the purpose of accurately advising the press and shippers of the facts developed upon the record, disclaimed any personal responsibility for the propaganda, and definitely stated that his personal endeavors were limited to an effort to have the facts correctly laid before the public. Whether other and subordinate officials of the carriers may be responsible we do not know, nor have we sought to ascertain. There can be no doubt, however, that this clamor and outcry have tended to mislead the public and have seriously aggravated the present commercial depression.

This matter is referred to because of its general impropriety and because it shows the existence of a widespread misconception as to our powers and duties.

We may justly feel proud of the development of our transportation system. Despite occasional discreditable chapters, the history of our railroads has been marked by great achievements. There is among the carriers a growing spirit of co-operation with the Commission in its efforts to enforce the law. With the application of correct and helpful accounting, the establishment of sound business methods, and a better understanding by both carriers and the public of their mutual obligations, to which we believe this investigation has contributed, the future is full of promise. We see no reason why our American railroads should not enjoy a large measure of prosperity consistently with just and reasonable rates.

In order to give effect to our findings and conclusions herein and to avoid confusion in establishing the rates herein approved, it will be necessary for the various carriers to cancel all the tariffs now under suspension; and an order to that effect will be entered.

Dissenting Opinions.

Commissioner McChord: To prevent in central freight association territory the increased rates proposed in the majority report and to deny increases to the trunk lines appears to me to be unwarranted by the facts of record and not in harmony with the general basis of rate adjustment that has so long existed in official classification territory, and I deem it proper to state briefly what seem to me to be certain practical reasons which lead me to this conclusion.

To disallow an increase in the joint through rates and at the same time allow an increase in central freight association territory to and from the Ohio River gateways would have the effect of allowing increased locals to central freight association lines on this through traffic at the expense of their southeastern connections, who would be expected to shrink their earnings to the extent the central freight association lines increased theirs.

The two subdivisions of this territory, to wit, central freight association and trunk line, constitute one great industrial community which supplies the bulk of the manufactured products of the country and through which move the great streams of east and west bound commerce. The two territories are divided only by an imaginary line.

Within each territory are some of the greatest commercial centers of the country, each in active competition with the other in the purchase and sale of raw materials and manufactured products. For many years the rates between these cities have borne a fixed and well understood relation each to the other. Commercial conditions have, to a considerable extent, come to be based upon this relationship and, in so far as is shown by this record, it appears to have given general satisfaction. It must follow that any general increase of rates within central freight association territory alone will change the rate relationship as between cities in that territory and cities in trunk line territory, perhaps to the advantage of the latter.

Viewed from a commercial, geographical, or transportation standpoint, and in the light of the facts of record, I am convinced that the reasons which impelled the Commission to approve certain changes in central freight association rates apply equally to trunk-line rates, and that the transportation conditions in the two territories are not absolutely so much unlike as to indicate the wisdom of dissimilar treatment of the rates proposed by the carriers in the entire official classification territory.

Commissioner Daniels: In the conclusions reached in the majority report I am unable to concur. Except as hereafter indicated, the five per cent advance should have been granted in trunk-line territory no less than in central freight association territory. To the extent that an increase is permitted upon rates in central freight association territory I concur. The majority opinion, however, falls far short, in my judgment, of giving even to the carriers in that region the relief to which the evidence of record clearly shows they are entitled.

For more than a decade the operating and maintenance expenses of the railroads of the United States have constantly risen. The rates charged, on the other hand, have been either static or declining. Unable to raise their rates without the sanction of this Commission, the railroads have found that the margin between their receipts and their outgo has progressively narrowed; that their net profit from operation has tended to decline; that their operating ratio —the number of cents out of every dollar received which are absorbed by the cost of conducting their business—has steadily increased. Despite recent investments of hundreds of millions embodied in extensions and improvements, the addition to net operating income has been meager in the extreme. In conspicuous instances, despite such additional investments, there has been an absolute decrease in net operating income; this decline in net earnings has occurred during a period when the carriers have handled an increasingly greater tonnage and carried more passengers than ever before. While they have been furnishing greater and better service, both in the transportation of freight and the carriage of passengers, their net operating income has at the same time progressively dwindled.

While the suggestions offered at the close of the majority report as to methods of conserving and increasing railroad revenue are, many of them, interesting and significant, others are more or less conjectural, and most of them remote in possible effect. This Commission is not constituted by law a board of general managers of the railroads of the country, and the assumption of rendering suggestions as to management ought never to delay or postpone the settlement of a plain matter of law and fact involved in an application for advanced rates.

The testimony offered by the carriers deals mainly with insufficiency of return. Such testimony is germane and proper. Evidence establishing general inadequacy of return impeaches the general reasonableness of rates which result in such inadequate return. It is not conclusive evidence that rates are unduly low, but it creates a reasonable presumption to that effect, and it suffices to meet the burden of proof cast by the law upon the carriers which propose rate advances.

Failure to advance passenger fares at the same time is no persuasive reason for declining permission to increase freight charges to a level that is just and reasonable. Peculiar difficulties center around the advance of passenger fares, and while they eventually ought to be made to bear their proper share of transportation expenses, their elevation under existing circumstances must in point of time inevitably follow comprehensive adjustment of freight rates.

To deny advances which would establish rates just and reasonable, and in consonance with changed conditions of costs and income, will but postpone a necessary and inevitable readjustment. It is true that the difficulties confronting the carriers may be temporarily lessened or even for a time offset by unusually heavy tonnage arising, for example, from exceptional crops; but in the ebb and flow of material prosperity from year to year these difficulties will reappear and, without adequate offset in the shape of higher rates or otherwise, will eventually become chronic.

The averment was made that the maintenance costs have been excessive, but it is significant that the majority report though canvassing this particular subject fails anywhere to find that the maintenance costs are excessive.

Certain of the carriers seeking to make this advance are charged with waste or other financial irregularities. The New Haven, which has been shown guilty of such practices in the past, is not interested, save to a slight degree, in the present decision; but even if a few vitally interested railroads had been shown culpable it would not change the conclusion, because it has already been demonstrated that where their lines are inextricably interlaced with other lines no practical distinction can be made in according advances. The attempt would defeat its own end. So with this in view the majority report accords, of necessity, the same advances to the Cincinnati, Hamilton & Dayton, the Pere Marquette, and other lines in central freight association territory whose administrative integrity has been impeached, as to the remaining lines in the same region whose management has not been questioned.

THE BURDEN OF PROOF UNDER THE STATUTE.*

It is clear that evidence of inadequate returns upon the fair value of property devoted to the public use is prima facie a showing that present rates are unduly low, and that rates higher than those current are presumably just and reasonable. To this extent revenue evidence is rate evidence; and revenue evidence applying to rates in their totality is rate evidence which applies to each specific rate.

The contention that the Commission may not pass upon rates as a whole, but that it is obliged under the law to consider and to pass separately upon each particular rate between every two points, is expressly and explicitly repudiated.

The obvious conclusion, both from reason and from precedent, is that the Commission may legally deal with rate schedules as a whole, and also that insufficiency of revenue is a proper ground upon which, nothing sustantial to the contrary appearing, to accord advances which will result in just and reasonable rates.

The further contention is made that the proposal of a five per cent advance upon existing rates presumes a relationship between particular rates which is just and proper; that there is no conclusive evidence of this fact; and that a five per cent advance would simply accentuate the disparities, inequalities and inconsistencies already interwoven in the rate fabric. It is clear that this contention can not have prevailed in the majority opinion. Had it done so the five per cent advance could not have been accorded in central freight association territory. There exists a presumption in favor of inter-relations in a rate fabric that have long continued undisturbed. Moreover, there are commonsense limits within which any attempts at a rate adjustment are necessarily confined. Every act of rate making necessarily carries vestiges of discrimination; the very classification of freight assimilates into one class many articles not identical in weight, bulk, value or fragility. The Commission is not called upon to do the impossible and to show such meticulous attention to the adjustment of fractions as to preclude the possibility of any readjustment of rates whatever. With a demonstration of inadequate revenues, and with a presumption in favor of the propriety of the interrelation between rates long in effect, an advance moderate in amount, calculated to produce but a reasonable increment in earnings, and affecting all traffic in the same proportionate degree, is the plain dictate of law and of common sense in the premises.

Another contention that sought to impeach the propriety of granting advances was founded on the idea that the failure to increase passenger rates simultaneously with the proposed advance in freight rates would impose on freight traffic an undue burden.

It is becoming increasingly clear that passenger traffic does not bear its proper share of the joint costs incurred by the carriers for the transportation of freight and passengers. But it is even more clear that as a practical matter passenger fares can not be speedily readjusted upon a higher basis. Although the record in this case clearly shows that the carriers generally do not find passenger traffic highly remunerative, the suggestion that they should add to their revenues by advancing their passenger rates is of little force in view of the fact that they are powerless to adopt it. In recent years State Commissions and State Legislatures have established maximum intrastate passenger rates. So long as the rates thus established are not so low as to be deemed confiscatory in violation of the fourteenth amendment to the federal constitution the carriers are bound to observe them.

---

*Note.—It ought to be said, however, that what is above stated as to the burden of proof and the authority of the Commission to pass upon rates as a whole does not imply that these views are opposed to those of the majority.

The activity of the States in this respect has been so general that the carriers no longer can fairly be expected to look upon their intrastate passenger traffic as a possible field for the substantial augmentation of their revenue.

CONCLUSION.

The ratio of return upon the property investment has been indicated. The contention of the carriers is that upon investments in property amounting to approximately $640,000,000 since 1910, no commensurate return has been made, and that the net operating revenue between 1910 and 1913 shows an actual decline. It is no sufficient rebuttal of these contentions, if the supporting figures are true, to point out that the "revenues received by the carriers have been earned by the whole investment, and it is not correct to say that a part of the investment made since a given date has earned no return." The point of the contention is that additional investment can not be expected on the showing made on the last increments of investment. It may be true that physically the $640,000,000 invested since 1910 has been annexed to or blended with the property previously existing. It is admittedly true that the net return has come from working the entire property, old and new. But it is equally certain that if the marginal investment affords no addition to net revenue, the incentive to add further investments is lacking. From this standpoint, the financial standpoint, the case is exactly as though the original property had alone yielded the entire net revenue, and the addition had failed to make any return whatever. Expected earnings constitute in the last analysis the bid which the carriers must make for new capital for needed improvements, extensions, new rolling stock, and similar purposes. It is not necessary to say that on such a showing the investing public will hardly be eager to intrust its funds to transportation enterprises. Where well-secured, long-time bonds bearing 4½ per cent interest command little over par, and where stock can be sold at par only on the prospect of a much higher rate of return, it is clear that the carriers must make a better showing of net revenue before they can as a whole enlist large additional supplies of capital.

Report on Express Companies.

THE Interstate Commerce Commission has issued its statistical report on the express companies of the United States for the year ending June 30, 1911. This constitutes the third report of this series and covers thirteen important companies. A comparative statement of mileage covered in the operation of express companies as of June 30, 1911 and 1910, is presented and shows an increased mileage of 12,262 miles for 1911 as against 1910, the mileage on steam roads increasing 5,556 miles, on electric lines 683 miles and on steamboat lines 6.132 miles. On stage lines there was a decrease of 110 miles.

The Commission's report also shows an increase in the total cost of real property for 1911 of $1,828.199, or 7.22 per cent as compared with 1910. The total value of real property of all express companies for 1911 is recorded as $27.153.868. The increase in cost of real estate and buildings and fixtures used in operation for all companies, was for 1911 over 1910, $1.217,036, while the increase for equipment by a like comparison was $611,163.

Interstate Commerce Commission's Latest Accident Bulletin.

THE Commission has issued its Accident Bulletin No. 50, which contains a record of all accidents occurring to persons, equipment or roadbed arising from the operation of railways used in interstate commerce during October, November and December, 1913. The number of persons killed in train accidents during these months were 191 and the number of persons injured 3,726. The total number of casualties of all classes reported, amounted to 2,792 for persons killed and 50,776 for persons injured. Trespassing still continues to claim a heavy toll as out of the total number killed from all causes, considerably over half was the direct result of this illegal practice. It would appear about time, in view of the Commission's strenuous activities to protect the life and limb of travelers and railway employes, and in view of the regulations which they have enforced for this purpose costing the carriers millions of dollars, that they should make a greater effort to develop some effective means by which the trespassing evil, which is the direct cause of the majority of fatalities, can be more effectively controlled.

STATE COMMISSIONS.

The Development of Commission Regulation.—L. R. Nash has recently written an interesting article for the "Public Service Journal" in which he traces the development of Commission regulation in the United States.

The first efforts in this direction began as early as 1844, in the organization of Commissions for two New England States. In the 50's four other Commissions were established in the Eastern States. After the Civil War the idea spread more rapidly and by 1885 there were twenty-seven Commissions supervising the railroads in about three-fourths of the then existing States. These old Commissions, however, bore little resemblance to the present Public Service bodies, their power being very limited and largely confined to the collection of statistics of operation, information regarding the condition of the roads and their manner of operation, with special regard to the safety and accommodation of the public.

Since then, the jurisdiction of these Commissions has been gradually increased to include allied transportation business and later telegraph and telephone companies, while still later, interurban electric railways, and, in a few instances, street railways came within their scope.

Because of this gradual change, which is still going on, Mr. Nash found it difficult to definitely classify the State Commissions as a whole, with respect to either the breadth or thoroughness of their jurisdiction. There are no two States utility laws exactly alike, and only a few approach similarity in form. It is also found that fairly broad powers conferred by some laws are not in fact fully exercised from lack of appropriations or for other reasons. An attempt was made, however, to arrange the States in four groups as follows:

(1) Those in which Commissions have, and

Full Jurisdiction
Full Jurisdiction, Except Capitalization
Limited Jurisdiction Over Railroads and Some City Utilities
Supervision of Carriers and Some Telegraph and Telephone Companies
No Commissions

exercise full jurisdiction over all forms of utilities; (2) those in which jurisdiction is exercised primarily over transportation companies; (3) those in which railroads only are supervised; and (4) States having no Commissions.

The first group includes twenty-five States and the District of Columbia. Two other States will probably be added to this group in the near future, Maine and Colorado having passed laws in 1913 which are awaiting referendum before becoming effective. All these Commissions have regulatory powers over all the common utilities with the exception of Nevada, where street railways are not included. In a few States a "home rule" provision exists in the laws under which municipalities may elect to retain control over utilities within their borders.

Municipal plants are exempt from the jurisdiction of the State Commissions in Illinois, Oklahoma, Washington and Connecticut. In some other States, where there is no specific exemption, the extent of control is subject to interpretation of ambiguous provisions in the laws.

Most of these Commissions are authorized to undertake valuations of utility properties in rate cases or for other purposes.

Indeterminate permits are granted in place of limited term franchises in Massachusetts, Wisconsin, and Indiana, in connection with rights of the municipalities to purchase. This latter right is also embodied in other State laws.

Some States have not conferred upon their Commissions the power to prevent competition between private plants. Among these are Georgia, Indiana, Oklahoma, Oregon and Vermont.

The authority of the Commissions with respect to security issues is also variable. A considerable number have full jurisdiction over all issues. The control of others is limited to corporations organized within the State or in other ways.

The accompanying chart shows the extent and kind of regulation to which utilities are subjected at the present time.

Illinois.—The Public Service Commission has entered an order holding that public warehouses of classes A, B and C, which store grain or other property for a compensation, are public utilities and as such are under the jurisdiction of the Commission. It further holds that such warehouses shall file with the Commission and keep open to public inspection schedules showing rates of charges, together with all rules, regulations, etc., that in any manner affect the rates charged or to be charged.

The order further provides that any warehouseman who was not engaged in the business of conducting a public warehouse of class A, B or C at the time the law took effect, shall make application to the Commission for a certificate of public convenience and necessity before he shall engage in such business and that warehousemen shall not make any discrimination between persons desiring to avail themselves of warehouse facilities.

Missouri.— The Public Service Commission has issued an order reducing express rates in Missouri approximately 21 per cent. The express companies are ordered to make the new rates effective on three days' notice, but not later than August 1st.

A table prepared by the Commission shows among comparative figures the following reductions:

St. Louis to Kansas City, 1-pound packages from 25 to 22 cents; 5-pounds from 45 to 27 cents; 10 pounds, from 55 to 33 cents; 25 pounds, 75 to 54 cents; 50 pounds, from $1 to 87 cents, but on 100 pounds the rate is raised from $1.50 to $1.55.

Missouri railroads will make application to the Public Service Commission of the State, probably within ninety days, for a general increase of both freight and passenger rates within the State. The Commission will take no action until the physical valuation of the railroads is completed which will be several months hence.

The Public Service Commission has issued an opinion in which it is held that railroads have no lawful right to impose a team track storage charge upon shippers in addition to the demurrage charges fixed by statute. The ruling is of general interest and affects every railroad and shipper in Missouri.

Nebraska.—A reduction of nineteen per cent in intrastate freight rates has been ordered by the State Railway Commission on more than one-third of the freight business done in Nebraska. The reduction will total about $750,000.

The new schedule is a distance tariff placing the jobbing towns of the State upon an equalized basis. About 10,000 items are affected including all merchandise, groceries, agricultural implements and many manufactured products. The new rate is effective September 6th. The railroads will probably fight the reduction.

New York.—The Up-State Public Service Commission has made an order directing the New York Central to amend its tariffs so that the rate shall be the same on grain in carload lots to Niagara Falls from Hamlin on the Ontario Division as from Francher on the Falls branch.

This effects a reduction from 4½c. per hundred pounds on the rates from Hamlin and Kendall.

New York.— The Up-State Public Service Commission has been served with an interlocutory injunction order issued by Judge Ray, of the United States District Court restraining the Commission from enforcing its order compelling the Delaware, Lackawanna and Western Railroad to restore two trains between Syracuse and Oswego.

The order is a temporary one and obtains only until the trial and decision of the case finally in the United States Court. Judge Ray, in his opinion, does not question the jurisdiction of the Public Service Commission to regulate intrastate service on an interstate carrier but holds that an interstate carrier so regulated may appeal to the Federal courts rather than to the courts of the State. The present order is concerned actually only with the merits of the case so to speak—the restoration of the two trains. Judge Ray holds the present service to be sufficient.

The decision follows a number of hearings both before the Public Service Commission and two arguments of the case before Judge Ray. The time for final disposition of the case has not been set.

Pennsylvania.—The Public Service Commission has issued the following conference ruling with reference to the requirements covering published rates and fares:

The Public Service Company Law, Approved July 26th, 1913, Article 2, Section 1, (f) provides in part as follows:

"To make no change in any tariff or schedule, which shall have been filed or published or posted by any public service company in compliance with the preceding sections, except after thirty days' notice to the Commission and to the public, posted and published in the manner, form and places required with respect to the original tariffs or schedules, which shall plainly state the exact changes proposed to be made in the tariffs or schedules then in force, and whether an increase or decrease, and the time when the proposed changes will go into effect;" * * *

The term "then in force" as employed in the paragraph above quoted must be interpreted as requiring that a tariff or schedule filed and posted must be allowed to become effective and remain in effect for at least thirty days before any change may be made therein, but this will not affect tariffs or schedules containing rates for excursions limited to certain designated periods under authority of General Order No. 4, of 21st day of January, 1914.

In an administrative ruling covering transportation of railroad contractors, their men, materials and equipment, the Commission has concluded not to construe the law as preventing a common carrier from according free or reduced rate transportation to a contractor, his men, materials, tools, equipments and supplies necessary to be transported by such contractor in the performance of the work being done for the carrier by the contractor, inasmuch as the contractor, under such circumstances, is to all practical intents and purposes, an employe of the carrier, engaged in work for the carrier, and the transportation is, in substance and effect, transportation rendered by the carrier to itself.

Pennsylvania.—The Public Service Commission has ruled that railroads can not give lower rates to coal companies or producers shipping in their own cars than to producers who use the cars of the railroad. The decision was given in a Western Pennsylvania case.

The Public Service Commission has granted permission to trunk line carriers to postpone until October 29th the tariffs previously issued by them providing for changes for "spotting" service performed by such carriers. The tariffs were originally issued to become effective May 27th, but by permission of the Commission were postponed until July 1st, and are by this later action again postponed until October 29th, to which date such issues were postponed by the Interstate Commerce Commission.

LEGISLATION.

Class Legislation.—Nothing has aroused the business men of the country more recently than the efforts to exclude labor and the farmers from the provisions of the anti-trust bills now before Congress. The President and the members of both Houses of the National Legislature have been petitioned again and again against the passage of such legislation, but the opposition, up to the present time, has had little apparent effect as the numerical importance of labor appears to have had a hypnotizing effect upon our national law makers.

How deeply the business men of the country feel the injustice of such class legislation is shown by the following resolution recently passed by the Board of Directors of the United States Chamber of Commerce and sent to each member of the Chamber as well as to the President of the United States and to the members of Congress:

Whereas in response to Referendum No. 3 this Chamber by a vote of 669 to 9 declared itself opposed to legislation which places the laborer and the farmer under a different rule of law from the merchant, manufacturer and miner, and

Whereas the Sundry Civil Bill now before the House contains the identical clause which in the same bill of last session was the occasion of Referendum, No. 3, and

Whereas the Clayton Bill to regulate Trusts and Monopolies, which has now passed the House and is before the Senate, contains clauses discriminating in favor of associations and organizations of laborers, agriculturists, horticulturists and consumers and the members thereof, and

Whereas these clauses in the said Clayton Bill constitute the second step in the progress of legislation which is arraying the employer against the employe, the farmer against the merchant, the horticulturist against the manufacturer, the consumer against the producer, and is not only wrong in principle but so harmful and far reaching in its effects as in our judgment to gravely endanger the stability of a government founded upon equal rights to all men, and

Whereas it is the duty of this Board under its Constitution and By-Laws to do all in its power to make the voice of the Chamber, as expressed in response to its referenda, heard and heeded,

Now Be It Resolved—

1. That a memorial and protest be presented to the President of the United States.
2. That a memorial and protest be presented to the Judiciary Committee of the Senate inasmuch as no hearings are being held by that Committee.
3. That the special attention of the constituent members of this Chamber be called to the form as well as to the substance of the first of the clauses in the Clayton Bill above referred to, —a form said to be adopted because of its doubtful meaning:—some contending that it will legalize violations of the Sherman Act when made by certain associations and organizations therein referred to and by the members thereof, while making unlawful the same acts when committed by all other associations and organizations or the members thereof:—others contending that it merely declares such associations and organizations not to be ipso facto conspiracies in restraint of trade, but does not legalize any act which they or their members may commit in violation of the Sherman Act or of any other law. If this clause is to be accepted as excusing the misconduct of the organizations named, it constitutes a partial repeal of the wise and comprehensive inhibitions of the anti-trust laws. If it is to be construed as merely legalizing the existence of these organizations it is useless because the anti-trust laws do not challenge them. In either event, this clause is unwise, first, because it represents a distinct and affirmative recognition of one class of organizations when similar recognition for other organizations is denied, and this discrimination must prove as unfortunate for the first class as it is unfair to the other; and second, because the adoption of the clause would throw upon the courts the burden of interpreting the intention of Congress when Congress has obviously no definite intention, and thus tends to discredit and cast odium upon the Courts. Moreover, the clause unquestionably furnishes embarrassment to the Executive Department in the impartial enforcement of the law.

The Anti-Trust Program.—The Senate of the United States is now engaged in daily consideration of the three measures said to constitute the administration's "anti-trust" program. One of these relates particularly to the issue of railroad securities, while the other two are designed to supplement the Sherman anti-trust law. All three have passed the House, and, with some alterations, are expected to pass the Senate before the present session closes. The discussion, however, discloses wide differences of opinion over questions of policy and of law, even among senators who are in substantial agreement as to what they seek to accomplish. There is a balancing of possible evils against hoped-for benefits that indicates great uncertainty and confusion, and, notwithstanding the heat of Washington and the weariness of members, the situation is such as to promise an animated and protracted debate. It is evident that not in many years has the Senate faced a task about which the members felt so many misgivings as they do concerning the one now before them. The revision of the tariff and the reorganization of the banking and currency system were simple matters compared with an attempt to provide for official supervision over the conduct of business in the United States, not only compelling all rivals to compete but restricting their competition to approved methods.

The deplorable condition of several great railroad companies at the present time, and the publicity given their affairs during the last two years, is undoubtedly responsible for the strength of the proposal to have all railroad borrowings and stock issues approved by the Interstate Commerce Commission, but the bill is supported by many who hold that unless there is federal supervision there will be State supervision, and that the former is preferable. The most common objection is that the Interstate Commerce Commission is being overworked, that it is physically impossible for the members personally to attend to the many responsibilities being placed upon them, and that in delegating such duties to employes the Commission will suffer the same deterioration in efficiency that has characterized some of the overgrown corporations; and, finally, that it is impracticable for the Commission to place itself in the position of the owners of all railroads and determine the questions of policy which are sought to be carried out by the issue of stock or securities.

Again, some of the most prominent critics of the railway companies are opposed to having the Interstate Commerce Commission charged with any responsibility as to railway securities or capitalization, holding that such responsibilities may be embarrassing in the future. Answering all these objections the friends of the bill say that as amended it simply names the proper purposes for which stock or securities may be issued, and charges the Commission to grant permits accordingly and to see that the funds are so expended, but that the Commission is not charged with determining questions of policy, and will have no responsibility for policies.

The other two bills deal with questions that are much more complicated. They are conceded to involve a radical departure in legislation, in that they attempt to regulate not only monopoly but competition, and to say how far competition in private business may go. The thought in the minds of the legislators undoubtedly is to protect the comparatively weak competitor from the deliberate and calculated warfare of a stronger rival who is seeking to eliminate him from the field by the various practices called "unfair." In other words, the intent of Congress is to prevent the aggressive, destructive kind of competition that is aimed primarily at a rival and prompted not by the present desire to sell goods but by desire to obtain a future control of the market. But there is great difficulty in distinguishing between a perfectly legitimate motive which may at times prompt a man to sell goods even at a loss and the illegitimate motive which is sought to be restrained. In short the legislators recognize that it is very difficult to convict a man of an illegitimate intent when the acts complained of may be innocently performed. Because it seems to be impracticable to define all of the unfair practices that may be used, or to describe the particular conditions under which a given practice is unfair, it is proposed to delegate these powers to a trade commission; but in attempting to do this other difficulties are confronted. Congress no doubt has the authority in the regulation of interstate commerce to declare certain practices unfair, but there is a question whether it may delegate to some other body the function of declaring what is unfair; and still another question whether it may deprive any accused person of a trial in the regularly constituted courts of justice, and yet another question whether the approval of such a body would afford any protection from prosecution in the regular courts. In short the question is raised whether there is any place for a body of the broad authority here proposed in our system of government, wherein all authority is distinctly divided by the Constitution into the Legislative, Executive and Judicial departments. It is true that these same questions were debated when the several grants of authority to the Interstate Commerce Commission were made, and the authority of that Commission to fix "reasonable" rates is claimed as analogous to the authority to define "unfair" practices. Although the authority of the Interstate Commerce Commission has limitations and is subject under the terms of the law to review by the courts, it is effectively exercised.

Laying aside all constitutional questions, there is evidently much uncertainty in the Senate as to the wisdom and practicability of vesting so much authority over the common practices of the business community in any Commission. Evidently the idea of a trade commission that will tell every man what he may do, and protect every honest man from the unfair competition of others, is a pleasing one, in these days of stress, to many people, for many letters and resolutions from trade organizations have endorsed it. This is one reason why Congress feels that despite its own doubts it must go ahead. But not a few of the Senators are wondering whether the authors of the resolutions understand in what vague terms the new authority must be established and how important a step it is in the movement toward the governmental, political and popular control of what have been heretofore regarded as private business affairs. "We have believed," said Senator Borah, of Idaho, in his speech in the Senate, "that however severe the competition, things would finally adjust themselves to the public good. * * * This bill marks the beginning of the time when the business of the country will be controlled through bureaus and commissions." The theory of those who have this view is that familiarity with authority begets its further use, and that a commission possessed of unlimited power to regulate and temper competition will constantly extend its interference with private initiative. The result in their opinion will be an unavoidable loss of individual freedom, originality and aggressiveness, a weakening of the springs of progress, and a certain fixity of conditions that will serve to protect even the big concerns whose domination is feared.

These are some of the considerations that cause the Senate to hesitate and debate and hunt for new language and new light before coming to the final test.

LEGAL.

Important Recent Federal and State Legal Decisions Affecting the Carriers.

THE following analysis of the more important Federal and State Court decisions rendered during July and which appertain to the operation, management and regulation of the railroads of the United States, constitutes a continuation of the record began in the July issue of the "Railway World." As is apparent, the necessary reference to Court records and authorities is given in each case, and any further information desired, will be gladly furnished upon request. Suggestions regarding these records will be thankfully received as a consistent effort is being made to make such records of practical value to the legal departments of the various railways.

Cities May Not Become Investors in Railroad Stock.—(Federal Court.) The United States District Court for the Eastern District of North Carolina has held that the North Carolina Code authorizing counties of the State to subscribe for the stock of any railroad company when necessary to aid the completion or construction of any railroad in which the citizens of the county have an interest, does not authorize cities to issue bonds in payment for stock of a railroad corporation. The City of New Bern, N. C., deemed it advisable to furnish financial assistance to the East Carolina Land and Railway Company. The city officials decided to purchase a block of stock from the company and to pay for the same by ordering a bond issue. The stock was purchased and the bonds issued. The plaintiff, Charles C. Burlingham, and others, purchased some of the bonds. When the interest upon them became due, the city levied a tax to cover the same. The tax was collected but no interest was paid the bondholders for the reason that it was discovered that the stock purchase and bond issue were illegal for the reason that such acts were beyond the corporate powers of the city. Burlingham brought a bill in equity to compel the tax collectors to turn over the tax money to him and the other bondholders and to declare all money in their hands a trust fund for bondholders. The court, in deciding the case held that the city had no authority to make the purchase of stock or to issue bonds to be used in paying for the same. That since both the stock purchase and the bond issue were illegal, any tax levied to pay the interest on the bonds was also illegal and therefore it could not be said that Burlingham or any of the other bondholders had any interest in the money collected. The court dismissed the plaintiff's bill.—(Burlingham v. City of New Bern, 213 Fed. 1014.)

Abandonment of Franchise.—(Washington.) An electric railway holding a franchise to construct an electric railway or its successors in interest having exercised the privileges conferred thereby cannot, against the will of the State, abandon the enterprise if the abandonment works a prejudice to the public interest.—(Day v. Tacoma Ry. & Power Co., 141 Pac. 347.)

Violation of the Federal Appliance Act.—(Federal.) The Federal Safety Appliance Act, providing that where any railroad car has been properly equipped and the equipment shall become defective while the car is being used by the carrier on its line of railroad, it may be hauled from the place where the defect was first discovered to the nearest available point where it can be repaired, does not allow cars with defective equipment to be moved on side tracks or in switching yards except for the purpose of hauling them to the nearest available point for the purpose of making repairs, and hence the statute was violated by moving a car from one yard to another placing it on a side track, where it was required to be moved frequently and by failing to make repairs until it was moved back to the first yard twelve days after the discovery of the defect in the equipment.—(United States v. Chesapeake & O. Ry. Co., 213 Fed. 748.)

Duty to Fence.—(New York.) The duty of a railroad company to fence its right of way, prescribed by Railroad Law (Concol. Laws 1910, c. 49) is an absolute duty; and hence a covenant between a railroad company and the adjoining owner, relieving the railroad company from fencing its right of way, while a defense as to an action by the adjoining owner for injuries to his stock is not a defense to an action by a third person, not a party to the agreement, whose stock strayed onto the right of way through the land of the adjoining owner.—(Shepard v. Pennsylvania R. Co., 148 N. Y. S. 388.)

The Degree of Care to be Exercised.—(Indiana.) A railroad company operating trains over public streets must use ordinary care to so operate its trains as not to injure others lawfully using the streets, but the company is not an insurer of the safety of persons lawfully on the streets, and the care which the company must use is the care which a person of ordinary prudence would use under similar circumstances.—(Evansville & T. H. R. Co. v. Hoffman, 105 N. E. 788.)

Excessive Damages.—(Maine.) Under Maine Rev. St. c. 89, prescribing the measure of damages in actions for wrongful death as a fair and just compensation to the person for whose benefit the action is brought, the measure of damages in an action for the death of an eight year old child brought for the benefit of its parents must be based entirely upon the prospective pecuniary benefit to the parents, and a verdict of $1,811 is excessive.—(Curran v. Lewiston A. & W. Ry. Co., 90 A. 973.)

Safety Appliances.—(Wisconsin.) In an action against a railroad company for burning plaintiff's property, the burden was on it to show that it had provided a spark arrestor so constructed as to give the most practical protection against the escape of sparks, cinders, etc., from the smokestack of its engine as required by St. 1913, section 1494.—(Bonnell v. Chicago, St. P., M. & O. Ry. Co., 147 N. W. 1047.)

Interstate Rates.—(Kansas.) Two carriers filed and published tariffs under the Interstate Commerce Law making two rates on household goods, one of which was based on a declared valuation and limitation of liability in case of loss, and the other showed a higher rate where no valuation was declared or limitation prescribed. A shipper of household goods testified that upon inquiry the agent of one of the carriers quoted a rate to him without explaining that two rates were in existence, also that when the contract of shipment was signed, and the freight paid the agent indorsed on it the valuation of the property and the limited liability in case of loss, and that he objected to the limitation, but did not offer to pay the higher rate, nor ask to have the goods withheld from transportation. Held, that the filing and publication of the rates afforded the shipper notice of the existence of the two rates, and he is presumed to have known of the limitation in value and of liability in the rate under which the shipment was made and the freight paid, and this rate determines the liability of the carrier in an action brought for the loss of the goods.—(Christl vs. Missouri Pac. Ry. Co., 141 Pac. 587.)

Suit by Executor or Administrator.— (New York.) The New York Civil Code authorizes the executor or administrator of a decedent who has left surviving a husband, wife, etc., to maintain an action for a wrongful act causing death against any railroad corporation responsible for such death. Under this section of the law the Court of Appeals has held that no action can be maintained by the executor or administrator, where the decedent at the time of his death, could not himself have maintained the action, the statute of limitations having barred his commencing the suit.—(Kelliher v. New York Cent. & H. R. R. Co., 105 N. E. 824.)

Injury to Animals on Track.—(Kansas.) It is the duty of a railway company to exercise reasonable or ordinary care to keep its cattle guards from becoming so filled with snow and ice as to make it possible for animals to cross them, and for negligent failure in this respect the company is liable for injuries to animals thus getting upon its right of way.—(Martin v. Atchison, T. & S. F. Ry. Co., 141 Pac. 599.)

Trespassing Animals.—(N. D.) A railroad company owes no duty to the owners of animals, which are allowed to trespass upon its right of way, to keep a lookout therefor or to take steps to prevent striking them, until it has discovered them, nor is it bound to presume that they may be there. Even after such discovery, the duty of the engineer to safeguard the lives of himself and the crew and passengers of his train is higher than his duty to protect the trespassing animals. If, therefore, it would appear to a reasonably prudent engineer, under all of the circumstances of the case, that a collision would be unavoidable, and that it would be safer to continue operating the train at the same rate of speed than to attempt to stop or to slow down the train such action and failure to stop or slow down the train would not constitute a ground of recovery for the owner of the injured stock.—(Corbett vs. Great Northern Ry. Co., 148 N. W. 5.)

Railroad Cannot Occupy Land Until Actually Needed.—(North Carolina.) Where a railroad company condemned a right of way over land upon part of which were located tenement houses belonging to defendant, such houses did not become the property of the railroad company, and the defendant has the right to rent them as before until the land shall be actually needed for railroad purposes.—(Raleigh, C. & S. R. Co. v. Mecklenberg Co., 82 S. E. 5.)

Express Company Acting as Forwarding Agent.—(Federal Court.) An express company to which an automobile was delivered to be packed and forwarded to a seaport by rail and there delivered to a steamship for transportation, which did so deliver it, and received the steamship company's usual bill of lading to its order, was not an insurer nor a carrier, but a mere forwarding agent, and was not liable for the negligence of the steamship company or of stevedores employed by it to unload the steamship.—(Reid v. Fargo, 213 Fed. 772.)

Railway Tie Patents Held Invalid.—(Federal Court.) The United States Circuit Court of Appeals, Sixth Circuit, has held the Wolhauper patents for railway tie plates as void for lack of invention, in view of the prior art.—(Railroad Supply Co. v. Elyria Iron & Steel Co., 213 Fed. 789.)

Not Bound to Warn Travelers.—(N. H.) A railroad company is not bound, by lights or other signals, to warn travelers that a freight train is crossing a highway at night, unless, to discharge its common-law obligation of ordinary care, it is bound to give some warning of such fact. Where the plaintiff, driving an automobile on an extremely dark night, ran into the side of a freight train, no recovery can be had unless it can be proved that the sole cause of the accident was the failure of the railroad company to provide some signal.—(Gage v. Boston & Maine R. Co., 90 A. 855.)

Liquor Not Considered Legitimate Subject of Trade.—(Mississippi.) The commerce clause of the Federal Constitution excludes State control only over interstate commerce in articles which are legitimate subjects of trade, and not over articles which are inherently unworthy of commerce and unfit for the use of the people, intoxicating liquors for instance, and which the State, in the absence of Congressional legislation covering the subject, has declared are not legitimate subjects of trade.—(American Express Co. v. Beer, 65 So. 575.)

Crossings Must Not Be Blocked.—(Kentucky.) Where a railroad crosses a public highway the railroad company and the public must each exercise the right to use the crossing so as to subject the other to as little inconvenience as is practicable under the circumstances. Under Kentucky Statutes, if a train has blocked a crossing for five minutes and is not ready to move, the crossing must be cleared by cutting the train in two.—(Harvey v. Illinois Central R. Co., 167 S. W. 875.)

Complying With Speed Ordinance a Public Duty.—(Iowa.) Where an ordinance limited the speed of trains within the city to six miles per hour, compliance with such regulation is a public duty, a violation of which is actionable negligence, authorizing a recovery by a person injured as a proximate result thereof.—(Wolfe v. Chicago Great Western Ry. Co., 147 N. W. 901.)

Duty of Trainmen to Remove Trespassers.—(Pennsylvania.) Where the conductor or other railroad employe in charge of starting a train sees a child sitting on the steps, failure to remove him before starting the train is negligence rendering the carrier liable for the resulting injuries.—(Trevethan v. Philadelphia & R. Co., 90 A. 796.)

Coal Roads Indicted Under Anti-Trust Law.—Indictments have been filed in the United States District Court at Rochester, New York, against the Pennsylvania Railroad, the Northern Central Railway, the Delaware, Lackawanna & Western Railroad Co., and the Delaware, Lackawanna & Western Coal Co.

All the indictments relate to transactions in connection with the mining of anthracite coal in the Pennsylvania fields and transportation to Buffalo and vicinity, and allege unfair advantages by the railroads over other shippers.

New York Central Officials Indicted for Rebating.—Indictments were returned in the Federal Court in Chicago on August 4th, charging that the New York Central Railroad and its subsidiaries have given rebates to the O'Gara Coal Company by various subterfuges; that the railroads had granted extension of credit to the coal company, thus violating the Elkins law, and that advances and loans amounting to $500,000 had been given the coal company.

W. C. Brown, former president of the New York Central; John Carstenen and Richard M. Huddlestone, respectively first vice-president and auditor of the New York Central; Thomas J. O'Gara and William A. Brewerton, president and secretary of the coal company, and three roads—the Lake Shore and Michigan Southern, the Cleveland, Cincinnati, Chicago & St. Louis, and the Chicago, Indiana & Southern—are named in the indictments.

Suit for Heavy Damage Claims Filed Against New Haven.—Whipple, Sears & Ogden, representing minority holders of the New Haven System, have filed a suit in the Supreme Court at Boston, asking for the appointment of a receiver, special master or other official to prosecute claims aggregating $306,000,000 against defendant directors and directors' estate of the New York, New Haven & Hartford Railroad.

The suit, in which the attorneys recently demanded that the directors join, is designed to force restitution from those responsible, of funds alleged to have been illegally expended in building up the New Haven System.

The litigation is in the form of an equity action entered by the attorneys as trustees under the will of Olea Bull Vaughan. They own fifty shares of New Haven stock and bring the action "in behalf of themselves and all other stockholders of said corporation who may become parties."

The bill of complaint declares that the defendants, on account of breach of directors' duty chiefly through causing the New Haven to acquire illegally Boston and Maine, trolley and steamship properties, are bound to pay to the New Haven $162,000,000 "withdrawn therefrom wrongfully and for ultra vires and illegal purposes." It is alleged that the losses resulting from these acquisitions approximate $102,000,000 and that under the Federal anti-trust act the New Haven is entitled to recover from the defendants three-fold that sum or $306,000,000.

That the New Haven had no charter authority to acquire the properties in question; that their acquisition was prohibited by specific statutory enactment in Massachusetts at least and also by the Sherman anti-trust act; and that the New Haven did not acquire legal titles for any purpose except to compel return to it of its funds illegally expended in connection therewith.

Union Pacific Wins Stock Case.—The Court of Appeals at Albany has sustained a demurrer of the Union Pacific Railroad to the complaint of the Equitable Life Assurance Co., which sought to restrain the railroad from distributing certain moneys among the common stockholders, and thereby makes it possible for the common stockholders of the Union Pacific Company to receive approximately $82,000,000 in Baltimore and Ohio stock. The action of the Equitable was based upon the assumption that the preferred stockholders had a right to participate in accretions of $58,064,157 resulting from Southern Pacific transactions and a $15,868,200 decrease in liabilities resulting from the exchange of convertible bonds.

The proceeds of these transactions the Union Pacific Company regarded as profits and held that under provisions of the articles of association the rights of the preferred stockholders to share in them were limited. The Equitable company holds $1,618,000 of Union Pacific preferred stock.

The total amount of stock outstanding in the Union Pacific Railroad at the time the action was brought by the Equitable Company was $216,662,400 common and $99,543,500 preferred.

The question submitted to the Court of Appeals by the plaintiff was whether the accretions from the Southern Pacific transactions and the proceeds of the exchange of convertible bonds were profits.

The appeal to the highest court was by permission from an order of the first appellate division, which sustained an order from the special term entered in New York County sustaining the Union Pacific's demurrer to the complaint of the Equitable Life Assurance Company.

TRAFFIC.

Transportation of Exhibits to the Panama-Pacific International Exposition.—The Panama-Pacific International Exposition, through its Traffic Department has issued Rules and Regulations covering the transportation of exhibits to the Exposition which will be held in San Francisco from February 20th to December 4th, 1915. The information is contained in two pamphlets, one to cover domestic shipments and the other foreign shipments. These pamphlets also contain information as to steamship reductions in freight rates for sea carriage of exhibits as well as the special provisions and reductions made by the rail carriers, which generally speaking, is on the basis of full freight rate to the Exposition and free return to the original point of shipment if exhibits have not changed ownership.

Exhibits and merchandise should be securely packed to insure safe handling and transportation. Where boxes and crates are used in packing, it is suggested that screws be used instead of nails, as it will then be easier to re-assemble at the close of the Exposition in December of next year.

Exhibits and merchandise intended for different buildings should be packed in separate packages and each package must contain an accurate and detailed list of the contents and should have affixed to it a special tag which will be supplied by the Exposition.

Arrangements have been made for the consolidation of less than carloads shipment at New York, Chicago and other points into carload lots. By means of this arrangement exhibitors may ship their goods to the nearest consolidated point and obtain the benefit of the carload rate, plus a charge for the consolidation service from that point to San Francisco.

All charges including terminal charges at San Francisco are to be prepaid and shippers are cautioned that the exact amount of prepay is entered and receipted for on the Bill of Lading. Simply writing the word "Prepaid" on the Bill of Lading is not sufficient.

Full information and requirements relating to Bills of Lading on all shipments and invoices on foreign shipments are shown which should prevent errors, delays and confusion.

The foreign pamphlet contains United States Customs Regulations under the "Act providing for the free importation of articles intended for foreign buildings and exhibits at the Panama-Pacific International Exposition and for the protection of foreign exhibitors" and calls attention to Quarantine Regulations for live animals, plants, shrubs, agricultural products, etc.

Automobiles, motorcycles, bicycles, aeroplanes, airships, balloons, motor-boats, racing shells, teams and saddle horses, may be brought to the United States by non-residents for touring purposes or for the purpose of taking part in races or other specific contests under bond to export the same within six months, provided that no article shall be allowed such entry if intended for sale or which is imported for sale on approval.

The Vessel Tonnage of the World.— The world's carrying power now includes approximately 31,000 vessels with an aggregate capacity of 47 million gross tons and has nearly doubled in capacity during the last twenty years. In number, however, this commerce fleet has decreased slightly, thus showing a tendency toward larger carrying units. These figures are based upon the tonnage of all vessels of over 100 tons engaged in trade, whether domestic or foreign, or ocean, river and lake.

This country ranks second in number and tonnage of vessels engaged in commerce, but this is due to the vast number engaged in lake and ocean coastwise trade, since the number of American vessels engaged in foreign trade, according to reports received by the Bureau of Foreign and Domestic Commerce, Department of Commerce, is less than that of Great Britain, Germany, France, Italy or Norway. According to a recent statement of Lloyd's, out of an aggregate tonnage of 47 million gross tons in 1913-1914, forty per cent were credited to Great Britain, eleven per cent to the United States, eleven per cent to Germany, about five per cent each to Norway and France, three per cent each to Holland, Italy and Japan, and from 2¾ to 1¾ per cent to Russia, Sweden, Austria-Hungary, Denmark and Spain.

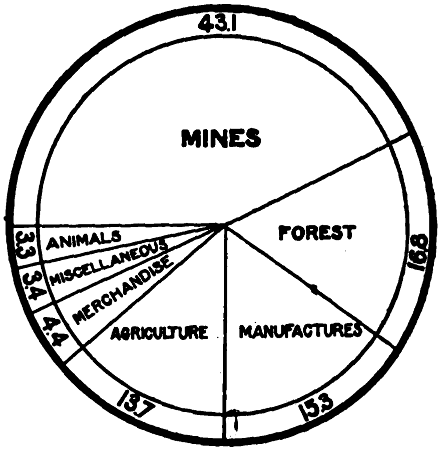
Effect of War upon Import and Export Traffic.—The European War has practically suspended, for the time being, the movement of import and export merchandise; and various railways, having their termini on the coasts have found it necessary to issue statements for the purpose of informing shippers regarding the true status of affairs. The following notice issued generally to shippers by the Boston and Maine Railroad is an example of the attitude which the carriers have been forced to assume under existing conditions:

"On account of European War conditions and the consequent disarrangement of Trans-Atlantic service, all ocean rates quoted are withdrawn, and through bills of lading will not be issued until further notice.

"The legal responsibility of the inland carrier ceases when freight for export is placed on the wharf of the ocean carrier, and the Steamship Lines deny responsibility for protection of the property until they take possession. Owners of export freight held at ocean terminals of the Boston and Maine Railroad can arrange to protect by insurance for the period intervening before removal by Steamship Companies.

"While there is no obligation on the part of the inland carrier, this notice is given from courtesy, as a reminder to the owner of the freight, to exercise his own wishes as to protecting the interest he may have in it."

The Grand Divisions of Traffic.—The following graphic shows, in an interesting manner, the various sources from which the freight traffic of the country is procured. The fact that nearly half the tonnage comes from the mines would perhaps prove a surprise to the layman who, in many instances, has been led to believe that agricultural products constitute the most important factor in freight movements. As a matter of fact, agricultural productions come fourth, the products of the mines, the forests and the factories, all moving in greater volume than do the products of agriculture.



Railroad Rates to the Panama-Pacific International Exposition.—It is the official declaration of the traffic managers of great railway lines confirmed by the Traffic Department of the Exposition itself, that no such early announcement of round-trip rates to a World's Fair has ever been made as has just been determined upon in the case of the Panama-Pacific International Exposition at San Francisco in 1915. Neither has there ever been such a comprehensive agreement by competing routes, nor any hitherto equaled reduction of the rates.

The Transcontinental Passenger Association, comprising the passenger traffic managers of the lines of Chicago, during their convention in San Francisco, decided upon extraordinarily favorable rates, for an unprecedented period in connection with this exposition. At previous World's Fairs in this country a few months' advance notice at most was all that was made by the railroads of their special round-trip rates, stop-over privileges, etc. At the St. Louis Exposition for example, in 1904, it was not until the close of January of that year that the special schedule of railway rates to and from St. Louis was announced. This was barely three months before the opening of the Fair and in meagre contrast to the months ample notice now extended by the roads to public knowledge. The advantage of knowing thus early what the rates to San Francisco and return from all points in the West are to be, is of every advantage alike to prospective visitors and to the Exposition. All who are contemplating a visit to what unquestionably is to be the noblest and most beautiful exposition the world has ever beheld, have now full time in advance to know the cost of the trip, its various routes of approach, stopover and other exceptional privileges, etc. When to this is added the vital fact that the excursion rates have been fixed at figures materially lower than in connection with any previous exposition. the determination to attend, and relative ease of arranging for the trip, will be appreciated.

A comparison of these rates shows them to average rather less than a cent a mile as against, to quote St. Louis again—last of previous great expositions in this country—about a cent and a half a mile, or nearly one-third less than the then special mileage rate and from that city. The time limit for the use of return tickets from St. Louis was only sixty days, whereas ninety days is allowed in the case of the trip to San Francisco next year.

These tickets will be on sale from March 1st to December 1st, 1915 and good going on any direct line and from returning if desired on any other direct line. Tickets from Chicago, St. Louis and similar territory will be good via New Orleans, and all tickets good by way of Los Angeles.

The railroads are taking further active interest in the Fair. The Exploitation and general advertising departments of all the western roads, and in most of the eastern, have already literature in preparation showing, naturally enough, the special attractions of their own respective lines but dwelling with hearty emphasis on the magnificence of the Exposition itself. No little of the photographic output and useful data of the Exposition's Exploitation Department has already been forwarded, at the Companies' request, for this purpose. Each company will also show in its own booklets and other publications the exact rates from all points within its territory. There is to be another convention of the traffic managers a little later on, when there will be additional things done of material interest to the Exposition and the public.

Appended is a list of the rates decided upon at the recent meeting of the Transcontinental Passenger Association:

From Denver and common points to San Francisco and return	$45.00
From Omaha, St. Joseph, Atchison, Kansas City and common points to San Francisco and return	50.00
From St. Louis, Memphis, New Orleans and common points to San Francisco and return	57.50
From Chicago and common points	62.50
The rates from territory east of Chicago will be decided at an early date. The same basis of reduced rates will doubtless be put in effect from all points east, which will make the rates from New York and Boston to San Francisco and return not far from	80.00

Round trip tickets, going or returning via Canadian or northern lines through Victoria, Vancouver, Seattle or Portland; Shasta (rail) route, or steamship between these points, $17.50 higher. The usual stop-over privileges will be allowed on both going and return trips.

Pullman accommodations and meals may add about one-third more to the above rates. The cost as a whole is less than has ever been known for so extended a variety of round trips, with the attendant attraction of scenery, first class equipments, and the King of Expositions as the grand half-way house of the splendid journey.

ORGANIZATION NOTES.

Forthcoming Meeting of the American Association of Railway Superintendents.—The 27th annual meeting of the American Association of Railway Superintendents will be held in New York City, August 20th and 21st, 1914. The Hotel Cumberland at Broadway and 54th Street and Hotel Woodward at Broadway and 55th Street, have been selected as headquarters. The Long Island Railroad has extended the courtesy of a free trip over a portion of its electrified territory, to leave New York 3 P. M. Saturday, August 22nd. The Pullman Company has agreed to grant to members of the Association and department members and their families, who are prohibited by law from receiving free or reduced transportation, the privilege of accommodations in their cars en route to and returning from the Convention, at half rates. It is believed that the forthcoming meeting will prove one of the most interesting in the history of the Association as a railroad president, a vice-president and a superintendent of transportation have already agreed to deliver addresses bearing on the operating conditions of the day. Aside from this, there will be a number of reports by committees to consider and discuss.

Summer Outing of Pittsburgh Traffic Club.—The outing of the Traffic Club of Pittsburgh was held at Idlewild Park, a beautiful mountain resort near Ligonier, Pa., Monday, August 10th. The committee in charge of the affair comprised: R. B. Merrick, chairman; J. G. Hill, secretary; J. F. Lent, A. H. Orr, J. A. Fitzpatrick, E. R. Worcester, C. E. Barnhart, A. Waldbauer, T. W. Bennett, D. C. McCready, T. B. Moss, F. A. Higerd, Chas. McNichol, J. C. Kimes, C. H. Jackson. For the first time in the history of the Club, members were permitted to invite wives and sweethearts. This innovation was a huge success. A serious pause prior to the noonday lunch occurred when President E. F. Lalk requested two solemn reverent minutes with heads bowed in silent prayer out of respect to the funeral of Mrs. Woodrow Wilson, President Wilson being an honorary member of the Club. Repeating the custom of last year the Traffic Club of Cleveland was entertained and a baseball game between teams representing both clubs resulted in the defeat of the Pittsburgh Club to the tune of 11 to 5. W. K. Steele, of the Pennsylvania Railroad, listened to the squawking of the vanquished who seriously questioned his balance of mind but never his integrity. Various contests were held, prizes being awarded to the winners in every event. Dancing and cards for the ladies and moving pictures of all events were taken. J. W. Patton, of Columbus, scored high in the Clay Pigeon Shoot. A dinner of chicken, waffles and corn concluded a pleasant day for all.

Telegraphic Reports on Accidents.—The Special Committee on Relation of Railway Operation to Legislation, has issued its Bulletin No. 63, in which attention is called to the necessity and proper method of making telegraphic reports of accidents to the Interstate Commerce Commission.

The Bulletin, with the exception of the cipher code which is referred to under Secton 5, reads as follows:

To the Railways:

Reports to the Safety Division.

On June 21, 1911, the Interstate Commerce Commission issued its order to each carrier requiring a "report by telegram * * * * of any collision, derailment or other accident upon the railroad operated by such common carrier resulting in the death of one or more persons."

The definition of accidents involving death is as follows:

Accidents to persons resulting in immediate death, or in death within twenty-four hours from the time the accident occurred, should be reported * * * * killed.

The following suggestions are made in connection with the reporting of accidents:

1. Railways to transmit by telegram reports of accidents involving the death of passengers or employes riding upon or employed in, on or about trains, engines or cars.

2. Railways to transmit by mail reports of accidents involving the death of trespassers killed on the right-of-way, persons killed at grade crossings, employes killed by trains while engaged in work on tracks or bridges.

3. Railways not to report either by telegram or mail, but to include in the monthly reports as heretofore, so-called industrial accidents, such as employes killed while working in shops, falling from bridges, or by any accidents not connected with train operation.

4. Reports to be as brief as possible, and not deal with more than the following essential facts:

Time (A. M. or P. M.)
Place (nearest station and state).
Number killed—passengers.
Number killed—employes.
Nature of accident.
Approximate cause.
Signature (name and title).

5. In the interest of brevity, conciseness and uniformity, railways may use the cipher code as provided by Committee.

6. Telegrams to be addressed as follows:

The Interstate Commerce Commission,
Safety Division, Washington, D. C.

Reports to the Locomotive Boiler Inspection Division.

7. All accidents resulting from failure, from any cause, of a locomotive boiler or any of its appurtenances, resulting in serious injury or death to one or more persons, to be reported by wire to the Chief Inspector of Locomotive Boilers at his office at Washington, in accordance with Paragraph 55 of the Rules and Instructions for the inspection and testing of locomotive boilers and their appurtenances, issued by order of the Interstate Commerce Commission, June 2, 1911.

8. A "serious injury" is defined as an injury which requires the person injured to lay off for three days, in the aggregate, within the ten days immediately following the accident. If the injury is so slight that apparently it will not disable the person injured from working for three days, it is not the subject of report.

9. Telegrams may be addressed:

McManamy, Southern Building,
Washington, D. C.

10. It is sufficient to state date of accident, name of railroad, number of locomotive, where same can be inspected, nature of accident, and number of persons killed or seriously injured.

11. It will not be necessary to report by wire or by letter accidents of the kind specified in Paragraph 7 to the Safety Division of the Interstate Commerce Commission.

Monthly Reports.

12. The making of telegraphic or mail reports as suggested above, either to the Safety Division or to the Locomotive Boiler Inspection Division, will not relieve railways from reporting accidents as required by law in their monthly reports to the Accident Division of the Interstate Commerce Commission.

Special Committee on Relations of
Railway Operation to Legislation.

Portland (Ore.) Transportation Club Elects President.—W. Merriman, freight agent of the Southern Pacific Company at Portland, has been elected president of the Portland Transportation Club, having been advanced from the vice-presidency. The club membership numbers 371 and is made up from transportation men of all lines in the city. Mr. Merriman has always been an active member of the club. He began service with the Southern Pacific Company twenty-five years ago as office boy at a small station in Oregon.

CONSTRUCTION.

Railway Construction in Alaska.—Rapid progress is being made on the preliminary railway surveys in Alaska and the engineering Commission expects to have the reports completed and ready for presentation in Washington in December. To Lieut.-Col. Arthur Mears, has been assigned the task of superintendent of construction of the Alaskan Railways. He was one of Col. Goethals' assistants on the Panama Canal, being appointed chief engineer on the Panama Railway.

This railway development in Alaska is being watched with keen interest by the people of British Columbia. It is expected that the construction of the thousand miles of Alaskan Railway by the United States Government at the cost of $35,000,000 will be followed by the extension of the lines through the Yukon into Northern and Central British Columbia connecting with the main line of the Grand Trunk Pacific Railway.

Prince Rupert in particular, will benefit by the opening up of Alaska. That city justly claims to be the real gateway to the North. With its magnificent harbor, its dry dock just approaching completion and its ideal situation—it is the nearest Canadian City to Alaska—it will handle the bulk of the commerce over the newly created routes.

Southern Railway Constructing Many New Stations.—The Southern Railway is engaged at the present time in the construction of new passenger or freight stations at the following points: Passenger station at Reidsville, North Carolina; freight depot at Huntington, Indiana; passenger station at South Boston, Virginia; freight and passenger station at Bath, South Carolina; passenger station at Kershaw, South Carolina; freight and passenger station at Ninety-Six, South Carolina; passenger station at Mt. Airy, North Carolina and freight and passenger station at North Wilkesboro, North Carolina. In addition to these new stations, it has also awarded contracts for the construction of transformer houses at Morristown, Tenn., and Gainesville and Howell, Ga., and a combination depot at East Chattanooga, Tenn.

New Freight Facilities at Mobile.—Southern Railway Company is arranging for a general development of its freight terminal at Mobile, Ala., and authority has been given for the construction of new freight houses, storage yard and engine yard.

The facilities for handling freight will consist of an out-bound freight house, 26x410; and inbound freight house, 40x140, with office 56x134. Cotton platform 40x330; ribbon platform, 12x410, and necessary tracks, team ways, drainage and paving with adequate fire protection.

The work to be done in providing engine handling facilities will consist of grading, track work, cinder conveyor and the provision of drainage and water supply. A new storage yard, with a 50 foot track scale will also be provided.

Important Double Tracking Project for Southern Railway.—It is reported that within five years the management of the Southern Railway expects to have a double track line the entire distance of 649 miles from Washington to Atlanta. The funds for this work will be provided by the sale of $20,000,000 bonds of the Atlanta and Charlotte Air Line Railway, the issue of which has been authorized and approved by the Georgia Railroad Commission.

Of these bonds $5,500,000 have already been sold and the proceeds will be used to refund an equal amount of Atlanta and Charlotte Air Line bonds now owned by Southern Railway. This sum will be used by Southern Railway in double-tracking those portions of its line between Washington and Charlotte which are still single track. When this has been completed, attention will be turned to double-tracking that portion of the line between Charlotte and Atlanta which is still single track. This will involve a great deal of heavy work, especially in the mountains of North Georgia, and will call for expenditure of between $13,000,000 and $14,000,000.

The single track lines north of Charlotte to be double-tracked are as follows: Orange, Va., to Amherst, Va., 73.99 miles; Whittle, Va., to Danville, Va., 22.09 miles; Pelham, N. C., to Greensboro, N. C., 37.14 miles; Concord, N. C., to Harrisburg, N. C., 6.4 miles; a total of 139.62 miles.

Of the line from Charlotte to Atlanta, 267.5 miles, double-track has been constructed between Atlanta and Duluth, 24.52 miles; between Suwanee and Gainesville, 22.9 miles; and between Spartanburg and Spartanburg Junction, 1.88 miles, a total of 49.3 miles, leaving 218.2 miles of single track.

The completion of this great work of double-tracking the main thoroughfare for travel between the East and the South will mean a new era of transportation for the South and is of interest to all parts of the section.

EQUIPMENT.

Applying the Federal Safety Appliance Acts.—The Pennsylvania Railroad has notified other railroads that it will no longer accept from lines with which it connects, any passenger cars which do not meet the requirements of the Federal Safety Appliance Acts.

To meet the Federal requirements for passenger cars, the Pennsylvania Railroad has, since the details of the laws were made known in 1911, been adding to its cars the appliances demanded. All cars have now been equipped at a cost of $144,217.

To equip its locomotives and passenger and freight cars with the safety appliances required under the Federal laws will, when completed—the company has until July 1st, 1916, to equip its freight cars—cost the Pennsylvania Railroad System $5,185,000.

The Development of the Block System on the Pennsylvania.—With the completion on September 1st, of an elaborate plan of improvements in its automatic block signal system, the Pennsylvania Railroad will have more four-track lines operated under automatic signals than any railroad in the world.

At a cost of $6,000,000 the Pennsylvania Railroad has in the past three years equipped 253 miles of its main lines with automatic signals.

On September 1st, the main line of the Pennsylvania Railroad between Pittsburgh and New York, and Philadelphia and Washington, will be equipped with automatic block signals.

The signal system on the Pennsylvania Railroad East of Pittsburgh and Erie represents an estimated investment of approximately $18,000,000. The difficulty in arriving at more than an approximate figure is due to the fact that many changes have been made in the signals from time to time in the past thirty years. The electro-pneumatic interlocking switch and signal system in the New York Station and on the electric line between Sunnyside Yard, L. I., and Manhattan Transfer, N. J., alone cost $1,750,000.

It takes a normal force of 1,800 men to maintain the Pennsylvania's signal system. It costs to keep these signals in order no less than $1,500,000 a year.

NEW ROADS.

Arrangements Completed to Finance New Tennessee Railroads.—Reports from Tennessee state that plans for financing the Nashville, Shiloh and Corinth Railroad have been approved by Nashville organizations and the Davidson County Court, which renders the deal practically complete. Davidson County and Nashville will authorize a bond issue of $1,000,000. The road will run from the Nashville terminus, through a rich section to the Illinois Central in Mississippi. According to the present plans work will be commenced as soon as necessary details are completed.

New Roads for Kansas.—A State charter has been granted in Kansas for the construction of a new north and south line in that State. The proposed road runs from Washington and Concordia through the counties of Sedgwick, Harvey, Martin, Dickinson, Saline, McPherson, Ottawa, Cloud, Clay, Republic and Washington, a distance of 200 miles.

New Canadian Transcontinental Line.— The name of the proposed new transcontinental road for Canada has been changed from the All-Red-Line to the Labrador, Quebec & Southern. Its proposed length of 3,270 miles has been reduced more than one-third, and its capital stock to $10,000,000. The line, as now authorized by the Canadian Railway Commission, is to run west from Cape Charles to the Peribonka River, 600 miles; thence through the Peribonka Valley to a point on Lake St. John, 200 miles more; on to the city of Quebec.

Work on New Arizona Road Begun.—The first spike in the Yuma Valley Railroad has been driven. The new railroad is being laid on top of the broad levees constructed by the reclamation service to protect the Imperial Valley and the Yuma Valley lowlands from floods of the Colorado River. Its purpose is mainly for transportation of rock and machinery required to repair the levee system, but it will also be utilized by farmers to market their products. The line will be twenty-one miles long.

One other railway only in this country is exclusively owned and operated by the Government. This is the Arrow Rock Line in Idaho, ten miles in length.

New Road from Denver to San Diego Proposed.—Articles of incorporation for the Southwestern Pacific Railroad which capitalists purpose to build from Denver to San Diego, Cal., have been filed with Secretary of State Jordan. The capitalization is cited as $2,200,000. Colonel D. C. Collier, of San Diego, president of the company, said the railroad would cost approximately $105,000,000 for its 2,200 miles of track. The main line, between Denver and San Diego, will total 1,021 miles. A branch will run from Denver to Salt Lake, with several others to mining districts.

FOREIGN ROADS.

Characteristics of German Freight Traffic.—Characteristics of the freight traffic of Germany are brought out in the Statistical Abstract of that Empire, the 1914 edition of which has just appeared. No less than seventy different groups of commodities are reported as to tonnage by railroads and by inland waterways. Coal, the principal commodity, forms about one-fourth of the total tonnage both by rail and water. Other commodities, in order of importance, are stone of various kinds; earths; coke (from coal); brown-coal briquettes and brown-coal coke; iron ore; brown-coal (unworked); fertilizers; beets; iron rods, frames, bands, etc.; wood for building, etc.; wood for fuel, etc.; pig iron; cement and cement blocks; coal briquettes; lime; round timber; scrap iron and steel; flour and other mill products; potatoes; and a long list of smaller items.

Live stock constituted but a small fraction of the total traffic, and was carried almost exclusively by rail. The cattle carried during the past several years numbered about 6,000,000 to 7,000,000 annually; sheep about 2,000,000; swine 13,000,000 to 17,000,000; horses, mules and asses 600,000 to 800,000.

Of the grain hauled by rail in 1912, there were 3,721,000 metric tons of barley; 3,180,000 of wheat and spelt; 2,854,000 of rye; 2,134,000 of oats; and 1,197,000 metric tons of corn. Potatoes amounted to 4,073,000 tons, or more than any one kind of grain.

In 1912 the total railroad traffic was 479,230,000 metric tons, of which 120,221,000 consisted of coal, 46,276,000 of stone, 34,507,000 of earths and 25,484,000 of coke.

Compared with railroad traffic, the river traffic in some commodities is fairly important. Coal on German rivers amounted to 25,371,000 metric tons, or about one-fifth that carried by rail; iron ore tonnage was 10,025,000 by river and 18,637,000 by rail; while earths made 12,134,000 metric tons on waterways and 34,507,000 on railroads. Most other commodities were carried in far greater quantities by rail than by river. The entire traffic on inland waterways in 1912 in Germany amounted to 93,481,000 metric tons, or less than one-fifth the railroad traffic.

ELECTIONS AND APPOINTMENTS.

Executive.

Edward A. Bynum, vice-president and general manager, Texas City Terminal Company. Headquarters, Texas City, Texas.

W. R. Campbell, vice-president, Susquehanna and New York Railroad. Headquarters, New York.

E. C. Deal, vice-president and chief engineer, Carolina and Yadkin River Railroad. Headquarters, Greensboro, N. C.

Lawrence V. Guild, assistant to the president, Kansas City, Mexico and Orient Railway. Headquarters, Kansas City, Mo.

James H. Hustis, president, Boston and Maine Railroad. Headquarters, New Haven, Conn.

R. A. McTyer, president, Greenville and Western Railway. Headquarters, Atlanta, Ga.

F. A. Peil, assistant to the president, Oregon-Washington R. R. and Navigation Company. Headquarters, Portland, Oregon.

Frank Scott, vice-president and treasurer, Grand Trunk Railway. Headquarters, Montreal, Que.

William C. Tompkins, assistant to vice-president, Grand Trunk Railway. Headquarters, Montreal, Que.

Financial.

J. R. Frink, secretary and treasurer, Macon, Dublin and Savannah Railroad. Headquarters, Macon, Ga.

James A. Yates, assistant treasurer, Grand Trunk Railway. Headquarters, Montreal, Que.

Accounting.

W. H. Ardley, comptroller in charge of all accounting, Grand Trunk Railway. Headquarters, Montreal, Que.

D. W. Beddo, auditor of freight receipts, Texas and Pacific Railroad. Headquarters, Dallas, Texas.

A. J. Biard, assistant auditor, Texas and Pacific Railroad. Headquarters, Dallas, Texas.

H. E. Cartwright, auditor of disbursements, Wells Fargo & Company. Headquarters, Chicago, Ill.

G. W. Danner, auditor of disbursements, Texas and Pacific Railroad. Headquarters, Dallas, Texas.

J. B. Duke, assistant to the controller, Southern Railway. Headquarters, Washington, D. C.

W. T. Gill, traveling auditor, Piedmont and Northern Lines. Headquarters, Charlotte, N. C.

B. Lancaster, auditor of disbursements, Union Pacific Company. Headquarters, Omaha, Neb.

G. R. Martin, assistant auditor of disbursements, Grand Trunk Railway. Headquarters, Montreal, Que.

J. P. Pelham, assistant auditor, Piedmont and Northern. Headquarters, Charlotte, N. C.

J. A. Robinson, auditor of revenue, Southern Railway. Headquarters, Washington, D. C.

H. H. Smith, car accountant, Canadian Northern Railway. Headquarters, Toronto, Ont.

F. E. Stanberry, auditor of passenger receipts, Texas and Pacific Railroad. Headquarters, Dallas, Texas.

F. A. Truan, auditor of freight accounts, Southern Railway. Headquarters, Washington, D. C.

George H. Winsor, auditor and traffic manager, San Benito and Rio Grande. Headquarters, San Benito, Texas.

Engineering and Mechanical.

Edward L. Adams, senior railway signal engineer of the Division of Valuation, Southern District, Interstate Commerce Commission. Headquarters, Chattanooga, Tenn.

E. L. Akans, master mechanic, Southern Railway. Headquarters, Birmingham, Ala.

R. A. Baldwin, engineer maintenance of way, Ontario Grand Division, Canadian Northern. Headquarters, Toronto, Ont.

W. C. Barrett, division engineer, Lehigh Valley Railroad. Headquarters, Sayre, Penna.

F. L. Beal, engineer of valuation, Louisiana and Arkansas Railway. Headquarters, Stamps, Ark.

J. A. Boatwright, master mechanic, Tallulah Falls Railway. Headquarters, Cornelia, Ga.

T. J. Brown, resident engineer and bridge and building master, Canadian Pacific Railway. Headquarters, Cranbrook, B. C.

G. M. Elliott, supervisor of track, Canadian Northern Railway. Headquarters, Perry Sound, Ont.

J. D. Evans, division engineer, Ottawa Division, Canadian Northern Railway.

J. W. Findlay, general foreman, Toronto Division, Canadian Northern Railway. Headquarters, Perry Sound, Ont.

G. Glasford, district master mechanic, Canadian Pacific Railway. Headquarters, Cranbrook, B. C.

Ralph E. Hammond, assistant road foreman, Northern Pacific Railway. Headquarters, Minneapolis, Minn.

R. C. Harris, resident engineer, Canadian Pacific Railway. Headquarters, Calgary, Alta.

E. Haystead, supervisor of track, Canadian Northern Railway. Headquarters, Toronto, Ont.

G. A. Hoag, superintendent of car service, Canadian Northern Railway. Headquarters, Montreal, Que.

Frank Johnson, master mechanic, Southern Railway. Headquarters, Princeton, Ind.

Paul Jones, assistant master mechanic, Southern Pacific Company. Headquarters, Sparks, Nev.

A. G. Kinyon, superintendent of locomotive operation, Seaboard Air Line Railway. Headquarters, Portsmouth Shops, Portsmouth, Va.

T. D. LeMasters, master car repairer, Southern Pacific Company. Headquarters, Ogden, Utah.

D. McDonald, supervisor of track, Canadian Northern Railway. Headquarters, Trenton, Ont.

T. R. McLeod, division master mechanic, Ontario Grand Division, Canadian Northern Ry. Headquarters, Toronto, Ont.

D. H. Martin, chief engineer, new Welland ship canal. Headquarters, Allanburg, Ontario.

R. A. Miller, general foreman, Canadian Northern Railway. Headquarters, Trenton, Ont.

Melvin S. Montgomery, road foreman of engines, Minnesota Division, Northern Pacific Railway. Headquarters, Staples, Minn.

W. C. Moore, road foreman of engines, Ottawa Division, Canadian Northern Railway. Headquarters, Trenton, Ont.

E. Myers, roadmaster, Ottawa Division, Canadian Northern Railway.

C. B. Oakley, supervisor of track, New York Central & Hudson River Railroad. Headquarters, Rochester, New York.

O. Ogden, supervisor of track, Canadian Northern Railway. Headquarters, Ottawa, Ont.

Mark H. Reasoner, assistant supervisor of stations, Minneapolis, St. Paul & Sault Ste. Marie Ry. Headquarters, Minneapolis, Minn.

W. J. Rennix, district master mechanic, Canadian Pacific Railway. Headquarters, Calgary, Alta.

W. H. See, supervisor of bridges and buildings, Canadian Northern Railway. Headquarters, Toronto, Ont.

F. C. Simpson, master mechanic, Virginia and Southwestern Railway. Headquarters, Bristol, Tenn.

E. A. Sweeley, master car builder, Seaboard Air Line. Headquarters, Portsmouth, Va.

E. M. Sweetman, master mechanic, Southern Railway. Headquarters, Spencer, N. C.

Thomas Turnbull, assistant chief engineer, Canadian Northern Railway. Headquarters, Winnipeg, Man.

C. A. Veale, signal supervisor, Tuscon Division, Southern Pacific Railroad. Headquarters, Tucson, Ariz.

W. Walsh, supervisor of track, Canadian Northern Railway. Headquarters, Trenton, Ont.

J. W. Williams, chief engineer of construction, Northwestern Pacific Railroad. Headquarters, San Francisco, Cal.

G. H. Wion, assistant signal engineer, Victorian Government Railways. Headquarters, Melbourne, Australia.

F. K. Zook, chief engineer maintenance and structural engineer, Northwestern Pacific Railroad. Headquarters, San Francisco, Cal.

Operation.

R. H. Allison, division superintendent, Atchison, Topeka and Santa Fe Railroad. Headquarters, Marceline, Mo.

J. F. Barnes, trainmaster, Third District, Oregon Short Line Railroad. Headquarters, Pocatello, Idaho.

A. F. Brewer, superintendent, Utah-Montana Division, Oregon Short Line Railroad. Headquarters, Pocatello, Idaho.

F. R. Blount, superintendent, Panama Railroad. Headquarters, Colon, Panama.

I. L. Boomer, superintendent, Fourth District, Canadian Northern Railway. Headquarters, Calgary, Alta.

C. E. Brooks, assistant superintendent, Montana Division, Oregon Short Line Railroad. Headquarters, Nampa, Idaho.

John S. Brown, manager of the transportation department, Chicago Board of Trade. Headquarters, Chicago, Ill.

J. L. Burd, superintendent, Gulf Division, International and Great Northern Railroad. Headquarters, Palestine, Texas.

E. E. Cain, superintendent, Chicago-Petoskey Division, Pere Marquette Railroad. Headquarters, Grand Rapids, Mich.

P. T. Carmody, trainmaster, Lehigh Valley Railroad. Headquarters, Cortland, N. Y.

J. W. Carnes, assistant superintendent, Trinity & Brazos Valley Railway. Headquarters, Teague, Texas.

D. B. Carson, general manager, Nashville, Chattanooga & St. Louis Ry. Headquarters, Nashville, Tenn.

W. E. Cline, chief train despatcher, Canadian Pacific Railway. Headquarters, Cranbrook, B. C.

George Collins, superintendent, Ottawa Division, Canadian Northern Railway. Headquarters, Trenton, Ont.

L. V. Combs, trainmaster, Illinois Southern Ry. Headquarters, Sparta, Ill.

D. Crombie, superintendent of transportation, Canadian Northern. Headquarters, Toronto, Ont.

W. J. Curle, superintendent, Canadian Northern Railway. Headquarters, Toronto, Ontario.

R. S. Derbyshire, assistant superintendent, Ottawa Division, Canadian Northern Ry. Headquarters, Trenton, Ont.

C. R. Duncan, superintendent, Illinois Southern Railway. Headquarters, Sparta, Ill.

J. H. Dyer, superintendent, Sacramento Division, Southern Pacific Company. Headquarters, Sacramento, Cal.

A. H. Ehlers, general superintendent, Copper Range Railroad. Headquarters, Houghton, Mich.

P. H. Fox, chief despatcher, Canadian Northern Railway. Headquarters, Toronto, Ont.

H. B. Grimshaw, general manager, Macon, Dublin and Savannah Railroad. Headquarters, Macon, Ga.

H. R. Hanlin, general manager, Dayton and Union Railroad. Headquarters, Cincinnati, Ohio.

A. J. Hills, general superintendent, Ontario Grand Division, Canadian Northern. Headquarters, Toronto, Ont.

Otto Holstein, superintendent of transportation, San Antonio, Fredericksburg & Northern Railway. Headquarters, Fredericksburg, Texas.

M. G. Hurd, chief despatcher and trainmaster, Canadian Northern Railway. Headquarters, Calgary, Alta.

W. R. Kelly, assistant superintendent, Toronto Division, Canadian Northern. Headquarters, Toronto, Ont.

S. J. Kitchen, trainmaster, Canadian Northern Railway. Headquarters, Trenton, Ont.

G. R. Lewis, trainmaster, Lehigh Valley Railroad. Headquarters, Cortland, N. Y.

J. M. MacArthur, terminal trainmaster, Canadian Pacific. Headquarters, Calgary, Alta.

T. W. McGaw, superintendent, Alabama Division, Seaboard Air Line Railway. Headquarters, Savannah, Ga.

E. C. Manson, superintendent of transportation, Oregon Short Line Railroad. Headquarters, Salt Lake City, Utah.

C. L. Mason, trainmaster, Atchison, Topeka and Santa Fe Railroad. Headquarters, Emporia, Kansas.

R. Nelson, chief despatcher and trainmaster, Canadian Northern Railway. Headquarters, Edmonton, Alta.

J. C. O'Donnell, superintendent, Canadian Northern Railway. Headquarters, Edmonton, Alta.

R. A. Pierce, superintendent of terminals, Southern Pacific, Union Pacific Railroad and Oregon Short Line Railroad. Headquarters, Ogden, Utah.

T. M. Rodes, superintendent, Harriman and Northeastern Railroad. Headquarters, Harriman, Tenn.

T. H. Sears, general superintendent, Atchison, Topeka and Santa Fe Railroad. Headquarters, Marceline, Mo.

H. B. Sherwood, superintendent, Ottawa Division, Canadian Northern Railway. Headquarters, Napanee, Ont.

Warren D. Shull, superintendent, Waynesburg and Washington Railroad. Headquarters, Waynesboro, Pa.

R. Sinclair, trainmaster, Canadian Pacific Railway. Headquarters, Calgary, Alta.

Rutledge Smith, superintendent, Tennessee Central Railroad. Headquarters, Nashville, Tenn.

E. A. Sollitt, acting superintendent, Peru Division, Wabash Railroad. Headquarters, Peru, Ind.

T. L. Terrant, terminal trainmaster, Baltimore and Ohio Railroad. Headquarters, Lorain, Ohio.

John F. Tracy, trainmaster, Northern Pacific Railway. Headquarters, White Bear, Minn.

W. T. Wilkins, trainmaster, Harrisonburg Branch, Washington Division, Southern Railway. Headquarters, Harrisonburg, Va.

T. H. Williams, superintendent, Tucson Division, Southern Pacific Company. Headquarters, Sacramento, Cal.

L. E. Wooten, general manager, Knoxville, Sevierville and Eastern Railway. Headquarters, Knoxville, Tenn.

Traffic.

J. H. Barr, traveling freight agent, Central of Georgia Railway. Headquarters, Kansas City, Mo.

O. H. Becker, district freight agent, Canadian Pacific Railroad. Headquarters, Portland, Oregon.

C. E. Belk, assistant general claim agent, Beaumont, Sour Lake and Western Railroad.

George L. Bodie, traveling freight agent, Toledo, St. Louis and Western Railway. Headquarters, Cleveland, Ohio.

F. G. Browder, Jr., assistant general freight agent, Atlanta and West Point and the Western Railway of Alabama. Headquarters, Atlanta, Ga.

W. R. Busenback, general agent, Erie Railroad. Headquarters, Akron, Ohio.

C. C. Cameron, general freight agent, northern and western lines, Illinois Central Railroad. Headquarters, Chicago, Ill.

C. H. Carpenter, freight claim agent, Alabama, Tennessee & Northern Railroad. Headquarters, York, Ala.

E. S. Center, assistant general freight agent, Atlanta and West Point and the Western Railway of Alabama. Headquarters, Atlanta, Ga.

James J. Cherry, assistant general freight agent, northern and western lines, Illinois Central Railroad. Headquarters, Chicago, Ill.

George A. Clifford, general agent, Canadian Pacific Railway and Minneapolis, St. Paul and Sault Ste. Marie Railway. Headquarters, Cleveland, Ohio.

J. F. Dalton, assistant general freight agent, Norfolk Southern Railroad. Headquarters, Norfolk, Va.

M. T. Dean, general freight and passenger agent, Susquehanna and New York Railroad. Headquarters, New York.

K. Elliott, city freight agent, Canadian Pacific Railroad. Headquarters, Calgary, Alta.

H. A. Fidler, assistant general freight agent, Detroit, Toledo and Ironton Railway. Headquarters, Ironton, Ohio.

Nelson Fleming, district freight agent, Canadian Northern Railroad. Headquarters, Tacoma, Wash.

R. W. Foster, general agent, Chicago, Burlington and Quincy Railway. Headquarters, Portland, Oregon.

W. T. Gill, freight claim agent, Piedmont and Northern. Headquarters, Charlotte, N. C.

J. W. Gray, general claim agent, Houston Belt and Terminal Railroad.

W. B. Groseclose, traffic manager, Detroit, Toledo and Ironton. Headquarters, Detroit, Mich.

F. R. Hanlon, director of traffic, port commission of Seattle. Headquarters, Seattle, Wash.

J. S. Henny, commercial agent, Toledo, St. Louis and Western Railroad. Headquarters, Kansas City, Mo.

George M. Henry, general passenger agent, Detroit, Toledo and Ironton Railway. Headquarters, Detroit, Mich.

Gerald Hiam, division freight agent, Canadian Pacific Railroad. Headquarters, Fort William, Ont.

C. A. Lahey, assistant to the freight traffic manager, Chicago, Milwaukee and St. Paul Ry. Headquarters, Chicago, Ill.

R. E. Larmour, assistant general freight agent, Canadian Pacific Railway. Headquarters, Vancouver, B. C.

E. J. Lewis, commercial agent, Lake Erie and Western Railroad. Headquarters, Minneapolis, Minn.

W. I. Lightfoot, charge of solicitation of all passenger traffic, Nashville, Chattanooga and St. Louis and the Western and Atlantic roads. Headquarters, Nashville, Tenn.

S. G. Lutz, general traffic manager, Chicago and Alton Railroad. Headquarters, Chicago, Ill.

A. A. Martin, freight claim agent, Texas and Pacific Railroad. Headquarters, Dallas, Texas.

C. R. Moffett, commercial agent, Tennessee Central. Headquarters, Knoxville, Tenn.

William Moore, agent, Western Transit Company. Headquarters, Philadelphia, Pa.

C. A. Morse, district freight agent, Canadian Pacific Company. Headquarters, London, Ont.

J. H. Peebles, assistant passenger agent, Nashville, Chattanooga and St. Louis Ry. and the Western and Atlantic Railroad. Headquarters, Chattanooga, Tenn.

Dan C. Pettibone, general baggage agent, Northern Pacific Railroad. Headquarters, St. Paul, Minn.

H. A. Plow, division freight agent, Canadian Pacific Railroad. Headquarters, Vancouver, B. C.

Burton J. Rowe, coal traffic manager, Illinois Central Railroad. Headquarters, Chicago, Ill.

B. D. Shropshire, Jr., commercial agent, Rock Island Lines. Headquarters, Fort Worth, Texas.

Jonathan Story, traveling passenger agent, Wabash Railroad. Headquarters, Boston, Mass.

Boyd Suthers, commercial agent, Norfolk Southern Railroad. Headquarters, Pittsburgh, Penna.

C. A. Torrence, foreign freight agent, Western Pacific Railway. Headquarters, Chicago, Ill.

G. H. Winsor, traffic manager and auditor, San Benito and Rio Grande Valley R. R.

Industrial.

F. L. Merritt, agent, land and industrial department, Southern Railway. Headquarters, Bristol, Tenn.

Purchasing.

D. Kavanaugh, general storekeeper, Western Maryland Railway. Headquarters, Hagerstown, Md.

George L. Mayer, purchasing agent, Ohio Electric Railway. Headquarters, Springfield, Ohio.

E. H. Polk, division storekeeper, Southern Pacific Company. Headquarters, Sparks, Nev.

T. D. Singletary, storekeeper, Macon, Dublin and Savannah Railway. Headquarters, Macon, Ga.

L. C. Thomson, division storekeeper, Ontario Grand Division, Canadian Northern Railway. Headquarters, Toronto, Ont.

Ray F. Transue, storekeeper, Lehigh and New England Railroad. Headquarters, Pen Argyle, Pa.

Miscellaneous.

Frederick A. Delano, member, Federal Reserve Board.

C. E. Denney, assistant general sales manager, Union Switch and Signal Company. Headquarters, Swissvale, Penna.

Safety.

C. H. Blakemore, chairman of the Safety Commission, Norfolk and Western Railway. Headquarters, Roanoke, Va.

RESIGNATIONS.

Executive.

John L. Billard, director, New York, New Haven and Hartford Railroad.

J. P. Clark, vice-president and chief engineer, Carolina and Yadkin River Railroad.

E. C. Hoyt, vice-president, Susquehanna and New York Railroad.

J. T. Wright, vice-president and general manager, Macon, Dublin and Savannah Railroad.

Financial.

A. S. Hale, secretary and treasurer, Macon, Dublin and Savannah Railroad.

Accounting.

J. G. Innes, auditor of disbursements, Wells Fargo and Company.

Engineering and Mechanical.

William C. Edes, chief engineer construction, Northwestern Pacific Railroad.

R. A. Lamb, foreman, car department, Macon, Dublin and Savannah Railroad.

E. A. Sweeley, supervisor of car repairs, Atlantic Coast Line.

Operation.

H. E. Allen, superintendent, Trinity and Brazos Valley R. R.

C. E. Bower, superintendent, Waynesburg and Washington R. R.

E. B. Boyd, manager of the transportation department, Chicago Board of Trade.

D. F. Bunch, trainmaster, Tennessee Central Railroad.

B. F. Frobes, superintendent of telegraph, Southern Pacific Railway.

H. B. Grimshaw, superintendent, Alabama Division, Seaboard Air Line.

C. L. Mason, superintendent of terminals, Atchison, Topeka and Santa Fe Railway.

J. W. Mulhern, superintendent, Chicago Division, Pere Marquette Railroad.

W. F. Stark, superintendent, Dayton and Union Railroad.

G. C. Starkweather, general superintendent, Southern District, Atchison, Topeka and Santa Fe Railway.

W. A. Whitney, superintendent, Sacramento Division, Southern Pacific Company.

Traffic.

J. S. Brown, general freight agent, Illinois Central Railroad.

E. L. Cardle, district freight agent, Canadian Pacific Railroad.

A. P. Cooper, commercial agent, Tennessee Central Railroad.

C. T. Davis, traffic manager and auditor, San Benito and Rio Grande Valley R. R.

F. R. Hanlon, district freight agent, Oregon-Washington Railroad and Navigation Company.

E. R. Johnson, general agent, passenger department, Canadian Pacific Railway.

Clayton Jones, freight claim agent, Alabama, Tennessee and Northern Railway.

W. J. Laffey, general claim agent, Houston Belt and Terminal Railroad.

I. G. Thompson, commercial agent, Rock Island Lines.

Industrial.

C. W. Fitch, agent land and industrial department, Georgia Southern and Florida, the Hawkinsville and Florida Southern and the Macon and Birmingham Railroads.

Purchasing.

F. B. Arndt, storekeeper, Lehigh & New England Railroad.

J. F. Hoyer, purchasing agent, New Orleans Great Northern Railroad.

Co-operation and Efficiency.

By Charles W. Tomlinson, General Eastern Freight Agent, Baltimore and Ohio Railroad.

THE science and study of efficiency is a matter of recent years, but like the Tango and Maxixe, it has become a wave, and is being advocated and studied on all sides.

"Safety First," which is an efficiency measure, is but a new version of an old rule in railroading, "in case of doubt, take the safe side," published in time cards before the days of the telegraph, telephone or train order, and stood for the same thing as "Safety First," only now its application is unlimited. In those days the most terse and impressive slogan was "Do It."

Efficiency has a double value, a quadruple value, an unlimited value. It is not something to be reserved for the comprehension of the elect. It is not a thing to be called scentific management and used as a bugaboo. It is on the contrary, nothing but common sense, applied to every day affairs. The doing of a thing in a better, quicker and more economical way than at present, the doing of a thing in the right way, the easy, the adept, the direct and natural way, rather than in the careless, slovenly, wrong, or roundabout way. Efficiency is the duty not alone of every man to himself, but every man to his neighmor. It is a slogan that means prosperity, and a watchword of honest effort, and will direct energy. Efficiency in the office means more and better business and larger profits and rightly should receive first attention because all work originates and ends in the office.

Can you figure the price of inefficiency in the office clerk, who, when he dips his pen in the ink bottle, finds there is no ink there?

The machinist who has a job on a whistle and in an eccentric, finishes the whistle and starts on the eccentric, and before getting far, finds he has left half his tools on the cab.

I might say, however, that with the plumber this kind of efficiency has become a science. Did you ever have a plumber come to your house to do a job who opened up his tool bag, looked at the job and found that he had to go back to the shop to get another tool, adding three hours time at plumber's rates to your bill?

Take the yard crew switching. The complaint of the crew in the old days was that the agent, or the traffic department, or the superintendent, was giving instructions which required them to switch until they got all the odd numbers together. To-day, there is danger in the efficiency in switching for one purpose only. It is understood that four switches cost more than two switches in making up a train. Viewed from the standpoint of efficiency in switching only, that is a reduction of 50 per cent in expenses. There is nothing charged against this showing by the man who does the switching, but suppose the other two switches were for the purpose of getting out two cars of freight from two different shippers, which were the first two cars the shippers had ever given the Baltimore and Ohio Railroad. These cars were secured on our advertised fast schedule, this being aside from exigencies, the same as our competitor. By saving these two switches, the freight is forced on to our slowest schedule, which was not in accordance with our sale, as our transportation was sold as No. 97 schedule. Cars arrive at Chicago in six to eight days instead of three to four days. Did that ever occur to you gentlemen who are directly interested in this heading?

---

*Extracts from an address delivered to the officials and employes of the Staten Island and New York Terminal Lines of the Baltimore and Ohio on April 18, 1914.

Take the engineer who comes in after a hard run with his engine needing packing. He goes to the blackboard with some of the boys whom he has not seen lately, gets to talking with them, and before they get through he gets a call to go out on an extra trip. The engine has to be gotten right out and there is no chance to pack it.

Then the lighterage department gets orders to place a lighter alongside a steamer. They are not in position to place their lighter alongside owing to ever changing, always different local conditions. Efficiency with the sole object of reducing expenses prompt the efforts to make an extra move for the tug and she is sent away. Thirty minutes later the steamer calls for the lighter, which is there, but no tug to move it. The result is, it is shut out and competitors have the call. The tug finishes its intervening job and comes back, and as the time that a ship can take it is then uncertain is obliged to wait an hour-thirty minutes longer than would have been the case had efficiency prevailed.

The results are now shown alongside of the lighterage department. They are not familiar with it. They do not know it until later when the traffic department, which secured this business on equal terms with its competitors, advises them that by reason of being shut out the shipment was unable to get out of import. Failure to handle the lighters promptly might result in shutting out the shipment entirely, thereby causing a delay possibly of four weeks. The cost of such inefficiency would be very high.

It is important for an agent to strive for efficiency. He receives instructions from the general superintendent of transportation establishing a minimum loading of 10,000 pounds on all merchandise going to points off the local division. This order is given in line of efficiency. Each agent is imbued with the ambition of doing better than any other agent. He, calculates, that if 10,000 pounds is good, 20,000 pounds would be better. He falls short of the 20,000 pounds to a single destination but that 20,000 pounds will have an effect on his average loading. He robs Peter to pay Paul, thereby reducing the tonnage to some other point, depriving him of the necessary tonnage to meet the requirements of the 10,000 pounds loading.

The Celebrated

Railroad Watch

THIS watch has a stem wind and stem set, has a high grade appearance and is as good as it looks. The entire case is made of a composition gilt metal which will wear like solid gold or silver.

There is no plating to wear off. It has been thoroughly tested, and will run accurately for *thirty hours*. Absolute guarantee for *one year*. Will be sent post paid on receipt of price, $2.00

LEONARD WATCH COMPANY

208 BULLETIN BUILDING PHILADELPHIA, PA.

"Pittsburgh Perfect" Railroad Fencing

Bought by leading railroads of the United States and Canada because it excels in strength and durability, and affords perfect protection to the right-of-way. Made of special formula Open Hearth wire, HEAVILY AND THOROUGHLY GALVANIZED. ELECTRICALLY WELDED JOINTS. A one-piece fabric, easiest to erect. Write for catalogue and prices.

PITTSBURGH STEEL CO., PITTSBURGH, PA.

NEW YORK. CHICAGO. ST. LOUIS. MEMPHIS. DALLAS

Manufacturers of "Pittsburgh Perfect" Brands of Barbed Wire: Bright, Annealed and Galvanized Wire; Hard Spring Coil Wire; Twisted Cable Wire; Telegraph and Telephone Wire; Straightened and Cut Wire; Fence Staples; Poultry Netting Staples; Regular and Galvanized Steel Wire Nails; Coated Nails; Large Head Felt Roofing Nails; Bale Ties, and "Pittsburgh Perfect" Fencing, all produced in our furnaces and mills from the ore in our mines to the finished material.

VOL. LVIII. SEPTEMBER, 1914 No. 9

Important Developments in the Transportation Field

THE PLIGHT OF THE RAILROADS

At the urgent appeal of Eastern railway executives, the Interstate Commerce Commission has agreed to reopen the so-called Eastern rate advance case, and, on October 19th, to begin a rehearing of the application of all roads in Official Classification territory for a five per cent horizontal increase in freight rates. While this action, so far as it goes, i
encouraging character, it i
gretted that the C
found it n
a

have been hard put to meet expenses to say nothing of providing for dividend and interest requirements, and the proper maintenance of the plant. Whatever justification governmental authorities may have had for their attitude, no one can deny that the drift of their influence, within the past few years, has been steadily agains
nance of a progr

ed the public to turn from the consideration of their internal problems to the more spectacular developments in Europe, those problems still remain, and have lately been emphasized in a manner which will cause a sad awakening unless unusual efforts are made to solve them.

Business men throughout the United States have been severe in condemning the Interstate Commerce Commission for its unsatisfactory decision in the advance rate case. The bureaucratic methods of this body together with its lengthy discussion of railway ecnomics, do not appeal to the aver-
man who sees in the recent
and expenses a

that are doing large things in a large way to make a large country, to become small and do small things in a small way. The net result of such a policy is retrogression instead of progression and its effect will be to hurt business beyond the dreams of the pessimism so prevalent to-day.

We would prefer to pay a 10 per cent rate of increase and see industry hum with activity and all people actively employed and at good wages and every one contented and all railroads developing and growing and opening up new parts of this great land, than to see a body of men haggle over and try to see how small they can make the rate increase and on how little additional the railroads can just manage to exist and avoid receiverships.

* * * *

Congress should see that the necessary legislation is passed not only to help our merchant marine which needs help most pronouncedly, but also our railroads which need it equally much. To wait for the Interstate Commerce Commission to act
would mean a lingering death to the rail-
the deliberation of the Commission.
in the growth of this coun-
before offered for
all the ele-
for

The purpose of this conference is to lay before the President in brief terms the present situation of the railroads of the United States—250,000 miles of great national highways. That the case of the railroads deserves sympathetic treatment arises from the fact that, although privately owned, their property is devoted to public service. The industrial health of the country depends upon an adequate railroad service; such service can not be rendered, and proper response to public needs can not be made, unless the financial soundness of the railroads is maintained.

The credit of the railroads, seriously impaired, as we believe, before the war started, is now confronted by an emergency of a magnitude without parallel in history. To understand the full import of the existing crisis, it is necessary to consider briefly the antecedent conditions.

The purpose here is not to complain but to point out the one paramount fact that by reason of legislation and regulation by the Federal Government and the forty--eight states, acting independently of each other, as well as through the action of a strong public opinion, railroad expenses in recent years have vastly increased. No criticism is here made of the general theory of governmental regulation, but, on the other hand, no ingenuity can relieve the carriers of the burden of expense created thereby. However desirable may have been the expenditures which have been forced upon the railroads, no adequate provision has been made to pay the bill.

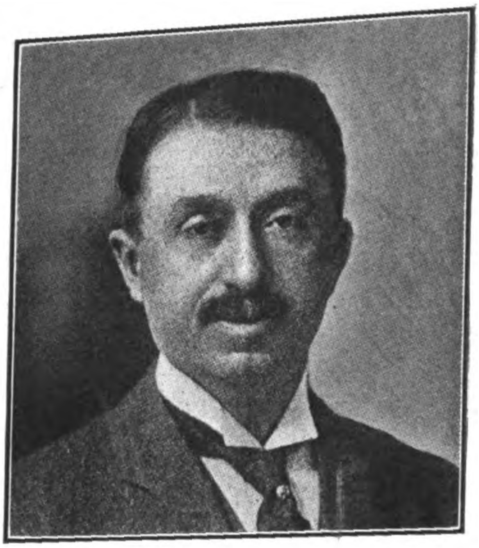
This great increase in expenses now coincides with seriously depleted revenues, with no corresponding ability of the railroads to reduce their costs in proportion. Governments can proceed with expenditures of all kinds by taxation, but railroads can not. While the effect of the European war upon railroad earnings may vary in different sections, it is painfully evident that there will be serious decreases in the total because of the unprecedented difficulties in the marketing of cotton, the great decrease in imports and the general dislocation of trade and industry.

Even prior to the existing emergency and to meet the antecedent situation, railroad expenditures generally had been reduced to absolute necessities. The difficulty of further contraction is enhanced by existing wage agreements and, in so far as the Western railroads are concerned, by the possibilities involved in the arbitration proceedings to which they have recently agreed.

The net operating income of the railroads of the United States for the year ending June 30, 1914, was $120,000,000 less than for the previous year, or about 15 per cent. The gross earnings for the year were $44,000,000 less than for 1913; expenses and taxes were $76,000,000 more.

The maintenance of the credit of the railroads (and the credit of the railroads establishes the standard for all industrial enterprises) depends upon their ability to increase their net earnings. The railroads may have the most perfectly appointed plants in the world, but if the net earnings are not adequate new capital can not be attracted.

In the important Eastern rate case the Interstate Commerce Commission unanimously found that the railroads in the richest section of the country needed more revenue. That finding was based upon the situation prior to the first of July this year; indeed upon conditions of a year previous.



FRANK TRUMBULL.
Who acted as Spokesman for the Railway Executive Committee.

No emphasis need at this time be put upon the new railroad capital which has heretofore been required to provide for normal development but this has been from $400,000,000 to $500,000,000 per annum, and railroads should not only be able to keep abreast of the times, but should even in this emergency be in a position to anticipate the demands of an expanding commerce.

Simultaneously with the great impairment of earnings, general credit conditions have broken down, and the absolute and immediate necessities of both public and private borrowers of money here and abroad have already increased interest rates to a level unthought of a few months ago—rates much higher than present net earnings return upon the railroad property of the United States.

This emergency was not contemplated when the Interstate Commerce Commission rendered its decision in the Eastern rate case, yet the problems now confronting the railroads greatly transcend in seriousness those which existed then. The menace is now not only to railroad credit, but to the transportation service itself, and efficient transportation is inseparably connected with the welfare of our people.

Securities of United States railroads held abroad are computed at from three to five billion dollars. It is a certainty that bond and note obligations of the railroads maturing before the end of next year aggregate over $520,000,000. In the highest public interest it is imperative that these obligations shall be met. Yet it is evident that for a long time Europe will not be a lender of money to America. On the contrary, the war will create such enormous debts and involve such a general dislocation of industry and commerce, that Europe must realize largely on its holdings of American securities regardless of the price obtainable.

The New York Stock Exchange has now been closed for a longer period than at any other time in its history. There is no present market for railroad securities, either old or new. The United States in a condition of financial isolation. If the Stock Exchange were to open (and it must open some time), the pressure of selling would inevitably be greatest against railroad securities. If

they go down, industrial issues will fall still more seriously. The public necessity to stem this tide of selling and to reduce to the utmost its destructive effect, calls for the exercise of every resource of statesmanship.

Our respectful requests are:

1. That the President will call the attention of the country to the pressing necessity for the support of railroad credit by the co-operative and sympathetic effort of the public and of all governmental authorities, and suggest that the railroads be relieved as far as possible of further immediate burdens involving additional expense; and

2. That the President will urge a practical recognition of the fact that an emergency has arisen which requires, in the public interest, that the railroads have additional revenue, and that the appropriate governmental agencies seek a way by which such additional revenue may be properly and promptly provided.

President Wilson received the committee in a most friendly spirit and promised to give the matter his immediate attention. On the following day, September 10th, he addressed the following letter to Chairman Trumbull:

September 10, 1914.

DEAR MR. TRUMBULL:

Since you read it to me yesterday, I have read again the statement you made me on behalf of the committee of railroad presidents whom I had the pleasure of meeting and conferring with at my office. It is a lucid statement of plain truth.

You ask me to call the attention of the country to the imperative need that railway credits be sustained and the railroads helped in every possible way, whether by private co-operative effort or by the action, wherever feasible, of Governmental agencies, and I am glad to do so, because I think the need very real.

I can not say that I entertain any deep anxiety about the matter, except, of course, the general anxiety caused by the unprecedented situation of the money markets of the world; because the interest of the producer, the shipper, the merchant, the investor, the financier and the whole public in the proper maintenance and complete efficiency of the railways is too manifest. They are indispensable to our whole economic life, and railway securities are at the very heart of most investments, large and small, public and private, by individuals and by institutions.

I am confident that there will be active and earnest co-operation in this matter, perhaps the one common interest of our whole industrial life. Undoubtedly men, both in and out of official position, will appreciate what is involved and lend their aid very heartily wherever it is possible for them to lend it.

But the emergency is, in fact, extraordinary, and where there is a manifest common interest we ought all of us to speak out in its behalf, and I am glad to join with you in calling attention to it. This is a time for all to stand together in united effort to comprehend every interest and serve and sustain it in every legitimate way.

The laws must speak plainly and effectively against whatever is wrong or against the public interest, and these laws must be observed; for the rest and within the sphere of legitimate enterprise, we must all stand as one to see justice done and all fair assistance rendered, and rendered ungrudgingly.

Cordially and sincerely yours,
WOODROW WILSON.

It is hardly necessary to state that the railways were deeply appreciative of the President's attitude and this feeling extended not only through the rank and file of the entire industry, but reached millions of American citizens who, either through their interest in railway investments or their association with industries whose success is largely dependent upon railway prosperity, are equally affected by the Administration's attitude toward the carriers In fact, the President has received so many letters of commendation regarding his attitude that no doubt can be left in his mind as to the feeling of business men towards a railway policy sufficiently liberal to permit the carriers to continue to successfully meet their financial obligations and the increasing demands of commerce. This attitude is well expressed in a letter sent to President Wilson by the Honorable Seth Low, after he had read the communication which the President had sent to Mr. Trumbull. He says:

I have read with a sense of thoughtfulness your letter adressed to Mr. Frank Trumbull, as chairman of a committee of railroad presidents. The importance of keeping railroad securities sound and of maintaining the credit of the roads in this worldwide emergency is so vital to the well-being of everybody that your prompt and hearty recognition of it is of itself of immense value. I am entirely confident that the business world will co-operate to this end with all the more courage because it knows that in so doing it will cooperate with you.

Encouraged by the attitude of the Nation's Chief Executive, the railway presidents on September 15th, after several informal conferences with various members of the Interstate Commerce Commission, filed with that body a petition for a reopening of the five per cent advance rate case. The petition reads as follows:

Your petitioners, 112 railroad companies, comprising the 35 railroad systems in Official Classification territory, parties to the above- entitled proceedings, respectively petition the Commission for such a modification of the order of July 29, 1914, as will permit carriers to make effective the rates specified in the tariffs which were by said order directed to be cancelled. Since the filing of the report and entry of the order by the Commission in these cases, facts and circumstances have arisen which, taken in connection with the facts already before your Commission, your petitioners believe will justify the relief herein prayed for. These facts and circumstances are briefly as follows:

First, during the month of October, 1913, your petitioners published and filed with this Commission the tariffs involved in these proceedings. At the time of the filing of the report of the Commission there were available for the information of the Commission the annual reports of your petitioners for the year ended June 30, 1913, as well as the monthly reports of your petitioners up to and including May, 1914. Since that time the complete income accounts of your petitioners for the fiscal year ended June 30, 1914, have become available.

The reports of your petitioners for the year ended June 30, 1914, as compared with the year ended June 30, 1913, show a decrease in total operating revenues of approximately $44,700,000, while during the same period operating expenses have increased about $23,300,000. After deductions of taxes and deficit in outside operations there was a decrease in operating income of approximately $73,700,000, notwithstanding an increased property investment. Thus the tendency toward a diminishing operating income, found by the Commission in its report, is emphasized by the figures covering the complete year to June 30, 1914, while the reports for July and such figures as are available for August, 1914, show a continuance of this declining tendency, notwithstanding the extraordinary efforts that have been made to reduce expenses.

Second, the unforeseen European war has brought about an unparalleled destruction of wealth and dislocation of credit throughout the civilized world. It is certain that the competition for capital will be keener and interest rates higher for some years to come than in any corresponding period within living memory. The emergency thus resulting is extremely serious. It is conservatively estimated that the railroad companies of the United States have obligations maturing in the next fifteen months amounting to well over five hundred millions of dollars, and it is imperative in the public interest that these obligations shall be duly met. A large part of this sum is owned by your petitioners and they will further need from time to time in the next few years large amounts of money to provide for improvements which will be necessary in the public interest to prevent a serious deterioration in the standard of transportation service. In order to compete effectively for this new capital they must have a material increase in revenues.

Third, the Commission in its report made certain tentative suggestions as to measures which might be taken by the carriers to secure additional revenues. Your petitioners are proceeding as rapidly as possible to put into effect the increase in freight rates in Central Freight Association territory authorized by the report of the Commission and are giving earnest attention to the other recommendations and suggestions of the Commission with respect to other rates and practices.

It is believed, however, that the additional revenue which may be secured by the adoption of means other than a general advance in freight rates can not be obtained in the near future, and when secured will be inadequate to meet the needs of the carriers for increased revenue in the present situation.

Therefore, your petitioners ask that the Commission modify the order aforesaid so as to permit the carriers to make effective the rates specified in the tariffs, which were by said order directed to be cancelled, except so far as they have been or may be superseded by advances filed in accordance with the report of the Commission, and that your petitioners may have such other and such further relief in the premises as to the Commission may seem proper.

This petition was signed by Daniel Willard, president of the Baltimore and Ohio, as chairman of the presidents' committee on behalf of the railroad companies in the Official Classification territory, and Hugh L. Bond, Jr., George F. Brownell, J. L. Minnis, O. E. Butterfield and George Stuart Patterson, counsel for the carriers.

As stated in our opening paragraph, the Commission has decided upon a rehearing, and while it is, of course, too early to state what the Commission will do, its evidently present lenient attitude would appear to offer encouragement for a favorable decision. Certainly the case of the railroads is much stronger than it has been in any of the previous arguments, for the results of recent operations have reinforced their contention that expenses are overwhelming them and making railroading a decidedly unprofitable business. The evidence that the railroads will present will deal almost exclusively with the financial situation in the United States and Europe that has developed as the result of the war. This evidence will be of a much briefer character than submitted in any previous case and the Commission is likely to require but a short time to consider it in view of the ample time taken for a thorough consideration of the original evidence. That the Commission is making an effort to assist the carriers to increase their income is evidenced in that it has entered a formal order permitting the roads in Central Freight Association territory to put into effect the advances in freight rates permitted in the so-called five per cent rate decision, upon ten days' notice instead of the statutory time of thirty days. This, however, is not to apply to grain rates.

While the carriers had hoped for an earlier date on which this rehearing was to begin, the Commission nevertheless showed a commendable promptness in the consideration of the railroads' appeal for the reopening of the case and the out of town members of that body were promptly informed as to the character of the appeal, so that they might give it immediate consideration. In referring to the petition of the carriers, Commissioner Edgar E. Clark, while in Boston on September 17th, for the purpose of attending the Passenger Traffic Officers' convention, made the following public statement:

> In addressing the convention I hope to lay the basis for better relations with the Interstate Commerce Commission. Since the so-called five per cent rate case arose there has been a great deal of misunderstanding in which I can see nothing but harm to all concerned. If the Commission changes its mind as a result of the railroads' petition for reconsideration of that case, it will be on the basis of new facts and new circumstances which they declare they can prove to have arisen since last fall. We have no desire to reopen the old record.
>
> We have known for several days that the railroads intended to come forward with the formal petition just filed. While it may be possible even before October 1 for Commissioners to come to some decision as to whether or not we will reopen the case, it is unlikely there will be any meeting of the full board until October 1, and therefore, if the case is reopened, there can be no formal hearings before next month.
>
> The fear of onslaughts on American railroad credit coincident with the opening of the Stock Exchange is, of course, natural, for the outlook for railroads successfully and satisfactorily to finance themselves and refund their maturing obligations has been very seriously complicated by the financial conditions resulting from the European war.
>
> The Interstate Commerce Commission has no more desire than anybody else to see railroads crippled financially or otherwise. We realize the importance and necessity of well equipped, well maintained, and thoroughly efficient railroads and we know that they cannot be constructed, maintained or operated without money.
>
> If transportation costs more and there are no unreasonable profits, it will necessarily have to be sold at a higher price.
>
> So far as passenger fare increases on mileage books are concerned, the bulk of those recently filed are scheduled by the railroads to become effective October 1. We have given no consideration to the question of suspending these tariffs, and if any protests are filed we shall try to take them up with the railroads before resorting to any suspension of the effective date of the new tariffs, provided, of course, there is time to do so.

It is safe to infer from Commissioner Clark's statement that the Commission will be able to reach a prompt decision and the signs of the times are encouraging for the railroads as some favorable consideration of this question seems immediately imperative. As the Boston *Transcript* puts it:

> Making the railroads stagger on under the burden of oppressive operating expenses and capital costs may appear a just penance for past iniquities—as lying on beds of nails, or treading paths of shattered glass was considered a genial expiation for individual sins in mediaeval times—but "cutting off one's nose to spite one's face" is neither commendable nor economic. Perhaps, we have been inclined to do just this with respect to our railroads. A continuance of such a policy inevitably must react with terrific consequences upon our industrial fabric. The unprejudiced readily can see the justice of the claim made in the new petition that "it is certain that competition for capital will be keener and interest rates higher for some years to come than in any corresponding period within living memory" as an aftermath of the great European struggle.

Financial interests have, of course, recognized for some time the serious predicament of the carriers and the necessity for the prompt procurement of relief. An enormous amount of railway securities are held not only by banks but by insurance companies and many other institutions, and the result of the destruction of railway credit and serious curtailment of the value of their securities, would prove one of the worst disasters which could befall the country. In view of the fact that Europe holds, at the present time, millions of dollars worth of such securities which it is anxious to dispose of as soon as our financial markets again become operative, it is easy to appreciate how vital is the maintenance of railway credit. As the presidenr of the New York County National Bank recently put it in a letter to Senator James A. O'Gorman:

> An extremely grave situation confronts us on account of the certain overwhelming of the investment markets of this country by the enforced liquidation by foreign holders of their investments in American railroad securities.
>
> A close study of the investment markets for over 50 years has convinced me that the popularity of investment in railroad securities has been seriously impaired in recent years by reason of oppressive national and state legislation. In view

of that fact the question arises what can be done with the deluge of our securities which will be poured out on us from the other side as soon as the exchanges are opened and which must be paid for in gold.

Unless immediate relief is given the railroads so as to restore their securities to popular favor with investors no market can be found for those held by foreigners and no money can be raised by the railroads to provide facilities for carrying on the business of the country.

Many letters of similar tenor have been addressed to the President, to Congress and to the Interstate Commerce Commission, and the prevailing idea appears to be that could the railway problem he adjusted in a satisfactory manner, the stock exchanges could be again opened, in spite of conditions abroad, as the foundations of investment distrust, which have rested on the increasingly serious position of our railroads, would be removed and American capital become available for the unusual demands which Europe would place upon us.

Railroad officials are, of course, even more cognizant of the grave danger which threatens the entire industry than even the bankers, and the following statement by B. F. Bush, president of the Missouri-Pacific Railway, which appeared in a recent issue of the St. Louis *Republic,* is worthy of the most careful consideration:

The problems arising from the European war confronting the country as to the difficulties in marketing our many varied productions are momentous. These are receiving deserved consideration by our Government and public spirited citizens, and it is hoped that an amelioration of the harsh conditions encountered will be at once forthcoming.

Serious as these problems are, they are no greater as to their injurious effect on the welfare of the country, in the decline of industry, trade and commerce than those which confront the transportation industry. Though much has been considered and done for the relief of other industries, nothing so far has been suggested to aid the railroad industry, which is all important to every other. For some years back railroads, by reason of diminished net earnings, have experienced difficulties in borrowing money to make necessary improvements to meet the requirements of the expanding business and the public demand for better service. This war emergency will accentuate this situation and further impair their credit, so that under the present conditions of inadequate revenues all attempts to finance railroad securities will be futile.

This is the gravest danger with which railroads have been menaced in their history. They are thus not only deprived of the means to meet current urgent needs in affording adequate service, but they are confronted with the problem as to how they can take care of outstanding obligations which mature in the near future.

A careful computation of these obligations shows there are upward of $578,000,000 in default at the present time, $34,000,000 which must be met before the end of this year and $563,000,000 between now and the end of next year. It is needless to say that if these obligations are not met, other industrial interests dependent on the railroads will be injuriously affected as well as the railroads.

Benjamin F. Bush,
President of the Missouri Pacific System.

The probabilities are that for a long time to come American securities will not find a market in Europe. All surplus capital of that continent will for some years be required to replace the destruction of property and repair the ravages of war. Nor is this all, for we shall likely have to repurchase a large share of the American securities which are now held in Europe. This will throw upon our own people the burden of financing the railroad requirements for an indefinite period, and if the railroads are not to be driven upon the rocks of bankruptcy and deterioration, they must have the kindly co-operation and friendship of the public and our law-making bodies as never before.

It is now quite generally known that for a long period back, even with good crops and prosperous times, railroad revenues have not been adequate for railroad requirements; they have not been sufficient to enable them to establish a sound credit with bankers so as to raise money for improvements and extensions to take care properly of the expanding commerce.

Rate reductions and burdensome regulations prescribed by federal and state authority, together with largely increased taxes and expenses for labor and materials entering into the operation of the roads, have so decreased the net earnings of the carriers as to leave many of them without means to meet their mortgage interest. As a consequence of this their credit has been swept away and they are unable to get new money for necessary improvements and facilities. It is estimated that to provide amply for the constantly increasing business, $50,000,000 of new money is required yearly. Of course, such a sum could not be provided from earnings, though large sums from earnings when available are now spent for the purposes named.

As an instance of how the low rates with the increased expenses work, I may cite the results of operation of the railroads of the country for the last fiscal year ended June 30, 1914. The gross earnings for the year were $44,000,000 less than those of 1913, but the expenses and taxes were $76,000,000 more, making the net earnings for 1914 $120,000,000 less than for 1913. This is $120,000,000 less to meet obligations, which no doubt has been increased during the year by the expenditure of new money for needed betterments or extensions.

How long can the railroad industry of the country continue to give the high standard of service which it now provides and which service is essential to the prosperity of all other industries, trades and callings, with results such as shown for a year's labor? The year cited, with its increased expenses and decreased net, is not an exceptional one. Expenses beyond the power of the management to control have so increased of late years, and enforced rate reductions have so followed one upon the other, that it is only by using every device toward efficient operation that some of our roads are enabled to live.

We are face to face with the gravest crisis in the history of American railroads—so grave, in fact, that those intrusted with the responsibility of their management are for the moment too dazed to fully comprehend the profound difficulties which now surround them. The only hope for them that I can see is, that there be an immediate advance in their passenger and freight rates. The rates now obtainable are not compensatory for the service rendered. This is particularly true of the passenger rates.

Such an advance in the rates as would give the railroads the necessary net earnings, whereby they would establish a better credit with investors, would not be burdensome on any industry, and when resolved to the selling price to the consumer, it would be inappreciable.

Mind you, I haven't lost faith in the future. We have the greatest country in the world and the greatest and most resourceful people on the globe, and if we all "stand as one," as the President says, we shall weather the storm—but in the meantime all thinking men cannot realize too soon the grave exigencies which confront us.

Undoubtedly this great European war has opened the doors to many world markets which have heretofore been closed to us, and in order that we may take prompt advantage of these opportunities it is all the more necessary that our industrial machinery be maintained at the highest possible point of efficiency. A breakdown in our transportation facilities now would be fatal indeed.

Nor am I in a humor to scold or find fault with the troubles we have had in the past. Unquestionably there have been abuses in the railroad world as in all other lines of commercial and industrial activity, but there is little likelihood that there will be much cause for complaint in this respect from this time forward.

With the power to make rates lodged in the Interstate Commerce Commission and the several states and with a closer surveillance of the issuance of all kinds of securities than ever before, the railroads are to-day absolutely in the hands of the people, as their will may be expressed through their law-making bodies. If the people are willing that the railroads shall have living rates for the service they render—if they are willing to protect them against assaults and unreasonable demands of one kind and another, we will make American railroad securities so highly respected as an investment that those of our fellow-citizens who have money—who are our only refuge in the present storm—will be glad to put their savings and accumulations into them.

This is our only hope. When one considers that there are approximately 4,000,000 bona fide holders of American railroad securities at the present time anyone can see how vitally important it is to maintain public confidence in these investments. That the public will not fail us in this crisis—and that, on the other hand, those in charge of the railroads will try harder than ever before to merit the people's confidence and good will, I confidently believe.

RAILWAY MAIL PAY DEVELOPMENTS

There appears to be daylight ahead in the railway mail pay situation. While the railways are a long way from being compensated for the enormous amount of package freight which they have been compelled to carry free of charge under the parcel post regulations, the Committee on Railway Mail Pay has concluded its investigation and asserts in its report, in no uncertain terms, that the railways are badly underpaid for carrying the mails, and that a plan of payment should be at once devised which will appreciably increase their compensation. In view of the findings of this committee, which has given the whole subject a most thorough investigation and has arrived at conclusions based upon hard facts, it would appear distinctly up to Congress and the Post Office Department to take steps promptly in conformity with the committee's suggestions. Certainly the United States Government does not desire to continue to rob the railways now that a committee of its own appointing shows this to be a fact.

The carriers' Committee on Railway Mail Pay of which Mr. Ralph Peters is chairman, recently held a meeting to discuss the report submitted to Congress by the Joint Congressional Committee referred to. After the meeting, Mr. Peters authorized the following statement which shows an earnest desire on the part of the railways to co-operate with Congress and the Post Office Department in reaching a speedy adjustment of the whole question:

It is most gratifying that the Joint Congressional Committee fully and unanimously sustains our main contention that the railroads are now materially underpaid for carrying the mails.

The committee proposes a plan of payment which will give the railroads an increase of $3,000,000 a year, and completely supports the companies in the other leading principles which they have urged, namely:

That the railroads are entitled to a fair commercial profit for carrying the mails; that apartments in cars fitted up as traveling post offices should be paid for; that the railroads should be paid for the terminal messenger service they now perform, and that the system of weighing the mails only once in four years is unjust and unbusinesslike.

While the Congressional committee does not see eye-to-eye with the railroads as to the total compensation due the companies for their mail service, the railroad committee has expressed its willingness to accept the views of the Bourne Committee upon this main question of fact.

We firmly believe that the Congressional committee has canvassed the whole subject most carefully and that its findings of fact embody the sound judgment of an unusually able and impartial committee.

The specific plan proposed by the Bourne Committee for hereafter meeting the underpayment due the companies is open to question. The feeling of the railroad managers is that the present system of payment, based on the weight of the mails and the distances over which it is carried, is scientific, and, that if fairly administered, it should be satisfactory. It actually measures and provides payment for the actual service performed. The proposed plan does not.

That, however, is a technical matter. The Bourne Committee has established the doctrine that the railroads should be compensated on a commercial basis for the services they render. The railroad committee is now prepared to cooperate with Congress in establishing detailed standards of payment which should place this purely commercial relation of the Government and the railways upon a sound business basis.

In reviewing the whole situation, it is of interest, as illustrating the glaringly inaccurate statements which emanate from Governmental sources from time to time, to note that three years ago Postmaster-General Hitchcock announced to the public that the Post Office Department had found the railroads to be over-paid by $9,000,000 per year. This "finding" has now been completely demolished as the result of the most thoroughgoing inquiry ever made into railway postal conditions. The position that the railroads should, in fairness, be paid more is not only sustained by the Government's own Congressional Investigating Committee, but the general principles of the Post Office Department's policy toward the railroads and against which the companies have so long protested are condemned. The Congressional committee also decries the doctrine in the last annual report of the Postmaster-General that "rates for carrying the mails on railroads should be less than those which might be fixed for commercial purposes."

The committee report replies:

> Do we ask a mail clerk to work for less than a normal salary because he handled letters?
>
> The patrons of either freight or passenger service should pay no more and no less than a fair rate, and the Government should pay no more and no less than a fair rate for the transportation of mail.
>
> The money paid for freight, passenger, express and mail transportation is all ultimately paid by the public. Fair rates should be made in all branches of traffic, otherwise a deficiency of return from one branch must be made up by an overcharge from another branch.
>
> The Government is the people organized. The patrons of the freight or passenger train services are the public unorganized. We see no reason for favoring the people organized as against the people unorganized.

Considering the right to a fair profit on the part of the carriers, the committee states that:

> Regarding the certainty of the traffic, some claim that the railroads are not compelled to spend as much to get the mail traffic in the way of advertising and traffic bureaus as in the case of the passenger traffic proper, and argue that this would tend to make the mail car somewhat less expensive per mile than the regular passenger car; but even if this were a fact, it is in no wise in conflict with the commercial principle. * * *
>
> Unfortunate also is the attempt of the department to find an analogy between the commutation passenger traffic and the mail traffic. The making of low rates per passenger is not in conflict with the commercial principle. The earnings per car mile may be greater than in the regular passenger service. * * * *
>
> In the matter of the certainty of the payment, we can see no reason for regarding the department as a favored shipper. Is payment once a month for mail service any better than payment in advance from the passenger?
>
> It is said that railroads are not built primarily to carry the mails. This may be true. They are bult primarily to get all the traffic that can be developed, and, according to the commercial principle, each great branch of that traffic should, if possible, be made to bear its proportionate share of the expenses. * * * *
>
> We are asked to consider the principle of "public utility" as a reason for departing from the commercial principle. Just as railroads accept a low rate of profit on one class of freight in order to develop a given territory, they might, it is urged, be called upon to make a special rate on mail because mail helps to diffuse intelligence.
>
> The desirability of diffusing intelligence may well be taken into account in fixing the postage rates to be paid by the public, but it is not clear that this has any connection with what the Government should pay the railroads. * * * *
>
> Does the manufacturer of desks make a special price to the Post Office Department because the mail service helps to diffuse intelligence?

Then why should the railroad, which is merely another instrumentality used by the Government in its mail business, sell its services at an abnormally low rate if the Government is able to pay the normal rate?

The original estimate of $9,000,000 overpay was based on a proposal submitted to Congress by the then Postmaster-General, Mr. Hitchcock, who proposed to save the Government that amount yearly by paying the railroads on the basis of the estimated operating cost of carrying the mails plus six per cent, with no allowance for return on capital. Considering this question the report says:

Evidently Mr. Hitchcock, and his Departmental committee studying this problem, failed to realize that rights of way, roadbeds, tracks, equipment, and terminals were necessary prerequisites in the operation of mail cars, as no allowance whatever was made in the suggested method of payment for capital charges.

No reasonable man can expect that the Government can increase its postal revenues at an average rate of $13,000,000 per year without increasing its expenses in practically all departments of the service, though perhaps at a smaller ratio.

In this connection it is pertinent to remark that although the postal revenues doubled in that ten-year period, railway mail compensation increased only 20 per cent.

In what manner the Bourne Committee has supported the fundamental contentions of the railroads as to *the fact* of underpayment and unfair treatment, the following principles for which the railroads have contended may be repeated:

1. That the quadrennial system of adjusting payments to the increased weights of the mails is unjust and unbusiness-like.
2. That the railroads should be paid for the messenger and terminal services they now perform without pay.
3. That apartments fitted up as traveling post offices in cars partly used for other purposes should be paid for.
4. That the railroads are entitled to a fair commercial profit for carrying the mails.
5. That the rates of pay and conditions of the mail service should be fixed by law and not left discretionary with Post Office Department officials.

This is what the committee says:

The country is divided into four divisions, weighings being made in each division every four years. This method is antiquated, unscientific, and unsatisfactory, as a quadrennial weighing in a postal division must be unfair to the Government in cases where there is a decrease in the volume of mail in the four-year period and unfair to the railroads in case there is an increase.

No actual data are obtainable as to the actual increase or decrease in the weights of mail, though under a weight system the lack of this information in the Post Office Department was a great surprise to your committee.

The annual post office report shows, however, an average increase in mail revenue of 7 per cent for the past 10 years; hence, undoubtedly, there has been an annual increase in the volume of mail during the same period.

If the increase in weight has been proportional to the increase in revenue, then under the present quadrennial weighing system the railroads of the country have received no compensation whatever from the Government for about 14 per cent of the mail carried by them during each four-year period. * * * *

Since expansion of the parcel post, the quadrennial weighing has become much more unsatisfactory as a means of determining the compensation to be paid for transportation.

It is no more reasonable or just to compel the railroads to deliver mail to a post office after it reaches the depots or terminals than it would be for the Interstate Commerce Commission to require the railroads to furnish taxicabs free of cost to take passengers to their homes on arrival at their destination depots, or motor trucks to move freight from the freight terminals to the consignees at the expense of the railroads.

Hence we provide in our suggested plan for the relief of the railroads from this unjust burden now placed upon them. * * * *

Conveyance of mail on city streets is no proper part of railroad duty. Railroad transportation, both freight and passenger, begins and ends at railroad depots and terminals.

The committee considers that the free transportation of Post Office Department employes should be limited to those actually engaged in the railway mail service, when on actual duty in such capacity, in contrast with the Moon bill provision for free transportation when on official duty of any character. On this point the report says:

The railroads should no more be expected to carry postal employes free of charge when not directly and officially connected with the Railway Mail Service than they should United States Government engineers, officers, or employes of any other department in our Government.

In discussing the Government ownership of postal cars, the committee states that:

Our study of the subject has convinced us that Government ownership of post office cars is entirely impracticable and would be much more expensive to the Government than the present system of compensation. At present the railroad companies own the cars and pay all the expenses of heating, lighting, repairing, painting, cleaning, inspecting, furnishing ice water, etc.

If the Government owned these cars, which would be scattered throughout the United States, it would be compelled to employ skilled inspector to guard against development of defects whic would render the cars unsafe, would employ cleaners and arrange for heating and lighting, would

> maintain repair shops and employ expert mechanics.
>
> We do not believe that any person of business experience will doubt for a moment that to maintain the comparatively few R. P. O. cars used in the Railway Mail Service would cost the Government many times what it costs the railroads.
>
> Nor do we believe that any one, after giving the subject consideration, will contend that the railroads should be required to haul such Government-owned cars without additional compensation for the service rendered.

The conclusions of the committee are particularly significant in that, by inference at least, they severely condemn both the actions of the Post Office Department and certain members of Congress in attempting to make a political issue of this matter, and to dispose of it without giving it any fair or intelligent consideration. The exact words of the committee in this particular are as follows:

> It has been our view that it is not our duty to endeavor to make out a case that is favorable or unfavorable to either the Government or the railroads, but to ascertain with as great accuracy as possible what is a reasonable compensation to be paid.
>
> We believe that the Government should deal

>
> e rea-
> such

the committee found that 7 cents must be added, making .25.49 cents per mile necessary if the railways are to make their mail traffic relatively as profitable as their insufficiently profitable freight and passenger services. Yet the Post Office Department in a proposed readjustment of mail pay purposed to set less than 21.8 cents per car mile. "If similar unprofitable rates," says the Bourne report, "were made on all railroad traffic, the roads would necessarily have to go into bankruptcy, because there would be no sufficient allowance for capital charges."

This discrepancy between expenses and earnings, moreover, prevailed before inception of the parcel post added its immense tonnage of former express and freight matter to the contents of mail cars.

From 1903 to 1912 express revenue of the railways increased 91 per cent, while mail revenue increased only 22 per cent, showing, says the Congressional committee "that the express payments have been responsive to the growth in traffic while the mail payments clearly have not."

> The annal Post Office Reports show an average increase in mail revenue of 7 per cent in the past ten years; hence, undoubtedly, there has been an annual increase in the volume of mail during the same period. If the increase in weight has been proportional to the increase in revenue then under the present quadrennial weighing system the railroads of the country have received no compensation whatever from the Government for about 14 per cent of the mail carried by them during each four-year period.

A more extended review of the final report submitted by the Joint Congressional Committee on Railway Mail Pay will be found in another section of this issue.

by purchase and ownership of the railway post office cars. The statement appeared plausible and there was no contradiction. For more than twenty-five years this declaration has been accepted as true by the great majority of people though men in official position have doubted its accuracy No proof on the subject has been presented until recently, when the subject was discussed at length by Hon. Jonathan Bourne, Jr., chairman of the Joint Congressional Committee on Railway Mail Pay, in the report of the committee's work and its conclusions.

In that report Mr. Bourne shows that if the Government owned the cars and paid the railroads the usually prevailing rates for transportation of the same and paid the expense of maintenance, repairs, inspection, icing, cleaning, lighting, etc., the Government would pay more than it does to-day.

After presenting statistics showing that under government ownership of railway postoffice cars the expense to the Government would be greater than under ownership by the railroads, Mr. Bourne asserted that purchase of the railway postoffice cars would also be unwise because it would be the beginning of the general government ownership policy, eventuating in bureaucratic paternalism, inertia, and, inside of a century, governmental dissolution. He cited the fact that under general government ownership of public utilities there would be over three million governmental employes, that in the last ten presidential elections the President has been elected by a plurality of from 7,000 to a little over 2,500,000, and that, therefore, government employes could absolutely control the government, the tendency being more pay, less service in go

> greatest menace to the future of our country, would, in our opinion, be greatly accentuated by governmental ownership.

Another view on this same subject is strikingly expressed in an article by Francis Nelson, which appeared in a recent issue of *Leslie's Weekly*. We quote from it in part, as follows:

> By intensive regulation the Government now dominates the earning power of the transportation lines. In fixing rates it sets a measure on the revenues without regard to the inroads made upon them by the unchecked demands of labor and the increased costs growing out of mandatory legislation.
>
> The earnings of railroads are applied to cost of equipment, maintenance of way and property, wages and the payment of dividends to the owners. Depreciation of equipment, way and property never ceases. In recent years the cost of labor is constantly rising. The Government studiously fights shy of any regulation of this charge but legislation has helped to swell it by specifically fixing the hours of labor as well as by super-manning the trains. The payment of dividends is the just increment of the investor's confidence. The charges for these items are inherent in the operation of a railroad. If they are not earned bankruptcy is inevitable.

A government monopoly is a quencher of private enterprise,—a velveted iron hand held above the fortunes of the people. The ways of monopoly are ingenious and disingenuous. It is a euphemistic delight to the patriotic citizen to pay taxes as such. How tickled he will be when he awakens to the realization that in swelling transportation charges he is paying more taxes in support of a vast government monopoly. The Government now has under its paternal wing one monopoly—the mail service. Is the human imagination elastic enough to visualize what this service would be without the use of privately owned transportation lines as its carriers?

A French economist, M. Guyot, has just published a book which gives a body blow to government ownership. He analyzes conditions in Italy, France, Switzerland, Prussia, Germany and New Zealand, and finds no argument for public ownership to effectually set up against the efficiency of the American railroad. His conclusions resolve themselves into one of three situations: Being profitable and the profit absorbed by the public treasury, the interests of shippers and passengers are sacrificed to those of the Government. Being operated at a loss and the deficiency made up by taxation, the interests of the taxpayers are sacrificed to those of the shippers and passengers. All other interests being sacrificed to those of the employees, political considerations overwhelming those of transportation, is a condition inseparable from State ownership.

AND THE PEOPLE IMAGINE A VAIN THING?

THE DESTRUCTION OF A USEFUL INDUSTRY

While the carriers have been forced into a prolonged and expensive effort to procure even a consideration of their claims regarding the additional burdens placed upon them through the operation of the parcel post, express company profits, owing to the unequal competition of this new branch of the Postoffice Department, are rapidly nearing the vanishing point.

With above 4,000 more miles of railway covered by their services eleven express companies operating in the United States during ten months of the last fiscal year experienced a loss of 85 per cent in operating income. Official figures just published by the Interstate Commerce Commission, analyzed by the Bureau of Railway News and Statistics, show that for the ten months to April, 1914, operating income for these eleven companies was $628,487, only 15 per cent of the operating income for the corresponding period in the year before, or $4,231,465.

So drastic an exhibit as this raises the question before the American people whether they desire to see the express business wholly taken from private management and given entirely to the Government through the parcel post. The showing is the direct result of the immense deflection of tonnage formerly carried by express to the parcel post, which in its competition for the business has enjoyed the overwhelming advantage of being able to increase its tonnage steadily through raising of the weight limit on parcels admitted to the mails while refusing with impunity to bear the increased expenses entailed, as would be necessary for a commercial enterprise, by withholding from the railways increased remuneration to cover the heavier work of carrying the enlarged mail tonnage. At the same time rates on the traffic left to the express companies has been cut 16 per cent.

In gross receipts from operation for the ten months, due largely to these influences, there was a loss of more than $8,000,000. Payments to the railways for their service in the express business conseqeuently fell more than $3,000,000, while the tonnage which would have saved this revenue for the carriers as express was carried by the same railways without pay in mail cars. Operating revenues of the express companies thus fell $5,000,000, while a reduction of only $1,500,000 in expenses left a loss in net of $3,500,000, which was aggravated by an increase in taxes.

For April alone, due to the same conditions, operating income fell from $437,826 in 1913 to $48,747 in 1914.

The figures for the ten months and for April are as follows:

Ten months	1914.	Loss.
Mileage	303,986	*4,213
Gross receipts	$132,646,163	$8,382,778
Express privileges Dr.	66,413,551	3,266,223
Total revenue	66,232,612	5,116,555
Expenses	64,376,816	1,581,227
Net revenue	1,855,796	3,535,328
Taxes	1,227,309	*67,650
Operating income	628,487	3,602,978
April.		
Gross receipts	$12,839,513	$970,175
Express privileges Dr.	6,475,442	373,537
Total revenue	6,364,071	596,638
Expenses	6,185,416	226,738
Net revenue	178,655	369,900
Taxes	129,908	*19,180
Operating income	48,747	389,080

---

* Increase.

Of the eleven companies covered by the official figures, five reported operating deficits for the ten months. One of the largest express companies alone during that period took in $466,258 less than it paid out to operate, and after paying taxes reported a deficit of $635,657 for the ten months' operations. The others had operating deficits of

$612,965, $247,091, $38,965 and $26,593, respectively.

A MORE ENCOURAGING OUTLOOK

In spite of the calamity howler, there are many indications that the fall and winter months will show a distinct improvement in business and a decided restoration of confidence. There are several reasons why such results may be anticipated. First, the initial shock of the great European war has been largely dissipated and many of the business readjustments for which it was responsible, have been or are being accomplished.

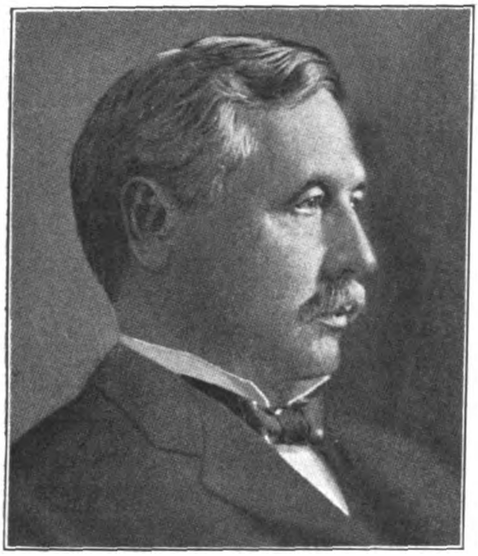
Second, the ocean highways have again been opened to international commerce and the European demand for our products is rapidly increasing, particularly with reference to foodstuffs. Already the export movements of grain and other food products has reached a volume in advance of last year and it may be confidently stated that this demand has only begun. Under existing conditions, we can sell our export grain to Europe, at a price far in advance of that of recent years, and still leave their demand far from satisfied.

Third, reports from the West indicate a general improvement in the business tone of that section, and Western railway presidents, who have recently been giving the general situation a closer scrutiny, are largely of the opinion that the tide has turned and that there is real reason for a more optimistic outlook for the future. With characteristic enterprises and confidence, the American business man, manufacturer and farmer, are rapidly adopting methods to meet the stress of the war and to harmonize their operations in accordance thereto. To quote from a statement recently made by President W. B. Scott, of the Sunset Central Lines:

> One thing we must not forget in considering the matter from the viewpoint of either railroad or business man is the always intresting fact that no matter what happens the millions must be fed and clothed. As Europe now warring represents several hundred millions of persons, the majority of whom are barred from tilling the soil or operating the factories, who will be in a position to feed and clothe them except the United States, or the countries south of us?
>
> It is in this phase of the situation that we must take comfort. The South is the cotton producer of the world, and if the marketing of the staple is now problematical, this problem will not long remain unsolved. The economic situation is too acute to permit the vast sum of money represented by our cotton production to remain quiescent or unproducing, as the effect of such a policy would be disastrous to banking interests, farmers and the Government. Therefore cotton must be sold for a fair price; must be moved to the consuming markets, be put on the loom and issued to the trade. The present "wait" can be only temporary, and the final result will put money into the pockets of the interests which will settle the vexing questions with proper justice to the producer and the people who depend upon him.
>
> The farmer is the man to get busy. Grain products are bound to be in demand next year, no matter what happens, and the great crop of this year will find its way to the granaries of this country and of the Old World, and should find its way there, too, without the consumers of America being unduly held up as a result of individual or collective rapacity.
>
> The demand for American products will increase naturally. Europe and the countries supplied by Europe will look to us for relief. Farm and manufactured products will be properly stimulated and we should reap the reward of our preparedness. It is therefore up to us to get in position for the coming demand, and the farmers should be encouraged and assisted in every way possible to meet the contingency. We need the farmers, and more of them, for upon them rests the "other fellow's" burden, and in proportion to their prosperity and enterprise all other industries flourish or decay.
>
> The railroads are part of the whole. They are the connecting links between the producer and the consumer, and must profit or lose as the general business waxes or wanes. I am enough of an optimist to believe that whatever depression may seem to or does exist just now will be totally eliminated as we realize just how potent a force in the commercial and producing situation we represent. Trade must continue and traffic move. Out of it we shall all ultimately profit.

President Scott is by no means the only railway executive who is taking a hopeful

WILLIAM R. SCOTT,
President of the Sunset-Central Lines.



A. J. Earling,
President of the St. Paul System.

view of the future. According to a statement by President Earling, of the Chicago, Milwaukee and St. Paul, there is much less apprehension in the West regarding the effects of the European war than in the East. He significantly points out that the grain movement throughout that section is considerably ahead of a year ago and he is of the belief that a much larger tonnage will follow.

James J. Hill affirms that the American people at this time should realize the full and wonderful opportunities offered as a result of the terrible struggle now taking place in Europe. He adds, however, that while the country must not necessarily go slow, it should, in the conduct of its National and trade affairs, be governed by extreme caution. He points out that the prosperity of the farming business must, in general, greatly improve and that there will be plenty of work for every branch of activity throughout the Nation during the coming year, if the people will exert the necessary judgment.

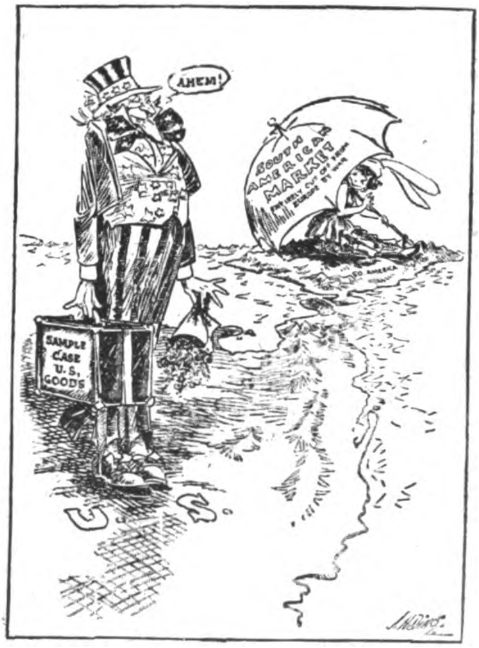
In addition, as pointed out elsewhere, the railway situation has recently given indications of better times ahead. The Interstate Commerce Commission's attitude appears friendly and a desire to prove of real assistance to the carriers has at last become manifest. Should the five per cent increase in rates be granted and should traffic increase as is now confidently expected, railway conditions will greatly improve and the stimulating effect of this betterment will be felt throughout the entire country.

NEW CURRENTS OF TRADE

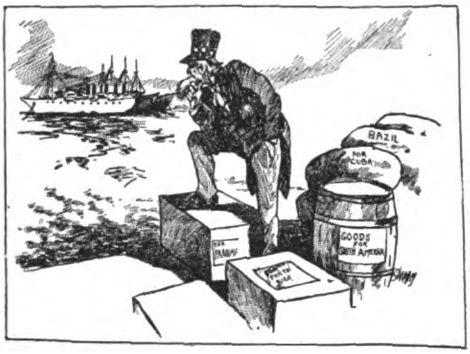
The European war is is likely to establish new currents of trade of vast importance between the United States and foreign countries, particularly those located in South America. Manufacturers and merchants are already beginning to seriously consider taking advantage of these opportunities and a great stimulation in the interchange of commodities with these countries can be confidently anticipated. Furthermore, the opening of the Panama Canal has guaranteed easy access to the western as well as the eastern coast of this great continent.

These countries, up to within the beginning of the European war, had been buying largely from Great Britain, France and Germany, particularly from the last named country, and must now find a new source of supply. There is every reason now why the United States should obtain a large share of this trade, particularly of machinery and metal articles of all kinds, as well as cotton goods. Furthermore, the recent establishment of American banks at Buenos Ayres and Rio Janeiro will prove of great advantage in the development of any such trade.

Our railroads, particularly those in the South, appreciate the opportunities which



NOW THAT SHE'S ALONE
– Darling in the Des Moines *Register and Leader*



—From Cleveland Plain Dealer

Waiting for the Ferry.

lie in this direction and efforts are being made to instruct manufacturers as to the best methods by which it may be taken advantage of. The Southern Railway, for example, has established a bureau through which it is prepared to furnish information of every character with regard to South American markets, the purpose being to aid Southern business men to establish trade with South America. The information given out by this Bureau is without cost, being part of the Southern Railway's work for the development of the South. Other roads are making similar efforts which will undoubtedly bear fruit in the stimulation of commerce between the southern ports and those of South America.

How great are the opportunities which lie southward may be appreciated when it is stated that South America exchanges goods with the rest of the world, to a total annual value of more than $2,000,000,000. If we add to this trade that of Cuba, Haiti and the Dominican Republic, the annual value approximates $3,000,000,000. With the opening of the Panama Canal, and on account of the European war, practically this entire trade is thrown open to American manufacturers, if they display enough energy and enterprise to develop it. Their position at the present time is certainly preferred and is one which may never again present such an unequalled opportunity.

In addition to the efforts of the railroads to develop this trade, the Department of Commerce has organized a corps of commercial agents specially selected on account of their knowledge of South America, who will at an early date, proceed to the various Republics of that country for the purpose of determining their import requirements and how they may best be met. It will be the duty of these agents to go thoroughly into all details and examine carefully the possibilities of extending and strengthening our trade in South America.

AN UNREMUNERATIVE PASSENGER SERVICE

In the decision of the Interstate Commerce Commission covering the Eastern carriers' appeal for an increase of five per cent in their freight rates, attention is called to the fact that passenger rates, in many instances, are unremunerative and the suggestion is made that steps be taken to so readjust these rates as to provide sufficient revenue to cover the cost of this branch of the service.

While for many years the carriers have recognized the fact that passenger rates were too low, developments within recent years have greatly aggravated the situation. Not only has the public's demands for a higher class and more costly service been incessant and general, but the arbitrary action of state commissions in reducing intrastate passenger rates has brought about a condition which is well nigh intolerable and one which calls for immediate and drastic remedy.

Traffic officials recognize the fact that a no more unpopular move could be made than a readjustment upwards of passenger rates. They now have behind them, however, the moral support of the Interstate Commerce Commission as well as a number at least, of the state regulative bodies, and the present is hardly the time to hesitate in taking full advantage of the Commission's recommendations. While a favorable public sentiment is much to be desired, the public is characteristically selfish, when it comes to a matter of personal interest and the railroads cannot afford, at this juncture, to be swayed by their opinion in the readjustment of these rates. The service does not pay for itself, is a heavy drag upon the whole industry and the Commission's attitude is at least logical, when it affirms that a continued advance in freight rates can hardly be permitted until the passenger service has at least been made to bear its share of the costs. The following statement recently issued by the Bureau of Railway News and Statistics is of unusual interest in this connection:

Twenty-one years ago more than one-third of the railway mileage of the United States was carrying its passenger business at a loss. Taken in conjunction with the recent decisions of the Interstate Commerce Commission in both Eastern and Southwestern rates cases, finding present state enforced passenger fares unprofitable and ruling that the railways need not apply to interstate traffic the excessively low rates forced by state legislation, figures taken by the Bureau of Railway News and Statistics from early reports of the Commission show that at least for a quarter century the passenger traffic of the United States has either resulted in actual loss to the carriers performing the service or has failed to contribute its proper share to railway revenues.

The Commission's recent decision, therefore, is seen as the result, not of a recent development in passenger traffic but of the fact that American passenger fares never have been adequate to the expensive quality of service demanded by the American public.

For six years after its creation the Commission compiled figures showing not only the average revenue received by the railways for carrying one passenger one mile but also the average cost of performing the service. For these six years the revenue, cost and difference in cents per passenger mile are as follows:

Year.	Revenue.	Cost.	Difference.
1888	2.349	2.042	.307
1889	2.165	1.992	.172.
1890	2.167	1.917	.250
1891	2.142	1.910	.232
1892	2.126	1.939	.187
1893	2.108	1.955	.153

Taking these costs of a quarter century ago it may be seen how slight could be the profit to-day, when the average revenue has declined to 2.01 cents per passenger mile, forced upon the railways by state legislation, while all elements of cost particularly labor, fuel, equipment and terminal facilities, have risen enormously.

By 1893, in fact, when the Commission abandoned the computations, the railways in four of the ten territorial groups were shown to be carrying passengers at a loss. The deficits for these groups for the several years follow in fractions of cents per passenger miles.

Group	1890	1891	1892	1893
V	*.388	*.217	*.089	.146
VII	*.063	.093	.283	.151
VIII	.026	.176	.212	.250
IX	.153	.057	.138	.050

---

* Net profit.

Thus in 1893 there was an average loss for every passenger carried by the railways of Georgia, Florida, Alabama, Mississippi, Tennessee, Kentucky, Louisiana, Arkansas, southern Missouri, Oklahoma Indian Territory, Kansas, Nebraska, western North and South Dakota, Montana, Wyoming, Colorado, eastern New Mexico and Texas. These railways, paying more to furnish the passenger service than they earned from the service operated 58,843 miles of the 169,780 for the entire country, or almost 35 per cent.

To-day American railways furnish the highest class passenger service in the world at a price as low or lower than that charged by any of the railway systems of Europe in their first class tariffs, even disregarding the much greater value of the American cent in these foreign countries. The comparative cheapness of American travel is shown more truly in the length of journeys purchasable by an average day's labor, the wage taken being that of railway employes:

	Av. wage per day	Av. Rects. First class per passenger mile	First class for day's labor
Switzerland	$0.99	*3.26c.	30.4 m.
Great Britain	0.93	*3.00c.	31.0 m.
Italy	1.15	*3.52c.	32.7 m.
France	0.87	2.12c.	41.0 m.
Belgium	0.85	2.01c.	42.1 m.
Germany	1.35	2.93c.	46.1 m.
United States	2.49	2.01c.	123.9 m.

---

*Tariff rate.

One day's labor in the United States purchases thus almost three times as much travel as would the same labor traveling first class in the nearest European competitors above.

In the consideration of this general subject, it might be well to remember that in the two Minnesota decisions the Interstate Commerce Commission, some time ago, affirmed that rates between states need not be the sum of the local state rates. In the Shreveport decision the Supreme Court ruled that the Federal authority in rate making must be supreme and that where state and interstate rates conflict the former must give way. In the five per cent rate case the Commission has found passenger rates even in the densely populated Eastern States non-compensatory. Now, in the interstate passenger fares case just announced, it finds the same condition on southwestern railways.

Exhaustive statistics which the railways have spent years in working out thus have attained an important victory. Although in this case the Commission admits that the apportioning of costs in these statistics may not be absolutely accurate, the "margin of error which may be imputed to them is not sufficient to change our conclusion," and the state-made rates thus are placed in a light of direct discrimination with a higher rate found reasonable by Federal authority.

What has led the Interstate Commerce Commission to this decision is indicated by an analysis of some of its findings in the recent Eastern rate case. Four Eastern roads in 1913 showed actual deficits from passenger service while all the others displayed immensely smaller net revenues earned on the passenger than on the freight servic.

Ten roads in Central Freight Association territory were computed as having lost almost $18,000,000 in Ohio, Indiana. Illinois and Michigan alone through state reductions in passenger fares.

"The traveling public," says the Commission, "is giving expression to its demands for better service, better accommodations, and for the adoption by the carriers of all the devices that make for safety. A public that demands such a service can not reasonably object to the payment of a reasonable compensation therefor."

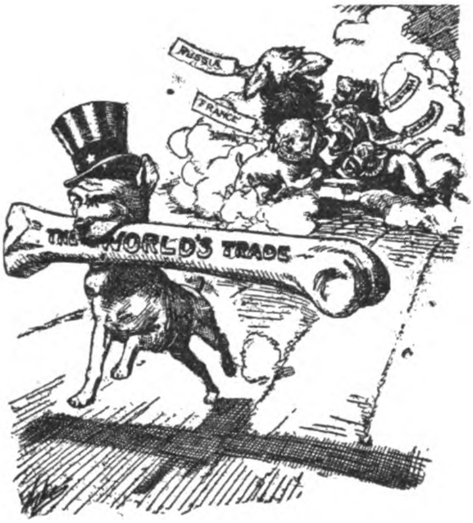
THE INFLUENCE OF THE PANAMA CANAL

The opening of the Panama Canal is another event which has suffered in comparison with the developments in Europe. At another time its opening would have created a world-wide interest in that it represents one of the greatest achievements of concentrated human effort. Its effect upon the commerce of the world will be profound and had it not been for abnormal conditions, the commercial developments connected with its first month of operation would have received the closest attention, not only by the commercial interests of the United States but by all foreign countries. Already its effect is being felt by the transcontinental roads, who in their efforts to check the shrinkage its influence has caused in their Pacific Coast freight trade traffic, are already engaged in a rate readjustment in order to compete with the new route on a more equitable basis. This early influence was to be expected, however, and while it is felt that the Panama Canal may at first cause some difficulties for American railroads, it should, in the long run, prove of general benefit.

C. H. Markham,
President of the Illinois Central.

Some of the probable benefits of the Canal are interestingly set forth in a statement recently made public by C. H. Markham, president of the Illinois Central Railroad, from which the following paragraphs are quoted:

> Anything that results in aiding development on the Pacific Coast will result in increasing the movement of commerce between the Atlantic and Pacific seaboards. It seems to me that an important factor in bringing about this development will be the direct sailing of ships carrying immigrants from Europe direct to the Pacific Coast points. This will increase the freight movement to and from that territory.
>
> The Illinois Central has not a very great interest in the transcontinental business, but being a north and south line it has a decided interest in any change in the movement of commerce that will increase shipments from Gulf ports.
>
> If frequent sailings are provided from New Orleans there ought to be a very considerable movement of tonnage to and from territory as far north as St. Louis and Louisville. However, nothing has occurred yet to indicate the extent to which ships will be provided, and we are all at sea as to what the future will bring.
>
> Regarding any possible change in freight rates from Chicago, Mr. Markham said the situation was so indefinite that a forecast could not be made.
>
> I think likely that the freight rate from Chicago and adjacent territory to New Orleans always will be as low as from Chicago to New York. I think without doubt it will be the policy of the lines serving the Middle West to go the limit in making rates which will protect industries located in that territory, and permit direct movement, all rail, as against back hauls to either the north Atlantic or Gulf ports.
>
> It has been estimated that 3,000,000 tons of merchandise go annually by rail from East to West, and about the same amount from West to East. About 500,000 tons go each way by water.
>
> The bulk of water shipments originate within a strip approximately 300 miles wide along both seaboards. Up to the present time the movement of freight to and from points located in territory tributary to New Orleans and other Gulf ports and crossing the Isthmus of Panaman or Tehuantepec has amounted to very little.
>
> A large portion of the transcontinental freight originates west of Pittsburgh, but I believe the opening of the canal will materially widen the strip from which freight will flow chiefly toward water frontage along the coasts.
>
> The extent of this strip will depend upon the spread between the rail and water rates as it will exist after the canal is handling the traffic and the transcontinental lines decide the extent to which they can afford to go in meeting the competition of vessels using the canal. There is no question that a much larger share of the class of traffic now moving will go by water than at present.



Beats Fighting! —Philadelphia Ledger.

FREIGHT RATES AND EUROPEAN WAR

One contention of railway officials has been more than vindicated by the influence of the European war upon the living expenses of this country. The familiar argument that the cost of living was dependent, to a large extent upon freight rates, has been so clearly proven to be fallacious that the political demagogue is not likely to use such argument for some time to come.

The shock of war has taught the American citizen, as never before, that an increase in the cost of living may be totally unrelated to freight rates. On the other hand, it is being forcibly brought to his attention that by denying the railways a living rate, not only does the entire transportation industry suffer, but its effect is felt by every other business enterprise, and that a restrictive policy of this kind, in the long run, must affect the prosperity, to a greater or less extent, of every American home.

If the American people could only more fully appreciate the significance of the fact that ninety-five cents of every railway dollar goes directly back to the people for wages, fuel, lumber, iron, steel and other supplies, they would be more conservative in their efforts to regulate the railways and to demand a lower rate irrespective of its effect upon the industry. As the result of a largely fancied grievance, nursed by the self-seeking politician, this regulation has grown to such an unnecessary extent as to load the back of the public with taxes for national commissions of investigation, state commissions, boards, bureaus and other regulative bodies, far beyond the real requirements of the case; and this enormous weight of largely unnecessary taxes, has been one of the important factors in the increased cost of living.

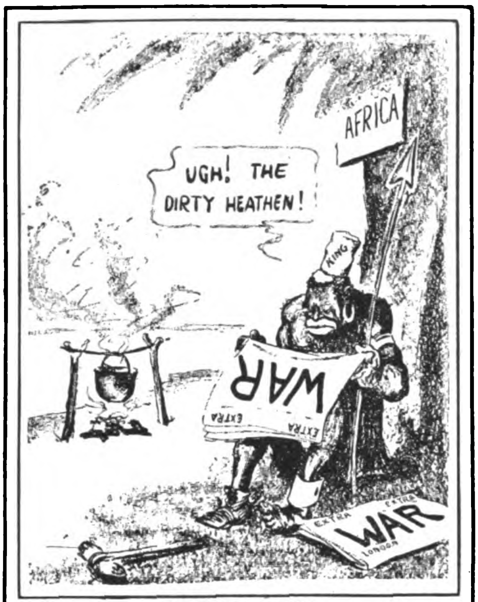
Politicians naturally cater to this sort of thing, seeing in it more power and a bigger pork barrel, while the common people, believing in the plausible argument that it offered them a panacea for all ills, have aided and abetted it. However, there are many indications of a revulsion of feeling and the heroic work performed by railroad officials during the past few years, under the most discouraging conditions, may yet bear fruit. If it does, the country will witness the resumption of a prosperity which has not been in evidence for some time past.

THE EXPERIENCE OF RAILWAY OFFICIALS IN GERMANY

The experiences of a number of prominent railroad officials who have recently returned from the European war zone, do not appear to justify the criticisms of harsh treatment which so many American travelers have indulged in upon their return from abroad.

George F. Brownell, vice-president of the Erie Railroad, who was with President Daniel Willard, of the Baltimore and Ohio, at Carlsbad, when the war broke out, is

George F. Brownell,
Vice-President of the Erie.



AS OTHERS SEE US
—Tuthill in the St. Louis Star.

among those who have recently returned.

Mr. Brownell said that Americans in Germany and Austria were treated with the greatest consideration as far as military conditions permitted. "Those who remained where they were when the war broke out and did not become panic stricken and seek to get out of the country during the period of mobilization suffered no discomforts except difficulty in getting money on letters of credit, which condition was remedied wherever it was possible to get in touch with American consuls.

"Of course," said Mr. Brownell, "it is not unlikely that those Americans who tried to get out of the country during the progress of mobilization and first excitement of the declaration of war, were subjected to hardships and inconveniences which appeared at the moment to be outrageous indignities. But it must be remembered that many tried to get out of the country and even to penetrate the zone of military operations, with French automobiles, French chauffeurs, and French licenses, which was like waving a red rag in front of a bull. Most of these people could not speak German and in the general excitement it is not surprising that some were handled severely. Then, too, many Americans were mistaken for Englishmen against whom there is a very bitter feeling in Germany.

"It is also not surprising that Americans were not able to cash their letters of credit for most of these were drawn against Paris or London banks and with Germany at war with both of these nations, the German tradespeople and bankers hesitated to cash them for the reason that it was uncertain when they could be collected, although they were admittedly good.

"Wherever it was possible to get in touch with American consuls this condition was relieved although discounts necessarily in many cases had to be given to protect the Germans against probable delay in collecting or against probable loss.

"When our party was ready to leave Carlsbad about two weeks ago and after the mobilization had been completed, we were shown every courtesy and even afforded many privileges that Germany refused to its own people. A special train was made up on which about 500 Americans left Carlsbad and over the entire trip to Holland the feeling displayed by the people of the towns through which we passed was so friendly as to give it the appearance of having been specially displayed as a demonstration of the friendly attitude of the German public toward Americans."

President Willard's experience was very similar to that of Mr. Brownell's. To quote from a short statement he made upon his arrival:

> The only inconvenience we suffered was a temporary shortage of funds. This, however, was soon overcome and all was smooth sailing. Of course, transportation facilities were not of the best, but we have no complaint to make.

Abuse of the Parcel Post.

(From the "Express Gazette.")

AS an incident of the European war and the upheaval in the American money market, fifty-seven tons of gold was sent by parcel post from the Mint in Philadelphia to the Sub-Treasury in New York. This trick of the Government to get railroad transportation for nothing is not new, for ten carloads of gold were sent by registered mail, several years ago, from San Francisco to New York. A railroad president who was accused of padding the mails, during the weighing period, on his small road in Iowa a few years ago, was indicted in court as a criminal, and we believe, was punished; but it is difficult to see any great difference between his act and this one of the Government. Sending big bags of gold by parcel post is legal, apparently; and so was the sending of tons of grain last year in Colorado, and of fruit in New Mexico; but everybody must admit that it is glaringly illegitimate.

Contemporary Opinion

Danger of Undermining Railroad Credit.

(From the Boston News Bureau.)

IT cannot be too often emphasized that the fundamental and generally unseen danger in this country is the insidious undermining of railroad credit for which the politicians in and out of Washington are more responsible than the labor unions.

One of the first measures in England on the outbreak of war was to insure the facilities of transportation by guaranteeing the railroads their previous net return and then operating them in harmony with the War Department. It didn't take a week to accomplish this in England. Yet the Interstate Commerce Commission has been considering for years the question of a trifling advance in the freight rates of some American railroads. The entire wisdom brought forth was in the minority report which showed the necessity for the increase.

When credit seeps out of a railroad property it is only a question of time when the result shows in the locomotive, the rail and the tie, and shipments are retarded and travel beomes unsafe.

The hope for a future that the Interstate Commerce Commission should have given to the railroad security holders of this country having been denied, what is there to sustain American "railroad credit in the present trying times?"

Business is based on hope, and a firm hope for the future will carry forward billions of credit over great chasms. At the present time there is a chasm yawning under the feet of the railroad men in this country.

It is more important at the present time to save the railroad situation than it is to punish railroad managers who have exercised bad judgment and have expanded when they should have contracted.

Inexcusable Delay by Interstate Commission.

(From Philadelphia "Ledger.")

WHEN through extravagance, bad management and ill fortune the Federal Government finds its treasury empty it takes prompt measures to get more money. The Interstate Commerce Commission refuses to permit the railroads to increase their revenues, although their necessities are quite as great as those of the governmental bureaus which spend money so lavishly.

On the one hand, Congress, which is directly **responsible** to the people, acts without quibble or delay. On the other hand, the bureaucratic Interstate Commerce Commission, which is responsible to nobody, postpones, shifts from one foot to the other and prepares to collect another colossal amount of useless information.

Congress meets an unlooked for emergency squarely and settles it before procrastination has multiplied the country's ills. The bureaucratic Commission apparently feels no like patriotic impulse to solve for the railroads and the entire business interests of America their financial troubles.

Congress acts while the Commission delays, and yet the problem before Congress in getting more revenue was vastly more complex than the question which now faces the Commission. If the Commission performs the work it was intended to do, it must already possess all the facts and figures needed to make a decision in the railroad rate case.

When a bureau gets snugly and comfortably settled in its easy chair, it is liable to forget the reasons for its being there.

A Desperate Necessity.

(From the Wall Street Journal.)

IT is not too much to say that an advance in railroad rates is now a desperate national necessity. Constant increase in taxation, ever advancing wages, and higher cost of everything that goes into maintenance, prove the Eastern roads should have had the increase they demanded. For reasons of politics, and after prolonged delay, they did not get it.

This is equally true of the Western roads and those in the South. But in the new set of circumstances the matter becomes one of absolute national emergency. Our railroad securities are so largely held in Europe that unless we can convince the holders there that they should be the last investment to be sold, this country will be flooded by foreign holdings, a liquidation of our debt abroad, which neither this nor any other country could stand.

Already the earning capacity of the railroads, except those of the very highest credit, has been reduced to a level unattractive to the investor. The foreign holder of securities is a student. He holds on merit, buys on merit, and sells, not on speculative information, but upon cold analysis of earning capacity. We can make him a buyer of American securities. But the Interstate Commerce Commission has already done its best to make him a seller, while it has not provided any buyers, unless it has the idea of public ownership through bankruptcy.

Every kind of wild project has been submitted to the Federal Government. It is asked to invest the taxpayer's money in a speculative position in cotton, marine stores, or a dozen other staples which should take care of themselves. But it is invited to starve out the railroads, representing the greatest single industry in the world, and incomparably the greatest taxpayer in this country, the one of all on which the prosperity of the others stands.

Relief to the railroads through an advance in passenger and freight rates is a necessity so great and urgent as to approach almost to the actual pressure of war.

Applaud the Attitude of President Wilson.

PRESIDENT WILSON'S stand with regard to the railroads of the United States as contained in his recent letter to Chairman Frank Trumbull of the Norfolk and Western Railway, and published in full in another section of this issue, has met with the universal approval of business men throughout the country, if press editorials and the published statements of men engaged in all branches of industry, may be taken as a criterion.

The Executive Committee of the Railway Business Association has issued the following statement on the stand taken by the President:

"The Railway Business Association commends the spirit in which the railway presidents recently conferred with the President of the United States upon the grave conditions confronting the railways, aggravated by the European war, and is profoundly appreciative of the appeal made by President Wilson on behalf of the railways.

"We are moved thereby to say that the logical sequence of the President's appeal is for business men to plead that the Interstate Commerce Commission may find a way to grant immediate relief in response to the petition which the Eastern railways have now filed.

"The President in his conference with the railway executives manifested earnest sympathy with them and showed familiarity with the facts as presented.

"Out of the war has arisen an emergency affecting the railways which has no parallel and which demands extraordinary measures. Reports of earnings and expenses for the year ending June 30, 1914, which were not yet available when the Commission decided the five per cent freight rate case, have now been laid before the Commission and show a serious decline of operating income in face of increased property investment.

"The war has inflicted and is inflicting still further losses in gross earnings. It was evidently the Commission's expectation that current earnings would be sufficient to tide the roads over until the new sources of revenue should materialize into money.

"The war has put an end to that hope. The roads are now vigorously taking steps to follow the recommendations of the Commission as to passenger rates unremunerative freight rates, free service and other matters.

"Outbreak of hostilities caused the wholesale return to this country of American railway securties held abroad. Prices slumped violently. This sacrifice was temporarily suspended by the closing of the European and American stock exchanges.

"We would respectfully urge upon the Congress that in the conisderation of railway mail pay the recommendation of the Congressional Joint Committee points a way whereby the railway may be dealt with in a spirit of greater liberality than is provided in the House bill now under consideration in the Senate.

This is surely a time when the Government should be actuated by a desire to pay adequately for an important public service."

An Unfortunate Delay.

(From the New York Times Annalist.)

IT is unfortunate that the Interstate Commerce Commission felt it necessary to put over until October 19 the hearing of the renewed application of the railroads for an increase in freight rates. The petition of railroads for a rehearing was granted on Saturday, and a delay of a week or ten days would appear to be sufficient for the taking of testimony in a case of this kind, which is merely the continuation of a long pending case in which a modified decision is sought on the basis of a new set of facts which were not before the Commission when it rendered its recent decision. The Commission was very wise in limiting the testimony in the reopened case to the new facts. That should avoid any prolonged discussion. The presentation of the "new evidence" will be a relatively simple matter.

The effects of the war have increased the railroads' need of an increase in freight rates, and they have also increased the interest of the country at large in a favorable response to the appeal of the roads. There can be no doubt that an advance in rates at this time would increase the confidence of European investors in our securities, and that in turn would lessen the desire of those investors to dispose of their holdings in American railway securities. Strengthening the position of our railroads and proceeding promptly with the settlement of our obligations to Europe would probably have the effect of limiting the foreign selling of our stocks when trading is resumed here to the selling prompted by the necessities of the holders unaugmented by selling due to misgivings regarding the safety of investments in American securities.

What Railway Employes Would Receive Under Government Ownership.

(From the Railway Employes' Journal, official organ of the Brotherhood of all Railway Employes.)

LET us have another talk, brother railroad men, about government ownership of your industry and of you—a heart-to-heart, man-to-man talk.

Let us see where we railroad workers will get off or get on when this industry of ours, out of which we draw the only living we'll ever have, quits running as a plain business proposition and begins running as a huge political machine.

Let us see what happens to government employes in the one big business the government now owns and operates—the post office business.

Incidentally, the government makes that business appear to pay a profit by making your business work for it at a loss. That loss comes out of the wage-fund that rightfully belongs to you.

Last month you read in these columns a sentence that said:

"When the postman, the railway mail clerk, the government bureau clerk, the soldier or sailor is punished or dishonorably discharged, he takes his medicine. It does not matter how great the injustice done him, there is no right of protest, no appeal. Government ownership puts you in the same fix."

That sentence was written early in August. Verification of it was not long in turning up.

In the Chicago Herald of August 21, 1914, appeared an item which said:

"Frank H. Raduenz, president of the Chicago local of the Postal Clerks' Union, was discharged from his position in the Chicago postoffice last week by special order from the Postmaster-General's office in Washington. Postmaser D. A. Campbell said last night he understood inspectors from Washington had discovered Raduenz placing circulars for other clerks in the bundles of mail sent out. The circulars asked the removal of the head of the railway mail service at Washington.

"At the office of Postmaster-General Burleson in Washington yetserday it was said a number of Chicago clerks were to be discharged for insubordination on the grounds that they sent out in the mail bundles of circulars which contained criticism of their superior officers.

"It was said the circulars were being sent to all the postal employes' organizations, urging them to take action for the dismissal of Second Assistant Postmaster-General Stewart, in charge of the railway mail service. The circulars also started a campaign for shorter hours and a revision of night work."

Draw your own conclusions, brother railroad men, from this little case of government ownership discipline. You can guess from it what would happen to you if a government bureau had the power over you a government bureau has over the postal clerks and if you offended some little Jack-in-office of a bureaucrat.

Another good way to find out what government ownership would do to you is to find out what it is actually doing to railroad workers in other countries.

Here is how government ownership Italy dealt with railroad workers who took part in a recent strike. The facts as gathered by the Railway Age Gazette from official reports are thus set forth:

"As a result of the Italian railwaymen's strike, the following measures have been adopted: Forty-eight employes of various grades have been called upon to resign; two station-masters, 16 lower employes, and 352 mechanics and firemen have been degraded; increases in salary of other persons taking part voluntarily in the strike will be postponed for periods varying from six months to two years, alternatively they will be suspended from duty for periods of from 6 to 12 days. The council of administration has decided to commend those employes who did not leave work."

And you might make a note of it right here that government ownership Italy pays its average railroad worker the munificent sum of $287 a year—seventy-nine whole cents a day!

Lately there was a general strike on the railways of South Africa, owned and operated by the government. It was the outgrowth of widespread industrial disturbances.

Whatever the rights and wrongs of the railroad strike, just take a glance at how it ended:

"1. Marital law was proclaimed in the strike centers.

"2. Troops parolled yards and stations and guarded all trains, making many arrests.

"3. The strike was crushed within a few days and the strikers unconditionally surrendered.

"4. Nine strike leaders, including the secretary of the railroad workers' organization, were deporteed as 'enemies of South Africa.'"

So much for the effect of government ownership upon your organizations and your right to organize. These are merely current examples; there are plenty of others like them to be found in the recent history of practically every government ownership country.

Now let us have a look into what government ownership does to the railroad industry and to the public it serves.

Ex-President Roosevelt is much looked up to by many Americans as the foremost citizen of his period in all things that pertain to national progress. Recently, writing home to a magazine, the Outlook, while he was traveling in South America, he said:

"When the time came for us to leave Chile, we went southward on the railway to Puerto Varas. Incidentally I may remark that the railways in Chile are owned by the state, and that the men I met who were best informed and most trustworthy, expressed great regret that they had not been kept in private hands. These men stated that there was always a deficit in the management of the railways, and that they were a burden on the government and unprofitable to the citizens generally."

In government ownership Belgium the state roads are bankrupt, according to tthe latest official figures. There are five little private Belgian companies. They spent in one recent year $41 for operating expenses out of every $100 of revenue, while the government roads spent $66—and the average Belgian railway worker gets $256 a year—seventy whole cents a day!

Then look at government ownership Germany. A worldwide authority on railroad management, Prof. Walther Lotz—himself a German—has just published a book in which he declares the German system of government ownership to be an oppressive monopoly and a political mistake.

Professor Lotz goes on to say.

"Nationalization is not by any means a solution of the monopoly trouble. Monopoly remains monopoly even if it is managed by officials. True, the state is claimed by nationalization enthusiasts to be a higher and unerring entity. But in reality the state is only the national organ of erring men, who are influenced by their virtues, their faults, their interests and their passions. And these influences are all brought to bear on railroad management quite as much when the state does the managing as when private persons do it. Indeed, in countries governed on party principles, privately owned railroads are often more bearable than state-owned railroads, as state-owned railroads are exploited as much as possible for their own advantage by changing parties. * * * * This is a reason against nationalizing the railroads in the United States."

Size it all up for yourselves, brother railroad men. These few examples are enough. They show you how badly government ownership serves the public and how much worse it serves the railroad worker.

Yet government ownership is being steadily crowded upon the American railroads and upon you.

They are rabid about it sometimes, these government ownershippers. Here is what one of them—a very powerful one—publisheed recently:

"The heart of one railroad is the heart of all railroads, just as the heart of one rattlesnake is the heart of all rattlesnakes. * * * * The railroad impulse is as black and bad as was the railroad impulse of a third of a century ago.'

You railroad workers know how wickedly untrue and unjust this statement is. But it is exactly the brand of evil that is being wrought against your industry and you. This kind of talk is resounding from the forums where demagogues rant and shout and abuse your industry in their scramble for place and power—it is what they are making the people believe about your industry and you.

The purpose of the government ownershippers—some working directly and others indirectly by "regulation" and by harassing legislation—is to wreck your industry first and then buy it cheap—with you thrown in.

Much the government ownershippers care about you or your chance to live like white men!

They will let you have, maybe, as much of a wage as is paid to the average railroad worker in Italy—seventy whole cents a day!

Perhaps, if you are polite and always tip your hat and if you snuggle up to the right set of politicians, they'll let you have the Belgian wage—seventy-nine whole cents a day!

And you'd better note that the Belgian and Italian wage is for 365 days' work a year.

Should you dare to form an organization and invoke its strength against some tyrannical Fourth

Deputy Assistant Commissioner of Railroads, your president will get what Postal Clerk Raduenz got.

O, if there should be a strike, your leaders might be spared terms in Leavenworth penitentiary and simply deported—that is, exiled for ever from their own free country—as "enemies of the United States."

No wonder most of you are against government ownership—the wonder is that any of you are for it.

But "being" against it won't save you from it. You'll have to be DOING against it or you'll get it—and with it the coolie's wage, the slave's shackled limbs and gagged mouth.

Government Ownership as Viewed by a Government Railway Official.

PRESIDENT RIPLEY, of the Atchison, Topeka and Santa Fe, has recently received an interesting communication from an Englishman who has had actual experience as an official in the employ of a Government railroad in one of the British possessions. The following is the letter with only such slight modifications as have been necessary in order to avoid revealing the writer's identity, thus avoiding embarrassment for him:

"For the past seven years I have held the post of assistant to the general manager of a small colonial railway, owned and operated by the Government, and have also been employed in the United States for three years; in addition to this American methods were the model far more than European ones in the operation of the line. Having always followed railway affairs in the principal countries with great interest it appears that the bait which attracts the public in all lands to advocate government ownership is the hope that the railway service will be run at a loss to the Government, or, in other words, so that those using the railway may do so at the expense of those who do not.

The public were continually making the following demands:

(1) That all rates, both freight and passenger, should be reduced to the figure considered reasonable by themselves.

(2) That all services should be much improved in every way, not only as to class of accommodation required but also to the extent of removing necessary regulations, such as demurrage, storage charges on unconsigned or uncollected goods, insurance charges for valuable goods and most other necessary regulations for the protection of the interests of the concern.

(3) That all rates should be on the ton-mile basis for all articles when this would be favorable to a particular district when compared with the existing rates to some other district, but vice versa when more advantageous; this quite irrespective of the physical characteristics of two sections of the line, etc.

(4) Perpetual agitation for branch lines into unremunerative districts, very largely for the reason that some other parish had a branch line—the line of argument advanced as regards navy dockyards in the United States.

These same arguments are further used by the politicians for their own purposes, to which they add the cry that all railway employes are underpaid.

Add to this the opinion held by most government employes that the Government's dollar bill is only worth about eighty cents in equivalent work, and that they are of inalienable right entitled to many concessions which they would not expect with a first-class company, and it is evident that that much abused ideal "efficiency" becomes unattainable under such conditions.

I quite admit that the concern of which I have had experience is microscopic in magnitude compared with any large company, but the point of view of mankind as to desiring something at the other fellow's expense is universal.

Aside from the impossibility of comparing railway operations in one country with those in another excepting on very general lines it always has seemed to me that no comparisons of rates could be made unless the differences in the value of money in the corresponding countries was also taken into account. Taking passenger fares, for example, the following rough tabulation will illustrate the point:

Country	Av. rate per mile. Cents	Av. laborer's wage per day	Miles possible to travel for one day's wage. Miles
United States ...	2	$1.50	75
England	2 (3rd cl.)	.75	37.5
Germany	1 (4th cl.)	.50	50
British India	0.5 (3rd cl.)	.08	16

The usual statement by "popular" writers and many others is that the rate in England and the United States is the same, whereas traveling for a laborer is twice as cheap in the United States as in England. I do not advance these figures as exact, but only to illustrate the necessity of a common unit of comparison.

To Prosecute Trespassers.

(From the "Santa Fe Magazine.")

AT last the public conscience in the State of Illinois has been awakened to the responsibility which rests upon the governmental powers in the matter of railroad trespassing. According to a statement made by James E. Quan, chairman of the Public Utilities Commission of Illinois, trespassers on railroad tracks in Illinois will be arrested and prosecuted from now on.

With the consent of Governor Dunne the Commission will instruct municipal and railroad authorities to arrest all trespassers. It is believed when the people realize they will be fined for walking the tracks they will cease to take such dangerous cutoffs, and the common practice of track walking will be eliminated. Figures prove that more than half the people killed by the railroads in the United States are trespassers.

A general campaign will be waged to educate the public on the danger of grade crossings and to teach them to heed the railroad danger and warning signs.

It is rather a strange commentary on human nature that individuals must be penalized as a matter of self-protection, but there is a take-a-chance element in most of us that needs must be tamed either by actual injury or by the law, and the thought of a pecuniary fine or other punishment, with a certain degree of humiliation attached, is far more terrifying to the average person than the possibility of injury.

A resume of the laws existing in the different states covering this important phase of transgression will be of interest here:

In New York all persons, excepting those connected with or employed upon a railroad, are prohibited from walking upon or along its tracks, excepting where the tracks are laid across or along streets or highways.

In Wisconsin it is declared to be unlawful for any person to walk along a railway track, but no penalty is provided for violating the statute.

In Virginia persons are prohibited from being on a track within one hundred yards of an approaching train otherwise than in passing over the railway at a public or private crossing.

In Missouri it is provided that any person who is injured while walking without right on a railway track shall be deemed to have committed a trespass in any action brought by him on account of such injury, but the courts of Missouri have practically nullified this statute, and there is no specific prohibition of mere trespassing.

In Indiana any person who is unlawfully on, or is about to enter unlawfully upon, the property of a railway, shall be notified to depart by the company's agent, and, if he refuses to do so, shall be guilty of a misdemeanor and on conviction shall forfeit not less than $5 nor more than $50. This law is very defective because of the provision that notice must be given to the person before his trespassing can be punished.

In New Hampshire it is provided that "if any person shall without right enter upon or remain on any right of way, track yard, station ground, bridge, depot or other building of any railway when notice has been posted forbidding such trespassing, he may be fined not exceeding $20, and no right to enter or be upon any railroad track shall be implied from custom or use, however long continued." It is further provided that if any person shall be injured while violating this act, neither he nor his executors or administrators shall have any cause for action against the railroad company for damages arising from such injury unless the injury is occasioned by the wilful or gross negligence of the railroad or its employes.

In Maine it is provided that no railroad corporation shall be liable for the death of a person walking or being on its road contrary to the law or to its valid rules and regulations. It is further provided that whoever without right trespasses on a railway track or other property shall forfeit not less than $5 nor more than $20. Railways are required to keep the section containing this latter provision posted in a conspicuous place in every passenger station, and for neglect thereof may be fined $100.

The New Jersey law prohibits any person but an employe from walking along railroad tracks, and any person who is injured while violating this provision cannot recover damages.

Massachusetts provides that whoever without right knowingly stands or walks on a railroad track shall forfeit not less than $5 nor more than $50, and the Rhode Island law is similar.

The foregoing summarizes the provisions of all the state laws that can be found that deal with the specific subject of railway trespassing. It leaves thirty-eight states mute on this subject, and a general awakening on the part of the law enforcers throughout the country is greatly to be desired. But, even in those states where there are laws against trespassing, offenders too frequently are dismissed without punishment after the railroad special officers have gone to the trouble to arrest and prosecute them. This feature is very discouraging to railroadmen.

Governor Dunne, of Illinois, has set an excellent example, which we trust other state executives will not be slow to emulate.

Personal

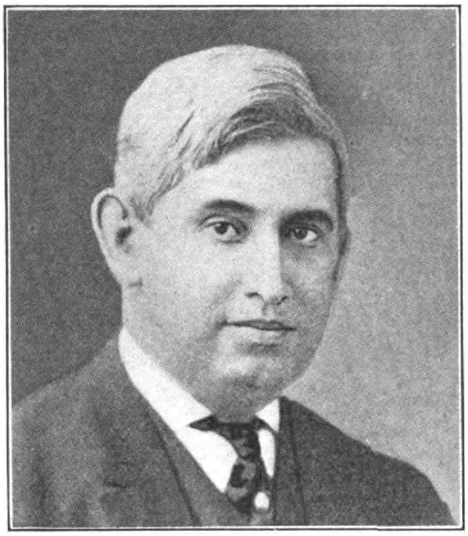
Hale Holden.

HALE HOLDEN, who has been elected president of the Chicago, Burlington and Quincy Railroad, was born August 11, 1869, in Kansas City, Mo. After receiving an education at Williams College and the Harvard Law School, he began the practice of law in Kansas City, and in 1907, became identified with the legal affairs of the Chicago, Burlington and Quincy. Mr. Holden conducted many important litigations for this railroad and his success was of such a profound character that he was appointed assistant to the president in 1910. Two years later, he was elected vice-president, which position he occupied at the time of his recent election to the presidency.

HALE HOLDEN.

Harry R. Kurrie.

HARRY R. KURRIE, who has recently been elected president of the Chicago, Indianapolis and Louisville Railway, was born in Indiana, in 1875. After graduating from the Indiana University, he began the practice of law at Rensselaer, Ind. Afterwards, on February 10, 1902, he was appointed general solicitor of the Chicago, Indianapolis and Louisville, and was

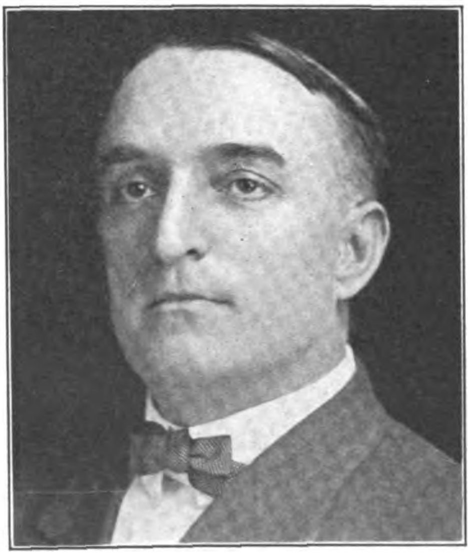


Harry R. Kubrie.

made general attorney of the same road in January, 1910, which position he held at the time of his recent election. He succeeds Mr. F. A. Delano who, as reported in a previous issue of the "Railway World" resigned to become vice-chairman of the Federal Reserve Board.

E. A. Bynum.

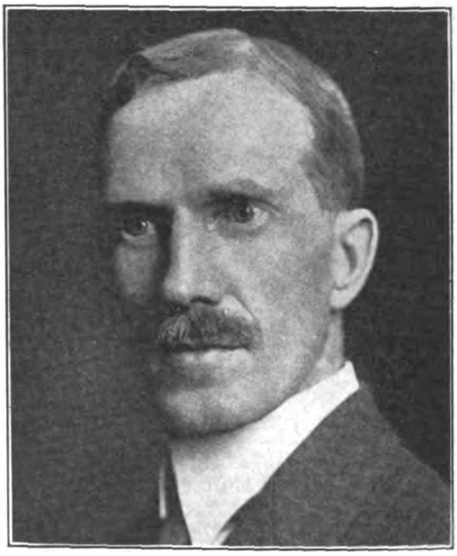
E. A. BYNUM, who has recently been appointed vice-president and general manager of the Texas City Terminal Company, began his railroad career in the service of the Baltimore and Ohio Southwestern at Louisville. In 1885, he went to the Illinois Central road at New Orleans, serving in various capacities with that road and with the Yazoo and Mississippi Valley Railroad for eight years. In 1894, he entered the freight department of the Texas and Pacific, two years later returning to the Illinois Central where he became associated with the foreign freight department in which he occupied various positions for nine years. After serving a total of seventeen years with the Illinois Central, he was appointed joint agent for the New Orleans Terminal Company, the New Orleans and Northeastern Railroad and the St. Louis and San Francisco Railroad in charge of the Chalmette Terminals. After serving three and one-half years in this capacity, he was appointed assistant general freight agent of the Mobile and Ohio Railroad and held this position at the time of his recent appointment.



E. A. Bynum.

William C. Tompkins.

BRIEF reference was made last month to the promotion of Mr. William C. Tompkins, to the position of assistant to the vice-president of the Grand Trunk Railway Company. Mr. Tompkins who entered the Grand Trunk services in 1885, has been in the continuous employ of this company during the past twenty-nine years.



W. C. Tompkins.

Frank B. Townsend.

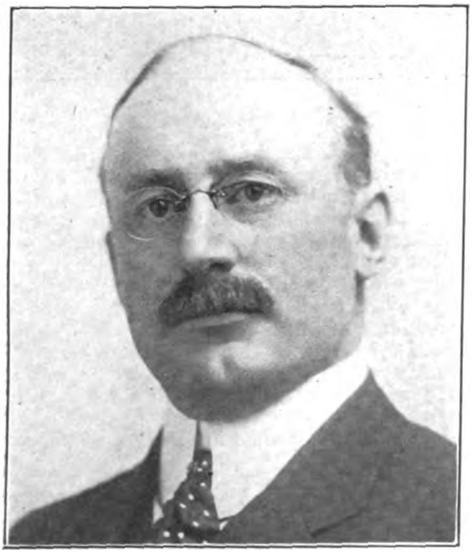
FRANK B. TOWNSEND, who has recently been appointed traffic manager of the Minneapolis and St. Louis Railroad with headquarters at Minneapolis, was born October 22, 1875, at Kirbyville, Mo. He entered railway service February, 1892, and until 1904, was in accounting and traffic departments, Iowa Central Railway, at Marshalltown, Iowa, and Peoria, Ill., with exception of one year during which time he served in United State and Cuba as Regimental Sergeant Major, 49th Iowa Infantry Volunteers, during Spanish-American war, since which he has been consecutively, July, 1904, to February, 1906, traveling freight agent, Minneapolis & St. Louis R. R. and Iowa Cen-

Frank B. Townsend.

tral Ry., at Indianapolis, Ind.; December, 1906, to December 31, 1908, commercial agent, same lines at Indianapolis, Ind.; January 1, 1909, to December 31, 1909, general agent, same lines at Chicago, Ill.; January 1, 1910, to December 31, 1911, coal freight agent, same lines, also Chicago & Alton R. R. and Toleda, St. Louis & Western R. R., at Chicago, Ill.; January 1, 1911, to July 31, 1914, assistant general freight agent, Minneapolis & St. Louis R. R., at Minneapolis, Minn.; appointed traffic manager, Minneapolis & St. Louis R. R., at Minneapolis, Minn., August 1, 1914.

R. E. Larmour.

R. E. LARMOUR, who has recently been made assistant general freight agent of the Canadian Pacific Railway Company, entered the service of the Grand Trunk Railway as clerk in the superintendent's office at Stratford, Ont., in 1884. In 1886, he was transferred to Detroit as clerk in the manager's office of the Great Eastern Fast Freight Line, and later in the same year, became clerk in the general superintendent's office of the Chicago and Grand Trunk Railway at Detroit. In 1898, he was appointed chief clerk of the local freight office at Fort William, Ont., and in 1902, agent of the Canadian Pacific Railroad at Port Arthur, Ont. In the latter year he became freight claim agent of the same road with headquarters at Vancouver, B. C., and in 1904, was transferred to Winnipeg, Man. In 1905, he was appointed city freight agent at Winnipeg, Man., which position he held until May, 1906, when he was promoted to the position of general agent, with headquarters at Fort William, Ont. From July, 1907, until July, 1914, he was division freight agent at various localities including Nelson, B. C., Winnipeg, Man., and Vancouver, B. C. It was while acting in this position at Vancouver that he was appointed general freight agent as above recorded.

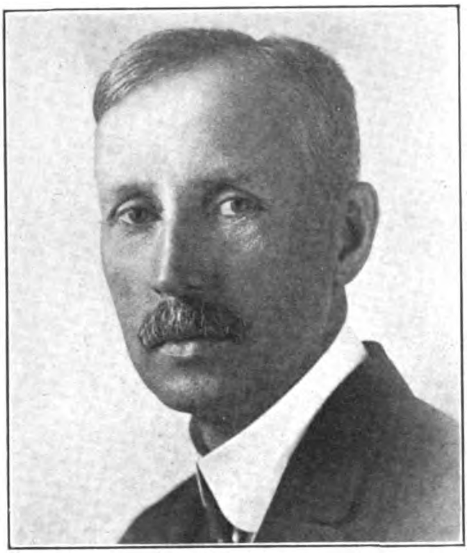


R. E. Larmour.

Frank Scott,
Who as Recorded in Last Month's Issue Has Been Elected Vice-President and Treasurer of the Grand Trunk Railway.

David Crombie.

DAVID CROMBIE, who has recently been appointed superintendent of transportation of the Eastern lines of the Canadian Northern, with headquarters at Toronto, Ont., was born in 1864, at Hamilton, Ont., and was educated in the public schools. He began railway work in 1882 with the Grand Trunk, and previous to 1890 was operator, agent, and train despatcher on that road. He then served as train despatcher and car service agent on the Flint & Pere Marquette at Saginaw, Mich., until 1900, when he became superintendent of transportation at Detroit of its successor the Pere Marquette. From 1903, to 1907, he was out of railway service, and in the latter year went to the Grand Trunk as master of transportation. Three years later he

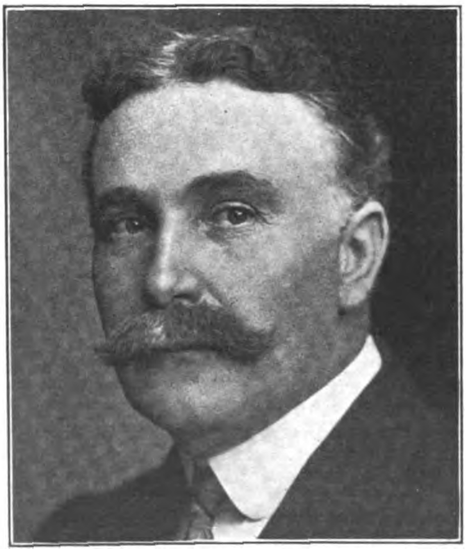


David Crombie.

was appointed assistant to general transportation manager, and in 1912, was made assistant to vice-president, remaining in that position until January, 1913, when he was made general superintendent of transportation of the same road. In August of the same year, he returned to the service of the Pere Marquette as inspector of transportation at Detroit, and in May, 1914, was appointed inspector of transportation of the Canadian Northern, which position he held at the time of his recent appointment.

Rutledge Smith.

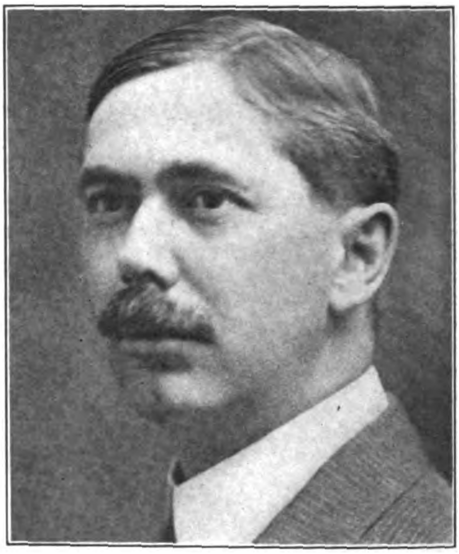
RUTLEDGE SMITH, who has recently been appointed superintendent of the Tennessee Central Railroad Company, with headquarters at Nashville, Tenn., was born on August 1, 1870, at Cookville, Tenn. Before engaging in railway work, Mr. Smith was engaged in private enterprises of various kinds including the establishment in 1887 and the development of the Cookville press, of which he has been publisher and owner ever since. He has also been manager of the Southern Press Syndicate, chairman of the Tennessee Press Association, cashier and president of the People's Bank of Cookville, assistant superintendent of public instruction of Tennessee and connected in various official capacities in the capitol at Washington City. He entered railway service on March 6, 1911, as industrial agent for the Tennessee Central Railroad and on March 1, 1913, was appointed general agent for the receivers and occupied this position when recently appointed superintendent. He still retains, however, his position as general agent.



Rutledge Smith.

C. B. Williams.

C. B. WILLIAMS, who on September 1st, was appointed purchasing agent of the Central Railroad of New Jersey with office at New York City, was born at Beech Creek, Pa., March 22, 1873. He entered railway service in 1890, in the employ of the Beech Creek Railway, now the Pennsylvania division of the New York Central and Hudson River. In 1893, he was transferred to the general offices of the Central Railroad of Pennsylvania as stenographer and chief clerk to the general superintendent, which position he held until February 1, 1900, when he became chief clerk to the superintendent of motive power of the Central Railroad of New Jersey with headquarters at Jersey City. On September 1, 1908, he was appointed general storekeeper with office at Elizabethport, N. J., which position he held at the time of his recent promotion to that of purchasing agent.



C. B. Williams.

Truman P. Gaylord.

TRUMAN P. GAYLORD, who has been elected acting vice-president of the Westinghouse Electric and Manufacturing Company, was born at Shelby, Mich., and attended preparatory school at Allen Academy, Chicago. He subsequently attended the University of Michigan, and in 1895 received the degree of Electric Engineer from the Armour Institute of Technology, Chicago.

Mr. Gaylord was engineer of underground construction during the World's Fair at Chicago, 1892-3.

At the close of the Fair he became assistant professor of Electrical Engineering in the Armour Institute, which position he retained until 1898, when he became associated with the Commonwealth Edison Company, of Chicago, as electrical engineer.

In July, 1899, he entered the employ of the Westinghouse Electric & Mfg. Company as a salesman, following this line of work until 1902, at which time he was appointed district manager of the Electric Company in Chicago, which position he held until the time of his election as acting vice-president.

Mr. Gaylord is a member of the American Institute of Electrical Engineers, the National Electric Light Association, and is closely identified with a number of other engineering societies.

Henry D. Shute.

HENRY D. SHUTE.

HENRY D. SHUTE, who has recently been elected treasurer of the Westinghouse Electric and Manufacturing Company, was born at Somerville, Mass. He attended high school in Boston and graduated from Massachusetts Institute of Technology in 1892, with the degree of Bachelor of Science in Electrical Engineering. Following his graduation he spent a year in Germany at the School of Mines, Clausthal and also in Dresden.

In 1893, he entered the works of the Westinghouse Electric Company at Pittsburgh, as an apprentice and spent his first two years in the testing department, following which he was engaged for a considerable time in erection and laboratory work under the direction of Messrs. Chas. F. Scott and Lewis B. Stillwell, and later as assistant foreman.

He entered the Engineering Department in 1897, and one year later was transferred to the Commercial Department. In 1901 he was appointed the head of the Alternating Current Division thereof. Two years later he was promoted to the position of assistant to Vice-President L. A. Osborne, in which position he was particularly active in the development of the heavy electric traction and single-phase railway work.

In 1910, Mr. Shute succeeded Mr. Walter McFarland as acting vice-president of the company, which position he held until his election as treasurer of the company.

Mr. Shute is a member of the American Institute of Electrical Engineers, the National Electric Light Association, Engineers' Club of New York, is a director of the Pittsburgh Chamber of Commerce and is closely identified with a number of other technical and social organizations.

Obituary

Darius Miller.

DARIUS MILLER, president of the Burlington road, died on August 23rd at Glacier Park, Montana, following an operation for appendicitis. He was born in Princeton, Illinois, on April 3rd, 1859, and is survived by his wife, Mrs. Sue Brown Miller, and his mother, Mrs. John S. Miller. His entire life was spent in railroad service, beginning as a stenographer in the offices of the Michigan Central in Chicago in 1877, and ending as the president of one of the greatest of our railroads and a power in the business organization of the country.

The intermediate steps in his rise illustrate the ability and ambition with which he was endowed. From the position of chief clerk to general manager of the Memphis & Little Rock road he was in 1883 made general freight and passenger agent of the same line, and subsequently went with the St. Louis, Arkansas & Texas Railway in the same capacity. His first "big job" was that of traffic manager of the Queen & Crescent Route, which he reached in 1890, at the age of 31 years. After holding that place for two years and one-half he became traffic manager for the Missouri, Kansas & Texas Railway, and later from 1896 to 1898 was vice-president of that road. During that period his work attracted the attention of Mr. James J. Hill, and in November, 1898, he was called to be second vice-president of the Great Northern Railway, where he remained for three years, until the Burlington was purchased jointly by the Great Northern and Northern Pacific, when he was made first vice-president of that road, in charge of traffic, which position he retained until his election as president, in January, 1910.

No man can look back on his business career

DARIUS MILLER.

with more pride and less regret than could Mr. Miller. Every act was taken with keen regard to the rights of his associates and his duty as a citizen. It is seldom that a man leaves so many friends. The high honors and preferment that came to him later in life served only to make him more kindly and considerate; even when the press of affairs was strongest, his door was always open to the friend in need of help or advice.

Some of the peculiarities of his career were the entire lack of ostentation in his methods of arriving at results, his amazing ability to inspire his subordinates to their best efforts and the great regard in which his judgment was held by all who knew him well.

Luther S. Anderson, former treasurer and purchasing agent of the Union Pacific R. R., died September 8th, at Quincy, Mass.

Edward P. Amory, secretary of the Western Railroad Association, at Chicago, was found murdered in his office in Chicago on August 12th.

Frank Barr, formerly vice-president and general manager of the Boston & Maine, died recently at Winchester, Mass., at the age of 62. Mr. Barr was born at Nashua, N. H., and began railway work on March 1, 1869, as freight clerk and telegraph operator on the Worcester & Nashua, now a part of the Boston & Maine. From June, 1873, to November, 1892, he was general agent of the same road, and in November, 1892, was appointed superintendent of the Worcester, Nashua & Portland division of the Boston & Maine, at Nashua, N. H. He was promoted to assistant general manager in December, 1896, remaining in that position until July, 1903, when he was elected third vice-president and general manager of the same road, and in July, 1912, Mr. Barr was retired under the pension rules of the company.

Isaac Duell Bartin, formerly from 1881 to 1892, general superintendent of the Long Island, died on August 21st, at his home in Flushing, N. Y., at the age of eighty. He began railway work in 1852, as a station agent on the New York & Harlem, now a part of the New York Central and Hudson River, and was then consecutively freight conductor, passenger conductor, general freight agent and assistant superintendent of the same road. He was then superintendent of the Long Island, and subsequently became superintendent of the United States Rolling Stock Company. He then served consecutively as general superintendent of the Atlantic & Great Western, superintendent of the North Shore & Central of Long Island, superintendent of construction of the Manhattan Beach Railroad, general superintendent of the Indiana, Bloomington & Western, and general superintendent of the Manhattan Beach Railroad. On January 1, 1881, he was appointed general superintendent of the Long Island, remaining in that position until January, 1892, and then was general superintendent of the New York & New England. Mr. Bartin was general superintendent of the Brooklyn Elevated Railroad from February, 1894 to 1900, and then returned from active service.

James Thomas Byrne, until recently vice-president and superintendent of the Texas & Gulf, with office at Longview, Tex., died on August 7th, at Temple, Tex. He was born on February 26, 1865, and received a common school education. He began railway work on August 1, 1880, as an axman on an engineering corps of the Chicago & North Western. He was then consecutively laborer, section foreman, and steel gang foreman on the same road, and brakeman, fireman, conductor and telegraph operator on the Missouri Pacific and the St. Louis, Iron Mountain & Southern. He then served as telegraph operator on various roads until his appointment in November, 1887, as trainmaster's clerk on the Gulf, Colorado & Santa Fe. He was then consecutively train despatcher, chief train despatcher, trainmaster and assistant trainmaster on the same road, until August, 1908, when he was elected vice-president and superintendent of the Texas & Gulf.

William Henry Chambers, controller of the Florida East Coast, with office at St. Augustine, Fla., died recently in London, Eng. Mr. Chambers was born on September 25, 1852, at Dublin, Ireland, and began railway work in 1871, as a clerk in the freight department of the London & North Western, and afterwards was assistant ticket agent at Dublin of the same road. Previous to 1887, he was claim clerk of the Savannah, Florida & Western, now a part of the Atlantic Coast Line, at Jacksonville, Fla. He was subsequently, for about a year, auditor of the St. Augustine & Palatka, now a part of the Florida East Coast, and from 1888, to 1892, was chief clerk and cashier of the Jacksonville, St. Augustine & Halifax River. He was then to January, 1901, auditor, and since that time was controller of the same road and its successor, the Florida East Coast.

William E. Harwig, formerly from 1902 to 1912 supervisor of bridges and buildings on the Lehigh Valley, died on August 24th, at his home in

Phillipsburg, N. J. Mr. Harwig entered the service of the Lehigh Valley in 1878, and about two years ago left that company to become supervisor of bridges and buildings on the Lehigh & New England.

William B. Jones, former superintendent of the Chicago, Indianapolis & Louisville Railway, died recently at Lafayette, Ind.

Jacob C. Miller, formerly master mechanic of the Eastern district of the Chicago, Milwaukee & St. Paul, died suddenly on July 25th, at his summer camp on Tomahawk Lake, Minocqua, Wis., from apoplexy, aged 61 year. He retired from active railway service February 1, 1910, since which time he had been living at Maywood, Ill.

Joseph Gladding Panghorn, special representative of the Baltimore & Ohio R. R., and chairman of the company's general safety committee, died in Baltimore, August 15th. Major Pangborn was 70 years old. He was born at Albany, N. Y., April 9, 1844. At the outbreak of the Civil War, Major Pangborn, while attending the public schools of his native city, enlisted in the Forty-fourth New York Volunteer infantry as a drummer boy and served throughout the war with distinction. Toward the close of the war Major Pangborn was transferred to the cavalry division of the army and was mustered out of service at San Antonio, Texas. He was for some time in newspaper work. He resigned as editor of the Kansas City "Times" to enter the employ of the Atchison, Topeka & Santa Fe Ry., and was active in securing the right of way through the Grand canyon of the Colorado. He left the Santa Fe to go with the Baltimore & Ohio R. R., in May, 1880, as general advertising agent. He continued this work as assistant general passenger agent. For a while Major Pangborn was out of railroad work and was engaged in the advertising business with a Baltimore company, which manufactured a patent remedy. He next organized a syndicate and published a newspaper supplement for Sunday papers, having been the originator of the Sunday magazine section of the newspapers. Returning to the Baltimore & Ohio, Major Pangborn gathered the historical collection of old railroad engines, cars and appliances in their original form and reproductions and was in charge of the exhibit made at the World's Fair in Chicago, in 1893. At the close of the World's Fair the exhibit was loaned to the Field museum, and Major Pangborn started on a tour of the world as the director of the commission of the World's Rail Way. At the close of the St. Louis exposition, where he had charge of the exhibit of the Baltimore & Ohio, Major Pangborn became special representative of President Oscar G. Murray. He continued in his position under President Willard, and several months ago the general safety committee was put in his charge as chairman. Aside from his railroad activities and close identity with the affairs of his city, Major Pangborn possessed a human side of his character which made him popular with all classes. His favorite relaxation from business was that of helping deserving and ambitious young men and boys to succeed. The career of Major Pangborn as a soldier, journalist, railroad official .author, globe trotter, friend of royalty, welfare worker and man of affairs was tinged with all of the romance of fiction, and few Americans have had more varied experience crowded into life. Among other books by Major Pangborn were: "Which—The Cross or the Pound," a study of the customs of the people of India; "The History of the World's Rail Way," "Sidelights on the World's Systems of Railways," and numerous articles about his travels throughout the world.

D. M. Philbin, formerly general superintendent of the Lake District of the Great Northern and president of the Lake Superior Terminal & Transfer Railway, died in Duluth, Minn., August 6th, aged 57 years. Mr. Philbin had been in railway service since 1874. From 1890 to 1893, he was superintendent of the Duluth, South Shore & Atlantic and the following three years was general manager of the Duluth, Missabe & Northern. He was then general superintendent of the Duluth & Winnipeg until June, 1898, when he became second vice-president of the Eastern Railway of Minnesota, of which road he also was superintendent from June, 1898, to April, 1903. On the latter date he was appointed assistant general superintendent of the Great Northern and in 1906 he became general superintendent of the Lake District, which position he resigned December 31, 1913, on account of ill health.

John Player, formerly superintendent of machinery of the Atchison, Topeka & Santa Fe, died at Chicago on August 14, aged 67 years. Mr. Player began railway work in June, 1873, and until September, 1887, was with the Central Iowa consecutively as machinist, general foreman of shops, master mechanic and also in charge of the car department. He then became superintendent of motive power of the Wisconsin Central, leaving that road in June, 1890, to go to the Atchison, Topeka & Santa Fe as superintendent of machinery, which position he held until January, 1902, when he was appointed consulting superintendent of motive power. In June of that year he retired from active railway service on account of ill health.

Paul P. Rainer, superintendent of the joint rate inspection bureau, with headquarters at Chicago, died at Brockville, Ont., on September 8th.

Francis B. Sears, formerly vice-president and director of the Chattahoochee Valley, died on August 26th, at his summer home in Weston, Mass., at the age of 65.

Richard F. Stevens, formerly secretary and treasurer of the Camden & Amboy, now a part of the Pennsylvania Railroad, died recently at his home in South Orange, N. J., at the age of 82.

Daniel E. Sullivan, formerly master mechanic of the Union Pacific at Cheyenne, Wyo., died at Ogden, Utah, on August 20th, aged 60 years. He was employed by the Union Pacific for 34 years, retiring July 1st last, on account of illness.

William Tinkham, formerly president of the Providence & Springfield, now a part of the New York, New Haven & Hartford, died on August 20th, at Providence, R. I., at the age of 92.

Report of the Joint Congressional Committee on Railway Mail Pay

Editorial Note:—The following paragraphs constitute an abstract of the report submitted to Congress on August 31st, by the Joint Congressional Committee on Railway Mail Pay. After an exhaustive investigation, this Committee finds that the rate of pay for carrying the mails at the present time is wholly inadequate and that immediate steps should be taken to properly compensate the carriers for this service.

IN its final report the Joint Congressional Committee on Railway Mail Pay, recommends enactment of a bill which will increase the annual mail compensation of the railroads about $3,000,000 as compared with the compensation carried in the appropriation bill for the present fiscal year. The report recommends a space basis plan worked out by the Committee.

The Joint Committee expresses the opinion that the railroads should receive for mail transportation a rate that will yield them a car-mile revenue approximately the same as received from passenger transportation, because mail service is coincident with passenger service in speed, regularity, frequency and safety, and, therefore the cost of mail service is approximately the same per car-mile as the cost of passenger service. The rates recommended by the Committee will yield an average of 24.22 cents per 60-foot car mile, while the average return from passenger traffic is slightly over 26 cents per car mile. The proposed rates are as follows:

	Line charge per mile	Terminal charge per round trip
60 ft. R. P. O. or storage car	$0.21	$8.50
30 ft. apartment car	.11	5.50
15 ft. apartment car	.06	4.00
Closed Pouch		
7 ft.	.03	1.00
3 ft.	.015	.50

The bill provides that after the new plan has been in force two years, either the postmaster general or railroads representing not less than 25 per cent of the total mail-carrying mileage, may have the justness and reasonableness of the rates tested in an investigation before the Interstate Commerce Commission.

The report says that express and mail services performed by the railroads are so different in many respects, and reliable data regarding the two services are so incomplete, that no satisfactory comparison can be made. The passenger traffic, rather than express, is made the gauge of mail compensation. It is assumed that passenger rates are not too high as they have stood the tests of legislatures, railroad commissions and courts.

In a letter submitting the report to the Committee, the chairman, Hon. Jonathan Bourne, Jr., makes caustic comments upon what he denominates the "vacillating attitude" of the Post Office Department on this subject. He calls attention to the fact that in 1911, Postmaster General Hitchcock submitted a plan for railway mail pay and recommended it as scientific and businesslike and strongly urged its immediate enactment; that this plan was modified in important particulars in January, 1912, that an entirely different plan was submitted and recommended for enactment by Postmaster General Burleson in January, 1914, and that the Department had finally given its approval to a fourth plan which had been submitted to the House.

Mr. Bourne states that delay in completing the work and submitting the report of the Committee has been due in large part to the inadequacy of the departmental data regarding railway mail problems and also to its vacillating policy. He says:

> "While I recognized the desirability of an expeditious conclusion to our work, I believed it more important that we should do our work thoroughly than that we should conclude it quickly. I should regret extremely and be deeply humiliated if our investigation had resulted, as did that of the Post Office Department, in our changing our attitude three times and advocating four radically different measures. We should certainly forfeit all claim to the confidence of Congress if we presented such a record of vacillation as did the Department. If, in our anxiety to be expeditious, we had repudiated three plans we had evolved, upon what theory could we expect Congress to believe that we would for any considerable length of time, continue to advocate any new plan we might recommend?"

In the body of the report there are similar criticisms of the Department with citations of inconsistent statistics submitted by the Department, the most important of which is the quotation of estimates of overpay of the railroads varying from $10,531,792 down to $221,832. Quotations are made from reports of previous investigations to show that Departmental statistics have been found unreliable in the past.

The bill submitted by the Joint Congressional Committee differs from all the bills recommended by the Department. The report condemns what it calls "greed for power," cites instances of abuse of such power as in the order of the Department which sent some magazines by freight while rival magazines were transported by mail, and after quoting from one of the Department's recommended bills which gave the Postmaster General power to fix the mail pay rates on ninety per cent of the weight of mail, says:

> "Unless confronted by the record of its recommendations, we would be loath to believe that any administrative Department could presume to ask such a delegation of power from an intelligent, self-respecting, legislative body imbued with a fair appreciation of its own functions.
>
> "In view of the evidence, which is submitted on pages 111-117 of this report, showing the inability of the Department to procure

and present reliable statistics regarding its own operations, it is difficult to conceive how the Department could imagine itself competent to make an apportionment of expenses as among passengers, express and mail."

All members of the Committee join in the report so far as it relates to findings of fact and construction of the bill, but Senators Bankhead and Weeks and Congressmen Lloyd and Tuttle dissent from the chairman's criticisms of the Post Office Department.

The report closes with an itemized account of the expenditures of the Committee showing that out of an appropriation of $25,000 it expended $6,560. Two members of the Committee, former Senators Bourne and Richardson, whose terms expired in March, 1913, have served since that time without compensation and paid their own expenses.

Government Ownership of Railways

By LOGAN G. McPHERSON

Lecturer on Transportation, Johns Hopkins University.

POLITICAL government originally had its basis in combination for offense and defence. It is not a direct instrument in the production of the wealth by which it is maintained, but collects taxes for its maintenance. Although one government and another at one time and another have engaged directly to a greater or lesser extent in the processes of industry and commerce, a prime distinction between the political activities and the economic activities is that the former are not engaged in the production of wealth, while the latter are.

The mechanism of industry and commerce, money, instruments of exchange, banks, bank deposits, deeds, leases, the contractual relations between employer and employee, landlord and tenant, are the product of an evolution that has been subject to limitations of a different nature and in a measure apart from those that have affected governmental development. The underlying effort of all industry and commerce is to make "two blades of grass grow where but one grew before," or at least to see that "a new dollar is returned for the dollar that is expended." The political government has been under no necessity of making its activity immediately productive. To it, making both ends meet means no more than the levying of taxes sufficient to meet the expenditures. Many governmental organizations having the taxing power, including even some of the national governments, in recent years have seriously had to consider whether the economic sources of taxation could stand the further strain necessary to provide means for desired expenditure. In many cases projects have had to be abandoned.

The science of political government has been the development of many centuries; the science of economics, which deals with the production and distribution of wealth, is little more than one hundred years old. The first book that deserves to be considered as a scientific treatise on political economy was published in the same year that the United Colonies declared their independence of Great Britain. Agriculture had been the chief industry of nearly all nations; the use of coal had hardly begun; there was but little organization of manufacture, which was virtually all the product of handicraft.

The present Constitution of the United States was adopted, the government under which we now live was established, before that use of steam which is the basis of our industrial and economic status. It was another half century before there came into anything like general use the art of double-entry bookkeeping, the development of which has alone made it possible to ascertain with definiteness whether a dollar expended brings a dollar or more in return.

Now this is an important fact, the underlying fact in any consideration of individual wealth, of partnership wealth, of corporate wealth, of national wealth. If the individual spends more than his income he suffers material loss; continuance in this course will make him a bankrupt and finally a pauper. If a firm or a corporation is able to produce year after year only a loss instead of a profit, a deficit instead of a surplus, it must ultimately become bankrupt and go out of existence. This means that its capital has been dissipated, and capital is the surplus of past production which is needed that there may be future production. It is likewise with the nation. If the total of the production of a people does not exceed the total expenditure, that people will stagnate and ultimately the nation will decay.

This leads to the perception that not only must every dollar expended bring a dollar or more in return, but that all of that return must not be immediately consumed. Part of it must be utilized in the provision of the means for further production; that is, part of it must be utilized as capital.

Now it will hardly be denied that the mainspring of that activity which has led to advance in the political government and the mainspring of that activity which has led to advance in the economic status mainly have been set in action by selfishness. The feudal barons and their followers fought to protect themselves and to extend their sway. They were subdued and welded into nations by the conquerors who fought for power. After power was attained the conqueror sometimes continued to be a despoiler, but often he became an upbuilder. Even Napoleon said that there could not be lasting power without justice. Even our revolutionary heroes were not entirely altruistic in fighting to achieve the political independence of this nation. They were fighting for the political freedom which would give them relief from governmental exaction.

The endeavor to obtain from each dollar expended more than a dollar in return was originally prompted by the desire for gain, the desire for gain on the part of the individual. But as monarch after monarch after attaining power has given proof of his desire to bring about improvement in the lot of the people, so also have merchant and manufacturer after success in the struggle for economic independence given much of their effort to bettering the conditions of their fellowmen.

---

*A lecture delivered in May, 1914.

The science of political economy, which treats of the way that the world makes a living, is anything even as yet but an exact science. There are not as yet satisfactory and accepted definitions of such fundamental terms as wealth and capital. Theories of value, of wages, of profit, and of interest, are still in dispute. But in the material world men keep on working for wages and salaries and profits, many of them with an interest in the work that transcends the reward, but more perhaps because of the reward. Merchants, manufacturers, and bankers play their parts, many with motives above that of the desire to gain, but still perhaps in the overwhelmingly greater number of cases the desire for gain is the impelling motive.

The desire for profit means that for every dollar expended there must be obtained more than a dollar in return. Were it not for this result there would be no accumulation of capital and the processes of industry and commerce would stop. This desire for gain leads on the whole to the employment of those who are best fitted for their tasks, to the weeding out of the stupid, the lazy, the intemperate. It leads on the whole to the adoption of new inventions and appliances through which production can be more economically effected and to production at the best adapted locality.

It is peculiarly the function of the banker to see that money is not invested except where it will bring return, and this has led to the scrutiny of the security, of the integrity, of the ability, and of the habits of those who apply for capital. The channels through which capital is conserved, through which the processes of industry and commerce are maintained and advanced, all tend to the elimination of the unfit, to the rise of the capable and honest to the positions of direction and responsibility, to the relegation of the less capable to subordinate positions in accordance with their capability. It is not only those who work and save and invest who have an immediate interest in the return of more than a dollar for every dollar expended, but the whole nation has an interest for it is alone from the product of those who work and save and invest that the vast expenditures of the nation, the states, the counties and municipalities can be met; and it is alone from the product of those who work and save and invest that are supported the infirm, the decrepit, the physical and mental defectives, the ne'er-do-well, the unemployable, and the criminal. In the world of business the man has no place above the dollar unless he can demonstrate that he is worth more than a dollar. The business of the country is carried on by those who demonstrate that they are worth more than the dollar, and it is they who support those who cannot demonstrate from an economic standpoint that they are worth even so much as a dollar.

What business is and what business does are, however, not clearly understood by all. Indeed they are widely misunderstood. There are comparatively few who understand that because a man has a large fortune it does not necessarily mean that men without such fortune are necessarily suffering deprivation; that on the contrary the control of the large fortune may mean investment in mines, mills and factories which give employment to thousands, provide the means for paying their wages, and produce the things of need to all people. It is not understood that, whereas large volumes of capital during the earlier period of our industrial and commercial development were frequently the result of the efforts of their immediate possessors who often had to work the harder the greater their fortunes, it is now almost invariably the case that a large volume of capital is formed of the contributors of many, even of thousands of investors, and is administered in their behalf by executives who frequently are not rich but have come to their positions because of demonstrated capacity for large-scale organization and administration. Thus the greater the extent to which the field of industry and commerce is occupied by corporations whose capital is widely distributed, the greater is the extent to which the field of industry and commerce becomes an industrial democracy with boards of directors chosen by vote of the investors, and with executives called to their positions because of their qualifications.

Obviously, it is those who are more successful in preventing the loss of capital who should be entrusted with its preservation, and those who are most successful in the use of capital who should be entrusted with its disposition. Only the few develop this ability, and they only through the experience and practice which lead to successful initiative and successful direction of the increasingly complex processes of industry and commerce. Enterprise, wide information, breadth of grasp, watchfulness of detail, judgment, the ability to choose capable men and give them constant direction are necessary. The very diffusion of thrift and energy, the increasing utilization of machinery, roll up capital from various sources in volume too large to be successfully utilized except by those of great grasp and administrative capacity.

As a rule it is the industrious, the thrifty, the prudent and intelligent who save by living within their income and avail of opportunities for the wise investment of their savings. It is such who under proper restriction ought to have the franchise in the industrial democracy.

The political democracy is differently constituted. Throughout the greater part of the United States every male adult, with the exception of certain defectives and criminals, has or may obtain the political franchise. The high average intelligence of the citizens of the United States has been the source of justifiable pride and has led the nation safely to ride the breakers, but still there have been deplorable mistakes. Of recent years some of the Southern States have established an educational and property qualification for the franchise. There is hardly anyone at this time who does not think that some such qualification ought to have been established immediately after the war before all the emancipated slaves were admitted to the franchise. Just as one example of the continuing effect of the precipitate action of that time may be cited the fact that in the city of Indianapolis, one of the fairest in the land, where social and business life is on a high plane, there are fifteen thousand negroes and these fifteen thousand negroes hold the balance of political power in that city.

Wherever the political boss has established supremacy it has been because of the great body of the ignorant and unscrupulous, whose vote has been gained, not because of appeals to their citizenship, but through the lure of immediate appeal to personal desire. This selfish appeal is not alone of the individual politician who seeks to obtain votes for himself. It is exemplified in the appeal which state legislatures and even the national legislature make to communities and to large organizations for the sake of retaining the hold of the party in power.

This country has many reasons to be proud of its government, but the methods by which it has expended the public money do not constitute one of them. The folly that has characterized many of the congressional appropriations for the improvement of waterways to enable them to carry traffic that never by any possibility will come to them, for the erection of public buildings for the purpose of enhancing the value of the real estate of a struggling town, and the ease with which millions after millions have been added to the pension roll, causing its aggregate to increase after the time when in the nature of things it ought to decrease, are known to all men. Such appropriations mean expenditure that is in utter disregard of sources of income. All sorts of committees initiate all sorts of expenditures and the wherewithal comes from taxation. States and municipalities add recklessly to the burdens of taxation, and yet the administration of most of our large cities is so far inferior to that of cities of corresponding size in Europe as to make their condition a reproach. The political administration in this country, whether of the nation, the states, or the municipalities, has to this time shown little regard, if any, for making even one blade of grass grow where one grew before, of obtaining even one dollar in return for the dollar expended. The financial record of the political government of this country is of appalling wastefulness.

As the franchise in this country is held by virtually all male adult citizens, it is but natural through governmental action benefits which they have not been able to secure for themselves. Manufacturers sought advantages through protective tariffs; railroad promoters sought vast grants of land. It has not been many years since it was the common belief that legislation was controlled by the men in charge of the large business interests and oftentimes by unworthy methods. Admitting that there was a large measure of foundation for this belief, it alone is a sad commentary upon the quality and the integrity of the men elevated to public office by the votes of their constituents.

Now the tables are turned. It is the organizations of great bodies of voters such as the trades unions that have lobbies at the Federal and State capitals, that negotiate with a candidate before his election as to what he will do in return for their vote, that send telegrams of congratulations to governors when they approve bills instigated by the labor organizations. In all such instigation there is no effort to cause two blades of grass to grow where but one grew before, to bring a dollar of return for a dollar expended.

It would seem, therefore, that the political democracy with universal male franchise and the industrial democracy composed of those who have contributed to the aggregate of capital are not pulling together. Even if the extreme assertion were to be admitted that the one is more concerned with the man and the other the more concerned with the dollar, there is yet never to be forgotten that the man is important and that the dollar also is important, that without sturdy and efficient men there could not be the production of wealth and that without wealth there could not be sturdy and efficient men.

That there have been evils and that there are evils in the industrial democracy as well as in the political democracy every one knows. As the leaders of the political democrocy have often sought to gain and retail political power through wasteful expenditure of the money provided by taxation, so also have leaders of the industrial democracy often sought to gain wealth through the ruthless exploitation of those who work for wage or salary.

Would the problem be solved, would the condition of the country be advanced, if the control of the processes of industry and commerce were placed with the political democracy to be immediately directed under the auspices of the office holders elected by the political democracy instead of the executives chosen by the industrial democracy? There is the alternative known as public regulation. There is an old saying that if you want a thing done right you must do it yourself. That dictum has a limited application to the things done wholly by oneself in one's own interest, and frequently does not hold good even within this limit. When it comes to administration, and especially to the direction on a large scale of the processes of a large organization, it is much easier to pick flaws than to perform, to criticise than to do, and this is the principal reason why it is better that the large business of this country be regulated by the people than administered by the people. The army and navy are large organizations to be sure, and are administered by the government, but they are not concerned with obtaining return for the money expended. The condition of the army at the beginning of the Spanish war did not afford a high testimonial to the efficiency of its administration, and it has often been claimed that there is log-rolling in connection with the navy-yards as well as in appropriations for government buildings.

As has time and again been pointed out, when a large organization is under the control and administration of a governmental body that administration is affected in many ways by political influence. The vigorous efforts of many years to place the employees of the federal government under the civil service have only been successful in part. When fault is found with a particular process of governmental administration there is likely to be a wrangle between the party in power that is responsible, and the party out of power that is looking for every opportunity to find fault. The governmental processes are so involved and there is such division of authority that definite responsibility is often, if not always, extremely difficult to place. The appeal is to the voters. If they uphold criticism to the extent of displacing the party in power there is a change of administrative officers, oftentimes a change in general administrative policy. and frequent changes in administrative policy and the personnel of administration usually do not bode well for efficiency.

On the other hand, a public regulatory body, especially an appointed commission of the type now exemplified by the Interstate Commerce Commission and railroad and public service commissions of many of the States, is far less responsive to political influence than a legislative body whose members are elected for short terms and persistently seek re-election. . Such a body may be an efficient critic and censor of the conduct of a business organization, even although its own organization be defective and poorly administered. With proper authority it can bring pressure to bear upon those actually charged with the administration of business organizations that will cause them to remedy abuses such as a political organization would have great difficulty in remedying within its own ranks.

The country is not at this time immediately confronted with the proposal that the government take over the administration of all business. It is, however, immediately confronted with the proposal that the government take over and administer the telegraph and telephone systems, and the proposal that it take over and administer the railroads has become a subject of wide discussion.

If the railroads were taken over by the government it would be inevitable that no end of questions would come into politics that are not now subject to political decision. It is almost inevitable that the tremendous voting power of the rank and file of the employes would cause their votes to be sought by politicians with various promises of increases in pay and easier working conditions. The party in power by having control of the railways would have control of the nation. Should there come to the presidency a man with the ambition to establish a dictatorship, his pathway would be the less difficult.

It is impossible that under governmental ownership the railways would be manned in any appreciable degree by other than the employes now in their service. There likely would be more or less change in the officers charged with administration and management, but there could not be a great deal of change even in these because men capable to fill such positions are now all too few. The great body of under officials and employes would of necessity have to be constituted at least for a time almost entirely of the same men by which it is now constituted. Responsibility for their performance would rest ultimately with governmental officials elected by the people instead of with officers owing their positions to their efficiency and retaining their positions only so long as their efficiency continues.

The experience of the country with appropriations for river and harbor improvements and for public buildings gives ample reason for belief that if the building of new railroads were to become a matter of congressional appropriations the congressmen of one part of the country would endeavor to get railroads for their district, and the congressmen of other parts of the country would endeavor to get railroads for their districts whether there were economic justification for their construction or not; and there would ensue interminable log-rolling and wasteful appropriations.

In recent years there have been debates in the Houses of Congress even as to railroad rates applying in one section of the country as compared with the rates in another section. If the government were to take over the railroads, it is almost inevitable that the shippers of a particular section of the country would cast their influence for the candidate who would endeavor to obtain rates that might give them an advantage in competitive markets. The shippers of other districts would adopt similar methods in opposition. The result would be that the freight-rate structure of the United States that has been undergoing a gradual adjustment to the needs of commerce would be thrown into confusion. That this is not idle surmise is demonstrated by the fact that the legislature of more than one state has forced its railroads to make rates for intrastate traffic solely for the purpose of giving shippers of the respective state an advantage over their competitors of other states.

As has been said, the material welfare of the people of a nation can only be served when two blades of grass are made to grow where but one grew before, when for a dollar expended a new dollar and more is returned. The conduct of industry and commerce under private enterprise does not always serve this end. There are losses in business and there are failures in business, but the loss falls upon the immediate investor.

It has been the theory of this country that the expenditure of the government should serve the needs of the people in ways in which they cannot so well serve themselves. Therefore have been sanctioned the expenditures for offense and defense, for maintaining order, for popular education, and other purposes in which immediate pecuniary return is not expected or desired. Such purposes are properly served by taxation for the common good. If, however, the government enters upon the control and administration of the processes of industry and commerce it takes it upon itself to see that two blades of grass must be made to grow where but one grew before, that for a dollar expended a new dollar and more must be returned. The nearest approach that the government now makes to conducting a business enterprise is in the distribution of the mails, and the Post Office Department has never even been self-sustaining. A recent Postmaster General reported that the deficit in the operation of the Post-Office Department had been turned into a surplus, but that report was arrived at through distorted accounting as reprehensible as any ever undertaken by financial buccaneers in railroad exploitation.

In so rich a country as the United States the burden of taxation has not fallen heavily upon the people, although it has been asserted that if the aggregate taxation, direct and indirect of the federal government, the state governments, the municipalities, and other political entities having the taxing power were assigned per capita, the proportion would be found to be greater than in any of the heavily taxed countries of Europe. If the government were to take over and operate the railroads with the same degree of business inefficiency and business laxity that has characterized other phases of its administration, it would not be many years before taxation would bear severely upon every taxpayer. If the government were to take over and operate the railroads, the express service, the telegraph and telephone service, it would be the largest purchaser of coal, of iron and steel, likely of lumber, and other of the great commodities of commerce. Its payrolls would be increased by over two million employes. With their families this would mean that over ten million persons, or one out of every ten in the United States would be directly dependent upon governmental disbursement.

To know from what sources money is received and in what direction money has been expended, and therefore to know whether or not a new dollar is being returned for every dollar expended, is needed an exact and definite system of accounts that is necessarily the more elaborate the larger the scale of operations, and the more intricate the greater the variety of the processes. The Interstate Commerce Commission in co-operation with officers of the railways has devised a system of accounts for their operation that is a highly developed achievement and that, moreover, is continuously undergoing improvement.

That which the people through this regulatory body have been able to do in bringing to the clear light the receipts and expenditures of the railways, they have never been able to bring about for the receipts and expenditures of the political governments through the officers they have elected to administer those governments. It is in but few states that the accounts of moneys received from the people and expended for the people are kept scientifically and intelligibly. The wastefulness of the expenditure of the moneys received from the taxpayers of the large cities is a by-word and the so-called accounting systems of most of these cities are beneath contempt.

The national government, which does not provide the capital for the railways nor the expenditure for their maintenance, properly compels them to keep comprehensive and accurate records of their traffic and of their traffic in relation to expenditure.

The government, which does provide the capital for the construction of canals, the improvement of rivers and the expenditure for the maintenance of all inland waterways, has not required until recently any adequate record of the traffic carried upon them. Such statistics of this traffic as are given in the reports of the chief of engineers are compiled from such data as are available, but which admittedly are unsatisfactory. It is, perhaps, not an exaggeration to say that the entire value of the entire traffic carried upon many an inland waterway is not equal to the annual expenditure of the government thereon.

Many of the public regulating bodies during their earlier years were outspoken champions of the people against the corporations. They not only were professedly partisan in opposition to the large business interests of the country, but were vindictive in public utterances against the business interests, and especially against the railways. But there are always two sides to every question. With the continuance of their service the public commissions are gaining the experience which the better enables them to understand not only the evils in business which must be removed but the beneficent activities of business which must have strength and support. On the other hand, those engaged in the administration of business and especially of the great corporations, have come the more clearly to understand the line between business energy and undue aggressiveness.

A recent phase of public regulation that is of great significance is the public arbitration of industrial disputes. Competition was supposed to serve the public good by putting each man on his mettle, by allowing him to obtain benefit from the social organization to the extent that he contributed to the benefit of the social organization. When the competitors joined in combination, whether of labor or of capital, there was a modification of competition. Instead of competition between individual and individual for employment there came a struggle between trade union and corporation as to the division of the returns from the product which is the joint result of labor and capital. The strike and the boycott have led to mediation, conciliation and arbitration, through which it has come about that boards of arbitration chosen by the disputants or by the government or in part by one and in part by the other determine the questions at issue. This procedure is a step away from pulling apart and a step toward pulling together for the common good. In the arbitrations the contentions, the arguments and the facts of the disputants are brought to the light. This alone helps to a better understanding that itself ought to lead to the more peaceful, amicable and well-considered adjustment of future disputes.

This is one of the ways in which the whole people are gaining that understanding of the various phases of indutry and commerce which may perhaps in time fit them to control and to direct the industrial and commercial processes in the same way that they now control and direct the processes of the political government, or better it were to say in the way that they ought to control and direct the political government through the means at their hand.

In the ideal industrial state depicted by Edward Bellamy in "Looking Backward," it is the whole people who do control and direct the processes of industry and commerce as they do the construction and maintenance of the highways, public sanitation, the channels of communication and other parts of the social mechanism for the social good. In that ideal state of Bellamy, which perhaps is typical of the ideal of every one who hopes for the fullest attainment of the brotherhood of man, there are neither physical nor mental defectives because, under the conditions of living and of marriage, such could not be born. After a preliminary period of education from childhood through youth carefully adapted to develop the physical and mental characteristics of the individual, each boy and girl is assigned to a round of preliminary service including work with the hands in pursuits that at the present time are considered to be those of the drudge and the menial. But in Bellamy's state there is no drudgery, for all recognize that all work is service for the common good.

After the preliminary round of service the youth is assigned to the vocation for which he has manifested particular aptitude. By the time he is forty or forty-five years old his contribution to the material welfare of the state is deemed sufficient to justify his retirement and the spending of the remainder of his life in self-cultivation, except that after five years of such leisure and study in which his view has been broadened, he may be called upon to serve as one of the directors of the industry in which he spent the larger part of his service. The directorate of each industry determines the kind of product as nearly as possible in accordance with the wishes of the people, the places of production and the quantities of production sufficient to meet the needs of all the people.

A national board composed of members selected from the various industrial boards determines questions of national concern, among others the amount of the surplus of production that shall be used as capital for future production. In this state every one puts forth his best efforts at all times because of the satisfaction that lies in doing the best that can be done and in the knowledge that thereby he best serves the social welfare. It is so with the inventor, the composer, the writer, the man of affairs, with everyone in every vocation; the satisfaction of doing is the only motive, and approbation of their fellowmen the reward.

There is probably no one who would deny that the attainment of such a state would be the transcendent achievement of man. There apparently are those who think that such a state could immediately be brought about by abolishing present institutions and establishing such a social state forthwith. The demonstration of the futility of such a proposal leads, however, to the perception that the social, the material, and the spiritual progress of man is toward just such a state as Bellamy depicts. The pressure of the political forces, of the economic forces, of the spiritual forces, is moulding men and the institutions of men into fitness for such a state. Great as has been the progress the goal is as yet far beyond and it cannot be reached except step by step along the path along which we have come step by step.

The entire country is in a ferment of economic education. The theory of our government is that its institutions rest upon the will of the people, but that they shall be determined only after thorough popular discussion and deliberation. It is to be hoped that the present discussion will not be cut off by a precipitate decision on the questions at issue but will continue until there is thorough understanding on the part of all men of the economic transition which has been taking place during the last half century. When that understanding has been reached it may be that the organization of business will have become so adapted to the service of the whole people that there will be no case of governmental control versus private enterprise, that the work of all the people for all of the people will have attained that development and the recognition which may lead to the realization of Bellamy's ideal state.

The Effect of the War Upon the Railway Industry

NOTE:—The following extracts taken from an address delivered on September 7th, by Fairfax Harrison, president of the Southern Railway at the Labor Day celebration in Spencer, N. C., are of peculiar interest at the present time in that many of the influences cited are effecting railways generally throughout the United States.

OUR high level of wages and conditions of employment at least as favorable as substantially all of the other railroads in the United States were established at a time when the business of the company was normal and when there was reason to expect increased earnings rather than the reverse. Suddenly we find to-day that the entire situation as affecting the business of the company has been changed. Under the modern systems of world-wide exchange of commodities and of international credits, though the American people are at peace with all nations, the war in Europe has profoundly disturbed all lines of business in the United States and has brought about a curtailment of production and a consequent falling off in transportation, the full extent and duration of which no man can now predict with certainty. We know, however, that, although the war is being waged three thousand miles from our shores, its effects are being felt to a greater or less degree by practically every family in the United States. We also know that, unfortunately, the effects of the war are being felt in no part of the United States more seriously than in the South.

But a few weeks ago the South was looking forward after a winter of hesitating business to a season of unsurpassed prosperity. Rejoicing in having a substantial monopoly in supplying the world with cotton, the Southern people were looking with satisfaction upon the bountiful crop maturing in the fields which they had every reason to believe would be sold at a remunerative price. When Europe plunged into war, because of the fact that a large proportion of the crop must seek foreign markets, the cotton monopoly of the South, instead of being a source of strength, became an economic weakness. The market for cotton was wiped out. Steps are now being taken by the Federal Government and by patriotic bankers to relieve the situation and prevent widespread bankruptcy and distress throughout the South. However successful these may be, they can afford only partial relief, for, excluded from foreign markets, a large proportion of the crop must be stored in the South and will not be offered for shipment for many months. The situation is made worse by the fact that the activities of American cotton mills are being hampered, not only by financial conditions, but also by inability to secure dyes which in the past have been supplied only by European countries involved in the war. Likewise Southern farmers will have to restrict their acreage of leguminous crops this year, because of inability to secure supplies of seed from Germany and Austria. Looking forward to next year, we find that, unless the war shall be of short duration, the manufacture of some kinds of commercial fertilizers, which are an important article of freight for the railroads of the South, will be greatly restricted because Germany is the sole source of supply of potash.

Under present conditions and prospects in the South all lines of business have fallen off and railroad traffic and earnings are showing substantial decreases. We hope for the best and are doing all in our power to bring about improved conditions. We are continuing the extensive construction work for which, fortunately, capital funds were secured before the war began. The disbursement of this money in Southern communities will be helpful, not only to the men employed, but to Southern business enterprises generally. We realize that, with all the great manufacturing and commercial nations of Europe involved in the war, there is splendid opportunity for the expansion of the export trade of the United States, especially to the markets of Central and South America, and we are actively co-operating with Southern manufacturers and merchants who desire to enter this field. But, under most favorable circumstances, it will take time for the business of our section to recover, and while we hope for better conditions for the South and the Southern Railway, we can not be blind to the present situation of declining traffic and decreasing earnings. It is then a time for caution. The Manufacturers' Record has this past week given an admirable statement of the duty which this situation imposes on us all. I venture to quote a paragraph:

"Every responsible citizen of the United States, in whatever calling he maybe, should lose no time in adjusting his material affairs to meet the economic emergency created by the temporary paralysis of civilization in Europe. The very conveniences with which civilization has equipped mankind have begotten a world-wide sensitiveness to any action anywhere interrupting the play of the forces of civilization. In war involving directly seven peoples of Europe, and indirectly all peoples of that continent, the material influences for the advancement of the human race have virtually collapsed. Consequences are already felt in this country. They will become more manifest day by day and will persist for a while even after wholesale murder and rapine have ceased in Europe. The people of the United States are to-day beginning to pay the bills for the destruction wrought. Such payments mean resources taken from productive enterprises here and unjustified burdening of every capitalist, and wage-earner, every farmer, every manufacturer, every banker, every merchant, every broker in the United States."

In this situation the interests of all officers and employes of the company are identical with the interests of its owners. Wages and dividends are drawn from the same fund—the earnings of the company—with this important difference, that wages must be paid first regardless of whether there is anything left for dividends or not. But the owners of the property who have adventured their money in the provision of this great railroad system which gives employment to tens of thousands of Southern people have rights which can not be disregarded, and, but for the fact that it was anticipated that the company would earn reasonable profits, it would have been impossible to secure the money with which we are now making it not only a more efficient carrier for the people of the South and a safer plant on which our employes may work, but are putting it in a position to afford employment to increased numbers of men when business shall have once more revived.

The earnings of the railroad, which are at once the source from which its expenses must be paid and the basis of its credit, can not be advanced by the mere volition of its managers. We are powerless to raise a single passenger or freight rate without the approval of a state or federal commission, and we are now face to face with the fact that earnings are decreasing, and that since August first each week's revenues have been less than for the previous week, though the falling off has as yet been rather an indication of a tendency than of an actually serious condition.

I do not anticipate any trouble for the company, but my point is that manifestly this is no time for consideration of wage increases or the eight-hour day. I should be lacking in frankness if I did not say that these matters can not now be considered by the management of Southern Railway Company and if I did not at the same time express the hope that our decrease in business may not become such as greatly to curtail opportunity for employment and make necessary a policy of strict retrenchment. Like the general staff of one of the warring nations of Europe we have long had a plan of retrenchment ready for the emergency and I may say that, disagreeable as retrenchment always is, we have the courage to put our plans into operation, if that shall seem to be to the best interest in the long run of the company and of the Southern people. But, please God, it may not be necessary. What shall be the event lies largely in the demonstration of character, and patience, and cheerfulness of Southern men and women, and I venture to believe that we, as Southern men and women, will be as ready, as ever our ancestors were, to accept sacrifices when that shall prove necessary. If such shall become the necessity of Southern Railway Company, the sacrifice will be borne by officers as well as men, but I pledge you my word that I will keep the interests of our men and those dependent upon them faithfully in mind and that no sacrifice will be asked until it shall be necessary. As one responsible for the ultimate decision, I pray for strength to decide right and I ask with confidence the understanding and the support of all you men and women here assembled with whom I am linked in a strong bond of common service to the public and the attachment of many years of association.

Effect of War Upon United States Railroad Bonds

UNUSUAL interest was added to the annual meeting of the Society of Railway Financial Officers held at Lenox, Mass., on September 16th, by an address delivered by Louis B. Franklin, vice-president of the Guarantee Trust Company, on the effect of the European War upon United States Railroad Bonds. Mr. Franklin said that the normal factors governing the prices of securities are to a large extent rendered ineffective by the present war and the consequent international financial situation, and any discussion on the trend of prices of American railroad securities involves a consideration of the economic effects of the conflict. "In the effort to determine what this effect will be," he added, "it is natural to refer back to other occurrences of similar nature and endeavor to forecast from them something of the future.

"Upon careful analysis we find that no war in history is comparable in its effect upon financial transactions with the present upheaval.

"A study of the probable effects of the war leads naturally to a division of these into two classes, namely: those of a temporary or artificial nature and those of a permanent or basic nature.

"We have already experienced most of the immediate results. We have seen the system of international credit relations disrupted at the first blow. Moratoria have been generally declared throughout Europe, and payments due us are held up while we, as a neutral country, are expected to meet our obligations at maturity. American securities held abroad have been dumped into our markets in such volume that self preservation compelled us to call a halt by the closing of our principal Stock Exchange and the cessation, by agreement, of the sale of all unlisted securities. Our enormous exports of gold and the consequent strain of our banking facilities have forced us to resort to the expedients of clearing house certificates and emergency currency.

"Our foreign commerce, except in foodstuffs, is almost at a standstill. The Bureau of Agriculture in its recent report gives promise of one of the largest cotton crops in the history of the country. Normally, we export approximately 60 per cent of this crop, and at the present time, through the shutting down of foreign mills on account of scarcity of labor, lack of demand for the finished product or inability to finance, hardly a bale of export cotton is moving and extreme measures are being taken to care for the surplus which is sure to exist.

"Despite the fact that the stringent measures already adopted have prevented panic and to some extent opened the channels of trade, we have still to face the problem of meeting the wave of foreign liquidation which is likely to break upon us upon the reopening of our markets. It has been estimated that American securities to the extent of from four to seven billion dollars are held in Europe, and while it is evident that a large part of these are not for sale at any price, it is quite certain that the drain on the resources of the belligerent nations will be so tremendous as to necessitate enormous liquidation. Their own securities are due to suffer more than ours and our markets are therefore likely to be the most available. This problem must wait until our international credit and commercial relations have been placed on a more normal footing. We cannot buy securities unless we can sell commodities.

"If we are unable to take care of our securities now offered for sale by Europe how can we expect to find a market for the additional securities which corporations are so anxious to sell to provide for maturing obligations and necessary improvements and extensions? The prospect is indeed not a favorable one. There is no market for bonds now and it is hard to say when there will be one and what prices bonds will command when the market opens. In any event, our railroads on the average have now an over production of bonded debt compared with the investment represented by capital stock and it should be by additional issues of stock that present necessities should be financed. How this can be done under present business conditions, and the public prejudice against railroad securities is a difficult problem.

"Against such an array of unfavorable factors as the immediate result of war, what have we that may be of benefit? In a few lines of business increased activity is indeed noted on the expectation of increased exports of goods to neutral countries heretofore supplied by belligerents. But here again we are confronted with the difficulty of financing any such shipments and the lack of neutral ships to act as carriers. In one respect only is there an immediate benefit and that is in the larger demand at increasing prices for our food supplies, and despite the difficulty of transportation and payment, such shipments are being made in quantity.

"Capital, which for the past few years has been difficult to obtain will be in still greater demand to make good the losses of war, and it is reasonable to look forward to a long period of higher interest rates on fixed investments, a small supply of new capital and lower prices for investment securities unless we can discover off-setting factors of a sufficiently favorable nature.

"Let us look then and see what we have on the other side of the picture. Possibly there may be a ray of sunshine somewhere. One of the first results of a condition of affairs such as we are now experiencing is increasing economy on the part of practically every class of society. I believe that the generally prosperous condition of this country during the last twenty years has led to a gradual reduction in the proportionate amount of savings which has in the last few years contributed to our higher cost of living and our higher cost of capital. It is generally conceded that the maximum of saving does not take place in periods of great prosperity and an upheaval such as the present crisis is often the signal for a return to a simpler scale of living and an increased proportion of saving. It will not take a very large increase of savings per capita to make a radical increase in the amount of capital available yearly.

"I have already referred to increased activity in certain lines of business as one of the immediate results of the war and there are likely to be permanent results of a similar nature.

Efforts are already being made looking to the restoration of our merchant marine to its former place of prominence in the commerce of the world, which, if successful, will result in many millions of dollars per annum formerly paid to foreign carriers remaining in this country. (Is this an economic gain in itself?)

"Our imports of drugs, dyes, chemicals, toys, gloves, clothing, etc., from Germany have been stopped and supplies of these articles are diminishing and prices rising. American ingenuity is already at work in an effort to manufacture in this country much that we have heretofore imported. If this effort is crowned with success, our productive capacity will be permanently increased and our trade balance benefitted.

"Markets heretofore held by belligerents, principally Germany, whose foreign trade is now at a standstill, are now open to our manufacturers and if our opportunities in this respect are not neglected our export business should be permanently benefitted."

The Interest of the Average Citizen in Railway Prosperity

NOTE:—The following extracts are from an address delivered by W. L. Stanley, of the Seaboard Air Line, before the recent convention of the Train Dispatcher's Association of America at Jacksonville, Fla. They indicate in a most convincing manner how the prosperity and welfare of every American citizen whether in or out of railway employ is intimately associated with, and to a large measure dependent upon, the prosperity of the railways.

DOES the prosperity of the railroads of America interest me individually? When I say individually, I am speaking to you, first, as a representative class, and through you to every other citizen of this country, it makes no difference whether he is engaged in railroad service or not. I would ask through you the question: Does the prosperity of the American railways interest me as a farmer? Does it interest me as a mechanic? Does it interest me as a merchant? Does it interest me, it makes no difference in what work I am engaged?

If I look at it from a selfish viewpoint, if it appealed to me solely with reference to my own interest, I would say that I am interested in the prosperity of the American railroads because my earning capacity, my promotion depends upon the prosperity of those railroads. You, Mr. Train Dispatcher, sitting in your office, day after day, have an interest in the railroad for which you work; you represent that road and you are connected with that road in a capacity, and in a service broader than that comprehended by the word employe. You are just as much interested in it to the extent that you give your brain, your brawn and your time to it, as the man who invests his money to buy stock and bonds in that company.

Every man ought to feel a peculiar interest in every concern in which he works, for the selfish reason that he has money, which is represented by his brain and his time, invested in that enterprise. I am interested in the prosperity of the American railroads for the reason that I am an employe of these railroads; I am interested in the prosperity of the American railroads for the reason that I want to see the treasury from which my compensation comes reasonably full. But that is the remotest of all reasons, the least of all consideration as to why I, as an American citizen, am interested in the prosperity of the railroad for which I work. I am interested in the prosperity of these railroads because they are the greatest developers of the material resources of this country of ours.

It is not a very far cry, gentlemen, from 1826, when the first railroad was built in Maryland, to 1914, when this country of ours is threaded by railroads from the Atlantic to the Pacific and from the North to the Gulf of Mexico, but the history of this country, its development, its prosperity, have been co-ordinate and co-extensive with its railroad development. What would the coal mines of West Virginia, what would the gold mines of Nevada, what would the fruit producing territory of Florida and California be worth to this country of ours if it was not for the railroads? And I say to you now that we do not pause often enough to consider when we discuss and criticise and abuse the railroads that they have been the makers of whatever prosperity and of whatever development we have had in this country during the last few years or during the last century.

But in the next place, I am interested in them as a means for the exchange of commerce and the interchange of ideas. Have you ever realized, have you ever stopped to think how little this world is with the railroads and how big it would be without them? Have you ever stopped to consider what we enjoy to-day that our fathers were deprived of? Have you ever stopped to think that you are heir to all the prosperity, to all the wealth, to all the resources of this country for the simple reason that their bands of steel have linked every portion of this land together?

I want to suggest to you that the railroads are the greatest of all employment agencies. I do not mean to confine myself alone to the thought that the railroads in themselves and through themselves employ more men than any other instrument or agency of commerce in this country, but I want to suggest a thought in addition to that: that through the railroads, through what they buy, through what they do, through what they accomplish, they are the greatest employment agency of this country. Someone has truthfully said that the truest barometer of business in America is the prosperity or adversity of the American railroads, and why should it not be so? Have you ever stopped to think that the American railroads use half of the steel that is produced by the American people? Have you ever paused to think that they buy forty per cent of the lumber that is placed upon the American market? Like the pebble that was thrown into the brook, the ripples from which reach from one to the other until they touch the shore, so the buying by American railroads starts the activity of commerce in the steel business and in the lumber business and so on to every branch of business activity.

Then I am interested in the prosperity of the American railroads for the reason that without them the people themselves would soon have not only their means of livelihood, but their means of sustenance cut off. It has been said, I think truly, that without the transportation lines that center in New York there would be a famine in that city within three days, and cannot you gentlemen here, who are acquainted with localities in the territory from which you come conceive of conditions similar to that? Take the railroads out of this country and you would have famine and suffering where to-day they bring those things that make these conditions impossible.

Now, gentlemen, I just want to suggest, and I am not going to take time to discuss them, some other reasons for the benefits that will accrue to me individually if the railroads of this country are prosperous. First, increased business activity; second, employment as a result thereof for all the people; third, nation-wide prosperity—every man is heir to the fruits of individual effort that tends to the common good; fourth, increased competition in transportation, as a result of new railroad construction, which to-day is practically at a standstill.

Let me tell you what I would advocate if I were a member of a body that had authority to control the railroads. The first thing I would advocate would be to ascertain what is a fair and reasonable compensation for the service that the railroads render and then, having done that, I would say: "Mr. Railroad, you have got to have automatic block signals on every mile of your road; you have got to have stone ballast under every cross tie on your road; you have to throw around your operation every factor of safety that the human mind can conceive of; in the next place, you have got to give the people of this country, not only reasonable but extraordinary service, so that a man in season and out of season may make a trip from one point in this state or one point in this nation to another." And then, gentlemen, what would be the condition? We would have a safe railroad; we would have a sound railroad financially; we would have reached that point in our national history where we would have put both human life and excellence of service beyond the mere dollar.

The Evolution of Signaling

An unusually interesting article on the Evolution of Signaling on the Baltimore and Ohio by F. P. Patenall, appeared in a recent issue of the Baltimore and Ohio Employes Magazine. The extracts from the article herewith presented together with the accompanying diagram give a comprehensive review both of the history of railroad signaling and its present operation. To quote from the article:

"In connection with three plants installed by the Pennsylvania Steel Company in 1886, lower left hand quadrant signals were used.

"Since the year 1887, and from that time to the present, it will be noted by reference to the diagrams that, notwithstanding the various designs used, a most important feature was uppermost in mind, viz.: the distribution of metal so as to insure the spectacles being so counterweighted as to result in its gravitating toward the stop position in case of failure of the connections. Additional weights applied to the balance lever or crank at the base of the mast augmented this purpose, and also provided means for overcoming friction in the connections or other obstructions in case of failure of the connections.

"Figure No. 1 shows one of the most primitive designs of train order signals used extensively prior to 1886, and continued in operation long after that date, but finally discarded in favor of the semaphore signal.

"This disk form of signal is well known, and in fact has by no means become obsolete, inasmuch as many thousands of automatic signals of similar design (see Fig. No. 2) are in operation and are giving satisfactory service. These latter, of course, are of improved design, and are power operated.

"Figure No. 3 shows a Revolving Banner Signal, also power operated, and many of which are in successful operation, although this type of signal appears to be passing.

"To describe briefly the construction of the disk signal, Fig. No. 1, will take up very little space. "The movable parts of the signal consisted principally of red and green cloth disks, mounted on slides, operated on slides, operated by means of ropes, the slides being raised when it was desired to display a proceed indication. They returned to their normal position by gravitation. The correct principle in this respect, therefore, was laid down.

"Later on metal disks and frames were substituted, the use of which added a feature of safety, inasmuch as with such added weight there was less liability of slides or shutters sticking in the proceed position. These metal slides were also equipped with lenses of the desired colors. These resulted, principally, in intensifying the colored lights displayed as compared with the primary light being screened either by red or green cloth. The signal was arranged to govern traffic in both directions, there being two slides for each direction, viz., one red and one green.

"The proceed caution signal was displayed by the raising of the red slide, and the lowering of the green slide into view, the latter at night being kept normally up, so as not to impair the strength of the light when a stop indication was being displayed. The lamps used were fitted with the well known Zenith burner and globe; masts were hollow, and lamps were hoisted or lowered, as desired, by windlass at the base of the mast.

"The weight of the slide being relied upon entirely to restore the signals to the normal position, it was found difficult to operate these from a distance far away from the office, inasmuch as the weight of the rope had a tendency to overcome the weight of the slide, and the result was that trouble often occurred from that source.

"In 1885 and 1886 some small installations of interlocking were made on the Baltimore and Ohio Railroad by the Pennsylvania Steel Company and the Union Switch and Signal Company, in connection with which the semaphore spectacle (Fig. No. 4) was used.

"These were mounted on triangular lattice iron

DIAGRAM SHOWING EVOLUTION OF SIGNALING ON THE BALTIMORE AND OHIO RAILROAD, PREPARED BY F. P. PATENALL, SIGNAL ENGINEER OF THAT ROAD.

posts, the semaphore shaft and half cranks being in one piece, or as are now frequently used for inside connected signals. These blades moved to a position for proceed (clear) 60 degrees below the horizontal (see Fig. No. 5).

"In 1887 the spectacle shown in Fig. No. 6 was adopted, its design resulting in more satisfactory service, inasmuch as it provided increased weight for restoring signal to the horizontal (stop) position, there having been a tendencv in the use of spectacle No. 4 for false indications occurring with the least variation in the connections, excepting where considerable outside additional counterweight was applied. Fig.No. 7 shows the proceed (clear) position.

"A similar defect, although not so serious, developed later on in the use of the specacle, Fig. No. 6, on account of signals being operated at greater distances mechanically connected.

"In 1889 spectacle, Fig. No. 8, was adopted, having two receptacles for roundels, at which time the proceed(clear) position of the blades was, as shown in Fig. No. 10, inasmuch as variations in connections would not be sufficient to change radically the position of the blade (when indicating stop) towards the proceed (clear) position and thus prevent its being accepted as a proceed indication. It will be seen that in order to display a white light, both roundels were required to pass beyond the light. For this operation a considerable sweep of blade was necessary, and signals which did not move to the proper angle for proceed (clear) were considered as imperfectly displayed signals, and trainmen were governed accordingly. In the use of this type of spectacle additional information was provided, as shown in Fig. No. 8, viz., the 45 degree or caution indication, when used for manual block signals the lower roundel being green, as shown in Fig. No. 9. The use of Fig. No. 10 was discontinued, however, because the position of the blade, when vertical, was poorly outlined. That is, its being displayed in front of the mast made it indistinct, there being no criticism of positions of blades as displayed in Figs. Nos. 8 and 9.

"In 1889 recommendations were made to provide distant signal protection at facing switches, which resulted in the adoption of the arrangement as shown in Fig. No. 11, whereby the distant switch signal was operated by a separate lever, locking the switch lever in the normal position only, the plunger lock being fixed in the center of the track, using standards material. One special feature worthy of attention was the method of signal control, which was not directly from the lock lever, but required that the plunger lock should have its full throw in order to bring the signal to the clear position, which was entirely dependent on the plunger being properly guided; hence, should the plunger casting be torn out it was not possible to clear the signal, although it was possible to reverse the lock lever. The reason for this was that link L would pivot on pin P, which, when pressure was applied, in taking up wire tension (there being no guide for the plunger), resulted in link L swinging to the right or left, thus having no effect on the signal. Later on this method was abandoned, because various troubles were encountered from dragging chains and other parts of equipment which frequently tore out these connections between rails. It will be noted that the blade on signal used for the purpose was pointed (see Fig. No. 12, stop position and Fig. No. 13 (proceed position), the angle of the blade below horizontal fop roceed (clear) having been 75 degreees.

"After this it was deemed advisable to provide more adequate protection in the way of a semaphore signal at the switch, and signal A was added to the lay-out (see Fig. No. 11) and adopted.

"The use of vertical lever stand has proven much more satisfactory than the levers arranged horizontally on the ties, especially in winter weather.

"The home switch signal was operated by the switch lever, and the distant switch signal was operated by a separate lever, the distant lever locking the switch normal through a bolt lock. By this means all connections are arranged outside the rail, thus avoiding possible damage from the dragging of equipment parts.

"Home and distant switch signals were later equipped with square end blades, the distant signal indicating in the 45 degree position for caution, the home indicating in the horizontal position with the switch open. This arrangement will be superseded by a special type of switch target, because of the difficulty in classifying semaphore signals for such use and to avoid possible confliction with other signals.

"In 1891 it was considered necessary on some of our heavy freight lines to install spacing signals, which were operated manually and indicated only two (proceed) positions, viz., caution (see Fig. 14) and clear (see Fig. No. 15). At that time we were agitating the universal adoption of the square end arm for all signals, and specially the use of same in the 45 degree position for caution signals.

"This spacing signal was restored to the normal (caution) position in the rear of the train, indicating to a following train that the preceding train has passed an arbitrary (according to division rule), number of minutes previously, and after an additional lapse of time the signal was changed to the vertical (clear) position.

"It will be noticed, therefore, that the caution indication was displayed by the arm in the 45 degree position, although at that time distant signals having blades with forked ends were used, indicating caution in the horizontal position which still is common practice on some roads, although it cannot be considered logical. In this case straight form of semaphore castng was used, there being an abundance of counterweight to carry the signal to the normal (caution) position.

"During the period extending from 1888 to the present time three-position block signals, both manual and automatic, have been in continuous operation on the Baltimore and Ohio System.

"The type of manual block signal in operation from 1888 to 1900 is shown in Fig. No. 16, stop, Fig. No. 17, caution, and Fig. No. 18, clear.

"In 1900 the standard was changed to that shown in Fig. No. 19, stop, Fig. No. 20, caution, and Fig. No. 21, clear, the spectacle being designed with three receptacles for colored glasses, two only at that time being used, the remaining opening being in view of the possible change from the white light to the green light for clear and the use of the yellow light for caution.

"This type of signal is still in operation in manual block territory, as well as in automatic block territory at stations where it may be desirable to issue orders.

"It is necessary to digress here from the subject of semaphore spectacles to that of semaphore shafts and half cranks, as mentioned in connection with Fig. No. 4.

"In 1901 a standard was adopted which required the application of the operating half crank direct to the shaft for all mechanically operated signals in lieu of the eye rod connecting with the stud riveted to the spectacle casting, the object being to gain control of the blade through the shaft, so that in case of breakage of the spectacle the blade would still be controlled through the shaft. The reason for this change was on account of a derailment produced by the spectacle end of a semaphore breaking off at the time it was placed in the stop position, which resulted in the blade's falling to the clear position, there being no counterweight after breakage.

"This was one of the first principles adopted in early signaling, and should be followed.

"The application of the half crank is shown in Fig. No. 22, as is also seen in Fig. No. 4.

"Having commenced in 1888 with three-position signaling in mind as the most intelligent method of conveying information to the runner, a startling set-back was experienced in 1902 when 97 miles of double indication (home and distant) automatic block signals were installed. The lower quadrant vertical position blade, however, outside the line of the post for the proceed (clear) indication was adhered to, although the forked end distant blade indicated caution in the same position as the home blade indicated stop (see Fig. No. 23, stop, Fig. No. 24, proceed, prepare to stop at next signal, block clear, Fig. No. 25, proceed, next signal at proceed).

"The design of the semaphore spectacle being as shown in Figs. Nos. 23, 24 and 25, had two spectacles for the colored glasses, from which it will be seen that unless the blade assumed the proper positions the light was obscured, which was objectionable. This, however, resulted in a vast improvement in the adjustment of mechanically operated signals, it being necessary to keep the connections in a most efficient operating condition. Otherwise imperfectly displayed signals would have occurred.

"The trouble above-mentioned, however, of the light being obscured during the passage of the casting from the vertical position to the horizontal position, or vice versa, was overcome in the adoption of spectacle shown in Fig. No. 26, which provided three receptacles for colored glasses, the lower one being left open for the display of the white light, which, however, will be used when the green light is adopted for the clear night indication.

"In the home signal spectacles, Figs. Nos. 23, 24 and 25, two red roundels were used, and two green roundels in the distant spectacles, making it necessary for the blade to travel the required distance in order to display the proper proceed night indication.

"Having in view the absolute necessity of uniformity in signaling for all divisions, it was decided in 1903 to dispense with the double (home and distant) indication previously mentioned, using instead one blade (three-position signaling), as shown in Fig. No. 26, stop; Fig. No. 27, proceed—prepare to stop at next signal; Fig. No. 28, proceed—next signal at proceed, and this method is still in operation, and all further work was done in accordance therewith, the same indications being used in manual block territory.

"In February, 1908, the most interesting evolution took place in the design of spectacles, in that the upper quadrant three-position method of signaling was authorized to be used in all future installations, and where heavy renewals were made. The upper quadrant spectacle adopted is shown in Fig. No. 29, stop, Fig. No. 30, caution, and Fig. No. 31, clear

"The first installation of signals of this type was at Cumberland, Md., in February, 1908, the high speed signals being power operated and the low-speed signals mechanically operated in conjunction with the installation of a mechanical interlocking plant at the east end of Evitts Creek Yard.

"Several sections of three-position upper quadrant automatic signaling have since been put into operation.

"The adoption of the upper quadrant type of signal as a standard is based on the fact that the same results in cost of construction, with lesser cost of operation and maintenance, and with the maximum safety, from the use of a semaphore spectacle of less than one-half the weight of the lower quadrant type. It should also be borne in mind that undue weight added to the blade, such as ice, sleet or snow, will result in the display of the least favorable indication.

'This method of signaling is universally conceded to be better and safer than those previously used, and has been in successful operation since its adoption.

"As to the methods of signaling, in 1887 an interlocking plant was installed on this road at Camden Station, Baltimore, Md., in connection with which three signals on a mast were used, as shown in Fig. No. 32. The upper signals governed movements from the shed tracks to the outbound track; the second signals governing movements from the shed tracks to the inbound track, and the lower signals governing movements from the shed tracks to the siding.

"The lower signals were arranged to be illuminated at night by reflecting the light onto the signal blade, no colored light being used, consequently at night the position of the blade governed the same as in daylight. Colored lights, however, were used in connection with the upper and second signals.

"As a comparison, Fig. No. 33 shows the signaling at a plant installed in April, 1911, wherein it is noticeable that the three-blade signal is still considered good practice, although in the passing of twenty-four years' experience the use of the third or lower signal was dispensed with for a period, it being assumed that two signals could very capably fulfill all the requirements. This latterly has been proved an error,as the third or lower signal relieves the signals above it from transmitting special information, which can be done more logically and with greater safety in the use of the third or lower signal."

The Proposed New Welland Ship Canal

Note:—The following paragraphs are from a report by J. L. Weller, engineer in charge of the proposed new Welland ship canal to the Canadian Department of Railways and Canals. In view of the fact that the successful completion of this canal would mean a greatly intensified competition between Canada and the United States for the eastbound movement of the vast crops grown within the interior of the country and adjacent to the Great Lakes, the proposed plans for its construction as outlined herewith will prove of interest not only to railway engineers but to traffic officials as well.

The proposed Welland ship canal as finally located follows the course of the present canal from Port Colborne on Lake Erie to Allanburg, half way across the peninsula. From this point an entirely new cutting is to be made, crossing the present canal just below lock No. 25, the water level of the two canals at this point being the same, viz.: 568 feet above sea level. The new canal again crosses the present one below lock No. 11, the water of both canals at this point being at an elevation of 382 feet above sea level.

The proposed canal enters Lake Ontario at the mouth of the Ten Mile Creek about three miles east of Port Dalhousie, the entrance to the present canal. The total length of canal from lake to lake is 25 miles, and the difference in level between the two lakes, 325½ feet, is to be overcome by seven lift locks, each having a lift of 46½ feet. The dimensions of the locks are to be 800 feet in length by 80 feet in width in the clear and with 30 feet of water over the mitre sills at the extreme low stages in the lakes. The width of the canal at the bottom will be 200 feet and for the present the canal reaches will be excavated to a depth of 25 feet only, but all structures will be sunk to the 30 foot depth, so that the canal can be deepened at any future date by the simple process of dredging out the reaches.

A new spur on the western breakwater, consisting of an immense rubble mound of stone from the excavation north of Port Colborne, and terminating in a timber and concrete head-block, located some 2,000 feet farther out in the lake than the present breakwater, will be built to insure quiet water in Port Colborne harbor during storms, which is not the case now, the present breakwater not being far enough out in the lake to deaden the swells.

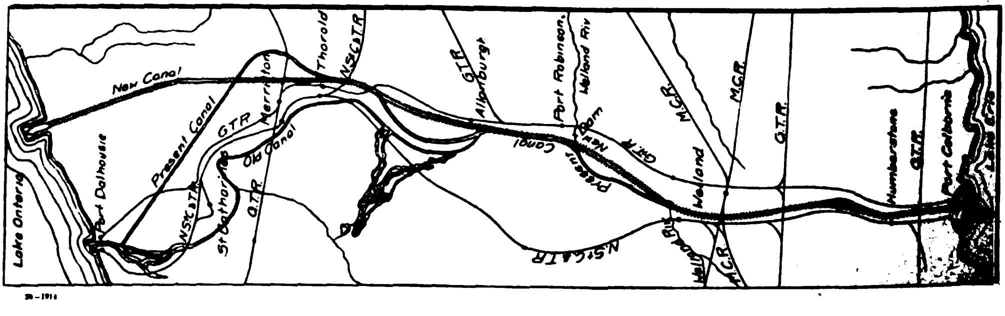
The outer harbor at Port Colborne has now a 22-foot depth of water at ordinary stages of the lake, which is as much as is available at most of the lake ports and in the channels connecting the lakes at the present time, and the deepening of this portion of the harbor may be left for a few years until the connecting channels in the lakes allow deeper navigation.

The inner harbor at Port Colborne will be deepened to the proposed new depth and the old locks and regulating weir now in the centre of the village will be entirely removed. The rock cut from Port Colborne to Humberstone will be deepened and widened on the west side, and just below Humberstone a thorough cut will be made across the point now forming Ramey's Bend to materially straighten the canal. The materials from these cuts will be nearly all rock, and will be used to form the breakwater previously mentioned. A guard lock will be built in the rock cutting a short distance below Humberstone, and when this new cutting is ready for navigation a regulating weir will be built across the abandoned portion of the present canal which will be used as a by-pass to furnish water to the canal. This lock and regulating weir will control the elevation of the summit level of the canal, which it is proposed to keep at the level of extreme low water in Lake Erie, viz., 568 feet above sea level.

From Ramey's Bend to Welland the canal will be deepened and widened by excavating a strip along the western bank. Instead of building a new aqueduct at Welland to carry the canal over the Welland river, it is proposed to raise the level of the river to that of the summit level of the canal, viz., 568 feet above sea level by means of a dam across the river at Port Robinson. This dam will be provided with a large overflow and regulating weir which will control the elevation of the summit level, allowing any surplus water to overflow into the old Welland river and pass out into the Niagara River at Chippawa as at present, a sufficient quantity of water will be allowed to run constantly to keep the river clean.

The present aqueduct at Welland will be dredged out, also the bank between the canal and the river, which latter will be utilized between Welland and Port Robinson instead of the present canal, being somewhat straighter and entailing considerably less excavation. At Port Robinson a cut will be made through the present bank between the canal and the river through which vessels will again enter the canal prism.

The raising of the Welland River above Wel-



Map of the Proposed New Welland Ship Canal Between Lake Ontario and Lake Erie.

land will flood some 1,600 acres of low land adjoining the river bed. This land is flooded every spring by the flood water in the river and is principally used for pasturage. The township of Wainfleet adjoining the Welland River on the south side, consists principally of low lying ground which drains into the Welland River, and to prevent damage to this land on account of the raising of the river, it will be necessary to open up most of the ditches from the point of their present entrance to the river to the intended high water mark.

The turning of the Welland River into the canal will pollute the waters which are at present used by the towns of Welland, Thorold and Merritton, and by the city of St. Catharines for domestic purposes. This may necessitate the construction of extensive filtering plants, which scheme is not looked upon with favor by those interested. An alternative scheme to lay a pipe line from Lake Erie to the reservoirs of the different municipalities, through which clean water would be continuously pumped, is under consideration, and appears to be the most feasible scheme available.

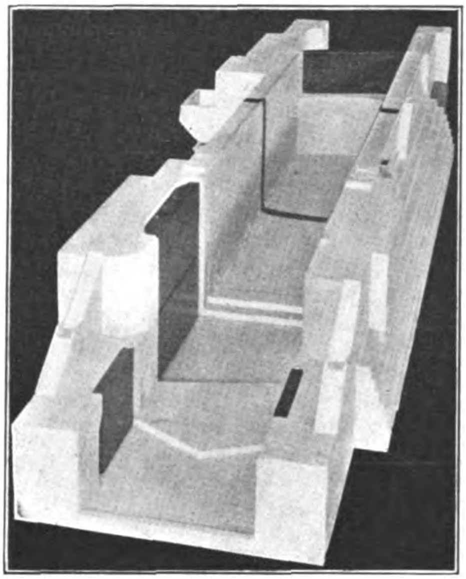
Between Port Robinson and Allanburg what is known as the deep cut (deepest cutting 80 feet) will be deepened and widened by cutting a slice off the western bank. Allanburg is now the junction of the present and old Welland canals, and the water required for the latter, which is quite considerable on account of the numerous power developments along it, is taken into the canal through a weir at this point.

In connection with the construction of the ship canal, it is proposed to close the present old canal entirely between Allanburg and Marlatt's Bridge near Thorold, first building a new weir at the head of lock No. 25 of the present canal to supply the above mentioned water. A dam will then be thrown across the old canal at Allanburg, and the old bed of the canal between the dam and Marlatts Bridge will be utilized as a dumping ground in which to place the material removed from above water in widening the deep cut. This will form a very convenient dumping ground, and the old canal will become more self-contained, as at present the entrance works are situated at an inconvenient distance from the remainder of the canal.

If it is desired to continue navigation on the old canal, entrance may be had to it through lock No. 25 of the present canal when the ship canal is completed by making a short cut through the bank separating the two waterways.

A pair of twin guard gates are located on the proposed canal near the southerly limits of the town of Thorold, and a short distance north of them is located lock No. 7, the head of this lock being directly opposite the head of lock No. 24 on the present canal. That portion of the present canal between locks Nos. 24 and 25 together with a pond of about 27 acres formed by flooding the upper valley of Ten Mile Creek will be utilized as a regulating basin from which water to fill lock No. 7 will be drawn. This method of drawing water from a side pond instead of directly from the canal above avoids the formation of objectionable currents and surges in the canal and locks, and is the method adopted for filling all of the locks.

Below lock No. 7 is a short reach of canal with an adjacent side pond or regulating basin having a surface area of about 84 acres, and immediately below are located twin locks Nos.6, 5 and 4 in flight. These three locks overcome a descent of 139½ feet. One flight will be used for down bound vessels and the adjoining flight for up bound, a double flight being required to save long delays in the passage of vessels through the canal.



Model of Lock for the Proposed New Welland Ship Canal.

The main line of the Grand Trunk Railway between St. Catharines and Niagara Falls will cross over the foot of twin locks No. 4 by means of two short Bascule lift bridges.

The Welland division line of the Grand Trunk Railway is situated just where the new locks are to be built, and it will be necessary therefore to divert it some distance to the west, and the diverted line will bear the same relation to the proposed canal as the present lines does to the present canal, following up on the west side of the locks, but remaining on the west side of the canal for some distance above the present lock No. 25, when it crosses over the proposed canal on a Bascule lift bridge to the east side.

From lock No. 4 the proposed canal crosses the meadow to the north, following in part the bed of the Ten Mile Creek till it croses the present canal at the foot of lock No. 11 at an elevation of 382 feet above sea level, which is the level of the present canal at that point. This will enable small vessels which wish to do so, to use the Port Dalhousie entrance as at present, as far as lock No. 11.

Lock No. 3 is located immediately north of the present canal, and at its head on the east side is situated an equalizing basin or pond of 150 acres. Below No. 3 a heavy cutting is requided through the village of Homer to the bed of the Ten Mile Greek again, above Carleton street, and just below Carleton street lock No. 2 is located. It was difficult to find a location for this lock on account of lack of rock for a foundation, but eventually a suitable foundation was found at the present site. The canal at the head of lock No. 2 is at an elevation of 335½ feet above sea level, and floods about 200 acres of land in and adjoining the bed of Ten Mile Creek. Below lock No. 2 the canal follows the bed of the creek to lake lock No. 1 being situated just below the lake road. The pond at the head of lock No. 1 covers an area of 107 acres.

The outer entrance piers in Lake Ontario are placed about one and one half miles from shore, where the depth of water is 30 feet. A wide channel will be dredged from these piers to lock No. 1. The sides of this channel will be protected near the shore end by reinforced concrete cribs with concrete superstructure, alongside which vessels may lie. From the shore line of the lake to the outer entrance piers an embankment about 500 feet in width will be formed on either side of the channel from materials excavated from the canal between the lake and Thorold.

For the purpose of conveying this material from the different contracts to the lake, the Department will build a double track railway along the west side of the canal from the foot of the flight of locks near Merritton to the lake, and temporary trestles will be built out in the lake on either side of the harbor from which to start the dumps. The railway will also be utilized to haul crushed stone from the site of the flight of locks to locks Nos. 1, 2 and 3, where it will be used for the purpose of making concrete.

The contractor for the rock excavation from the site of the flight of locks will, under his contract, be obliged to crush a sufficient quantity of the good rock taken from his excavation to supply all the crushed stone required for making all the concrete for the different locks and structures.

The lock walls will be 82 feet high above the top of the gate sills and including the necessary foundation work required below this level two of the locks will have walls 100 feet high.

The lock gates will be of the single leaf type, swinging on a hinge at one side of the lock, and resting when closed on a notch cut in the opposite wall, a single leaf thus spanning the whole width of the lock chamber. The gate at the foot of each lock will be 83 feet in height and 88 feet in length, and will weigh about 1,100 tons.

The valves and culverts in the walls are of large dimensions and will permit of the lock being filled in less than eight minutes. This will mean that the time of passing through the canal will be very much reduced below that required at present.

The canal will be divided into nine sections for contract and construction purposes.

The contractor for each section will be required to supply all plant and labor to efficiently carry ou the work of excavation and the construction of all structures such as locks, weirs, substructures or bridges, entrance piers, etc. He will also supply all necessary materials required in the construction of the above excepting Portland cement and certain metal work which will be furnished by the Department.

The furnishing of Portland cement to the contractors has been found a very satisfactory method on other contracts with the Department and this method will be adopted in all contracts on the ship canal.

All steel and iron castings and other metal work which is standard for all locks, etc., will also be furnished to the different contractors to be placed in position in the concrete masonry of locks, weirs, bridges, etc.

The building and erection of the lock gates will form a separate contract.

The steel superstructure of bridges will be built under separate contracts.

The following estimated quantities will give an idea of the magnitude of the work:

Rock excavation	6,000,000 cubic yards
Earth excavation	40,000,000 cubic yards
Concrete	2,500,000 cubic yards

A careful and conservative estimate places the total cost of the work at less than $50,000,000.

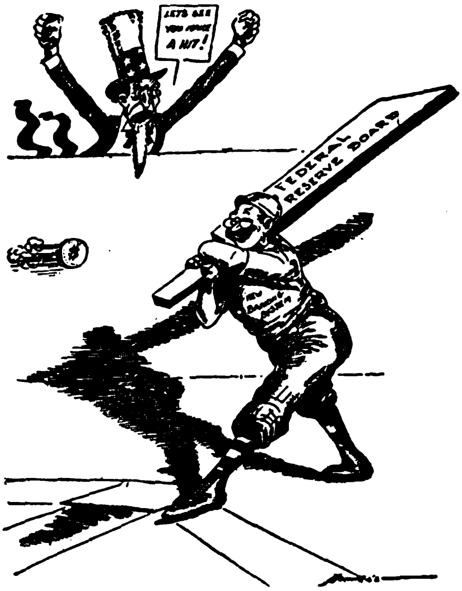
The canal should be ready for navigation in five years.

Financial

Recent Developments.

RECENT developments have been such as to give grounds for some encouragement. The perplexing problem at this time relates, of course, to the re-opening of the security markets of the country. What is needed at the present time is the establishment of a trade credit balance great enough to cover Europe's sale of stocks and bonds which will undoubtedly be very heavy as soon as our markets are re-opened.

It is extremely unfortunate, under such circumstances, that the Interstate Commerce Commission has found it impossible to act more promptly in connection with the carriers' appeal for a re-opening of the five per cent advance rate case. A prompt settlement of this case in favor of the carriers would undoubtedly prove the greatest single factor in restoring national



The New Player at Bat. —St. Louis Globe-Democrat.

confidence and permitting a resumption of financial transactions. The pressure from abroad will prove extremely severe as soon as the bars are let down, but with the railroads in a position to reasonably protect their credit, the situation would not prove nearly so threatening.

The real trouble which is sapping the nation's vitality at the present time, may be classified under the single head of "Bureaucracy." Great business enterprises in various fields are either suffering from this disease or are so afraid of catching it, that stagnation is the almost universal result. A reaction is bound to set in, however, and in the manifest desire of the Interstate Commerce Commission to treat the railroads more liberally, may be found what is hoped to be the turning in the lane which has proved altogether too long for the business interests of the country.

In the meantime the railroads are marking time. Improvements are being held up, new equipment bought only under the most imperative necessity and the question of new construction absolutely side-tracked for the time being. A five per cent increase in Eastern rates, however, together with corresponding assistance for the Western roads, would put an entirely new complexion upon the outlook and would infuse new life into the now stagnant arteries of trade. While conditions at Washington are still ominous with reference to the so-called trust legislation, big business has about made up its mind to bow to the inevitable and to accept its chastisement without permitting it to unnecessarily upset its equilibrium. An encouraging development is the greater optimism found on all sides and the determination to re-establish that progress and prosperity to which this country is entitled. It is the day for the strong man, and the complaints of the weak are becoming more indistinct as the influence of his stronger brother is becoming more generally felt.

While this nation is not yet out of the woods, so far as the effect of the European war is concerned, it can; with its magnificent resources and its splendid citizenship, meet the issue unflinchingly. Whatever the duration of the war, Europe is already beginning to feel it in a tremendous slackening of its productive powers, and the demands upon the United States for its products, may be expected to increase very rapidly from now on. This, in itself, should give us the trade balance so highly desirous under the circumstances, and place us in a position where we can successfully finance the heavy European demands which are sure to fall upon our shoulders as the result of the war.

The most encouraging recent development is the fact that our trade with a number of foreign countries has been resumed in such proportions as to make our exports, particularly of foodstuffs, equal, if not in excess of the movement for the corresponding period of last year. This as already pointed out is only the beginning and is sure to create a greater feeling of confidence when its significance is more fully appreciated by the American people. Strange as it may seem, the tariff issue has become practically dead for the time being, as the European war, with its after-effects, is likely to create and sustain such a demand for American products of all kinds, and at the same time to slacken Europe's ability to supply us with its own products, as to make a consideration of the tariff as a pressing political issue, a matter of comparative small present importance.

The Maturing Obligations of the Railways.

BETWEEN now and the end of next year, the railways will have to face the maturity of between $500,000,000 and $600,000,000 of bonds and short term notes. Even before the outbreak of the war, with railway earnings in their present shape, the taking care of these obligations was one of the most serious questions confronting the carriers. The war has, of course, greatly emphasized this difficulty and as the President's Committee put it to the Nation's Chief Executive, the transportation industry at the present time "is confronted with an emergency of a magnitude unparalleled in history."

Restoration of railway credit is the vital necessity of the hour. Without immediate and liberal assistance from regulative authorities, the railway industry would soon be upon the rocks. Investors, even before the war, were fighting shy of railway securities and it takes little imagination to appreciate what their attitude must be at the present time. Another important consideration is the rise in the cost of capital which the war is certain to bring about. High rates of interest are likely to be current for some time to come and with a narrowing margin of profits and practically no surplus, it would take a Solomon to determine how maturing obligations are to be met. As the Boston "Evening Transcript" puts it:

"All that will mean that whereas a railroad enjoying good credit previously may have been able to get money at five per cent it will now have to pay six or seven. As to the inducements which roads not in good standing with the investment public will have to make to get rid of any securities they may have to sell, that is unpleasant to think about. Certainly it will have a marked effect on their net earnings for a good while. Cost of capital like the cost of anything else in running a railroad is an item bearing directly on profits. It is just as logical for the railroads to ask for a further increase in freight rates because the capital they use costs them more, as it is to ask for it because there has been an advance in the cost of materials and labor."

Gross Net Earnings for the Half Year.

THE statement issued by the "Commercial and Financial Chronicle" shows that there was a diminution in the gross earnings of American railroads for the first six months of the present calendar year as compared with the first six months of 1913, of $85,033,426, or 5.72 per cent. While there was a loss in net by a similar comparison of $50,660,208 or 12.82 per cent. To appreciate the full significance of this contraction which, in net, is at the rate of over $100,000,000 a year, it is only necessary to recall that the capital obligations of the railroads are at all times being augmented to provide for the growing volume of traffic and an actual increase in net earnings is necessary merely to keep the railroads on an even keel in the matter of the relation of dividend and interest charges to income. It is peculiarly significant at the present time that the bulk of this whole loss in net income comes from the roads who recently made application to the Interstate Commerce Commission for a five per cent increase in freight rates and failed in their effort.

The following table presents comparisons for the first half year for a long series of years. It shows a poorer result for the first six months of 1914 than for any other year with the single exception of 1908.

Year	Net Earnings. Year Given	Year Preceding	Increase or Decrease
Jan.	$	$	$
1897	121,059,320	115,427,318	+5,632,002
1898	139,585,717	121,895,682	+17,690,035
1899	150,599,074	140,545,535	+10,053,539
1900	180,718,437	155,591,468	+25,126,969
1901	206,218,320	179,495,140	+26,723,180
1902	209,973,703	202,250,797	+7,722,906
1903	218,024,056	198,256,826	+19,767,230
1904	198,807,547	224,157,420	-25,349,873
1905	234,333,810	215,417,468	+18,916,342
1906	272,101,047	226,345,855	+45,755,192
1907	280,697,496	261,423,946	+19,273,550
1908	231,254,071	294,738,973	-63,484,902
1909	371,591,341	294,951,102	+76,640,239
1910	408,380,483	371,562,668	+36,817,815
1911	378,852,053	404,569,430	-25,717,377
1912	373,370,171	375,407,648	-2,037,477
1913	400,242,544	373,442,875	+26,799,669
1914	343,835,677	394,495,885	-50,660,208

Railroad Gross Earnings for August.

THE preliminary statements of railway gross earnings for August as prepared by the New York "Commercial and Financial Chronicle" shows a decrease for the month of $4,955,479 as compared with the earnings of the same month of 1913. The ratio of last year is 6.37 per cent.

While the shrinkage appears moderate, in view of the conditions, it becomes more significant when it is understood that the grain carrying roads which, with the cotton carrying roads, are the lines chiefly represented in the "Chronicle's" tabulation, had the advantage of a much heavier grain movement this year, and also that the returns for 1913, with which the comparison is made, were of a poor or indifferent character. In other words, the "Chronicle's" early statement for the last year showed a gain of only $71,670. The following table shows the increases or decreases in gross earnings during August for a series of years.

August.		Gross Earnings Year Given.	Year Preceding.	Increase(+) or Decrease(-).	
Year.	Roads	$	$	$	%
1896	120	38,801,525	40,010,144	-1,208,619	3.02
1897	118	43,190,342	38,526,399	+4,663,943	12.62
1898	121	46,632,848	44,446,940	+2,185,908	4.92
1899	112	54,751,100	48,325,106	+6,425,994	13.29
1900	105	57,143,176	53,731,004	+3,412,172	6.35
1901	96	65,155,714	57,439,471	+7,716,243	13.43
1902	76	58,887,908	56,213,712	+2,674,196	4.75
1903	76	72,505,067	66,411,069	+6,093,998	9.17
1904	67	59,445,529	57,494,231	+1,951,298	3.39
1905	56	58,859,481	55,955,430	+2,904,051	5.19
1906	68	79,344,748	70,099,249	+9,245,499	13.19
1907	67	86,377,190	79,029,051	+7,348,139	9.30
1908	52	59,649,837	70,341,817	-10,691,980	15.20
1909	49	57,953,811	51,851,211	+6,102,600	11.77
1910	46	62,005,137	56,405,033	+5,600,104	9.90
1911	50	71,282,467	69,057,069	+2,225,398	3.22
1912	47	77,638,413	71,361,692	+6,276,721	8.79
1913	46	77,975,309	77,903,639	+71,670	0.09
1914	47	73,690,353	78,645,832	-4,955,479	6.37

Annual Report of Chicago and North Western.

THE report of the Chicago & North Western Railway Company for the year ended June 30, 1914, shows net earnings of $24,271,909, a decrease of $511,231 from the preceding year. The total operating expenses for the year were $59,405,141, of this amount $12,179,689 was for charges pertaining to the maintenance of way and structures. The ratio of operating expenses to gross revenue advanced to 70.99 per cent from 70.15 per cent the preceding year. The income account for the fiscal year compares as follows:

	1914	Increase
Total operating rev.	$83,677,050	$641,129
Operating expenses	59,405,141	1,152,361
Net rev.—Rail operations	24,271,909	*511,231
Outside oper.—Net deficit	14,149	25,446
Net railway oper. rev.	24,257,759	*536,677
Railway tax accruals	4,252,790	655,630
Railway operating income	20,004,969	*1,192,308
Other income	2,920,760	*542,731
Gross income	22,925,729	*1,735,039
Deductions from gross income	10,619,587	833,831
Net income	12,306,142	*2,568,871

Balance to profit and loss	1,206,054	*2,569,353

---

*Decrease.

Annual Report of the Philadelphia and Reading Coal and Iron Company.

THE year ended June 30th, shows heavy decreases in gross and net earnings. Iron earnings were $32,703,982, a decrease of $8,279,081. Net operating profit was $848,367, or $2,938,551 less than in the previous year. After the payment of fixed charges, the surplus left was $715,390 a decrease of $424,202.

President W. J. Richards in his annual report says:

"The total production of anthracite coal from the lands owned, leased and controlled by the company for the year ended June 30, 1914, was 10,271,669 tons, as compared with 12,807,996 tons mined during the previous year, a decrease of 2,536,327 tons or 19.8 per cent.

"During the year the company mined 8,992,494 tons, a decrease of 2,097,248 tons or 18.91 per cent; purchased 218,957 tons and sold 8,747,643 tons, a decrease of 2,000,959 tons, or 18.62 per cent as compared with the previous year.

"The percentage of sizes above pea produced from the mining operations was 59.35 per cent as compared with 59.92 per cent the previous year."

The new state tax on coal mined obligated the company, from June 28th to December 31, 1913, to pay about $320,000.

Annual Report of the Chicago, Indianapolis and Louisville.

THE annual report of the Chicago, Indianapolis & Louisville for the year ended June 30, 1914, has been issued.

Gross operating revenues per mile of road were $11,237, a decrease of $92 from that of 1913; and net operating revenues per mile were $2,847, a decrease of $205.

In the remarks it is stated that the dividend payable on the common stock July 1st, was not declared, because of the unsettled conditions, but that it is expected that the payment will be resumed at an early date. The report further says that, in pursuance of the policy of continuous development and improvement of property, the expenditures of additions and betterments during the year amounted to $844,510, as compared with $1,427,966 the previous year.

Annual Report of the Reading Company.

THE Reading Company has issued its pamphlet report of the year ended June 30, 1914. The income statement shows net earnings of $16,816,968, against $15,892,261 the preceding year. The surplus after charges was $11,322,062, which, after allowing for dividends on the first and second preferred stocks, was equal to 12.17 per cent on the common stock outstanding, as compared with 11.19 per cent earned the year previous. The condensed income account compares as follows:

	1913-14	1912-13
Receipts	$16,919,118	$15,997,121
Expenses	102,149	104,859
Net earnings	$16,816,968	$15,892,261
Interest, taxes, etc.	5,494,906	5,258,331
Surplus for year	$11,322,062	$10,633,930

Annual Report of the Minneapolis, St. Paul and Sault Ste. Marie Railway.

THE Minneapolis, St. Paul & Sault Ste. Marie Railway has issued its annual report for the year ended June 30, 1914. The income account of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company proper (not including the Wisconsin Central) shows net earnings of $6,508,462 and surplus of $2,853,502. After deducting seven per cent dividends on $12,603,400 preferred stock, the balance, $1,971,264 was equal to 7.82 per cent on the $25,206,800 common stock, as compared with 18.42 per cent earned last year. The income account compares as follows:

	1914.	1913.
Total oper. revenue	$18,717,689	$21,410,672
Operating expenses	12,209,228	12,096,215
Net revenue	$6,508,462	$9,314,457
Other income	1,083,244	871,051
Total income	$7,591,705	$10,185,508
Charges, taxes, etc.	4,738,203	4,658,093
Surplus	$2,853,503	$5,527,415

Annual Report of the Norfolk & Western.

NORFOLK & WESTERN was one of the few railroads to increase its gross revenues in 1914, the gain amounting to $730,698. This, however, was wiped out by a $1,370,028 increase in operating expenses. As a result net operating revenue decreased 4.2 per cent or $639,330.

After spending a slightly greater percentage of gross revenues than ever before on maintenance of property, the road earned six per cent dividend requirements with a margin of $3,108,000 to spare, equal to 2.6 per cent on the amount of common stock outstanding. Common share balance of 8.6 per cent compares with 10.1 per cent in the 1913 year, and 9.9 per cent in 1912.

Total maintenance appropriations were $14,212,619, compared with $13,879,591 in 1913, consuming 31.96 per cent of gross against 31.73 per cent. Details which will be shown below show that upkeep per unit of motive power and rolling stock (except in case of passenger cars) has increased in amount steadily in recent years. Maintenance of way per mile of road is second only to 1913 figures.

The inevitable increase in costs resulted in an advance in the ratio of transportation expenses to 31.64 per cent, from 30.16 per cent in 1913 and 29.62 per cent in 1912.

A four-year comparison of maintenance and transportation costs is presented below:

	1914	1913	1912	1911
Gross	$44,470,619	$43,739,921	$39,735,237	$35,557,522
Maint	14,212,619	13,879,591	12,492,842	10,967,550
Percent	31.96	31.73	31.44	30.84
Transp. exp.	14,068,577	13,192,922	11,771,800	10,672,624
Percent	31.64	30.16	29.62	30.02
Net income	12,894,903	13,714,499	12,635,398	11,269,263

Norfolk & Western has about cleaned up its losses occasioned by the floods of March, 1913, and in the 1914 year charged off $671,000 to operating expenses on this account.

Annual Report of the St. Paul.

THE report of the Chicago, Milwaukee & St. Paul Railway Company for the year ended June 30, 1914, shows net earnings of $30,452,629, a decrease of $747,457. The gross revenues for the year were $91,782,690, a decrease of $2,301,363, compared with the previous year. The revenue from freight traffic was $65,266,420, a decrease of $2,697,740, or 3.97 per cent. The number of tons of freight carried was 33,007,277, a decrease of 5.17 per cent. The revenue from passenger traffic during the year was $18,961,224, an increase of $504,089, or 2.73 per cent.

The income account for the fiscal year compares as follows:

	1914.	Decrease.
Operating revenues	$91,782,690	$2,301,364
Operating expenses	61,330,061	1,553,906
Net oper. revenue	$30,452,629	$747,457
Net rev.—Outside oper's	260,483	*85,735
Total net revenue	$30,713,112	$661,722
Taxes accrued	4,106,557	*282,724
Operating income	$26,606,555	$944,447

*Increase.

Annual Report of the Atchison, Topeka and Santa Fe.

IN the fiscal year ending June 30th, last, the Atchison, Topeka and Santa Fe lost $5,786,482 in gross earnings, as compared with the year previous. The citrus fruit crop of California did much to keep earnings as high as they were.

Decreases of over $4,000,000 in operating expenses in the year greatly eased the effect of the loss in gross earnings. The company curtailed wherever possible. An increase of $863,000 in taxes, however, brought the loss in net earnings up to almost $2,500,000.

On $105,000,000 common stock, the company earned approximately 7.5 per cent in the year, as compared with 9.49 per cent on $190,836,500 common stock the year before. Bond conversions during the past year were comparatively small. On the basis of the share balance for the past fiscal year, Atchison had a margin of about $2,925,000, after all dividend payments, against $6,000,000 in 1913.

In the last few months of the fiscal year, the margin between gross earnings and those of last year, was narrower, and in June an increase of $650,000 was reported. This gain was an indication of what might have been expected in the current months, and in the months to come. What effect the European war may have on the volume of moving tonnage, remains to be seen.

Atchison increased its average mileage operated in the last fiscal year to 10,908 miles, a gain of 158 over the year before. In the past five years, 1,113 miles have been added to the system, an average of 223 miles a year. The mileage added last year was principally on account of construction begun in the year before, and represented more than anything else the completion of old contracts. Little new work was undertaken, and the management has nothing of size now planned.

Annual Report of the Denver and Rio Grande.

THE report of the Denver & Rio Grande Railroad Company for the year ended June 30, 1914, shows net earnings of $7,148,855, as compared with $7,405,793 the previous year. The balance available for dividends was $1,400,375, equal to 2.81 per cent on the preferred stock, against 4.2 per cent earned the year before. The income account compares as follows:

	1914.	1913.
Total operating revenue	$23,167,051	$24,452,965
Operating expenses	16,018,196	17,047,172
Net oper. revenue	$7,148,855	$7,405,793
Outside operations, net	16,148	6,495
Total net revenue	$7,132,707	$7,399,298
Taxes	1,009,142	948,739
Operating income	$6,123,563	$6,450,560
Other income	1,262,934	1,247,938
Total income	$7,386,498	$7,698,498
Interest and rent	5,986,122	5,604,318
Net income	$1,400,375	$2,094,180
Sinking and renew fund	263,889	247,808
Additions & betterments	80,927	389,000
Balance	$1,055,559	$1,457,372

President B. F. Bush says: "The revenue from freight traffic decreased $1,020,059, or 5.64 per cent largely attributable to the protracted coal strike in Southern Colorado, fruit crop failure on the Western slope in Colorado and inactivity in the building industry reducing the demand for lumber from Southern Colorado and New Mexico territory.

Annual Report of the Lehigh Valley Railroad.

THE report of the Lehigh Valley Railroad Company for the year ended June 30, 1914, shows net earnings of $12,174,402, a decrease of $1,761,150 from the preceding year. Operating expenses showed a decrease of $1,498,658, but the ratio of expenses to gross earnings advanced to 69.40 per cent from 67.62 per cent the year previous. The revenue from express business was reduced by $62,219.

The report of the Lehigh Valley Coal Company for the same period shows a total net income from all sources of $564,859, a decrease of $906,415. This shrinkage in earnings, says the report, was due almost entirely to the restricted demand for anthracite coal as a result of the mild winter.

The income account of the railroad company for the fiscal year compares as follows:

	1914	Decrease.
Operating revenue	$39,783,564	$3,259,808
Operating expenses	27,609,162	1,498,658
Net oper. revenue	$12,174,402	$1,761,150
Outside op. deficit	280,244	34
Total net revenue	$11,894,158	$1,761,183
Ry. tax accruals	1,549,895	*102,690
Oper. income	$10,344,263	$1,863,874
Other income	2,864,272	*560,518
Total income	$13,208,535	$1,303,356
Misc. charges	6,157,875	*401,812
Net income	$7,056,660	$1,705,168

*Increase.

Annual Report of the Chicago Great Western Railway.

THE preliminary income statement of the Chicago Great Western Railway Company for the year ended June 30, 1914, shows net earnings of $3,429,354, against $3,740,476 the preceding year. The surplus after charges was $895,930, equal to 2.18 per cent on the preferred stock outstanding, as compared with 3.3 per cent earned the year previous. The income account compares as follows:

	1914	1913
Total operating revenue	$14,260,522	$14,000,618
Other expenses	10,831,168	10,260,142
Net operating revenue	3,429,354	3,740,476
Outside operations	*3,249	2,293
Total net	3,426,105	3,742,769
Taxes	499,082	439,419
Operating income	2,927,023	3,303,350
Other income	146,140	118,475
Total income	3,073,163	3,421,825
Charges hire, equip. etc.	2,177,233	2,176,786
Surplus	895,930	1,245,039

*Debit.

Annual Report of the New Haven System.

ALL but four companies in which the New Haven Railroad is interested earned their fixed obligations in the year ending June 30, 1914, report of which has just been issued. These four companies are the New England Steamship Company, the Berkshire Street Railroad Company, the New York & Stamford Railway Company and the New York, Westchester & Boston Railway Company. The total deficit in net corporate income of these companies is $403,057.74. A total surplus of net income of the other companies is $3,244,820.20. Deducting the total deficit, there is a total surplus of $2,841,762.46.

The companies that show a surplus of net corporate income are New York, New Haven & Hartford Railroad Company, $268,662.87; Central New England Railway Company, $230,020.98; New York, Ontario & Western Railway Company, $663,692.06; Hartford & New York Transportation Company, $85,965.42; New Bedford, Marthas Vineyard & Nantucket Steamboat Company, $62,708.25; The Connecticut Company, $1,501,072.42; The Rhode Island Company, $347,642.94; Westchester Street Railway Company, $4,883.99; Housatonic Power Company, $78,506.49; Westport Water Company, $1,664.78.

The amounts of the deficits of the four companies are: New England Steamship Company, $77,802.62; Berkshire Street Railway Company, $72,507.17; New York & Stamford Railway Company, $5,824.17; New York, Westchester & Boston Railway Company, $246,923.78.

The report says: "The fiscal year ending June 30, 1914, has been a difficult one for all transportation companies and particularly for those in New England."

It also explains that "net corporate income represents the amount available for the payment of floating debts, additions and improvements necessary but unproductive or only partially productive (like new stations), and therefore preferably payable out of income rather than from new capital and for dividends."

From the report as issued it is not possible to do more than contrast the figures of 1914 with those of 1913, and these show a tremendous falling off in both net and gross income in some of the properties and in others an improvement over the previous year is shown.

The biggest drop is in the New York, New Haven & Hartford Railroad Company, which showed a net corporate income in 1913 of $8,922,237.72, as against $268,662.87 for 1914. The operating revenue of this company, including net results of outside operations, for 1914, was $66,703,172.85. The operating expenses and taxes were $52,703,172.85, leaving an operating income of $14,619,604, added to other income for $7,247,989.90 shows a gross income of $21,867,593.90. From this is deducted interest, rentals, etc., amounting to $21,598,931.03, leaving a balance of net corporate income of $268,662.87.

The greatest falling off in this company appears to be under the head of "other income." In 1913 "other income" was $10,063,784.78. In 1914 it was $7,247,989.90. The item of "interest, rentals, etc.," was greater by $2,140,538.64 in 1914 than in 1913, so that the total loss by increase and decrease in these two items is nearly $6,000,000. In addition to that there was a falling off in "operating revenue, including net revenue of outside operations," of $2,555,777.43.

There is a falling off of almost 75 per cent in the net corporate income of the Central New England Railroad Company. In 1913 it was $914,416.36 and in 1914 it was $230,020.98.

There has been a falling off of almost 50 per cent in the net corporate income of the Central New England Railroad Company. In 1913 it was $914,416.36 and in 1914 it was $230,020.98.

There has been a falling off of almost 50 per cent in the net corporate income of the New York, Ontario & Western Railway Company.

In 1913 it was $1,211,633.01 and in 1914 it was $663,692.06.

Annual Report of the Missouri Pacific.

THE income statement of the Missouri Pacific System for the year ended June 30, 1914, shows net earnings of $14,984,731, a decrease of $964,424. The income account in condensed form for June and the twelve months compares as follows:

	1914.	Decrease.
June gross	$4,687,130	$37,693
Net after taxes	1,102,681	84,205
Other income	306,618	73,424
Total income	1,409,299	157,830
Twelve months' gross	59,793,900	2,361,605
Net after taxes	14,084,731	964,424
Other income	2,447,779	15,819
Total income	16,532,510	980,244

Annual Report of the Seaboard Air Line.

SEABOARD AIR LINE RAILWAY'S operating results are to a high degree satisfactory.

Gross revenues the past fiscal year, a period when railroad gains were the exception, showed an increase of $763,000 over 1913 and of $2,370,000 over 1912. Net earnings after taxes in 1914 were $135,000 higher than in 1913 and $1,256,000 ahead of 1912. Total available income for fixed and other charges was $214,000 ahead of 1913 and $1,300,000 ahead of 1912. In three years available income has increased more than twice as fast as fixed and miscellaneous charges.

The following comparisons show available income, including "other income," and fixed and miscellaneous charges for the past three years.

	1914	1913	1912
Total available inc..	$7,280,359	$7,066,315	$5,908,195
Charges:			
Lease of other roads	51,000	51,000	51,000
Hire of equipment .	269,426	228,637	201,098
Joint facility rents .	101,760	103,319	94,227
Miscellaneous rentals	19,658	14,643	15,012
Interest funded debt	3,535,632	3,272,314	3,146,904
Int. Eq. Tr. Oblig's.	354,166	328,111	288,987
Int. unfunded debt..	4,136	56,134	24,836
Outside operations .	20,360	26,314	22,686
Total charges ..	4,356,144	4,080,462	3,844,750
Surplus	2,924,216	2,985,854	2,063,444
Int. adjust. inc. bonds	1,250,000	1,250,000	1,249,658
Final surplus	1,674,216	1,735,853	813,786

The 1914 surplus is equivalent to 7.00 per cent on the preferred stock outstanding, which compares with 7.26 per cent in 1913 and 3.40 per cent in 1912.

Although the actual stock earnings were slightly under those of the preceding year, this is due to the fact that fixed interest charges last year included a year's interest on the $6,000,000 notes which the company sold to provide for its requirements for the next three years and which will be spent during that period. The actual increase in interest on funded debt for this account was about $250,000, but apparently the end has justified the extra burden for any railroad that is financed for the next two years is in an extraordinarily favorable position in view of the financial situation brought about by the war in Europe.

Operation

Fire Organization on Baltimore and Ohio.

BY virtue of a circular issued by the Baltimore and Ohio Railroad to its employes, the men working for that company are to be constituted into a vast organization of fire-fighters, ready for emergency service in protecting the property of the public and that of the railroad against destruction by flames.

Employes in train service and others whose duties require them to travel over the property are urged by the management to maintain a constant vigil against fire, either on the property of the railroad's neighbors or along its own right-of-way. Suggestions concerning precautions against fires are requested of the employes.

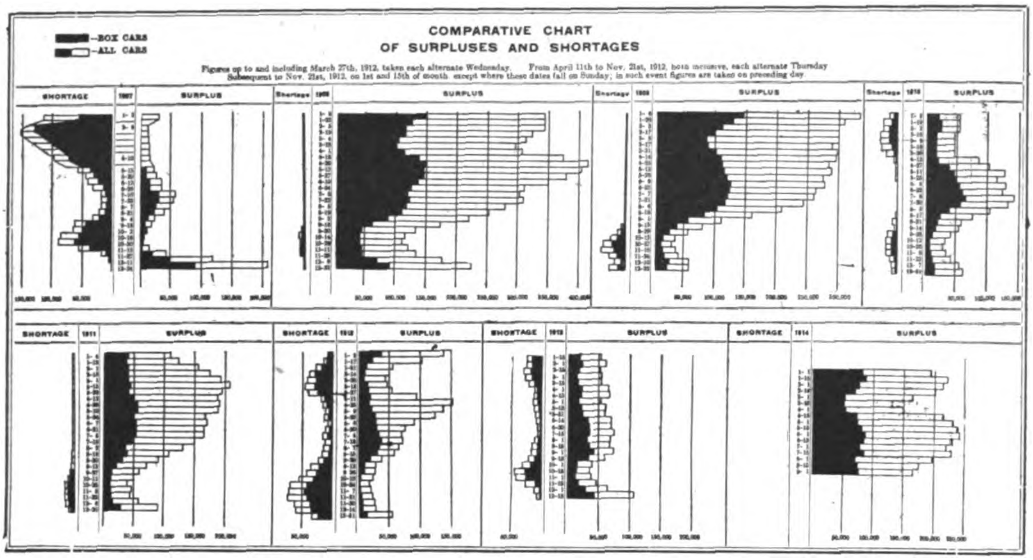
In the event that fires be discovered by engineers, conductors or other employes in train service, they are pre-emptorily authorized by the company to lend assistance in extinguishing the blaze; but the regulation requires that in such emergency any delay occasioned by assisting in putting out a fire must be reported at the first telegraph station.

While the regulation concerning the suppression of fires has in view primarily the protection of railroad property, the Baltimore and Ohio urges its men to take a broad interest in the communities in which they reside so that at all times they may render assistance of direct benefit to society. In the cities and towns, division points and terminals the railroad has provided fire-fighting apparatus for the use of employes in emergency cases, and to increase the efficiency of such protection the men are drilled in order that they keep themselves on the alert. Numerous instances have been reported of railroading forces preventing serious fire destruction.

The campaign waged by the Baltimore and Ohio against fire losses extends beyond the employes to the mechanical operations of the property. Locomotive stacks have been equipped with spark nettings to prevent particles of fire from being scattered along the right-of-way or on adjoining property and the fire grates in the engines are so designed that hot coals are not dropped along the tracks. In the ends of sidings, where locomotives usually stand when waiting to pass trains, wooden ties have been replaced by steel ties for the prevention of fire.

The Car Situation.

THE last report of the American Railway Association on car surpluses and shortages shows that on September 1, 1914, there were 165,244 idle cars as compared with 174,260 on August 15, 1914 and 73,576 on September 1, 1913. In other words, there are more than twice



as many idle cars at the present time than there was a year ago. The report indicates that there has been an increase in surplus box cars in the Southern and Western States of approximately 7,000, while reductions have occurred in the Eastern and Central States and in Canada. The largest decreases in surplus coal cars have occurred in the Eastern States and in Central Freight Association territory, with a small reduction on the Pacific Coast. A slight increase in this class of equipment is recorded for the Northwest. Shortages on September 1, 1914, amounted to but 1,918 cars as against 2,115 on September 15, 1914, and 15,270 on September 1, 1913. Present indications are that there will be no general shortage of freight cars during the fall and winter months, as the domestic grain movement is now well under way and the supply of cars is plentiful in the territory involved.

Car Balance and Performance for May.

THE American Railway Association, through its Committee on Relations between Railroads, has issued its statistical bulletin No. 176, covering car balance and performance for May, 1914.

The miles per car per day were 22.2, compared with 23.0 for April. This figure for May, 1913, was 25.0.

Ton miles per car per day for May were 329, compared with 334 for April. This is a decrease of 17.3 per cent compared with the figure for May, 1913, which was 387.

The proportion of home cars on line was 68 per cent, compared with 64 per cent in April. This is an increase of 12 points over May, 1913.

The per cent of loaded car mileage increased from 60.2 per cent in April to 68.0 per cent in May. This figure for May, 1913, was 68.7 per cent.

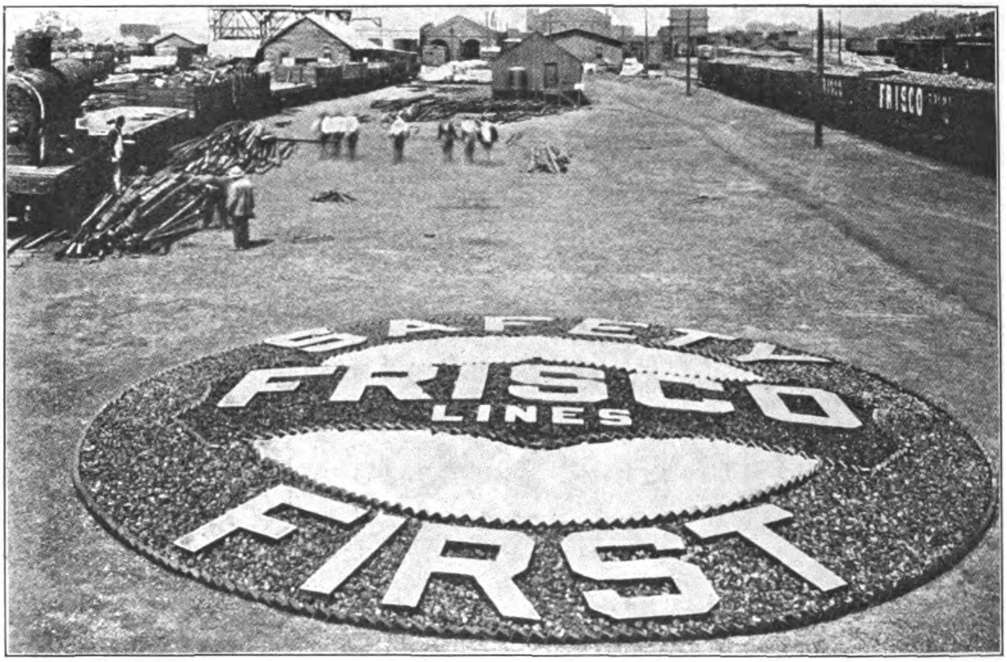
The average earnings per car per day for all cars on line decreased 23 cents to $2.18 in May. This figure for May, 1913, was $2.55.

Award of Safety Banner by Southern Pacific Company.

THE Southern Pacific Company's safety banner for the present year has been awarded to the Salt Lake Division on the Northern District, the Stockton Division on the Southern District and the Sacramento general shops. The banners are awarded in each district to the division sending in the greatest number of practical safety suggestions per hundred employes and the competition recently closed was the keenest ever held and the most gratifying to the Company's officials. Considering the system as a whole, over fifty per cent more safety suggestions were made than last year and over 80 per cent more of them were considered practical. The cost of the improvements made as the result of these suggestions during the year ending June 30, 1914, amounted to nearly $130,000, with pending expenditures for adopted suggestions approximating $175,000. The Southern Pacific Company spends a tremendous amount of money annually to secure the safety of life and limb of employes and patrons, but the money above mentioned went, and is going—into improvements suggested by the men on the line.

Safety Developments on the Santa Fe.

THE Santa Fe has recently issued a comparative statement showing the number of personal injuries to employes only during the fiscal years ending June 30, 1913 and June 30, 1914. This statement shows that during the latter fiscal year, 13,421 employes were injured as against 12,107 for the previous year, a decrease of 1,314 or ten per cent. The number killed during the same periods was for the fiscal year ending June 30, 1914, 103 as compared with 66 for the previous year, a decrease of 37. In connection with the reduction in the number of employes injured, it would perhaps be fair to state that during the last year, quite a number of minor injuries were reported and recorded, of which in former years, no record was made, so that, as a matter of fact, the beneficial results of the safety campaign on this road have really been considerably greater than indicated by the latest figures.



Safety First Emblem of the Frisco Lines at Recreation Plant, Springfield, Mo.

The Express Companies and the Safety Movement.

In an educational pamphlet, issued by the American Express Company, the safety first idea is impressed graphically upon the employes in a series of paragraphic and photographic illustrations, showing how a number of accidents occurred and some of the ways in which they might have been averted. The company had one per cent more rigs in the streets than in the previous year, and yet there were thirty per cent more personal injuries. The bulletin points out that greater care should be exercised in operating the wagons and automobiles, and calls attention to improper practices that contribute to accidents.

Stress is laid on the slogan, "Safety First." One paragraph suggests that in all cases of doubt, regardless of the right of way or other sacrifice which it may be necessary to make, the vehicle should be stopped instead of proceeding on the assumption that the one ahead has heard the warning and will get out of the way. Another paragraph is devoted to the need of giving ample warning, so that all danger of accidents and personal injury may be averted. Following are some of the points that the company tries to impress on its drivers:

"Safety should be the first consideration of every employe. Do not think that you have the whole use of the street. Turn corners slowly. Operate your truck at a moderate rate of speed, and respect the warnings of the traffic officer. Do not say that you have no time to be careful, and, finally, never be over-confident."

Economy in Little Things.

It is surprising how economy in little things in railway operations aggregate enormous amounts if constantly employed. Every employe by using a little care or by being watchful of the company's property can individually aid materially in effecting a saving. When the number of employes is considered the importance of practicing every possible economy cannot be over-estimated. The following table published in the Rio Grande "Service Gazette," shows in appliance what the loss, destruction or careless handling of the company's material or supply means:

To Lose, Break or Unnecessarily Use or Destroy the Following Article—	Means That to Replace Such Article the Denver & Rio Grande R. R. must Perform Service as Indicated Below, by Hauling:

Mechanical

Summer Course for Engineering Teachers at East Pittsburgh,

FOLLOWING a custom adopted four years ago this summer, the Westinghouse Electric & Mfg. Co. has had at its East Pittsburgh works, a number of college professors engaged in regular shop and engineering work.

This course was the result of a conference held at a meeting of the Society for the Promotion of Engineering Education held in Pittsburgh in the summer of 1911. At that time a number of college professors were invited to spend a portion of their vacation at the East Pittsburgh works, and so become more familiar with actual working conditions in the manufacture of electrical apparatus. So successful was the scheme which was tried by a number of professors that the following year regular employment was opened to a number of engineering teachers.

This year circumstances made it necessary to postpone the beginning of the course from the date originally set, which had the effect of lessening the attendance because a number of the teachers had made other plans for the summer.

As the accompanying photograph indicates, however, fifteen engineering teachers took the course during the present summer and represented technical institutions in practically all sections of the country. These teachers it might be added, are treated just the same as the regular shop employes and therefore, have an excellent chance to gain practical first-hand information on the building of electrical apparatus.

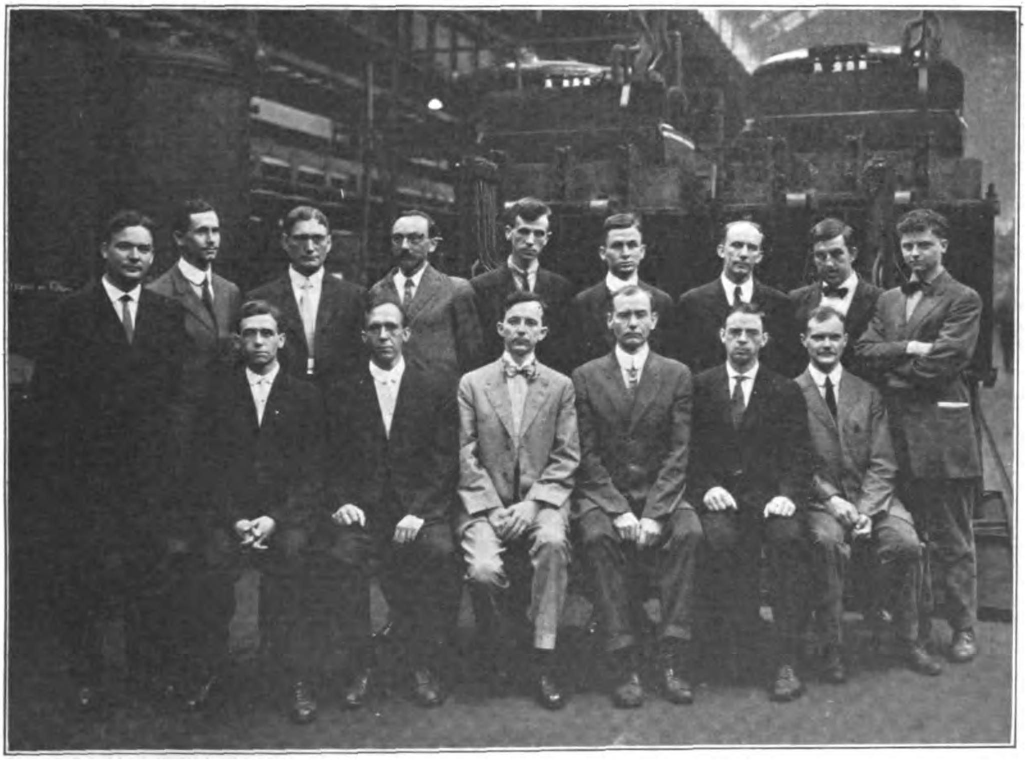
A Flexible Rail Joint for Steam Shovel Tracks.

J. P. THULL, a steam shovel operator in the Panama Canal zone, has recently invented a flexible rail joint to be used in connection with steam shovel tracks which should prove of considerable interest to railway officials engaged in construction work. It is well understood that the track on which steam shovels operate needs an unusual amount of flexibility in order that it may adapt itself to the irregular surface upon which it is laid. Often, if the joints are bolted tightly together insufficient allowance is made for lateral movement and this often causes breakage or distortion. On the other hand, if the bolts are left loose enough to allow for sufficient lateral play the track may be so insecure as to lead to derailment.

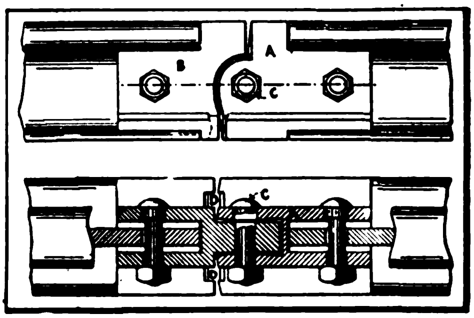
In order to overcome these difficulties, Mr. Thull has invented a rail joint for this particular service which has now been successfully in use for several months on the Panama Canal. The invention, as shown in the accompanying illustration consists of two steel castings bolted to and projecting beyond the rail ends.

One casting A is of H section, the end of the web of the rail entering one of the recesses, while the other receives the end of the casting B bolted to the other rail.

Each casting is secured to its rail by a single



College Professors Who Took the Summer Course at the Works of the Westinghouse Electric and Manufacturing Company.

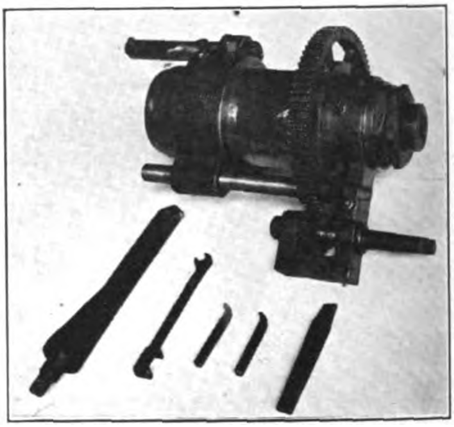


Flexible Rail Joint for Steam Shovel Tracks.

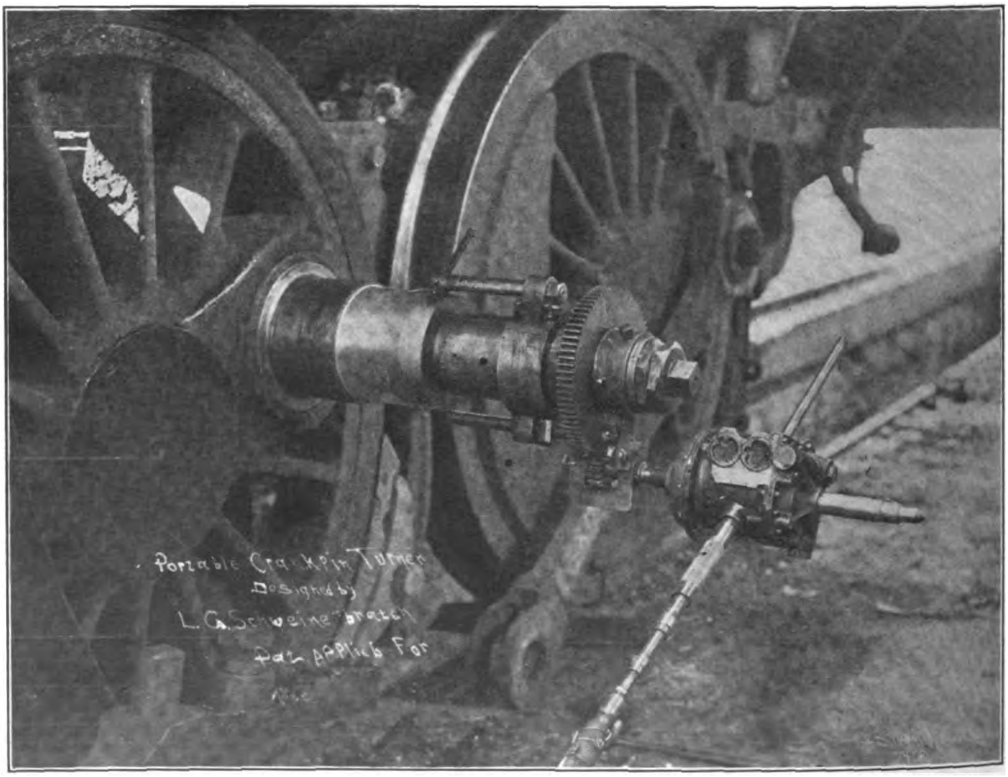
bolt, while a third bolt C, through the engaging portions of the castings, forms a pivot allowing for longitudinal flexibility. The outer or projecting ends of the H casting are curved laterally, as shown, thus allowing for lateral flexibility. In case this lateral movement should be undesirable at any time, however, it may be prevented by driving spikes in the slots D, provided for the purpose.

New Crank Pin Turner Invented by Southern Machinist.

A MACHINIST in the Birmingham shops of the Southern Railway, has recently invented a portable crank pin turner, as indicated in the accompanying illustration, which has been used with success at a number of points. The machine is the result of a request by the master mechanic for a device for turning the eccentric shape and worn-out-of-round crank pins without removing the pins from the wheels. The turner is simple in construction and built exclusively out of steel and will true up a bearing in one hour and thirty minutes. It is reported that this device is being employed with satisfactory results not only by the Southern Railway but by the Seaboard Air Line, the Pennsylvania Lines West of Pittsburgh and a number of other roads.



Crank Pin Turner and Tools Used in its Operation.



Method of Applying Crank Pin Turner to Locomotive Wheel.

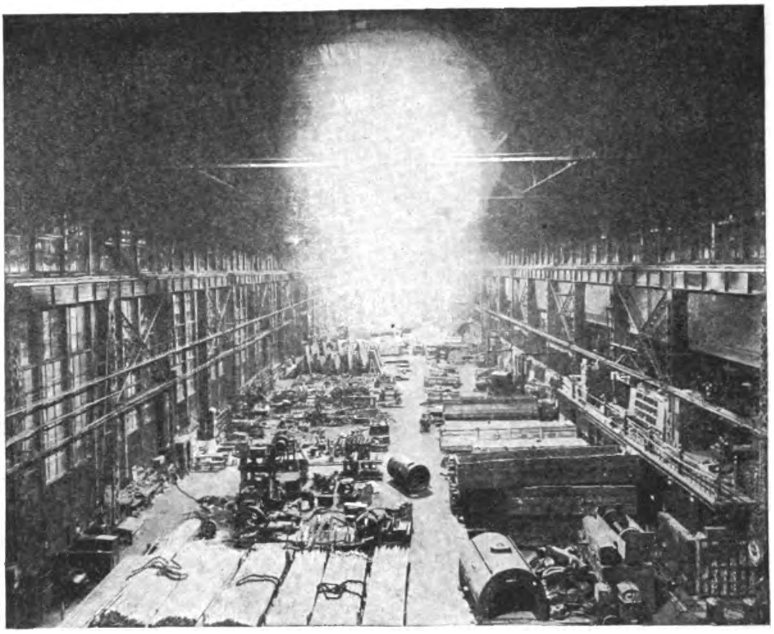
An Exceptionally Well Lighted Railroad Shop.

THE manifold advantages of having adequate illumination in an industrial plant are being realized by no class of operators more readily than the far-seeing railroad men. Not only does the proper illumination of a shop mean a better and more efficient class of work turned out, but exhaustive tests recently made in a large industrial plant proved conclusively that a workman actually made a gain of several minutes per day in the production of a given piece of work, owing entirely to the better illumination with which he was supplied. These few minutes when multiplied by a large number of workmen amount to a considerable item.

There are shown herewith some views of an

A LOCOMOTIVE BOILER SHOP ARTIFICIALLY LIGHTED.

LOCOMOTIVE ERECTING SHOP ILLUMINATED IN THE SAME MANNER.



LOCOMOTIVE BOILER SHOP; VIEW TAKEN BY ARTIFICIAL ILLUMINATION.

excellently lighted boiler shop and erection shop of a prominent eastern railroad. As will be noted from a glance at the photographs reproduced herewith which were taken at night, the illumination is abundant but entirely without glare or shadows, reaching every part of the shop. The buildings are 528 feet long and 58 feet wide giving an area of 30,624 square feet in each building.

The illumination for these buildings is furnished by type Z Cooper Hewitt Quartz lamps operating in a 220-volt direct current circuit. This lamp is a modification of the well-known Cooper Hewitt lamp based on the same fundamental principles, but possessing some essential differences. The details of construction have been described in the trade technical press. The lamp uses the mercury vapor, and a short tube of pure fused quartz instead of the long tube of lead glass used in the older types.

Ten lamps are installed in the boiler shop placed at regular intervals of 52 feet down the middle of the building, each lamp lighting an average of 3,062 feet.

In the erecting shop there are twelve lamps regularly spaced down the middle of the building at intervals of 44 feet, giving an average space lighted by each lamp of 2,552 feet.

All the lamps are hung at a height of fifty feet above the floor.

The lamps are rated at 2,400 candle power with an energy consumption of 725 watts, or a total for the installation of approximately sixteen kilowatts.

The light afforded by these lamps is entirely sufficient for all purposes even the locomotive pit being well illuminated. The only other form of artificial light required is a portable hand lamp needed by the workman when he goes inside the boiler.

The total lumens per lamp from these units is 14,603, with a total available in a zone of 0 to 60 degrees of 10,800 lumens per lamp which, with a wattage of 725 gives a value of 20.2 total lumens per watt, and 14.9 available lumens per watt.

The efficiency of the system as installed is made evident from the low wattage consumption obtained per square foot, these being .28 for the erecting shop and .24 for the boiler shop, the former being said to be the best lighted erecting shop in the country.

The average candle feet obtained are 4.24 for the erecting shop and 3.53 for the boiler shop.

No better evidence of the success of the installation from a practical viewpoint can be secured than the universal commendation of the employes who are working under the light. They are universally pleased with it and the results they are able to obtain.

It is interesting to note, however, that when a trial installation of four lamps was first made, there was a certain antipathy to the light on the part of the men employed, because of the difference in color value, but this speedily disappeared after they gave it a thorough trial. This trial resulted in the adoption of the complete installation of these units.

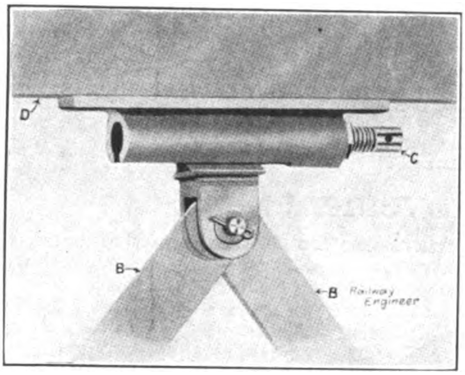
The lamps have been installed at various times but the entire installation averages practically sixteen months and the maintenance charges for the period totals $134.54 or $4.58 per lamp per year.

Window Balancer with New Features.

THE annexed drawings illustrate the "lazy tongs" window balancer patented and manufactured by Messrs. G. D. Peters and Co., Ltd., Moorfields, London. The lazy tongs are of the usual pattern, but the patent knuckle joint and the top universal joint give the whole arrangement great advantages.

The spring box, which is screwed down on to the bottom of the well, is shown in section so that the patent knuckle joint is clearly seen in connection with the eye bolt into which the spring is hooked. The spring is in perfect alignment and quite easily adjusted. It will be noticed that there is only one spring.

The top universal joint C, fig. 1, which is fixed to the bottom bar D of the drop light, is adjustable so that the point of support can easily be brought exactly under the centre of gravity of the window. This again is a most important point as it prevents the window rubbing and jamming against the sides of its case.

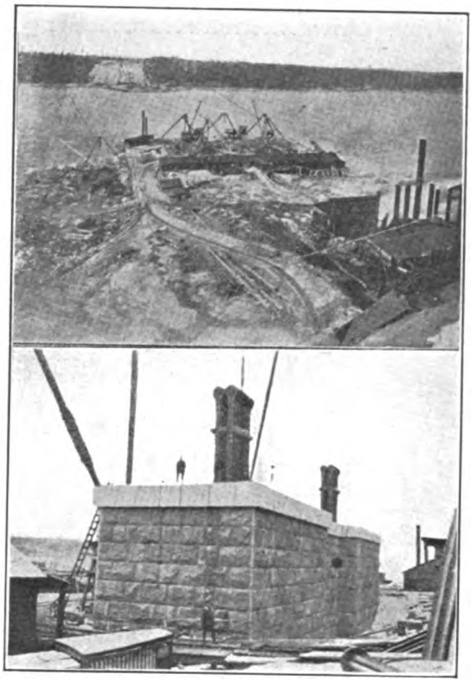


A New Universal Joint for Window Balancer.

The New Quebec Bridge.

According to the Canadian Department of Railways and Canals, work on the new Quebec bridge which was contracted to be finished on December 31, 1915, is making satisfactory progress. The contract price is 9 2-10 cents a ton and will aggregate about $8,650,000, a saving of about $2,600,000 having been effected by the elimination of the highways for vehicular traffic contemplated in the original design.

The bridge when constructed will have a total length of 3,228 feet or about 3-5 of a mile. The center span will be 1,800 feet long, the length of the suspended portion of it will be 640 feet. This span will, for a length of 760 feet over the channel of the river, have a height of 150 feet between its lower members and the high water level of the river. The two cantilever arms will each be 580 feet long. The width of the bridge between trusses will be 88 feet. The bridge will comprise a double track railway, and two sidewalks for foot passengers.



Two Views of Construction Progress of the Quebec Bridge.

ELECTRICAL.

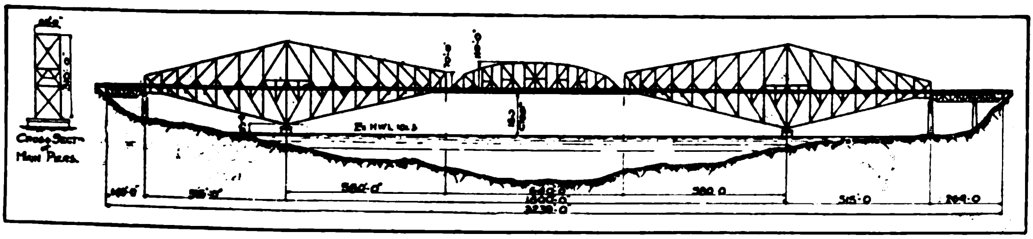
Census Report on Electric Railways.

The total trackage owned by the 1,260 street and electric railways in the United States in 1912, according to the census bulletin just issued was 40,470 miles and 649 miles leased. About one-half of these companies had their own power plant equipment. The total capitalization of the operating companies was $4,708,568,141, of which $2,384,344,513 was capital stock and $2,324,223,628 funded debt.

These lines of railways carried in that year 12,135,341,716 passengers, of whom 2,423,918,024 were on transfers and 165,869,025 were free. The average number of revenue passengers to each mile of track operated was 232,556.

The gross income of these railways, less operating expenses, was $585,930,517 and the net income was $61,910,753, made up of $51,650,117 dividends and $10,260,636 surplus.

There were employed by the operating lines 282,461 persons, with a total salary and wage expenditure of $200,890,939.



Quebec Bridge Across the St. Lawrence River, Above Quebec Now in Course of Construction.

New Haven Electrification Contract.

IT is reported that the New Haven Road is at work on the practical negotiations of one of the biggest power contracts ever closed for the purpose of train propulsion.

The parties to this contract will be the railroad and the New York Edison Co. In consequence, the Edison Co. will have to expand its generating capacity.

The additional energy which will be obtained under the new contract will supply the power for New York, Westchester & Boston and will permit the New Haven itself to operate electrically from New York to New Haven, Conn., at about 70 per cent of full capacity. When financial and other difficulties clear up, development of the Housatonic Power enterprise will enable complete electrical operation over the entire 70-mile stretch.

Although track and overhead work has been intact a month, the railroad has been able to run by electricity only the relatively small number of eight or ten trains per diem into and out of New Haven. This is due to insufficiency of the company's Cos Cob power plant to meet the increased demands of the entire electrified zone.

This zone really requires yearly about 200,000,000 kilowatt hours of electricity. Engineers estimate that such an amount of power should be obtainable at an expenditure of not over $2,000,000 per annum. It is planned to use the New York Edison current for the New York end of the zone, the company's Cos Cob station's power between Port Chester and Stamford, and Housatonic Power from there to New Haven.

The New Haven has spent a total of about $16,000,000 on electrification.

Its whole electrification experience to date has been only in the nature of an experiment. Throughout its extensive electrification program, the road has blazed practically a pioneer path.

It will be unwise and unprofitable for either the public or the road to boom electrification on the basis of present results.

In the matter of electrification, the New Haven must proceed very slowly to make sure of benefitting from experience.

Terminal Improvements

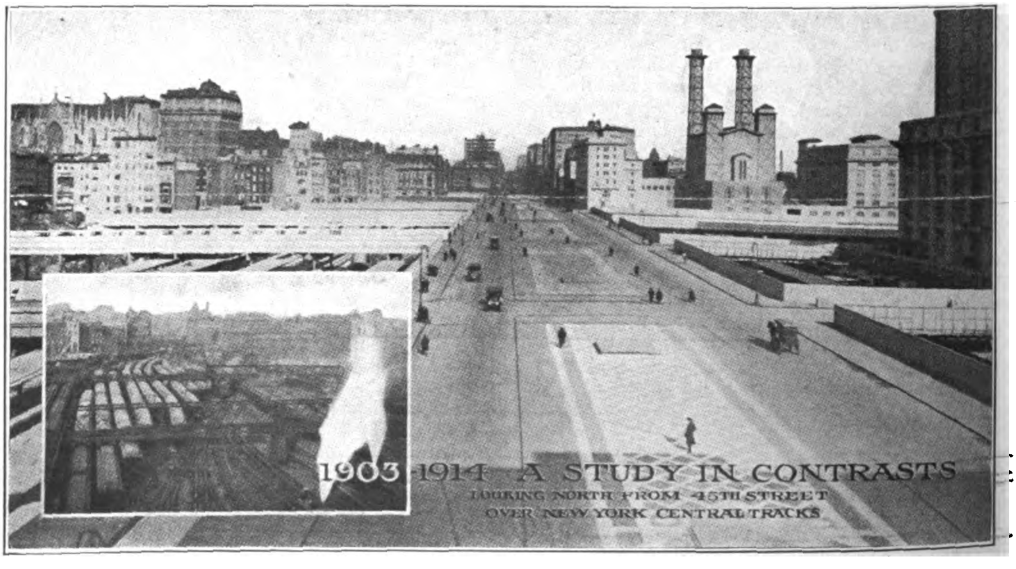
The Advantage of the Modern Terminals.

THE new Grand Central Terminal at New York, which has been fully described in the columns of the "Railway World," offers a striking example of how such a terminal can transform an entire neighborhood. The two photographs, one within the other, herewith presented, show the conditions surrounding the Grand Central Terminal in 1903, before the new building and constructions and the general appearance of the same locality at the present time. In the old picture may be seen the railroad yards at the street level crossed by two or three elevated foot bridges. As a matter of fact, the whole area covered by the railroad yard north of 45th Street was closed to the public and was of no use other than a place to shift trains.

In the construction of the new terminal, electricity having suspended steam, it was possible to depress the tracks below the street level and thus to restore the cross streets from 45th Street to 56th Street to public use, in addition to which Park Avenue, a magnificent thoroughfare, 140 feet wide, has been opened from 45th Street.

The larger photograph tells its own story.

Already a number of handsome buildings have been erected in the area, among them the Railroad Men's Y. M. C. A. on Park Avenue, 49th to 50th Street; the Grand Central Palace on Lexington Avenue, 46th to 47th Street, and the terminal heating and lighting plant (the building with the two stacks), 49th to 50th Street, between Lexington and Park avenues. When in the course of a few years the property now vacant over the tracks is built up there will be



1903 1914 A STUDY IN CONTRASTS
LOOKING NORTH FROM 45TH STREET
OVER NEW YORK CENTRAL TRACKS

A General View of the Grand Central Terminal at New York Showing the Great Improvements Which Have Taken Place as Compared With the Old Terminal.

established in place of the old, smoky railroad yard, a center of harmonious architectural development that will be the pride of New York City and a monument to the foresight of the men who planned Grand Central Terminal.

The New Great Northern-Northern Pacific General Office Building at St. Paul.

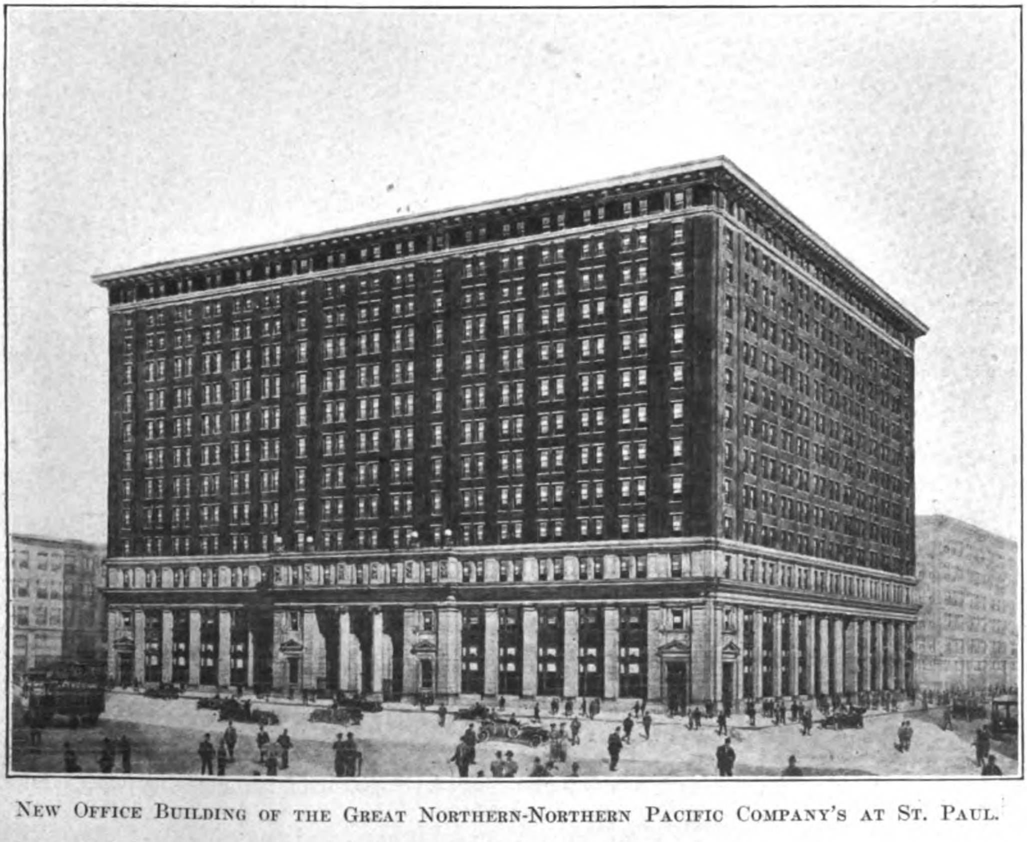
CONTRACTS have recently been let for the construction of a $3,500,000 office building in St. Paul to house the general offices of the Great Northern and the Northern Pacific, with provision also, for the accommodation of two banks on the main floor. The new structure will be located on Jackson Street, occupying the entire block between Fourth and Fifth Streets. The overall dimensions of the building will be 290 feet 5⅜ inches by 232 feet. It will be thirteen stories high, with a basement and sub-basement. The attic story will be framed in the same manner as the other stories to make possible the addition of four stories with the minimum amount of changes, if such an addition becomes advisable. The building will be of steel frame construction, with combination tile and reinforced concrete floor slabs. The exterior finish will be of stone for the lower two stories, and brick and terra cotta for the remaining height.

The central portion of the first floor will be occupied by the First National Bank and the Northwestern Trust Company. The city ticket office and exhibition rooms of both railways will occupy the ends of the building on street level floor. The public space in the bank will be finished with mahogany, marble and genuine bronze grills.

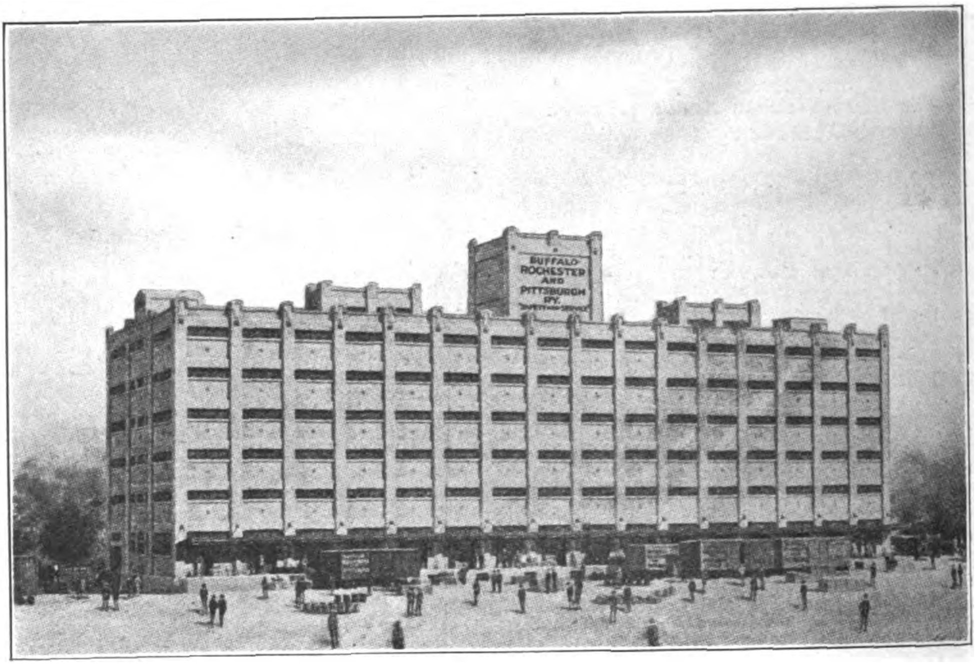
The basement will contain the safety deposit vaults for the banks, and in the sub-basement will be located the power plant, with facilities to supply electricity to light the entire building and to operate the elevators; also to furnish all heat and to operate the mechanical ventilating system installed throughout the building.

The central portion of the second floor will contain banking offices, meeting rooms, etc. The upper portion of the building will surround a light court 145 feet by 109 feet in size. The office area on each floor will be completely divided in the middle; one-half to be used by the Great Northern and the other by the Northern Pacific. A typical office floor contains a total area of about 46,000 sq. ft. inside the enclosing walls. The woodwork in these office floors will be of oak, and the trimming throughout will be made severely plain.

The design and construction of the building are being handled by a committee representing the three owners, consisting of R. Butt, assistant to the president of the G. N.; W. L. Darling, chief engineer, N. P., and E. H. Bailey, president of the First National Bank. C. S. Frost, Chicago, is the architect, and Max Toltz, St. Paul, the structural steel engineer. The contract for the structural steel has been let to the Cambria Steel Co., Johnstown, Pa., and for the general construction to Grand, Smith & Co., St Paul, Minnesota.



NEW OFFICE BUILDING OF THE GREAT NORTHERN-NORTHERN PACIFIC COMPANY'S AT ST. PAUL.



NEW WAREHOUSE OF THE BUFFALO, ROCHESTER AND PITTSBURGH RAILWAY AT ROCHESTER.

The New Rochester Warehouse of the Buffalo, Rochester and Pittsburgh.

THE Buffalo, Rochester and Pittsburgh has recently completed a new warehouse at Rochester which adds greatly to the advantages of its terminal facilities at that point. The building which will be entirely completed in October, has six floors and a basement, four elevators and a capacity for storing 400 cars of freight. The equipment will be modern throughout and the building of absolute fire-proof construction. The accompanying illustration gives an excellent idea of its general appearance.

The advantages of such a warehouse to the commercial interests of the city are many, for example, the merchant can abandon all or part of his present expensive storage arrangements, relieving congestion at his store, reducing cost of insurance, handling and cartage, not only saving expense in operation, but also enabling him to use his capital in extending his business.

The manufacturer can find proper and reasonable storage for his product which must be held to accommodate the trade or as business conditions may require, negotiable receipts being given by the warehouse company which can be used as collateral.

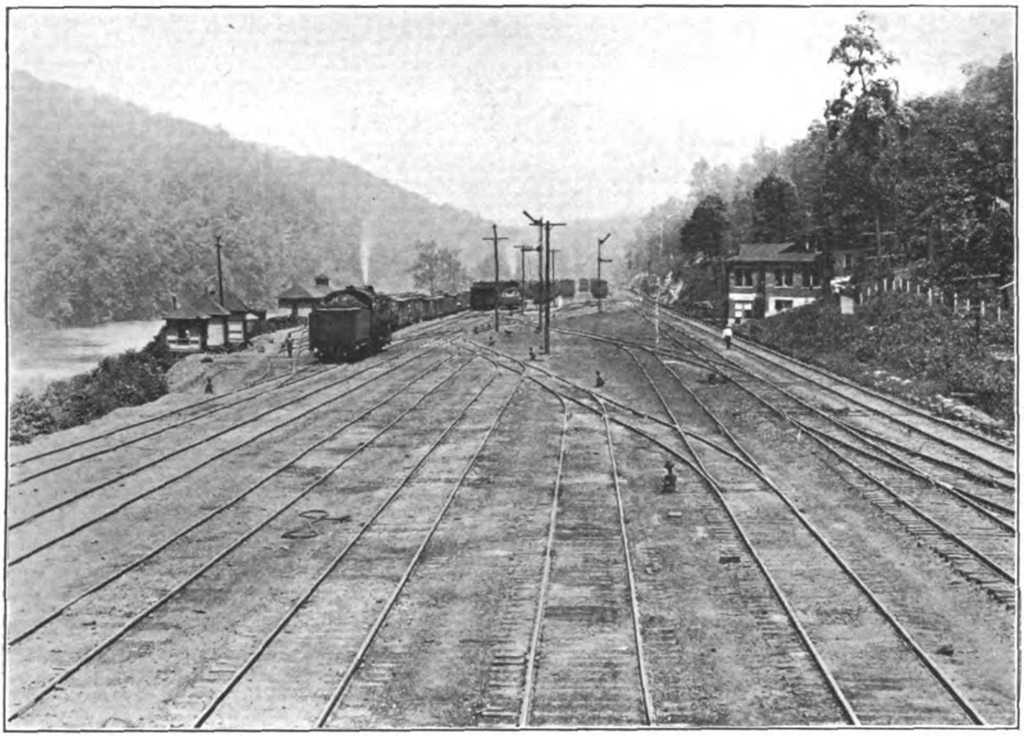
The broker or dealer who only desires an office or desk can have his goods consigned for delivery at the Buffalo, Rochester and Pittsburgh Warehouse and have his orders filled either for local delivery or for other points at less expense than can otherwise be provided. Large stocks of goods can be purchased when prices are favorable and stored until trade conditions warrant their sale.

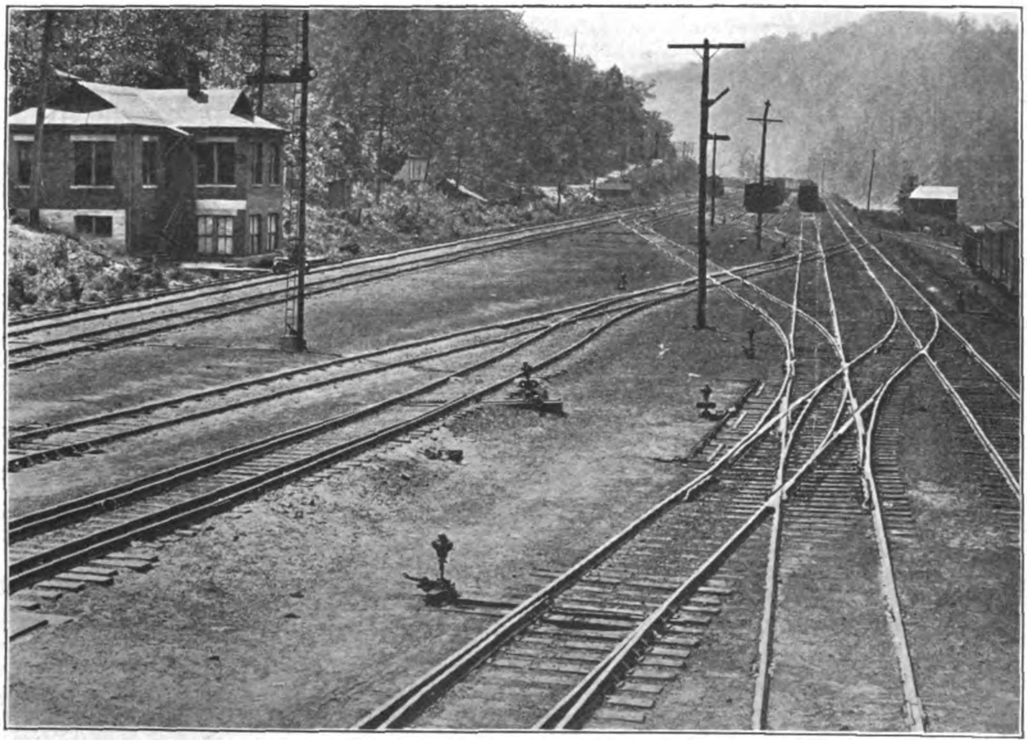
New Terminal Yards for the Texas Pacific.

THE Cincinnati, New Orleans and Texas Pacific has recently completed district terminal yards at Oakdale, Tenn. The layout consists of two yards, one for the north bound trains and one for the south bound, as shown in the accompanying photographs. Each yard contains five tracks of about sixty-five cars capacity each, the north yard being used for south bound trains and the south yard for north bound trains. Entrance is from either direction at the outside ends and departure from the middle where the yard office and interlocking plants are located and where all of the switching is done. The yard is so arranged that two switch engines can work simultaneously, one on the north bound and the other on the south bound trains. This arrangement materially assists in expediting the movement of traffic over the line.

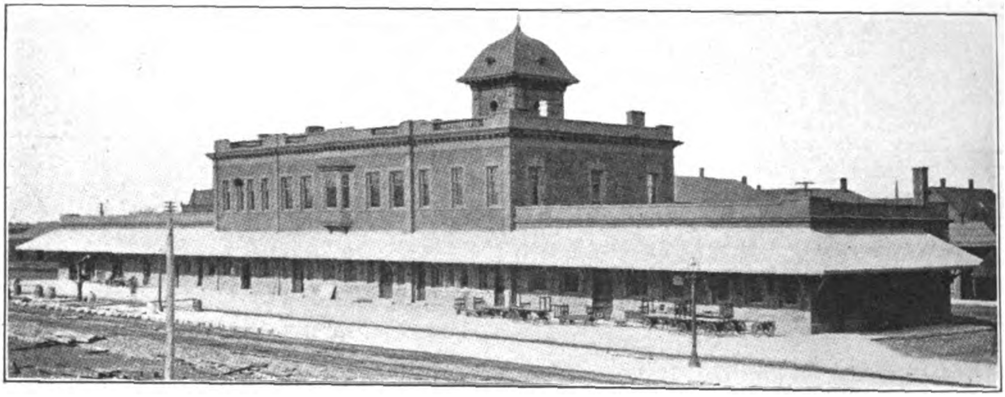
Activity in Terminal Work in Canada.

IT constitutes a rather disheartening comparison to note the difference in the work of railway developments at the present time as between the United States and Canada. In the latter country, in spite of the European war, tremendous progress is being made all along the line and the Canadian Government is taking an active part in promoting and protecting the transportation industry. While our country has outgrown such methods as involve government subsidies, the pity of it is that government regulation has become so restrictive as to practically stop, for the present at least, those railway improvements which are so essential for the further development of our great national resources.





Two Views of the New Terminal Yards of the Cincinnati, New Orleans and Texas Pacific Railway at Oakdale, Tenn. One is Employed for North Bound and the Other for South Bound Trains.



INTERCOLONIAL RAILWAY'S NEW PASSENGER STATION AT TRURO, N. S.

The accompanying photograph is a fair illustration of the type of new station building which is being constructed by Canadian roads for the smaller towns and communities. The particular one referred to is located at Truro, N. S., on the Intercolonial Railway and on its face bears the stamp of a progressive railway policy and the ability to invest sufficient capital in order to give a growing and enterprising town proper railway facilities. If government officials of this country could only see the light sufficiently to permit United States Railways to go and do likewise, it would mean the beginning of a period of progress and prosperity such as the country has not seen for several years.

Interstate Commerce Commission

To Rehear Eastern Advance Rate Case.

THE Commission as elsewhere stated, has agreed to a rehearing in the five per cent advance rate case to begin on October 19th and to be confined to presentation of facts.

The text of the order of the Commission follows:

"Upon consideration of a petition of respondents for modification of orders heretofore entered and good cause appearing therefor,

"It is ordered, that further hearing in said cases be, and is hereby granted; said hearing to be limited to presentation of facts disclosed and occurrences originating subsequently to the date upon which the records previously made in these cases were closed.

"It is further ordered, that pending such rehearing and further order of the Commission in the cases, the Commission's report findings and orders heretofore entered there shall remain in full force. It is further ordered that this proceeding be assigned for hearing at the office of the Commission in Washington, D. C., on the 19th day of October, 1914, at ten o'clock A. M.

"It is further ordered, that a copy of this order be served upon each of the parties to the cases."

Shippers Favor Rate Advance.

BUSINESS men all over the country are writing to the Interstate Commerce Commission and to their Congressmen urging that some relief be immediately granted to the carriers.

The Illinois Manufacturers' Association which originally opposed an increase in freight rates has now decided that the railways are in urgent need of assistance and has sent the following circular to all its members:

"Many members of the Illinois Manufacturers' Association are writing letters to their Senators and to Representatives in the lower House urging the adoption of a joint resolution directing the Interstate Commerce Commission to review and revise its decision in the recent application of the Eastern railroads for a five per cent advance in freight rates.

"It is contended that our financial situation is under a severe pressure because it is threatened by the unloading of railroad securities held by Europe and that the break is only temporarily halted by the close of the public markets. It is claimed that the small advance which the Interstate Commerce Commission has given the carriers will have no effect in restoring and establishing the confidence of the large investors and holders of American securities abroad, which it is maintained will be sent over as soon as it is possible to do so to draw our gold or its equivalent.

"The Interstate Commerce Commission will have a big opportunity to take a big view of a big question if Congress will take the action requested; and it will take it if enough people appeal to it to act."

Mr. John M. Glenn, secretary of that body, in discussing the action taken, said:

"The Illinois Manufacturers' Association, which for several years opposed every effort to increase railroad rates, will assist the railroads to reopen their fight for higher rates before the Interstate Commerce Commission.

"The Illinois Manufacturers' Association is in favor of any movement which will mean better business conditions. We opposed former efforts on the part of railroads to secure higher rates, because we did not believe that conditions in the country warranted the change and because we would be the ones who would suffer. We still want to ship our goods just as cheaply as possible, but we want them shipped. Conditions now are such that they can not always be shipped, partly because there is no market and partly because the railroads can not afford to supply the needed equipment. The railroads are in trouble and, because they are in trouble, we are in trouble also."

Increased Rates to be Filed on Ten Days' Notice.

THE Commission has authorized the railroads in Central Freight Association territory to make effective upon ten days' notice the increased freight rates allowed in the recent rate decision, excepting those on grain and its products, which must be preceded by the regular thirty days' notice.

Three-Cent Passenger Fares Upheld in Western States.

INTERSTATE railroad passenger fares of three cents a mile through Arkansas, Missouri and Oklahoma have been upheld in a decision by the Commission, acting on complaints of the public service commissions of those states, which sought to have the two-cent intrastate rate made the basis of through traffic charges.

The Commission's ruling is important, as the reduction sought would have had a wide influence on passenger traffic rates generally. Six states—Arkansas, Kansas, Minnesota, Nebraska, Missouri and Oklahoma—established a two-cent intrastate rate in 1907 and resulting litigation brought a ruling from the Supreme Court that nothing confiscatory could be found to justify the railroads' complaint.

In appealing to the Interstate Commerce Commission the state commissions sought to show that a reduction of the interstate rate would stimulate travel, filing exhibits tending to support the contention that the two-cent intrastate rates had meant increased revenues for the carriers. The Commission thought other conclusions might be drawn from other tables and sustained the three-cent rate. The decision, however, asserts that the ruling does not mean that "there may not be force in the theory that a reduction of rate tends to increase travel."

Increase in Eastern Mileage Tickets.

PRACTICALLY all the principal railroads of the East have completed filing with the Commission the new tariffs proposing increases in the price of mileage tickets. The roads some time ago began giving notice of the new rates to take effect October 1. The increases approximate twelve and one half per cent.

Many of the lines propose to increase the price of thousand-mile local books from $20 to $22.50. The $5 refund on interchangeable books which sold for $25 would be reduced to $2.50.

Rate Advances Approved.

ADVANCES in the rates on lumber and other forest products from points on the Maine Central Railroad to points on the Boston and Maine Railroad have been approved by the Commission.

The new rates took effect on September 12. The Commission held that the roads had justified the proposed increases on the basis of the increase in operating expenses. The schedule did not include the rates on wood pulp, which are to continue as at present.

The Commission also held the Great Northern and other railroads have justified the increased rates on beer and other malt products between stations in Iowa and South Dakota and points in Minnesota and Wisconsin.

Extension of Time for Southeastern Roads.

THE Commission has granted to the Southeastern railroads an extension of time until April 1, 1915, to meet its order for readjustment of class and commodity rates from Eastern cities, Ohio River points, and New Orleans to south Atlantic and Gulf ports.

Extension of Round Trip Tickets of Americans Abroad Recommended.

ALTHOUGH without authority to require the railroads to do so, the Commission has recommended that the carriers extend the return time on round-trip transportation held by travelers marooned in Europe and which may expire before they shall be able to return to this country, and the sentiment in local traffic circles, unofficially expressed, is favorable to the suggestion.

Tap Decision Vacated.

IN conformity with the ruling of the Supreme Court, the Commission has issued an order vacating its previous decision which held tap lines not to be common carriers. Under the order the division of rates which obtained prior to May 1, 1912, will be re-established and tap lines permitted to make joint rates and throlgh routes with trunk lines.

Hearing on Car Embargoes Set for January 20th.

A HEARING on the general subject of regulation of railroads levying embargoes on freight cars will be held by the Commission in Chicago on January 20, 1915. The Commission instituted a general investigation into this subject about two months ago and it has been decided to announce the beginning of the public hearings in order to give ample opportunity to shippers and railroads to prepare any case they may desire to present.

The investigation has been assigned to the general direction of Commissioner Daniels. It is expected that Mr. Daniels will personally conduct the Chicago hearing next January.

Time on Intermountain Rate Orders Extended.

THE Commission has extended the effective date of the orders of the Intermountain Rate Case from October 1st to November 15th, to give the Western carriers more time to adjust their tariffs.

Rulings Under Long and Short Haul Clause.

THE Commission has entered an order denying the application of the Atchison, Topeka and Santa Fe and other Western railroads, filed under the long and short haul clause relating to the Western sugar rates, in the following particulars:

Authority to continue rate on sugar from San Francisco and from California sugar producing points to Missouri River points lower than to intermediate stations via reasonably direct lines denied.

Authority to continue rates on sugar from Colorado producing points and New Orleans to El Paso lower than to intermediate points denied.

Authority to continue rates from New Orleans to Oklahoma points lower than to intermediate Texas points via direct lines denied.

In the other particulars the application was granted as follows:

Authority to continue rates from San Francisco and from California producing points to Missouri River points lower than to intermediate stations via certain indirect routes granted.

Authority to establish rates from California producing points to Chicago lower than to intermediate points granted.

The Commission has also granted the Illinois Central relief under the long and short haul clause in connection with rates on sugar from New Osleans, La., to Ohio and Mississippi river crossings. A new schedule of rates will go into effect on January 1. In order to meet the water competition on the rivers the roads may charge a schedule of rates higher to the intermediate points upon a scale fixed by the Commission averaging an excess of 15 cents on distances not exceeding 200 miles and graduated to an excess of 25 cents on distances exceeding 700 miles.

The Commission has also declined to permit the railroads between the Missouri River and the Pacific Coast to ignore the long and short haul rule on wheat and flour.

Pacific Navigation Company Wins Through Rate Case.

THE Commission has issued an order requiring the Southern Pacific and other railroads to make through and joint rates with the Pacific Navigation Company upon a basis equal to similar joint rates now in effect with the San Francisco and Portland Steamship Company and the Pacific Coast Steamship Company. The Pacific Navigation Company operates steamers between San Francisco, San Pedro and San Diego, Cal.

The Commission said: "If rail carriers are permitted to choose the particular boat lines with which they will establish through routes and joint rates they will be able to dictate who shall operate on the water insurance and who shall not, for a boat line which is accorded a monopoly of the through rail and water traffic will soon be able to drive its competitor out of business.

"The spirit of the act to regulate commerce is to maintain the freedom of our ports and to allow boat lines to engage in traffic upon equal terms. To permit the rail carriers serving a port to favor one boat line or another would destroy the freedom of competition between the lines which the act is intended to preserve and would practically close ports to all but the favored vessels."

Rate Suspensions.

PROPOSED increased rates on bituminous coal from points on the Pittsburgh and Lake Erie Railroad to Wilmington, Del., Philadelphia and Baltimore, on traffic destined for points beyond those cities have been suspended by the Commission.

Advances in the rates on high explosives from Baltimore, Philadelphia, New York and other Eastern points located on the Grand Trunk Railway have been further suspended by the Commission from August 29 until February 28. These advances were previously suspended from May 1, but the Commission has not had time within which to complete its investigation into their reasonableness.

Advances amounting to 18 cents in the rates on wheat and flour from points on the Colorado and Southern Railway to Galveston, New Orleans and other Gulf ports for export have been suspended by the Commission from August 28 until December 26. The Commission will conduct an investigation into the reasonableness of the proposed advances.

Advances in the re-icing charges on butter, eggs and other perishable freight from points in Kansas, Nebraska and other states to north Pacific Coast points and other points in the Northwest, proposed by R. H. Countiss and other agents of railroads, have been suspended by the Commission from August 31 and subsequent dates until December 29.

An advance of 2,000 pounds in the carload minimum weight on packing house products and fresh meats from Chicago and other points, to points located on the Louisville and Nashville Railroad, have been suspended from September 1 until December 30. The Commission will conduct an investigation into the reasonableness of the new tariffs.

Advances in the rates on printing and various other kinds of paper in less than carload quantities from certain stations on the Boston and Maine Railroad to New York City and other points proposed by the Boston and Albany Railroad have been suspended by the Commission from August 18 until November 25. Similar advances proposed by the New York, New Haven and Hartford were previously suspended by the Commission.

Tariffs of the Missouri Pacific and other railroads proposing to cancel the joint through commodity rates on lumber from points in Arkansas and other states to points in Central Freight Association and Trunk Line territories, have been suspended by the Commission from August 15 to December 13. The effect of the proposed tariffs would have been to increase the existing rates from two to three cents per 100 pounds. The Commission will conduct an investigation into the reasonableness of the proposed rates.

STATE COMMISSIONS.

Alabama.—After fighting for many years, the Louisville and Nashville has finally accepted the lower freight rates on between 5,000 and 6,000 commodities of common use, and complied with every requirement of the Alabama Railroad Commission. New tariffs setting out the reduced schedules have been filed with the secretary of the Commission. Many reductions are below rates that have been charged by the Southern Railroad for several years under an agreement reached after the Alabama Legislature made statutory rates.

California.—Active steps have been taken by the Railroad Commission to do all in its power to avert the shortage of cars, threatened by the big crops awaiting shipment. The Commission has addressed a circular letter to all shippers and receivers of freight, the text of which follows:

"Indications point to a serious car shortage during the next few months when a large number of cars will be required to move California traffic. The carriers are apprehensive that the situation in California will be more acute during the next few months than it has been at any time in the past.

"The Commission, therefore, urges that receivers and shippers of freight in carload lots use every effort to unload and load cars in the shortest space of time possible and when possible, to load cars to their full capacity regardless of the minimum weight applying on the commodity shipped, thereby materially reducing the number of cars required to handle California business. It is also urged that in ordering cars, shippers should, when possible, advise the carrier from which the cars are ordered, of the quantity of the freight to be moved to afford the carrier an opportunity to more intelligently supply the equipment required for the particular purpose.

"The carriers are requested to handle promptly all carload shipments, to move empty cars to loading points without delay and to promptly repair for service all bad order cars.

"The Commission is of the opinion that the fullest co-operation of carriers and shippers is necessary to meet the situation."

Iowa.—The semi-annual hearing of general freight rates and classifications will be held before the Iowa Railroad Commission at the State House, October 6th. Shippers and railroads all will be heard at that time.

Missouri.—Application for an increase in passenger rates to three cents a mile on main lines and four cents on branch lines, has been filed with the Public Service Commission by the Trunk Lines of Missouri. The railroads also ask for substantial increases in freight rates. The railroads also ask freight rate increases ranging from 25 to 300 per cent.

The two-cent passenger rate and many freight rates were fixed by statute, upheld by the Federal Supreme Court, but the State Supreme Court has since held that the Missouri Public Service Commission has authority to fix rates.

New York.—The Rutland Railroad has secured permission for the issuance of securities for the purchase of a quarter million dollars' worth of passenger equipment. These certificates whose par value is $266,000, are not to be sold at less than 92 so as to net not less than $244,720. The proceeds are to be employed to purchase various classes of passenger equipment.

Ohio.—A pamphlet sent out by the Ohio Public Utility Commission to prevent congestion during the crop-moving period contains the following:

Take your railroad officials into your confidence.

Promptly report to your railroad agent all loaded and empty cars on your sidings.

When ordering cars give the size wanted, the route to be traveled and the destination.

Avoid ordering more cars than you need.

Keep your actual car needs constantly before the operating officials of your railroads.

Load cars to their full physical capacity. Ten cars so loaded gain a car.

Avoid loading a car and starting it on its way without knowing its final destination.

Release cars as promptly as possible after they have been placed for loading or unloading. Two days saved is a car gained.

Whenever you contribute to the delay of a car to-day will be reflected in the promptness of that same car's return for your further service.

Avoid unreasonable exactions.

Co-operate.

Keep the cars moving.

Pennsylvania.—On the application of representatives of the Central Freight Association, the Public Service Commission has agreed to the withdrawal of all tariffs of Pennsylvania intrastate roads, now under voluntary suspension, effective on or before September 12th, but reserved its decision on a request to make effective the five per cent increase in freight rates as modified by the order of the Interstate Commerce Commission on less than the statutory notice.

No matter what its attitude on the latter question may be, the Commission makes it plain that it will not affect the question as to the reasonableness of the increased rates. The matter only involves that section of Western Pennsylvania which comes under the recent ruling of the Interstate Commerce Commission.

LEGAL.

Important Recent Federal and State Legal Decisions Affecting the Carriers.

THE following analysis of the more important Federal and State Court decisions rendered during August and which relate to the operation, management and regulation of the railroads of the United States, constitutes a continuation of the record began in the July issue of the "Railway World." As is apparent, the necessary reference to Court records and authorities is given in each case and any further information desired, will be furnished upon request. Suggestions regarding these records will be thankfully received as an effort is being made to make them of practical value to the legal departments of the various railways.

Injury at Unauthorized Crossing.—(Federal, Western New York.) Plaintiff, while crossing one of defendant's main tracks at a place where the railroad company for years had permitted the public to cross, though not a regular crossing, slipped and caught his foot between a switch point and a rail, and being unable to extricate himself, was run down by an approaching engine, and suffered the loss of a leg. It also appeared that the public use of the place where plaintiff crossed the tracks had been open, constant, and notorious for a long period, and had been with the acquiescence of the railroad company without any attempt to withdraw its permission to the public to so use its premises. Held, that plaintiff was not a trespasser, and that the railroad company was bound to exercise reasonable care to prevent injuries to persons in plaintiff's situation. (Erie R. Co. v. Burke, 214 Fed. 247.)

Rate Regulation.—(Federal, Eastern Kentucky.) Where a railroad company maintained low rates for grain inward bound to distillers to build up the distilling business, and thereby receive a high class return traffic, and the company maintained the same rates for a long time after the reason for their establishment had ceased to exist, the rates were prima facie reasonable, and an order of a state railroad commission fixing the rates for all grain inward bound as lawful was sustained by evidence, for the commission was not bound to assume that an equivalent result would not follow as to outward-bound flour from grain inbound to the miller, or as to all reverse traffic which would normally result directly or indirectly from grain moving in one direction, and the burden was on the company to prove that the rates were unreasonable, before it could complain. (Louisville & N. R. Co. v. Kentucky Railroad Commission, 214 Fed. 465.)

Construction to be Placed Upon Safety Appliance Act.—(Federal, Southern Florida.) It is no defense to an alleged violation of the Safety Appliance Act (Act March 2, 1893, c. 196, 27 Stat. 531), requiring carriers engaged in interstate commerce to have at least 85 per cent of the cars in a train equipped with air brakes so that they may be operated by the engineer, and also requiring all cars, used in interstate commerce to be equipped with operating automatic couplers, that the cars and train in question were only being moved in switching operations.—(United States v. Atlantic Coast Line R. Co., 214 Fed. 498.)

Switching Facilities.—(Federal, Western Pennsylvania.) Interstate Commerce Act (Act Feb. 4, 1887, c. 104, 24 Stat. 380) requires that all carriers shall afford reasonable and equal facilities for the interchange of traffic between their respective lines. Under this act it is unlawful for a terminal railroad company owning trackage which it uses in serving industries along its lines to furnish interchanging facilities to a railroad having physical connection with its tracks and at the same time refusing them to another company which merely operates its trains over the tracks of the company receiving the privilege. (Pennsylvania Co. v. United States, Interstate Commerce Commission, 214 Fed. 445.)

Care to be Exercised at Crossings.—(Maryland.) A railroad crossing of extraordinary danger requires the exercise of extraordinary care, both by the parties attempting to cross, and by the managers of passing trains, and, though the trains have the prior right to pass unobstructed, yet they must give all proper and sufficient signals of their approach. (United Rys. & Electric Co. v. Cain 91 A. 405.)

Injured While Passing Through Train.—(Pennsylvania.) Where, in an excursion train there was a baggage car in the center fixed up with a place for refreshments, and an excursionist who was passing from a passenger car to the baggage car was thrown from the car and killed, the question of negligence of the railroad company was for the jury. (Sulger v. Philadelphia & R. Ry. Co., 91 A. 235.)

Animals Trespassing on Right of Way.—(Pennsylvania.) An owner of animals trespassing on the right of way of a railroad cannot recover for injuries sustained by them unless he shows gross negligence on the part of the railroad company. (Devereaux v. Philadelphia & R. R. Co., 91 A. 235.)

Property Owner's Right to Private Crossing.—(Pennsylvania.) A property owner's right to a private crossing over a railroad track, where the right of way has been acquired by condemnation, is a vested right. (Green v. Baltimore & O. R. Co., 91 A. 248.)

Injury to Hidden Trespasser.—(Pennsylvania.) Where a boy hid himself in a car, and was injured from the starting of the train at the signal of a flagman who did not know of the boy's presence, the fact that the boy was of tender years did not render negligent the flagman's failure to discover him; the standard of duty in case of concealed trespassers being the same whether the person injured be an adult or a child. (Schleich v. Baltimore & O. R. Co., 91 A. 253.)

Action for Loss of Goods.—(Delaware.) In an action by a shipper to recover for loss of goods under Interstate Commerce Act (U. S. Compiled Statutes, 1901), requiring any interstate carrier to issue a bill of lading, and making it and any other carrier to which it may be delivered liable "to the lawful holder thereof" for any loss, the holding of the bill of lading is not a prerequisite to such right or action; but the statute extends its remedy directly against the carrier to whom goods are delivered for shipment in behalf of such shipper, or one who has succeeded to his rights. A bill of lading is not a contract of shipment, but evidence thereof. (Bowden v. Philadelphia, B. & W. R. Co., 91 A. 209.)

Where View of Track is Obstructed.—(Delaware.) If at a railway crossing there are obstructions of such a nature that a traveler on the highway is prevented from seeing an approaching train, or if the peculiar conditions surrounding the crossing prevent a traveler using due care and caution from hearing the blowing of the whistle, the degree of care required on the part of the railroad company to warn travelers of the approach of trains is correspondingly increased. (Lofland's Brickyard Crossing Cases, 91 A. 285.)

Recovery Notwithstanding Contributory Negligence.—(New Hampshire.) Where railroad employes, after a person was in a dangerous situation at a farm crossing, could have given warnings which they failed to give, and the person might have escaped in safety had they been given, negligence of the person in driving upon the track was immaterial and a full recovery can be had against the railroad company. (Tyrrell v. Boston & M. R. R., 91 A. 179.)

Employers' Liability Act.—(New York.) The provisions of the Federal Employers' Liability Act (U. S. Comp. Stat. Supp. 1911) provides that railroad employes shall not be considered guilty of contributory negligence where the railroad company's violation of any statute enacted for the safety of employes contributes to an injury or death, applies only to violations of federal statutes such as the Safety Appliance Act (U. S. Comp. Stat. 1901). (Gee v. Lehigh Valley R. Co., 148 N. Y. S. 882.)

Not Within Employers' Liability Act.—(New York.) A yard switchman injured while in moving a freight car left in the yard by a fast train was not within the Federal Employers' Liability Act, where the cars during the trip did not pass out of the state and contained no freight for interstate commerce. (Norton v. Erie R. Co., 148 N. Y. S. 769.)

The Test of the Engagement in Interstate Commerce.—(New York.) The test of whether a railroad employe is engaged in interstate commerce, so as to be within the protection of the Federal Employers' Liability Act, is the nature of the work being done at the time of the injury and not what the employe expects to do after completing his task. He is within the act only where his relation to traffic at the time of his injury was so direct that such injury tended to stop or delay the movement of a train engaged in interstate commerce. His engagement in a general repair shop at the time of the injury will not bring him within the benefits of the act. (Shanks v. Delaware, L. & W. R. Co., 148 N. Y. S. 1034.)

Hours of Labor for Signalmen.—(New York.) The New York Labor Law, forbidding the employment of railway signalmen for more than eight hours in every 24 hours, is suspended as to employes engaged in interstate commerce by the Federal Hours of Service Law (34 Stat. 1415), limiting the time of such employment to 9 hours in each 24, since, Congress having legislated upon the subject, its legislation is exclusive, and there is no room for state legislation. (People v. New York Cent. & H. R. R. Co., 148 N. Y. S. 495.)

Issuance of Bill of Lading.—(Alabama.) An agent of a carrier has no authority to issue a bill of lading for goods before the same are received for shipment, and a carrier is not responsible for the unauthorized acts of an agent issuing a bill of lading before receiving the goods. (Louisville & N. R. Co. v. National Park Bank of New York, 65 So. 1003.)

State Has No Power to Exclude Railway from Its Territory.—(Mississippi.) While a state for any reason can exclude from doing business within its borders a foreign corporation authorized only to do a purely intrastate business, its power over a corporation which is an instrument of interstate commerce, as a foreign railroad corporation engaged in doing both intrastate and interstate business, is subject to limitations, one of which is that it cannot deprive it of a right guaranteed by the Federal Constitution, as the right to remove a suit from a state court to a federal court, and therefore it cannot, as attempted by Laws of 1908 c. 122, penalize it, by prohibiting it from doing intrastate business, merely because it has exercised such right of removal. (Louisville & N. R. Co. v. State, 65 So. 881.)

No Recovery Where Deceased Employe Left No Dependent Relative.—(South Carolina.) There can be no recovery for the death of an employe of a railroad company engaged in interstate commerce, who leaves no dependent relatives, under a state statute giving a right of action in favor of relatives whether dependent or not, as the Federal Employers' Liability Act, limiting the right of action to dependent relatives, is paramount and exclusive, and the liability of interstate carriers for injuries to their employes engaged in interstate commerce must be tested solely thereby. (Jones v. Charleston & W. C. Ry. Co., 82 S. E. 415.)

Release from Liability.—(Iowa.) A release of one railway company from all liability for an injury was not conclusive as to another company, where the injury was due solely to the negligence of the latter company. (Stearns v. Chicago, R. I. & P. Ry. Co., 148 N. W. 128.)

Equipment of Cars.—(Iowa.) Under Code, sec. 2082, requiring automatic brakes for railroad cars, the brakes need not, as a matter of law, be coupled up so as to be operated by the engineer, especially where the engine is switching or spotting cars. (Stearns v. Chicago, R. I & P. Ry. Co., 148 N. W. 128.)

Proper Remedy to Compel Compliance With Law.—(Michigan.) Mandamus is an appropriate remedy to compel compliance by a railroad company of a proper order of the Railroad Commission. (Michigan Railroad Commission v. Detroit & M. Ry. Co., 148 N. W. 385.)

Railroad Not Liable for False Imprisonment.—(California.) Where a special officer, appointed on the application of a railroad company, arrested without a warrant, an employe of the company on a charge of larceny, after being informed by a participant in the larceny that the employe assisted in the crime, the company was not liable for the false arrest of the employe. (Redgate v. Southern Pac. Co., 141 P. 1191.)

Gratuitous Transportation.— (Washington.) Where the transportation of a passenger is a mere gratuity, the carrier is not liable for injuries sustained by such passenger; but if the person injured is a passenger for hire then the carrier is liable. (Hagerman v. Puget Sound Electric Ry. Co., 141 P. 1027.)

Oklahoma's Two-Cent Fare Case.—The trial on its merits of the Oklahama two-cent railroad fare case, which has been on the dockets for two years, is set for October 1st. Because of delay in instituting the suit Oklahoma was not included in the United States Supreme Court decision rendered several months ago holding the two-cent laws and commission orders in Missouri, Kansas and Nebraska constitutional. Because of this fact all Oklahoma railroads still charge three cents a mile for all tickets sold to interstate purchasers, although intrastate fares in Oklahoma are only two cents, and only two cents in all the adjoining states.

The railroads expect this to be a decisive test and efforts will be made to prove that two-cent fares are not remunerative to the companies. The recent decision is expected to be offered in evidence, if this is permitted by the court.

The outcome of this case is considered of great importance by the railroads.

Decisions of Courts Affecting Railway Labor.—The Federal Bureau of Labor Statistics has published its annual summary of judicial decisions and opinions as to the construction and application of labor laws and of the rules of the common law. The reference in this publication to the decisions construing the federal statute relating to the liability of interstate railroads for injuries to their employes, is of particular interest to our readers. The chief point involved in these decisions is the scope of this law and among the employes held to be within its provisions are a brakeman getting ice to cool hot boxes on his train, a truckman loading a detached car with interstate freight, a pumpman at a water station, a repairman working on an engine tender on a siding, a member of a switching car placing oil in the car to furnish fuel for an interstate locomotive, a yard clerk taking the numbers of the cars on an interstate train, and a track repairer injured by an interstate train while at work on a bridge.

ORGANIZATION NOTES.

W. C. Maxwell Addresses St. Louis Traffic Club.—In an address before the St. Louis Traffic Club on September 14th, W. C. Maxwell, general traffic manager of the Wabash Railroad, said passenger rates of railroads between St. Louis and Chicago will be increased $1, December 1st, and the rates between St. Louis and New York will be advanced $2. This proposed increase, he said, is at the suggestion of the Interstate Commerce Commission.

Mr. Maxwell said the earnings of the passenger department of the Pennsylvania Railroad last year as reported was less than ½ of one per cent.

Mr. Maxwell, in part, said: "Now as to the general situation—evidence shows that the carriers spent about $200,000,000 a year for additions and betterments the last ten years. During a good part of this period, especially the latter part, the expenditures of many of the roads were very much below what they should have been. During the last eighteen months, expenditures for additions and betterments were reduced to a minimum, and this, in my opinion, is one of the leading causes for the depression in business."

Mr. Maxwell said the railroads need at least $250,000,000 a year for the next ten years for additions and betterments to their properties and to care for growing commerce.

"To give you an illustration," he said, "twenty-eight important roads last year earned 1.4 per cent on their property investment. This is not anything like enough to pay the interest on the bonds of these properties. Will any of you present to-day, invest your money in a business of this sort? The problem is to find a way to make railroad investments attractive enough to pay a reasonable return, otherwise the carriers can not get the money.

"Some constructive legislation helpful to the railroads is necessary both on the part of national and state bodies, otherwise a depressed condition of this industry and all industries dependent on the railroads is likely to continue for many years."

Forthcoming Meeting of Electric Railway Association.—The American Electric Railway Association will make a distinct departure when at its annual convention in Atlantic City, October 12th to 16th, a committee consisting of some of the strongest men in the electric railway field will present for consideration a platform of principles embracing what the committee believes to be a statement of the relations that should exist between public utilities and the public.

Public relations is an important topic in public utilities' affairs at this time. Measures aimed at public utility corporations have made it of importance to operators and investors that the case of the utility should be properly presented to the people.

This is one of the many important matters that will be taken up at the coming convention. The association represents practically every important electric railway on the North American continent and a very large number in South America. An attendance of between four and five thousand railway men is expected at Atlantic City, and the exhibit of electric railway appliances and apparatus will cover over seventy thousand square feet of floor space on one of the piers. The association consists of a parent organization and four allied bodies covering the engineering, accounting, claims and transportation departments of railways, so that during the five days of the meeting there will be five conventions in continuous session and over seventy committees will report. Among the speakers will be R. B. Stearns, vice-president of the Milwaukee Electric Railway and Light Company, who will describe the experiment now being conducted in that city with the zone system of railway fares.

This is the system in general use in European countries instead of the flat-rate system common to the United States. Milwaukee is the first city where it has ever been carried out on anything like an extensive scale, and railway men are watching the experiment with the closest interest, as a possible remedy for conditions arising in this country from the expansion of the cities, the corresponding growth in the length of haul and the consequent cutting down of the per passenger revenue, which it is believed has had much to do with the present depression in railway extension.

LEGISLATION.

Railway Legislation During 1914.—The Special Committee on Relations of Railway Operation to Legislation, has issued its Bulletin No. 64, which contains a statement showing the classification of bills introduced and laws enacted, relating to railway operation, in the state legislatures which were in session in 1914. It will be noted according to the following table that 236 bills of this character were introduced of which 27 were enacted. While there were not as many legislatures in session in 1914 as in 1913, nevertheless the new bills introduced and the laws enacted were proportionally much smaller in number during the current year which is a development devotedly to be thankful for.

A comparison with the three preceding years may be of interest and is herewith appended:

	1914	1913	1912	1911
Legislatures in session	*14	42	*19	37
Bills introduced	236	1395	292	512
Laws enacted	27	230	48	**

*Including special sessions.
**This data not compiled in 1911.

The following is a classification of the bills introduced and enacted during 1914 and according to states and character of subject.

Progress of the Railroads Securities Bill.—Advices from Washington indicate the possibility that the Railroads Securities Bill may go over until the next session of Congress. While the matter has not yet been definitely decided, it was understood that of the three so-called trust bills now before Congress, the railroad bill is the one most likely to be postponed until the next session.

Bill to Equalize Rates on Vegetables and Fruits.—A bill to equalize transportation rates on vegetables and fruits has been introduced in Congress by Representative Frank Clark of

BILLS INTRODUCED AND LAWS ENACTED IN STATE LEGISLATURES, RELATING TO RAILWAY OPERATION.

*Special sessions.

Florida. The Interstate Commerce Commission is directed to fix a uniform rate over all common carriers on packages of fixed dimensions and weight for the same distance of shipments from the initial point. Rates for express companies and steamship lines are also to be fixed by the Commission.

LABOR.

The Arbitrators in the Western Wage Controversy.—W. L. Park, vice-president of the Illinois Central, and H. E. Byrum, vice-president of the Burlington, have been chosen to represent the western roads in the arbitration of the enginemen's wage question. The enginemen have selected F. A. Burgess of the engineers and Timothy Shea of the firemen as their representatives.

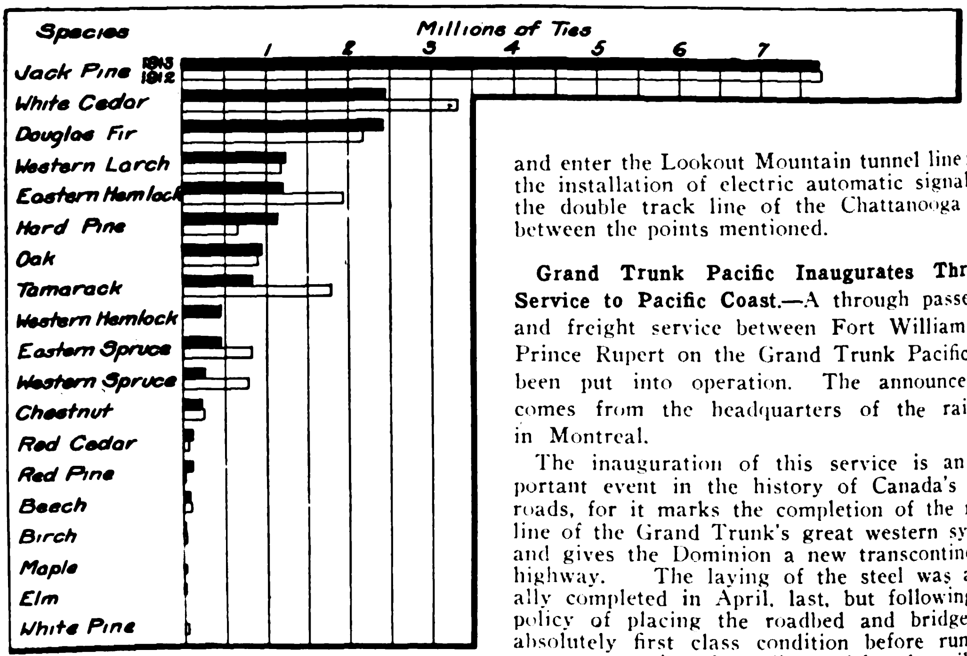
EQUIPMENT.

Railway Ties Purchased in Canada.—The following diagram shows in an interesting manner, the number of railway ties purchased in Canada during the years 1913 and 1912. It is reprinted from the "Canadian Railway and Marine World" of September. The decrease in the number of all ties purchased in 1913, was 6.7 per cent of the total of 1912. As indicated by the diagram, out of twenty kinds of wood reported, the two most important, jackpine and white cedar, were reported in smaller quantities than in 1912, as were seven of the other kinds of wood. The use of Douglass fir increased and formed 12.2 per cent of the total compared with 10.2 per cent in 1912. The employment of this wood has constantly increased since 1908. Four other British Columbia species, namely, Western larch, spruce, hemlock and red cedar, all show increases over the 1912 figures. Oak ties, of which the greater part are imported from the United States, were purchased in increased numbers, but all the other hard woods with the exception of elm, showed decreases. During 1913, the Canadian Railways imported 14.6 per cent of their ties for which they paid on an average of thirteen cents a tie more than for the native article. The average price of ties of all classes was practically the same in 1913, as in the preceding year.

CONSTRUCTION.

Southern Railway Improvements in Tennessee.—The Southern Railway Company has under way the construction of a double track line through the Lookout Mountain tunnel from a connection between the Chattanooga Belt Railway to a point .4 of a mile west of the west portal of the Lookout Mountain tunnel, where a connection is being made with a line being constructed to Wauhatchie by the Wauhatchie Extension Railway Company. This line is to be used by the trains of the Alabama Great Southern and the Southern Railway Company. In this connection, an expenditure of $80,000 has also been authorized on the Belt Railway of Chattanooga in order to make connection with the Extension line now being completed through the tunnel referred to.

The work to be done includes the construction of second main line track between the points mentioned; the extension of the present interlocking plant at East End Avenue so as to cover the additional tracks proposed; the construction of an interlocking plant at crossing of tracks of the Central of Georgia Railway and the Chattanooga Belt Line near Missionary Avenue; the construction of interlocking plant near the south end of yards where A. G. S. trains will leave the track of the Chattanooga Belt and enter the Lookout Mountain tunnel line; and the installation of electric automatic signals on the double track line of the Chattanooga Belt between the points mentioned.



Comparative Diagram of Railway Ties Purchased in Canada During 1912 and 1913.

Grand Trunk Pacific Inaugurates Through Service to Pacific Coast.—A through passenger and freight service between Fort William and Prince Rupert on the Grand Trunk Pacific has been put into operation. The announcement comes from the headquarters of the railway in Montreal.

The inauguration of this service is an important event in the history of Canada's railroads, for it marks the completion of the main line of the Grand Trunk's great western system and gives the Dominion a new transcontinental highway. The laying of the steel was actually completed in April, last, but following its policy of placing the roadbed and bridges in absolutely first class condition before running passenger trains the railway delayed until the present time the inauguration of this through service.

Enormous Dry Dock for Prince Rupert, B. C.—Good progress is being made with the construction of the big Grand Trunk Pacific dry dock at Prince Rupert. This dock, costing $3,000,000, will have an important national value, as it will be able to handle the largest vessels, either naval or mercantile, afloat on the Pacific Ocean.

The dock will have in all twelve pontoons and the first of these was launched this week. It is 130 feet long and exclusive of other fittings has 300,000 feet of timber in its construction. A second pontoon is to be launched on the 22nd inst., and six pontoons will be completed by January 1st. The capacity displacement of the series will be 20,000 tons and each pontoon will have two powerful centrifugal pumps, so that, when the ship is in place, the water can be rapidly pumped out and repair work begun. The dock is so arranged that it can be used in three separate units or in any combination that is desired.

Double Tracking the Southern Railway in North Carolina.—Southern Railway Company has just awarded contracts for construction of thirty-six miles of double track on the Danville Division between Greensboro and Pelham, N. C., which will give it a continuous double track line across the state of North Carolina from Charlotte to Danville, Va. Contracts have also been recently let for the construction of twenty-one miles of double track on the Alabama Great Southern between York, Ala., and Meridian, Miss., and on the C. N. O. and T. P. for nine miles between New River and Sunbright, Tenn.

TRAFFIC.

Improvement in Export Trade.—Improvement is noted in the export trade from various points along the Atlantic Coast. While commerce with Germany still remains practically suspended, steamers are now leaving with some regularity for a number of European ports, particularly those of Great Britain. This improvement is clearly indicated in the following notice published on September 5th, by the Foreign Freight Department of the Boston and Maine Railroad.

Prepayment of inland charges will not be demanded on through export bills of lading for export freight to ports or destinations in England, Ireland, Scotland or Wales, via Steamship Lines operating from the port of Boston, or to Sweden and Norway via the Sweden-Norway Line, except that prepayment or guarantee of inland charges is required on apples and other perishable fruits and vegetables.

Traffic Conditions Improving in Mexico.—Telegrams from N. M. Leach, general traffic manager of the Texas & Pacific and International & Great Northern, and H. C. Dinkins, Latin American agent for the Gould Lines, to the Missouri Pacific Iron Mountain assert that affairs in Mexico have reached a state where traffic with the United States is being resumed. The International & Great Northern in conjunction with the Texas & Pacific and Iron Mountain, previous to the troubles in Mexico, ran through trains via Laredo, Texas, to the City of Mexico in connection with the National Railways of Mexico. The war there caused a temporary suspension of the traffic. Mr. Dinkins telegraphs that it is believed that the Constitutionalists, who have possession of the railroads, will in a short time turn the lines back to the National Railways of Mexico. In the meantime, Mr. Leach wires that arrangements have been made with the Constitutionalists for an interchange of traffic between the Gould Lines and the Mexican Railways at Laredo. All freight, both ways, is transferred in the International & Great Northern yards at Laredo. As there are no through rates in effect, through bills-of-lading cannot at present be issued to or from points in Mexico. Bills of lading will be issued only to and from the Mexican border at Laredo, and it will be necessary for shippers to make their own arrangements for the payment of freight charges, transfer of equipment, custom house entries, bills of lading to destination, etc.

Reduction in Sugar Rates from the Pacific Coast.— Some time ago the Southern Pacific Company and other California roads applied to the Interstate Commerce Commission for permission to reduce their rates on sugar to Chicago from California producing points. The Commission has just granted the application.

This action on the part of the carriers marks a new chapter in the industrial development of California and shows their disposition to forego temporary revenue for the benefits accruing to California by the extension of the zone within which the industries may profitably compete for business.

The voluntary sacrifice of revenue on the part of the carriers was made to increase the production of sugar in California, broaden the market of the California refineries, give employment to a large number of men and increase the tribute which the East will pay California as against buying in New York.

A gratifying result of the railroads' effort appeared a day or so after the adjustment was sanctioned by the Commission when one of the largest refineries in the state announced an increase in the annual capacity of its plants from 375,000 tons to 575,000 tons. At the same time, there came word from Honolulu that the entire Hawaiian sugar crop would be refined here.

Trade with Europe Resumed.—After a series of meetings during the latter part of August, the Trunk Line Association has decided to resume the acceptance of through bills-of-lading to Cuba and Porto Rica and to all European ports and lines in the west have been duly notified to this effect. With regards to Cuban ports the acceptance will be without qualifications. All other ports, however, will be subject to certain war clauses and in all instances prepayment of inland charges will be required, this being exacted by the steamship lines and not by the rail carriers.

The present rate of exchange as named in the bills will be ignored, agents being instructed that they must insert this to correspond with what it is on the day the bills of lading are issued, the information to be ascertained from the steamship agents, as it may fluctuate from day to day.

Difficulties in Readjusting Western Passenger Rates.—At a meeting held in Chicago on September 15th, for the purpose of arriving at some plan by which railways operating in Chicago could agree on an increase in passenger rates, difficulty arose on account of the objection raised by the Chicago lines on the ground that it would be impracticable to make interstate rates higher than intrastate rates. No definite action was taken.

Increase in Passenger Fares from Chicago Eastward.—General advances in interstate passenger fares on all railroads operating eastward from Chicago are planned to take effect as soon as the tariffs can be prepared and published. The tariff bureaus representing the Eastern lines are preparing schedules based upon 2½ cents a mile for all interstate journeys and these schedules will be filed with the Interstate Commerce Commission.

The railroads contend that they are raising passenger rates to conform with the suggestions of the Interstate Commerce Commission, which recently held that passenger rates were too low.

Time Consumed in Panama Canal Passage.—The first steamship to pass through the Panama Canal, the Cristobal, made the trip from the Atlantic to the Pacific in eleven and a half hours.

The return trip, however, was made in eight and a half hours which probably marks the average time that will be consumed by merchantmen when all of the machinery of the canal is in smooth operation.

Colonist Rates to Coast.—The St. Paul, in common with the other western roads, has established a one-way colonist rate of $38 to the Pacific coast. These tickets will be on sale the last of next month for two weeks, but inquiries have not been numerous, according to St. Paul reports.

Parcel Post Business.—The Electric Vehicle Association of America recently appointed a committee on parcel post delivery, the duties of which were to collect statistics on parcel post deliveries, and present arguments for such deliveries to be made by electric vehicles.

Data on parcel post deliveries has been received from fifty cities with an aggregate population in excess of 25,000,000. These statistics show that from October 1st to October 15th, 1913, nearly 11,000,000 parcels were mailed out from these cities, while 3,500,000 parcels were received in the same time. The average weight per parcel was 1 pound 11 ounces, and the average postage was 10 cents per parcel.

Chicago Roads to No Longer Absorb Switching Charges.—All the Chicago roads with the exception of the Wabash, have definitely announced that, effective after October 1st, they would no longer absorb switching and lighterage charges, and filed their new tariffs with the Interstate Commerce Commission at Washington. The State Public Utilities Commission has suspended these cancellations of joint rates as far as intrastate traffic is concerned.

The action of the railroads is right in line with the Interstate Commerce Commission's recent suggestion that they abolish all free services to shippers.

Panama Railroad to Discontinue Freight Carriage.—All carriers have been notified by the Panama Railroad Company that the previous working arrangement whereby the railroad acted as an intermediate carrier would be terminated at the end of ninety days. After that the steamship lines will have to make their own arrangements for the transfer of cargo across the Isthmus, and the railroad will serve as a co-carrier only in case of emergency. The ninety-day order went into effect with the opening of the canal.

Eastern Trunk Lines Increase Mileage Rate.—Eastern Trunk Lines have filed with the Interstate Commerce Commission notices necessary for an advance in passenger rates. The first notice covered only the charges for open and interchangeable mileage books. On and after October 1st, these are to be at the rate of 2¼ cents a mile instead of 2 cents a mile as heretofore. Advances on other passenger rates are under consideration. Formal notice is to be served on the Commission in respect to those later.

Union Pacific Defers Ogden Gateway Order.—Pressure brought to bear by officials of other railroads following the closing of the Ogden gateway to the Denver & Rio Grande Railroad by the Union Pacific, has caused the Union Pacific to postpone its action. The Union Pacific recently notified the Trans-Missouri Tariff Bureau to eliminate the routing of through passengers over the Rio Grande between Denver and Ogden.

Lower Rates for Canada.—A dispatch from Montreal states that the lower freight rates ordered by the Railway Commission several weeks ago are now effective. The case arose from protests made by three prairie provinces on the ground that Canadian Pacific was granting lower rates to Eastern shippers. After hearings lasting many months, the Commission decided that the railroads were justified in charging higher rates in the West than in the East, but at the same time a general reduction was ordered in Western rates on both east and westbound business. In Manitoba the reductions averaged 10½ per cent. Coal rates were reduced fifty per cent.

August Anthracite Shipments.—The shipments in anthracite coal in August as reported by the chief of the Bureau of Anthracite Statistics, was 5,483,743 tons, as compared with 5,369,900 tons in August, 1913, an increase of 113,843 tons. Shipments for the year to date, eight months, were 43,821,389 tons, as against 45,709,606 tons in the same period of last year, a decrease of 1,888,217 tons.

Imports and Exports for August.—The Bureau of Statistics at Washington has published its returns for last month's foreign commerce of the United States. It shows that August exports of merchandise amounted to only $110,337,000 as against $154,082,000 in July and $187,909,000 in August last year. No single month since the middle of 1909 showed so small a total of merchandise exports for the country.

Imports of merchandise suffered to a much smaller extent from the trade blockade than did exports. They were $129,400,000 against $160,178,000 in July and $137,651,000 in August, 1913. They were the smallest of any month since the close of 1911.

Of the August imports, 61.8 per cent entered free of duty, compared with 50.9 per cent in August, 1913, and 54.3 per cent in August, 1912. Of the month's exports, $108,188,732 consisted of domestic merchandise.

September Traffic Better.—Trunk lines have announced that the September traffic reports show an increase of business over the first half of August, due mainly to resumption of activities in industries and to the grain shipments. Business is still below normal, the reports say, but the outlook is brighter.

ELECTIONS AND APPOINTMENTS.

Executive.

N. J. Conran, president, St. Louis & Missouri Southern Railway. Headquarters, New Madrid, Mo.

William J. Cunningham, president's assistant, Boston and Maine Railroad. Headquarters, Boston, Mass.

Thornwell Fay, assistant to receivers. International and Great Northern Ry.

Lawrence V. Grield, assistant to president, Kansas City, Mexico and Orient Railroad. Headquarters, Kansas City, Mo.

Hale Holden, president, Chicago, Burlington and Quincy R. R. Headquarters, Chicago, Ill.

Harry R. Kurrie, president, Chicago and Alton R. R. Headquarters, Chicago, Ill.

E. T. Lamb, president, Atlanta, Birmingham & Atlantic Railroad. Headquarters, Atlanta, Ga.

Brooks Morgan, vice-president, Atlanta, Birmingham and Atlantic Railroad. Headquarters, Atlanta, Ga.

Duval West, receiver, San Antonio, Uvalde and Gulf Railway.

Legal.

P. B. Warren, general counsel, Chicago, Peoria and St. Louis R. R. Headquarters, Springfield, Ill.

Financial.

W. F. Ingram, assistant treasurer, Southern Pacific Co. Headquarters, San Francisco, Cal.

F. K. Mays, secretary and treasurer, Atlanta, Birmingham and Atlantic. Headquarters, Atlanta, Ga.

F. J. Wilson, treasurer, Chicago, Peoria and St. Louis R. R. Headquarters, Springfield, Ill.

Accounting.

H. W. Berger, auditor, Chicago, Peoria and St. Louis Railroad. Headquarters, Springfield, Ill.

T. V. Pomar, general auditor and assistant treasurer, Florida East Coast Railway. Headquarters, St. Augustine, Fla.

Engineering and Mechanical.

H. E. Astley, division engineer, Midland Division, New York, New Haven and Hartford Railroad.

M. K. Barnum, superintendent of motive power, Baltimore and Ohio Railroad. Headquarters, Baltimore, Md.

J. S. Buckley, resident engineer's office, Southern District, Southern Railway. Headquarters, Birmingham, Ala.

Joseph Billingham, superintendent of motive power, Grand Trunk Railway. Headquarters, Transcona, Man.

R. A. Billingham, master mechanic, Tennessee Central. Headquarters, Nashville, Tenn.

E. E. Chrysler, superintendent of shops, Oregon Short Line Railroad. Headquarters, Pocatello, Idaho.

C. M. Buck, division engineer, Atchison, Topeka and Santa Fe Railway. Headquarters, Emporia, Kans.

W. A. Christian, senior civil engineer in charge of roadway and track department, Central District, Division of Valuation, Interstate Commerce Commission. Headquarters, Chicago, Ill.

J. E. Epler, superintendent of motive power, Chicago and Eastern Illinois Railroad. Headquarters, Danville, Ill.

D. W. Gross, valuation engineer, Atlantic Coast Line Railroad. Headquarters, Wilmington, N. C.

T. C. Hudson, division master mechanic, Canadian Northern Railway. Headquarters, Joliette, Que.

A. J. Ironsides, district master mechanic, Canadian Pacific Railway. Headquarters, Saskatoon, Sask.

H. E. Kellenberger, senior signal engineer, Central District, Division of Valuation, Interstate Commerce Commission. Headquarters, Chicago, Ill.

J. M. Kilfoyle, master mechanic, St. Louis Southwestern of Texas. Headquarters, Tyler, Texas.

J. A. Killian, Jr., resident engineer, Southern Railway. Headquarters, Charlotte, N. C.

T. S. Lowe, master mechanic, Lake St. John Division, Canadian Northern Railway. Headquarters, Limoilou, Que.

J. A. Lingstrand, senior architect, Central District, Division of Valuation, Interstate Commerce Commission. Headquarters, Chicago, Ill.

John A. Marshall, road foreman of engines, Northern Pacific Railroad. Headquarters, Duluth, Minn.

Charles Manley, master mechanic, Missouri and North Arkansas Railroad. Headquarters, Harrison, Ark.

E. Meyers, roadmaster, Ottawa Division, Canadian Northern Railway.

W. J. Miller, superintendent of motive power, St. Louis Southwestern Railway. Headquarters, Pine Bluff, Ark.

W. S. Moseley, mechanical engineer, Carolina, Clinchfield and Ohio. Headquarters, Erwin, Tenn.

F. D. Nauman, division engineer, Baltimore and Ohio Railroad. Headquarters, Garrett, Ind.

William O'Brien, master mechanic, Illinois Central Railroad. Headquarters, Clinton, Ill.

O. A. Redinger, resident engineer, Middle District, Southern Railway. Headquarters, Knoxville, Tenn.

R. L. Pearson, track supervisor, Providence Division, New York, New Haven and Hartford R. R. Headquarters, Providence, R. I.

G. F. Shull, acting master mechanic, Carolina, Clinchfield and Ohio Railroad. Headquarters, Erwin, Tenn.

G. I. Sitton, resident engineer, Northern District, Southern Railway. Headquarters, Richmond, Va.

Paul A. G. Tilmont, assistant roadmaster, Northern Pacific Railway. Headquarters, Tacoma, Wash.

W. E. Van Hook, office engineer, Central District, Division of Valuation, Interstate Commerce Commission. Headquarters, Chicago, Ill.

W. D. Warren, division engineer, New York, New Haven and Hartford Railroad. Headquarters, Providence, R. I.

T. E. White, supervisor of track, District No. 1, Louisiana and Arkansas Railway. Headquarters, Minden, La.

H. A. Woods, chief engineer, Grand Trunk Railway. Headquarters, Winnipeg, Man.

C. F. Yardley, division engineer, Central New England. Headquarters, Hartford, Conn.

Operation.

H. E. Allen, superintendent, Louisiana Division, Chicago, Rock Island and Pacific. Headquarters, Eldorado, Ark.

R. S. Allison, assistant trainmaster, Louisville and Nashville Railroad. Headquarters, Knoxville, Tenn.

F. B. Barber, assistant superintendent, Cleveland and Toledo Divisions, Wheeling and Lake Erie Railroad. Headquarters, Brewster, Ohio.

Fred N. Beal, general manager, Sandy River & Rangeley Lakes. Headquarters, Phillips, Me.

J. A. Caldwell, trainmaster, Gulf Division, International and Great Northern Ry.

E. E. Chrysler, superintendent of shops, Oregon Short Line. Headquarters, Pocatello, Idaho.

A. M. Deverell, chief dispatcher and division operator, Minnesota Division, Northern Pacific Railway.

C. W. Fisher, chief train despatcher, Canadian Pacific Railroad. Headquarters, Edmonton.

Gustave Gullickson, roadmaster, Northern Pacific Railroad. Headquarters, Forsyth, Mont.

W. S. Hall, trainmaster, Canadian Pacific Railroad. Headquarters, Red Deer, Alta.

G. A. Hoag, superintendent of car service, Canadian Northern Railway. Headquarters, Montreal, Que.

W. C. Hurst, general manager, Chicago, Peoria and St. Louis R. R. Headquarters, Springfield, Ill.

James B. King, trainmaster, Taylor sub-division, International and Great Northern Railway. Headquarters, Palestine, Texas.

H. H. Maher, trainmaster, Lake Superior Division, Northern Pacific Railway. Headquarters, Duluth, Minn.

C. E. Mansfield, chief train despatcher, Canadian Pacific Railway. Headquarters, Calgary, Alta.

J. G. Metcalfe, Jr., trainmaster, Louisville and Nashville Railroad. Headquarters, Paris, Ky.

D. J. Morris, assistant superintendent of transportation, Wheeling and Lake Erie Railroad. Headquarters, Brewster, Ohio.

David B. Mulligan, general superintendent, Grand Trunk Pacific systems. Headquarters, Winnipeg, Man.

L. F. Newton, trainmaster, Northern Pacific Railroad. Headquarters, Mandan, N. D.

P. E. Pournelle, trainmaster and roadmaster, Florida Railway. Headquarters, Live Oak, Fla.

D. E. Nichols, trainmaster, Minnesota Division, Northern Pacific. Headquarters, Staples, Minn.

H. H. Smith, car accountant, Canadian Northern Railway. Headquarters, Toronto, Ont.

T. D. Stafford, assistant superintendent, New Orleans, Texas and Mexico Railroad. Headquarters, DeQuincy, La.

R. T. Taylor, trainmaster, Lake Superior Division, Northern Pacific Railway. Headquarters, Duluth, Minn.

J. L. Terry, general manager, Denver, Laramie & Northwestern R. R. Headquarters, Denver, Colo.

A. E. Walker, superintendent, Arkansas Division, Chicago, Rock Island and Pacific Railroad. Headquarters, Little Rock, Ark.

Traffic.

C. I. Allen, commercial agent, Atlanta, Birmingham and Atlantic Railroad. Headquarters, Jacksonville, Fla.

H. S. Baggs, traveling passenger agent, Atlanta, Birmingham and Atlantic Railroad. Headquarters, Atlanta, Ga.

W. D. Clary, soliciting agent, Louisville and Nashville Railroad. Headquarters, Cincinnati, Ohio.

Willis Callaway, commercial agent, Norfolk and Western Railway. Headquarters, Jacksonville, Fla.

J. J. Coburn, soliciting agent, Louisville and Nashville Railroad. Headquarters, New Orleans, La.

A. B. Cutts, general freight and passenger agent, Minneapolis and St. Louis Railroad. Headquarters, Minneapolis, Minn.

H. C. Davis, traveling passenger agent, Nashville, Chattanooga and St. Louis Railroad. Headquarters, Chattanooga, Tenn.

H. E. Dengler, freight agent, Lehigh Valley Railroad. Headquarters, Easton, Pa.

D. M. Denison, general freight and general passenger agent, Minneapolis and St. Louis Railroad. Headquarters, Minneapolis, Minn.

W. L. Dulaney, traveling freight agent, Louisville and Nashville Railroad. Headquarters, Houston, Texas.

J. H. Fitch, division freight agent, Louisville and Nashville Railroad. Headquarters, Lexington, Ky.

E. K. Garrison, general agent, freight department, Chicago, Milwaukee and St. Paul Railroad. Headquarters, Seattle, Wash.

J. T. Graffins, general agent traffic department, Minneapolis and St. Louis Railroad. Headquarters, Indianapolis, Ind.

George M. Henry, general passenger agent, Detroit, Toledo and Ironton Railroad. Headquarters, Detroit, Mich.

W. McN. Knapp, traveling freight agent, Tennessee Central R. R. Headquarters, Savannah, Ga.

P. J. Leimbach, commercial freight agent, Missouri Pacific Railroad. Headquarters, Hutchinson, Kansas.

J. P. Linton, traffic assistant to general manager, Florida Railway. Headquarters, Live Oak, Fla.

C. V. Lewis, special representative, freight claim department, Baltimore and Ohio. Headquarters, Baltimore, Md.

H. G. Locke, district passenger agent, Chicago Great Western R. R. Headquarters, Boston, Mass.

J. R. Long, traveling freight and passenger agent, the Wabash Railroad. Headquarters, Philadelphia, Pa.

F. W. Lyons, commercial agent, Lehigh Valley R. R. Headquarters, Hazelton, Pa.

P. H. Mattimow, superintendent of weighing inspection and handling freight, Wabash Railroad. Headquarters, St. Louis, Mo.

Guy H. May, traveling passenger agent, Tennessee Central R. R. Headquarters, Knoxville, Tenn.

Fred Mulberry, traveling freight agent, Louisville and Nashville Railroad. Headquarters, Chicago, Ill.

J. P. Murray, agent, Lehigh Valley Railroad. Headquarters, Ransom, Pa.

L. G. Parsons, general agent, Louisville and Nashville Railroad. Headquarters, Detroit, Mich.

R. P. Reichard, agent, Lehigh Valley Railroad. Headquarters, Tatamy, Pa.

F. L. Salisbury, traveling freight agent, Louisville and Nashville Railroad. Headquarters, Lexington, Ky.

J. A. Scheuerman, assistant general passenger agent, Detroit, Toledo and Ironton Railroad. Headquarters, Detroit, Mich.

M. L. Schultz, commercial agent, Georgia and Florida Railroad and the Detroit, Toledo and Ironton Railroad. Headquarters, Chicago, Ill.

C. L. Smith, general agent, freight department, Chicago Great Western Railroad. Headquarters, Boston, Mass.

J. Spitzenberger, agent, Lehigh Valley Railroad. Headquarters, Manville, N. J.

Glem Strope, agent, Lehigh Valley Railroad. Headquarters, Avoca, Pa.

Frank B. Townsend, traffic manager, Minneapolis and St. Louis R. R. Headquarters, Minneapolis, Minn.

B. M. Waldron, freight claim agent, Baltimore and Ohio Railroad. Headquarters, Baltimore, Md.

G. C. Whitney, commercial agent, Queen and Crescent Route. Headquarters, Greensboro, N. C.

C. P. Wilson, commercial agent, Missouri, Oklahoma and Gulf Railway. Headquarters, Dallas, Texas.

W. O. Wall, general claim agent, Georgia and Florida Railway. Headquarters, Augusta, Ga.

Purchasing.

Leroy Cooley, general storekeeper, Central Railroad of New Jersey. Headquarters, Elizabeth, N. J.

E. O. Griffin, purchasing agent for the receivers, International and Great Northern Railroad. Headquarters, Houston, Texas.

C. B. Williams, purchasing agent, Central of New Jersey. Headquarters, New York City.

Miscellaneous.

C. F. Swanger, chief gardener, Illinois Central Railway.

RESIGNATIONS.

Executive.

Frederick A. Delano, president, Chicago, Indianapolis and Louisville Railroad.

James H. Hustis, president, New York, New Haven & Hartford R. R.

Financial.

H. A. Jones, assistant treasurer, Southern Pacific Company.

Accounting.

E. B. Pierce, auditor, Missouri, Kansas and Texas Railroad.

Engineering and Mechanical.

J. W. Barrie, principal assistant engineer, Florida East Coast Railroad.

Fred M. Baumgardner, master mechanic, Illinois Central Railroad.

J. T. Cherry, supervisor of track, Louisiana and Arkansas Railway.

J. J. Clark, master mechanic, Tennessee Central Railroad.

J. P. Dolan, master mechanic, Missouri and North Arkansas Railroad.

F. L. Guy, division engineer, Atchison, Topeka and Santa Fe Railway.

B. B. Kelliher, chief engineer, Grand Trunk Pacific Railway.

G. W. Robb, superintendent of motive power, Grand Trunk Railway.

H. F. Staley, master mechanic, Carolina, Clinchfield and Ohio Railway.

J. H. Tinker, superintendent of motive power, Chicago and Eastern Illinois Railroad.

Traffic.

Willis Callaway, commercial agent, Atlanta, Birmingham and Atlantic Railway.

R. E. Camp, traveling passenger agent, Atlanta, Birmingham and Atlanta Railroad.

W. A. Dolan, general New England passenger agent, Chicago Great Western Railroad.

C. W. Hay, traveling freight agent, Louisville and Nashville Railroad.

C. H. Latta, traveling freight and passenger agent, the Wabash Railroad.

J. H. Latimer, traveling passenger agent, Nashville, Chattanooga and St. Louis Railroad.

A. E. Lee, general agent, traffic department, Minneapolis and St. Louis Railroad.

S. G. Lutz, traffic manager, Minneapolis and St. Louis R. R.

J. M. Macek, agent, Lehigh Valley Railroad.

R. W. Rigdon, commercial agent, Kansas City, Mexico and Orient Railroad.

F. S. Sleight, general agent, Missouri, Oklahoma and Gulf R. R.

J. N. Snyder, agent, Lehigh Valley Railroad.

J. A. Titlow, freight agent, Lehigh Valley Railroad.

LAND AND INDUSTRIAL.

New York Central's Fruit Packing Demonstration Train.

THE New York Central has recently put into operation a number of fruit packing and marketing demonstration cars which have been sent out by the Agricultural Department of that system in co-operation with the Cornell College of Agriculture. The exhibits installed include different kinds of mechanical graders which are of special interest to growers of large quantities of apples, in view of the importance attached to uniform grading under the provisions of the new Apple Packing Law. Several graders that have been giving satisfaction in different parts of the State will be shown.

Other exhibits show by piles of apples the amount of variation in quality and size, which is permitted under the new law, and to further illustrate this point demonstrations are being made at each stop of the packing of "orchard run" fruit, furnished by local growers.

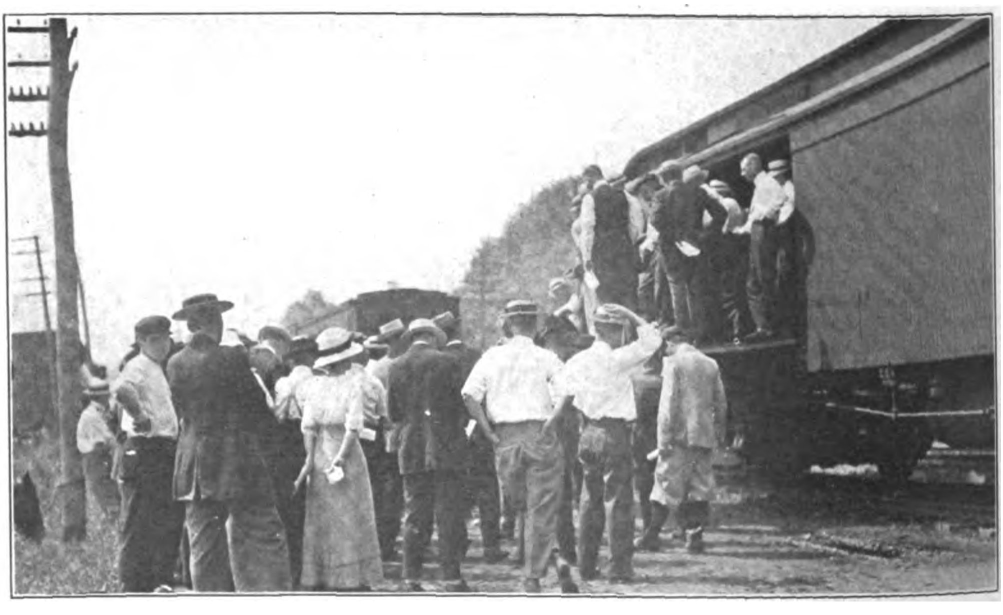
The matter of marketing of fruit is also being touched on in addition to the packing, and lantern slides are used to show the increasing receipts of different varieties of apples in the New York market, the preferences of different markets for different varieties, the prices of fruit by months on the New York Market, and the effect of cancellations of car orders on the available car supply.

Those accommodating the cars are: Prof. C. S. Wilson and H. B. Knapp, of the College of Agriculture, Hon. Marc Cole of the State Department of Agriculture, Mr. C. R. White of Ionia, representing the New York State Fruit Growers' Association, Mr. John Hall of the Western New York Horticultural Society, Mr. R. G. Phillips of the International Apple Shippers' Association and Mr. F. S. Welsh, Agriculturist of the New York Central Railroad, who will have charge of the cars.

BOOK REVIEWS.

Water Traffic and Rates.—By B. Olney Hough, editor of the "American Exporter," published by the La Salle Extension University; price, $3.00.

In the preparation of his book on "Water Traffic and Rates," Mr. Hough has taken a rather different point of view from most writers on this subject, as he deals almost entirely with its practical side. The author has laid particular stress on the matter of handling foreign freight which, at the present time, is of more than usual interest to railway officials and he



NEW YORK CENTRAL'S APPLE PACKING DEMONSTRATION TRAIN SHOWING LECTURER ENGAGED IN EXHIBITING AND DESCRIBING USES OF DIFFERENT MECHANICAL GRADERS.

explains, from a broad experience, the many complexities that arise in connection with the handling of world-wide traffic. He also makes many practical suggestions as to the ways and means of developing export trade. The book also contains a considerable number of photographs and actual forms portraying various phases of the work. Many important and practical facts relative to the conduct of foreign business are brought out, some of which are little known even to the experienced traffic man. Among such points may be mentioned exporting in bond and securing the benefit of the drawback, the latter being a matter of considerable practical importance in many lines of business.

The work is unusually comprehensive as the following chapter heads indicate: Ocean Carriers; Shipping Agreements; Ocean Shipping Routes and Service; Seaports and Terminal Facilities; Handling Export and Import Shipments; Getting Export Trade; Developing Export Trade; Foreign Credits and Collections; Foreign Trade Opportunities; Marine Insurance and Merchant's Marine.

As there appears to be at the present time no other comprehensive text book on this general subject, the work will undoubtedly fill a long felt want.

Link Motions, Valves and Valve Settings.—By Frederick H. Colvin, Assistant Editor, "American Machinist." Published by the Norman W. Henley Publishing Company, New York, Price, 50 cents.

This handy little book for engineers or machinists helps in a practical manner to clear up the mysteries of valve setting and shows the different valve gears in use, how they work, and why. Piston and slide valves of different types are illustrated and explained. It also contains chapters on locomotive link motion, valve movements, setting slide valves, analysis by diagrams, modern practice, slip of block, slide valves, piston valves, setting piston valves, joy Allen valve gear, Walschaert valve gear, Gooch valve gear, Alfree-Hubbell valve gear, etc. The book is fully illustrated and is one which should prove useful to many of the men in the motive power department.

The Validity of Rate Regulations.—By Robert P. Reeder, of the Philadelphia Bar. Published by T. & J. W. Johnson Co. Law Buckram, $5.00.

This book will be welcomed by every serious student of railroad law or of railroad economics. It deals with the principles of constitutional law which are involved in rate regulation, taking up such questions as the contrast between state and federal power over rates, the methods of making and of enforcing regulations, the valuation of property, the constitutional rate of return, discrimination in regulations, and differentials. It carefully enumerates and explains the rules of law which are already firmly established, and it discusses at length many unsettled problems. The subject, which is of the utmost importance to all railroad men, is handled with exceptional ability. The statements in the text are supported by elaborate notes, with an array of citations which it must have required years to gather together; the discussions show a thorough understanding of railroad economics; and the book throughout is written in a style of admirable clearness.

RAILWAY PUBLICATIONS.

The Southern Pacific's Panama-Pacific International Exposition Folder. — For the benefit and guidance of 1915 visitors to the Panama-Pacific International Exposition at San Francisco, the Southern Pacific Company has just issued for general distribution throughout the world a folder, containing a comprehensive map in colors of San Francisco, with carefully compiled facts about that city and her neighbors. Use of this map will not only enable the stranger to find his way about the city but also find quickly all streets, principal buildings, institutions, parks, hospitals, churches, monuments, hotels, clubs, homes of fraternal organizations, street car lines, theatres and newspaper offices, together with the important structures at the exposition. The key to the map is simple enough to make it readily intelligible.

TRADE PUBLICATIONS.

The Young Man and the Electrical Industry.—This is the title of a story written by James H. Collins, the well known magazine writer, which has just been issued by the Westinghouse Electric & Mfg. Company.

The little book deals with the opportunities afforded a young man in this industry and the different lines in which he may direct his activities as exemplified by the works of the Westinghouse Electric Company.

The company announces that it will supply a copy to anyone interested in the development of young men.

The Growth of the Galena Signal Oil Company.

A STATEMENT recently issued by the Galena Signal Oil Company to its stockholders, constitutes a most remarkable document, not only on account of its extreme frankness, but because of the remarkable growth in the activities of this Company, which it reports.

The most striking portion of the statment is that which gives the principal customers of the company.

"In July, 1869, the Union Pacific first used Galena Oil for its equipment. That railway is still our customer, and also the following railroads have been using our oils for forty or forty-five years:

Union Pacific
Delaware & Hudson
Northern Pacific
St. Paul
C., B. & Q.
C. R. I. & Pacific
Chicago & Alton
Chicago & N. W.
Lake Shore & Mich. South.
Big Four

"To-day we are supplying all the trans-continental railways in the United States and Canada with Galena oils. We supply 98 per cent of all the railroads in the United States and Canada.

"In this connection it might be interesting to note that the largest percentage of Galena oil customers have been users for from twenty to forty years, and that scarcely a railroad using our oil has not been on the company's books under contract for the last ten to twenty years.

"In addition it might be mentioned that Galena numbers as its customers the Interborough Rapid Transit Company of New York City and the Manhattan Elevated since these two companies were formed; also all the companies operating street cars in New York City and all the lines of the Brooklyn Rapid Transit Co. The street car department commenced supplying oils to trolley lines and street railroads in 1890, and is now supplying lubricating oils for about 75 per cent of the total street car mileage in this country."

To quote further: "Your company manufactures about 130 different kinds of oils for special purposes for railroads, among which the following were the original oils manufactured by the two companies combined into the Galena Signal Oil, and since their introduction have remained standard for the purposes for which they were intended: Perfection Valve Oil, Galena Engine Oil, Perfection Signal Oil, Galena Coach Oil, Galena Car Oil. When your company began the output was 12,000 barrels. In 1878 it was 15,000 barrels, and the business has grown until in 1913 the output was 800,000 barrels."

The history of the company, from its inception in 1869, when General Charles Miller and his partner, John Coon, started an oil refinery at Franklin, Pa., is traced through the various stages up to the present company, Galena Signal Oil Co., which was formed in 1900 as a result of the consolidation with the Signal Oil Co.

The latter company started the manufacture of lubricants long before the Standard Oil Co., and in tracing the relation of the Galena to the old Standard Oil Co., of New Jersey, it is explained how General Miller's partners sold out their stock, but left the management of the business entirely in the hands of General Miller.

It is denied that the Galena was ever, in the strictest sense, a subsidiary of the Standard Oil Co., and to prove this the court records in the dissolution proceedings are cited:

"In 1879 the Standard Oil Co., of New Jersey purchased the interest of Mr. John Coon, Mr. H. B. Plummer and Mr. Richard H. Austin, the three partners of General Miller, and became the owners of the majority of the Galena stock and 37½ per cent of the Signal Oil Co. However, the management and direction of the business was left entirely in the hands of General Miller. At the time of dissolution of the Standard Oil Co., of New Jersey it owned 70 per cent of the common and 84.37 per cent of the preferred stock of the Galena. Consequently, while the Standard Oil was the largest stockholder of the Galena at the time of dissolution, the Galena existed long before the Standard Oil ever manufactured any oils, and therefore, in a true sense it never was and is not now a subsidiary of the Standard Oil, but simply a company in which the Standard was interested. When the investigation was made by the Government upon the allegation that the Galena had obtained its large business through the efforts or under the fostering care of the Standard by giving freight to the railroads. This was absolutely disproved, and all other allegations which the Government made were disproved in toto."

In summarizing the financial history of the company, the statement says:

"A review of the financial aspect will interest you. Stockholders have never failed to receive a dividend since the company was organized in 1869. The capital after the dissolution of the Standard Oil consisted of $2,000,000 eight per cent preferred stock and $8,000,000 common, the latter paying sixteen per cent per annum in dividends. On May 15, 1913, the common stock was increased to $12,000,000 and a stock dividend of 50 per cent was declared out of surplus. Subsequently the common dividend rate was made twelve per cent per annum and an extra dividend of one per cent was paid June 30, 1913. The present rate is twelve per cent, payable three per cent quarterly out of earnings. The balance sheet of your company as of December 31, 1913, compared with the corresponding figures for 1912, follows:

ASSETS.

	1913	1912
Plants, contracts and trade marks	$9,456,592	$9,111,583
Merchandise	1,762,118	1,344,707
Securities, accts., notes receivable	5,348.637	4,926,518
Cash	544,154	1,292,408
Total	$17,111,501	$16,675,276

LIABILITIES.

Preferred stock	$2,000,000	$2,000,000
Common stock	12,000,000	8,000,000
Accounts payable	2,185,486	1,875,850
Profit and loss surplus	*926,015	4,799,426
Total	$17,111,501	$16,675,276

"*The profit and loss surplus of your company was changed to the extent of $4,000,000 by the distribution of the 50 per cent common stock dividend referred to above.

"Cash on hand, which was $544,154 on December 31, 1913, decreased approximately $750,000 from the amount of the corresponding date of 1912 because your company has seen fit to invest a portion of its surplus in high-grade securities. At present cash on hand is $1,600,000.

"Your company has no bonded debt, no notes and no bills outstanding; in fact, since 1875 the Galena has not borrowed money nor discounted any paper."

Map of New York City's Rail Terminals.—The Merchants' Association of New York has just published a useful map of the rail terminal facilities of New York City, prepared by its Industrial Bureau. It shows the entire harbor including the Lower Bay, as well as a large part of New Jersey, the Bronx and Staten Island. The map shows only the freight facilities and indicates classification yards, track and warehouse delivery points, warehouses which are directly connected with railroads and railroad piers.

This map brings out forcibly the rail transportation facilities of the City. Along the New Jersey side of the Hudson River and the Upper Bay are to be found the terminals of almost all the railroads entering New York. Opposite these, in Manhattan, are the railroad piers which are terminals for the New Jersey roads. In addition there is the New York Central, which has its most southerly terminal at St. John's Park.

The characteristic development of Brooklyn is the growth of joint terminals. From the Bush Terminal in South Brooklyn northward to Newtown Creek, there are a number of these joint terminals where the shipper can unload his goods from any one of the railroads entering Greater New York.

The manufacturer who locates his plant in New York City within a reasonable distance of these various railroad terminals, or near any one of the joint terminals, is able to connect directly or indirectly with every railroad in the United States.

Statement for April, 1914, of the ownership, management, etc., of the "Railway World," published monthly at Philadelphia, Pa., required by the Act of August 24, 1913.

Editor	Edward G. Ward,	Philadelphia, Pa.

Notary Public.

(My commission expires February 21, 1915.)

The Celebrated

Railroad Watch

THIS watch has a stem wind and stem set, has a high grade appearance and is as good as it looks. The entire case is made of a composition gilt metal which will wear like solid gold or silver. There is no plating to wear off. It has been thoroughly tested, and will run accurately for *thirty hours*. Absolute guarantee for *one year*. Will be sent post paid on receipt of price, **$2.00**

LEONARD WATCH COMPANY

208 BULLETIN BUILDING
PHILADELPHIA, PA.

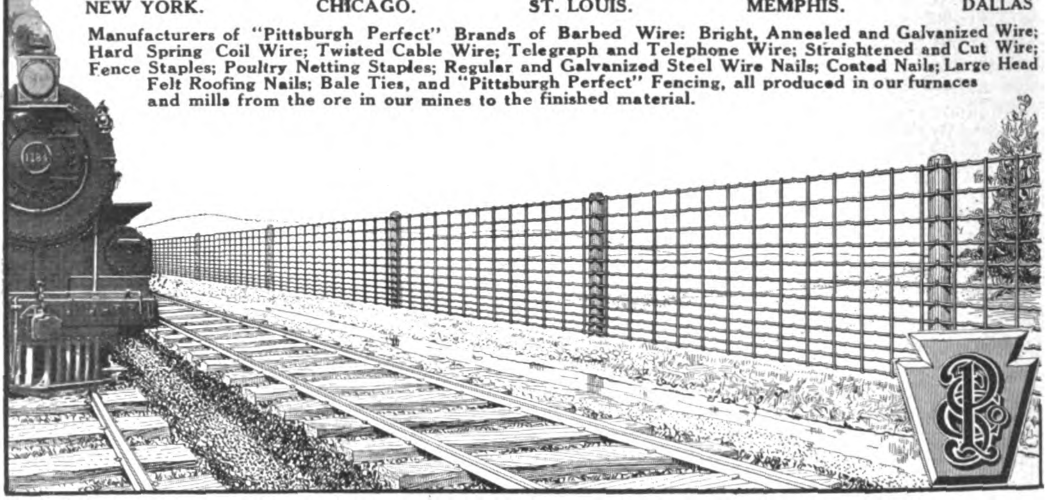
"Pittsburgh Perfect" Railroad Fencing

Bought by leading railroads of the United States and Canada because it excels in strength and durability, and affords perfect protection to the right-of-way. Made of special formula Open Hearth wire, HEAVILY AND THOROUGHLY GALVANIZED. ELECTRICALLY WELDED JOINTS. A one-piece fabric, easiest to erect. Write for catalogue and prices.

PITTSBURGH STEEL CO., PITTSBURGH, PA.

NEW YORK. CHICAGO. ST. LOUIS. MEMPHIS. DALLAS

Manufacturers of "Pittsburgh Perfect" Brands of Barbed Wire: Bright, Annealed and Galvanized Wire; Hard Spring Coil Wire; Twisted Cable Wire; Telegraph and Telephone Wire; Straightened and Cut Wire; Fence Staples; Poultry Netting Staples; Regular and Galvanized Steel Wire Nails; Coated Nails; Large Head Felt Roofing Nails; Bale Ties, and "Pittsburgh Perfect" Fencing, all produced in our furnaces and mills from the ore in our mines to the finished material.



GALENA OILS HAVE NO EQUAL IN *Quality, Efficiency and Economy*

Sole Manufacturers of Celebrated Galena Coach Engine and Car Oils
Lubrication on a Guaranteed Basis
Electric Railway Lubrication a specialty

PERFECTION VALVE AND SIGNAL OILS

Galena Railway Safety Oil, made especially for use in headlights, marker and classification lamps.

Galena Long Time Burner Oil, for use in switch and semaphore lamps, and all lamps for long time burning, avoiding smoked and cracked chimneys and crusted wicks.

Tests and correspondence solicited

VOL. LVIII. OCTOBER, 1914 No. 10

Important Developments in the Transportation Field

THE FREIGHT RATE CASE

The Interstate Commerce Commission is again engaged in hearing the Eastern railways' plea for an increase of five per cent in their freight rates.

As in the previous advance rate case decided a few months ago, President Willard, of the Baltimore and Ohio Railroad, opened the proceedings by stating that "the needs of the carriers are pressing and immediate" and that "the actual situation has become extremely critical."

Mr. Willard is chairman of the Committee of Railroad Presidents having in charge the presentation of the railroad case. His statement summarizes the general facts upon the basis of which the railroads maintain that the Commission should now allow the general increase of five per cent in freight rates.

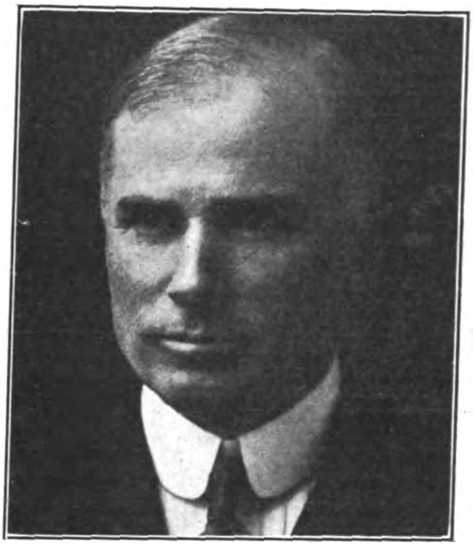
Mr. Willard called attention to the decision of the Commission in the former case, wherein was stated that "the net operating income of the railroads in Official Classification territory * * * * is smaller than is demanded in the interest of both the general public and the railroads," and to the fact that the railroads had already taken action to secure additional revenues through various advances and changes of practice, but, added Mr. Willard, "the measures of relief proposed by the Commission will not in our opinion adequately meet the existing situation."

Among other things Mr. Willard said:

The annual statements of all the railroads involved in this proceeding combined, for the fiscal year ending June 30, 1914, show roundly that the total operating revenues during that year were approximately $48,000,000 less than during the previous year, while the operating expenses during the same period were approximately $22,000,000 greater.

The net operating income of these companies for the same period amounted to $260,000,000, or approximately $76,000,000 less than was earned during the previous year, and equal to but 3.98 per cent upon the property investment, a lower return than was shown at any time in fifteen years.

The income, applicable to interest, dividends and surplus, during the fiscal year just closed, was $265,700,000, or 4.06 per cent upon the total capital obligations, this return also being lower than any in fifteen years.



DANIEL WILLARD.

President, Baltimore and Ohio Railroad, who again opened the advance rate case for Eastern carriers.

A war such as that now raging causes great and immediate disturbance to industry, commerce and finance. It causes contraction of credit and great restriction, if not the actual stoppage of international trade as well as serious disturbance to domestic commerce, and, as we have seen, it has thrown the security markets of the world, first into panic and then into suspension of operations.

These have, in fact, been the immediate, direct and clearly apparent consequences of the war which began less than three months ago; but the ultimate and more lasting consequences are almost as plainly to be seen and will certainly follow, if they do not accompany, the conditions mentioned.

These are enormous destruction of wealth, with great diversion of labor and capital to unproductive employment, thus causing a check to the world's accumulation of new capital, and a serious and prolonged rise in the rate of interest. The effect of such higher interest rates will continue long after the present emergency has passed, because they will be reflected in the basis upon which the new securities will be issued from time to time as required, for refunding and other purposes.

In so far as the war and its consequences tend, as I have just shown, to change the conditions surrounding the enlistment of new capital, they tend to change the fundamental relation between railroad and shipper, for the cost of capital is one of the most important elements of the cost of transportation.

It is known that the railroads of the United States have over $520,000,000 of outstanding obligations which will mature and must be met within the next twelve months alone. It was shown in the original record in this case that the railroads in Official Classification territory only had spent approximately $200,000,000 per annum upon their properties for improvements and extensions during the last ten-year period, and it will be necessary to continue such expenditures if the roads are to maintain their standard of service and provide for the growing needs of the future.

Further, as nearly as can be ascertained, there are more than $3,000,000,000 par value of American railroad securities held abroad as investments. The demands for cash in Europe, growing out of the present situation, will doubtless result in large selling of such securities when the markets or stock exchanges are again opened, and the possible effect of such selling upon railroad credit and related subjects is causing much concern.

With all this in mind it will readily be seen that the available supply of and probable demand for new capital, as well as the interest rates thereon, are matters of great importance, not only to the railroads, but also to those who depend upon them for transportation.

The specific differences in the financial situation of the thirty-eight Eastern carriers now as compared to one year ago, when the five per cent rate advance was first requested, were presented to the Commission by Mr. George M. Shriver, vice-president of the Baltimore and Ohio Railroad. Mr. Shriver is chairman of a committee of accounting officers appointed to compile data for the railroads as a whole. Mr. Shriver's figures covered the period to June 30, 1914.

"A striking feature of the 1914 returns," said Mr. Shriver, "is the complete disappearance of surplus or margin."

The figures presented showed that the railroads in this territory paid in 1914 average dividends of 4.58 per cent, but that they fell short by $8,200,000 of earning that dividend—itself the lowest rate of dividend paid in ten years. The year 1914 was the first year in fifteen years in which these railroads earned no surplus over the dividends paid.

For the three systems generally considered prosperous, viz., the Pennsylvania, the New York Central, and the Baltimore and Ohio, the surplus or margin after an average dividend of 5.53 per cent, was only $461,235. In 1913 it was $47,083,000 and had averaged $38,733,000 for fifteen years.

In the previous case special attention was called to the fact that whereas all the roads concerned in this proceeding had in the three years ended June 30, 1913, invested $660,000,000 in their properties, the net operating income in 1913 was $16,300,000 less than for 1910, before the $660,000,000 had been spent.

BUSINESS
TRADE
MONEY MARKET

The Convalescent Ward —Cleveland Plain Dealer

Mr. Shriver presented figures showing that during the past year these same roads had invested $249,000,000 additional in their properties, and yet their net earnings were $70,500,000 less than for 1913. In other words, in four years $909,000,000 had been invested in these properties, and yet on June 30, 1914, these companies were $87,500,000 worse off in net operating income than they were before the $909,000,000 had been spent.

Operating revenue in 1914 was $1,375,000,000, less by $48,000,000 than in 1913, although operating expenses (notwithstanding the smaller amount of business handled) were $22,000,000 more than in the previous year.

While the business handled in 1914 was, excepting 1913, the largest in fifteen years, the net operating income was the smallest shown in ten years.

Taxes increased $2,900,000 in 1914. These railroads paid $22,000,000 in taxes in 1900; they paid $57,000,000 in 1914—an increase of 159 per cent.

The taxes paid by the three larger systems were $33,400,000 in 1914, an increase of $2,180,000 over 1913. These same companies paid but $12,200,000 in 1900—an increase for the period of 173 per cent.

For the Pennsylvania, the New York Central, and the Baltimore and Ohio, net operating income in 1914 was $41,476,000 less than in 1913, and the lowest in ten years.

Dividends paid by these three systems were smallest in five years and at the lowest average rate for ten years.

In 1914, for the three systems, the sum available for interest, dividends and surplus amounted to but 4.54 per cent on total capital obligations, a rate much the lowest of any shown in the preceding fourteen years. Previous to 1914 the ratio did not fall below 5.67 per cent.

On the second day of the hearing Mr. Charles A. Conant, of New York, author of many authoritative works on finance, testified before the Commission as an expert concerning the financial conditions as affected by the European war and particularly as related to American railroad securities. Mr. Conant said in part:

(1) The cost of the war, if it lasts approximately a year, will not be materially less than $15,000,000,000.

(2) The demand for capital for purely war purposes, and for the settlements which succeed the war, will be so great as to absorb an amount equal to the entire savings for investment made in all civilized countries for a period of several years.

(3) The effect of this abnormal demand for capital, which is being consumed without economic profit, will be to raise the rate of interest on investment securities higher than it has been for many years.

(4) The fact that such enormous sums to pay the costs of the war are sought almost exclusively by means of Government loans will make it impossible to obtain capital for other purposes, except at a rate of interest considerably higher than that paid by governments.

(5) The financial disturbances which will occur during the process of distribution of these Government loans to investors, extending over several years, will involve the sale on the American market of railway and industrial securities now outstanding to an amount which will in itself absorb so much of the new capital available in the United States, that it will be extremely difficult to obtain any for new enterprises.

(6) If, therefore, American railways and industrial enterprises are to obtain any new capital whatever, during the next few years, it will be necessary to make issues of securities very attractive, not only in respect to the rate of interest, but in respect to the evidence that the interest and dividend payments are absolutely secured by adequate earnings.

Mr. Conant quoted authorities indicating that the world's new capital normally available for investment amounts to about $4,000,000,000 per year. He then concludes:

If the cost of the war for one year has to be paid out of the amount of annual savings indicated by these figures, then every dollar of new capital for approximately four years will be absorbed in Government loans, and there will not be a penny available in any financial market for building a railway spur, putting up a new station or terminal out of capital account, adding a bobbin to the equipment of woolen and cotton mills, or making a single public improvement in the city of New York or any other municipality except out of current revenue.

What part the railways will be able to play in wresting a portion of the world's savings from the outstretched hands of the powers which have been blowing away thousands of millions in powder and ball becomes an interesting consideration. They must come into the open market and bid against the greatest states in the world for some scanty portion of the supply of investment capital.

The rise of the return on capital to a new rate and the corresponding fall of prices of securities to a lower level are facts which are apparently inevitable. It should be possible, however, to so distribute the shock of the descent that quotations on the exchanges should oscillate around this new center of gravity instead of plunging violently below it even temporarily.

Leaving aside the question of averting panic, the most important question involved in the return of American securities held abroad is the manner in which it will diminish the fund of capital which is normally available for new investments. In this direction the effect of the European war loans will be acutely felt in this country, even if not a dollar of American money appears as a bidder for the new loans.

It has been recently calculated by Sir George Paish, the economic adviser of the British Government, that the total amount of foreign capital invested in the United States is $6,000,000,000. He also estimates that foreign capital, chiefly British, is invested in Canada to the amount of $3,500,000,000, and in other American countries, including all Latin America, to about $10,000,000,000.

It is these enormous sums in foreign holdings which represent the most serious menace to the American market and to the possibilities of our future financial development. This money has been advanced to us from time to time over a long period, because there was not a sufficient fund in America to meet the requirements of our development.

The newer states of the West could never have been equipped with railways, banks, grain elevators, barns and homes, if foreign capital had not been poured into them in hundreds of millions after our Civil War. What will be involved, in effect, if European investors undertake to market a large part of their holdings of American securities in New York, will be the conversion of this gigantic time loan, payable only over long terms of years into a call loan payable as rapidly as the securities can be sold on the New York Stock Exchange. It would hardly be within the range of the capacity of the banking system of the country to absorb the entire amount of $6,000,000,000, estimated by Sir George Paish to represent foreign investments in the United States.

The amount in such securities which is returned to the American market will influence directly the amount of investment capital remaining in the United States available for other purposes. It is at this point that the problem comes directly home to American railway managers and their bankers.

If the country is subjected to a severe strain in order to take back from European holders an amount of securities representing the fund usually available for investment for one year or for several years, there will be practically no surplus left for investment in new railway issues.

Here again, a question of vital importance will be how far the issues can be made attractive, not only in the rate of interest paid, but in the surplus of earnings above the operating expenses and existing fixed charges of the issuing company, which will give a complete guaranty of security to the new investments.

For a number of weeks past the Commission and other government officials at Washington have been receiving appeals from all sections of the country for a prompt and decisive action with reference to railway earnings. The Commission's delay in this matter has been widely deplored and even severely criticised, it being the general belief that the peculiar and urgent necessities of the case, made such delay extremely unfortunate.

Banking interests and investors have become thoroughly aroused, and are expected to take an active part in the hearing.

This is indicated by the following letter addressed to the members of the Investment Bankers' Association by its president, George B. Caldwell:

> President Wilson, in a letter recently published, has called attention to the fact that it is of paramount importance in the present crisis to maintain the credit of the railroad industry in the United States.
>
> The clientele of the members of the Investment Bankers' Association embraces almost the entire investing public of the country. A very large proportion of this clientele owns railroad securities. It is therefore of particular importance to the membership of the Association that the value of railroad securities should remain as far as possible unimpaired.
>
> For several years a situation has been developing in the United States which vitally affects every owner of a railroad bond or share. We refer to the steadily decreasing margin of net earnings of the railroads, which has already resulted in placing corporations with over $500,000,000 of outstanding securities in the hands of receivers.
>
> For the purpose of placing before the proper tribunal the broad facts as they have developed, and are developing, your committee has asked that you write them a letter which may be considered a composite representation of the opinions of your own clients to whom you have in times past sold securities (especially railroad securities) and which will state their impressions as to the safety of their investments—say ten years ago—and at the present time. If such statements show an increasing lack of confidence in the intrinsic safety of these securities, has this lack of confidence been brought about through the various increases in labor cost enforced by arbitrations sanctioned by the government through the reduction in rates enforced by state legislatures and commissions acting independently and by the Interstate Commerce Commission? Are these the principal causes? If not, what others are stated?
>
> Your committee believes that statements of this character, representing the opinion of hundreds of thousands of individuals in the country who have in times past furnished money for extensions and improvements of the roads and from whom the money must come to provide for future extensions and improvements, will be of great value in considering the merits of the situation.
>
> The following questions are submitted with a view of outlining some phases of the situation which the committee believes should be covered:
>
> 1. During the last ten years have you noticed any change in the requirements of your clients in the matter of preferences for municipal, industrial or public utility bonds or stocks where previously they have purchased steam railroad bonds? Give their reasons.
>
> 2. Has there been a growing reluctance on the part of your clients to the purchase of the newer, and therefore junior, securities of steam railroads and a growing preference for underlying issues? Give their reasons.
>
> 3. What expressions of opinion have you had from your clients in regard to the necessity of an increase in the rates of well-managed, conservatively capitalized railroads, as being necessary for the protection of their investments? Give their reasons.
>
> 4. Has there been, to any great extent, a disposition to exchange steam railroad securities for other classes of corporate issues, for any other reason than possibly a larger return on the investment?
>
> 5. What effect do you believe the European war will have on the attitude of your clients toward the purchase of railroad bonds?
>
> 6. Do you anticipate that unless there is an increase of rates, or some other method devised, which will stem the tide of declining earnings of the steam railroads, it will be possible to place with your clients the large amounts of securities which must necessarily be floated to cover maturing obligations, amounting to over $500,000,000 prior to January 1, 1916, and should be floated to provide added facilities for the increased business which will be necessary if this country continues to grow in wealth and population?

Not only are railway stocks and bonds held by hundreds of thousands of individual citizens, but banks, insurance companies and other large financial concerns are heavily involved, and the outlook is viewed with liveliest concern. Daily it is becoming more apparent that the whole financial situation has been greatly aggravated by the fact that a very large part of American securities is discredited by the disastrous situation which has been brought upon the railroads. It is now over two months since the closing of our stock exchanges and the menace of a great mass of foreign sales still provides the barrier against their reopening. In this particular, the railway wields a vital influence, for if the carriers were earning ample surpluses, insuring permanent dividends and easy payment of fixed charges, the whole situation would be changed. Our securities would then be the most attracive in the world, because they would be the issues of highly profitable companies located in the only great country in the world at peace. Such a situation would advance prices materially for these securities and would reduce by hundreds, and probably thousands, of millions the amounts which would press for sale on the Stock Exchange. Every present holder abroad who was not forced to sell would be eager to hold such investments, liable to advance. These European holders are careful students of investment conditions. They would at once realize that our securities on this new basis would be the last things to part with, as they would be far safer in the present situation than money in hand over there could possibly be, or than the securities of any other country.

To produce such a situation would appear vital to the reopening of the Exchange, and the reopening is really necessary to bring about normal industrial conditions, activity, and prosperity.

To quote from a statement issued by the New York banking house of J. S. Bache and Company, on October 7th:

> How then can the situation be produced? The power is absolutely in the hands of the Interstate Commerce Commission They have restricted the earning powers of the railroads, especially since 1910, until to-day the roads, largely by reason of inadequate charges, are many of them, in the hands of receivers, others are facing bankruptcy, and only a few of them are making a successful showing.
>
> As a business proposition the railroads are not making money, and have not been for a long time.
>
> They have been compelled to default within the last few months on obligations equal to half of the national debt.
>
> Net operating income of all the railroads declined in one year to June 30, 1914, 120 millions, and no relief is in sight.
>
> There is only one way to save the situation, and this is by a liberal increase in rates.
>
> This can be done promptly and will be amply effectual at once if the increase is large enough.
>
> This situation is realized by Congress and by the President, and the latter has recently, in a strong letter, called the attention of the country to the facts.
>
> To this power of public opinion the Interstate Commerce Commission has responded by agreeing to reopen the Eastern rate case, the decision on which, rendered after long months of delay and when the shock of war was upon the whole world, left the roads in desperate condition, as far as any adequate benefit was promptly obtainable. But the Commission has, disappointingly, delayed the new hearing a whole month, until October 19th.
>
> As a war measure for the relief of the entire country, it should have received immediate attention.
>
> Every other agency of the government and every business interest in the country is hurrying all expedients necessary to meet the war emergency. Is it unreasonable to ask the Interstate Commerce Commission to do what everybody else in the country is doing, from the President down?
>
> In considering this question of the railroads, the public should not let prejudice against officers, directors and managers cloud their views. These officials are merely a part of the machinery of railroads. The real parties affected are the thousands and thousands of security holders all over the country and representing all classes of people and institutions.
>
> The prosperity of every business man in the United States depends upon prompt action. It should be the mission of all business men, security holders and chambers of commerce to impress upon the Commission their views of the importance of immediate and liberal action.
>
> The business of the country cannot proceed normally and successfully until the Stock Exchange is open.
>
> How can the Exchange open successfully until our securities are made especially attractive through ample earnings?
>
> The Interstate Commerce Commission can bring this about by a turn of the hand.
>
> It is the business of business people to let the Commission know what they want and to let them know it promptly and in an emphatic way.

Undoubtedly the financial interests of the country will be strongly represented at the hearing now in progress. This is already indicated by the fact that the Investment Bankers' Association has appointed a committee which the Commission has signified its willingness to hear. This committee, which will come to Washington fully prepared to show the Commission why immediate relief should be granted to the railroads, is composed of the following men:

> George B. Caldwell, chairman; John E. Blunt, Jr., Merchants' Loan and Trust Co., Chicago; Frederick Strauss, J. and W. Seligman and Company, New York; Moritz Rosenthal, Ladenburg, Thalmann and Company, New York; S. L. Fuller, Kissell, Kinnicutt and Company, New York; A. G. Hoyt, N. W. Halsey and Company, New York; Lawrence Chamberlain, Kountze Brothers, New York; Warren S. Hayden, Hayden, Miller and Company, Cleveland; Stedman Butterick, Estabrook and Company, Boston; R. B. Young, E. H. Rallins and Sons, Boston; Howard Graham, Graham and Company, Philadelphia; R. Lancaster Williams, Middendorf, Williams and Company, Baltimore; J. R. Edwards, Cincinnati; W. R. Compton, William R. Compton, Comany, St. Louis; R. T. Field, Field, Richards and Company, Cincinnati; B. B. Veech, United States Trust Company, Louisville; Lynn H. Dinkins, Interstate Trust and Banking Company, New Orleans; W. G. Lackey, Mississippi Valley Trust Co., St. Louis; J. Herndon Smith, Smith, Moore and Company, St. Louis; J. A. Prescott, John A. Prescott and Company, Kansas City; Gardner P. Stickney, Wisconsin Trust Company, Milwaukee, and Eugene M. Stevens, Stevens, Chapman and Company, Minneapolis.

As an indication of how deeply the present railway situation is interesting the general public, the following plank in the platform of the Maryland Republicans adopted September 28th, is of interest:

> To starve the railroads is to starve the nation and we believe that the deplorable condition of the railroads of the country calls for relief through the proper governmental agencies, fully without stint, freely without delay, for the benefit of the railroads as public carriers and for their hundreds of thousands of employes.

Attention has been called in past issues to the more liberal attitude of foreign governments towards their railways than apparently exists in this country. This is not only true with regard to private owned transportation systems but even with regard to those which are owned by the state. Rates have been increased without half the trouble and with far greater success than characterizes similar efforts in this country. Apparently the United States stands practically alone at the present time in its evident determination to strangle one of its greatest and most efficient industries.

How the attitude of our Commission is viewed abroad is strikingly illustrated by a recent German review of the advance rate decision published in *Zeitung des Vereins Deutscher Eisenbahnverwaltungen,* the official journal of the German Railway Association. In view of the fact that Prussia is the land of government ownership and practically military organization of railways, this statement has peculiar force as applied to the restrictive tendencies of our present regulative methods. The statement says in part:

> Thorough treatment of the results of actual inquiries is conspicuous for its absence. For months, witness after witness and expert after expert were examined. From them a mass of facts for and against the case of the railways must have been brought out. In the decision there is as good as nothing covering all this. The few statistics on capital, traffic, receipts and expenses could have been secured easily from figures already on file with the Commission or from reports which could have been made in the shortest time. There was no necessity of spending many months.
>
> Since there is a lack of concrete foundation the arguments of the Commission make no lasting, convincing impression. One would think he was reading a not too weighty scientific treatise, instead of the decision of so high, and, because of its power, so very respected a body.
>
> The occasion surely was important enough for exceptional handling. * * * * Yet there is lacking adequate grounds * * * * for the separation of the territory into one part where the increase was granted and another where it was refused. The few figures on average rates charged on individual roads in the affected areas are insufficient as a basis for a discrimination so seriously disturbing and cutting so deeply into the industrial structure.
>
> The impression is given, involuntarily, that the Commission had been driven most unwillingly to a decision favoring the increase; and, to please both sides, railroads and shippers, had found no other way out than this, so to speak, local division of spoils.
>
> Concerning the gratuitous advice given as to how the railways may find relief, there is not much to be said beyond what railroad men have said already. But through the thoroughly impracticable proposal for an increase in passenger rates the Commission has opened itself very seriously to attack. * * * * The objection can be made with justice that great difficulties stand in the way of raising passenger tariffs, wholly aside from the fact that in a large number of states passenger rates for intrastate traffic are fixed by law; and that from a technical as well as an economic standpoint it is inadvisable to raise interstate fares higher than state fares.
>
> Throughout there is a certain irritable tone which in a more or less judicial decision is not in place. Repeated introduction of the misdeeds of individual enterprises and the vehement rejection of suggestions made to it (from outsiders) were better left out.
>
> The review closes by contrasting the experience of German roads in a similar petition 40 years ago, when they were granted an increase of 20 per cent to offset higher costs and wages.

THE ENORMOUS WORK INVOLVED IN TARIFF RECONSTRUCTION

There is an element of grim humor in the news from Washington that the Interstate Commerce Commission is likely to issue a statement to the public practically accusing railroad executives of being derelict in their duty in not having made greater progress in their readjustments of freight tariffs as suggested in the Commission's decision in the five per cent rate advance case. As a matter of fact, never have the traffic departments of the Eastern roads been under such a terrific strain or worked with such desperation, as they have within recent weeks in their effort to rearrange their tariffs so as to procure what benefit there appeared to be in the very unsatisfactory and inadequate rate decision. Many of the suggestions have been found extremely difficult to follow in view of their impracticability and lack of real understanding of present rate structures and an effort to work them out has led to snarls and tangles which it has appeared almost impossible to unravel.

In spite of these difficulties the rate experts have been working heroically to accomplish results and any apparent lack of progress is due to the difficult nature of the readjustments, rather than to any lack of effort on the part of the traffic departments. The work has been pushed night and day and in every possible way. This the Commission should be fully cognizant of and if it is really seriously considering issuing a statement to the public criticising the carriers' attitude in this particular it is grossly ignorant of the true state of affairs. Instead of being derelict in their duty, the railroads have been doing everything in their power to prepare the new freight tariffs called for under the decision and furthermore, it would appear incomprehensible that the Commission is not fully aware of this fact.

EXTREME MEASURES TO REDUCE EXPENSES

The plight of the railroads has led to the adoption of extreme measures in an effort to reduce operating expenses. Sacrifices have been made which, in other businesses, would have led to a mighty protest, particularly in view of the fact that these sacrifices are the result of no fault on the part of those who have been compelled to make them, but are due, to a large measure at least, to the intolerable interference in railway affairs by those in whom regulative authority has been vested but who appear to have no real appreciation of the necessity of offsetting the effect of their enormously expensive regulations, by some increase in railway revenues. We are now witnessing a very tardy recognition of this fact which, it is to be hoped, will yet save the general situation. Of course it is admitted that there is, at the present time, a general business depression which is unfavorably affecting the carriers' revenues. Likewise the influence of the European war is not helpful, but nevertheless, it is generally recognized that, had regulative authorities assumed a fairer and more liberal attitude towards the carriers, railway business in general would not have suffered so severely.

Many roads have, therefore, been compelled to resort to extreme measures. How far, in some instances, these forced economies have reached, is indicated by the following announcement made on October 11, by the Southern Railway:

> In view of the curtailment of service made necessary by the current depression of business and the consequent reduction of the opportunity of many hundreds of employes to earn the wages to which they have been accustomed, President Fairfax Harrison of Southern Railway Company, has deemed that it is only fair that the officers of the company should also share the sacrifice.
>
> He has accordingly reduced his own salary twenty per cent, and has asked all the other officers receiving salaries in excess of twenty-five hundred dollars per annum to accept temporary reductions on a descending scale, proportioned to the amount of their salaries, so as to distribute the personal sacrifice equitably. Under the plan adopted the pay of those receiving salaries of as much as twenty-seven hundred dollars will be reduced two per cent. The officers affected have all accepted the situation with loyal appreciation of the necessity of a spirit of mutual sacrifice. While the actual saving to the company on this account is relatively small, the principle of common interest of all those who draw their livelihood from Southern Railway Company has been the controlling motive.
>
> Following this action, the board of directors has reduced the dividend of the preferred stockholders, many of whom are women dependent upon this income, from five to four and one half per cent, although it was fully earned before the present tendency of business was apparent, and has declared it payable not in cash but in deferred scrip so that all interests in the property may participate in the retrenchment.

THE PRESS AND THE RAILROADS

One of the hopeful signs of the times, so far as the railways are concerned, is the evident desire of the press of the country to give the carriers a square deal. If, as has been often stated, the daily papers reflect public sentiment, then a great change has been brought about, for, whereas, a few years ago newspaper support of the railways was so uncommon as to prove almost the exception to the rule, to-day the situation is practically reversed and the carriers are receiving a vigorous editorial support which should soon be reflected by a more liberal and tolerant attitude on the part of public regulators.

An example of this support is illustrated in the recent action of the Missouri Press Association which, in annual convention at St. Louis, adopted a resolution stating that the railroads should be permitted to receive sufficient remuneration to enable them to render high class service and inviting the co-operation of legislative bodies and thinking citizens to accomplish these ends. Membership in this Association includes the editors and publishers of practically all the daily and weekly newspapers in Missouri, embracing what is said to be the largest organization of its kind in the country, and therefore, believed to be representative of public opinion generally. The text of the resolution is as follows:

> WHEREAS, The railroads of the United States are the most vital forces for agricultural, commercial and industrial progress in the nation, as well as the largest employers of labor and the heaviest purchasers of steel, lumber and other material; and,
>
> WHEREAS, The European war has closed to them indefinitely the money markets of England, Germany, France, Austria, Belgium and Holland, thus compelling them from this time forward to finance their needs and requirements within the United States, and bringing them face to face with the gravest crisis in their history; and,
>
> WHEREAS, We believe it essential for the future agricultural, commercial and industrial welfare of the nation that the railroads be permitted to receive sufficient remuneration to enable them to render high-class service, to make such improvements and betterments from time to time as

FAIRFAX HARRISON.

President, Southern Railway, who believes there is a distinct improvement in public sentiment towards the carriers.

the needs of the different communities may require, and to re-establish American railroad securities as a highly respected and sound investment; therefore, be it

Resolved, That the Missouri Press Association, realizing the great and vital part which the railroads have played in the development of our great commonwealth in the past, and the further fact that we are still in need of many new lines and extensions before we shall be able to realize the fullest possibilities of the matchless resources of our state, invites the co-operation of all thinking citizens and our lawmaking bodies to the accomplishment of the above ends. In this connection we heartily indorse the non-partisan proposal of Congress to surround the issuance of railroad securities with such safeguards as will henceforth protect the public and the purchaser of railroad securities alike.

THE BUSINESS MAN'S INTEREST IN A LIBERAL RAILWAY POLICY

Recent months have shown a growing appreciation on the part of business men that general prosperity is impossible without railway prosperity. The transportation industry is now so vast that any restriction in its legitimate progress has its effect upon all industrial activities. This has been recognized by railway officials and economists for a number of years but only lately has the business man been able to fully understand the interrelation.

The result is that the general public is becoming more active in its support of a liberal policy of railway regulation and the pressure on public regulators is becoming daily more severe. How great this change in public sentiment has been, is strikingly indicated in the following circular letter recently sent to the district managers' office by a large manufacturing company:

Dear Sir:—The return of peace in Europe ought to mean business revival if it does not come before that event. Many factors may determine how prompt and how full that will be. In respect to one leading factor we can help to a very large extent and that factor is the railways. They need more income and the policy of this company has ever been in favor of permitting them to obtain it. The Interstate Commerce Commission in July concurred in this, and the war has led President Wilson to make an appeal on their behalf.

The actual realization of higher railway rates will strengthen the investor's confidence; increase the buying power of the railways themselves; enable customers to finance their operations, and inevitably bring orders to our company.

The Commission instructed the roads to find new income in passenger rates and they have sanctioned an advance in mileage rates which has gone into effect.

Notwithstanding that that increase will materially increase our expenses, we believe that the advance is necessary and expedient. This is the official attitude of our company and you are hereby advised of it for your information and guidance and those of our employes under your direction.

Other interstate mileage cases are pending and state legislatures and commissions must co-operate if the advance is to be made fully effective. Certain commercial travelers' organizations have protested against any increase in mileage rates, which we believe is a mistake from an economic standpoint, and that the influence of such commercial organizations should be in favor of the advance.

Our representatives should therefore not take any position antagonistic to this move. They should, on the contrary, reflect the attitude of the company in their contact with outsiders and do everything that they reasonably can to influence opinion in favor of aiding the railways; for we appreciate how essential to our business and business in general is their prosperity.

Yours truly,

——— ———,

Vice-President.

This growing appreciation on the part of the public of the necessity for a fair and proper consideration of the problems which are constantly confronting the carriers, is well set forth in the annual report of Fairfax Harrison, president of the Southern Railway, made public on October 13th. Mr. Harrison discusses the effects of the war upon the railways of the South and upon the Southern Railway in particular, and adds:

> In such a crisis, when more than ever it is apparent that the interests of the railway company are identical with those of the public it serves and that it can prosper only as the communities which it serves develop and grow, it is gratifying to be able to state that there has never been a time within its history when the relations of Southern Railway Company were more close and cordial with the people of the South than now. The determination of the management at all times to deal frankly and fairly with the public has been instrumental in bringing about this condition. The era of suspicion and distrust on the part of the public seems to be nearing an end, and the purposes and ideals of the company are beginning to be understood and approved. No better omen for the future of the company can be found than that discernible in the growing good-will in the public mind.

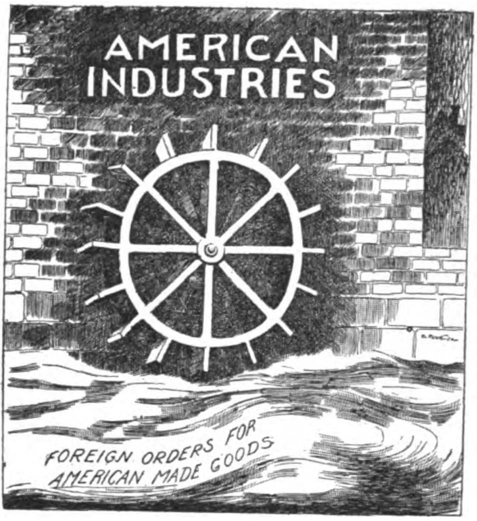
Speaking of the general effect of politics upon railway developments, Mr. Harrison says:

> The slackening in the general volume of business done in the United States, which has been so marked during the past year, was felt last of all in the South, but had become part of the problem of management of this company with the opening of the calendar year 1914. The high level of expense of operation is maintained not so much by any natural economic law, not by any deliberate intention or neglect of management, as by general social tendencies which are in substantial measure abnormal and beyond the control of management. It can hardly be expected that the operation of an American railroad shall be again on a normal basis unless, and until, the question of the railroads shall cease to be a factor in American politics. To state this fact is but to repeat the statement of the contemporary plight of the railroads which has been so frequently urged upon the American public in recent years. It is mentioned here simply to illustrate its application to the fortunes of Southern Railway Company.

WESTERN ROADS TO RECTIFY FREIGHT RATES

Weeding out of inconsistencies in the Western freight and passenger rate structure, applying advice extended by the Interstate Commerce Commission to the railways as to the manner in which they may meet at least partially the difficulties arising from declining earnings and advancing expenses, is the aim of the proposed rectification of tariffs in Western territory, served by roads operating west of Chicago, St. Louis and the Mississippi.

The basis for the readjustment, as pointed out by the Bureau of Railway News and Statistics in an outline of the proposed changes, is the Interstate Commerce Commision's insistence that each branch of the railway service "should contribute its proper share of the cost of operation and of return upon the property devoted to the use of the public"; and no changes will be made except those based upon recommendations or findings of the Interstate Commerce Commission. Characterizing of this rectification as a "general advance" thus is inaccurate.



AMERICAN INDUSTRIES
FOREIGN ORDERS FOR AMERICAN MADE GOODS

THE RISING TIDE

In Western territory, as the Commission found to be the case in the East, many unremunerative rates remain which had their origin in the past under fierce competition or under the menace of powerful shippers. Some of these may have been remunerative in the past, but they are not now; and in many instances the shippers themselves admit the rates to be too low. In view of this the Interstate Commerce Commission in the Eastern rate case advised the railroads to "examine carefully their freight rates, rules and regulations with a view to increasing rates that are found to be clearly unremunerative and modifying burdensome rules and regulations." It is this the Western roads purpose to do.

What added revenue may accrue to the carriers as an offset to the excessive rise of late years in expenses, when inconsistencies of this character have been weeded out, is purely speculative, as shown by the fact that irresponsible estimates already made show ridiculously impossible discrepancies. Railway executives themselves cannot estimate, as the scanning of tariffs is not yet near completion; yet it may be stated with certainty that all possible addition to revenue cannot approach the five per cent being petitioned for a second time by Eastern railways as essential relief from long standing difficulties which have been increased since the outbreak of the European war.

Transcontinental rates will remain untouched in the Western rectification process. Packing house rates, long recognized as excessively low, can enjoy only a partial rectification as rates from Kansas City, applying to a great bulk of the business, can be raised only nominally, one railroad handling all of this traffic under contract; but elsewhere the aim is to render this traffic self-sustaining. Rates on bullion, as copper and lead; some rates east of the Mississippi on grain and coal and certain other commodities long recognized as unduly low constitute the principal other proposed changes.

Existing special services also are to be examined, following the Commission's advice that the roads ascertain to what extent these services, for which no charge, or a non-compensating charge is made, "constitute an unjust burden upon the carriers."

Passenger fares, wherever the rate within states has been two cents per mile, have been made generally on the two-cent factor between states with some exceptions, as in Oklahoma, where the interstate fare into Oklahoma has been three cents. In a test case brought by Oklahoma, Arkansas and Missouri the carriers have been sustained in this by the Commission, which found the three-cent rate not unreasonable; while even in the densely populated Eastern States the Commission previously had found existing passenger rates non-compensating and advised their increase.

Western passenger fares will not be increased to any specified rate per mile but will be rectified here and there where lowest and least justifiable, having been brought down by competition to a level pronounced inadequate by the Interstate Commerce Commission itself.

RATE INCREASES IN AUSTRALIA

Viewed from whatever angle, the recent attitude of our public regulators towards the railroads, appears incomprehensible. In a number of foreign countries, both as regards privately and publicly owned railroads, the necessity for increased rates has, in many instances, become clearly apparent, and action along these lines promptly taken, notwithstanding the fact that foreign rates are, in general, largely in excess of those in effect upon United States roads, and operating costs much smaller.

Increases in freight rates of 10 per cent; and in passenger fares ranging from 5 to 50 per cent, are the means by which the government railways of New South Wales, Australia, have undertaken to combat the world wide advance in costs of railway operation. The annual report of these railways just received in Chicago from Sydney by the Bureau of Railway News and Statistics, presents detailed outlines of the advances, and attributes them almost wholly to the expansion in wages and costs of materials.

This is looked upon as the most striking recent instance of the facility with which the state owned railway systems have been adopting advances in rates to cope with the rapid rise of late years in operating expenses, and is in sharp contrast to the experience of the private transportation systems of the United States, where in spite of recognition by the Interstate Commerce Commission of pressing need, Eastern railways have been refused a five per cent advance covering only freight rates, and under emergencies caused by the European war the roads have had to petition for a reopening of their case owing to actual threatening of their credit structures.

Increased charges for freight transportation placed in effect by the New South Wales government roads are uniformly 10 per cent, and with the estimated annual increase in revenue are as follows:

First and second class freight rates	$350,000
Class A, B, and C. mileage rates	230,000
Live stock rates	300,000
Total added freight revenue	$880,000

Advances have been made in passenger fares, despite the fact that "cheap excursion fares" already were on a basis of four cents per mile first class, and two cents per mile second class, while "special cheap excursion week end rates" were 3½ cents per mile first class and 1¾ cents per mile second class, compared with an average of only two cents per mile received for all passenger traffic by United States railways in 1913.

The increases range from five per cent in the case of through fares, to 50 per cent in second class excursion fares. With the percentages of increase, and the estimated annual additions to revenues the advances are as follows:

Season tickets, 20 per cent	$285,000
Through fares, 5 per cent	460,000
Cheap excursion fares from 4 cents to 5 cents per mile 1st class (25 per cent) and from 2 cents to 3 cents per mile 2d class (50 per cent); special cheap excursion week end fares from 3½ cents to 4 cents per mile 1st class (14 per cent) and from 1¾ cents to 2 cents per mile 2d class (14 per cent)	50,000
Workmen's fares increased to basis in effect in 1907	75,000
Total added passenger revenue	$870,000

Total new yearly revenue from both services is estimated at $1,750,000, or more than 5.3 per cent of gross operating revenues in 1913. A similar increase in the United States would amount to almost $169,000,000.

In explanation of the increases the minister of the government railways points out that expenses rose $3,742,000 in the last year, of which $2,704,000 was in wages. The operating ratio rose from 68.8 per cent in 1913 to 69.9 per cent in 1914. Wages took up $49.68 of every $100 revenue in 1914 against $48.80 in 1913.

THE EFFECT OF UNRESTRICTED DEVELOPMENT

Recently A. E. Goff, of the Great Indian Peninsula Railway, concluded a tour of the Canadian railways and was evidently greatly impressed with the remarkable progress made in that country during the past few years. He spoke in glowing terms of the great engineering obstacles overcome, the wonderful terminals, the magnificent railroad hotels and other developments, which, taken altogether, go to make up a progressive and efficient transportation plant.

We have not the slightest doubt that Mr. Goff's high praise is well-founded and well deserved. The Canadian railways are making splendid progress and in the past, no doubt, have drawn much of their inspiration from the developments of this country.

At the present time, however, there is a grave and deplorable difference between the railway activities of these two great nations. In Canada, government officials are working shoulder to shoulder with railway officials in an effort to develop a magnificent and efficient plant. These harmonious relations are reflected by the public, and the entire country's attitude is extremely helpful for the rapid promotion of this great industry. In the United States, politicians have used the railways so long for the exploitation of their own selfish ends, that the greatest and most progressive transportation system of the world is, at the present time, staggering under an oppressive load of unfair restrictions and regulations, with its actual solvency seriously threatened. No one really doubts that the integrity and ability of the railway officials of the United States fully measure up to those of our Canadian brothers. The fault lies very largely with our methods of regulation, which have so strangled railway development by their restrictive influences, that the situation has become intolerable. May a Moses yet be found among government regulators with a vision clear enough, with a heart stout enough, and an honesty of purpose high enough to compel a fair consideration of their difficulties.

EFFECT OF THE WAR UPON AGRICULTURAL PRODUCTION

It is rather surprising that more attention has not been paid, as yet, to the necessity for greater production of agricultural products during the coming year in order to satisfy the abnormal demands which Europe will make as the result of the war. American farmers are offered an unusual opportunity for greater profits by increasing the acreage of tillable lands and by adopting intensive methods for enlarging the yield.

If the war continues agricultural production in Europe will undoubtedly be greatly diminished, perhaps for several years, with the result that enormous demands will be made upon our agricultural resources. A higher agricultural efficiency, as well as an increased acreage are both necessary to satisfactorily meet the situation. Such developments would not only hold in check the high cost of living but would greatly increase the profits of the farmers and enable them to satisfactorily fill the large orders which will come from Europe.

A fifteen per cent increase in food production would add to the wealth of the nation approximately $1,000,000,000, or even more, should higher prices prevail. That the demands for this extra production will more than justify the effort, is becoming daily more fully appreciated as the devastating effect of the European war becomes more fully recognized.

Railroad officials should make it their

business to see that the farming communities along their lines are familiar with the necessity of bringing their production up to the requirements which the European situation will place upon the food supply. An appeal should at once be made to the farmers to sow a larger acreage of wheat and winter oats, while there is yet time. Additional corn land can now be sown in wheat in the corn belt to bring about a material increase in the winter wheat production without materially interfering with other crops.

The production of all canned products should also be greatly stimulated by the European war, increasing the home consumption of such products and rebounding to the enormous benefit of the canned goods industry. The agricultural and industrial departments of our railway systems thus have offered them unusual opportunities in the development of new business, and exceptional activities in such departments may be confidently expected. It means a greater tonnage for the railways and a larger prosperity for the American people.

THE INFLUENCE OF BUREAUCRATIC METHODS

The Congressional Committee which has been busy during the past year studying postal affairs, has brought to light not only the fact that the railways are badly underpaid for carrying the mails, but that the methods of the Post Office Department and its continuous demands upon the carriers for information upon which it has laboriously built its false structure of railway mail pay, have proved tremendously expensive. The entire report is full of the most conclusive evidence of the pernicious influence of bureaucratic methods.

For eight separate investigations of railway mail pay and Post Office Department affairs, in progress almost one half of the entire time since 1876, figures compiled by the Bureau of Railway News and Statistics from the recent Bourne report to Congress on mail pay show that the United States government has spent over $181,000. To furnish information required of them in these investigations the railways have spent more than $2,300,000.

Yet as a net result of these expenditures the latest investigation finds existing mail pay still grossly unprofitable; methods of computation "so complicated and so difficult that a business man of average ability and business experience could not read the existing laws and then compute the amount that should be paid any road," while the Post Office Department itself is "utterly lacking in knowledge of its own business affairs," and "has evinced a determination to secure a reduction in the total amount of railway mail pay, with little, if any, regard to whether such a reduction is justified or not."

Investigations which have been made with expenses to the government, are as follows:

1. Hubbard Commission, 1876-77	$16,000
2. Elmer-Thompson-Slater Commission, 1883	10,000
3. Wolcott-Loud Commission, 1898-1903	21,852
4. Joint Com. on 2d class mail, 1906-07	10,534
5. Joint Com. on Business Methods of P. O., 1907-09	78,207
6. Hitchcock Investigation, 1907-11	19,500
7. Hughes Commission, 1911-12	18,566
8. Bourne Commission, 1912-14	6,560
Total	$181,219

For the Hitchcock investigation alone the railways, to furnish the information sought by the Department, spent $250,000, more than ten times the cost to the government. The net returns were a widely circulated allegation that the railways were overpaid $9,000,000 yearly, though the department admitted this would be wiped out were the roads allowed a return on capital invested in mail service; and proposed rates found by the Bourne Committee to be "so small that if similar unprofitable rates were made on all rail traffic the roads would necessarily have to go into bankruptcy, because there would be no sufficient allowance for capital charges."

Present methods of mail pay, despite the large expenditures on investigations, are pronounced "antiquated," unscientific and unsatisfactory." Quadrennial weighings are denounced as unsatisfactory "because they make no allowance for changes in quantity of mail during the four-year periods." Payment is recommended for terminal services as "it is no more reasonable or just to compel the railroads to deliver mail to a postoffice after it reaches the depot than it would be for the Interstate Commerce Commission to require railroads to furnish taxicabs free of cost to take passengers to their homes * * * * or motor trucks to move freight."

As a victory second only to the unqualified vindication of the railways' claim that mail pay is too low is seen the finding that "railroads are entitled to be paid for mail transportation on a commercial basis," Chairman Bourne believing even that in justice "the railroads should receive a higher car mile revenue for mail transportation than for passenger service."

Will this vindication, railroad men are asking, like others before it, find its way to some pigeon hole, and its expenses consigned with what have gone before to the limbo of forgotten things?

EXPRESS VERSUS MAIL PAY

The Railway Committee, representing the carriers in the matter of mail pay, have recently issued a circular calling attention to the fact that the Joint Congressional Committee on Railway Mail Pay finds that the railroads are better paid for serving the express companies than for serving the Government in carrying the mails. The Joint Committee also holds that the comparison of mails and express receipts furnishes no basis for the claim that the railroads have been overpaid for carrying the mails. To quote from the report:

"The express service undoubtedly costs the railroads less than the mail per car-mile.

"Railway employes help to load and unload mail but not express matter, except where employes are jointly paid by the railroad and express companies.

"Express cars are cheaper than equipped mail cars.

"Railroad companies are liable for injuries to mail clerks but not for injuries to express employes.

"Express matter is handled at all times by express company employes.

"A railroad company not only handles the mail at and in stations, but in a great many instances bears the expense of transporting mail between the station and the post office.

"Mail must be carried on all trains, including the fast trains, while express matter is limited in frequency and speed of service.

"Postal employes are carried free on railroads while on official business, whether connected with railroad mail service or not. Transportation of express employes is reciprocated by free services rendered by the express companies for the railroads."

As to how the receipts of the railroads from mail and express compare, the committee reviews the evidence for the test month of November, 1909, and states this conclusion:

"Suffice it to say that we are convinced that the railroad earnings from mail were in 1909 decidedly lower than from express on a car-mile basis, which is the only basis for comparison we have.

"Certainly there is no warrant in the oft-repeated assertion that the Government is being robbed in its mail payments by comparison with what the express companies pay. There has been an amazing amount of reckless assertion on this subject."

In ten years railway mail pay increased only 22 per cent, while the earnings of the railroads from express traffic increased 91 per cent, according to the records of the Interstate Commerce Commission placed in evidence before the Joint Committee.

In the hearings before the committee the railroads proved mathematically that express cars earn an average of 19 per cent more, for each mile traveled, than mail cars.

In spite of this favorable showing for express business, it is now officially admitted that the mail service is more burdensome and costly to perform. How unfair is the present system of railway mail pay is strikingly illustrated by the statement that the carriers are paid approximately 50 per cent of the total gross receipts of the express companies, while they receive less than 20 per cent of the gross receipts of the Post Office Department for a similar but much more costly service.

GRATIFYING RESULTS OF THE SAFETY MOVEMENT

Reports are being received with increasing frequency showing the beneficial influence of the safety movement which is now in vigorous operation on nearly all of the more important railways. Not only are individual roads constantly reporting a decrease in all classes of casualties, but regulative bodies are taking cognizance of the improvement manifested and are congratulating the railroads upon the beneficial results obtained. The following statement recently published by the New York Public Service Commission, strikingly illustrates the influence of this movement:

The transportation division of the up-state Public Service Commission has compiled a table of the accidents on steam railroads in this state for the years ending June 30, 1913 and June 30, 1914, which shows that the decrease in passengers killed is over 72 per cent and the decrease in passengers injured 46 per cent. A year ago 51 passengers were killed during the preceding twelve months. But 14 passengers on steam railroads met death during the last year.

Unfortunately no figures are available as to the number of passengers carried within the state of New York, these reports being made for entire rail systems within and without the state, but the fact that but fourteen persons met death of all the vast number which must have been carried during the year speaks well for the safety of railroad travel in this state. Nine hundred and forty-three passengers were injured during the last year as against 1,746 the year before.

Casualties among railroad employes also show a gratifying decrease, but their number is still very large. One hundred and ninety-six employes were killed and 3,022 injured last year as against 250 killed and 3,760 injured the previous year, a decrease of 21.6 and 19.6 per cent, respectively.

The only class of railroad fatalities which shows an increase is that of the non-trespasser—persons neither employes nor passengers killed while in places where they had a right to be. A very large percentage of these fatalities were at grade crossings. One hundred and thirty-nine non-trespassers were killed in the year ending June 30, 1914, as against 129 for the year before, an increase of 7.2 per cent. Six hundred and sixty-one non-trespassers were injured as against 692 the year before, a decrease of 4.5 per cent.

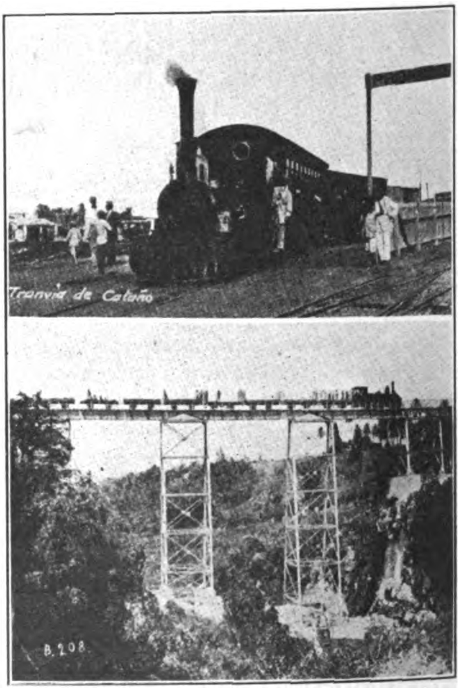
Three hundred and forty-eight trespassers were killed last year as against 393 the year before, a decrease of 1.5 per cent and 358 trespassers were injured as against 409 injured the year before, a decrease of 14.9 per cent.

The total of all classes killed last year was 697 as against 823 the year before, a decrease of 15.3 per cent. Four thousand nine hundred and eighty-four in all were injured as against 6,609 the year before, a decrease of 24.6 per cent.

The last paragraphs of this statement are of peculiar significance, in that the only increase in accidents involves trespassing, for which the government is really directly responsible. In view of the splendid progress which has been made in the general safety movement and in the attitude taken by government officials in its promotion, it would appear about time that they accepted their full responsibility and devise practical means and methods by which the intolerable evil of trespassing can be abolished.

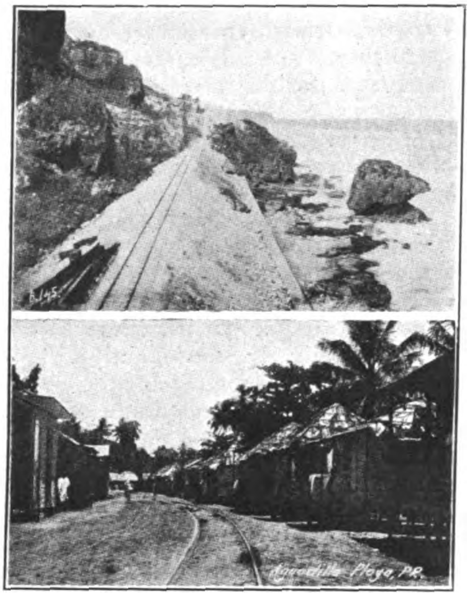
AMERICAN RAILROAD COMPANY AT PORTO RICO

The *Railroad Trainman* for October publishes a brief but interesting account by R. H. Newcomb on the so-called American Railroad Company which is operated on the island of Porto Rico. This company, by the way, is owned by French capital. The main line, which runs from San Juan to Ponce, is 172 miles long and a day's work on passenger or freight train is about half of that mileage as both classes of service make about the same number of hours. No overtime is allowed and there is only one brakeman in every class of service, although passenger trains have a baggage man and chair car porter. No cabooses of any kind are furnished freight trains and while a few freight cars are equipped with air there has apparently no attempt ever been made to use it. Mixed trains are frequently run with the freight cars behind the passenger cars. No tail end signals are used during the day time and at night the lamp carried by the brakeman on top of the rear car serves that purpose. Labor unions are not recognized and promotion appears to be largely by favoritism. The rates of pay per week are as follows:



TWO VIEWS OF THE PORTO RICO RAILWAY.

First, showing a station on short road between Catano and Baya, and second, railway trestle of steel construction.



Two Views Along the Main Line of the American Railroad.

This road closely follows the coast line for a great part of its distance.

Station agents $11.50, clerks $3.50, engineers $17.50, firemen $7.00, first assistant section foreman $9.00, second assistant section foremen $7.00, laborers $3.00, time keepers $4.50, inspectors $5.00.

The accompanying illustrations give an excellent idea of the appearance of this remarkable railway system and the country through which it passes.

CAMPAIGN FOR QUIET STATIONS

In the May, 1914, issue of the Railway World attention was called to an order issued by the Northern Pacific to the effect that loud talking, inging of engine bells, sounding of whistles, blowing off steam and other avoidable influences, over which employes have control, were to be avoided and reduced in the future to a minimum and that the coupling of cars at stations, setting out or picking up cars, were also to be controlled by signals and done as silently as possible.

The railroads have, of course, for years been striving to do away with these avoidable noises but there has been added evidence recently of a more determined effort along these lines. Service competition has largely displaced rate competition in modern railway operations, and any improvement which will prove conducive to the happiness or comfort of the traveling public is a distinct advantage to the road which adopts it.

From San Francisco comes the report that the Southern Pacific is giving this matter increased attention and it is stated that Vice-President W. R. Scott has just issued through the division superintendents an appeal to all employes of the company, especially train and yard crews, asking them to increase their efforts to eliminate all unnecessary nocturnal noises and requesting furthermore, suggestions for improvement of the service in this regard. Mr. Scott's idea is evidently to prove that real sleeping cars are within the realm of possibility everywhere on the Pacific system, hence, his appeal to the men to co-operate for improvement. This is a movement with which every road desiring to improve popular sentiment towards the railroads should find it possible to co-operate most heartily.

NEW YORK COMMISSION APPROVES NEW YORK CENTRAL CONSOLIDATION

The Up-State Public Service Commission of New York has approved the consolidation of the New York Central and Hudson River Railroad Company with the Lake Shore and Michigan Southern Railway Company, and other railroad corporations already controlled through stock ownerships by one or the other of the two lines, into the single corporate entity, the New York Central Railroad Company, with principal offices at Albany. The matter has been pending before the Commission for some months, during which time various issues involved have been heard before the Interstate Commerce Commission, the United States courts and the regulative bodies of other states. In the opinion written by Chairman Van Santvoord, in which all the members of the Commission concur, the Chairman says:

> We find nothing to indicate any intent on the part of the petitioners to over-capitalize either in stock or bonds. The proposed stock issue of about $250,000,000 by the new company is some $50,000,000 in amount less than the combined capital stock of the constituents; while the outstanding bonded indebtedness of the new company on account of the New York Central-Lake Shore collateral trust bonds can at no time and under no circumstances exceed the precise amount at that time unpaid of the original debt, whether represented by the original bonds or by the new 4's.

The opinion comments favorably on the improved position which the consolidation should create for the business now carried on under many distinct corporate heads. It is suggested that these benefits will be not only along the lines of economy and efficiency in management, but that the financial prospect created is both novel and pleasing.

It had been urged by the opposition to this consolidation that "a permanent system of financing," created by the consolidation was not desirable in that it would make more difficult the possible future dissociation of the properties involved. Of this Chairman Van Santvoord says:

> This Commission is not impressed with the impending danger of a "permanent system of financing" which may attend approval of the consolidation; rather are we impressed with the petitioners' "sublime audacity of faith" in creating such lofty ideals and cherishing so magnificent a hope as are embodied in a permanent system of financing for a trunk line railroad. We are inclined to believe that a corporate management which can assuredly usher in that heretofore unheard of—if not undreamed of—accomplishment in the realm of railrod financing deserves every proper encouragement in its efforts to attain that which would perforce merit general approbation. And, finally, we concur in the opinion of the Interstate Commerce Commission that from the standpoint of economy and operation and facility in financing the proposed consolidation is warranted. The statutory formalities prerequisite to the authorization of the proposed consolidation have been complied with; and there is proof, and the Commission is of the opinion and finds that the operation of the consolidated properties and the financing of the same under a single corporate entity would through certain incidental economies and facilities in administration, both physical and financial, inure to the advantage of the owners of the enterprise, and presumably to that of the general public as well.

The opinion takes up in detail the five principal objections against the consolidation raised by Cadwalader, Wickersham and Taft, representing William A. Read and other Lake Shore minority stockholders, and J. Aspinwall Hodge for C. H. Venner and Company and other stockholders of both Lake Shore and New York Central.

"These objections and others of a minor character have been urged not only before this Commission, but as well before the Interstate Commerce Commission in its Congressional investigation of the proposd merger, and upon no less than three applications to the federal courts for restraining orders in connection with the projected consolidation," says the opinion, and adds that the proceedings referred to have confirmed the Commission in the belief that the objections are not valid.

The most important point settled by the decision, one that has not before been raised since the passage of Section 141 of the railroad law is as to whether or not an increase in interest rate—in this instance from 3½ per cent on Lake Shore collaterals to 4 per cent on new bonds to be issued in exchange therefor — constitutes a violation of the prohibition contained in the section referred to against the issue of "additional securities" "in connection" or "in consideration for" consolidation.

It is the opinion of the Commission that the intent of the prohibition contained in Section 141 is to prevent what may be termed "capitalizing the consolidation agreement.' It finds the language of the act clear on this in respect to stock issue where the prohibition manifestly has reference only to the amount of stock, and holds that the same intent must be imputed to the language with regard to bond issue, though that language is somewhat less definite. The Commission points out that if this clause were to be interpreted as argued by the objectors to the consolidation it would effectually prevent the issue of all refunding bonds in consolidation proceedings. It finds in the statute no prohibition against the increase in interest rate to induce bondholders to consent to consolidate, the reason for the increase in interest rate in this case.

The opinion says that the views of the Interstate Commerce Commission in a report favoring the consolidation, and of the Federal Court in denying an injunction restraining the consolidation seem to be sufficient answer to the allegation that the consolidation is in violation of the Sherman act. It was argued that inasmuch as the Lake Shore now controlled through stock ownership the Nickel Plate and other roads, which, it might be argued, competed with it between Buffalo and Chicago, such control through stock ownership being illegal, the consolidation of the property was but confirmation of a violation of law. The opinion quotes Judge Grubb, of the Federal Court, to the effect that a consolidation can add nothing to the completeness of control of competing lines and that even if this control were hereafter determined to be illegal, the consolidation would in no way release the parties from their responsibility for such illegal control.

Upon the contention that the consolidation is in violation of the New York State anti-trust act the Commission finds no evidence to this effect. Such evidence is to the control of competing lines as has been submitted, the opinion points out, relates to interstate commerce and is without the jurisdiction of the Commission.

The opinion, making clear that the Lake Shore minority stockholders, now holding approximately one tenth of the outstanding stock of the Lake Shore, after consolidation will own one tenth of a stock issue which not only represents the Lake Shore, but in addition all the property of the New York Central. On this point Chairman Van Santvrod says:

> And while, of course, the question of subsequent dividend certainty, depending on the earning capacity of the new company, must also be considered, we find nothing in the record which would justify us in withholding our approval of the consolidation on the ground that the net result of the present and prospective indebtedness of the New York Central and of its earning capacity under the new conditions will, under the proposed consolidation, prove unfair and inequitable to the Lake Shore minority interests.

There are involved in the consolidation 5,335 shares of a preferred or guaranteed Lake Shore stock. This was originally issued by the Michigan Southern, Northern Indiana Railroad Company in the year 1857, and on it the payment of a ten per cent preferential dividend was guaranteed. When this original road was acquired by the Lake Shore it still maintained in accordance with the law this ten per cent preferential dividend. In the present case the Commission finds that the record does not contain evidence sufficient on which to base a definite order. It suggests as a solution of the difficulty that, as five shares of the New York Central stock are to be issued for one share of Lake Shore, such new Central shares as are issued to the holders of this "preferred" stock shall be endorsed with a guarantee of payment of two per cent preferential dividend, thus assuring the same pecuniary return to holders of the guaranteed stock. If the petitioners do not accept this suggestion they will be obliged to submit further evidence on this point.

Contemporary Opinion

Business Men Plead for Rate Advance.

Doctor A. R. L. Dohme, president of the New York City Wide Congress, has addressed an open letter to President Wilson urging that the railroads be allowed the rate of increase they have been asking. The plea bristles with facts and arguments, and from a business standpoint its conclusions seem almost inevitable.

Dr. Dohme says that many of the roads face receivership unless some relief is given, and he points out that the business interests of the country generally favor the increase, and as this element will have to bear the burden, there was no good reason for the conclusions of the Interstate Commerce Commission in the late decision.

The letter places this local business organization in line with many others throughout the country which have taken the same position, though the Baltimore body is perhaps the first which has made its appeal directly to the President.

In his letter Dr. Dohme says:

"The Interstate Commerce Commission has handed down its railroad rate decision after a long delay and after many railroads have gone into receivers' hands, because they could not make ends meet during that long delay. The decision is so impractical and has so paternal a flavor that its main result will be to absolutely prevent further growth of mileage or development of territory and as well to compel many more railroads to go into receivers' hands.

The commission apparently intends its decision to be a good parental scolding and thrashing. This, however, does not help the child to get a new pair of shoes, which it needs badly.

The company whose president I have the honor to be is in a very fair position to speak upon this question, because it ships all over the country and prepays its freight at a dead expense to itself. It hence would naturally like to see freight rates reduced. But as business men who appreciate that you cannot expect competent service from a sick employe, we know that unless we agree to pay more for freight expense the railroads must give us less efficient service, just as we must give less efficient service if we are making deficits instead of profits from month to month.

The railroads are the arteries as they are the barometer of trade and carry the life blood from the factory to the user just as the arterial system does. If the cost of doing business continually increases, but the price of the products of the business are held steadily at one figure the business must die, and that is the inevitable fate of the railroads.

When a man is sick unto death because of lack of nourishment as well as because of a weakened condition brought on by past indiscretion, the doctor who would treat the patient with lectures upon how he could have been well if he had not years before been indiscreet in diet, hours of work, etc., would be discharged, driven out of town. Yet, this is exactly what the Interstate Commerce Commission is doing.

All men who have studied railroading and who are practical men and not theorists, know that the rate decision handed down last month is unworthy of the body that handed it down. It benefits no one except the theories of those who propounded it. The shipper, the railroads, the employes of railroads, merchants, manufacturers, their employes, the holders of securities of all railroads, miners, farmers, charities of all kinds—and this covers the vast majority of the people of this country—will distinctly and directly suffer financial loss and personal inconvenience and discomfort as well as suffering as the result of this railroad rate decision.

"I do not know the politics of the members of the Commission, and I do not care to know them, but I do know that their decision is a destructive and not a constructive one; it is reactionary and not progressive and it corresponds with the tendency of the present Government to break up into little bits all things of any size because of apparent fear of great things."

The Duty of the Interstate Commerce Commission.

COMMENTING editorially upon the stability of American finance and trade since the suspension of business by the warring nations of Europe, "The Kernel," a New York financial publication, reviews the conditions of international commerce which brought about the closing of the New York Stock Exchange and points to factors which should place this country on a sound basis before the world. The article says:

"Pressure to sell securities exceeds the desire to buy them the world over at this time. The stock exchanges of the world were closed because of a panicky and overwhelming selling mania, and since conditions have not been such as to permit of the development of keen demand. Offerings are much in excess of bids. Europe holds between $5,000,000,000 and $6,000,000,000 of American securities. Europe wants gold. We must conserve our gold supply in the present circumstances. There is no better demonstration of this than comparison of the fluctuations in the stocks of gold in the Bank of England and in the New York Clearing House institutions during the last 3½ months. From June 4th to September 17th, the Bank of England gold holdings rose from $179,961,590 to $243,602,460. From June 6th to September 19th the gold holdings of the New York banks and trust companies fell from $441,715,000 to $320,549,000. While the Bank of England's stock of gold has risen $63,641,000 that of the New York City institutions has shrunk $121,166,000. It is the European craving for gold and its anxiety to realize on such securities as can be sold that keeps the New York Stock Exchange closed. To open the stock exchange for trading in the regular way would mean that we were willing to pay gold for such of the five to six billions of American securities held abroad as the foreigner desired to sell. The foreigners might offer but a small proportion of their total holdings in Americans and yet the amount would be much larger than we could reasonably take on a gold basis under present conditions. On July 30th, the last day our stock exchange remained open, foreign selling amounted to not less than $100,000,000. This statement of facts makes clear the wisdom and necessity of keeping our stock exchange closed until gold is less attractive and securities are more attractive, or until we are in position to offer acceptable exchange other than gold for foreign holdings of our securities, either merchandise or a currency guaranteed by the United States government—the latter might be made gradually redeemable in gold.

"To do business, make your offering attractive. This is, the first business principle, whether in kindlings or government loans. The great majority is clamoring for the reopening of the stock exchange. What should be the first step toward such an undertaking? It should be to do something to make the securities listed on the stock exchange more attractive than they now are. Who possesses the power to restore attractiveness in American securities? The Interstate Commerce Commission has that power. How shall it proceed? By granting, without "hemming or hawing," a liberal increase in freight rates such as will restore the integrity of American Railroad securities in the eyes of investors, not only of Europe, but of the United States. The present is an emergency—the greatest ever faced by this country. A little bridging and the United States may step upon a solid rock which will idefinitely hold it in position of first commercial importance indefinitely. Will the government authorities of the United States permit the nation to step into this coveted position? The question is not one of patriotism, but of business common sense.

"Should the Commission later discover that it had gone too far in permitting flat rate increases, it could easily right its error by new rulings ordering reductions. Before now the Interstate Commerce Commission has reversed itself. All wise men have reversed themselves. The United States Supreme Court has reversed itself. Before the war the people had begun quite generally to say, to themselves and openly, that business had been pounded enough during the past ten years and the last month of war has done more to further develop this more favorable attitude than a normal year could have done. It is not improbable that in the same or a greater degree the war conditions have developed the outlook and the practical business capacity of the Interstate Commerce Commission.

"Hostile attitude toward the railroads, largely developed by demagogues and crystalized in a long succession of unfavorable rulings by government bodies which try more or less in their actions to reflect public sentiment, has worked to the point where the people themselves are beginning to realize the bad policy of it. For years the savings banks have been marking down the values of their securities as a result of anti-railroad legislation and decisions. This marking down process has got to the point where it threatens to bring about forced reduction in the rates of interest paid on savings deposits. So long as reduction in rates and increases in wages and costly equipment requirements confined their injurious effects largely to the rich investor the policy was popular enough. To-day this policy is actually unpopular among all classes. The pendulum was bound to swing back, but the wait for the back swing has been tedious for capital and costly for labor, though the latter has been slow to realize the cost of whatever pleasure or satisfaction it has gained through baiting capital.

"Not haste, but dispatch, should be used by the Interstate Commerce Commission in rehabilitating at once its own integrity and the integrity of American securities in the present dire emergency by granting a liberal increase in freight rates to the railroads, the inadequacy of whose revenue is admitted in its previous decision in the Eastern Rate Case while at the same time it withheld the necessary relief. Such action will do more to immediately re-establish confidence and credit in the United States than anything else that may be done. "The Kernel" believes the Interstate Commerce Commission will recognize this duty and perform it."

A European Opinion on the American Rate Situation.

(From the "London Statist.")

IT is a matter for sincere congratulation to all interested in the economic welfare of the United States that the Interstate Commerce Commission has agreed to reopen the application by the Eastern Roads for an advance of five per cent in freight rates. The new inquiry will commence on October 19th, and it is stated will be confined to a presentation of facts relating to recent developments. That, in view of the exceptional existing circumstances, the railway companies will not have again appealed in vain for permission to make a small increase in their transportation charges is generally believed. Apart from the question of the abnormal rise that has occurred in expenses, the railways of the United States are faced with the difficulty of having to meet before the end of 1915 bond and note obligations aggregating over £100,000,000. In the highest public interest it is, of course, imperative that these obligations shall be met. With net income impaired and the rate of profit earned on the capital of the railroads declining, the raising of capital, not only to enable the companies to keep abreast of the times, but even in this emergency to place them in a position to anticipate the demands of an expanding commerce, is no easy task. Simultaneously with the great falling-off of income general credit conditions have broken down, and the absolute and immediate necessities of both public and private borrowers of money in the States and elsewhere have raised interest rates to a level unthought of a few months ago, rates much higher than the present net earnings return upon the railroad property of the United States.

Constructive Action the Need of the Hour.

LIKENING the war in Europe with its fearful loss of life and terrific destruction of property to the "fearfully destructive war against property and business interests generally" which it says has been going on in this country during the last ten or fifteen years, *The Manufacturers' Record* makes an editorial plea for constructive action which will tend to relieve business unrest and restore prosperity.

"We have very nearly wrecked the railroads of the United States, representing about 40 per cent of the railroad mileage of the world," comments *The Record.* "We have wrecked," it continues, "a great many of the business operations of the country. We have sown distrust which, in its influence on business operations, has been almost as destructive as the bullets which are being sown broadcast on the battlefields of Europe. We have waged warfare against prosperity; we have waged a relentless fight against the railroads and other corporations of the country.

"If the United States had been in good business shape and had not had these last six or seven years of down-grade business, due largely to the politicians' warfare against business which commenced fourteen or fifteen years ago, we would have seen no such disastrous conditions existing in the country as we find to-day. In state legislation we have carried on a campaign as vigorously and in its results as vicious as that which has been carried on in national legislation. We are paying the penalty, and, seek to disguise it as the agitators may, our present railroad stagnation and very much of our whole business depression is due to this bitter warfare, and we might as well face the truth. It required no gift of prophecy to foretell the inevitable result.

"No one would be so foolish as to deny that some restrictive legislation was needed in many directions, but most of the evils complained of could have been overcome without the hostile legislation enacted. And never was there justification for the bitter, relentless effort of some politicians who sought to destroy merely to curry favor with the mob spirit of the day."

The Record suggests a remedy through a campaign "to down or drown the agitators, encourage by all legal and moral means the investment of money in railroads and business enterprises, and give to the capital thus invested the freedom from hostile legislation which is killing; go back to the spirit of the day when counties, towns and cities bid against each other to offer the largest bonus to aid railroad building; go back to the time when great enterprises and great individual successes were esteemed worthy of commendation, and help to kill off the spirit of the inefficient and the slothful who are unwilling to control themselves, but who want the government to control everything for their benefit. Stop praising the inefficient and the wilfully incompetent; stop catering to the agitator who lives by and on creating class hatred, and once more stand up and work for broad material upbuilding."

The Sherman Law and the Railroads.

DECLARING that after twenty-five years spent in experimenting the country and its lawmakers have not decided whether they prefer competition or regulation in the government of business, the *New York Journal of Commerce* makes the editorial comment that such a situation leads towards endless confusion and embarrassment.

"The Sherman law was not intended to apply to the railroads," says *The Journal of Commerce,* and it adds that "the action of the courts in applying it to the carriers involved the illogicality of forcing them to compete and at the same time depriving them of the means of competition, and substituting for competition regulation, which has in recent years been carried so far as to authorize determining prices that railroads may charge for their services."

Commenting upon the free service performed by the railroads, and which was referred to in the recent decision in the Eastern rate case, *The Journal* observes that "The free services that the railroads have been rendering, to the marked disapproval of the Commission, are concessions to big shippers to get their business. They are features of competition. Abolish all efforts to maintain railroad competition, prorate the business at uniform rates, and the railroads will be perfectly willing to sit still and let shippers bring their stuff to them. But if the public and the Commission will have competition, then the railroads must be allowed to compete."

And it adds: "What is really needed is an intelligent comprehension of the distinction between transportation and other industries, and an application of the principles on which the Cullom and Sherman laws were enacted, though the Cullom law is not entirely consistent on the point of regulation and competition. But instead of applying both systems to both classes of corporations Congress and the courts and public opinion ought to have learned by a quarter of a century's experience to depend on regulation mainly in the case of railroads, and on competition in the case of industrials."

President Ripley on Railway Regulation.

IN the 19th annual report of the Atchison, Topeka and Santa Fe Railway Company, President Edward P. Ripley takes occasion to call attention to the restrictive influences which have, within recent years, had a marked effect upon railway development, and for which to a large extent at least, government regulation has been responsible. While Mr. Ripley states that his Company has been less crippled by these conditions than some of those lines less fortunate, the margin of safety on which the Atchison is now compelled to operate is so narrow as to make the consideration of a liberal policy out of the question at the present time. To quote from his report:

"Your directors feel that heavy responsibilities devolve on them in the present state of governmental activities directed at the railroad industries. It has been found almost impossible to make even an approximate estimate of the cost of "regulation" which has been imposed on us by the State and National governments. Without criticising the policy of proper supervision, it is fair to say that many of the laws are not only expensive but in the opinion of your officers unnecessary and superfluous. Constant whittling of rates, plus constant legislation which adds to your expenses without adding to revenue, have had their inevitable effect. There are some evidences of a disposition on the part of those in authority to realize that great injustice has been done in the guise of regulation and that it is time to call a halt, but the relief which the railroads need cannot come until this disposition shall be transmuted from mere expressions of friendliness into positive remedial measures. General words of sympathy will accomplish nothing if governmental agencies continue in each specific instance to impose additional burdens or to find excuses for not granting specific relief. Hence your Directors deem it their duty again to warn stockholders that their interests are more endangered by the various governmental regulations than from any other source.

"But in making the foregoing statement the threatening attitude of the labor organizations must not be lost sight of as a vigorous second in the menace of the times. Your Company has always shown the utmost consideration for its employes, and as a class they are a credit to themselves and to the road. Left to themselves there would be little of which to complain, but the organizations as a body have been aggressively demanding increased wages for their members with no regard for the ability of their employers to pay, and have been steadily demanding, and frequently with success, many varieties of legislation, such as full-crew bills, designed to increase operating expenses. Between the repressive forces of Government and the demands of organized labor it is evident that the sum remaining as the share of invested capital is in serious danger.

"Under these conditions it is the intention of your Directors to make no additions or betterments, however desirable, which can not be paid for out of current earnings, and to continue the policy of incurring no floating debt."

Safety on Railroads.

(From the Troy, New York, "Times.")

IN view of the criticisms which allege carelessness and indifference on the part of American railroads, the showing made in a statement just issued by the New York Central and Hudson River Railroad Company has special interest. This report is to the effect that since February 1, 1911, not a passenger has been killed on the company's lines in any train accident. It further appears that within the time mentioned 1,266,654 passenger and 819,513 freight trains have been operated on the New York Central System, in all kinds of weather. The passenger trains carried 136,154,983 persons, a number which is more than 40,000,000 greater than that of all the inhabitants of the United States at the last federal census. It is difficult to grasp the magnitude of such a passenger business. But the one thing that stands out most impressively is the wonderful security in which the patrons of the road have traveled.

Unquestionably other well-managed railroads can make equally surprising showings, and it will be well for the public to weigh the significance of such exhibits before indulging in indiscriminate censure of railroad management. There has been a vast amount of irresponsible talk on the subject, the effect of which has been to bring unmerited opprobrium on American railroads. Yet the careful student of statistics long ago learned that much of the denunciation to which our railroad managers have been subjected was most unjust. There have been excellent reasons why railroad companies should seek to increase the safety of passengers, and few of them have spared effort in that direction. The result, as an analysis of the figures will prove, is that the fatalities on our leading railroad systems represent an extraordinarily small proportion of the passengers carried.

Let the fair-minded reader give a few moments thought to what this report of the New York Central Railroad Company means. During the operation of the great system for a period of more than three years and a half 136,154,983 persons have been carried, often under such weather and other conditions as to involve special peril, and yet not a passenger lost his life! It is doubtful if similar exemption from fatalities can be shown in any other branch of transportation. In fact, a study of industrial statistics will prove that the lives of passengers on a well-conducted railroad are far more secure than those of persons engaged in various occupations not regarded as particularly hazardous. The death rate in many communities considered fairly healthful is far larger than that of passengers on railroad trains.

The larger proportion of railroad fatalities may be attributed to the recklessness of persons who deliberately put themselves in the way of danger. Employes sometimes grow careless and neglect the safeguards which the companies themselves prescribe for the men. Trespassers on the right of way frequently fall victims to their own temerity, and this implies no reproach to the railroad companies, for the corporations are constantly warning persons against the risk involved. Accidents will happen, even when the utmost vigilance is enjoined; but it cannot be denied, in the light of the figures given, that passenger travel on the best American railroads is becoming remarkably safe.

Safety and the Individual.

(From the "Bulletin," Official Organ of the Southern Pacific Company.)

THE greatest and most important element in the promotion of safety is the human individual. Upon him rests the onus of responsibility for results. Results mean the extent to which accidents shall have been prevented and human life conserved.

In the work of minimizing mishaps and protecting life, there is an unlimited field for the railroad man—probably more so than that offered men in any other occupation. And to get results it is only necessary to keep the subject constantly in mind, and, instead of waiting for opportunity to present itself, look for it.

Not very long ago a locomotive fireman, at the risk of his life, leaned from the pilot of his engine and threw to safety from the track an elderly woman who had lost her wits when she saw the train bearing down upon her. But for the fireman's heroism a headstone would mark her resting place to-day and another name be added to the trespassers' death list. Had the fireman failed in his attempt he, too, would undoubtedly have been killed and two families would be in mourning. But his action deserves every commendation. He saw his duty—to save her if possible—and unflinchingly performed it. To-day he is a hero.

But here is another incident. A track-walker approached a trestle just as two workmen started across. He stopped them and told them who he was.

"Didn't you read that sign about trespassing?" he asked.

They nodded.

"We were in a big hurry," said one of them. "The trestle is a short cut for us." His last words were almost drowned as an extra freight thundered past and he paled.

"You'd been pretty busy out on the trestle now," said the track-walker. He saw that they realized this and were impressed, and so he followed up the advantage by giving a few facts about the danger of trespassing and telling of the great number of people who had no business on railroad property killed every year.

Both men thanked the railroad man.

"Furthermore," said one of them, "I happen to be foreman over at the mill and I'm going to put up a sign warning the men." He did as he promised. He told his men what the track-walker had told him, and they, too, were impressed.

The incident was not recorded in headlines. The track-walker was not hailed as a hero. But nevertheless he was a hero, for in the performance of what he saw was his duty he prevented the workmen of the mill from imperiling their lives daily. No one will ever know just what results he accomplished in preventing what might have been, and he did not have to risk his own life in doing so.

There are numerous opportunities every day for the individual railroad man to help in this educative campaign. The person who stands too near the edge of the station platform, the one who wants to jump off a moving car, the woman who gets excited at the approach of her train, the factory worker or school child seeking a short cut through railroad property—these and countless others need your attention. Their own carelessness or thoughtlessness may cause their death or injury any moment. A word from you will save them.

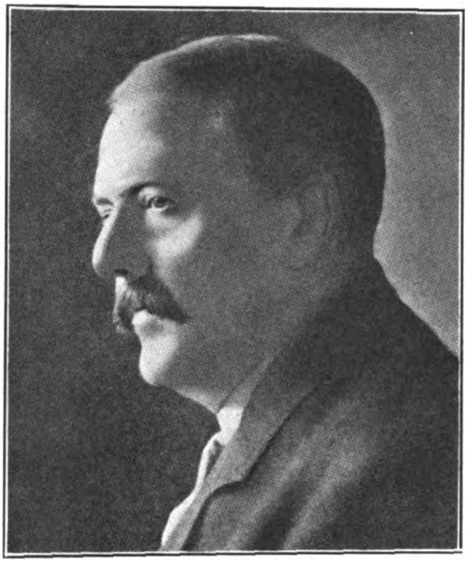
Personal

George M. Henry.

GEORGE M. HENRY, who has been appointed general passenger agent of the Detroit, Toledo and Ironton Railroad, with headquarters at Detroit, Michigan, was born September 3, 1876, at Toledo, Ohio. He began railway work in May, 1893, with the Wheeling & Lake Erie at Toledo, and was successively clerk and chief clerk in the passenger department until 1898, when he went to the Detroit & Lima Northern at Detroit, Mich., as chief clerk in the passenger department. From 1900 to 1902 he was general freight and passenger agent of the Rapid Railway, an electric line, and the following two years was general passenger agent of the Detroit Southern. He was then engaged in the coal business at Detroit for one year, returning to railway service in 1905 as general freight and passenger agent of the Detroit, Monroe & Toledo. For three years from 1906 he was in the advertising business, taking up railway work again in 1909 as chief clerk in the passenger department of the Ohio Electric Railway at Springfield, Ohio. Mr. Henry became connected with the Detroit, Toledo & Ironton in 1910 as assistant general passenger agent.

J. A. D. Vickers.

J. A. D. VICKERS, who, since the election of George C. Taylor to the presidency, has been acting vice-president and general manager of the Western Lines of the American Express Company, headquarters at Chicago, was elected vice-president and general manager September 28th. Mr. Vickers entered the express business in Canada under his father, who was the founder of Vickers' Express Company, becoming its superintendent in 1882. Upon the absorption of Vickers' Express by the American Express Company in 1889, Mr. Vickers became superintendent of the Canada Division of the American Express Company, and in 1891

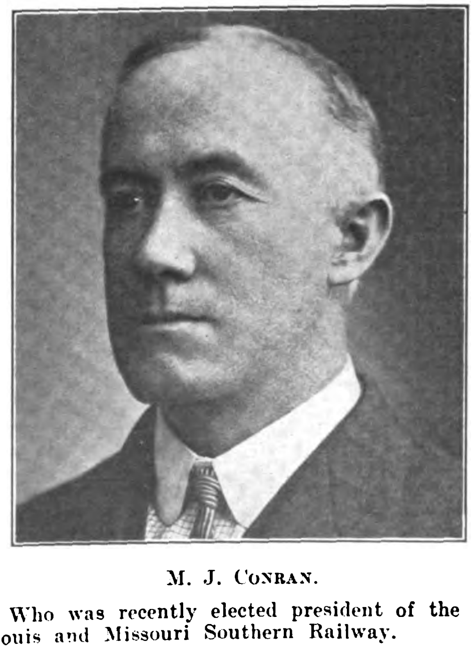


J. A. D. VICKERS.

was made superintendent of the National Express Company's lines in the West, with headquarters in Chicago; later promoted to general superintendent and again to general manager.

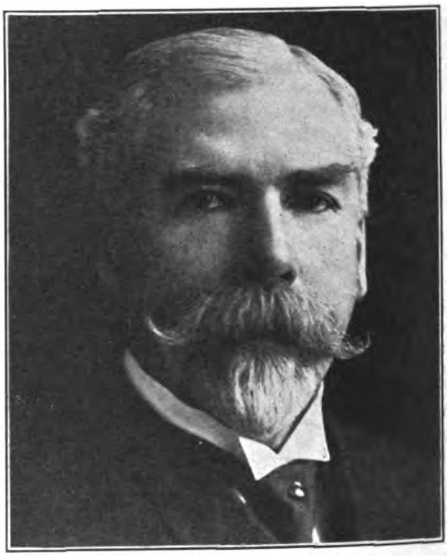
T. J. Kennedy.

T. J. KENNEDY, who has been elected president of the Algoma Central and Hudson Bay Railroad Company, with headquarters at Sault Ste. Marie, Ont., was born at Campbellford, Ont. He entered railway service in 1874 on the engineering staff of the Canadian Pacific Railroad and in 1881, became engineer for contractors of Section B of this road; in 1885, he was made roadmaster of the Lake Superior Division and in 1892, superintendent of the Chapeau Division. In 1899, Mr. Kennedy was transferred to the North Bay Division, from which position he left the service of the Canadian Pacific to become general superintendent and traffic manager of the Algoma Central and Hudson Bay Railway and the Algoma Eastern Railway. From 1900 to 1911, he was manager of the International Transit Company and of the Trans St. Mary Traction Company and in 1911, he became president of the Superior Construction Company, with headquarters at Sudbury, continuing in this position until October 1, 1914. Mr. Kennedy is also president of the Algoma Eastern Railway, the Algoma Central Terminals, the Algoma Eastern Terminals, the Superior Rolling Stock Company, the British America Express Company and is vice-president of the International Transit Company and of the Trans St. Mary Traction Company.



M. J. CONRAN.

Who was recently elected president of the St. Louis and Missouri Southern Railway.



T. J. KENNEDY.

Edward J. White.

EDWARD J. WHITE, who has been appointed general solicitor of the Missouri Pacific and the St. Louis, Iron Mountain and Southern, was born February 11, 1869, at St. Louis, Mo. He attended public school at Springfield, Mo., and Joplin later; from 1883 to 1885, was a student at the University of Arkansas, Fayetteville, Ark., and in 1888 entered the University of Missouri at Columbia, Mo., graduating in 1891. He was admitted to the bar that year and commenced the practice of law at Aurora, Mo. He entered railway service in 1903 as assistant attorney for the Missouri Pacific, with jurisdiction over counties in southwestern Missouri, retaining his headquarters at Aurora. In April, 1911, he was appointed general attorney, with office at Kansas City, with jurisdiction over Jackson County, Missouri. Mr. White held the latter position at the time of his recent promotion. In 1913, Mr. White was also elected president of the Missouri Bar Association, his term having just expired. He is the author of

Edward J. White.

a number of well known books, including the following: "Mines and Mining Remedies"; "Personal Injuries in Mines"; "Personal Injuries on Railroads"; "Legal Antiquities"; "Law in Shakespeare."

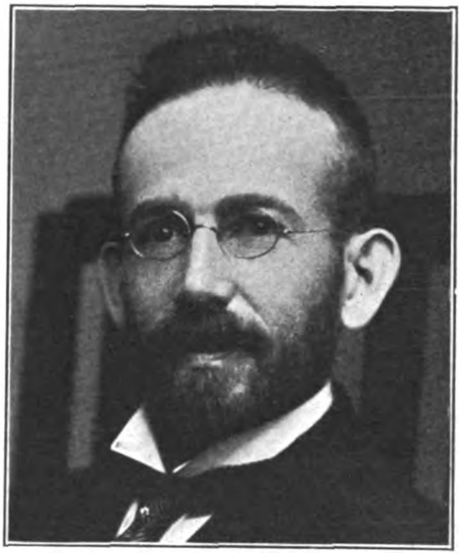
S. G. Lutz.

S. G. LUTZ, whose appointment as general traffic manager of the Chicago and Alton Railroad was announced in the August issue of the "Railway World," was born December 8, 1868, in Illinois and was graduated from Western College, Toledo, Ohio, in 1887. He began railway work in November, 1890, as a stenographer in the traffic department of the Iowa Central, and subsequently filled various clerical positions until September, 1894, when he became chief clerk in the freight traffic department. From January, 1898, to April, 1904, he was assistant general freight agent of that road, and was then until December, 1908, assistant general freight agent of the Minneapolis & St. Louis. He was freight traffic manager of both roads from December, 1908, to December, 1909, when he was appointed general freight agent of those roads and the Chicago & Alton and the Toledo, St. Louis & Western at Chicago. In November, 1910, Mr. Lutz was made traffic manager of the Minneapolis & St. Louis, which absorbed the Iowa Central, which position he resigned on August 1st, to become general traffic manager of the Chicago & Alton, with headquarters at Chicago, Ill.

S. G. Lutz.

Herbert L. Utter.

HERBERT L. UTTER, who has been elected secretary and treasurer of the Missouri Pacific, with headquarters at New York, was born on May 1, 1868, at Morrisville, N. Y. He was a student at Wayland Academy, Beaverdam, Wis., until 1886, and later was graduated from the Canandaigua (N. Y.) High School, and from Eastman's Business College, Poughkeepsie, N. Y. On April 4, 1891, Mr. Utter entered the service of the Missouri Pacific, and has been in the continuous service of that road ever since. In 1908, he was appointed assistant secretary and assistant treasurer, which position he held at the time of his recent election as secretary and treasurer of the same road as above noted.



H. L. Utter.

B. M. Waldron.

B. M. WALDRON, who has recently been appointed freight claim agent of the Baltimore and Ohio Railroad, was born February 26, 1871, in Richmond, Va. Entering the service of the local freight office of the Chesapeake and Ohio Railway September 12, 1889, he acted in various capacities of messenger, billing clerk and revising clerk, until February 9, 1893, when he took a position in the freight claim department, being advanced to loss and damage claim investigator June 1, 1896. On the latter date he was promoted to overcharge and relief claim investigator and on January 1, 1898, was made loss and damage claim investigator in charge of the over, short and damage department. On April 2, 1900, Mr. Waldron became chief clerk of the loss and damage department and on August 1, 1903, was transferred to chief clerk of the freight claim department.

Leaving the Chesapeake and Ohio Line in January, 1907, Mr. Waldron became identified with the Seaboard Air Line Railway at Portsmouth, Va., as freight claim agent, and went with the Pere Marquette Railroad in August of the following year as chief clerk in the freight claim department, at Detroit, Mich. On September 1, 1908, he became chief clerk of the freight claim department of the Cincinnati, Hamilton and Dayton Railway, at Cincinnati, being advanced to freight claim agent of that road in February, 1909, from which post he went to the Baltimore and Ohio as the head of its freight claim department.

B. M. Waldron.

Obituary

Thomas E. Adams, superintendent of motive power of the St. Louis Southwestern Railway, with headquarters at Pine Bluff, Ark., died at his home in that city on August 25th at the age of 63 years. Mr. Adams entered railway service in 1865 as a fireman on the Illinois Central R. R. He was consecutively locomotive engineer on that road, the Illinois Midland, the St. Paul, Minneapolis & Manitoba and the Great Northern railways from November, 1870, to February, 1893, when he was appointed division master mechanic on the Great Northern Railway. Three years later he became superintendent of the Dakota Division of that road, and from February, 1897, to April, 1901, he was successively master mechanic of the Fergus Falls Division and at Superior, Wis. He then became general master mechanic of St. Louis Southwestern and in July, 1905, was promoted to superintendent of motive power.

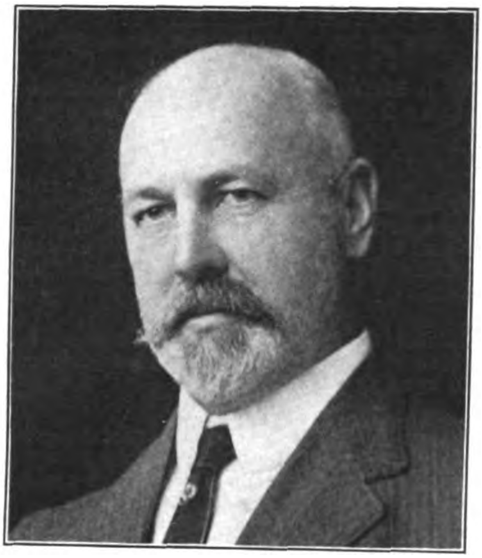
L. S. Brown, general agent of the Southern Railway at Washington, D. C., died in that city September 11th. He was born at Covington, Ga., in 1849.

Amos Howard Calef, secretary and treasurer of the Missouri Pacific, with office at New York, died on September 16th, at his summer home at Seabright, N. J., at the age of 71. The cause of his death was acute indigestion and heart disease. Mr. Calef was for many years closely associated with the Gould Railroad interests. Mr. Calef was born in Gloucester, Mass., and began railroad work as a clerk. He was with the Kansas Pacific and the Denver Pacific, now a part of the Union Pacific System. In 1880 he went to New York as secretary and treasurer of the Missouri Pacific System.

Frank W. Chaffee, general car inspector of the New York Central & Hudson River, with headquarters at Albany, N. Y., died on September 15th. He was born on December 17, 1850, at Springfield, Mass., and began railway work in 1868, as car repairer on the Connecticut River Railroad, now a part of the Boston & Maine. From September, 1870, to December, 1872, he was with the Wason Car Manufacturing Company, and then to June, 1881, was in the car building department of the Boston & Albany. He was then for three years in the service of the Baltimore & Ohio at Camden Station, Baltimore, and on June 1, 1884, left that company to go to the New York Central & Hudson River as general foreman of West Albany, N. Y., shops. He remained in that position until March, 1895, when he was promoted to master car builder of the same shops, and since February 1, 1901, Mr. Chaffee was general car inspector of the same road.

William S. Crane, formerly car accountant of the Missouri Pacific at St. Louis, Mo., died on September 20th, at his home in that city.

E. B. Gilbert, formerly superintendent of motive power of the Bessemer & Lake Erie, died at his home in Greenville, Pa., on September 7th. Mr. Gilbert was born at Windsor, N. Y., on December 13th, 1843. He took up the trade of machinist and later was employed on the Erie Railroad, both at Youngstown, Ohio, and at Galion, in the latter place holding the position of foreman. He went to Greenville about 28 years ago, and entered the service of the Pittsburgh, Shenango & Lake Erie, now the Bessemer & Lake Erie. He was promoted from machinist foreman to master mechanic, and later to superintendent of motive power, which position he held until his resignation in 1909.



Edwin A. Gordon.

Edwin Averill Gordon, for many years a prominent New England railway man, died August 30, 1914, at his home in Newton Centre, Mass. Mr. Gordon was born April 16, 1860, at Norwich, Vt., and entered railroad service in 1877 as freight clerk for the Providence and Worcester R. R. at Woonsocket, R. I. In 1880 he went to Boston as clerk in the local freight office of the New York and New England Railroad, remaining there until 1882. From 1882 until 1890, he was agent of the same road at Fishkill-on-Hudson and Newburgh, New York. From 1890 to 1892 he was traveling freight agent for the New York and New England Railroad with headquarters at Rochester, New York. In 1892, Mr. Gordon was appointed manager of the R. I. Car Service Association; in 1893 the Connecticut Car Service Association was added and in 1894 he also assumed the management of the Massachusetts and New Hampshire Car Service Associations.

He held these positions until 1898 when the American Woolen Company was formed, for which company he became traffic manager, holding the position until his death.

Mr. Gordon was a member of the Society of Colonial Wars; the New England Historical & Genealogical Society; the Economic Club of Boston; the Boston Chamber of Commerce; Honorary Member of the National Association of Car Service Managers and American Association of Local Freight Agents' Associations.

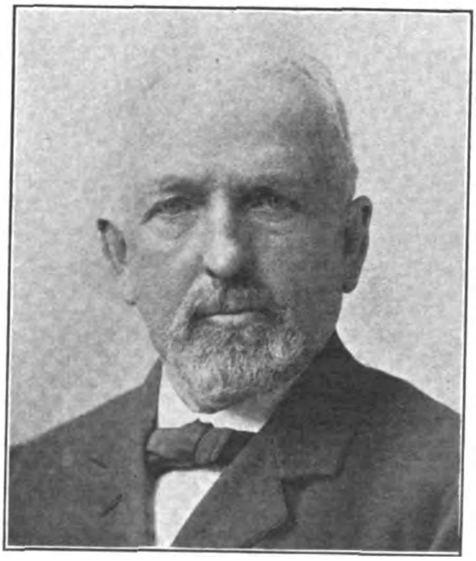
He is survived by his widow, Jennie R. Gordon, a daughter, Grace R. Gordon, and son, Harold Norris Gordon.

J. D. M. Hamilton, claims attorney of the Atchison, Topeka and Santa Fe, with headquarters at Topeka, Kan., died at a hospital in Kansas City on September 20th. He was born on July 18, 1851, at Pittsburgh, Pa., and was educated at Knox College and at the St. Louis Law School. From 1879 to 1898, he was local attorney for the Chicago, Burlington and Quincy at Fort Madison, Iowa and was for a time mayor of the city. From 1881 to 1890 he was also attorney for the Fort Madison & Northwestern. He entered the service of the Santa Fe System as assistant attorney and in June, 1898, was made claims attorney. He has been a leader in the safety first movement.

John G. Haun, supervisor of bridges and buildings of the Virginia and Southwestern, with headquarters at Bristol, Tenn., was killed in an accident on that road on September 14th. A motor car in which he was traveling was derailed while crossing a trestle near Bluff City, causing death.

Marshall E. Johns, superintendent of terminals of the New York, Susquehanna and Western and the Wilkes-Barre & Eastern, with office at Jersey City, N. J., died on September 30th, at his home in Paterson, N. J. He was born on April 17, 1860, at Washington, D. C., and was educated in the public schools of New York City. He began railway work in July, 1876, as a brakeman, and was later train baggage master and conductor on the Montclair & Greenwood Lake, now a part of the Erie. In July, 1880, he went to the New Jersey Midland, now the New York, Susquehanna & Western, as brakeman, and was then consecutively to September, 1894, freight conductor, passenger conductor and yardmaster. During the following ten years he was train master on the Wilkes-Barre & Eastern. In September, 1904, he was appointed superintendent of the New York, Susquehanna & Western and the Wilkes-Barre & Eastern, which form a part of the Erie System, and on January 1, 1914, was appointed superintendent of terminals of the same roads.

William Stewart, formerly from 1892 to 1897, freight traffic manager of the Pennsylvania Lines West of Pittsburgh, at Pittsburgh, Pa., died on October 3rd. He was born in July, 1833, in Ireland, and began railway work in May, 1852, as a clerk in the freight and passenger office of



William Stewart.

the Cleveland & Pittsburgh at Pittsburgh, and his entire service was with that and other lines now included in the Pennsylvania Lines West of Pittsburgh. From 1858, to 1864, he was agent of the same road and the Pittsburgh, Columbus & Cincinnati; he was then for four years general freight agent of the Pittsburgh and Cleveland, and during the following three years was superintendent and general freight agent of the same road. From 1871 to 1892, he was general freight agent of the Pennsylvania Company and the Pittsburgh, Cincinnati & St. Louis, and then to April, 1897, was freight traffic manager of the Pennsylvania Lines West of Pittsburgh.

Barney F. Keefe, general agent of the Chesapeake & Ohio, with office at Covington, Ky., died on September 6th at Toledo, Ohio.

J. P. McCuen, formerly superintendent of motive power of the Queen & Crescent Route, died at his home in Avondale, Cincinnati, Ohio, on October 2nd, aged 70 years. He was connected with the mechanical department of that system for thirty years, retiring three years ago.

M. J. McDonough, commercial agent of the St. Louis & San Francisco R. R. at Birmingham, Ala., met death in the recent train wreck near Livingston, Ala.

N. M. Markley, for many years supervisor of bridges and buildings of the Peoria & Eastern Division of the Cleveland, Cincinnati, Chicago & St. Louis, died at his home in Arcanum, Ohio, September 5th, aged 67 years.

Charles A. Pettibone, general agent of the Wabash at Portland, Oregon, died on September 16th, aged 53 years.

George L. Rhodes, formerly assistant general passenger agent of the Chicago, Rock Island and Pacific, died on September 23rd, at his residence in Chicago, aged 65 years.

Financial

Improvements in Financial Situation.

A CONSIDERABLE improvement has been noted in the general financial situation. Brokers have been largely able to clear up transactions pending prior to the declaration of war and new business has been strictly limited to purchases and sales at or above the closing prices of July 30th. The result is that restrictions in trading are being slowly modified and a fair volume of business being developed. Of the total amount of currency, amounting to $1,441,951,000, allowed to be issued under the Aldrich-Vreeland Act, but $300,000 has been issued thus far, and at no time has there been any apparent danger of panic conditions.

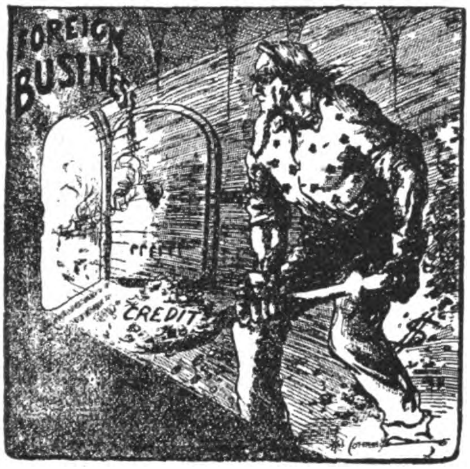
The great problem which confronts our money markets at the present time is, of course, that of placing the foreign exchange market again in a normal condition. The war caught the United States heavily indebted to Europe, due in a large part to the operations of the tariff causing an adverse balance of trade. Travelers' outlays, which are always largest in summer, together with interest payments and other financial obligations, have made this total of indebtedness very large. Our exports under ordinary conditions, particularly with regard to the foreign cotton movement, would have gone a long way towards offsetting this balance. Unfortunately, cotton exports at the present time have practically ceased and it is likely to be months before they are resumed in any fair volume. Gradual relief, however, is likely to be procured from two sources. In the first place, imports will be in small proportions for some time to come, while on the other hand, exports of food products now heavy, and expected to greatly increase, will prove an important factor in reducing our indebtedness.

One of the best signs of promise is the fact that for the latter half of September our exports at New York have been running ahead of the same weeks of last year, notwithstanding the heavy falling off in cotton and oil, two of the leading articles, the gain in food stuffs evidently more than balancing these losses. One of the notable items of the week ending September 9th was 104,000 barrels of flour to France. The following figures show exports at the port of New York, other ports not being available, each week since the war broke out:—

Week ended	1914	1913
September 26	20,032,132	16,810,536
September 19	17,208,199	14,561,782
September 12	13,906,351	15,393,386
September 5	12,210,989	14,866,148
August 29	10,214,302	12,158,997
August 22	8,477,361	15,797,498
August 15	10,723,082	14,834,851
August 8	12,071,056	13,515,717
August 1	14,670,910	16,343,572
July 25	14,177,223	14,144,568

Furthermore, the Federal Reserve Board, owing to the concerted action of banking interests at various large cities, is now in a position to supply up to $100,000,000 in gold which will be available for shipment to Europe or Canada, as may be required. It is estimated by financial authorities, however, that it will probably not be necessary to ship more than $25,000,000 of this amount, as the mere intention and ability of this country to settle its debts in gold is likely to have a beneficial effect upon the exchange market.

The question of our ability to procure a larger share of the South American trade, due to the temporary withdrawal of European competition on account of war influences, is largely a financial one. Strong banking affiliations have proved to be the backbone of Europe's commercial success in South America. By this means credit has been extended to South American merchants and extensive loans made to the purchasing country. Through habit, this method of doing business has become a custom and until



"FIRING UP"

—From The Pittsburgh Post.

similar banking relations have been established between the merchants of this country and those of South American countries, progress in the growth of our exports to this territory is likely to be disappointing. The present great disadvantage of our merchants, in endeavoring to break into South American markets, rests in the fact that they have no financial backing to speak of except their own resources and credit, and this backing is fully as necessary to control such trade, as is the quality or character of the merchandise offered. To quote from the monthly letter of the banking house of Spencer, Trask and Company of New York:

"Owing further to the fact that our expanding industries themselves still need every dollar we can spare, owing also to the fact that for sometime to come we may find it hard to obtain the capital from Europe on which we have hitherto been able to count, it is apparent that from a banking point of view we are not yet in a position where we can give any far-reaching help to our merchants in launching out into new fields, however desirable that might turn out to be for the future.
